- **BR-34.9 Tracking event ordering**: events are applied by `occurred_at`; an out-of-order delivery event (D1) after pickup (AF) missing sets stop status DELIVERED and backfills PICKED_UP as inferred.
- **BR-34.10 Rate card overlap** on save is rejected; a card with `valid_to < ship_date` is ignored and the explain trace states `NO_VALID_RATE_CARD`.
- **BR-34.11 Goods-in-transit transfer event.** The event that moves goods into the in-transit warehouse is set per vendor × Incoterm rule; defaults: EXW, FCA, FAS, FOB, CFR, CIF, CPT, CIP → origin shipment event (risk passes at origin); DAP, DPU, DDP → destination receipt (no goods-in-transit order). Estimated landed cost posts at the transfer event; Incoterms define risk, so title transfer can be overridden per contract.
- **BR-34.12 ISO 6346 check digit.** Letters map to values A = 10, B = 12 … skipping multiples of 11 (K = 21, L = 23, U = 32, V = 34 …); each of the first 10 characters is multiplied by 2^position (position 0–9); check digit = (Σ mod 11) mod 10. Example: CSQU305438 → check digit 3, so CSQU3054383 is valid. Invalid numbers are rejected.
- **BR-34.13 Yard moves and detention.** Dwell = check-out – check-in; detention minutes = max(0, dwell – free time); expected DETENTION charge = ceil(detention minutes ÷ 60) × the carrier's hourly accessorial rate; a yard move cannot target an occupied slot or a door holding another TU's active

appointment.

- **BR-34.14 Gate check-in matching.** Match by appointment id, else by carrier SCAC + trailer/container number + date; arrival within `gate_tolerance_min` → ON_TIME, otherwise EARLY or LATE with reason; at check-out the declared seal must equal the seal recorded at load confirmation (outbound) or at check-in (inbound sealed); mismatch blocks check-out with TMS-0129.
- **BR-34.15 DG checks.** Mixed-load segregation uses the regulation's table as reference data: FAIL if two classes marked prohibited share a load; ADR 1.1.3.6 points = Σ quantity × multiplier by transport category (category 1: × 50, 2: × 3, 3: × 1, 4: × 0; category 0 always requires full ADR); points > 1,000 → WARN with full ADR marking, documentation and driver training required; limited-quantity packages within the per-inner limit → WARN for marking only; a carrier service without DG eligibility is excluded from rate shopping (FR-34.4).
- **BR-34.16 Driver hours in VRP.** Per driver rule set: US property-carrying — driving ≤ 11 h within a 14-h on-duty window, 30-min break after 8 h cumulative driving; EU 561/2006 — daily driving ≤ 9 h (10 h when `extended_day_available`), 45-min break after 4.5 h driving; violations make the route infeasible for that driver (hard constraint).
- **BR-34.17 Screening gating.** Load release, tender and ship confirmation screen every party on the shipment (sold-to, ship-to, consignee, forwarder, carrier); results are cached `screening_cache_h` (default 24 h) per party + list version; BLOCKED stays until the list changes; POTENTIAL_MATCH and SCREENING_PENDING (provider timeout) hold the load until released by TRADE_COMPLIANCE_RELEASE with a logged reason; the hook never auto-clears.
- **BR-34.18 Lane RFQ award.** Each lane is awarded to the bid with the lowest normalized annual cost subject to maximum carriers per lane and minimum incumbent share; ties go to the higher on-time %; awarded RateCards start on the award effective date and overlapping existing cards are end-dated the day before (BR-34.10 still holds).

6.34.8 Acceptance criteria

- **AC-34.1** (FR-34.2, BR-34.1) Given Solomon C101, R101 and RC101 (100 customers), when optimized with a 60 s limit, then every route satisfies capacity and time windows and total distance is within 10% of best-known.
- **AC-34.2** (FR-34.3, BR-34.2) Given the 200-shipment rating fixture, when rated, then totals equal the expected charges to the cent and the explain trace lists weight-break, minimum, accessorial and fuel steps.
- **AC-34.3** (FR-34.5, BR-34.3) Given a route guide with 3 carriers and 10-minute timeouts (test clock), when carrier 1 ignores and carrier 2 declines, then carrier 3 receives the tender and, on acceptance, the load is ACCEPTED with carrier 3.
- **AC-34.4** (FR-34.7, BR-34.4) Given a freight bill of $412.50 and a carrier invoice of $418.00, when matched with tolerance $5/2%, then the bill is VARIANCE with $5.50 and no AP invoice exists until approval.
- **AC-34.5** (FR-34.8, BR-34.5) Given a load shipped and later matched, when postings are inspected, then accrual, reversal and AP invoice tie to zero on account 2150 for that freight bill.
- **AC-34.6** (FR-34.9, BR-34.6) Given a voyage with freight $1,000.00 allocated by weight over 3 receipt lines (weights 1, 1, 1 kg), when allocated, then shares are 333.33 / 333.33 / 333.34 and Σ = 1,000.00.
- **AC-34.7** (FR-34.6) Given a 214 with status D1, when ingested, then the stop is DELIVERED and the sales shipment shows delivered timestamp.
- **AC-34.8** (FR-34.1, BR-34.8) Given 30 shipments totaling 48,000 kg for a 20,000 kg TL rule, when loads are built, then 3 loads exist, none over capacity.
- **AC-34.9** (FR-34.12, BR-34.11) Given a voyage with 2 containers for 3 POs on FOB Shanghai, when the forwarder's departure event posts, then goods-in-transit orders move ownership to the in-transit warehouse with estimated freight and duty, and after the actual invoices the variance posts per BR-34.6 with Σ allocated = Σ actual costs to the cent.
- **AC-34.10** (BR-34.12) Given container number CSQU3054383, when entered, then it is accepted; CSQU3054384 is rejected with TMS-0124.
- **AC-34.11** (FR-34.13, BR-34.13) Given a trailer checked in at 08:00 with free time 2 h and checked out at 11:20, when the freight bill is built, then a DETENTION charge of 2 h × the carrier rate is expected.
- **AC-34.12** (FR-34.14, BR-34.14) Given an outbound load sealed with 778812, when the driver declares 778813 at check-out, then check-out is blocked with TMS-0129 and the gate log records the attempt.
- **AC-34.13** (FR-34.15, BR-34.15) Given a road load with a class 1.1D explosive and a class 3 flammable liquid under 49 CFR, when the load is tendered, then the DG check FAILs with the segregation rule id and no tender is sent.
- **AC-34.14** (FR-34.15, BR-34.15) Given a fixture load of 400 L of a transport-category-2 substance, when checked under ADR, then points = 1,200 and TMS-0131 is raised; at 300 L points = 900 and no warning is raised.
- **AC-34.15** (FR-34.16, BR-34.16) Given an EU driver without an extended day available and a route needing 10.5 h of driving, when optimized, then the route is infeasible for that driver and is reassigned or split.
- **AC-34.16** (FR-34.19, BR-34.17) Given a ship-to party returning POTENTIAL_MATCH from the screening provider stub, when the load is released, then it is held with TMS-0133; after release by a TRADE_COMPLIANCE_RELEASE user with a reason, tendering proceeds and the log shows user and reason.
- **AC-34.17** (FR-34.17, BR-34.18) Given a lane RFQ with 10 lanes and 4 carrier bids, when awarded with at most 2 carriers per lane, then draft RateCards exist per awarded lane starting on the award date and prior overlapping cards end the day before.
- **AC-34.18** (FR-34.18) Given 24 pallets of which 6 are non-stackable for a 53-ft trailer, when planned, then no pallet is stacked on a non-stackable pallet and the plan reports floor positions used.

6.34.9 Test plan and fixtures

Fixtures: Solomon instances (C101, R101, RC101, C201, R201), `rating-200.json` (lanes, weights, accessorials, expected totals verified by hand in a spreadsheet committed alongside), `carriers-demo` (5 carriers, 12 services, 3 rate bases), `carrier-invoices-50.json` with 10 variance cases, `voyage-3.json`.

Test	Type	Target	Pass criterion
VRP benchmark	performance/quality	optimizer	feasible, ≤ 110% best-known
Rating determinism	unit/property	engine	same input → same output; totals exact
Tender cascade	Temporal time-skip	workflow	cascades per BR-34.3
Match tolerance	unit	50 invoices	expected statuses
Accrual tie-out	contract	journal API	zero balance per bill
Landed cost sums	property	allocation	Σ shares = cost for random inputs
214 ingest	contract	API	ordering per BR-34.9

Reconciliation: Σ accrued freight by open freight bill = journal account 2150 balance; Σ landed cost posted = Σ voyage actual costs; loads shipped in wms = loads DISPATCHED+ in tms.

6.34.10 Deployment and operations

Helm `passage-tms` (api, worker), `passage-tms-optimizer` (Python, OR-Tools, 1–4 replicas, 2 CPU/4 GB each), `passage-osrm` (optional self-hosted routing with regional extracts). CloudNativePG `tms-db` (3 instances, 50 GB). Config: `TMS_VRP_TIME_LIMIT_S=60`, `TMS_TENDER_TIMEOUT_MIN=120`, `TMS_MATCH_TOL_ABS=5`, `TMS_MATCH_TOL_PCT=2`, `TMS_DIM_FACTOR_PARCEL=139`. Flags: `tms.enabled`, `tms.landed_cost`, `tms.vrp`. Scheduled: fuel index import weekly (Monday 06:00), tender expiry sweep (Temporal timers), KPI daily. SLOs: rating p95 < 300 ms per shipment per carrier; VRP 500 stops < 60 s; match p95 < 1 s; availability 99.9%. Alerts: tender failures > 3/day; unexpected invoices > 10/day; accrual drift ≠ 0; optimizer queue depth > 20. Runbook: optimizer OOM (reduce batch or raise limits); OSRM down (fallback to stored lane distances with warning). Rollback: `tms.enabled=false` returns to wave-28 carrier labels; open tenders are cancelled with notification.

6.34.11 Migration from AX / SAP

Source	Passage entity	Transformation
TMSCarrier, TMSCarrierService, TMSCarrierServiceGroup	Carrier, CarrierService	linked to Party by vendor account
TMSRateMaster, TMSRateBase, TMSRateBaseAssignment, rate engine metadata	RateCard, RateTable	basis per rate engine type; effective dates from assignment
TMSAccessorialMaster/Assignment, TMSFuelIndex/Region	Accessorial, FuelIndex	direct
TMSRoutePlan, TMSRouteGuide, TMSRouteSegment	RouteGuide	segments → lanes
TMSFreightBill/Detail, TMSCarrierInvoice/Detail (open)	FreightBill, CarrierInvoice	unmatched/unapproved only
Landed cost voyages (open)	LandedCostVoyage	estimated costs only
/SCMTMS/TOR_ROOT/ITEM/STOP (open freight orders)	Load, Shipment, Route	TOR category FO → Load, FU → Shipment
Freight agreements, /SCMTMS/TCM rate tables, calc sheets	RateCard, CalcSheet	scales → weight breaks
/SCMTMS/SFIR (open settlements)	FreightBill	status mapping
PO delivery cost conditions (FRA1/FRB1)	LandedCostVoyage estimated	per PO line

Not migrated: historical freight invoices and tracking events (lakehouse); SAP EM event handlers; ISV route optimization data.

6.34.12 Dependencies, risks, open questions

Depends on: wave 33 (phase ordering), wave 31 (loads, docks), wave 28 (shipments, carrier labels), wave 29 (customer freight charges), wave 20 (costing adjustments, supplier portal), wave 19 (AP invoices), wave 18 (purchase receipts), wave 12 (FX rate type), wave 11 (journal), wave 7 (carrier parties).

Risk	Likelihood	Impact	Mitigation
OR-Tools solution quality on real (non-benchmark) data	Medium	Medium	Planner override; parameter presets; report gap vs heuristic baseline
Carrier invoice formats vary (EDI 210 vs PDF)	High	Low	Manual/API entry path; OCR is v1.x

Open questions: (1) OSRM self-hosted vs stored lane matrix only? Proposed: OSRM optional, lanes default; decide by wave 34 design review. (2) Should customer-billed freight use rated or actual cost? Proposed: rated at ship confirmation; decide by wave 34.

6.34.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
tender_timeout_min	carrier / route guide	int	120	5–1,440	Tender expiry (BR-34.3)	Transportation management parameters › tendering; tender response deadline	SPRO TM › Freight Order Management › Tendering › Define Tendering Profiles
broadcast_tendering	route guide	bool	false	true / false	First acceptance wins (FR-34.5)	Load tender broadcast	Tendering process type "broadcast"
vrp_time_limit_s	tenant	int	60	5–600	Optimizer time budget (BR-34.1)	n/a	Planning profile › optimizer settings (runtime)
lateness_penalty_per_min	planning profile	money	50.00 USD	≥ 0	Soft time-window penalty (BR-34.1)	n/a	Optimizer cost function settings
dim_factor_parcel	carrier service	int	139 (in³/lb)	139 / 166 / 5,000 (cm³/kg)	Dimensional weight (BR-34.2)	Rate engine parameters (dimensional weight)	Charge calculation scale base "chargeable weight"
match_tolerance_abs / match_tolerance_pct	carrier	money / pct	5.00 USD / 2 %	≥ 0	Freight invoice tolerance (BR-34.4)	Freight reconciliation › Audit masters	Freight settlement invoice verification tolerance
fuel_index_source	carrier	enum	DOE_WEEKLY	DOE_WEEKLY / EU_WEEKLY_OIL_BULLETIN / MANUAL	Fuel surcharge index (BR-34.2)	Fuel indexes (TMSFuelIndex)	Charge type FUEL with index table
freight_accrual_account	legal entity	account	2150	GL accounts	Accrual posting (BR-34.5)	Transportation management parameters › freight reconciliation posting accounts	Settlement accrual account (T030 key FR1)
freight_variance_account	legal entity	account	5250	GL accounts	Variance posting (BR-34.5)	Freight bill type posting setup	Price difference account (PRD)
landed_cost_auto_costs	vendor / item group	template ref	none	auto-cost templates	Estimated costs at goods in transit (FR-34.12)	Landed cost › Auto costs	Pricing procedure with FRA1/FRB1 conditions
goods_in_transit_transfer_event	vendor × Incoterm	enum	per BR-34.11	ORIGIN_SHIPMENT / DESTINATION_RECEIPT	Ownership timing (BR-34.11)	Landed cost parameters › goods-in-transit ownership change	Stock in transit settings (movement types 107/109)
in_transit_warehouse	site	warehouse ref	TRANSIT-{site}	in-transit warehouses	Holds goods in transit	Landed cost parameters › goods-in-transit warehouse	SIT plant/storage location
container_check_digit_required	tenant	bool	true	true / false	Enforces BR-34.12	Shipping container validation	Transportation unit identification check
detention_free_time_min	carrier	int	120	0–1,440	Detention start (BR-34.13)	Accessorial (detention)	Charge type detention/demurrage

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
gate_tolerance_min	site	int	60	0–480	ON_TIME window (BR-34.14)	Appointment scheduling early/late tolerance	SPRO EWM › Yard Management › Define Checkpoints (tolerance)
walk_in_allowed	site	bool	true	true / false	Check-in without appointment (FR-34.14)	Driver check-in setup	Check-in without planned TU

dg_regulation_set	mode × country	enum	ADR (EU road), 49CFR (US)	ADR / RID / 49CFR / IMDG / IATA	Rules applied (FR-34.15)	n/a	EHS-DG: specify DG regulations per mode-transport category
dg_check_mode	legal entity	enum	BLOCK	BLOCK / WARN	FAIL behavior (FR-34.15)	n/a	DG check schema and check methods (SD/LE/TM)
emergency_response_phone	legal entity	text	none (required for DG)	E.164 number	Printed on DG papers	n/a	DG master emergency telephone
driver_hours_rule_set	depot	enum	FMCSA_PROPERTY	FMCSA_PROPERTY / EU_561 / NONE	Driver-hours constraint (BR-34.16)	n/a	TM resource driving-time rules
screening_provider	legal entity	adapter id	none	registered providers	Denied-party screening (FR-34.19)	n/a	SAP GTS / Watch List Screening configuration
screening_cache_h	tenant	int	24	0–168	Result cache (BR-34.17)	n/a	GTS screening buffer settings
customs_filing_provider	legal entity × country	adapter id	none	registered providers	Export filing call (FR-34.19)	n/a	GTS customs management communication
rating_cache_min	tenant	int	10	0–60	Rate shop cache (FR-34.4)	n/a	n/a

6.34.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Loads by status	list inquiry	status, pickup window, carrier, mode	load, weight, stops, tender state	`load`	Transportation management workspace; loads list	Fiori Freight Order Worklist; transportation cockpit
Rate shop log	drill-down	shipment, date	carriers, charges, explain trace	rating log	Rating results inquiry; rate route workbench	Carrier selection log
Tender history	list inquiry	carrier, outcome, period	sent, response, expiry, rank	`tender`	Tender status inquiry	Tendering overview (TM)
Late shipments / tracking timeline	operational report	late > n min, carrier	ETA vs window per stop	`tracking_event`	Load tracking inquiry	Track Freight Orders (event management)
Freight reconciliation status	operational report	carrier, match status, age	expected, invoiced, variance, dispute	`freight_bill`	Freight bill invoice reconciliation	Manage Freight Settlement Documents; VI12
Freight accrual tie-out	operational report	legal entity, period	open bills, accrual total, GL 2150 balance, difference	reconciliation	SSRS freight accrual report	VI12 with FBL3N on accrual account
Voyage cost and variance	drill-down	voyage, container, cost type	estimated, actual, variance, allocation per receipt line	`landed_cost_voyage`	Voyage cost inquiry; SSRS landed cost reports	MRDC log; MB5S GR/IR balances
Goods in transit	list inquiry	voyage, status, vendor	qty and value in transit, ETA	in-transit quants	Goods-in-transit orders	MB5T stock in transit
Yard status board	operational report	site	slots, TUs, status, dwell, reefer setpoints	`transport_unit`	Yard management workspace	/SCWM/MON yard nodes (TU, vehicle, yard bins)
Gate log	list inquiry	site, date, carrier	check-in/out times, trailer, seal, on-time flag	`gate_event`	Driver check-in log	Check-in/check-out log (/SCWM/CICO)
DG load report	operational report	load, mode, date	UN numbers, classes, ADR points, result, rule ids	`dg_check_result`	n/a	DG check log in delivery
Carrier KPIs	KPI	carrier, lane, period	cost/cwt, cost/mile, OTD %, tender acceptance %, invoice variance rate	Cube	Transportation KPIs	TM analytics / freight cost KPIs
Lane RFQ bid comparison	drill-down	RFQ, lane	bids, scenario totals, award	`freight_rfq`	n/a	Freight RFQ bid analysis
Screening holds	list inquiry	status, party, age	load, party, list version, released by	`screening_result`	n/a	GTS blocked documents

6.34.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Bill of lading (VICS straight BOL)	Load confirmed	Shipper, consignee, third-party bill-to, SCAC, PRO, handling units, NMFC class, weight, DG lines (UN, proper shipping name, class, PG, qty, emergency phone), seal	PDF	BOL-* gap-free per site	DG shipping papers: 2 years (49 CFR 172.201(e))
CMR consignment note / e-CMR	EU road load confirmed	CMR boxes 1–24	PDF; e-CMR (UN/CEFACT)	CMR-*	Per CMR convention and national law (country pack)
DG transport document	Load with DG lines	ADR 5.4.1 / 49 CFR 172.202 fields	PDF; on BOL	BOL number	ADR: 3 months minimum (5.4.4)
Load tender	Tender sent	Load, stops, windows, equipment, rate, DG flag	EDI 204; email PDF	Tender id	Contract evidence with freight bill
Freight bill reconciliation report	Match result	Expected vs invoiced per charge, variance, decision	PDF	FB-*	AP support, 10 years (wave 19)
Commercial invoice and customs packing list	Cross-border shipment confirmed	Exporter, consignee, Incoterm, commodity codes, origin, values, weights, export classification	PDF; data to `CustomsFilingProvider`	CI-*	US export records 5 years (15 CFR 762.6); country pack may extend

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Gate pass / check-in receipt	Check-in	Appointment, door or slot, trailer, instructions	Kiosk print / PDF	GATE-*	Gate log PII 90 days
Voyage cost statement	Voyage COSTED	Containers, cost types, allocation per receipt line	PDF / XLSX	Voyage id	Inventory valuation support, 10 years
Load plan sheet	Load plan computed	Top view, layers, load sequence, axle estimate	PDF	Load id	None

6.34.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
Fuel index import	Weekly, Monday 06:00	index	index + week	< 1 min	Retry hourly; warn on stale index	Index older than 8 days
Tender expiry	Temporal timers	load	workflow id	n/a	Cascade (BR-34.3)	Tender failures > 3/day
Carrier invoice auto-match	Every 15 min	carrier	carrier invoice id	1,000 invoices < 5 min	Unmatched stay in queue	Unexpected invoices > 10/day
Freight accrual tie-out	Daily 02:00	legal entity	date	< 5 min	Report only	Accrual drift ≠ 0
Voyage estimate refresh	Daily 01:00	voyage	voyage version	< 5 min	Rerun	Voyages without estimates at transfer
Detention computation	On check-out + hourly sweep	site	TU visit id	< 1 min	Rerun	none
Gate PII pseudonymization	Daily 03:00	legal entity	visit id	< 2 min	Rerun	Visits past retention not pseudonymized
Screening re-check on list update	On provider list-version change	party hash range	(party, list version)	100,000 parties < 30 min	Resume by range	New BLOCKED on open loads
DG reference data update	On new regulation edition (ADR biennial, IMDG amendment)	tenant	edition	< 10 min	Keep previous edition active	Edition not applied by effective date
KPI materialization	Daily 04:00	carrier	day	< 5 min	Rerun day	KPI lag > 24 h

6.34.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
TMS_VIEW	/loads/{id}/tracking; transportation workspace	none	All transportation roles
TMS_PLAN	/loads:build, /routes:optimize, /loads/{id}:dg-check, /loads/{id}:screen	TMS_RECONCILE_APPROVE	Transportation planner
TMS_RATE	/shipments/{id}:rate	none	Planner, customer service
TMS_RATE_APPROVE	Rate card publish; /freight-rfqs/{id}:award	TMS_RECONCILE_APPROVE (sets rates and approves invoices against them)	Transportation manager
TMS_TENDER	/loads/{id}:tender; tender board	none	Transportation planner
TMS_CARRIER_RESPOND	/tenders/{id}:respond; POD upload	External identities only; never combined with internal duties	Carrier user
TMS_RECONCILE	/carrier-invoices; reconciliation grid	none	Freight auditor
TMS_RECONCILE_APPROVE	/freight-bills/{id}:approve	AP_PAYMENT_RELEASE (wave 19); TMS_RATE_APPROVE	Freight audit lead
TMS_LANDED_COST	/voyages, /goods-in-transit/{id}:ship, /landed-cost/voyages/{id}:allocate	COST_PERIOD_CLOSE (wave 20)	Import coordinator
TMS_YARD	/yard-moves; yard board	none	Yard clerk, yard driver
TMS_GATE	/gate/check-in, /gate/check-out	none	Gate guard
TMS_DG_MAINTAIN	DG reference data; WARN overrides	TMS_PLAN (overriding own load)	Dangerous goods safety adviser
TRADE_COMPLIANCE_RELEASE	Release POTENTIAL_MATCH / SCREENING_PENDING holds	SALES_ORDER_MAINTAIN (wave 26)	Trade compliance officer
TMS_FLEET_ADMIN	Vehicles, trailers, drivers, calendars	none	Fleet manager

6.34.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
TMS-0101	error	No valid rate card for {carrier}/{service} on {date}.	NO_VALID_RATE_CARD	Maintain rate card	BR-34.10
TMS-0102	error	Rate card overlaps {card} ({from}–{to}).	Overlap on save	Adjust validity	BR-34.10
TMS-0103	warning	Load {load} exceeds {dimension} capacity ({used}/{max}); override logged.	Manual over-capacity	Split load or confirm override	BR-34.8

TMS-0135	error	Commodity code missing for {item} in {country}.	Customs data incomplete	Maintain commodity code	FR-34.19

6.34.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Rating	5,000 shipments/day × 8 carriers; peak 400 rate calls/min	60 / 300 / 500 ms per carrier; full rate shop p95 < 800 ms (parallel)	50 rate calls/s	Rating log 90 days ≈ 6 GB	GiST on `rate_card` validity daterange per carrier/service	Cached results served; rate shop narrows to route-guide top 3
VRP optimization	20 runs/day, ≤ 500 stops	≤ 60 s hard limit	4 concurrent runs per 2 optimizer replicas	—	—	Queue (alert at depth 20); first feasible solution returned at 50 % of budget
Tracking ingest	50,000 events/day; peak 2,000/min	20 / 80 / 200 ms	100/s	≈ 10 GB	`tracking_event` monthly partitions; `(load_id, occurred_at)`	Kafka buffering; per-load ordering preserved
Freight invoice match	1,000 invoices/day	200 ms / 1 s / 2 s	20/s	Invoices ≈ 1 GB	`freight_bill(match_status)`	Auto-match interval stretches; no auto-approval changes
Landed cost allocation	200 voyages/month × 3,000 receipt lines	< 10 s per voyage	—	Voyages ≈ 1 GB	`voyage(status)` ; receipt line FK	Allocations queued per voyage
Gate check-in	300 visits/day per site; peak 40/h	100 / 300 / 600 ms	5/s per site	Gate log ≈ 0.2 GB	`gate_event(site_id, occurred_at)`	Kiosk retries; paper fallback entered later with original time
DG check	Every load at plan, tender and ship	20 / 80 / 150 ms	100/s	Results ≈ 0.5 GB	Reference data in memory per edition	Unchanged (CPU-bound, small)
Screening call	3,000 parties/day at release	Provider budget p95 1.5 s; timeout 5 s	20/s	Results ≈ 0.3 GB	Cache keyed (party, list version)	Timeout → SCREENING_PENDING hold; never auto-clear
Load plan stacking	200 plans/day	< 5 s for 60 pallets	2/s per optimizer replica	—	—	Queued behind VRP with lower priority

6.34.20 Localization and compliance hooks

- **Dangerous goods.** US 49 CFR parts 171–180 (PHMSA), EU ADR (road), RID (rail), ADN (inland waterways), IMDG Code (sea), IATA DGR (air), Canada TDG. New editions (ADR biennial, IMDG amendments) arrive as reference data through `DgRegulationPack` (wave 48); BR-34.15 is edition-neutral.
- **Driver hours.** US FMCSA 49 CFR part 395; EU Regulation 561/2006 with tachograph Regulation 165/2014; UK domestic rules. Rule sets plug in through `DriverHoursRuleSet`.
- **Transport documents.** CMR convention and e-CMR protocol for EU road; EU eFTI Regulation 2020/1056 for electronic freight information to authorities; Mexico CFDI with Carta Porte complement for goods in transit (country pack MX, submitted through the wave-35 `MandateProvider`); Brazil CT-e/MDF-e and India e-way bill are country-pack documents on the same hook.
- **Customs, export control and sanctions.** US AES/EEI (15 CFR part 30) and EAR classification (15 CFR part 774); EU Union Customs Code export declarations and ICS2 for imports; UK CDS; denied-party lists such as the US Consolidated Screening List, EU consolidated financial sanctions list and UK OFSI list. Providers plug in through `ComplianceScreeningProvider`, `CustomsFilingProvider` and `PreferenceDeterminationProvider` (wave 48).
- **Landed cost.** Duty rates by commodity code and origin come from country-pack tariff tables; import VAT (including EU postponed accounting) posts through the wave-13 tax engine.
- **Currency and units.** Freight is rated in the carrier's currency and converted at the wave-12 rate type FREIGHT; miles/km, lb/kg and cwt (US 100 lb) vs per 100 kg follow carrier and locale.
- **Privacy and retention.** Driver names and license ids are personal data (GDPR, CCPA): 90-day retention, then pseudonymization; DG shipping papers 2 years (US) / 3 months (ADR); export records 5 years (US).

6.34.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX PARTIAL #47 — §12.8.1 Landed cost (voyages, shipping containers, folios, cost estimates, goods in transit; ITMVoyage*)	PARTIAL-34	ADDED as FR-34.12	BR-34.11, BR-34.12, AC-34.9, AC-34.10
AX PARTIAL #49 — §12.8.2 Landed cost reports (voyage cost, cost variance by voyage)	PARTIAL-34	ADDED as FR-34.12	"Voyage cost and variance" in §6.34.14
AX PARTIAL #51 — §12.8.3 Landed cost → Voyage cost allocation / Goods in transit receipts	PARTIAL-34	ADDED as FR-34.12	"Voyage estimate refresh" job; goods-in-transit receipt
AX PARTIAL #53 — §12.8.4 Landed cost setup (parameters, cost types, auto cost, container types, voyage templates, legs, tracking)	PARTIAL-34	ADDED as FR-34.12	`landed_cost_auto_costs`, `goods_in_transit_transfer_event`, `in_transit_warehouse`
AX PARTIAL #223 — §12.27.1 Landed cost (voyages, link)	PARTIAL-34	ADDED as FR-34.12	Same mechanism as #47
AX PARTIAL #224 — §12.27.2 SSRS: Landed cost reports (link)	PARTIAL-34	ADDED as FR-34.12	"Voyage cost statement" in §6.34.15
AX PARTIAL #225 — §12.27.3 Landed cost → Voyage cost actualization (link)	PARTIAL-34	ADDED as FR-34.12	Actuals at invoice with BR-34.6 variance
AX PARTIAL #226 — §12.27.4 Landed cost parameters / cost types / voyage templates (link)	PARTIAL-34	ADDED as FR-34.12	Same parameters as #53

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX GAP #73 — §12.26.4 Warehouse → Yard management (yard, trailers, yard moves)	GAP (propose 34)	ADDED as FR-34.13	BR-34.13, AC-34.11
AX GAP #74 — §12.27.1 Driver check-in / check-out	GAP (propose 34)	ADDED as FR-34.14	BR-34.14, AC-34.12
AX GAP #75 — §12.27.2 Driver check-in log	GAP (propose 34)	ADDED as FR-34.14	"Gate log" in §6.34.14
AX GAP #76 — §12.27.3 Driver check-in → Expire appointments / Gate log archive	GAP (propose 34)	ADDED as FR-34.14	"Gate PII pseudonymization" job; appointment expiry via DockAppointment status
AX GAP #77 — §12.27.4 Driver check-in setup / Gate configuration	GAP (propose 34)	ADDED as FR-34.14	`gate_tolerance_min`, `walk_in_allowed`, `gate_pii_retention_days`
AX GAP #78 — §12.27.4 Transportation → Yard management setup	GAP (propose 34)	ADDED as FR-34.13	Yard locations and detention parameters
SAP #192 — §13.16 EWM /SCWM/TU, /SCWM/VEH transportation units / vehicles	PARTIAL-34	ADDED as FR-34.13	TransportUnit linked to load and yard
SAP #195 — §13.16 EWM dangerous goods / hazmat checks in warehouse (EHS)	GAP (propose 34)	ADDED as FR-34.15	Warehouse storage side ADDED as FR-31.19
SAP #199 — §13.16 Hazardous material: regions, water pollution classes, storage classes, fire-containment sections (MGEF)	GAP (propose 34)	ADDED as FR-31.19	Master data introduced in wave 31 (first consumer); transport use FR-34.15
SAP #204 — §13.17 Dangerous goods check in delivery (EHS-DG), DG documents	GAP (propose 34)	ADDED as FR-34.15	DG transport document in §6.34.15
SAP #209 — §13.17 Dangerous goods: DG profiles, DG check methods in SD/LE (DGT*)	GAP (propose 34)	ADDED as FR-34.15	`dg_regulation_set`, `dg_check_mode`
SAP #210 — §13.18 TM transportation units / resources (vehicles, trailers, drivers), calendars	PARTIAL-34	ADDED as FR-34.16	Driver app / ELD OUT-OF-SCOPE (carriers' and telematics vendors' systems)
SAP #211 — §13.18 Dangerous goods and DG checks in TM	GAP (propose 34)	ADDED as FR-34.15	Checks at rate, build, tender, ship
SAP #213 — §13.18 Strategic freight procurement (lane RFQ, bid analysis)	GAP (propose 34)	ADDED as FR-34.17	Reuses wave-17 RFQ as the register proposed
SAP #214 — §13.18 Load consolidation / container packing optimization (3D load plan)	PARTIAL-34	ADDED as FR-34.18	Layer-based stacking; free-form 3D carton packing OUT-OF-SCOPE (low demand, high solver cost)
SAP #215 — §13.18 Dangerous goods in TM customizing	GAP (propose 34)	ADDED as FR-34.15	DG reference data job in §6.34.16
SAP #205 — §13.17 Foreign trade / export documents in delivery (customs, commercial invoice, EUR.1; GTS) — flagged for this wave by coordinator	PARTIAL-13	ADDED as FR-34.19	Commercial invoice and customs data added; EUR.1/origin certificates and customs declarations DEFERRED to wave 48
SAP #206 — §13.17 Preference determination (SAP GTS / foreign trade) — flagged	GAP (propose 48)	DEFERRED to wave 48	`PreferenceDeterminationProvider` hook; origin and commodity data captured by FR-34.19
SAP #208 — §13.17 Foreign trade: export control, preference, Intrastat settings (T604, T605) — flagged	PARTIAL-13	ADDED as FR-34.19	Export-control data and provider settings here; Intrastat settings stay wave 13; preference DEFERRED to wave 48
SAP #212 — §13.18 Customs declarations via GTS from TM — flagged	PARTIAL-13	DEFERRED to wave 48	`CustomsFilingProvider` call defined in FR-34.19; filing implementations are country-pack content
SAP #350 — §13.31 Business Partner Screening / Watch List Screening (GTS) — flagged	GAP (propose 48)	ADDED as FR-34.19	Screening gate and holds (BR-34.17) added; screening list provider DEFERRED to wave 48

6.35 Wave 35: B2B Integration: EDI, e-Invoicing & Integration Hub

6.35.1 Scope and business context

Wave 35 closes Phase 6 by replacing AX AIF / D365 data entities, Dual-write and Electronic Reporting (ER) for e-invoicing, and SAP IDoc/ALE, PI/PO (Integration Suite) and Document and Reporting Compliance (DRC). It delivers an EDI engine (X12 850/855/856/810/820/214/204/990/997 and EDIFACT ORDERS/ORDRSP/DESADV/INVOIC/CONTRL) with AS2 and SFTP transport, partner profiles and acknowledgments; Peppol BIS Billing 3.0 UBL 2.1 e-invoicing through a certified access point, Factur-X/ZUGFeRD, and a country mandate framework with hooks for IT SDI and MX CFDI; and an integration hub with public REST/GraphQL APIs, webhooks, Kafka topic subscriptions, a Backstage API catalog and developer portal with keys and quotas, plus reference connectors for Salesforce, Shopify and Stripe. Out of scope: full implementation of country e-invoice mandates beyond the framework and hooks (wave 48 country packs), EDIFACT subsets beyond the listed messages, a self-operated Peppol AS4 gateway (v1.x).

Scope amendment (coverage closure). The gap registers add four items to this wave: catalog punchout over cXML and SAP OCI that returns requisition lines to wave 17 (FR-35.13), cXML document exchange with cXML networks such as SAP Business Network (Ariba) and Coupa (FR-35.14), a PLM reference connector (FR-35.15), and intake and reconciliation of customer self-billing documents (FR-35.16). §6.35.21 lists the dispositions.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
SAP IDoc failures sit in status 51 (WE02/BD87); a 'MATERIAL not found' error on one E1EDP01 segment requires an ABAP-literate operator to read EDIDD SDATA, fix master data, then reprocess; D365 AIF (AifExceptionLog) and the data entity message processor are similar	Monitor shows raw segment data, no canonical view; reprocess is a separate transaction	Message monitor shows raw, canonical and the failing rule side by side; bulk reprocess with dry run	Mean time to resolve a failed inbound order: 30–90 min → < 5 min; operator needs ABAP/X++: yes → no
Outbound documents are produced by batch (SAP output determination NAST + RSNAST00 jobs; D365 batch jobs for outbound ports), so an ASN reaches the customer 15–60 min after shipment and 810s go out in nightly runs	Polling batch framework	Outbound documents generated from `load.shipped` / `invoice.posted` events via the outbox	Event-to-document latency: 15–60 min (batch) → < 60 s; nightly invoice runs → continuous
Every EDI partner requires a middleware project (PI/PO ICO + mapping, or an ISV EDI add-on for D365) with Java/graphical mappings nobody in the business can read	Mapping logic lives outside the ERP in a separate tool and skill set	Declarative maps in the product with partner overrides, test harness and simulator	New partner onboarding: 4–8 weeks → 1–3 days; middleware licenses for EDI: 1 → 0

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
External systems (MES, PLM, BI, agents) integrate through OData with no event feed (D365 business events cover few entities) or through BAPIs/RFCs needing SAP Gateway projects; nobody can see which APIs exist	No catalog, no subscription model, no quotas	Backstage catalog with OpenAPI/AsyncAPI for every entity, webhook/Kafka subscriptions with replay, keys and quotas, MCP (wave 47) over the same APIs	Time for an external team to first successful call: weeks (access request, gateway project) → < 1 h self-service; entities with event feeds: ~10% → 100%
ER-based e-invoicing (ERFormatMappingTable) and SAP DRC need a configuration import per country/version and validate only on submission; schematron failures come back from the network hours later	Validation happens at the authority or AP, not at creation	Schematron (CEN + Peppol) runs at validate time inside Passage; arithmetic rules checked first	Rejections from the Peppol network: ~3–5% of invoices → < 0.1%; feedback latency: hours → < 2 s

6.35.2 AX / SAP parity map

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Integration ports / endpoints	AIF: AifPort, AifInboundPort, AifOutboundPort, AifService, AifAction; D365 data entities (DMFEntity), OData	IDoc ports WE21, partner profiles WE20 (EDPP1, EDP12/EDP13/EDP21), distribution model BD64 (TBD05)	edi.TradingPartner, EDIProfile, Transport	full
Message log / monitor	AifDocumentLog, AifMessageLog, AifExceptionLog, AifGatewayQueue; D365 message processor	IDoc status EDIDS (WE02/WE05), BD87 reprocess, PI/PO message monitor	Message monitor with replay	improved — replay with state reproduction
EDI documents	ISV (partner EDI), data entity import/export	IDoc types ORDERS05, DELVRY03 (DESADV), INVOIC02, control record EDI_DC40 (EDIDC), data EDIDD (EDID4)	Map (canonical ↔ X12/EDIFACT)	full
e-Invoicing	Electronic reporting ER configurations (ERFormatMappingTable, ERModelMappingTable), Invoicing service	DRC eDocument framework (EDOCUMENT, EDOCUMENTFILE), Peppol exchange	Peppol UBL 2.1, Factur-X, mandate framework	full (Peppol), partial (country mandates: hooks)
CRM/commerce sync	Dual-write (entity maps to Dataverse)	SAP CPI prepackaged content	Reference connectors (Salesforce, Shopify, Stripe)	partial — reference connectors only
Business events / webhooks	BusinessEventsCatalog, BusinessEventsEndpoint	Event Mesh / enterprise event enablement	Webhook subscriptions, Kafka subscriptions	full
Public API catalog	OData $metadata, Open API via custom service	API Business Hub, Gateway (SEGW)	Backstage catalog, developer portal, OpenAPI/AsyncAPI	improved
API keys / quotas	Azure AD app registration only	API management (Integration Suite)	ApiClient, Quota	improved
Acknowledgments	n/a	STATUS/ALEAUD IDoc, CONTRL	997/999, CONTRL, MDN (AS2)	full
Catalog punchout	External catalogs with cXML punchout (CatVendorExternalCatalog)	OCI web-based catalogs (SPRO MM › Purchasing › Web-Based Catalogs › Define Catalogs); Ariba catalogs	integration-hub PunchoutCatalog, PunchoutSession → wave-17 requisition lines	full
cXML documents	n/a (ISV)	Ariba Network integration via Cloud Integration Gateway (cXML OrderRequest, ConfirmationRequest, ShipNoticeRequest, InvoiceDetailRequest)	cXML maps on the canonical document model	full
PLM integration	Engineering change management PLM connectors (Teamcenter, Windchill via Dataverse)	PLM system integration, Engineering Control Center	Reference connector `passage-connector-plm`	partial — reference connector
Customer self-billing	n/a (ISV for automotive)	Self-billing procedure VKA/VSB1 (IDoc GSVERF), SPRO SD › EDI › Self-Billing Procedure	SelfBillingDocument with line matching to wave-29 invoices	full

6.35.3 Functional requirements

- **FR-35.1 Trading partner profiles** — Must. The system shall define partners with identifiers (ISA sender/receiver qualifier+id, GS id, EDIFACT UNB id, Peppol participant id `0088:GLN/0192:orgnr`), transports (AS2, SFTP, HTTPS), maps per transaction set and direction, envelope options, and SLA (ack within n minutes).
  - Notes: a partner may have map overrides (per-segment rules) layered on the base map; test and production profiles; certificate rotation with overlap period.
- **FR-35.2 X12 and EDIFACT parsing/serialization** — Must. The system shall parse and generate X12 (versions 004010 and 005010) and EDIFACT (D96A, D01B) with configurable delimiters, validate against transaction-set schemas, and generate 997/999 and CONTRL acknowledgments.
  - Notes: control numbers (ISA13, GS06, ST02; UNB, UNH) are gap-free per partner per direction; duplicate inbound ISA13 within 30 days is rejected as a duplicate interchange and reported in the 997.
- **FR-35.3 Mapping engine** — Must. The system shall map between a canonical document model (order, order response, shipment notice, invoice, remittance, status, tender) and EDI segments using declarative maps (JSONata/TypeScript expressions), with lookups (partner item cross-reference, location GLN, UoM, qualifier tables).
  - Notes: base maps per BR-35.1–35.3 ship as fixtures; unit-tested; map versioning with effective dates.
- **FR-35.4 Document integration** — Must. The system shall convert inbound 850/ORDERS into wave-26 sales orders (with partner item cross-reference), outbound 855, 856/DESADV from `wms.load.shipped` with SSCC hierarchy, 810/INVOIC from wave-29 invoices, 820 remittance into wave-30 cash application, 214 into/out of TMS, 204/990 for tenders.
  - Notes: inbound order failures create a task with the raw and canonical payload; outbound documents are created from events via the outbox (no polling).
- **FR-35.5 Transport** — Must. The system shall send and receive via AS2 (RFC 4130: signed, encrypted, synchronous/asynchronous MDN) and SFTP (poll every 60 s, archive after pickup), with retries (5× exponential, max 1 h) and alerts on MDN timeout.
  - Notes: AS2 certificates stored in Vault; MDN required by default; SFTP file naming pattern per partner.
- **FR-35.6 Peppol e-invoicing** — Must. The system shall produce UBL 2.1 invoices and credit notes conforming to Peppol BIS Billing 3.0 (BR-35.4), validate against the CEN EN 16931 and Peppol schematron, and send/receive through a certified access point adapter (AS4 via the AP's API), handling the Peppol MLR/transport acks.
  - Notes: participant lookup via SML/SMP through the AP; invoices received create wave-19 vendor invoices; validation errors block sending and are shown on the invoice.
- **FR-35.7 Factur-X / ZUGFeRD and mandate framework** — Should. The system shall embed EN 16931 CII XML in PDF/A-3 (Factur-X profile EN 16931) and provide a country mandate framework (`MandateProvider` interface: validate, submit, poll status, store clearance id) with reference hooks for IT SDI (FatturaPA) and MX CFDI 4.0 (PAC stamping).
  - Notes: full IT/MX packs ship in wave 48; the framework stores clearance ids and statuses on the invoice.
- **FR-35.8 Public APIs and developer portal** — Must. The system shall publish versioned REST (OpenAPI 3.1) and GraphQL APIs for all entities exposed since wave 3, with API clients (Keycloak client credentials), scopes mapped to duties, per-client quotas (default 600 requests/min, burst 100) and a developer portal at `developers.<env>.passage.dev` generated from the Backstage catalog.
  - Notes: additive-change guarantee per PRD §8; deprecation ≥ 12 months with `Sunset` header; sandbox tenant per client.
- **FR-35.9 Webhooks and Kafka subscriptions** — Must. The system shall let clients subscribe to CloudEvents types by filter and receive them by webhook (HTTPS POST, HMAC-SHA256 signature, at-least-once, 8 retries over 24 h, dead-letter with replay) or by a dedicated Kafka topic with ACLs.

    - Notes: ordering per aggregate id; replay from a timestamp reproduces state when consumed idempotently; payload schema from the schema registry.
- **FR-35.10 Message monitor and replay** — Must. The system shall show every interchange/message with status, acks, errors and payloads; allow reprocessing inbound from raw, resending outbound, and SLA dashboards per partner.
    - Notes: payload retention 13 months (configurable); PII fields masked for non-admin duties.
- **FR-35.11 Reference connectors** — Should. The system shall ship connectors: Salesforce (accounts/opportunities ↔ parties/quotes), Shopify (orders/fulfillments/products), Stripe (payments/payouts into cash application), each built only on the public APIs and webhooks.
    - Notes: connectors are separate Helm charts; mapping configurable; they prove the hub, not full products.
- **FR-35.12 Partner simulator** — Must. The system shall include a partner simulator (AS2/SFTP endpoint plus document generator) used in CI and the demo distributor scenario.
    - Notes: generates 850/856/810 and ORDERS/DESADV/INVOIC with randomized but valid content.
- **FR-35.13 Catalog punchout (cXML and OCI)** — Should. The system shall let a requisitioner open a supplier's external catalog from a wave-17 requisition via cXML PunchOutSetupRequest or SAP OCI 4.0/5.0 (HOOK_URL form post), receive the returned cart (cXML PunchOutOrderMessage or OCI NEW_ITEM-* fields), and create requisition lines with supplier part id, description, price, currency, UoM, UNSPSC code and lead time.
    - Notes: supplier configuration holds URL, identity and shared secret (Vault), extrinsics (user email, cost center) and UoM/category mapping; validation per BR-35.13; session timeout 30 min; item-level (level-2) punchout via PunchOutSetupRequest with `ItemOut`; lines unknown to the item master become non-stock lines with a procurement category; catalog prices are flagged as catalog-sourced for wave-17 approval rules.
- **FR-35.14 cXML document exchange** — Should. The system shall exchange cXML 1.2 documents with cXML networks: outbound OrderRequest from wave-17 POs, inbound ConfirmationRequest (→ PO confirmation), ShipNoticeRequest (→ ASN for FR-31.9) and InvoiceDetailRequest (→ wave-19 vendor invoice), over HTTPS POST with shared-secret or certificate authentication and synchronous cXML Response status codes.
    - Notes: cXML maps sit on the same canonical documents as X12/EDIFACT (FR-35.3), so posting, monitoring and replay are shared; `payloadID` is the idempotency key (BR-35.14); responses 200/201 accepted, 4xx rejected with status text shown in the message monitor.
- **FR-35.15 PLM reference connector** — Could. The system shall ship a reference connector that imports released items, engineering BOMs and engineering change orders from a PLM system (Siemens Teamcenter REST services, PTC Windchill REST/OData services, or a neutral JSON/PLMXML file drop) into wave-9 engineering change requests, and writes ERP release status and effectivity back to the PLM system.
    - Notes: built only on public APIs and webhooks, like FR-35.11 connectors; PLM part number + revision map to item + BOM version; scheduled sync (default 15 min) plus event-driven updates; an ECO that targets a BOM version already released in Passage creates a task instead of overwriting; precedence per BR-35.16.
- **FR-35.16 Customer self-billing** — Could. The system shall receive customer self-billing documents (EDIFACT INVOIC with BGM 389 self-billed invoice, VDA 4908 credit notes, X12 810 flagged as self-billed by partner profile), match them line by line to Passage shipments and invoices (wave 29) by delivery note/ASN number, PO line, item and quantity, post matched documents as the legal invoice, and route differences to a dispute worklist (BR-35.15).
    - Notes: enabled per customer with a self-billing agreement reference and validity dates (EU VAT Directive Art. 224); tolerances per customer (default quantity 0, price 0.01 per unit); the customer's document number is stored as the legal invoice number; wave-29 billing rule `SELF_BILLED` suppresses Passage's own invoice for those shipments; a shipment not self-billed after `self_billing_wait_days` (default 30) creates a task; remittance follows through 820/cash application (wave 30).

6.35.4 Data model

TradingPartner / EDIProfile

Field	Type	Required	Notes
partner_id	uuid	yes	PK
party_id	uuid	yes	FK Party (wave 7)
isa_qualifier, isa_id, gs_id	text	no	X12 identifiers
unb_qualifier, unb_id	text	no	EDIFACT
peppol_participant_id	text	no	`scheme:id`
transports	jsonb	yes	[{type AS2/SFTP/HTTPS, url/host, cert_ref, mdn_mode, poll_interval}]
maps	jsonb	yes	[{transaction_set, direction, map_id, version, overrides}]
ack_sla_minutes	int	yes	default 60
environment	enum	yes	TEST, PROD

Interchange / Message

Field	Type	Required	Notes
interchange_id	uuid	yes	PK
partner_id, direction	uuid/enum	yes	IN/OUT
standard, version	enum/text	yes	X12 004010 / EDIFACT D96A / UBL 2.1
control_number	text	yes	unique per partner/direction/standard
raw_payload_ref	text	yes	object storage key (MinIO/S3-compatible, in-cluster)
received_at / sent_at	timestamptz	yes	
ack_status	enum	yes	PENDING, ACCEPTED, ACCEPTED_WITH_ERRORS, REJECTED, TIMEOUT
messages	—	—	Message rows: message_id, transaction_set, st_control, canonical_ref (document id), status (RECEIVED, MAPPED, POSTED, FAILED, SENT, ACKED), error

Subscription / DeliveryAttempt

Field	Type	Required	Notes
subscription_id	uuid	yes	PK
client_id	text	yes	Keycloak client
kind	enum	yes	WEBHOOK, KAFKA
event_types	text[]	yes	CloudEvents type patterns
filter	jsonb	no	CESQL-style expression
endpoint_url, secret_ref	text	no	webhook

Field	Type	Required	Notes
topic	text	no	Kafka `hub.<tenant>.<client>`
status	enum	yes	ACTIVE, PAUSED, DEAD_LETTERED
attempt: attempt_id, event_id, attempt_no, status_code, latency_ms, next_retry_at	—	—	DeliveryAttempt

ApiClient: client_id, scopes[], quota_per_min, burst, sandbox_tenant_id, owner contact, status. **EInvoice**: einvoice_id, invoice_id (wave 29/19), format (PEPPOL_UBL/FACTURX/CII/MANDATE), xml_ref, validation_report, transmission_id, clearance_id, status (DRAFT/VALIDATED/SENT/ACCEPTED/REJECTED).

Invariants: control numbers are strictly increasing without gaps per partner/direction; a Message in POSTED references exactly one Passage document; every outbound webhook event has ≥ 1 DeliveryAttempt or is DEAD_LETTERED; an EInvoice SENT has a passing validation report. Indexing: `interchange(partner_id, direction, control_number)` unique; `message(status, received_at)`; `delivery_attempt(subscription_id, next_retry_at) WHERE status = 'RETRY'`.

6.35.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	/edi/v1/partners	Create partner profile	key	EDI_ADMIN
POST	/edi/v1/inbound/as2	AS2 receive endpoint (RFC 4130)	AS2 Message-ID	partner cert
POST	/edi/v1/interchanges/{id}:reprocess	Re-run mapping/posting from raw	key	EDI_OPERATE
POST	/edi/v1/messages/{id}:resend	Re-transmit outbound	key	EDI_OPERATE
POST	/edi/v1/maps:test	Run a map against a sample payload	—	EDI_ADMIN
POST	/einvoice/v1/invoices/{id}:validate	Build UBL/CII and run schematron	—	EINV_OPERATE
POST	/einvoice/v1/invoices/{id}:send	Transmit via AP or mandate provider	key = invoice id + format	EINV_SEND
POST	/hub/v1/clients	Register API client, scopes, quota	key	HUB_ADMIN
POST	/hub/v1/subscriptions	Create webhook/Kafka subscription	key	HUB_CLIENT
POST	/hub/v1/subscriptions/{id}:replay?from=	Replay events from timestamp	key	HUB_CLIENT
GET	/hub/v1/catalog	API/AsyncAPI catalog (Backstage-backed)	—	public (authenticated)
POST	/graphql	GraphQL endpoint	per mutation key	scopes
POST	/hub/v1/punchout/sessions	Start a punchout session (cXML or OCI)	key	PUR_REQUISITION_CREATE
POST	/hub/v1/punchout/return/{session}	Receive cart (PunchOutOrderMessage or OCI form post)	session token	session-bound
POST	/edi/v1/inbound/cxml	Receive cXML documents	payloadID	partner shared secret or certificate
POST	/edi/v1/self-billing/{id}:match	Re-run self-billing matching	key	SELF_BILLING_RECONCILE
POST	/hub/v1/connectors/{id}:sync	Trigger a connector sync (PLM, Salesforce, Shopify, Stripe)	key = connector + change token	CONNECTOR_ADMIN

Event	Trigger	Payload fields	Consumers
dev.passage.edi.message.received.v1	inbound parsed	partner_id, standard, transaction_set, control numbers, canonical_ref	purchasing, sales, AP, tms
dev.passage.edi.message.posted.v1 / failed.v1	posting outcome	message_id, document_ref, error	monitor, tasks
dev.passage.edi.message.sent.v1 / acked.v1	transmit / ack	message_id, partner_id, ack_status	analytics
dev.passage.einvoice.status.changed.v1	validation/transmission	einvoice_id, invoice_id, status, clearance_id	AR/AP, customer portal
dev.passage.hub.webhook.delivered.v1 / deadlettered.v1	delivery	subscription_id, event_id, attempts	analytics, alerting

6.35.6 User experience

Screen	Primary actions	Key fields	Duty
Partner profiles	Create, transports, certificates, maps, test	identifiers, transport, map versions, SLA	EDI_ADMIN
Map designer	Edit expressions, test with samples, diff versions	segment, element, expression, lookup	EDI_ADMIN
Message monitor	Filter, view raw/canonical, reprocess, resend	partner, set, control no, status, ack, age	EDI_OPERATE
Partner SLA dashboard	Ack latency, failure rate, volume	partner, p95 ack, failures	EDI_OPERATE
e-Invoice workspace	Validate, send, view clearance, errors	invoice, format, status, schematron errors	EINV_OPERATE
Developer portal (external)	Browse APIs/events, create keys, test console, subscriptions, usage	OpenAPI, AsyncAPI, quotas, attempts	HUB_CLIENT
Hub admin	Clients, quotas, subscriptions, dead letters	client, scopes, quota, DLQ count	HUB_ADMIN

Interaction rules: monitor supports bulk reprocess (≤ 200) with a dry run; raw payloads open in a segment-tree viewer with element hover showing the X12 dictionary name; developer portal "try it" executes against the client's sandbox tenant only.

6.35.7 Business rules and edge cases

- **BR-35.1 X12 850 inbound mapping (004010) → canonical Order.**

Segment/element	Canonical field	Rule
ISA06/ISA08, GS02/GS03	partner resolution	must match profile; else reject interchange (TA1/997 R)
BEG01	purpose	00 original, 01 cancel, 04 change → create/cancel/change order
BEG02	order_type	SA standalone, BK blanket, RL release
BEG03	customer_po	required; duplicate per customer → reject with 997 AK5 R
BEG05	po_date	CCYYMMDD
CUR02	currency	ISO 4217; default partner currency
REF*DP / REF*A	department / vendor id	optional
DTM*002 / DTM*010	requested_delivery / requested_ship	DTM02 CCYYMMDD
N1*ST, N3, N4	ship_to (GLN from N104 qualifier 92/UL)	resolve to party address; unknown → task
N1*BT	bill_to	
PO101	line_no	

Segment/element	Canonical field	Rule
PO102, PO103	qty, uom (EA, CA, LB…)	UoM via qualifier table
PO104, PO105	unit_price, basis (PE per each, TP per thousand)	price verified against wave-26 pricing; variance tolerance 1% else hold
PO106/07 pairs	item cross-reference	BP buyer part → partner item xref; VP vendor part → item; UP/EN → GTIN; first match wins in order BP, VP, UP, EN
PID*F	line description	informational
SAC (loop)	charges/allowances	C=charge, A=allowance; SAC05 amount N2 (implied 2 decimals)
CTT01	line count	must equal PO1 count else reject

- **BR-35.2 X12 856 outbound mapping (004010, structure S/O/P/I) from `wms.load.shipped`.**

Segment/element	Source	Rule
BSN01/02/03/04/05	00, shipment id (load+shipment), ship date, time, 0001	BSN05 hierarchy S-O-P-I
HL*1**S	shipment	
TD1	packaging code (PLT94), lading qty, weight (G, LB/KG)	from load totals
TD5	SCAC (TD503), mode (TD504 M motor)	from tms carrier
REF*BM, REF*CN	bill of lading, PRO number	from tms load
DTM*011	ship date	
N1*ST / N1*SF	ship-to / ship-from with GLN	qualifier 92 or UL
HL**1*O	order	PRF01 customer PO, PRF04 PO date
HL**2*P	pack (pallet LP)	MAN*GM SSCC-18 (AI 00 without AI)
HL**3*I	item	LIN (VP item, UP GTIN, BP buyer part), SN101 line, SN102 qty shipped, SN103 uom
CTT01	number of HL segments	

- **BR-35.3 X12 810 outbound mapping (004010) from the wave-29 customer invoice.**

Segment/element	Source	Rule
BIG01, BIG02, BIG03, BIG04	invoice date, invoice no, PO date, customer PO	BIG07 type DI (debit) / CR (credit note)
REF*BM, REF*CO	BOL, customer order	optional
N1*RE / N1*BT / N1*ST	remit-to / bill-to / ship-to	
ITD	terms (ITD01 code, ITD03 discount %, ITD05 discount days, ITD07 net days)	from wave-29 terms
DTM*011	ship date	
IT1	IT101 line, IT102 qty, IT103 uom, IT104 unit price, IT106/07 BP/VP	
TXI	tax type (TXI01 ST/VA/GS), amount, rate	per tax line (wave 13)
SAC	freight (SAC02 D240), allowances	charge lines
TDS01	total invoice amount, N2	equals invoice total × 100
CAD	carrier, PRO	optional
CTT01	line count	

EDIFACT ORDERS/DESADV/INVOIC maps follow the same canonical model (BGM/DTM/NAD/LIN/QTY/PRI/MOA/CPS/PAC/GIN SSCC) and are shipped as fixtures.

- **BR-35.4 Peppol BIS Billing 3.0 required elements (UBL 2.1 Invoice).** `CustomizationID = urn:cen.eu:en16931:2017#compliant#urn:fdc:peppol.eu:2017:poacc:billing:3.0`; `ProfileID = urn:fdc:peppol.eu:2017:poacc:billing:01:1.0`; `ID`; `IssueDate`; `DueDate` or `PaymentTerms`; `InvoiceTypeCode` (380 invoice, 381 credit note as `CreditNote` document); `DocumentCurrencyCode`; `BuyerReference` or `OrderReference/ID` (one required); `AccountingSupplierParty/Party`: `EndpointID @schemeID` (e.g., 0088), `PartyIdentification` (optional), `PartyName`, `PostalAddress/Country/IdentificationCode`, `PartyTaxScheme/CompanyID` with `TaxScheme/ID = VAT` when VAT applies, `PartyLegalEntity/RegistrationName`; `AccountingCustomerParty/Party` (same set, `EndpointID` required); `PaymentMeans/PaymentMeansCode` (30 credit transfer, 58 SEPA) with `PayeeFinancialAccount/ID` (IBAN); `TaxTotal/TaxAmount @currencyID`; `TaxTotal/TaxSubtotal` per category: `TaxableAmount`, `TaxAmount`, `TaxCategory/ID` (S, Z, E, AE, K, G, O), `Percent`, `TaxScheme/ID = VAT`; `LegalMonetaryTotal`: `LineExtensionAmount`, `TaxExclusiveAmount`, `TaxInclusiveAmount`, `PayableAmount` (and `AllowanceTotalAmount`/`ChargeTotalAmount` when present); ≥ 1 `InvoiceLine`: `ID`, `InvoicedQuantity @unitCode` (UN/ECE Rec 20, e.g., C62, KGM), `LineExtensionAmount`, `Item/Name`, `Item/ClassifiedTaxCategory/ID` + `Percent` + `TaxScheme`, `Price/PriceAmount`. Arithmetic rules enforced before schematron: Σ line `LineExtensionAmount` = `LineExtensionAmount`; `TaxExclusiveAmount` = that – allowances + charges; `TaxInclusiveAmount` = exclusive + `TaxAmount`; `PayableAmount` = inclusive – prepaid + rounding; amounts to 2 decimals; VAT breakdown per category/rate equals Σ lines. Validation runs CEN-EN16931-UBL then PEPPOL-EN16931-UBL schematron; any `fatal` blocks sending.
- **BR-35.5 Control numbers and duplicates.** Outbound ISA13/GS06/ST02 per partner from a gap-free number sequence (wave 5); inbound duplicate ISA13 within 30 days → TA1 code 025 / reject; a 997 is generated within 60 s for every inbound functional group; missing partner 997 after `ack_sla_minutes` → alert and resend once.
- **BR-35.6 Idempotent posting.** Inbound 850 posting uses idempotency key `partner:BEG03:BEG01`; a re-sent original (BEG01 00) with the same PO number returns the existing order and is acknowledged accepted; a change (BEG01 04) applies as a wave-26 order change with version.
- **BR-35.7 Webhook delivery.** Retries at 10 s, 1 m, 5 m, 30 m, 2 h, 6 h, 12 h, 24 h; HTTP 2xx = success; 410 Gone pauses the subscription; signature header `Passage-Signature: t=<unix>,v1=<hmac>` over `t.body`; receiver must verify within 5 min of `t`. Events per aggregate are delivered in order; a failing event blocks later events for the same aggregate only (per-aggregate queue).
- **BR-35.8 Quotas.** Token bucket per client (rate/min, burst); exceeding returns 429 with `Retry-After`; quota consumption is counted per request and per 100 GraphQL complexity points.
- **BR-35.9 Replay.** Replay from timestamp T re-delivers events with `ce-passagereplay: true`; consumers must treat them idempotently; replay is capped at 1,000,000 events per request and runs as a Temporal workflow with progress.
- **BR-35.10 e-Invoice status.** `DRAFT → VALIDATED → SENT → ACCEPTED|REJECTED`; REJECTED allows correction and a new transmission with the same invoice id and a new `transmission_id`; an ACCEPTED invoice cannot be re-sent, only credited.
- **BR-35.11 AS2 MDN.** Async MDN awaited 1 h, then resend up to 5×, then FAILED with alert; MDN signature mismatch is FAILED immediately.
- **BR-35.12 PII masking** in the monitor hides N1/N3/N4 address lines and party contact elements for users without `EDI_PII_VIEW`.
- **BR-35.13 Punchout return validation.** Each returned line needs a supplier part id, quantity > 0, unit price ≥ 0 in a currency allowed for the supplier, and a UoM mapped through the UN/ECE Recommendation 20 table; failing lines are dropped with EDI-0133 and the rest are created; the cart total is recomputed as Σ quantity × price and compared with the message total; a difference > 0.01 rejects the whole cart with EDI-0134; a price above catalog price × (1 + `punchout_price_tolerance_pct`) flags the line for approval.

- **BR-35.14 cXML idempotency.** Inbound `payloadID` is the idempotency key per partner; a repeat with identical content returns the original response; a repeat with different content is rejected with EDI-0135 and logged.
- **BR-35.15 Self-billing matching.** Key = (customer, delivery note/ASN number, PO line, item). Quantity difference > tolerance or price difference > tolerance → DIFFERENCE with reason; a self-billed line without a matching shipment → UNMATCHED; matched documents post with the customer's number as the external (legal) invoice number and Passage's internal number as reference; VAT is recomputed by the wave-13 tax engine and a difference > 0.01 is a DIFFERENCE.
- **BR-35.16 PLM import precedence.** An imported ECO with effectivity earlier than today is moved to today with EDI-0139; revisions are ordered by the PLM revision scheme; importing the same part + revision twice is idempotent.

6.35.8 Acceptance criteria

- **AC-35.1** (FR-35.2, FR-35.3, FR-35.4, FR-35.12) Given the partner simulator, when it sends 850, 855 is returned, 856 and 810 are produced after shipment and invoicing, and the simulator's 997s are matched, then every supported transaction set round-trips with no manual step and the message monitor shows ACKED for each.
- **AC-35.2** (FR-35.6, BR-35.4) Given 50 demo invoices (standard, reverse-charge, zero-rated, with allowances), when UBL is built, then all pass CEN and Peppol schematron with zero fatal errors and the amounts rules hold.
- **AC-35.3** (FR-35.9, BR-35.7) Given a webhook endpoint that fails 3 times then succeeds, when an event is published, then exactly one successful delivery is recorded after 3 retries and ordering per aggregate is preserved.
- **AC-35.4** (FR-35.9, BR-35.9) Given a consumer that rebuilds a projection from scratch, when events are replayed from the tenant's start, then the projection equals the current Passage state for the sales order aggregate fixture.
- **AC-35.5** (BR-35.5) Given an inbound interchange with an ISA13 already seen 10 days ago, when received, then it is rejected with TA1 025 and no order is created.
- **AC-35.6** (FR-35.8, BR-35.8) Given a client with quota 600/min, when 700 requests are sent in a minute, then ≥ 100 receive 429 with `Retry-After` and the portal usage chart shows the burst.
- **AC-35.7** (BR-35.1) Given an 850 with PO104 differing from the wave-26 price by 3%, when posted, then the sales order is created on price hold with a task.
- **AC-35.8** (BR-35.2) Given a shipped load with 2 pallets × 3 cases for 2 orders, when the 856 is generated, then HL levels are S(1) O(2) P(2) I(n) with MAN*GM SSCCs equal to the wms LP ids and CTT01 equals the HL count.
- **AC-35.9** (phase exit) Given the demo distributor and manufacturer tenants, when the distributor sends an 850, then the manufacturer ships and invoices and the distributor's AP shows a matched vendor invoice from the 810 and the Peppol UBL, both within 15 minutes of each event.
- **AC-35.10** (FR-35.13, BR-35.13) Given a cXML punchout simulator returning 3 items with one unmapped UoM, when the cart returns, then 2 requisition lines are created with the catalog flag and the third is reported with EDI-0133.
- **AC-35.11** (FR-35.13) Given an OCI 5.0 catalog, when the HOOK_URL form post returns NEW_ITEM-DESCRIPTION[1] and [2] with prices and units, then 2 requisition lines carry those values.
- **AC-35.12** (FR-35.14, BR-35.14) Given a PO sent as cXML OrderRequest to the network simulator, when ConfirmationRequest, ShipNoticeRequest and InvoiceDetailRequest return, then the PO is confirmed, an ASN is available for receiving, and a vendor invoice is created and 3-way matched; replaying the invoice payloadID creates nothing new.
- **AC-35.13** (FR-35.16, BR-35.15) Given 10 shipments to a self-billing customer and an INVOIC BGM 389 covering 9 of them with one price difference of 0.05 per unit, when processed, then 8 lines settle, 1 goes to the dispute worklist, and after 30 days the unbilled shipment raises EDI-0138.
- **AC-35.14** (FR-35.15, BR-35.16) Given a PLM simulator releasing part P revision B with a 3-line BOM, when the connector syncs, then a wave-9 ECR with that BOM version exists and the release status is written back; a second sync of the same revision changes nothing.

6.35.9 Test plan and fixtures

Fixtures: `x12-samples` (004010 850/855/856/810/820/214/204/990/997, 20 variants each from partner implementation guides), `edifact-samples` (ORDERS/ORDRSP/DESADV/INVOIC D96A), `peppol-invoices-50` (UBL built from wave-29 invoices, including all tax category codes), `factur-x-10.pdf`, `partner-simulator` config for the demo distributor, `webhook-chaos` (failing endpoint profiles), `replay-salesorder-projection`.

Test	Type	Target	Pass criterion
Parser/serializer	unit/property	X12/EDIFACT	round-trip byte-equal after normalization
Map tests	unit	each map	canonical equals expected JSON
Round-trip	E2E (simulator)	every transaction set	ACKED, documents posted
Schematron	contract	Peppol UBL	0 fatal on 50 invoices; known-bad fixtures produce expected rule ids
Webhook delivery	property	retries/ordering	at-least-once, ordered per aggregate
Replay	E2E	projection rebuild	equals current state
Quota	performance (k6)	gateway	429 behavior, p95 overhead < 5 ms
AS2 interop	contract	mendelson/OpenAS2	MDN exchanged signed+encrypted

Reconciliation: inbound 850 count = sales orders created + rejected + held; outbound 810 count = invoices posted with EDI partners; Peppol SENT = invoices flagged e-invoice for Peppol customers; webhook events published = delivered + dead-lettered.

6.35.10 Deployment and operations

Helm `passage-edi` (api, as2 receiver behind Envoy with client-cert passthrough, sftp poller, mapper workers), `passage-einvoice`, `passage-integration-hub` (gateway policies on Envoy Gateway for keys/quotas, webhook dispatcher, Kafka subscription provisioner using Strimzi `KafkaUser`/`KafkaTopic` CRs), `passage-devportal` (Backstage with the catalog plugin, OpenAPI/AsyncAPI docs rendered from the service registry), `passage-partner-simulator` (non-prod only), connector charts `passage-connector-{salesforce,shopify,stripe}`. CloudNativePG `integration-db` (3 instances, 200 GB; payloads in in-cluster object storage, 13-month retention). Config: `EDI_ACK_SLA_MIN=60`, `EDI_DUP_WINDOW_DAYS=30`, `HUB_DEFAULT_QUOTA=600`, `HUB_WEBHOOK_RETRIES=8`, `EINV_AP_PROVIDER=<adapter>`. Flags: `edi.enabled` per partner, `einvoice.peppol`, `einvoice.facturx`, `hub.graphql`, `hub.replay`. Scheduled: SFTP poll 60 s, ack SLA sweep 5 min, DLQ report daily, certificate expiry check daily (alert 30 days before). SLOs: inbound 850 to sales order p95 < 30 s; outbound document generated within 60 s of the source event; 997 within 60 s; webhook first attempt within 5 s of event p95; gateway overhead p95 < 5 ms; availability 99.9%. Alerts: ack SLA breaches; AS2 MDN failures; DLQ depth > 100; certificate expiring; schematron failure rate > 5%. Runbook: partner certificate rotation; reprocess failed interchanges after a map fix; drain and replay DLQ; rotate client secrets. Rollback: per-partner flag off (queue inbound, do not process); map version pin to the previous version; hub gateway policies are versioned in Git with Argo CD rollback.

6.35.11 Migration from AX / SAP

Source	Passage entity	Transformation
AifPort/AifInboundPort/AifOutboundPort, AifService/AifAction	TradingPartner transports, map assignments	port → transport; service/action → transaction set/direction
AifDocumentLog, AifMessageLog (last 13 months)	Interchange/Message history (read-only)	payloads copied to object storage
ERFormatMappingTable/ERModelMappingTable (e-invoice configurations)	EInvoice format config	ER formats are not executable in Passage; only the country/format selection and customer flags migrate
Dual-write entity maps	Connector mappings (Salesforce reference)	field map table only
BusinessEventsEndpoint/Catalog	Subscription	endpoint type → WEBHOOK
EDPP1, EDP12/EDP13/EDP21 (WE20)	TradingPartner, maps	partner type LI/KU → vendor/customer party; message type ORDERS/DESADV/INVOIC → maps
EDIPOA/port definitions (WE21), TBD05 (BD64)	Transports, subscriptions	file ports → SFTP; tRFC ports → HTTPS webhook
EDIDC/EDID4/EDIDS (last 13 months, statuses 03/53/51)	Interchange/Message history	EDI_DC40 control fields (DOCNUM, IDOCTYP, MESTYP, SNDPRN, RCVPRN, STATUS) → message columns; EDIDD SDATA kept raw
EDOCUMENT/EDOCUMENTFILE (DRC)	EInvoice with clearance ids	status mapping; XML kept as reference
PI/PO integration directory (ICO)	Partner/transport inventory	exported as a spreadsheet for manual re-creation; routing logic not migrated

Not migrated: AIF transforms (XSLT/.NET), ABAP user exits in IDoc processing, PI/PO mappings (Java/graphical) — mapping logic is re-authored in Passage maps; IDoc history older than 13 months (lakehouse archive).

6.35.12 Dependencies, risks, open questions

Depends on: wave 34 (204/990/214 and freight invoices), wave 31 (SSCC/LPs for 856), wave 30 (cash application for 820), wave 29 (customer invoices), wave 26 (sales order intake and change), wave 19 (vendor invoices), wave 17 (purchase orders for outbound 850), wave 13 (tax categories for UBL), wave 7 (parties, GLNs), wave 5 (gap-free sequences), wave 4 (outbox, schema registry), wave 3 (entity APIs).

Risk	Likelihood	Impact	Mitigation
Peppol access point certification/onboarding timeline	Medium	Medium	Certified third-party AP adapter; two providers evaluated
Partner implementation guides require per-partner map work at every customer	High	Medium	Override layer, simulator, map test harness; estimate 1–3 days per partner
Public API surface freezes the data model early	Medium	High	Additive-only versioning; v1 scope limited to entities stable since wave 30
Licensing decision (PRD §12 Q1) affects developer portal terms	Medium	Low	Portal terms page templated; decision required before wave 35 close

Open questions: (1) Which certified Peppol AP provider for the reference adapter? Proposed: evaluate two, pick by wave 35 start. (2) GraphQL as first-class or REST-only for v1 public APIs? Proposed: both, GraphQL read-only at first; decide by wave 35 design review. (3) Where do connector products live long-term (core repo vs marketplace)? Proposed: separate repos under the hub; decide by wave 46.

6.35.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
edi.enabled	trading partner	bool	false	true / false	Processes the partner's traffic (rollback queues inbound)	AIF inbound/outbound port "Enabled"	WE20 partner profile, WE21 port
ack_sla_minutes	trading partner	int	60	5–1,440	997/CONTRL expectation (BR-35.5)	n/a	ALEAUD/STATUS message settings
dup_window_days	tenant	int	30	7–365	Duplicate interchange window (BR-35.5)	n/a	EDI subsystem duplicate check
x12_version	partner × transaction set	enum	004010	004010 / 005010	Parser/serializer version (FR-35.2)	n/a (ISV)	Message type version in WE20
delimiters	trading partner	jsonb	element `*`, segment `~`, component `>`, repetition `^`	any non-alphanumeric	Envelope syntax	n/a	EDI subsystem settings
as2_mdn_mode	trading partner	enum	SYNC	SYNC / ASYNC / NONE	MDN handling (FR-35.5)	n/a	AS2 adapter channel (B2B add-on)
as2_mdn_timeout_min	trading partner	int	60	5–1,440	Resend trigger (BR-35.11)	n/a	AS2 channel timeout
sftp_poll_s	trading partner	int	60	15–3,600	Inbound poll (FR-35.5)	Recurring integration recurrence	File port / file adapter poll interval
payload_retention_months	tenant	int	13	3–120	Payload retention (FR-35.10)	AIF message log cleanup	IDoc archiving (SARA object IDOC)
pii_masking	tenant	bool	true	true / false	Masks N1/N3/N4 (BR-35.12)	n/a	n/a
peppol_ap_provider	legal entity	adapter id	none	certified AP adapters	Peppol transport (FR-35.6)	Electronic invoicing parameters (Invoicing service)	DRC interface connector (Peppol exchange)
einvoice_formats	legal entity × customer	set	{PEPPOL_UBL}	PEPPOL_UBL / FACTURX / CII / MANDATE	Formats generated (FR-35.6, FR-35.7)	Customer e-invoice settings + ER format configuration	DRC eDocument types per country
schematron_version	tenant	reference data	current Peppol BIS 3.0 release	versioned	Validation rules (BR-35.4)	ER configuration version	DRC note-based updates
hub_default_quota_per_min / hub_burst	API client	int	600 / 100	10–100,000	Token bucket (BR-35.8)	n/a	API Management rate-limit policy
webhook_retries	subscription	int	8	0–12	Retry schedule length (BR-35.7)	Business events endpoint retries	Event Mesh retry settings
replay_max_events	tenant	int	1,000,000	1–10,000,000	Replay cap (BR-35.9)	n/a	n/a

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
api_deprecation_months	tenant	int	12	≥ 12	Sunset period (FR-35.8)	n/a	n/a
punchout_session_timeout_min	supplier	int	30	5–120	Cart return window (FR-35.13)	External catalog session	OCI catalog call settings
punchout_price_tolerance_pct	supplier	numeric(5,2)	0	0–20	Approval flag threshold (BR-35.13)	n/a	Requisition price check
cxml_auth	trading partner	enum	SHARED_SECRET	SHARED_SECRET / CERTIFICATE	cXML sender credential (FR-35.14)	n/a	Ariba Network / CIG authentication
self_billing_enabled	customer	bool	false	true / false	Suppresses own invoice; expects self-billing (FR-35.16)	n/a	SPRO SD › EDI › Self-Billing Procedure › Control Self-Billing Procedure
self_billing_tolerance	customer	qty / price	0 / 0.01 per unit	≥ 0	DIFFERENCE threshold (BR-35.15)	n/a	Self-billing tolerance settings
self_billing_wait_days	customer	int	30	1–120	Unbilled shipment task (FR-35.16)	n/a	n/a
plm_sync_interval_min	connector	int	15	1–1,440	Scheduled PLM sync (FR-35.15)	Engineering PLM sync batch recurrence	PLM integration schedule

6.35.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Message monitor	list inquiry / drill-down	partner, transaction set, status, age, control number	raw, canonical, failing rule, acks	`interchange`, `message`	AIF exception log; data management job history	WE02 / WE05 / BD87; SXMB_MONI
Partner SLA dashboard	KPI	partner, period	p95 ack latency, failure %, volume	message metrics	n/a	AIF interface monitor (/AIF/IFMON)
Control number continuity	operational report	partner, direction	expected vs used, gaps	`interchange`	n/a	IDoc number analysis (WE05)
e-Invoice status	list inquiry	legal entity, country, status	invoice, format, transmission id, clearance id, errors	`einvoice`	Electronic invoicing submission log	EDOC_COCKPIT
Webhook delivery and dead letters	list inquiry	client, subscription, status	attempts, latency, last status code	`delivery_attempt`	Business events endpoint status	Event Mesh monitor
API usage by client	KPI	client, period	requests, 429 count, p95 latency	gateway metrics	n/a	API Management analytics
Punchout session log	list inquiry	supplier, user, date	session, lines returned, rejected, total	`punchout_session`	n/a	OCI shopping cart log
cXML document log	list inquiry	network, document type, status	payloadID, status code, linked document	`message`	n/a	CIG / Ariba Network message monitor
Self-billing reconciliation	operational report	customer, period	matched, DIFFERENCE, UNMATCHED, unbilled shipments	`self_billing_document`	n/a	WE02 filtered on message type GSVERF; self-billing analysis
Connector sync log	list inquiry	connector, status	objects synced, errors, change token	`connector_config` runs	Dual-write / PLM sync log	Integration Suite message processing log

6.35.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
X12 / EDIFACT interchanges (850, 855, 856, 810, 820, 214, 204, 990, 997; ORDERS, ORDRSP, DESADV, INVOIC, CONTRL)	Source events (outbox) and inbound receipt	ISA/GS/ST or UNB/UNH envelopes; maps per BR-35.1–BR-35.3	EDI	ISA13 / GS06 / ST02 gap-free per partner and direction	Payloads 13 months (configurable); invoice interchanges archived as tax records (wave 46)
Peppol UBL invoice and credit note	Invoice posted for a Peppol customer	BR-35.4 elements	UBL 2.1 XML via access point	Wave-29 invoice number	Original XML archived: DE 8 years (AO §147 as amended 2025), FR and IT 10 years
Factur-X / ZUGFeRD invoice	Invoice posted for a flagged customer	PDF/A-3 with embedded EN 16931 CII XML	PDF	Wave-29 invoice number	As Peppol invoices
Mandate submissions (FatturaPA, CFDI 4.0)	Invoice posted in mandate country	Country schema	XML via `MandateProvider`	Clearance id from authority	Country pack (wave 48)
AS2 MDN receipts	Every AS2 message	Message-ID, MIC, disposition	S/MIME	none	Kept with the payload as non-repudiation evidence
cXML documents	PO, confirmation, ship notice, invoice	cXML 1.2 envelope and payload	XML	payloadID	As EDI payloads
Self-billed invoice copy	Self-billing document posted	Customer's invoice number, "self-billing" mention, lines, VAT breakdown	PDF render + original EDI	Customer's number (legal); internal reference	Supplier keeps as its sales invoice: 10 years default

6.35.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
SFTP poll	Every 60 s	trading partner	file name + SHA-256	< 10 s	Retry 5× exponential (max 1 h)	Poll failures > 3 consecutive
Ack SLA sweep	Every 5 min	trading partner	interchange id	< 30 s	Resend once (BR-35.5)	Ack SLA breaches
Webhook retry dispatcher	Continuous on `next_retry_at` index	subscription	event id + attempt number	First attempt < 5 s p95	Dead-letter after 8 attempts	DLQ depth > 100
DLQ daily report	Daily 07:00	API client	date	< 1 min	Rerun	none
Certificate expiry check	Daily 05:00	partner certificate	certificate id	< 1 min	Rerun	Expiry within 30 days
e-Invoice status poll	Every 5 min	provider	transmission id	< 1 min	Back-off on provider errors	Invoices SENT > 24 h without status

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
Payload retention purge	Daily 01:00	tenant × month partition	partition id	< 10 min	Retry next day	Partitions past retention
PLM sync	Every 15 min	connector	PLM change token	< 2 min	Resume from token	Sync failures > 3 consecutive
Self-billing unbilled check	Daily 06:00	customer	shipment id	< 2 min	Rerun	Unbilled shipments past wait days
Punchout session cleanup	Hourly	supplier	session id	< 1 min	Rerun	none

6.35.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
EDI_ADMIN	/edi/v1/partners, /edi/v1/maps:test; map designer	EDI_OPERATE in production (change map and reprocess the same traffic)	Integration administrator
EDI_OPERATE	/interchanges/{id}:reprocess, /messages/{id}:resend; message monitor	none	Integration operator
EDI_PII_VIEW	Unmasked payload view (BR-35.12)	none	Integration lead
EINV_OPERATE	/einvoice/v1/invoices/{id}:validate; e-invoice workspace	none	Accounts receivable clerk
EINV_SEND	/einvoice/v1/invoices/{id}:send	none	Accounts receivable supervisor
HUB_ADMIN	/hub/v1/clients, quotas, dead-letter handling	HUB_CLIENT on the same client (self-granting scopes)	Platform administrator
HUB_CLIENT	/hub/v1/subscriptions, /subscriptions/{id}:replay; developer portal	none	External developer
PUR_REQUISITION_CREATE (wave 17)	/hub/v1/punchout/sessions	PUR_PO_APPROVE (wave 17)	Requisitioner
SELF_BILLING_RECONCILE	/edi/v1/self-billing/{id}:match; dispute worklist	AR_CREDIT_NOTE_APPROVE (wave 29)	Accounts receivable specialist
CONNECTOR_ADMIN	/hub/v1/connectors/{id}:sync; connector configuration	none	Integration administrator

6.35.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
EDI-0101	error	Interchange sender {isa06} is not configured for any partner.	Unknown sender	Create or correct the partner profile	BR-35.1
EDI-0102	error	Duplicate interchange control number {isa13} (seen {date}); TA1 025 sent.	Duplicate ISA13 within window	Partner resends with a new number	BR-35.5
EDI-0103	error	CTT01 {n} does not match PO1 count {m}.	Truncated or malformed 850	Partner resends	BR-35.1
EDI-0104	warning	Price {p} differs from list {l} by {pct} %; order on price hold.	Variance > 1 %	Sales reviews the hold	BR-35.1
EDI-0105	error	No item cross-reference for {qualifier} {value}.	Unknown buyer/vendor part or GTIN	Add cross-reference; reprocess	BR-35.1
EDI-0106	error	Ship-to GLN {gln} not found.	Unknown location	Add GLN to party address; reprocess	BR-35.1
EDI-0107	warning	No 997 from {partner} after {n} min; resent once.	Ack SLA breach	Contact partner	BR-35.5
EDI-0108	error	AS2 MDN signature mismatch for message {id}.	Certificate or tampering	Verify partner certificate	BR-35.11
EDI-0109	error	Control number gap for {partner}: expected {e}, generated {g}.	Sequence defect	Incident; do not resend until fixed	§6.35.4 invariants
EINV-0110	error	Schematron rule {rule} failed: {text}.	Invalid UBL/CII	Correct invoice data	BR-35.4
EINV-0111	error	Arithmetic check failed: TaxInclusiveAmount ≠ TaxExclusiveAmount + TaxAmount.	Rounding or line errors	Correct invoice	BR-35.4
EINV-0112	error	Invoice {no} is already accepted; issue a credit note.	Resend of ACCEPTED invoice	Credit and reissue	BR-35.10
HUB-0113	error	Quota exceeded; retry after {s} s.	Token bucket empty (429)	Back off	BR-35.8
HUB-0114	warning	Subscription {id} paused: endpoint returned 410 Gone.	Receiver gone	Update endpoint and resume	BR-35.7
HUB-0115	error	Event {event} dead-lettered after 8 attempts.	Receiver failing	Fix receiver; replay from DLQ	BR-35.7
HUB-0116	info	Replay {id} delivered {n} of {total} events.	Replay progress	None	BR-35.9
EDI-0133	warning	Punchout line {n} dropped: {reason}.	Missing part id, bad UoM or currency	Correct supplier mapping	BR-35.13
EDI-0134	error	Punchout cart total {a} differs from line sum {b}; cart rejected.	Inconsistent cart	Repeat punchout; contact supplier	BR-35.13
EDI-0135	error	cXML payloadID {id} reused with different content.	Partner defect or replay attack	Partner sends a new payloadID	BR-35.14
EDI-0136	warning	Self-billed line {line} differs: {field} {theirs} vs {ours}.	DIFFERENCE	Dispute or accept	BR-35.15
EDI-0137	error	Self-billed line {line} has no matching shipment.	UNMATCHED	Investigate with customer	BR-35.15
EDI-0138	warning	Shipment {s} not self-billed after {n} days.	Customer has not billed	Follow up with customer	FR-35.16
EDI-0139	warning	PLM ECO {eco} effectivity moved to today.	Backdated effectivity	Review with engineering	BR-35.16

6.35.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Inbound 850 → sales order	5,000 orders/day; peak 300/min (Monday batches)	2 / 30 / 60 s end to end	10 interchanges/s	Payloads ≈ 50 GB (13-month rolling)	`interchange(partner_id, direction, control_number)` unique; `message` monthly partitions	Kafka backlog; SLA stretches to ≤ 2 min; no loss
Outbound document generation	20,000 documents/day	5 / 30 / 60 s from source event	20/s	Included above	Outbox per source service	Backlog alert; order of documents per partner preserved

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
997 / CONTRL generation	One per inbound functional group	< 60 s	20/s	—	—	Acks queued with priority over outbound documents
Peppol validation	10,000 invoices/day	300 ms / 1.5 s / 2 s	20/s	UBL ≈ 73 GB at 20 KB each	`einvoice(status, created_at)`	Schematron workers scale; sending delayed, never skipped
Webhook first attempt	2 M events/day; peak 5,000/s	1 / 5 / 10 s	5,000/s	Attempts 30 days ≈ 100 GB	`delivery_attempt` daily partitions	Per-aggregate queues; slow endpoints isolated per subscription
Gateway overhead	20 M requests/day; peak 2,000 req/s	1 / 5 / 10 ms	2,000 req/s	Metrics only	—	Quotas return 429; lowest-tier clients shed first
Replay	1 M events per request	< 10 min	2,000 events/s	—	Kafka offsets by timestamp	Throttled to protect live delivery
Punchout return	500 sessions/day	300 ms / 1 s / 2 s	5/s	Sessions ≈ 0.2 GB	`punchout_session(supplier_id, created_at)`	Return queued; session timeout still applies
Self-billing match	2,000 lines/day	< 1 s per 200-line document	10 documents/s	≈ 0.5 GB	(customer, delivery note) index	Matching queued per customer

6.35.20 Localization and compliance hooks

- **e-Invoicing mandates.** Belgium: B2B Peppol mandatory from 2026-01-01. Germany: receipt of EN 16931 e-invoices required since 2025-01-01, issuance from 2027-01-01 (turnover > EUR 800,000) and 2028-01-01 for all, as XRechnung (UBL/CII) or ZUGFeRD ≥ 2.0.1 with EN 16931 profile. France: receipt from 2026-09-01 through certified platforms (PDP), issuance for large and mid-size companies from 2026-09-01 and SMEs from 2027-09-01. Poland KSeF: 2026-02-01 for large taxpayers, 2026-04-01 for others. Italy SDI (FatturaPA) and Mexico CFDI 4.0 (PAC stamping) are clearance models. EU ViDA (Directive (EU) 2025/516) introduces digital reporting for intra-EU B2B from 2030. Each lands as a country pack (wave 48) implementing `MandateProvider`; FR-35.7 stores clearance ids and statuses.
- **Self-billing.** EU VAT Directive 2006/112/EC Art. 224 requires a prior agreement and an acceptance procedure, and Art. 226(18) requires the mention "Self-billing"; Germany UStG §14(2) "Gutschrift"; automotive formats VDA 4908 and Odette INVOIC. Country packs validate the mention and agreement fields through `SelfBillingPolicy`.
- **Retention.** e-Invoices are archived in their original XML format through wave 46 (WORM storage): Germany 8 years (AO §147, amended 2025), France and Italy 10 years (Italy with conservazione sostitutiva).
- **Privacy.** Payloads contain personal data (names, addresses, contacts): masking (BR-35.12), 13-month payload retention, and GDPR erasure requests are refused for documents under legal retention (Art. 17(3)(b)); API clients outside the EEA require a transfer assessment recorded on the ApiClient.
- **Character sets and time.** X12 basic/extended character sets; EDIFACT UNOA/UNOB/UNOC (ISO 8859-1) and UNOW (UTF-8); UBL and cXML UTF-8; ISA09/ISA10 in sender local time; UBL IssueDate in the supplier's legal date.
- **Punchout.** Currency and UoM per supplier; taxes on punchout lines are determined later by the wave-13 tax engine, never taken from the cart.

6.35.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX GAP #53 — §12.16.1 Procurement: External catalogs (punchout cXML/OCI)	GAP (propose 35)	ADDED as FR-35.13	Lines return to the wave-17 requisition; BR-35.13, AC-35.10, AC-35.11
AX PARTIAL #285 — §12.34.1 Engineering → PLM integration (Teamcenter/Windchill connectors)	PARTIAL-35	ADDED as FR-35.15	Reference connector on public APIs; AC-35.14
AX PARTIAL #291 — §12.34.3 Engineering → Sync with PLM (batch)	PARTIAL-35	ADDED as FR-35.15	"PLM sync" job in §6.35.16
AX PARTIAL #298 — §12.34.4 Engineering → PLM connector configuration	PARTIAL-35	ADDED as FR-35.15	`plm_sync_interval_min`; ConnectorConfig
SAP #139 — §13.12 MM-PUR Ariba Network integration (cXML, Cloud Integration Gateway)	PARTIAL-35	ADDED as FR-35.14	cXML catalogs also covered by FR-35.13; BR-35.14, AC-35.12
SAP #129 — §13.12 Fiori Create Purchase Requisition with catalogs (OCI punch-out) — flagged for this wave	PARTIAL-17	ADDED as FR-35.13	Requisition UI stays wave 17; punchout transport and cart intake here
SAP #220 — §13.19 VKA / VSB1 self-billing procedure (customer self-billing) — flagged	GAP (propose 29)	ADDED as FR-35.16	Adds wave-29 billing rule `SELF_BILLED`; BR-35.15, AC-35.13

Part 7 — Phase 7: Treasury, Assets & Controlling (waves 36–40)

7.0 Phase overview

Business outcome at phase exit. At the end of wave 40 the finance function runs entirely on Passage: treasury sees every bank balance intraday and a 13-week cash forecast built from the subledgers; fixed assets and leases depreciate under multiple books and post to the universal journal; controllers plan budgets, enforce budget control on commitments, and run a cost accounting ledger with allocations; product costs roll up from BOMs and routings with a cost component split, and production variances are decomposed by cause; intercompany trade posts mirror documents across legal entities and the group consolidates with eliminations and IAS 21 translation. This is the "finance parity" milestone in PRD §10 (wave 40): a practicing controller signs off that nothing they did in AX/SAP finance is missing.

Phase-exit sign-off criteria

- 1,000-line bank statement fixture auto-matches ≥ 95% of lines correctly with zero false positive matches (wave 36 proof).
- Cash forecast total per bucket equals the sum of source contributions to the cent, verified by a property test over 10,000 generated open items (wave 36).
- 100 asset × method × convention fixtures match IRS Publication 946 tables and the straight-line edge cases to the cent; the asset subledger ties to GL asset cost and accumulated depreciation accounts with zero difference (wave 37).
- IFRS 16 lease schedules match the accountant-reviewed workbook to the cent for 25 fixture leases (wave 37).
- Budget check blocks or warns every over-budget PO per policy; encumbrance liquidation on invoice is exact to the cent (wave 38).
- Every allocation cycle converges and `total cost out = total cost in` to the cent; cost accounting ledger primary costs reconcile to GL (wave 38).
- 50 multi-level cost roll-ups match the reference workbook across all cost components; variance decomposition sums to total variance for 200 ended production orders; mass roll of 50,000 items completes in < 15 minutes (wave 39).
- Intercompany mirror documents balance across entities for 1,000 random IC orders; IC reconciliation flags 100% of planted mismatches; the 3-entity, 2-currency demo group consolidates to accountant-reviewed statements (wave 40).
- Daily subledger-to-GL reconciliation jobs for bank, assets, cost accounting, costing and intercompany run green for 10 consecutive days in `stage`.

Cross-wave data model summary

Entity	Owning service (domain DB)	Key relationships
BankAccount, BankStatement, StatementLine, ReconciliationMatch, MatchingRule	`treasury-svc` (Postgres `treasury`)	BankAccount → LegalEntity, MainAccount (wave 11); StatementLine → payment (wave 19), receipt (wave 30)
CashForecastEntry, CashPosition	`cashforecast-svc` (Python, Postgres `treasury`)	Reads AP/AR open items, bank balances, recurring entries
BankConnection, OutboundFile, InboundFile	`bank-connect-svc` (TS, Postgres `treasury`)	Keys referenced by Vault path only
Asset, AssetBook, DepreciationProfile, AssetTransaction, Lease, LeaseSchedule	`asset-svc` (Postgres `assets`)	Asset → Project (wave 41 later), PurchaseLine (wave 17), InventTrans (wave 16); posts via journal API (wave 11)
BudgetRegisterEntry, BudgetPlan, BudgetControlRule, Encumbrance, BudgetCheckResult	`budget-svc` (Postgres `controlling`)	Encumbrance → Requisition/PO (wave 17), VendorInvoice (wave 18)
CostObject, CostElement, CostEntry, AllocationPolicy, AllocationRun, StatisticalMeasure	`costacct-svc` (Postgres `controlling`)	CostEntry mirrors journal lines by dimension (wave 11)
CostingVersion, CostingSheet, CostGroup, CostCalculation, CostComponentSplit, ItemCostRecord, VarianceEntry	`costing-svc` (Postgres `costing`, extends wave 20)	Reads BOM/Route versions (wave 9), production orders (wave 21), inventory cost trans (wave 20)
IntercompanyPartner, IcDocumentLink, IcJournal, IcReconciliationItem	`interco-svc` (TS, Postgres `group`)	Links SalesOrder (wave 27) ↔ PurchaseOrder (wave 17), invoices, payments
ConsolidationGroup, ConsolidationUnit, Ownership, EliminationRule, ConsolidationRun, ConsolidationEntry	`consol-svc` (Postgres `group`)	Reads balances per ledger (wave 11), rates (wave 12), statements (wave 15)

Cross-wave event catalog

Event (CloudEvents type)	Producer	Consumers	Payload summary
`dev.passage.treasury.statement.reconciled.v1`	treasury-svc	journal (wave 11), cashforecast-svc, analytics (46)	statementId, bankAccountId, matchedCount, unmatchedCount, closingBalance
`dev.passage.treasury.cashposition.updated.v1`	cashforecast-svc	dashboards, interco-svc (netting)	legalEntityId, asOf, balancesByAccount[], forecastBuckets[]
`dev.passage.assets.depreciation.posted.v1`	asset-svc	costacct-svc, analytics	runId, bookId, period, assetCount, totalAmount, journalEntryId
`dev.passage.assets.asset.disposed.v1`	asset-svc	costacct-svc, tax (wave 13)	assetId, bookId, proceeds, nbv, gainLoss
`dev.passage.budget.check.completed.v1`	budget-svc	procurement (17), AP (18), workflow	sourceDocumentId, result (pass/warn/fail), availableBefore, amount, availableAfter
`dev.passage.controlling.allocation.completed.v1`	costacct-svc	budget-svc, analytics	runId, policyId, iterations, totalIn, totalOut, residual
`dev.passage.costing.standardcost.activated.v1`	costing-svc	inventory costing (20), production (21), budget-svc	costingVersionId, itemCount, revaluationJournalId, totalRevaluation
`dev.passage.costing.variance.posted.v1`	costing-svc	costacct-svc, analytics	productionOrderId, varianceByType{lotSize,quantity,price,substitution}, byComponent[]
`dev.passage.interco.mirror.created.v1`	interco-svc	sales (27), procurement (17), consol-svc	sourceDocId, sourceEntity, mirrorDocId, mirrorEntity, type
`dev.passage.consol.run.completed.v1`	consol-svc	reporting (15), analytics	runId, groupId, period, unitCount, eliminationCount, ctaAmount

Phase-level risks

Risk	Likelihood	Impact	Mitigation	Owner
Bank connectivity (EBICS/Open Banking) certification differs per bank and takes weeks	High	Medium	Ship SFTP first; EBICS and PSD2 against public sandboxes; keep adapters behind one `BankChannel` interface	Engineering
Depreciation or lease math diverges from auditor expectation on edge cases (short years, mid-quarter, modifications)	Medium	High	Fixture library reviewed by the accountant; property tests that total depreciation always equals depreciable basis	Product

Risk	Likelihood	Impact	Mitigation	Owner
Budget control latency slows PO entry	Medium	Medium	p95 budget check < 150 ms SLO; per-dimension-combination balance cache rebuilt from events	Engineering
Reciprocal allocations fail to converge with circular self-references	Low	Medium	Exact linear solve for ≤ 2,000 senders; capped iteration with residual sweep rule (BR-38.6)	Engineering
Cost roll-up on cyclic or 20+ level BOMs	Medium	Medium	Cycle detection at BOM approval (wave 9) and at roll time; hard depth limit 20	Engineering
Two-person team across five accounting-heavy waves	High	High	Accountant review gate per wave; AI-assisted generation per PRD §11	Owners

7.36 Wave 36: Cash & Bank Management, Reconciliation & Treasury

7.36.1 Scope and business context

Wave 36 gives treasury a system of record for bank accounts and the daily mechanics around them. Before this wave, AP payments (wave 19) and AR receipts (wave 30) post to GL bank accounts, but nobody can import a bank statement, reconcile it, know the intraday position, or forecast cash. After it, a treasury analyst imports camt.053/BAI2/MT940 statements (or receives them automatically through SFTP/EBICS/Open Banking), the matching rule engine reconciles ≥ 95% of lines without touching them, exceptions are worked in a reconciliation workspace, and a cash position and 13-week forecast refresh from the subledgers every hour. Checks can be issued, voided and reprinted; letters of credit and bank guarantees are tracked with facility limits; intercompany netting and notional cash pooling basics are available for groups.

Out of scope: hedge accounting and derivative valuation (not in v1), in-house bank virtual accounts with interest calculation, lockbox OCR, treasury trading (money market, FX deals). Payroll (wave 43) and project (wave 41) forecast sources are consumed through the forecast source interface once those waves exist; until then recurring forecast entries stand in.

Scope amendment (gap closure). The gap registers (coverage-ax §12.99 rows 1–19, coverage-sap §13.99 rows 2–84 proposed or mapped to wave 36) assign the following to this wave, and they are added below: customer bills of exchange and vendor promissory notes (FR-36.13, FR-36.14), postdated checks (FR-36.15), cash journal / petty cash (FR-36.16), bank fee analysis from camt.086 (FR-36.17), treasury deals limited to FX spot, forward and swap plus fixed-term deposits (FR-36.18), loan contracts with interest schedules including intercompany loans (FR-36.19), FX exposure (FR-36.20), treasury payment requests and bank-to-bank transfers (FR-36.21), bank chains (FR-36.22), payment hub routing (FR-36.23) and in-house cash current accounts (FR-36.24, Could, flag-gated; this supersedes the out-of-scope note above for virtual accounts with interest). Hedge accounting (IFRS 9 / ASC 815), derivatives other than FX forwards and swaps, securities and money-market trading beyond fixed-term deposits remain out of scope for v1; their disposition is recorded in 7.36.21.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
D365 advanced bank reconciliation: statement import via DMF (BankStatementFormat + XSLT transform) fails silently on bank camt dialects; the user re-imports after editing XSLT	Transform-first design; no schema validation surfaced to the user	Native camt/BAI2/MT940 parsers with per-bank profile overrides and line-level validation errors	Failed imports needing IT help: 1 in 5 → < 1 in 200
SAP FEBAN post-processing: each unmatched line is opened, the clearing document found in FBL5N, keyed and posted (≈ 14 clicks per line)	Posting rules (OT83) only test search strings; no candidate ranking	Scored candidates shown inline; `m` to match; N:1 batch matching	Clicks per exception 14 → 2; auto-match ≥ 95%
BankReconciliationMatchingRule in D365 is pass/fail; a 1-day value-date difference leaves the line unmatched	Boolean rules, no partial credit	Weighted scoring with tolerance and date-window decay	Unmatched lines after rules: 30% → < 5%
Cash position in AX = BankAccountTable.Balance updated at posting; SAP FF7A refreshes in a batch run; both ignore intraday camt.052	Batch-oriented, no intraday feed	camt.052 ingestion on arrival; position recomputed per event	Position latency 4 h batch → < 60 s after file arrival
EBICS keys held on a Windows share for a bank client tool; audit cannot prove who sent what	Connectivity outside the ERP	`bank-connect-svc` signs in Vault; every file hashed and acknowledged	100% of files with signer, hash and bank ack in audit

7.36.2 AX / SAP parity map

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Bank account master, signatories, approval	BankAccountTable, BankAccountTrans, BankGroup, form BankAccountTable; D365 bank account change workflow	FI12 house banks T012/T012K, BAM (FCLM_BAM) with signatories and workflow	`treasury-svc` BankAccount entity, workspace Bank accounts	full
Electronic statement import	BankStmtISOAccountStatement, BankStmtISOReportEntry, BankStatementFormat, DIXF ISO 20022 transform	FF_5 (FEBKO/FEBEP), FF67 manual statement, OT83 posting rules, external transaction codes	Statement import API, formats camt.053/BAI2/MT940/CSV	improved (native XSD validation, duplicate detection)
Advanced bank reconciliation	BankReconciliationHeader, BankReconciliationMatchingRule, BankReconciliationMatchingRuleSet, BankReconciliationWorkspace	FEBAN post-processing, FEB_BSPROC, search strings (OTPM), interpretation algorithms	Matching rule engine with scoring, reconciliation workspace	improved
Check management	BankChequeTable, BankChequeReprint, check void/reverse, positive pay BankPositivePayFormat	PAYR check register, FCH5/FCH8/FCH9 (void/reissue), FCHN, FCHX	Check entity with void/reprint/stop, positive pay (wave 19 export)	full
Letters of credit / guarantees	BankLCImport, BankLCExport, BankLGTable (letters of guarantee), BankFacility, BankFacilityAgreement	No native EBS equivalent; TRM/bank guarantee via FI-TRM or custom; S/4 Trade Finance	Facility, LetterOfCredit, Guarantee entities with limit tracking	full
Cash position (intraday)	Bank balance per account only (BankAccountTable.Balance), no intraday	FF7A cash position, FQM_FLOW (One Exposure), camt.052 intraday	camt.052 ingestion, CashPosition view by entity/currency/account	improved
Cash flow forecast	LedgerCov, LedgerCovDocument, Cash flow forecasting setup, workspace Cash overview	FF7B liquidity forecast, FQM planning levels/groups, Cash Management liquidity planner	`cashforecast-svc` buckets daily/weekly/monthly from AP/AR/recurring sources	full
Intercompany netting, cash pooling	Not native (centralized payments only)	IHC In-House Cash, cash pooling (concentration) in S/4 Cash Management	Netting run creating IC settlement journals; notional pool structures	partial (no IHC virtual accounts)
Bank connectivity	None native (file-based via DMF)	Bank Communication Management (BCM), Multi-Bank Connectivity (MBC)	`bank-connect-svc` adapters SFTP/EBICS 3.0/PSD2 XS2A, Vault keys	improved

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Bills of exchange (customer)	CustBillOfExchangeJour, CustBillOfExchangeTrans, LedgerJournalTable types Customer bill of exchange draw / redraw / remittance / settle / protest, CustPaymModeTable (bill of exchange), remittance types Collection / Discount, Cash and bank management parameters → Bills of exchange	F-36 (BoE payment), F-33 (discount), F-34 (collection), FBWD / FBWE presentation, special G/L indicator W (BSID/BSED), S_ALR_87012199 BoE list	BillOfExchange entity with draw / remit / protest / settle lifecycle (FR-36.13)	full
Promissory notes (vendor)	VendPromissoryNoteJour, VendPromissoryNoteTrans, journal types Vendor promissory note draw / redraw / remittance / settle, vendor posting profile per note status	F-40 (AP bill of exchange payment), FBW6 reversal, FBWE presentation, special G/L W (BSIK), S_ALR_87012116	PromissoryNote entity (FR-36.14)	full
Postdated checks	CustPostdatedChecks / VendPostdatedChecks (R3 APAC), Cash and bank management parameters → Postdated checks tab (clearing accounts, withholding tax at settlement)	No standard object; noted item (special G/L S) or BoE used in practice	PostdatedCheck entity with maturity, deposit, bounce (FR-36.15)	improved
Cash journal / petty cash	Not native (LedgerJournal against a cash main account)	FBCJ, TCJ_DOCUMENTS / TCJ_POSITIONS / TCJ_C_JOURNALS, FBCJC0–FBCJC3 setup, S_ALR_87012309 cash book	CashDesk and CashJournalDocument with daily close (FR-36.16)	full
Bank fee analysis	None	Fiori Bank Fee Analysis / Bank Relationship Overview, camt.086 import (BAM)	BankFeeStatement import and variance to fee agreement (FR-36.17)	full
Treasury deals (FX, deposits)	None	FTR_CREATE / FTR_EDIT / FTR_00 (TRM transaction manager), VTBFHA / VTBFHAPO, TBB1 flow posting, TPM1 key-date valuation, TPM10, TPM12 / TPM13 position and flow lists, TPM20 posting journal	TreasuryDeal with flows, settlement and key-date valuation (FR-36.18)	partial (FX spot / forward / swap and fixed-term deposits only; no derivatives beyond these, no securities)
Loans management	None (loans kept as journals)	CML / FN* loan contracts, FNM1 flows, F.52 balance interest used for IC loans	LoanContract with schedule and interest accrual (FR-36.19)	partial (annuity / linear / bullet, fixed or index-linked rate; no structured loans)
FX exposure	None	Treasury Exposure Management (raw exposures, exposure positions)	FxExposure derived from AP / AR / orders / forecast / loans, offset by deals (FR-36.20)	partial
Payment requests and bank-to-bank transfers	Bank account transfer via LedgerJournal (account type Bank → Bank)	FIBLFFP payment request, F111 payment program for payment requests, FRFT / FRFT_B repetitive codes	TreasuryPaymentRequest with repetitive templates and four-eyes approval (FR-36.21)	full
Bank chains	Intermediary bank fields on VendBankAccount only	FIBC bank chains (TBCHAIN11 / TBCHAIN21 / TBCHAIN31)	BankChain per currency / receiving country / receiving BIC used in pain.001 IntrmyAgt (FR-36.22)	full
Payment hub routing	Centralized payments (wave 40, FR-40.12)	Advanced Payment Management (APM) routing, batching, reformatting; BCM batch approval	PaymentRoutingRule and central payment monitor in `bank-connect-svc` (FR-36.23)	partial (no cross-tenant hub)
In-house cash	None	IHC0 / IHC1IP in-house cash center, IHC accounts, internal payment orders, interest conditions, subsidiary account statements	IhcAccount with internal payment orders, interest and generated camt.053 (FR-36.24)	partial (no external payments routed through IHC accounts in v1)
Hedge accounting	None	THMEX hedge management, hedge effectiveness test run, hedge plan reports, THM* customizing	none	dropped-with-reason: IFRS 9 / ASC 815 hedge accounting is deferred to v2; FX deals are valued through P&L (7.36.21)

7.36.3 Functional requirements

- **FR-36.1 Bank account master** — Must. The system shall maintain bank accounts per legal entity with IBAN/BIC or routing/account numbers, currency, GL main account, bank transaction types, signatories and a change-approval workflow.
  - Notes: IBAN mod-97 and ABA routing checksum validated on save; account numbers stored encrypted at rest (pgcrypto, key in Vault) and shown masked except to the `TreasuryBankAccountMaintain` duty; status lifecycle Draft → Active → Inactive → Closed; changes to number/currency/GL account require 2-step approval (Temporal workflow); maximum 500 bank accounts per legal entity.
- **FR-36.2 Statement import** — Must. The system shall import bank statements in camt.053.001.02/08, BAI2, MT940 and configurable CSV, validate structure, detect duplicates and persist header, balances (OPBD/CLBD/CLAV) and entries.
  - Notes: files up to 50 MB and 200,000 entries; duplicate detection on (bankAccount, statementId or sequence, closingBalance); gap detection on statement sequence numbers raises a warning; each entry retains the raw source fragment for audit; import of 10,000 lines completes in < 30 s.
- **FR-36.3 Matching rule engine** — Must. The system shall match statement lines to Passage bank transactions using ordered rule sets, producing a 0–100 score per candidate and auto-matching above a configurable threshold.
  - Notes: criteria: amount (exact / tolerance absolute or %), value date window (±N days), reference regex capture (end-to-end id, check number, invoice number), counterparty name trigram similarity, bank transaction code map (BTC/domain-family-subfamily); weights sum to 100; default thresholds auto-match ≥ 90, suggest 60–89, unmatched < 60; 1:1, 1:N and N:1 matches with up to 50 lines per side; rules tested against historical statements with a precision/recall report before activation.
- **FR-36.4 ML match suggestions** — Should. The system shall rank unmatched lines' candidates with a model trained on the tenant's confirmed matches and present the top 3 suggestions with reasons.
  - Notes: Python gradient-boosted model in `cashforecast-svc`; retrained nightly if ≥ 200 new confirmed matches; suggestions never auto-post; model inputs and version logged per suggestion.
- **FR-36.5 Reconciliation workspace** — Must. The system shall let users confirm, split, create new transactions (fees, interest) from unmatched lines, mark lines as in-transit, and close the reconciliation when book and bank balances agree.
  - Notes: closing requires `|bank closing − (book balance + outstanding items)| = 0.00`; new transactions created from lines post through the wave-11 journal API with the statement line as source document; reversed matches keep history; reconciliation of 10,000 lines closes in < 60 s.
- **FR-36.6 Check management** — Must. The system shall issue, void, reprint and stop checks with gap-free check numbers per bank account.
  - Notes: void keeps the number consumed; reprint issues a new number and voids the old; status Created → Printed → Sent → Cleared / Voided / Stopped; positive pay file (wave 19 format) regenerated on void.

- **FR-36.7 Letters of credit and guarantees** — Must. The system shall record import/export letters of credit and bank guarantees against bank facilities with limits, expiry and amendments, and link them to purchase or sales orders.
  - Notes: facility utilization = Σ open instruments; new instrument blocked when utilization + amount > limit unless duty `TreasuryFacilityOverride`; expiry alerts 30/7/1 days; margin deposits post via the journal.
- **FR-36.8 Cash position** — Must. The system shall present intraday position per legal entity, currency and bank account from the latest camt.052 or statement balance plus same-day unposted payments and receipts.
  - Notes: refreshed on every inbound file and at least hourly; converted to entity reporting currency at the wave-12 spot rate; age of each balance displayed; stale (> 24 h) balances flagged.
- **FR-36.9 Cash flow forecast** — Must. The system shall compute forecast buckets (daily 30 days, weekly 13 weeks, monthly 12 months) from registered sources.
  - Notes: sources: AP open items (due date adjusted by vendor average days-late), AR open items (due date + customer DSO delta), open POs/SOs not yet invoiced (expected invoice date + terms), recurring entries, manual adjustments, later payroll (43) and projects (41); each source implements `ForecastSource.Contribute(asOf) []Contribution`; every bucket total equals the sum of its contributions (property test); 1M open items forecast in < 5 min.
- **FR-36.10 Intercompany netting** — Should. The system shall run a netting cycle across participating entities, net IC receivables/payables per pair and currency, and create settlement journals.
  - Notes: cycle statuses Proposed → Approved → Settled; netting rate = wave-12 rate on settlement date; residual below 1.00 in currency written off to IC rounding account.
- **FR-36.11 Cash pooling** — Could. The system shall model notional and physical (zero-balancing) pool structures and generate sweep transfers.
  - Notes: target balance per sub-account; sweep creates payment (wave 19) with pool header as counterparty.
- **FR-36.12 Bank connectivity** — Must. The system shall send payment files and receive statements through SFTP, EBICS 3.0 (H005) and PSD2/Berlin Group XS2A adapters with keys and certificates in Vault.
  - Notes: signing via Vault transit engine; private keys never leave Vault; every outbound file hashed (SHA-256) and logged with user, time, channel and bank acknowledgment; retries with exponential backoff up to 24 h; sandbox profiles per adapter.
- **FR-36.13 Bills of exchange (customer)** — Should. The system shall draw bills of exchange against customer open items, redraw unpaid bills, remit bills to a bank for collection or discount, record protest, and settle bills at maturity, posting each status through a customer posting profile per status.
  - Notes: lifecycle Drawn → Remitted (Collection or Discount) → Honored | Protested; a Redraw creates a new bill that settles the protested one; posting: Draw Dr Bills receivable / Cr Customer (open items settled, wave 30 settlement engine); Remit for collection Dr Bills remitted for collection / Cr Bills receivable; Remit for discount Dr Bank (net), Dr Discount expense / Cr Bills remitted; Honored on bank statement match (FR-36.3 rule criterion `billNumber`) Dr Bank / Cr Bills remitted; Protest reverses to the customer open item plus protest fee line; remittance files (CFONB 160, RiBa CBI, AEB 58 / 19) come from the wave-48 country packs through the wave-19 format engine; feature flag `treasury.bills-of-exchange`; bill numbers from a per-entity number sequence; maximum 5,000 bills per remittance.
- **FR-36.14 Promissory notes (vendor)** — Should. The system shall draw promissory notes against vendor open items, redraw, remit notes to the bank, and settle them at maturity through vendor posting profiles per status.
  - Notes: lifecycle Drawn → Remitted → Settled, with Redraw replacing an unpaid note; Draw Dr Vendor (open items settled, wave 19 settlement) / Cr Notes payable; Settle on bank statement match Dr Notes payable / Cr Bank; notes due within the forecast horizon contribute to FR-36.9 on maturity date with confidence 1.0; the note document prints with the vendor remittance (7.36.15); same flag as FR-36.13.
- **FR-36.15 Postdated checks** — Should. The system shall register customer postdated checks received and vendor postdated checks issued with a check date later than the registration date, hold them in PDC clearing accounts, deposit or present them at maturity, and handle bounced checks.
  - Notes: customer PDC lifecycle Registered → Deposited (maturity deposit journal Dr Bank / Cr PDC clearing) → Cleared | Bounced (reverse, restore customer open item, bounce fee line, customer credit hold event to wave 30); vendor PDC Issued → Presented → Cleared, with the vendor open item settled at registration (parameter `settle-vendor-on-registration`) or at clearing; withholding tax (wave 13) computed at check date when `withholding-at-pdc-settlement` is on (AX R3 India / Thailand behavior); check date drives the FR-36.9 forecast bucket; the `maturity-deposit` job (7.36.16) proposes deposits per bank account daily.
- **FR-36.16 Cash journal (petty cash)** — Must. The system shall maintain cash desks per legal entity and site with a currency, GL cash account and number sequence; record receipts and payments by business transaction type; and close each day with a counted balance.
  - Notes: business transaction types Receipt, Payment, CustomerReceipt (settles wave-30 open items), VendorPayment (settles wave-19 open items), BankDeposit, BankWithdrawal, each with default main account, tax code and dimension defaults; documents are Saved (editable) then Posted (journal API, source document = cash journal document); daily close requires `counted = computed closing` where computed = opening + Σ receipts – Σ payments, otherwise a difference line posts to the cash difference account up to a parameterized limit (default USD 10.00 / EUR 10.00) and above it the close is blocked; negative desk balance is blocked at posting; receipt printout per document; maximum 50 desks per legal entity.
- **FR-36.17 Bank fee analysis (camt.086)** — Should. The system shall import camt.086 bank services billing statements, store fee lines by AFP service code with volume, unit price and tax, compare them to the bank fee agreement, and report variances.
  - Notes: BankFeeAgreement holds expected unit price per (bank, service code, currency) with effective dates; variance = (billed unit price – agreed) × volume plus unexpected service codes; tolerance default 1% per line; monthly fee accrual posts optionally (Dr Bank fees / Cr Accrued bank fees) and is cleared by the statement charge line (BTC CHRG) through FR-36.3; 12 months of statements retained online, 7 years archived.
- **FR-36.18 Treasury deals (FX spot / forward / swap, fixed-term deposits)** — Should. The system shall capture deals with counterparty bank, trade date, value dates, buy and sell amounts, rate and forward points, confirm them against the bank confirmation, generate settlement flows, value open deals at key dates and post the results.
  - Notes: deal types FxSpot, FxForward, FxSwap (near and far legs), FixedTermDeposit; status Draft → Confirmed (manual or MT300 / camt.054 match) → Settled → Closed, with Canceled from Draft or Confirmed; settlement flows become treasury payment requests (FR-36.21) on value date; key-date valuation of a forward: mark-to-market = (market forward rate for the remaining tenor – contract rate) × notional, converted at the spot rate, discounted with the wave-12 yield curve when `discount-mtm` is on; unrealized gain / loss posts to P&L (no hedge accounting) and reverses on the first day of the next period; deposits accrue interest daily with the deal's day-count convention (ACT/360 default, ACT/365, 30/360); accounting codes map (deal type, flow type) to accounts; worked example: forward sell EUR 1,000,000 against USD at 1.1000; at the key date the market forward for the remaining tenor is 1.0850, so the deal value to the EUR seller = (1.1000 – 1.0850) × 1,000,000 = USD 15,000.00 unrealized gain (undiscounted); maximum 20,000 open deals per tenant.
- **FR-36.19 Loan contracts (bank and intercompany)** — Should. The system shall record loan contracts as lender or borrower with principal, schedule type, interest terms and day-count convention, generate the repayment and interest schedule, accrue interest per period and create the settlement flows.
  - Notes: schedule types Annuity, Linear (equal principal), Bullet; rate fixed or floating (reference index + spread with fixings imported from the wave-12 rate service); day-count ACT/360, ACT/365, 30/360; accrual posts Dr Interest expense / Cr Accrued interest (borrower) or Dr Accrued interest / Cr Interest income (lender); intercompany loans create both entities' contracts from one record, post interest as an IC journal (wave 40 due-to / due-from matrix) each period, which covers F.52-style balance interest for IC loans; worked example: EUR 1,000,000 bullet, 3.00% ACT/360, 30-day period → interest = 1,000,000 × 0.03 × 30 / 360 = 2,500.00; early repayment recomputes the remaining schedule prospectively; schedules contribute to FR-36.9 and FR-36.20.

- **FR-36.20 FX exposure** — Could. The system shall derive FX exposures per currency pair and bucket from AP and AR open items, open purchase and sales orders, forecast entries, loan flows and deals, and present the net open exposure after deals.
  - Notes: exposure = Σ inflows – Σ outflows per currency and bucket (same buckets as FR-36.9) – Σ deal legs maturing in the bucket; hedge ratio = hedged / gross exposure; export CSV for the treasury committee; no automatic deal proposals.
- **FR-36.21 Treasury payment requests and bank-to-bank transfers** — Must. The system shall create payment requests that are not vendor open items (transfers between own bank accounts, third-party treasury payments, deal and loan settlements), approve them, and hand them to the wave-19 payment engine with category `TreasuryTransfer`.
  - Notes: repetitive templates (SAP FRFT equivalent) store counterparty, accounts, amount and purpose for one-click requests; four-eyes approval required above a per-entity threshold (default USD 50,000 / EUR 50,000), with the approver different from the creator (SoD check in OPA); intercompany transfers post due-to / due-from through the wave-40 matrix; a request for a Draft or Inactive bank account is rejected; cutoff times per bank from FR-36.23 determine the execution date.
- **FR-36.22 Bank chains** — Should. The system shall maintain correspondent and intermediary bank chains per currency, receiving bank country and receiving BIC, and apply them when generating payment files.
  - Notes: up to 3 hops per chain; written to pain.001 `IntrmyAgt1–3` and MT103 fields 56 / 57 by the wave-19 format engine; BIC validated (ISO 9362); chains effective-dated; a payment to a currency / country without a chain is not blocked.
- **FR-36.23 Payment hub routing and monitor** — Should. The system shall route approved payment batches from every legal entity to a channel and format profile by rule, batch them per bank cutoff, and show one monitor of all batches with bank status.
  - Notes: rule key (legal entity, bank account, payment method, currency, amount band, urgency) → (connection, format profile); batching windows per connection (for example every 30 minutes and a final run 15 minutes before the bank cutoff); status from pain.002 and camt.054 updates the batch and the underlying payments (wave 19 / wave 30); central batch approval optional per entity (BCM-style); rules are versioned and tested against the last 30 days of payments before activation (dry-run report of routing changes).
- **FR-36.24 In-house cash current accounts** — Could. The system shall run an in-house cash center at one legal entity with current accounts per participating entity, internal payment orders between them, interest conditions, and monthly statements that the participants import like bank statements.
  - Notes: flag `treasury.ihc`; IhcAccount per (participant entity, currency) with credit and debit interest conditions (fixed or index + spread), overdraft limit; internal payment order debits the payer account and credits the payee account same day and posts due-to / due-from through the wave-40 matrix in both entities; monthly interest capitalizes to the account; a camt.053 is generated per account at month end and on demand and imported by the participant through FR-36.2 so that FR-36.3 reconciles it; external payments on behalf of participants go through FR-36.23 routing in v1 without passing through the IHC account.
- **FR-36.25 Balance interest on GL and intercompany accounts** — Could. The system shall calculate interest on the daily balances of selected main accounts (typically intercompany current accounts and shareholder accounts) using interest indicators with debit and credit rates, and post the interest with an interest advice.
  - Notes: interest indicator = (rate table or reference index + spread, day-count, calculation period, minimum amount 1.00); interest = Σ_days balance_d × rate_d / basis, separately for debit and credit days; balance per value date from the wave-11 balance projection; postings Dr Interest receivable / Cr Interest income (or the reverse) per account and dimension; for intercompany accounts the counterpart posts in the partner entity through the wave-40 IC journal (FR-40.5); reuses the day-count library of FR-36.19; run is per legal entity and period and is rerunnable after reversal only.

7.36.4 Data model

BankAccount

Field	Type	Required	Notes
id	uuid	yes	PK
legal_entity_id	uuid	yes	FK org (wave 6)
account_code	text(20)	yes	unique per entity
iban / account_number	text, encrypted	yes	one of the two; masked in API
bic / routing_number	text	no	validated
currency	char(3)	yes	ISO 4217
main_account_id	uuid	yes	FK ledger account (wave 11)
status	enum	yes	Draft/Active/Inactive/Closed
next_check_number	bigint	no	gap-free sequence
signatories	jsonb	no	[{partyId, limit, currency}]

BankStatementLine

Field	Type	Required	Notes
id	uuid	yes	PK
statement_id	uuid	yes	FK BankStatement
line_no	int	yes	unique in statement
booking_date / value_date	date	yes	
amount	numeric(19,4)	yes	signed, statement currency
btc_code	text	no	ISO 20022 domain/family/subfamily
references	jsonb	no	EndToEndId, InstrId, Ustrd, chequeNumber
counterparty_name	text	no	normalized for trigram index
status	enum	yes	Unmatched/Suggested/Matched/Created/InTransit
raw_fragment	text	yes	source XML/text slice

ReconciliationMatch

Field	Type	Required	Notes
id	uuid	yes	PK
reconciliation_id	uuid	yes	FK ReconciliationHeader
statement_line_ids	uuid[]	yes	1..50
bank_transaction_ids	uuid[]	yes	1..50

Field	Type	Required	Notes
score	smallint	yes	0–100
rule_id	uuid	no	null when manual
matched_by	text	yes	user or `rule-engine`
matched_at	timestamptz	yes	
reversed_at	timestamptz	no	

CashForecastEntry: id, legal_entity_id, source_type (AP/AR/PO/SO/Recurring/Manual/Payroll/Project), source_id, expected_date, amount, currency, confidence (0–1), bucket_key, computed_at.

Entities added by FR-36.13–FR-36.25 (summaries; tables follow the same conventions as above):

- **TreasuryInstrument**: id, legal_entity_id, kind (BillOfExchange/PromissoryNote/PostdatedCheck), direction (Receivable/Payable), number (per-entity sequence), party_id, bank_account_id, amount numeric(19,4), currency, issue_date, maturity_date (check date for PDC), status (Drawn/Registered/Remitted/Deposited/Presented/Honored/Settled/Cleared/Protested/Bounced/Redrawn), remittance_id, settled_open_item_ids uuid[], protest_reason_code, replaced_by_id.
- **CashDesk**: id, legal_entity_id, site_id, code, currency, main_account_id, difference_account_id, difference_limit numeric(19,4), number_sequence_id, status. **CashJournalDocument**: id, desk_id, document_no, business_date, transaction_type, amount, tax_code, party_id, open_item_ids, dimensions, status (Saved/Posted/Reversed), journal_entry_id. **CashDeskDay**: desk_id, business_date, opening, receipts, payments, computed_closing, counted, difference, status (Open/Closed/Reopened), closed_by.
- **BankFeeStatement / BankFeeLine**: statement_id, bank_party_id, billing_period, line: service_code (AFP), description, volume numeric(19,4), unit_price numeric(19,6), amount, tax, agreed_unit_price, variance, status (Within/Over/Under/Unexpected).
- **TreasuryDeal**: id, legal_entity_id, deal_no, type (FxSpot/FxForward/FxSwap/FixedTermDeposit), counterparty_bank_id, trade_date, near_value_date, far_value_date, buy_currency, buy_amount, sell_currency, sell_amount, contract_rate numeric(19,8), forward_points numeric(19,8), interest_rate numeric(9,6), day_count, status, confirmation_ref, flows jsonb [{flowType, valueDate, amount, currency, paymentRequestId, journalEntryId}].
- **LoanContract**: id, legal_entity_id, role (Borrower/Lender), counterparty_party_id, ic_partner_id, principal, currency, start_date, maturity_date, schedule_type (Annuity/Linear/Bullet), rate_type (Fixed/Floating), fixed_rate, index_code, spread_bp, day_count, status (Draft/Active/Repaid/Terminated); **LoanScheduleLine**: period_no, start, end, opening_principal, interest, principal_repayment, closing_principal, fixing_rate, accrual_journal_id, settlement_request_id.
- **TreasuryPaymentRequest**: id, legal_entity_id, category (TreasuryTransfer/DealSettlement/LoanSettlement/ThirdParty/IhcExternal), from_bank_account_id, to_bank_account_id or beneficiary jsonb, amount, currency, requested_date, execution_date, template_id, status (Draft/Submitted/Approved/Routed/Sent/Executed/Rejected), approver_id. **BankChain**: currency, receiving_country, receiving_bic, hops[1..3] (BIC, account), effective_from. **PaymentRoutingRule**: version, match keys, connection_id, format_profile_id, batch_window_min, cutoff_local_time.
- **IhcAccount**: id, center_entity_id, participant_entity_id, currency, credit_condition, debit_condition, overdraft_limit, balance (projection), status; **IhcPaymentOrder**: id, payer_account_id, payee_account_id, amount, value_date, status, journal_pair_id.
- **InterestIndicator / InterestRun**: indicator code, rate table, day_count, period; run id, legal_entity_id, period, accounts[], total_debit_interest, total_credit_interest, journal_entry_ids.

Invariants: Σ amounts of matched statement lines = Σ amounts of matched bank transactions ± configured tolerance; a bank transaction belongs to at most one non-reversed match; statement closing balance = opening balance + Σ lines; a closed reconciliation is immutable. Indexes: statement lines by (bank_account_id, value_date), GIN trigram on counterparty_name, partial index on status = Unmatched; CashForecastEntry partitioned monthly by expected_date, retention 24 months.

`dev.passage.treasury.file.sent.v1`	outbound file acknowledged	connectionId, fileHash, channel, ackStatus	audit
`dev.passage.treasury.instrument.statuschanged.v1`	bill / note / PDC status change	instrumentId, kind, fromStatus, toStatus, amount, maturityDate	AR (30), AP (19), cashforecast-svc
`dev.passage.treasury.pdc.bounced.v1`	PDC bounced	instrumentId, customerId, amount, fee, reasonCode	AR (30) credit hold
`dev.passage.treasury.cashdesk.closed.v1`	desk day closed	deskId, businessDate, closing, difference	journal audit, analytics
`dev.passage.treasury.deal.valued.v1`	valuation posted	runId, keyDate, dealCount, unrealizedTotal, journalEntryId	analytics, consol-svc
`dev.passage.treasury.paymentrequest.approved.v1`	request approved	requestId, category, amount, currency, executionDate	bank-connect-svc routing
`dev.passage.treasury.ihc.statement.generated.v1`	IHC month-end statement	ihcAccountId, participantEntityId, period, closingBalance, fileRef	treasury-svc import (participant)

7.36.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Bank accounts	Create, edit (workflow), close, view balances	code, IBAN (masked), currency, GL account, status, last statement	TreasuryBankAccountMaintain
Reconciliation workspace	Run rules, confirm, split, create transaction, close	line date/amount/reference, candidate score, difference, unmatched count	TreasuryReconcile
Checks	Print, void, reprint, stop	number, payee, amount, status	TreasuryCheckMaintain
Facilities and instruments	Create LC/guarantee, amend, close	facility, limit, utilization, expiry	TreasuryFacilityMaintain
Cash position	Filter entity/currency, drill to statement	account, balance, age, same-day pending	TreasuryView
Cash forecast	Change horizon, add manual entry, drill to source	bucket, inflow, outflow, net, cumulative	TreasuryView
Bank connections	Test, send, view log	channel, status, last file, ack	TreasuryBankSend

Interaction rules: the reconciliation grid supports keyboard `m` (match selected), `u` (unmatch), `n` (new transaction); multi-select up to 50 lines each side with running difference shown; rule changes require re-run before close; column layouts and filters persist per user via the wave-5 shell personalization.

7.36.7 Business rules and edge cases

- **BR-36.1** Score = Σ (criterion weight × criterion result ∈ [0,1]); amount tolerance criterion result = 1 − |Δ|/tolerance clipped at 0; date window result = 1 − |daysl/window.
- **BR-36.2** Ties above the auto threshold with more than one candidate are downgraded to Suggested; auto-match requires a unique top candidate at least 5 points above the next.
- **BR-36.3** Reconciliation state machine: Open → InProgress → Closed; Closed → Reopened only by `TreasuryReconcileApprove` within the open fiscal period; reopening reverses nothing, it only allows new matches.
- **BR-36.4** Statement currency ≠ bank account currency is rejected; FX differences between book and bank on foreign receipts post to realized gain/loss (wave 12) with the statement line as source.
- **BR-36.5** A void after Sent and before Cleared triggers a positive pay void record; void after Cleared is rejected.
- **BR-36.6** Forecast bucket boundaries use the legal entity's calendar; a contribution whose expected date falls on a non-banking day moves to the next banking day.
- **BR-36.7** Concurrency: two users confirming matches on the same line receive 409 on the second write (optimistic version on StatementLine).
- **BR-36.8** Duplicate statement file with identical hash returns 200 with the existing statement id; same statement id with different closing balance returns 409.
- **BR-36.9** Facility utilization uses the instrument's original currency converted at the daily rate; limit breaches recomputed nightly and on rate change > 2%.
- **BR-36.10** Bill of exchange state machine: Drawn → Remitted → Honored | Protested; Protested → Redrawn (new bill, old bill closed) or → ReturnedToCustomer (open item restored with protest fee); a bill cannot be remitted twice; remittance for discount books the discount expense on remittance date, not at maturity.
- **BR-36.11** Promissory note state machine: Drawn → Remitted → Settled; Drawn → Redrawn; settlement requires a matched bank statement line or a manual settlement with duty `TreasuryInstrumentSettle`; the vendor open item is settled at draw and never reopened except through a redraw reversal.
- **BR-36.12** Postdated check: a deposit before the check date is rejected unless the parameter `allow-early-deposit` is on; a bounce after Cleared is a new customer transaction (fee + reversal) with reason code; bounced customer checks raise `dev.passage.treasury.pdc.bounced.v1` consumed by wave-30 credit hold.
- **BR-36.13** Cash desk day close: closing balance = opening + Σ receipts − Σ payments in desk currency; |counted − closing| ≤ cash difference limit posts a difference line, above the limit the close is blocked; no document can post to a closed day; reopening a closed day requires `TreasuryCashDeskApprove` and the day's reopen is audited.
- **BR-36.14** Deal valuation entries are per deal and key date, reversed on the first calendar day of the next period before the new valuation; a deal settled between two key dates realizes gain / loss = settlement rate difference × notional and the last unrealized entry is reversed in the same journal.
- **BR-36.15** Interest accrual uses the contract day-count; ACT/360 for a leap-year February period counts 29 days; accrual rounding half-up to the minor unit per period, and the final period of a schedule absorbs the rounding residual so Σ interest = Σ scheduled interest.
- **BR-36.16** Treasury payment requests above the four-eyes threshold require an approver different from the creator and from the last editor; OPA denies self-approval; an edit after approval returns the request to Draft.
- **BR-36.17** In-house cash internal payment orders value the same day; an order exceeding the payer's overdraft limit is rejected unless the `TreasuryIhcOverride` duty approves; interest capitalizes on the last calendar day of the month at the conditions in force per day (daily balance method).
- **BR-36.18** Bank fee variance: a fee line is Within tolerance when |billed − agreed| / agreed ≤ 1%; a service code with no agreement line is Unexpected; a Within line never raises a message, an Over line raises TRS-0418 and an Unexpected line TRS-0419.

7.36.8 Acceptance criteria

- **AC-36.1** (FR-36.2) Given a camt.053 file with 1,000 entries, when imported, then 1,000 lines persist, opening + Σ lines = closing, and a re-upload returns the same statement id.
- **AC-36.2** (FR-36.3) Given the 1,000-line reconciliation fixture, when rules run, then ≥ 950 lines are auto-matched correctly and 0 are matched to the wrong transaction.

- **AC-36.3** (FR-36.5) Given a line for a USD 12.50 bank fee, when the user creates a transaction, then a journal entry Dr Bank fees 12.50 / Cr Bank 12.50 posts with the line as source document.
- **AC-36.4** (FR-36.5) Given a difference of 0.01, when closing, then the close is rejected with the difference displayed.
- **AC-36.5** (FR-36.6) Given check 1001 Printed, when voided and reprinted, then 1001 is Voided and 1002 is Printed with the same payee and amount.
- **AC-36.6** (FR-36.7) Given a facility of EUR 1,000,000 with EUR 950,000 utilized, when an LC of EUR 100,000 is created, then it is blocked without the override duty.
- **AC-36.7** (FR-36.9) Given 10,000 generated open items, when the forecast computes, then every bucket equals the sum of its contributions to the cent.
- **AC-36.8** (FR-36.12) Given an EBICS sandbox, when a pain.001 is sent, then the file hash, signature reference and bank acknowledgment are in the audit log and no private key bytes appear in any log or DB.
- **AC-36.9** (FR-36.13) Given a customer bill of EUR 10,000.00 drawn against two invoices and remitted for discount at 2% fee, when remitted, then the journal shows Dr Bank 9,800.00, Dr Discount expense 200.00 / Cr Bills remitted 10,000.00, and the two invoices are settled.
- **AC-36.10** (FR-36.13) Given a remitted bill, when the bank reports non-payment and the user protests it with a EUR 25.00 fee, then the customer open item of 10,025.00 is restored and the bill status is Protested.
- **AC-36.11** (FR-36.15) Given a customer PDC of USD 5,000.00 dated 2026-11-15 registered on 2026-10-20, when the forecast computes, then 5,000.00 sits in the 2026-11-15 bucket; when deposited on 2026-11-15 and bounced on 2026-11-18, then the open item of 5,000.00 plus a 15.00 fee is restored.
- **AC-36.12** (FR-36.16) Given a desk opening at EUR 500.00 with receipts 120.00 and payments 80.00, when the cashier counts 539.50 and closes, then a difference line of –0.50 posts and the day is Closed; when the cashier counts 525.00, then the close is rejected with TRS-0431.
- **AC-36.13** (FR-36.17) Given a camt.086 with service code `010100` billed at 0.26 for 1,000 items and an agreement of 0.25, when imported, then the variance line shows 10.00 Over (4%) and raises TRS-0418.
- **AC-36.14** (FR-36.18) Given the forward sell EUR 1,000,000 at 1.1000 example and a market forward of 1.0850 at the key date, when valued, then an unrealized gain of USD 15,000.00 posts and reverses on the first day of the next period.
- **AC-36.15** (FR-36.19) Given the EUR 1,000,000 bullet IC loan at 3.00% ACT/360, when the 30-day period accrues, then the lender posts Dr Due from borrower 2,500.00 / Cr Interest income 2,500.00 and the borrower the mirror entry with one ic_pair_id.
- **AC-36.16** (FR-36.21) Given a transfer request of USD 75,000.00 created by user A, when A attempts to approve, then OPA denies it; when user B approves, then a pain.001 with category `TreasuryTransfer` is routed by FR-36.23 to the bank's connection.
- **AC-36.17** (FR-36.25) Given an IC current account with a debit balance of EUR 200,000.00 for 31 days at 4.00% ACT/360, when the interest run executes for the month, then interest = 200,000 × 0.04 × 31 / 360 = 688.89 posts in the lender and the mirror entry posts in the borrower.

7.36.9 Test plan and fixtures

Fixtures: `recon-1000` (1,000 statement lines across camt.053/BAI2/MT940 with 60% exact, 25% reference-only, 10% N:1 batch receipts, 5% fees, generated from wave 19/30 payment fixtures); `forecast-10k` (generated open items with due dates across 12 months); `ebics-sandbox` (vendor sandbox recordings for contract tests); `facility-20` (LCs and guarantees with amendments).

Test	Type	Target	Pass criterion
Scoring function	Unit	rule engine	deterministic scores per criterion table
Statement parsers	Contract	camt.053 v02/v08, BAI2, MT940	100% of fixture files parse; schema errors reported with line
Match uniqueness	Property	reconciliation	no transaction in two active matches
Forecast additivity	Property	cashforecast-svc	bucket = Σ contributions
Reconcile-and-close	E2E	workspace	recon-1000 closes with difference 0
Import throughput	Performance	import API	10,000 lines < 30 s; 200,000 lines < 10 min
Adapter contracts	Contract	SFTP/EBICS/XS2A	sandbox round-trip with acknowledgment

Reconciliation checks: Σ BankAccount book balance = GL bank main account balance per entity nightly; Σ outstanding checks = positive pay open items; cash position = latest statement closing + pending.

7.36.10 Deployment and operations

Helm charts `treasury-svc`, `bank-connect-svc`, `cashforecast-svc`; config: `TREASURY_AUTO_MATCH_THRESHOLD=90`, `TREASURY_MAX_FILE_MB=50`, Vault role `bank-connect`. Atlas migrations generate tables from entity metadata. Feature flags: `treasury.ml-suggestions`, `treasury.cash-pooling`. Scheduled jobs (Temporal): `statement-poll` every 15 min per connection, `cash-position-refresh` hourly, `forecast-rebuild` hourly and on demand, `facility-expiry-check` daily 06:00. SLOs: import p95 < 30 s per 10k lines, rule run p95 < 20 s per 10k lines, forecast API p95 < 300 ms. Alerts: unreconciled lines > 7 days, connection failure > 3 retries, key rotation due. Runbook: resend file, rebuild forecast, rotate EBICS keys. Rollback: Helm rollback; matches are append-only with reversals, so no data rollback.

7.36.11 Migration from AX / SAP

Source	Passage entity	Notes
BankAccountTable, BankAccountTrans (open items)	BankAccount, BankTransaction	opening balance as of cutover; unreconciled items migrated as InTransit
BankChequeTable	Check	status map; next number continues
BankLCImport/Export, BankLGTable, BankFacility	LetterOfCredit, Guarantee, Facility	open instruments only
T012/T012K, BAM accounts	BankAccount	house bank + account id → account code
FEBKO/FEBEP (last 90 days)	BankStatement, StatementLine	for matching history and ML training
PAYR	Check	
LedgerCov / FQM_FLOW	not migrated	forecast is recomputed from sources

Validation: Σ migrated bank balances = GL bank accounts; IBAN checksums pass. Not migrated: closed reconciliations older than 90 days, matching rule configurations (re-authored, since scoring semantics differ).

7.36.12 Dependencies, risks, open questions

Depends on: wave 11 journal posting, wave 12 rates, wave 19 payment files and positive pay, wave 30 cash application, wave 35 integration hub for SFTP transport, wave 5 Vault integration.

Risk	Likelihood	Impact	Mitigation
Bank-specific camt dialects	High	Medium	Per-bank profile overrides; fixture per bank
ML suggestions mislead users	Medium	Low	Suggestions only, reasons shown, precision tracked

Open questions: (1) Default auto-match threshold 90 or 95? Proposed 90; decide by wave 36 build start. (2) EBICS versions to support (2.5 and 3.0)? Proposed 3.0 only; decide by wave 36. (3) Cash pooling in v1? Proposed Could; decide at phase 7 exit.

7.36.13 Parameters and setup

Parameters live in the `Treasury parameters` page (one tab per area, mirroring AX `BankParameters` tabs) and are versioned with effective dates; changes are audited and take effect for documents created after the change.

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`recon.autoMatchThreshold`	legal entity	int	90	60–100	score at or above which the engine auto-matches (FR-36.3)	BankReconciliationMatchingRuleSet, Cash and bank management parameters → Bank reconciliation	FEBAN interpretation algorithm + OT83 posting rule assignment
`recon.suggestThreshold`	legal entity	int	60	1–(auto – 1)	lower bound of Suggested status	matching rule "Mark as matched" vs manual	OTPM search string relevance (no score)
`recon.tieMargin`	legal entity	int	5	0–20	points the top candidate must lead by (BR-36.2)	none	none
`statement.maxFileMb`	tenant	int	50	1–200	rejects larger uploads (FR-36.2)	DMF file size limit	FF_5 file size (no limit setting)
`statement.sequenceGapPolicy`	bank account	enum	Warn	Ignore / Warn / Block	handling of missing statement numbers	none	FF_5 "check statement number"
`statement.btcMap`	bank account	table	ISO 20022 defaults	domain/family/subfamily → transaction type	maps bank codes to bank transaction types and default offset accounts	BankTransType, Bank statement transaction code mapping	OT83 external transaction types → posting rules (T028G)
`position.staleHours`	legal entity	int	24	1–168	flags old balances in cash position (FR-36.8)	none	FF7A display (no flag)
`forecast.horizon`	legal entity	struct	daily 30 / weekly 13 / monthly 12	daily 1–90, weekly 1–52, monthly 1–36	bucket layout (FR-36.9)	Cash flow forecasting setup (LedgerCovParameters)	OT14 planning levels, OT13 planning groups, FF7B horizon
`forecast.arDelayMode`	legal entity	enum	CustomerDsoDelta	None / CustomerDsoDelta / CustomerAverageDaysLate	adjusts AR expected dates	Cash flow forecasting setup → receivables payment history	FF7B planning level "customer payment history"
`check.voidReasonRequired`	bank account	bool	true	true / false	void without reason rejected	Bank account → Checks → "Require void reason"	FCH8 reason for void (T012V void reason codes)
`check.regeneratePositivePay`	bank account	bool	true	true / false	positive pay record on void (BR-36.5)	BankPositivePayFormat	FCHX positive pay extract
`facility.expiryAlertDays`	legal entity	int[]	30, 7, 1	1–365 each	LC / guarantee expiry alerts (FR-36.7)	Letters of credit → expiry notification	none native
`netting.residualWriteOff`	legal entity	money	1.00	0.00–100.00	residual to IC rounding account (FR-36.10)	none	IHC netting tolerance
`paymentRequest.fourEyesThreshold`	legal entity	money	USD 50,000 / EUR 50,000	≥ 0	second approver required above (FR-36.21)	Bank → Bank transfer workflow	FIBLFFP payment request approval (F8BT / BCM release strategy)
`instrument.billPostingProfile`	legal entity	table	none	status (Drawn/Remitted-Collection/Remitted-Discount/Protested) → account	GL accounts per bill status (FR-36.13)	Accounts receivable parameters → Bill of exchange tab, customer posting profile per bill status	OBXR special G/L indicator W accounts, OBYN bill of exchange charges

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`instrument.notePostingProfile`	legal entity	table	none	status (Drawn/Remitted/Settled) → account	GL accounts per promissory-note status (FR-36.14)	Accounts payable parameters → Promissory note tab, vendor posting profile	OBYR special G/L W (vendor)
`instrument.remittanceTypes`	bank account	enum[]	Collection	Collection / Discount	which remittance modes the bank accepts	Bill of exchange remittance types	F-33 / F-34 discount vs collection
`pdc.clearingAccounts`	legal entity	struct	none	receivable PDC account, payable PDC account	holding accounts until clearing (FR-36.15)	Cash and bank management parameters → Postdated checks tab	special G/L indicator S (noted items)
`pdc.settleVendorOnRegistration`	legal entity	bool	true	true / false	vendor open item settled at issue or at clearing	Postdated checks → "Settle postdated check"	none
`pdc.allowEarlyDeposit`	legal entity	bool	false	true / false	BR-36.12 deposit before check date	none	none
`pdc.withholdingAtSettlement`	legal entity	bool	false	true / false	withholding tax at check date (wave 13)	R3 India/Thailand "Calculate withholding tax at settlement"	extended withholding tax at payment (OBWW
`cashDesk.differenceLimit`	cash desk	money	10.00 desk currency	0.00–1,000.00	close blocked above limit (BR-36.13)	none	FBCJC0 cash journal definition (no limit)
`cashDesk.businessTransactions`	legal entity	table	6 seeded types	type, main account, tax code, dimensions	defaults per cash journal line (FR-36.16)	none	FBCJC2 business transactions (TCJ_TRANSACTIONS
`cashDesk.numberSequence`	cash desk	sequence	per desk, gap-free	number sequence id	document numbering	none	FBCJC1 number ranges
`fees.tolerancePct`	legal entity	decimal	1.00%	0.00–10.00%	Within vs Over (BR-36.18)	none	BAM bank fee analysis tolerance
`deal.dayCountDefault`	legal entity	enum	ACT/360	ACT/360 / ACT/365 / 30/360 / ACT/ACT	interest on deposits and loans	none	TRM product type interest calculation method (FTR customizing JBD*)
`deal.accountingCodes`	legal entity	table	seeded per deal type	(deal type, flow type, update type) → accounts	posting of flows and valuations (FR-36.18)	none	TRM accounting codes, update types, valuation areas (TPM customizing)
`deal.discountMtm`	legal entity	bool	false	true / false	discount MTM with the wave-12 curve	none	TPM valuation class / NPV method
`loan.defaultSchedule`	legal entity	enum	Annuity	Annuity / Linear / Bullet	schedule template (FR-36.19)	none	CML product types / condition types
`interest.indicators`	main account	table	none	indicator code, rates, day count, period, min amount	GL balance interest (FR-36.25)	none	OB46 interest indicators, OB82 interest terms, OB83 reference rates
`bankChain.searchMode`	legal entity	enum	ByCurrencyAndCountry	ByCurrency / ByCurrencyAndCountry / ByReceivingBic	chain lookup order (FR-36.22)	none	FIBC bank chain scenario (TBCHAIN11/21/31)
`routing.batchWindowMin`	connection	int	30	5–1,440	batching window (FR-36.23)	none	BCM batch rules (Bank Communication Management → merge criteria)
`routing.cutoffLocalTime`	connection	time	15:00 bank local	00:00–23:59	requests after cutoff move to next banking day	Bank → Bank holidays / payment calendar (wave 19)	BCM payment medium cutoff, FBZP value days
`ihc.conditions`	IHC account	struct	none	credit / debit rate, index + spread, overdraft limit	IHC interest and limits (FR-36.24)	none	IHC0 conditions, IHC account limits

7.36.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Reconciliation status	list inquiry	entity, bank account, period, status	statement, lines, matched, suggested, unmatched, difference, age	`recon_status_rm`	Bank reconciliation list (BankReconciliationHeader)	FEBAN, FEB_BSPROC
Unmatched lines aging	operational report	entity, account, age bands 0–7 / 8–30 / > 30 days	count, amount per band, top counterparties	`statement_line` partial index Unmatched	Bank statement lines (unreconciled)	FEBAN worklist, FF_6
Cash position	KPI / drill-down	entity, currency, as-of	balance, age, same-day pending in/out, converted total	`cash_position_rm`	Bank account balance FactBox	FF7A
Cash flow forecast	drill-down	entity, horizon, source types, currency	inflow, outflow, net, cumulative, by source	`cash_forecast_entry`	Cash flow forecast workspace (LedgerCov)	FF7B, FQM liquidity forecast
Check register / outstanding checks	list inquiry	bank account, status, date range	number, payee, amount, status, cleared date	`check`	Check (BankChequeTable), Outstanding checks report	FCHN, FCH6 (PAYR)
Facility utilization	KPI	facility, bank, currency	limit, utilization, headroom, expiring in 30 days	`facility_rm`	Bank facilities, LC inquiry	none native (TRM / Trade Finance)
Bill of exchange list (customer)	list inquiry	status, maturity range, remittance, customer	number, customer, amount, maturity, status, bank	`treasury_instrument` kind = Bill	Bill of exchange inquiry (CustBillOfExchangeJour)	S_ALR_87012199
Promissory note list (vendor)	list inquiry	status, maturity range, vendor	number, vendor, amount, maturity, status	`treasury_instrument` kind = Note	Promissory note inquiry (VendPromissoryNoteJour)	S_ALR_87012116
Remittance list	operational report	remittance id, bank, type	bills, totals, discount fee, net proceeds	`instrument_remittance`	SSRS Bill of exchange remittance list	FBWE output list
Postdated check inquiry	list inquiry	direction, check date range, status, party	check no, bank, check date, amount, status	`treasury_instrument` kind = PDC	Postdated checks (CustPostdatedChecks / VendPostdatedChecks)	none
Cash book	statutory report	cash desk, date range	opening, documents (no, type, text, receipt, payment), running balance, closing, difference	`cash_journal_document`, `cash_desk_day`	none	S_ALR_87012309, FBCJ print
Bank fee analysis	operational report	bank, period, service code	volume, billed, agreed, variance, status, trend 12 months	`bank_fee_line`	none	Fiori Bank Fee Analysis / Bank Relationship Overview
Treasury position list	list inquiry	entity, deal type, counterparty, key date	deal, nominal, rate, MTM, accrued interest, maturity	`deal_position_rm`	none	TPM12
Treasury flow list	list inquiry	entity, value date range, flow type	deal / loan, flow type, amount, currency, posted, payment request	`deal_flow`, `loan_schedule_line`	none	TPM13
Treasury posting journal	operational report	entity, period, deal type	flow / valuation postings with accounts and journal ids	`deal_posting_log`	none	TPM20
FX exposure	KPI / drill-down	entity, currency pair, horizon	gross exposure, hedged, net open, hedge ratio	`fx_exposure_rm`	none	Exposure management 2.0 reports
Loan schedule and interest	drill-down	loan, role, period	opening, interest, repayment, closing, fixing	`loan_schedule_line`	none	FNO5 / CML flow overview
Payment batch monitor	list inquiry	entity, connection, status, date	batch, payments, amount, channel, ack, pain.002 status	`payment_batch_rm` (bank-connect-svc)	none	BNK_MONI, Fiori Monitor Payments
IHC account balances	list inquiry	center, participant, currency	balance, overdraft limit, accrued interest, last statement	`ihc_account`	none	IHC account balance (IHC1IP / F9K* reports)
Interest run result	operational report	entity, period, indicator	account, debit days interest, credit days interest, posted amount	`interest_run`	none	F.52 log

7.36.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Check	payment with method Check (wave 19) or reprint	header: payer entity, bank, check no, date; body: payee, amount in words and figures; footer: MICR E-13B line (routing, account, check no), signature image per signatory limit	PDF to check stock (laser), print queue	gap-free per bank account (`next_check_number`)	voided checks retained as records 7 years (US), 10 years (DE)
Positive pay file	check print / void	header: account, file date; lines: check no, amount, issue date, payee, void flag	bank CSV / BAI-like per profile	per bank account per day	7 years
Bill of exchange	draw (FR-36.13)	drawer, drawee, amount, maturity, place of payment, domiciliation bank, acceptance box	PDF; LCR (CFONB 160), RiBa (CBI), AEB 19 / 58 files via wave-48 pack	per-entity bill sequence	statutory form per country (FR Code de commerce L511-1); 10 years
Remittance list and file	remittance (FR-36.13)	remittance id, bank, type, bills (no, drawee, maturity, amount), totals, discount fee	PDF + bank file	per remittance	10 years
Promissory note	draw (FR-36.14)	issuer, beneficiary, amount, maturity, domiciliation	PDF; pagaré layout (ES) via pack	per-entity note sequence	10 years
Cash journal receipt	cash document post (FR-36.16)	desk, document no, date, type, party, amount, tax, cashier, signature line	PDF (A6 / thermal 80 mm)	per desk gap-free	GoBD (DE) single-record immutability; 10 years
Cash book (daily / monthly)	day close, on demand	desk, period, opening, document lines, closing, count, difference, closer	PDF, CSV	n/a	DE §146 AO daily recording; 10 years
Deal confirmation (outbound)	deal capture (FR-36.18)	deal no, trade date, value dates, amounts, rate, settlement instructions	PDF, MT300 via SWIFT service bureau (wave 35 hub)	deal sequence	EMIR record keeping 5 years after termination
Loan interest advice / statement	accrual or settlement (FR-36.19), interest run (FR-36.25)	contract, period, principal, rate, days, interest, withholding	PDF, email to counterparty; IC copy to partner entity	per contract period	transfer-pricing file 10 years
IHC account statement	month end / on demand (FR-36.24)	account, opening, internal orders, interest, closing	camt.053.001.08, PDF	per account per period	10 years
Treasury payment order	approval (FR-36.21)	debtor account, creditor, amount, purpose, approvers	pain.001.001.09	payment request number	10 years

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Bank fee variance report	camt.086 import	bank, period, service lines, variance	PDF, CSV	none	none (management report)

7.36.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`statement-poll`	every 15 min	bank connection	file SHA-256 dedupe	< 30 s per connection	retry 5× exponential; channel marked degraded	connection failure > 3 retries
`cash-position-refresh`	hourly + on file arrival	legal entity	as-of timestamp	< 20 s per entity	keep last good position, flag stale	position age > 2 h
`forecast-rebuild`	hourly + on demand	legal entity	(entity, computedAt) snapshot swap	< 5 min for 1M items	previous snapshot stays live	rebuild failure
`facility-expiry-check`	daily 06:00	legal entity	(instrument, alert day) sent flag	< 1 min	retry next run	none
`ml-match-retrain`	nightly 01:00 if ≥ 200 new matches	tenant	model version	< 20 min	keep prior model	precision drop > 5 pts
`bank-gl-reconcile`	nightly 02:30	bank account	(account, date)	< 5 min	report differences	difference ≠ 0
`pdc-maturity-deposit`	daily 07:00	bank account	(instrument, check date)	< 2 min	proposals only; no posting	proposals older than 2 days
`instrument-maturity`	daily 07:00	legal entity	(instrument, maturity)	< 2 min	remittance / settle proposals	bills past maturity unhonored > 5 days
`deal-valuation`	period end (close checklist task, wave 14) and on demand	legal entity	(entity, key date) run id; reversal first	< 5 min for 20,000 deals	run fails whole; nothing posts	missing market rates
`valuation-reversal`	first calendar day of period 00:30	legal entity	(run id) reversal flag	< 2 min	retry; blocks next valuation	reversal missing
`loan-interest-accrual`	period end	legal entity	(contract, period)	< 3 min for 5,000 loans	per-contract isolation; failures listed	missing fixings
`gl-interest-run`	period end	legal entity	(entity, period)	< 5 min for 10,000 accounts	rerun only after reversal	difference vs prior period > 50%
`payment-batch-window`	every `routing.batchWindowMin`	connection	batch id	< 60 s per 10,000 payments	batch held; payments stay Approved	batch past cutoff unsent
`fee-statement-poll`	monthly day 5	bank connection	file hash	< 1 min	retry daily for 5 days	statement not received
`ihc-interest-and-statements`	month end 23:00	IHC center	(account, period)	< 5 min for 500 accounts	per-account checkpoint	statement generation failure
`cash-desk-open-day-check`	daily 23:00 site local	cash desk	(desk, date)	< 30 s	alert only	days left open > 1

7.36.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles
TreasuryBankAccountMaintain	POST/PUT /treasury/bank-accounts; Bank accounts screen	TreasuryBankAccountApprove; AccountsPayablePaymentPost (wave 19)	Treasury analyst
TreasuryBankAccountApprove	bank-account change workflow approve	TreasuryBankAccountMaintain	Treasurer
TreasuryStatementImport	POST /statements/import, /fee-statements/import	none	Treasury analyst, integration service account
TreasuryReconcile	/reconciliations/*/run-rules, /matches; Reconciliation workspace	AccountsPayablePaymentPost, AccountsReceivableCashPost on the same bank account	Treasury analyst
TreasuryReconcileApprove	/reconciliations/*/close, reopen	TreasuryReconcile (same reconciliation)	Treasurer, Controller
TreasuryCheckMaintain	/checks/*/void, reprint, stop	AccountsPayablePaymentApprove	AP payment clerk
TreasuryFacilityMaintain / TreasuryFacilityOverride	Facilities and instruments screen; override limit	override vs maintain	Treasury analyst / Treasurer
TreasuryInstrumentMaintain	/instruments (draw, register, remit, deposit)	TreasuryInstrumentSettle	AR clerk, AP clerk
TreasuryInstrumentSettle	/instruments/*/protest, settle	TreasuryInstrumentMaintain	Treasury analyst
TreasuryCashDeskPost	/cash-desks/*/documents, day close	TreasuryCashDeskApprove; AccountsReceivableCashPost on same desk	Cashier
TreasuryCashDeskApprove	reopen closed day, raise difference limit	TreasuryCashDeskPost	Site controller
TreasuryDealCapture	POST /deals	TreasuryDealConfirm (front office vs back office)	Treasury dealer
TreasuryDealConfirm	/deals/*/confirm, settlement release	TreasuryDealCapture	Treasury back office
TreasuryDealValuate	/valuation-runs	TreasuryDealCapture	Treasury accountant
TreasuryLoanMaintain	/loans	TreasuryPaymentRequestApprove on the same loan	Treasury analyst

7.36.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Statement import	30 files/day, 50,000 lines/day; peak 20 files/min at 06:00	8 s / 30 s / 60 s per 10k lines	200,000 lines in < 10 min	18M lines × 1.2 KB ≈ 22 GB	statement_line partitioned monthly by booking_date; GIN trigram on counterparty	queue by connection; imports serialize per bank account; p95 doubles, no rejections
Rule run	50,000 lines/day	5 s / 20 s / 40 s per 10k lines	4 parallel accounts	n/a	partial index status = Unmatched	runs queue in Temporal; UI shows queued
Manual match API	2,000/day; peak 60/min	40 / 150 / 300 ms	50 req/s	1M matches ≈ 0.5 GB	match by (reconciliation_id)	p95 < 400 ms
Cash position query	5,000/day; peak 100/min	50 / 300 / 600 ms	30 req/s	n/a (read model)	read model keyed (entity, currency)	serve cached snapshot with age
Forecast rebuild	1M open items, hourly	n/a	1M items < 5 min	24 months × 12M rows ≈ 6 GB	monthly partitions on expected_date	rebuild cadence drops to every 3 h; snapshot age shown
Check print batch	2,000 checks/run	n/a	2,000 checks < 2 min	50k PDFs ≈ 5 GB (object store)	check by (bank_account_id, number) unique	batch split by 500
Cash journal posting	500 desks × 40 docs/day	60 / 300 / 600 ms	20 docs/s	7M docs ≈ 4 GB	by (desk_id, business_date)	posting queue; receipts print after commit
Instrument status changes	5,000 bills/day	80 / 300 / 600 ms	5,000 per remittance in < 60 s	2M instruments ≈ 2 GB	by (legal_entity_id, kind, status, maturity_date)	remittance batches queue
Deal valuation run	20,000 open deals	n/a	< 5 min	240k valuation rows ≈ 0.3 GB	deal by (entity, status); valuation partitioned by key date	run takes < 15 min; close checklist task stays InProgress
Loan accrual	5,000 contracts	n/a	< 3 min	60k schedule lines ≈ 0.1 GB	schedule by (loan_id, period_no)	runtime scales linearly
Payment routing	100,000 payments/day; peak 10,000 per window	20 ms per payment	10,000 per batch < 60 s	36M routing log rows ≈ 10 GB	log partitioned monthly	batches fill next window; cutoff warnings TRS-0453
GL interest run	10,000 accounts × 31 days	n/a	< 5 min	small	balance projection by (account, value_date)	< 15 min

7.36.20 Localization and compliance hooks

- **Bills of exchange and promissory notes** vary by country: FR LCR / BOR (CFONB 160 remittance), IT RiBa (CBI), ES letra de cambio / pagaré (AEB 19 / 58, Norma 32), PT letras, JP tegata and densai electronic records, BR duplicata / boleto (CNAB 240 / 400). Country packs (wave 48) provide the `InstrumentRemittanceFormat` implementation, the document layout, stamp-duty lines (IT, JP stamp tax by amount band) and protest deadlines; the core supplies the lifecycle and postings.
- **Postdated checks** are common in IN, AE, SA, PH, MY, TH; the IN pack sets withholding at settlement, the AE pack records bounce reason codes required for legal action. Extension point `PdcPolicy` (deposit window, bounce fee, credit hold).

- **Cash journal**: DE GoBD / §146 AO require daily recording, immutability after post, and a cash book export (DSFinV-K is out of scope because desks are not retail POS); PL requires KP / KW cash receipt documents; FR and IT require a sequential cash book. Extension point `CashJournalPolicy` (numbering, mandatory fields, max cash payment amounts such as IT EUR 5,000 / FR EUR 1,000 cash payment limits, warning TRS-0433 extended by pack rules).
- **Bank statement and payment formats**: BAI2 (US), CODA (BE), Norma 43 (ES), CFONB 120 (FR), MT940 / camt.053 (DE, NL), CAMT for SEPA; positive pay (US), CPA-005 (CA); bank chain usage for non-SEPA cross-border payments. Extension point `BankFormatProfile` in the wave-19 format engine.
- **FX deal regulatory reporting**: EU EMIR (FX forwards and swaps are reportable; spot is not), UK EMIR, US Dodd-Frank for swap counterparties; Passage records the LEI on every counterparty and the UTI on deals and exports the trade report through the wave-48 `RegulatoryTradeReport` hook; delegated reporting by the bank is the default.
- **Intercompany loans and GL interest**: thin-capitalization and interest-limitation data (DE §4h EStG, US §163(j), EU ATAD art. 4) and transfer-pricing safe-harbor rates feed the wave-40 transfer-pricing evidence export; withholding tax on cross-border interest uses wave-13 tax codes.
- **Retention**: statements, checks, cash books and deal records 10 years (DE HGB §257, FR), 7 years (US), 5 years after termination for EMIR records; enforced through the wave-5 retention policies.
- **Calendars and rounding**: banking-day calendars per country and currency (TARGET2 for EUR); day-count conventions per currency market (GBP ACT/365, EUR / USD money market ACT/360).

7.36.21 Coverage closure

Register rows assigned to wave 36 in coverage-ax.md §12.99 (16 rows) and coverage-sap.md §13.99 (39 rows), plus two SAP rows proposed for wave 30 that this wave closes (GL balance interest).

7.37 Wave 37: Fixed Assets & Leases

7.37.1 Scope and business context

Wave 37 adds the asset subledger. Capital spend currently lands on expense or clearing accounts; after this wave an accountant acquires assets from AP invoices, projects (CIP) or inventory, depreciates them monthly under several books (local GAAP, IFRS, tax) with different methods and conventions, transfers, splits, revalues, impairs and disposes of them with correct gain/loss, and accounts for leases under IFRS 16 / ASC 842 with right-of-use assets and lease liabilities. A physical inventory with barcode scanning reconciles the register to what exists.

Out of scope: enterprise asset maintenance (wave 44), tax depreciation reports beyond MACRS/ADS tables for the US and straight-line for other v1 countries (country packs in wave 48), component accounting for infrastructure-grade asset hierarchies deeper than 3 levels.

Scope amendment (gap closure). The registers (coverage-ax §12.99 rows 40–43, coverage-sap §13.99 rows 51–55 and 315–321) add asset additions / component records (FR-37.14), insurance records with insured-value indexing (FR-37.15), group assets for pooled tax depreciation (FR-37.16) and capital appropriation requests (FR-37.17) to this wave. Investment program hierarchies with budget distribution and carry-forward land in wave 38 (FR-38.21) because they need budget control; the IRS Form 4562 layout ships with the US country pack (wave 48).

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
AX depreciation proposal → LedgerJournalTrans → post: three forms, and one bad asset aborts the whole journal with an infolog	Journal-centric batch without per-asset isolation	Temporal run with per-asset checkpoints; failing assets reported, others post	Failed runs per month 2 → 0; run restart time 1 h → < 1 min
SAP AFAB runs in background only, errors in SM37 spool; test run then real run, 2–4 h for 100k assets	Batch job architecture	Online proposal preview with formula inputs; 1M asset-periods/h	Run time for 100k assets 2 h → < 6 min
AssetBook convention changes in D365 silently recalculate history; auditors cannot see why a prior charge changed	No immutable transaction log per book	Append-only AssetTransaction; prospective changes only, with explanation	Unexplained changes in audit sample 100% traceable
Mid-quarter test performed in Excel because neither AX nor SAP computes the 40% Q4 test	Tax rules outside the engine	Automatic test per tax book per year with delta posting	Manual tax workbooks: 1 per entity per year → 0
Acquisition from AP needs the invoice line fixed-asset fields, then an asset journal; SAP needs F-90 with asset account assignment keyed again	Two-step with re-keying	AP invoice line with asset flag posts directly to the book	Clicks 18 → 3; re-keyed acquisitions 0

7.37.2 AX / SAP parity map

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Asset master and groups	AssetTable, AssetGroup, AssetGroupBookSetup, form AssetTable	ANLA, ANLZ (time-dependent), asset classes ANKA/ANKT (OAOA), AS01/AS02/AS03	Asset, AssetClass entities	full
Books / depreciation areas	AssetBook (D365 books; AX 2012 value models + AssetDepBook), posting layer per book	ANLB per depreciation area (OADB), T093 chart of depreciation, ledger assignment	AssetBook per asset × book definition, posts to ledger layers (wave 12)	full
Depreciation profiles	AssetDepreciationProfile (StraightLine, ReducingBalance, Manual, Factor, Consumption, StraightLineLifeRemaining, 200%/175%/150%/125% DB, RB/SL), conventions	Depreciation keys T090NA/T090NAZ (AFAMA), multilevel methods T090NP, period controls T090NR	DepreciationProfile with method, convention, factor, tables	full
Depreciation run	AssetDepreciationProposal → LedgerJournalTrans (Asset journal), AssetTrans	AFAB / FAA_DEPRECIATION_POST, ANLP, ANLC	Depreciation run (Temporal) → journal entry per book/period	improved (restartable, per-asset diagnostics)
Acquisition from AP / project / inventory	PurchLine fixed asset fields, ProjTable capitalize, InventJournal to fixed asset	F-90, ABZON, MIGO with asset account assignment (A), AIAB/AIBU AuC settlement	AcquisitionSource links from wave 18 invoice, wave 41 project, wave 16 inventory journal	full
Transfer / split	AssetTransfer, "Split fixed asset" (D365)	ABUMN (intra/inter-company), partial transfer	Transfer and Split transactions preserving history	full
Disposal, revaluation, impairment	AssetTrans types DisposalSale, DisposalScrap, WriteUpAdj, WriteDownAdj, Revaluation	ABAON, ABAVN, F-92, ABAW revaluation, impairment via write-down	Disposal (sale/scrap, partial), Revaluation, Impairment	full
Leases	D365 Asset leasing (AssetLeaseLease, AssetLeaseBook, AssetLeasePaymentSchedule, AssetLeaseLiabilityAmortization)	RE-FX Contract and Lease Management (RECN, RECEEP valuation), IFRS 16 valuation rules	Lease, LeaseSchedule, ROU asset auto-created	full
Physical inventory	Not native (AX 2012 lacked); D365 none; partner add-ons	ANLA-INVNR only; third-party scanning	Count sessions with PWA barcode scanning	improved
Asset additions / components	AssetAddition (Fixed asset → Additions), AssetMajorType, AssetTable.MajorType	Sub-numbers (AS11 asset sub-number), ANLA-ANLN2	AssetAddition records under an asset (FR-37.14)	full
Insurance	AssetInsurance, AssetInsuranceType, insurance companies on AssetTable (Insurance tab), SSRS Fixed asset insurance report	ANLA insurance fields, OAVI insurance types, OAVF / T094 index series, S_ALR_87011951	AssetInsurancePolicy with index series (FR-37.15)	full
Group assets	none (AX uses consolidated books per group manually)	AS21 / AS22 / AS23 group asset, OAYM / OAAX group asset areas (T093A)	GroupAsset per tax book (FR-37.16)	full
Appropriation requests	none native (Budget planning + project quotations)	IMA11 / IMA2 / IMA3 appropriation requests, variants, approval status, IMCCP1	CapexRequest with variants and Temporal approval (FR-37.17)	full

7.37.3 Functional requirements

- **FR-37.1 Asset master** — Must. The system shall maintain assets with class, location, responsible worker, serial/barcode, parent/child (≤ 3 levels), and default dimensions.
  - Notes: asset number from wave-5 number sequences; status NotYetAcquired → Open → Sold / Scrapped / Transferred; barcode unique per legal entity.
- **FR-37.2 Books and profiles** — Must. The system shall attach N books per asset (default from class), each with a depreciation profile, service life, salvage value, convention, posting layer and ledger.
  - Notes: methods: straight-line (service life and life-remaining variants), declining balance (factor 125/150/175/200%, with or without switch to SL), units of production, manual, MACRS tables (GDS 3/5/7/10/15/20-year, ADS); conventions: none, half-year, mid-month (1st or 15th), mid-quarter, full-month, half-year next year; up to 10 books per asset.
- **FR-37.3 Straight-line formula** — Must. The system shall compute period depreciation as `(cost − salvage − accumulated adjustments) / remaining periods` with the convention applied to the first and last periods.
  - Notes: worked mid-month example: cost USD 12,000, salvage 0, 5-year life, in service 2026-03-10, mid-month (15th) convention. Monthly charge = 12,000 / 60 = 200.00. March 2026 takes half a month: 100.00. FY2026 = 100 + 9 × 200 = 1,900.00; FY2027–FY2030 = 2,400.00 each (9,600.00); FY2031 = Jan 200 + Feb 200 + Mar 100 = 500.00. Total 12,000.00. The last period absorbs any rounding residual so Σ depreciation = depreciable basis exactly.
- **FR-37.4 MACRS** — Must. The system shall compute MACRS using the declining-balance-with-switch formula and verify it against the IRS Publication 946 percentage tables.
  - Notes: worked 5-year GDS, half-year convention, cost USD 25,000: rate = 200%/5 = 40%. Y1 = 25,000 × 40% × ½ = 5,000.00 (20.00%). Y2 = 20,000 × 40% = 8,000.00 (32.00%). Y3 = 12,000 × 40% = 4,800.00 (19.20%). Y4: DB = 7,200 × 40% = 2,880.00; SL over remaining 2.5 years = 7,200 / 2.5 = 2,880.00 → switch (11.52%). Y5 = 2,880.00 (11.52%). Y6 = 1,440.00 (5.76%). Σ = 25,000.00. Mid-quarter applies when > 40% of the year's basis is placed in Q4; the system computes the test per tax book per year and alerts. Bonus depreciation percentage and Section 179 amounts recorded as first-year adjustments.
- **FR-37.5 Depreciation run** — Must. The system shall propose and post depreciation per book, period and legal entity as one journal entry per book with lines per asset (or summarized per account/dimension by option).
  - Notes: Temporal workflow with per-asset checkpoints; rerun for the same book/period is rejected unless the prior run is reversed; 1,000,000 asset-book-periods per hour; proposal preview shows per-asset amount and formula inputs.
- **FR-37.6 Acquisition sources** — Must. The system shall create acquisitions from AP invoice lines flagged as asset, project CIP capitalization, inventory journal issue to asset, and manual journal.
  - Notes: AP invoice with asset flag posts Dr Asset cost / Cr AP (instead of expense); CIP collects to the asset's under-construction book value and capitalizes on a date with transfer from CIP account; inventory issue uses the item's current cost (wave 20).

- **FR-37.7 Transfer and split** — Must. The system shall transfer assets between dimensions, locations or legal entities and split by percentage or amount into new assets with proportional cost and accumulated depreciation.
  - Notes: intercompany transfer posts disposal in the source and acquisition in the target at NBV or agreed price (wave 40 IC due-to/due-from); split percentages must sum to 100.00%.
- **FR-37.8 Disposal** — Must. The system shall dispose assets by sale (to a customer invoice, wave 29, or free text) or scrap, including partial disposal, posting cost reversal, accumulated depreciation reversal and gain/loss.
  - Notes: gain/loss = proceeds − NBV of the disposed portion; partial disposal uses the disposed share of cost and accumulated depreciation; depreciation up to the disposal date is posted first when `depreciate-on-disposal` is set per book.
- **FR-37.9 Revaluation and impairment** — Must. The system shall post revaluation (IAS 16 revaluation model) to OCI reserve or P&L per policy and impairment (IAS 36) as write-down with reversal limits.
  - Notes: impairment reversal cannot exceed the carrying amount that would have existed without impairment.
- **FR-37.10 Leases (IFRS 16 / ASC 842)** — Must. The system shall record leases with payment schedules, incremental borrowing rate, options, and generate the liability amortization and ROU depreciation schedules, posting initial recognition, monthly interest, payments and depreciation.
  - Notes: worked example, annual payments in arrears USD 10,000 for 5 years, IBR 5%: liability = 10,000 × (1 − 1.05^{-5})/0.05 = 43,294.77. Schedule: Y1 interest 2,164.74, closing 35,459.51; Y2 1,772.98 → 27,232.49; Y3 1,361.62 → 18,594.11; Y4 929.71 → 9,523.82; Y5 476.18 (plugged from 476.19 to clear the 0.01 residual) → 0.00. Total interest 6,705.23 = 50,000 − 43,294.77. ROU asset 43,294.77 depreciated straight-line 8,658.95 for Y1–Y4 and 8,658.97 in Y5. Monthly schedules use periodic rate = nominal/12 by default (option: effective (1+r)^(1/12) − 1). Modifications remeasure the liability with the ROU adjusted by the same amount; short-term (≤ 12 months) and low-value (< USD 5,000 / EUR 5,000) leases are expensed under election.
- **FR-37.11 Physical inventory** — Should. The system shall run count sessions with the PWA scanner, record found/missing/moved assets and create transfer or scrap proposals.
- **FR-37.12 Asset budgeting** — Should. The system shall forecast depreciation for existing assets and planned acquisitions and publish it as a budget source to wave 38.
- **FR-37.13 Subledger reconciliation** — Must. The system shall reconcile Σ asset cost and Σ accumulated depreciation per book to the GL accounts nightly and list differences by asset.
- **FR-37.14 Asset additions and component records** — Should. The system shall record additions and components under an asset (improvement, major part, accessory) with description, quantity, serial number, date, cost reference and optional link to an acquisition adjustment, without creating a separate depreciable asset unless the user promotes the record to a sub-asset.
  - Notes: an addition with `financial = true` creates an AcquisitionAdj transaction on the selected books in the same request; non-financial additions are descriptive only; promote-to-sub-asset creates a child asset (≤ 3 levels, FR-37.1) and moves the referenced cost by split (FR-37.7); maximum 500 additions per asset.
- **FR-37.15 Insurance records and insured-value indexing** — Should. The system shall record insurance policies per asset (insurer, policy number, insurance type, coverage start / end, premium, insured value basis) and compute the indexed insured value from replacement value and an index series.
  - Notes: insurance types (property, machinery breakdown, transit, fleet) and insurance companies are master data; insured value_t = base replacement value × index_t ÷ index_base; index series per asset class and country, yearly values loaded by the `insurance-index-update` job; policies expiring within 30 days raise alerts; the insurance report (7.37.14) lists insured vs NBV vs replacement value and under-insured assets (insured < 90% of indexed replacement value).
- **FR-37.16 Group assets** — Should. The system shall group assets of the same class and tax year into a group asset for a designated tax book and compute depreciation on the group's aggregate basis, while other books keep per-asset depreciation.
  - Notes: covers US general asset accounts (IRC §168(i)(4)), DE Sammelposten (EUR 250.01–1,000.00 pool depreciated over 5 years), UK capital allowance pools and IN block of assets via profiles from the wave-48 packs; member assets carry the book with `depreciatedAtGroup = true` and no own charge; disposal of a member under the default rule credits proceeds to the group (no per-asset gain / loss) and under `terminate-on-disposal` computes gain / loss per member; the group's depreciation run line references every member for drill.
- **FR-37.17 Capital appropriation requests** — Should. The system shall let requesters create capital expenditure requests with one or more variants (scope, amount per year, expected in-service date, depreciation profile assumption), route them through a value-based approval workflow, and on approval create planned acquisitions and, when the request is executed, the asset under construction or project.
  - Notes: status Draft → Submitted → InApproval → Approved → Released → Closed, with Rejected and Postponed; approval levels by amount (defaults ≤ USD 50,000 plant manager, ≤ 500,000 CFO, above board) through the wave-4 workflow; the approved variant's yearly amounts publish as planned acquisitions to FR-37.12 depreciation forecasting and as a budget source to wave 38; assignment to an investment program position (FR-38.21) is optional; actual spend from linked CIP / project (wave 41) is tracked against the approved amount with an overrun warning at 10%.

7.37.4 Data model

Asset: id, legal_entity_id, asset_number (unique per entity), class_id (FK AssetClass), name, status, location_id, responsible_worker_id, barcode, parent_asset_id, default_dimensions jsonb, acquired_date, quantity numeric(19,4).

AssetBook

Field	Type	Required	Notes
id	uuid	yes	PK
asset_id	uuid	yes	FK Asset
book_definition_id	uuid	yes	FK BookDefinition (ledger, posting layer, currency)
profile_id	uuid	yes	FK DepreciationProfile
service_life_periods	int	yes	1..1200
salvage_value	numeric(19,4)	yes	default 0
convention	enum	yes	None/HalfYear/MidMonth1/MidMonth15/MidQuarter/FullMonth/HalfYearNextYear
in_service_date	date	yes	
cost, accumulated_depreciation, nbv	numeric(19,4)	yes	projections from AssetTransaction
last_depreciated_period	text	no	fiscal period key
status	enum	yes	NotYetAcquired/Open/Closed/Sold/Scrapped

AssetTransaction

Field	Type	Required	Notes
id	uuid	yes	PK, append-only
asset_book_id	uuid	yes	FK

Field	Type	Required	Notes
type	enum	yes	Acquisition/AcquisitionAdj/Depreciation/DepreciationAdj/Transfer/Split/Revaluation/Impairment/DisposalSale/DisposalScrap/CIPCapitalization
transaction_date	date	yes	
amount	numeric(19,4)	yes	signed
journal_entry_id	uuid	yes	FK wave-11 journal
source_type, source_id	text, uuid	no	AP invoice, project, inventory journal, lease
reversal_of_id	uuid	no	
run_id	uuid	no	depreciation run

Lease: id, legal_entity_id, lease_number, lessor_party_id, commencement_date, term_months, payment_frequency, payment_amount, payment_timing (arrears/advance), ibr_rate numeric(9,6), classification (Finance/Operating for ASC 842), rou_asset_id, status (Draft/Active/Modified/Terminated), election flags.

LeaseScheduleLine: lease_id, period_no, opening_liability, interest, payment, closing_liability, rou_depreciation, posted_journal_id.

Entities added by FR-37.14–FR-37.17: **AssetAddition** (id, asset_id, type Improvement/Component/Accessory, description, quantity, serial_number, added_date, financial bool, asset_transaction_id, promoted_asset_id); **AssetInsurancePolicy** (id, asset_id, insurer_party_id, policy_number, insurance_type_id, coverage_from, coverage_to, premium, basis Replacement/NBV/Agreed, base_value, index_series_id, index_base_year); **IndexSeries / IndexValue** (series code, country, class, year, value numeric(9,4)); **GroupAsset** (id, legal_entity_id, book_definition_id, class_id, tax_year, profile_id, basis, accumulated_depreciation, member_count, status); **CapexRequest** (id, legal_entity_id, number, title, requester_id, status, selected_variant_id, program_position_id, approved_amount, currency, linked_asset_ids[], linked_project_id) and **CapexRequestVariant** (id, request_id, description, amounts_by_year jsonb, in_service_date, profile_assumption_id, npv, irr).

Invariants: Σ AssetTransaction amounts by type = projected cost / accumulated depreciation; NBV ≥ 0 unless revaluation policy allows; Σ depreciation over life = cost – salvage; LeaseScheduleLine closing of period n = opening of n+1 and final closing = 0.00. Indexes: AssetTransaction by (asset_book_id, transaction_date), by run_id; AssetBook by (book_definition_id, status).

7.37.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	/api/v1/assets	Create asset	Idempotency-Key	AssetMaintain

7.37.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Fixed assets workspace	New asset, run depreciation, exceptions, reconciliation tile	assets by status, pending acquisitions, unreconciled difference	AssetView
Asset detail	Books tab, transactions tab, schedule, dispose, transfer	number, class, NBV per book, location	AssetMaintain
Depreciation run	Propose, review, post, reverse	book, period, asset count, total, exceptions	AssetDepreciate
Lease detail	Schedule, modify, terminate	liability, ROU, interest, next payment	LeaseMaintain
Count session (PWA)	Scan, mark found/missing, submit	barcode, location, found at	AssetCount

Interaction rules: schedule preview recalculates on any book field change before save; bulk class change via grid multi-select with validation at submit; depreciation run proposals paginate 500 assets per page with per-asset formula tooltip.

7.37.7 Business rules and edge cases

- **BR-37.1** Period depreciation rounds half-up to currency minor unit; the final period of the life is a plug so Σ = depreciable basis.
- **BR-37.2** Asset state machine: NotYetAcquired → Open (first acquisition) → Sold | Scrapped | Transferred (full IC transfer); Open → Open on partial disposal; no transaction on Sold/Scrapped except reversal of the disposal.

- **BR-37.3** Depreciation for a period cannot post if a prior period for the same book is unposted (sequential), except when the book's `catch-up` option is set, which posts the arrears into the current period.
- **BR-37.4** Change of service life or salvage after acquisition applies prospectively: new charge = (NBV – salvage) / remaining periods.
- **BR-37.5** Mid-quarter test: if Q4 in-service basis / full-year basis > 40% for a tax book, all assets of that year switch to mid-quarter; assets already depreciated are recomputed and the delta posts in the current period.
- **BR-37.6** Disposal date before last depreciated period requires reversal of later depreciation first; the system offers the reversal set.
- **BR-37.7** Partial disposal percentage p: disposed cost = cost × p, disposed accumulated depreciation = acc × p, rounded; residual cents stay on the remaining asset.
- **BR-37.8** Lease liability remeasurement on modification: new PV at revised rate (if scope change) or original rate (if only payment change under ASC 842 for operating leases); ROU adjusts by the same amount; if ROU would go below zero the excess hits P&L.
- **BR-37.9** Concurrency: the depreciation run holds a per-(book, period) Postgres advisory lock; a second run request returns 409.
- **BR-37.10** Indexed insured value rounds half-up to the currency minor unit; a missing index value for the current year uses the latest available year and raises AST-0531.
- **BR-37.11** A member asset can belong to one group asset per book; adding a member after the group's first depreciation period posts a catch-up in the current period on the group; removing a member is allowed only through disposal or transfer.
- **BR-37.12** Capex request state machine: Draft → Submitted → InApproval → Approved → Released → Closed; InApproval → Rejected | Postponed → Draft; an amount change after Approved returns the request to Submitted when the increase exceeds 10% or USD 10,000 / EUR 10,000, whichever is lower.
- **BR-37.13** Promoting a financial addition to a sub-asset moves cost and accumulated depreciation of the referenced transaction pro rata; the parent's remaining life is unchanged.

7.37.8 Acceptance criteria

- **AC-37.1** (FR-37.3) Given the USD 12,000 mid-month example, when the schedule is generated, then FY2026 = 1,900.00, FY2027–2030 = 2,400.00 each, FY2031 = 500.00.
- **AC-37.2** (FR-37.4) Given the USD 25,000 MACRS 5-year example, when computed, then the yearly amounts are 5,000.00 / 8,000.00 / 4,800.00 / 2,880.00 / 2,880.00 / 1,440.00.
- **AC-37.3** (FR-37.4) Given 100 fixture assets across methods and conventions, when depreciated for full lives, then every amount matches the reference table to the cent.
- **AC-37.4** (FR-37.5) Given 10,000 assets, when the monthly run posts, then one journal entry per book exists, Σ lines = Σ proposal, and a second run for the same period is rejected.
- **AC-37.5** (FR-37.8) Given cost 10,000, accumulated 4,000, proceeds 7,000, 50% disposal, when disposed, then cost –5,000, accumulated +2,000, gain 4,000 posts and the remaining NBV is 3,000.
- **AC-37.6** (FR-37.10) Given the 5-year USD 10,000 lease at 5%, when activated, then liability = 43,294.77, Y5 interest = 476.18 and closing = 0.00.
- **AC-37.7** (FR-37.10) Given 25 fixture leases, when schedules compute, then every line matches the accountant workbook to the cent.
- **AC-37.8** (FR-37.13) Given the demo entity after a month, when reconciliation runs, then Σ asset cost and Σ accumulated depreciation equal the GL accounts with 0.00 difference.
- **AC-37.9** (FR-37.15) Given a replacement value of USD 100,000.00 at index 112.0 (base year 2024) and an index of 118.5 for 2026, when the index update runs, then the insured value is 105,803.57 and assets insured below 95,223.21 (90%) are listed as under-insured.
- **AC-37.10** (FR-37.16) Given 40 DE assets of EUR 600.00 each acquired in 2026 in a Sammelposten group, when the tax book depreciates FY2026, then one group line of 24,000.00 / 5 = 4,800.00 posts and each member shows 0.00 own depreciation with a drill to the group.
- **AC-37.11** (FR-37.17) Given a capex request of USD 320,000.00, when submitted, then the workflow routes to the CFO level; when approved, then planned acquisitions of the selected variant appear in the depreciation forecast and `capexrequest.approved` reaches budget-svc.
- **AC-37.12** (FR-37.14) Given an asset with a financial addition of USD 2,000.00, when saved, then an AcquisitionAdj of 2,000.00 posts on every Open book and the addition links to the transaction.

7.37.9 Test plan and fixtures

Fixtures: `dep-100` (100 assets × SL, DB 150/200%, UoP, MACRS 3/5/7-year, conventions, short first years, salvage > 0), `lease-25` (accountant workbook: arrears/advance, monthly/annual, modifications, terminations), `disposal-30` (full/partial, before and after period end), `migration-nbv` (opening NBVs for the demo entity).

Test	Type	Target	Pass criterion
Method formulas	Unit	depreciation engine	match tables to the cent
Life totals	Property	engine	Σ depreciation = cost – salvage for random inputs
Lease PV and schedule	Unit/Property	lease engine	closing = 0.00; Σ interest = Σ payments – PV
Run posting	Contract	journal API	one entry per book; idempotent
Disposal flows	E2E	workspace	gain/loss per fixture
Run throughput	Performance	run	1M asset-book-periods/hour

Reconciliation checks: asset subledger to GL per book nightly; lease liability schedule to GL lease liability; ROU asset to GL ROU accounts.

7.37.10 Deployment and operations

Helm chart `asset-svc`; env `ASSET_RUN_BATCH_SIZE=500`, `ASSET_MAX_BOOKS=10`; Atlas migrations; flags `assets.physical-inventory`, `assets.asc842-operating`. Jobs: `asset-gl-reconcile` nightly 02:00, `lease-schedule-post` monthly on period open, `mid-quarter-test` on tax year end. SLOs: schedule API p95 < 200 ms; run throughput as above; reconciliation job < 10 min for 1M assets. Alerts: reconciliation difference ≠ 0, run failure, lease schedule unposted after period close. Rollback: Helm rollback; posted runs reversed through the reversal API, never deleted.

7.37.11 Migration from AX / SAP

Source	Passage entity	Notes
AssetTable, AssetGroup	Asset, AssetClass	
AssetBook / AssetDepBook, AssetDepreciationProfile	AssetBook, DepreciationProfile	method/convention mapped; opening NBV as acquisition + accumulated depreciation transactions dated cutover
AssetTrans	AssetTransaction (summarized)	history summarized to opening balances; detail retained in archive
AssetLease*	Lease, LeaseScheduleLine	remaining schedule recomputed; variance to legacy shown

Source	Passage entity	Notes
ANLA, ANLZ, ANKA	Asset, AssetClass	
ANLB, ANLC, T090NA	AssetBook, DepreciationProfile	depreciation key → profile map table; ANLC year values → opening balances
ANLP, ANEP	AssetTransaction (summarized)	
RE-FX contracts	Lease	

Validation: Σ opening NBV per book = GL; count of active assets matches; recomputed next-period depreciation within 0.5% of legacy (differences listed). Not migrated: fully depreciated and retired assets older than 7 years (archive), AX value model posting profiles (re-authored).

7.37.12 Dependencies, risks, open questions

Depends on: wave 11 journal and dimensions, wave 12 posting layers, wave 14 period control, wave 18 AP invoice, wave 16 inventory journals, wave 36 for IC transfer settlement; forward-references wave 41 projects (CIP) and wave 44 EAM.

Risk	Likelihood	Impact	Mitigation
Legacy NBV differs from recomputed schedules	High	Medium	Load NBV as balances, not recomputed; variance report
ASC 842 operating lease single-cost rule complexity	Medium	Medium	Flag-gated; IFRS 16 first

Open questions: (1) Posting summarization default per account or per asset? Proposed per asset; decide by wave 37 start. (2) Support 175%/125% DB in v1? Proposed yes (cheap); decide by wave 37. (3) Bonus depreciation handled as profile or adjustment? Proposed adjustment; decide by wave 37.

7.37.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`assets.numberSequence`	legal entity	sequence	FA-######	number sequence id	asset numbers (FR-37.1)	Fixed assets parameters → Number sequences	AS08 number ranges
`assets.capitalizationThreshold`	legal entity	money	USD 2,500 / EUR 800	≥ 0	AP lines below threshold do not propose asset creation	Fixed assets parameters → "Capitalization threshold" (D365)	OAYK low-value asset amount
`assets.createFromPurchasing`	legal entity	enum	ProductReceipt	Off / ProductReceipt / VendorInvoice	when AP-flagged lines create assets (FR-37.6)	Fixed assets parameters → "Create asset during product receipt or vendor invoice posting"	asset account assignment category A (OME9), ANLA creation in ME21N
`assets.defaultBooksByClass`	asset class	table	none	book definitions + profiles	books attached on create (FR-37.2)	Fixed asset groups → Books setup (AssetGroupBookSetup)	OAYZ depreciation areas per asset class
`assets.bookDefinition`	legal entity	table	Local GAAP, IFRS, Tax	ledger, posting layer, currency, posting allowed	posting target per book	Books (AssetBookTable), posting layer	OADB depreciation areas, OAOB chart of depreciation
`assets.postingProfile`	legal entity	table	none	(class, transaction type, book) → accounts	account determination	Fixed asset posting profiles (AssetLedgerAccounts)	AO90 account determination
`assets.depreciationSummarization`	book	enum	PerAsset	PerAsset / PerAccountDimension	journal line granularity (FR-37.5)	Fixed assets parameters → "Summarize depreciation"	OAYR posting rules (period and method per area)
`assets.depreciationPeriodicity`	book	enum	Monthly	Monthly / Quarterly / Yearly	run frequency	Depreciation profile → Depreciation year / frequency	OAYR period interval
`assets.catchUp`	book	bool	false	true / false	BR-37.3 arrears into current period	"Catch up depreciation" option	AFAB "unplanned/repeat run"
`assets.depreciateOnDisposal`	book	bool	true	true / false	depreciation to disposal date first (FR-37.8)	Fixed assets parameters → "Depreciate asset when disposing"	depreciation key period control for retirement (T090NR)
`assets.roundingMinorUnit`	book	enum	currency minor unit	minor unit / whole unit	BR-37.1 rounding	Depreciation profile → Rounding	OAYO rounding specifications
`assets.maxBooks`	tenant	int	10	1–20	books per asset (env `ASSET_MAX_BOOKS`)	none	max 99 depreciation areas
`assets.disposalApproval`	legal entity	enum	AboveNbv10k	None / Always / AboveNbv10k	workflow on disposal	Fixed assets parameters → "Approval required for disposals" (workflow)	none native (ABAVN no workflow)
`assets.midQuarterTest`	tax book	bool	true for US tax books	true / false	BR-37.5	none	US-specific depreciation keys with mid-quarter (T090NA)
`assets.bonusPercent`	tax book × year	decimal	per wave-48 US pack	0–100%	first-year bonus adjustment (FR-37.4)	Special depreciation allowance profile	special depreciation area (bonus)
`lease.periodicRateMethod`	legal entity	enum	Nominal/12	Nominal/12 / Effective	monthly rate (FR-37.10)	Asset leasing parameters → interest calculation	RE-FX valuation rule (RECEEP)
`lease.lowValueThreshold`	legal entity	money	USD 5,000 / EUR 5,000	≥ 0	low-value election	Asset leasing parameters → "Low value threshold"	RE-FX contract type exemption
`lease.shortTermMonths`	legal entity	int	12	1–12	short-term election	Asset leasing parameters	RE-FX valuation rule term
`insurance.types` / `insurance.companies`	tenant	table	seeded 4 types	code, description	FR-37.15 master data	Insurance types / Insurance companies	OAVI insurance types, insurance companies (T086)
`insurance.indexSeries`	tenant	table	none	series code, country, class, yearly values	FR-37.15 indexing	none	OAVF index series (T094)
`assets.groupAssetBooks`	tax book	bool	false	true / false	book allows group assets (FR-37.16)	none	OAYM / OAAX group asset areas (T093A)

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`capex.approvalLevels`	legal entity	table	50,000 / 500,000 / above	amount bands → approver role	FR-37.17 routing	Budget planning workflow (stand-in)	IMA approval status profile, appropriation request types (TAPRT)
`capex.overrunWarnPct`	legal entity	decimal	10%	0–100%	warning on spend vs approved	none	IM budget availability control tolerance
`count.sessionTolerance`	site	int	0	0–10	missing items allowed before escalation (FR-37.11)	none	none

7.37.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Asset register	list inquiry	entity, class, book, status, location	number, name, in-service, cost, accumulated, NBV, life remaining	`asset_book`	Fixed assets list page, Fixed asset balances	AR01 asset balances
Asset history sheet (roll-forward)	statutory report	entity, book, fiscal year, class	opening cost, acquisitions, retirements, transfers, revaluation, closing cost; opening acc., depreciation, impairment, closing acc.; NBV	`asset_transaction` aggregated	SSRS Fixed asset statement / Fixed asset note	S_ALR_87011990 asset history sheet
Depreciation forecast	drill-down	entity, book, horizon months, include planned (FR-37.17)	period, existing assets, planned acquisitions, total	forecast projection (FR-37.12)	SSRS Fixed asset projection / Depreciation expense projection	S_ALR_87012936 depreciation simulation
Acquisitions / retirements list	operational report	entity, book, date range, source type	asset, date, amount, source document, gain/loss	`asset_transaction`	SSRS Fixed asset acquisitions / disposals	S_ALR_87012050 acquisitions, S_ALR_87012052 retirements
Asset transactions	list inquiry	asset, book, type, date	type, date, amount, journal, run	`asset_transaction`	Fixed asset transactions (AssetTrans)	AW01N asset explorer, S_ALR_87012048
Tax depreciation (US 4562 data)	statutory report	entity, tax book, year	Part I §179, Part II bonus, Part III MACRS by recovery class and convention, mid-quarter flag	tax book projection	none	S_ALR_87010127 / 87010129
Lease roll-forward and maturity analysis	statutory report	entity, period, classification	opening liability, additions, interest, payments, remeasurements, closing; undiscounted maturities < 1 / 1–5 / > 5 years (IFRS 16.58)	`lease_schedule_line`	Asset leasing → Lease summary / liability amortization report	RE-FX RECEEP evaluation, IFRS 16 disclosure reports
Insurance report	operational report	entity, insurer, type, expiry window	asset, policy, insured value, indexed replacement value, NBV, under-insured flag	`asset_insurance_policy`	SSRS Fixed asset insurance report	S_ALR_87011951
Physical inventory list	operational report	site, location, session	expected, found, missing, moved	`count_session`	none	S_ALR_87011979 asset inventory list
Subledger to GL reconciliation	KPI / drill-down	entity, book, period	subledger cost / acc., GL balance, difference per account	reconciliation job output (FR-37.13)	Fixed asset reconciliation (D365 report)	ABST2 reconciliation analysis
Group asset members	drill-down	group asset, year	members, basis, group depreciation share	`group_asset`	none	AS23 group asset display
Capex request pipeline	KPI	entity, status, program, year	count, requested, approved, spent, overrun %	`capex_request`	none	IM appropriation request information system, IMCCV1

7.37.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Asset tag label	asset create / reprint	asset number, barcode (Code 128 or QR), entity, location	PDF label (50 × 25 mm), ZPL for thermal printers	asset number	none
Asset transfer slip	transfer / IC transfer (FR-37.7)	asset, from / to dimension, location, entity, NBV, approver	PDF	transfer document number	10 years (IC transfer evidence)
Disposal / scrap certificate	scrap disposal (FR-37.8)	asset, date, method, witness, NBV written off	PDF	disposal number	10 years; environmental proof for regulated waste where required by pack
Asset history sheet	period / year end	as 7.37.14	PDF, XLSX, XBRL tags via wave 15	none	statutory notes to accounts; 10 years
Lease schedule	lease activation / modification	lease, payments, interest, liability, ROU	PDF, XLSX	lease number	IFRS 16 / ASC 842 audit file; 10 years
IRS Form 4562	tax year end	US pack layout	PDF (wave 48)	none	7 years (US)
Count sheet	count session start	location, expected assets, barcode, found box	PDF, PWA list	session number	none
Capex request approval record	approval	request, variant, amounts, NPV/IRR, approvers with timestamps	PDF	request number	10 years (capex governance)

7.37.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`depreciation-run`	monthly on period open + on demand	(book, period, legal entity)	per-asset checkpoint; (book, period) advisory lock	< 6 min for 100k assets	failing assets listed; others post	run failure, exceptions > 0
`lease-schedule-post`	monthly on period open	legal entity	(lease, period) posted flag	< 2 min for 5,000 leases	per-lease isolation	unposted after close
`asset-gl-reconcile`	nightly 02:00	(entity, book)	(entity, book, date)	< 10 min for 1M assets	report only	difference ≠ 0
`mid-quarter-test`	tax year end + on demand	(entity, tax book, year)	(entity, book, year) result	< 2 min	alert; no auto-post without approval	Q4 share > 40%

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`depreciation-forecast-publish`	nightly 03:00	legal entity	snapshot version	< 5 min	previous snapshot kept	budget source stale > 2 days
`insurance-index-update`	yearly 01-15 + on load	index series	(series, year)	< 1 min	missing year → AST-0531	under-insured count change
`insurance-expiry-check`	daily 06:00	legal entity	(policy, alert day)	< 1 min	retry	expiring policies
`capex-overrun-check`	daily 05:00	legal entity	(request, date)	< 1 min	warning only	overrun > `capex.overrunWarnPct`

7.37.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles
AssetView	GET /assets/*, workspace, all 7.37.14 inquiries	none	Fixed asset accountant, Controller, Auditor
AssetMaintain	POST /assets, /books, /additions, /transfer	AssetDispose on same asset when disposal approval is on	Fixed asset accountant
AssetConfigure	classes, book definitions, profiles, posting profiles, group assets	AssetPostJournal	Finance system admin
AssetDepreciate	/depreciation-runs (propose)	none	Fixed asset accountant
AssetPostJournal	/depreciation-runs/*/post, /transactions	AssetConfigure; AccountsPayableInvoiceApprove for AP-sourced acquisitions	Fixed asset accountant
AssetDispose	/dispose	AccountsReceivableInvoicePost for the sale invoice	Fixed asset accountant
AssetDisposeApprove	disposal workflow approve	AssetDispose	Controller
LeaseMaintain	/leases, /modify	LeasePostApprove	Lease accountant
AssetInsuranceMaintain	/insurance-policies, index series	none	Risk manager
AssetCount	/count-sessions, PWA scanner	AssetMaintain (counter cannot adjust register)	Site asset custodian
CapexRequestCreate	/capex-requests, submit	CapexRequestApprove on own request	Plant manager, Engineering lead
CapexRequestApprove	workflow approve	CapexRequestCreate (same request)	CFO, Controller

7.37.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
AST-0501	error	Book `{book}` period `{period}` is closed for fixed assets	period control (wave 14)	open period or post in current	FR-37.5
AST-0502	error	Depreciation for `{book}` `{period}` is already posted	rerun without reversal	reverse the prior run first	FR-37.5
AST-0503	error	Previous period `{period}` is not depreciated	sequential rule	run prior period or enable catch-up	BR-37.3

AST-0542	info	Capex request `{no}` returned to Submitted after amount increase	BR-37.12	approvers re-approve	BR-37.12

7.37.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Depreciation run	100k assets × 3 books monthly	n/a	1M asset-book-periods/h	3.6M transactions ≈ 2 GB	AssetTransaction partitioned yearly by transaction_date; index (asset_book_id, transaction_date)	workers scale to 8; run < 20 min
Schedule API	3,000/day; peak 60/min	40 / 200 / 400 ms	30 req/s	n/a	computed on read, cached per (book, version)	cache hit rate rises; p95 < 500 ms
Asset create from AP	2,000/day; peak 200/min at invoice batch	80 / 250 / 500 ms	20/s	0.7M assets ≈ 1 GB	Asset unique (entity, number), barcode unique	queued through outbox
Lease schedule compute	50/day	100 / 400 / 800 ms for 360 periods	10/s	5,000 leases × 120 lines ≈ 0.1 GB	by (lease_id, period_no)	none needed
GL reconciliation	1M assets	n/a	< 10 min	small	aggregates by (book, account)	< 30 min; alerts delayed
Count scan (PWA)	20 scanners × 1 scan/5 s	50 / 150 / 300 ms	10 scans/s	0.5M scans ≈ 0.1 GB	by (session_id, barcode)	offline queue on device, sync later
Asset history sheet	50 runs/month	2 / 8 / 15 s for 100k assets	n/a	n/a	materialized yearly roll-forward	served from previous night snapshot with age

7.37.20 Localization and compliance hooks

- **Tax depreciation methods and tables** vary by country: US MACRS / ADS, §179, bonus, Form 4562 (US pack); DE AfA tables, GWG (≤ EUR 800 immediate expense), Sammelposten pool (FR-37.16); FR dégressif coefficients 1.25 / 1.75 / 2.25 and amortissement dérogatoire (excess tax over book posted to a regulated provision); UK capital allowances (AIA, WDA 18% / 6% pools, full expensing) as group assets; IN Companies Act Schedule II lives and income-tax block of assets WDV; MX Ley del ISR maximum rates; CA CCA classes with half-year rule. Packs provide DepreciationProfile templates, conventions and statutory layouts through the `DepreciationMethodProvider` and `StatutoryAssetReport` extension points.
- **Statutory asset registers**: FR tableau des immobilisations (liasse 2054 / 2055), DE Anlagenspiegel (HGB §284), IT libro dei cespiti; layouts via the wave-48 electronic reporting designer.
- **Leases**: IFRS 16 (default), ASC 842 operating lease single-cost (flag), local GAAP packs where leases remain off-balance (DE HGB, FR PCG) use a book with `leaseCapitalization = false`.
- **Retention**: asset records for the life of the asset plus 10 years (DE, FR), 7 years after disposal (US).
- **Currency and rounding**: books in non-functional currencies (e.g., hyperinflationary IAS 29 restatement) are out of v1; rounding per book currency minor unit.
- **Privacy**: responsible-worker field is personal data; masked for users without HR visibility (wave 42 policy).

7.37.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX 12.6.1 Fixed asset → Fixed asset additions (AssetAddition)	PARTIAL-37	ADDED as FR-37.14	
AX 12.6.1 Fixed asset → Insurance records (AssetInsurance)	PARTIAL-37	ADDED as FR-37.15	
AX 12.6.2 SSRS Fixed asset insurance report	PARTIAL-37	ADDED as FR-37.15	Insurance report in 7.37.14
AX 12.6.4 Fixed asset → Insurance types / Insurance companies	PARTIAL-37	ADDED as FR-37.15	`insurance.types` / `insurance.companies`
SAP 13.4 AS21 / AS22 / AS23 Group asset	PARTIAL-37	ADDED as FR-37.16	
SAP 13.4 Insurance values / indexing (S_ALR_87011951)	PARTIAL-37	ADDED as FR-37.15	index series formula BR-37.10
SAP 13.4 S_ALR_87010127 / 87010129 Tax depreciation reports (Form 4562 / mid-quarter)	PARTIAL-37	DEFERRED to wave 48	data (Part I–III amounts, mid-quarter flag) is in 7.37.14; the IRS form layout ships with the US pack
SAP 13.4 OAYM / OAAX Group assets per area (T093A)	PARTIAL-37	ADDED as FR-37.16	`assets.groupAssetBooks`
SAP 13.4 OAVI / OAVF Insurance types, companies, index series (T086, T094)	PARTIAL-37	ADDED as FR-37.15	`insurance.indexSeries`
SAP 13.27 IM01–IM36 / IMA11 / IMA2 / IMA3 / IMCCP1 Investment programs and appropriation requests	PARTIAL-37	ADDED as FR-37.17 (appropriation requests) and FR-38.21 (programs)	program budget distribution needs wave-38 budget control
SAP 13.27 IM reports (S_ALR_87012…) Investment program reports	PARTIAL-37	ADDED as FR-37.17 / FR-38.21	Capex request pipeline (7.37.14), Investment program report (7.38.14)
SAP 13.27 IM27 / IM32 IM budget rollup / carry-forward	PARTIAL-37	DEFERRED to wave 38	ADDED there as FR-38.21
SAP 13.27 IM customizing: program types, appropriation request types, status, budget categories, plan / budget profiles (TAIF, TAPRT)	PARTIAL-37	ADDED as FR-37.17 / FR-38.21	`capex.approvalLevels` here; program types in 7.38.13

7.38 Wave 38: Cost Accounting, Budgeting & Budget Control

7.38.1 Scope and business context

Wave 38 gives controllers a planning and control layer separate from statutory accounting. Before it, the universal journal records actuals by dimension but there is no budget to compare against, no way to stop a purchase order that exceeds a department's funds, and no management view that reclassifies and allocates costs the way the business is run. After it, budget register entries and planning scenarios flow through workflow into budget models; budget control checks requisitions, POs and invoices against available funds, recording encumbrances and liquidating them exactly; a cost accounting ledger mirrors primary costs from the journal into cost objects and cost elements, runs assessment/distribution allocations that converge and reconcile, supports activity-based costing and internal orders, and feeds the management reporting cubes consumed by wave 46.

Out of scope: public-sector fund accounting (appropriations, apportionments, year-end encumbrance carry-forward beyond the simple option), profitability analysis segment reporting (CO-PA style, wave 46 semantic layer), project budgets (wave 41).

Scope amendment (gap closure). The registers (coverage-ax §12.99 rows 34–37, 45–46; coverage-sap §13.99 rows 86–123 mapped to wave 38, plus the investment-program rows handed over from wave 37) add Excel worksheet templates (FR-38.13), plan generation from sources (FR-38.14), position forecasting (FR-38.15), cost behavior / overhead rate / cost rollup policies (FR-38.16), template (driver-formula) allocation (FR-38.17), cost object hierarchies (FR-38.18), top-down distribution (FR-38.19), budget reservation documents (earmarked funds, FR-38.20) and investment programs (FR-38.21). Fund and funded-program accounting uses financial dimensions (7.38.21); appropriations and apportionments remain out of scope.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
D365 budget check on PO happens in a batch-like synchronous call that takes 3–8 s per line on large BudgetSourceTracking tables; buyers disable it	Available-funds query aggregates BudgetSourceTrackingDetail at check time	Per dimension-combination balance cache rebuilt from events; check is one indexed read	Check latency 5 s → p95 < 150 ms
SAP FM availability control (FMAVCR01) rebuilds the AVC ledger (FMAVCT) when budget structure changes; FMAVCREINIT takes hours	Derived ledger with offline rebuild	Balance cache with incremental event replay	Rebuild for 1M documents 3 h → < 10 min
Encumbrance liquidation on invoice in AX leaves orphan amounts when the PO was partially received at a different price (BudgetSourceTracking residual)	Relief computed from invoice amount, not from PO reservation	Relief = min(invoice-matched share of PO reservation, remaining reservation); property-tested to the cent	Orphan encumbrances per month 20–50 → 0
KSU5/KSV5 cycles in SAP: a cycle with a circular segment fails with "iteration not converging" and the controller must restructure segments	Fixed 1,000-iteration loop with no exact solve	Exact linear solve ≤ 2,000 senders; residual sweep rule	Failed cycles per close 2–3 → 0

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
CAM cost accounting ledger in D365 requires "Process data" batch and loads GL into CAMCostEntry hours after posting	Separate ledger filled by batch import	Cost entries mirrored from journal events within seconds	Lag 4–24 h → < 5 s

7.38.2 AX / SAP parity map

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Budget register entries	BudgetTransactionHeader, BudgetTransactionLine, BudgetTransactionCode, BudgetModel, BudgetCycle	FMBB budget entry documents, FMBH; KP06/KP26 plan versions	BudgetRegisterEntry, BudgetModel	full
Budget planning	BudgetPlanHeader/Line, BudgetPlanningProcess, BudgetPlanStage, BudgetPlanScenario, BudgetPlanWorkflow, BudgetPlanTemplate (Excel)	KP06 plan versions, BPC/SAC planning	BudgetPlan with scenarios, stages, Temporal workflow	full
Budget control configuration	BudgetControlConfiguration, BudgetControlRule, BudgetGroup, BudgetControlUserGroup, budget threshold, funds available calculation	FM: FMDERIVE, funds centers FMFCTR, commitment items FMCI, tolerance profiles (OFUP/OF11), AVC ledger FMAVCT	BudgetControlRule with dimension subset, time span, tolerances, overrides	full
Encumbrances / commitments	BudgetSourceTracking, BudgetSourceTrackingDetail, BudgetCheckResult, LedgerSourceDocument encumbrance posting (purchase order encumbrance posting type)	COOI commitments, FMIOI open items, KSB2	Encumbrance entity with reservation/relief lines	full
Cost accounting ledger	CAMCostAccountingLedger, CAMCostObject, CAMCostElement, CAMCostElementDimension, CAMDimensionHierarchy, CAMCostEntry	CO area, KS01/KS02 CSKS, KSH1 hierarchy, CSKA/CSKB cost elements (KA01/KA06), COEP/COBK line items, COSP/COSS totals	CostObject, CostElement, CostEntry, DimensionHierarchy	full
Allocations	CAMCostAllocationPolicy, CAMCostDistributionPolicy, CAMAllocationBase, CAMCostBehaviorPolicy	KSV5 distribution, KSU5 assessment, cycles T811C/T811S/T811K, KSC6 indirect activity allocation	AllocationPolicy (assessment/distribution/reciprocal), AllocationBase	improved (exact solve)
Statistical measures / activity types	CAMStatisticalDimension, statistical measure provider templates	KL01 CSLA activity types, KP26 prices, KB21N	StatisticalMeasure, ActivityType with rates	full
Internal orders	Not native (projects used)	KO01 AUFK internal orders, KO88 settlement	InternalOrder cost object type with settlement rules	full
Cost control workspace	CAMCostControlWorkspace, overhead calculation, variance by cost object	S_ALR_87013611 (cost centers actual/plan/variance), KSB1	Cost control workspace with plan/actual/variance drill	full
Budget plan worksheets	BudgetPlanTemplate, Excel budget plan worksheet (Office add-in), BudgetPlanLayout (D365 layouts)	KP06 with planner profiles (KP34), SAC / BPC input forms	WorksheetTemplate with xlsx round-trip (FR-38.13)	full
Generate plan from source	Budget plan generation: from GL actuals, from budget plan, from fixed assets, from project forecasts, from demand forecast, from position forecasts	KP97 copy planning, KP98 copy actual to plan	PlanGenerationRun with sources (FR-38.14)	full
Position forecasting	HcmPositionForecast, HcmPositionForecastBudgetAcctLine, budget cost elements	HCM personnel cost planning (PCP, HRHCP00*)	PositionForecast with cost elements (FR-38.15)	partial (HR-driven source when wave 42 ships)
Cost behavior / overhead / rollup policies	CAMCostBehaviorPolicy, CAMOverheadRatePolicy, CAMCostRollupPolicy	Cost center categories (OKA2), overhead costing sheets on cost centers (KZS2 / KGI2), cost center group rollups (KSH1)	CostBehaviorPolicy, OverheadRatePolicy, CostRollupPolicy (FR-38.16)	full
Template allocation	none	CPT1 templates, CPTA / CPTB template allocation (actual / plan)	AllocationTemplate with driver formulas (FR-38.17)	full
Cost object hierarchy	CAMDimensionHierarchy (reporting only)	KKPHIE / KKP2 cost object hierarchy, KKP4 collective entry, KKPX distribution	CostObjectHierarchy with node collection and distribution (FR-38.18)	full
Top-down distribution	none	KE28 top-down distribution (CO-PA)	Allocation type TopDown (FR-38.19)	full
Earmarked funds	Budget reservations (D365 public sector, BudgetReservation_PSN)	FMX1 / FMX2 / FMX3 funds reservation, FMY1 precommitment, FMZ1 commitment, FMW1 revenue forecast, FMV1 funds blocking, FMEF document types	BudgetReservation with types (FR-38.20)	full
Investment programs	none native	IM01–IM36 programs and positions, IM52 budget distribution, IM32 budget carry-forward, IM27 rollup	InvestmentProgram, ProgramPosition (FR-38.21)	full

7.38.3 Functional requirements

- **FR-38.1 Budget models and register entries** — Must. The system shall record budget register entries (Original, Revision, Transfer, Carry-forward, Pre-encumbrance, Encumbrance reservation) per budget model, cycle, dimension combination and period, with workflow approval.
  - Notes: a transfer must net to zero across its lines; entries post to a budget ledger separate from the universal journal; budget model hierarchies (sub-models) roll up; 2M register lines per model supported.
- **FR-38.2 Budget planning** — Must. The system shall run planning processes with stages, scenarios (up to 10 per plan), top-down and bottom-up aggregation, distribution keys, and Excel import/export, ending in a register entry.
  - Notes: scenarios compared side-by-side; comments per cell; stage transitions by Temporal workflow; budget plan line count up to 500,000 per plan.
- **FR-38.3 Budget control configuration** — Must. The system shall define control rules per legal entity: budget control dimensions (subset of ledger dimensions), budget cycle time span (year / quarter / period / custom), funds-available formula, documents under control (requisition, PO, vendor invoice, GL journal, expense, project), thresholds (warn %, block %), and user-group overrides.
  - Notes: rule activation versioned with effective date; disabling control does not delete history.
- **FR-38.4 Budget check order of operations** — Must. The system shall evaluate a budget check in this fixed order: (1) determine whether the document type and main account range are under control; (2) derive the budget control dimension combination from the line's ledger dimension; (3) resolve the budget cycle and time span containing the line's accounting date; (4) relieve the document's own prior reservation (revision of a PO, invoice matching a PO) so only the net change is checked; (5) compute available = original + revisions + transfers in − transfers out + carry-forward − actuals − encumbrances − pre-encumbrances (− unposted documents if enabled); (6) compare the net change against available with the rule's thresholds: ≤ warn% → pass, between warn% and block% → warn, > block% → fail; (7) apply user-group override (fail → warn for groups with `BudgetOverride`); (8) record BudgetCheckResult and, on pass/warn, reserve the amount atomically.
  - Notes: evaluation uses a per-combination balance row with `SELECT … FOR UPDATE` so two concurrent POs cannot both pass against the last dollar; p95 < 150 ms; results retained 7 years.

- **FR-38.5 Encumbrance lifecycle** — Must. The system shall create pre-encumbrances for approved requisitions, convert to encumbrances on PO confirmation, adjust on PO change, relieve on invoice posting or PO cancellation, and optionally carry forward at year end.
  - Notes: relief = min(invoice quantity × PO unit price, remaining reservation) per PO line; price differences on invoice create a new check for the excess; closed POs release residuals.
- **FR-38.6 Cost accounting ledger** — Must. The system shall maintain cost objects (cost centers, internal orders, products, projects as references), cost elements (primary mapped from main accounts, secondary for allocations), dimension hierarchies, and cost entries mirrored from journal events within 5 s.
  - Notes: cost behavior (fixed/variable) classified by policy; one ledger per legal entity and currency; versioned hierarchies effective-dated.
- **FR-38.7 Allocation policies** — Must. The system shall run distribution (primary elements retained) and assessment (secondary element) allocations by fixed percentage, statistical measure, or actual cost basis, in ordered steps with reciprocal support.
  - Notes: iteration convergence rule: for reciprocal steps with n senders, when n ≤ 2,000 solve `(I − A) x = b` exactly (LU with partial pivoting); otherwise iterate Gauss–Seidel until max absolute unallocated residual on any sender ≤ 0.01 currency units or 100 iterations; after loop, any residual is swept to that sender's largest receiver; invariant `Σ cost in = Σ cost out` to the cent; rounding residual per step posted to the largest receiver.
- **FR-38.8 Activity-based costing** — Should. The system shall define activity types with planned rates, record activity quantities from production (wave 21) and manual entries, and allocate at rate × quantity with rate variances.
- **FR-38.9 Internal orders** — Should. The system shall create internal orders with budgets, collect costs, and settle to cost centers, assets (wave 37) or P&L by settlement rule.
- **FR-38.10 Cost control workspace** — Must. The system shall show plan vs actual vs committed per cost object and element, with variance %, drill to cost entries and to journal lines, and period comparison.
- **FR-38.11 Reconciliation** — Must. The system shall reconcile Σ primary cost entries per element and period to the journal balances and list differences.
- **FR-38.12 Management cubes** — Should. The system shall publish cost ledger facts and hierarchies to the lakehouse via CDC with a documented star schema for wave 46.
- **FR-38.13 Budget plan worksheet templates** — Should. The system shall define worksheet templates per planning process (row dimensions, column sets per scenario / period / prior-year actual, editable and protected ranges, formulas) and round-trip them as xlsx files whose upload validates and writes back only editable cells.
  - Notes: each exported workbook carries the plan id, stage, template version and a SHA-256 per protected range in a hidden sheet; upload is rejected when the stage changed, the template version differs or a protected range checksum fails; cell-level changes are applied as a diff with an audit row per cell; maximum 200,000 editable cells per upload; formulas evaluate in Passage (not trusted from the file) so totals always recompute server-side.
- **FR-38.14 Generate budget plan from sources** — Must. The system shall create or refresh plan lines from: GL actuals of a period range (with % uplift), another plan or scenario, depreciation forecast (FR-37.12) and approved capex requests (FR-37.17), demand forecast (wave 22) × standard cost (wave 39) or price, project forecasts (wave 41, when available), and position forecasts (FR-38.15).
  - Notes: generation modes Replace, Add, Update-if-unchanged (keeps manually edited cells); every generated line keeps its source reference; the run reports lines created / updated / skipped; 500,000 lines generate in < 3 min.
- **FR-38.15 Position forecasting** — Could. The system shall maintain forecast positions with start / end dates, FTE, compensation group and budget cost elements (salary, benefits %, payroll tax %), compute monthly cost per position and publish it as a plan source.
  - Notes: positions are entered manually or imported from CSV in wave 38; when wave 42 ships, the `HrPositionSource` populates them from effective-dated positions and compensation plans; cost element formulas: salary / 12 × FTE, benefits = salary component × %, tax capped by an annual ceiling per cost element; vacancy factor % per department.
- **FR-38.16 Cost behavior, overhead rate and cost rollup policies** — Should. The system shall classify cost entries as fixed or variable by policy rules (cost element range × cost object type, or regression result with a manual override), apply overhead rates per cost object and element to produce overhead cost entries, and define rollup policies that aggregate cost objects into hierarchy nodes for reporting.
  - Notes: policy evaluation order: explicit rule → element default → Unclassified; regression option fits cost against a statistical measure over ≥ 12 periods and classifies the intercept as fixed; overhead rate entries carry origin `Overhead` and a secondary element; rollup policies do not post, they define reporting aggregation; policies effective-dated and versioned.
- **FR-38.17 Template (driver-formula) allocation** — Should. The system shall allocate costs from a sender to receivers using templates whose lines evaluate formulas over receiver attributes and statistical measures (for example 25.00 × inspection lots + 0.5% × material cost) for actual and plan versions.
  - Notes: formula language is a restricted expression grammar (numbers, + − × ÷, min / max, if, references to measures, attributes and cost element balances); evaluation is per receiver per period; a template run produces one allocation run (FR-38.7 conservation invariant applies); formulas are validated at save and dry-run against the last closed period.
- **FR-38.18 Cost object hierarchies** — Should. The system shall define cost object hierarchies (for example product group → product → production order), collect costs at a node that cannot be assigned to a lower object, and distribute them to the lower objects by a basis (actual output, standard cost of output, fixed %) at period end.
  - Notes: a node may have collected costs only when its hierarchy type allows it; distribution posts origin `HierarchyDistribution` with the receiving order and feeds wave-39 variance (the distributed cost counts as actual input of category `Distributed`); undistributable residual remains on the node with a warning.
- **FR-38.19 Top-down distribution** — Should. The system shall distribute an amount booked at an aggregated level (for example freight per legal entity) to detailed segments (customer, product, region) in proportion to a reference basis from a reference period.
  - Notes: reference basis: revenue, quantity, COGS or any measure in the cost ledger or the wave-46 semantic layer; zero-basis segments are excluded; result posts as statistical (reporting) or actual cost entries per option; worked example: freight USD 12,000.00 with revenue shares 300,000 / 150,000 / 50,000 → 7,200.00 / 3,600.00 / 1,200.00.
- **FR-38.20 Budget reservation documents (earmarked funds)** — Should. The system shall create budget reservation documents of types FundsReservation, Precommitment, FundsBlocking and RevenueForecast that reserve or block available funds without a requisition, and let requisitions, POs, invoices and journals consume them by reference.
  - Notes: a reservation runs the FR-38.4 check on creation; consumption by a follow-on document relieves the reservation and creates the follow-on encumbrance in one transaction; FundsBlocking cannot be consumed; RevenueForecast increases available funds only when the rule sets `revenue-increases-budget`; residuals release on close or on expiry date; per-type number sequences.
- **FR-38.21 Investment programs** — Should. The system shall maintain investment programs per approval year with a hierarchy of program positions, distribute program budget top-down to positions, assign capex requests (FR-37.17), assets under construction and projects to positions, roll up plan / budget / actual, and carry forward unused budget to the next approval year.
  - Notes: a child position's budget cannot exceed the parent's undistributed budget; budget control (FR-38.4) for capex documents uses the program position as a control dimension; carry-forward moves (budget − actual − commitments) per position into the new program year as a CarryForward register entry; program types define allowed position levels (≤ 6) and budget categories (Capex, Opex-related, Contingency).

7.38.4 Data model

BudgetRegisterEntry: id, legal_entity_id, budget_model_id, entry_type (Original/Revision/Transfer/CarryForward/PreEncumbrance/Encumbrance), budget_cycle_id, status (Draft/Submitted/Approved/Posted/Rejected), lines[] (dimension_combination_id, period_key, amount numeric(19,4), currency), workflow_id, posted_at.

BudgetControlBalance

Field	Type	Required	Notes
id	uuid	yes	PK
rule_version_id	uuid	yes	FK BudgetControlRule version
control_dimension_key	text	yes	hashed dimension subset
time_span_key	text	yes	e.g. FY2026, 2026-Q3, 2026-09
budget_total	numeric(19,4)	yes	original + revisions + transfers + carry-forward
actuals	numeric(19,4)	yes	from journal events
encumbrances	numeric(19,4)	yes	
pre_encumbrances	numeric(19,4)	yes	
version	bigint	yes	optimistic + row lock on check

Encumbrance

Field	Type	Required	Notes
id	uuid	yes	PK
source_type	enum	yes	Requisition/PurchaseOrder/Invoice/Journal
source_line_id	uuid	yes	
balance_id	uuid	yes	FK BudgetControlBalance
reserved	numeric(19,4)	yes	
relieved	numeric(19,4)	yes	Σ relief lines
status	enum	yes	Open/PartiallyRelieved/Relieved/Released
lines	jsonb	yes	[{type: Reserve/Adjust/Relieve/Release, amount, documentId, at}]

CostEntry

Field	Type	Required	Notes
id	uuid	yes	PK, append-only
ledger_id	uuid	yes	cost accounting ledger
cost_object_id	uuid	yes	FK CostObject
cost_element_id	uuid	yes	FK CostElement (primary/secondary)
period_key	text	yes	
amount	numeric(19,4)	yes	
behavior	enum	yes	Fixed/Variable/Unclassified
origin	enum	yes	Journal/Allocation/Activity/Statistical/Manual
source_id	uuid	yes	journal line, allocation run, etc.
allocation_run_id	uuid	no	

AllocationPolicy: id, ledger_id, name, type (Distribution/Assessment/Reciprocal), steps[] (order, sender filter, receiver filter, basis {Fixed%/StatisticalMeasure/ActualCost}, secondary_element_id), schedule, version.

Entities added by FR-38.13–FR-38.21: **WorksheetTemplate** (id, planning_process_id, version, row_dimensions[], column_sets jsonb, protected_ranges jsonb, formulas jsonb); **PlanGenerationRun** (id, plan_id, scenario_id, source_type, parameters jsonb, mode, created, updated, skipped); **PositionForecast** (id, legal_entity_id, position_code, department_dim, start_date, end_date, fte numeric(5,2), compensation_group_id, cost_elements jsonb, source Manual/HR); **CostBehaviorPolicy / OverheadRatePolicy / CostRollupPolicy** (id, ledger_id, version, effective_from, rules jsonb); **AllocationTemplate** (id, ledger_id, sender_filter, lines [{receiverFilter, formula, secondaryElementId}], version); **CostObjectHierarchy / HierarchyNode** (id, type, parent_id, cost_object_id, collects bool, distribution_basis); **BudgetReservation** (id, legal_entity_id, type FundsReservation/Precommitment/FundsBlocking/RevenueForecast, number, lines [{dimension_combination_id, period_key, amount, consumed}], expiry_date, status Open/PartiallyConsumed/Consumed/Closed/Expired); **InvestmentProgram / ProgramPosition** (program: id, code, approval_year, program_type_id, currency, status; position: id, program_id, parent_id, code, level, budget, distributed, plan, actual, commitment, assigned_object_refs[]).

Invariants: a BudgetControlBalance's available = budget_total – actuals – encumbrances – pre_encumbrances; Σ Encumbrance.reserved – relieved for a balance = balance.encumbrances; Σ CostEntry(origin=Allocation) per run = 0 (senders negative, receivers positive). Indexes: BudgetControlBalance unique (rule_version_id, control_dimension_key, time_span_key); CostEntry partitioned by period_key, index (cost_object_id, cost_element_id, period_key).

7.38.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	/api/v1/budget/register-entries	Create entry	Idempotency-Key	BudgetMaintain
POST	/api/v1/budget/register-entries/{id}/submit	Start workflow	state check	BudgetMaintain
POST	/api/v1/budget/plans/{id}/scenarios	Add scenario	Idempotency-Key	BudgetPlan
POST	/api/v1/budget/checks	Perform check (document lines)	documentId+version	BudgetCheck (system)
GET	/api/v1/budget/available?rule=&dims=&span=	Available funds	n/a	BudgetView
POST	/api/v1/budget/encumbrances/{id}/relieve	Relief from invoice	documentId	BudgetCheck (system)
POST	/api/v1/controlling/allocation-runs	Run policy for period	(policy, period, version)	CostAccountingRun
GET	/api/v1/controlling/cost-objects/{id}/entries?period=	Entries	n/a	CostAccountingView
POST	/api/v1/controlling/statistical-measures/{id}/values	Load measure values	Idempotency-Key	CostAccountingMaintain
POST	/api/v1/controlling/internal-orders/{id}/settle	Settle	(order, period)	CostAccountingRun
POST	/api/v1/budget/plans/{id}/worksheets/export	Export xlsx for template and stage	n/a	BudgetPlan
POST	/api/v1/budget/plans/{id}/worksheets/import	Upload xlsx diff	file SHA-256	BudgetPlan

Method	Path	Purpose	Idempotency	Auth duty
POST	/api/v1/budget/plans/{id}/generate	Generate from source	(plan, scenario, source, version)	BudgetPlan
POST	/api/v1/budget/reservations	Create earmarked funds document	Idempotency-Key	BudgetReserve
POST	/api/v1/budget/investment-programs/{id}/distribute	Distribute budget to positions	Idempotency-Key	InvestmentProgramMaintain
POST	/api/v1/controlling/template-allocations/runs	Run template allocation	(template, period, version)	CostAccountingRun
POST	/api/v1/controlling/top-down-runs	Run top-down distribution	(policy, period, version)	CostAccountingRun

Validation: check requests must carry accounting date, ledger dimension and amount per line; allocation run rejects when period is closed in the cost ledger or a prior step's run for the period is missing.

Event	Trigger	Payload fields	Consumers
`dev.passage.budget.register.posted.v1`	entry posted	entryId, modelId, type, lines summary	balance projector, analytics
`dev.passage.budget.check.completed.v1`	check	sourceDocumentId, lineResults[{result, available, amount}]	procurement, AP, workflow
`dev.passage.budget.encumbrance.relieved.v1`	relief	encumbranceId, amount, invoiceId, remaining	analytics
`dev.passage.controlling.allocation.completed.v1`	run complete	runId, policyId, iterations, totalIn, totalOut, residual	budget-svc, analytics
`dev.passage.controlling.costentry.created.v1`	mirror or allocation	entryId, costObjectId, elementId, amount, origin	lakehouse
`dev.passage.budget.reservation.consumed.v1`	follow-on document consumes reservation	reservationId, documentId, amount, remaining	analytics
`dev.passage.budget.program.carriedforward.v1`	year-end carry-forward	programId, fromYear, toYear, positions[], amount	budget-svc, asset-svc
`dev.passage.controlling.hierarchy.distributed.v1`	node distribution	runId, nodeId, period, distributed, residual	costing-svc (39), analytics

7.38.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Budgeting workspace	New entry, approvals, available funds by rule	model, cycle, approved/pending, over-budget alerts	BudgetView
Budget plan grid	Edit cells, distribute, compare scenarios, submit stage	dimension rows × period columns, scenario columns, comments	BudgetPlan
Budget control rules	Configure dimensions, thresholds, user groups, activate	rule version, effective date, documents in control	BudgetConfigure
Budget check result (inline in PO)	View reason, request override	available, amount, result, threshold	Buyer
Cost accounting workspace	Run allocations, process status, reconciliation	ledger, period, steps status, in/out totals	CostAccountingRun
Cost control	Filter object/hierarchy node, drill	plan, actual, committed, variance, variance %	CostAccountingView

Interaction rules: plan grid supports copy/paste from Excel, keyboard fill-down, and distribute-by-key; budget check result renders inside the PO line without leaving the form; allocation runs show step progress and residual live via server-sent events.

7.38.7 Business rules and edge cases

- **BR-38.1** Budget check amounts convert to the ledger's accounting currency at the document's rate; a later rate change does not re-check.
- **BR-38.2** Register entry state machine: Draft → Submitted → Approved → Posted; Submitted → Rejected → Draft; Posted entries are immutable and corrected by a Revision.
- **BR-38.3** A PO revision that lowers the amount never fails a check; it releases the difference.
- **BR-38.4** Invoice exceeding the PO reservation: the matched part relieves; the excess is checked as a new amount under the invoice's document rule.
- **BR-38.5** Time span resolution for a date on a period boundary uses the legal entity's fiscal calendar; dates outside any open cycle fail the check with reason `NoBudgetCycle`.
- **BR-38.6** Allocation convergence: iteration stops at residual ≤ 0.01 or 100 iterations; residual sweep goes to the sender's largest receiver by basis share; step totals must satisfy `Σ out = Σ in` to the cent or the run fails and rolls back.
- **BR-38.7** Allocation runs for a period are versioned; rerun reverses the prior run's entries (origin Allocation) and creates new ones; actuals-based runs after new journal postings require rerun, flagged by the reconciliation job.
- **BR-38.8** A sender with zero basis in all receivers keeps its cost and is reported as unallocated; the run does not fail.
- **BR-38.9** Internal order settlement cannot exceed collected cost; over-settlement is rejected.
- **BR-38.10** Year-end carry-forward of open encumbrances creates a CarryForward register entry in the new cycle and releases the old reservation atomically.
- **BR-38.11** Worksheet import applies only to cells whose server value equals the value at export time or that were not changed on the server since; conflicting cells are rejected and listed (CO-0627); the rest apply.
- **BR-38.12** Template allocation formulas returning a negative receiver amount fail the run unless the template sets `allow-negative`; division by a zero measure evaluates to 0 for that receiver and raises a warning.
- **BR-38.13** Top-down distribution: residual cents from rounding go to the segment with the largest basis; Σ distributed = source amount to the cent.
- **BR-38.14** Budget reservation state machine: Open → PartiallyConsumed → Consumed → Closed; Open | PartiallyConsumed → Expired at expiry date (residual released); FundsBlocking goes Open → Closed only.
- **BR-38.15** Investment program distribution: Σ child budgets ≤ parent budget at all times; reducing a parent below Σ children is rejected; carry-forward is allowed once per position and year.
- **BR-38.16** Cost behavior reclassification after period close applies from the next open period only; closed-period entries keep their classification.

7.38.8 Acceptance criteria

- **AC-38.1** (FR-38.4) Given budget 100,000.00 with actuals 60,000.00 and encumbrances 30,000.00, when a PO line of 12,000.00 is checked with warn 0% and block 5%, then the result is `fail` (available 10,000.00 < 12,000.00, over by 20%).
- **AC-38.2** (FR-38.4) Given the same balance, when a PO of 10,400.00 is checked, then the result is `warn` (over by 4%) and 10,400.00 is reserved.
- **AC-38.3** (FR-38.5) Given a PO line of 10 × 50.00 encumbered, when an invoice for 10 × 52.00 posts, then relief = 500.00 and a new check runs for 20.00.
- **AC-38.4** (FR-38.4) Given two concurrent POs of 8,000.00 against 10,000.00 available, when checked simultaneously, then exactly one passes.
- **AC-38.5** (FR-38.7) Given a reciprocal step with 3 service centers serving each other, when run, then Σ out = Σ in to the cent and the solution matches the analytic solve.
- **AC-38.6** (FR-38.11) Given a month of journal postings, when reconciliation runs, then Σ primary cost entries per element equal the journal balances with 0.00 difference.
- **AC-38.7** (FR-38.2) Given a plan with 3 scenarios and 2 stages, when approvers act, then the workflow completes and a register entry posts from the selected scenario.

- **AC-38.8** (FR-38.6) Given a journal entry posted, when 5 s elapse, then matching cost entries exist for every line with a primary element mapping.
- **AC-38.9** (FR-38.13) Given an exported worksheet whose protected range was edited offline, when uploaded, then the upload is rejected with CO-0626 and no cell is written.
- **AC-38.10** (FR-38.14) Given GL actuals of FY2025 of USD 1,200,000.00 for a department and a 3% uplift, when the plan generates for FY2026 in Replace mode, then plan lines total 1,236,000.00 with source references to the actuals.
- **AC-38.11** (FR-38.19) Given freight of USD 12,000.00 and revenue shares 300,000 / 150,000 / 50,000, when top-down distribution runs, then the segments receive 7,200.00 / 3,600.00 / 1,200.00 and Σ = 12,000.00.
- **AC-38.12** (FR-38.20) Given a funds reservation of EUR 20,000.00, when a PO of EUR 8,000.00 references it, then the reservation shows 12,000.00 remaining and an encumbrance of 8,000.00 exists, with available funds unchanged by the conversion.
- **AC-38.13** (FR-38.21) Given a program with budget USD 5,000,000.00 and children distributed 4,800,000.00, when a user distributes 300,000.00 more, then the distribution is rejected with CO-0641.
- **AC-38.14** (FR-38.17) Given a template line `25.00 × inspectionLots + 0.005 × materialCost` and an order with 4 lots and material cost 20,000.00, when run, then the receiver gets 200.00 and the sender is credited 200.00.

7.38.9 Test plan and fixtures

Fixtures: `budget-check-200` (200 PO/invoice scenarios across thresholds, overrides, revisions, cycles); `alloc-reciprocal-10` (service centers with circular references and a 2,500-sender case for the iterative path); `plan-3-scenarios` (demo entity planning process); `costledger-month` (one month of journal postings mapped to elements).

Test	Type	Target	Pass criterion
Check order of operations	Unit	budget-svc	each step observable in result trace
Relief exactness	Property	encumbrance	Σ reserved − relieved ≥ 0, never negative; relief ≤ matched share
Concurrent checks	E2E	API	no double pass
Allocation conservation	Property	costacct-svc	Σ in = Σ out for random matrices
Convergence	Unit	iterative solver	residual ≤ 0.01 within 100 iterations for diagonally dominant cases
Check latency	Performance	API	p95 < 150 ms at 50 checks/s
Allocation throughput	Performance	run	1M cost entries, 5 steps < 10 min

Reconciliation checks: cost ledger primary costs = journal by element/period; Σ encumbrances = Σ open PO lines under control; budget balances = Σ posted register entries.

7.38.10 Deployment and operations

Helm charts `budget-svc`, `costacct-svc` (shared Postgres `controlling`); env `BUDGET_CHECK_TIMEOUT_MS=500`, `ALLOC_MAX_ITER=100`, `ALLOC_EXACT_SOLVE_MAX_N=2000`; flags `budget.unposted-in-available`, `controlling.abc`; jobs: `cost-mirror-lag-check` every 5 min, `cost-gl-reconcile` nightly, `allocation-schedule` per policy, `budget-balance-rebuild` on demand. SLOs: check p95 < 150 ms, mirror lag p95 < 5 s, allocation 1M entries < 10 min. Alerts: mirror lag > 60 s, reconciliation difference ≠ 0, check timeouts > 0.1%. Rollback: Helm; balance cache rebuilt from events if corrupted.

7.38.11 Migration from AX / SAP

Source	Passage entity	Notes
BudgetTransactionHeader/Line (current and next cycle)	BudgetRegisterEntry	posted entries summarized per combination/period
BudgetControlConfiguration, BudgetControlRule, BudgetGroup	BudgetControlRule	re-validated; user groups mapped to Keycloak groups
BudgetSourceTracking (open)	Encumbrance	open POs only, tied to migrated POs (wave 17)
CAMCostObject, CAMCostElement, CAMDimensionHierarchy	CostObject, CostElement, DimensionHierarchy	
CSKS, CSKT, SETHEADER/SETNODE (KSH1)	CostObject, DimensionHierarchy	
CSKA/CSKB	CostElement	primary mapped by main account
T811C/T811S/T811K cycles	AllocationPolicy	segment → step; tracing factors → basis
FMAVCT, COOI, FMIOI	Encumbrance	open commitments only
COSP/COSS plan versions, KP06	BudgetRegisterEntry (Original)	current year plan
COEP history	not migrated	cost entries mirrored from migrated journal balances

Validation: Σ migrated budget = legacy budget report per combination; open commitments count and total match. Not migrated: closed-cycle budget history older than 2 years (lakehouse archive), AX budget plan Excel templates.

7.38.12 Dependencies, risks, open questions

Depends on: wave 11 dimensions and balances, wave 14 fiscal calendars and allocation engine (reused for GL), wave 17 requisitions/POs, wave 18 invoices, wave 21 activity quantities, wave 37 depreciation forecasts.

Risk	Likelihood	Impact	Mitigation
Balance cache drift vs journal	Medium	High	Nightly reconcile; rebuild job; alert
Procurement UX slowed by checks	Medium	Medium	SLO; async pre-check on requisition

Open questions: (1) Include unposted documents in available funds by default? Proposed off; decide by wave 38 start. (2) Reciprocal exact solve threshold 2,000? Proposed yes; revisit at phase exit. (3) Internal orders as cost object type or separate module? Proposed cost object type; decide by wave 38.

7.38.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`budget.registerNumberSequence`	legal entity	sequence	BR-######	sequence id	register entry numbers	Budgeting parameters → Number sequences	FMBB document number ranges (FM area)
`budget.transferRules`	legal entity	table	net zero only	dimension constraints for transfers	FR-38.1 transfer validation	Budgeting parameters → "Use budget transfer rules", Budget transfer rules	FMBB transfer document types, budget structure (FMMD)
`budget.cycleTimeSpan`	legal entity	enum	FiscalYear	FiscalYear / Quarter / Period / Custom	time span for control (FR-38.3)	Budget cycle time spans	FM budget profile (annual / overall)
`budget.controlDimensions`	rule version	dimension[]	MainAccount + Department	subset of ledger dimensions	control combination (FR-38.4)	Budget control configuration → Define parameters → budget control dimensions	FMDERIVE derivation, FM account assignment elements (fund, funds center, commitment item)
`budget.fundsAvailableFormula`	rule version	flags	budget – actuals – encumbrances – pre-encumbrances	include unposted / include revenue	available formula	Budget funds available calculation	AVC control ledger FMAVCT, AVC profiles
`budget.thresholds`	rule version	struct	warn 0% / block 0%	0–100% each	FR-38.4 step 6	Budget control rules → thresholds	FM availability control tolerance profiles
`budget.overrideGroups`	rule version	group[]	none	Keycloak groups	fail → warn (FR-38.4 step 7)	BudgetControlUserGroup	FM tolerance profile per user (activity group)
`budget.documentsUnderControl`	rule version	enum[]	Requisition, PO, VendorInvoice	Requisition / PO / VendorInvoice / Journal / Expense / Project / Reservation	FR-38.3	Budget control configuration → Select source documents	FM update profile, commitment-relevant documents
`budget.carryForward`	legal entity	enum	Off	Off / OpenEncumbrances / OpenEncumbrancesAndUnusedBudget	year-end FR-38.5 / BR-38.10	Budgeting → Year-end encumbrance process (D365)	FMJ2 / FMJ1 commitment carry-forward, FMCB budget carry-forward
`plan.worksheetMaxCells`	tenant	int	200,000	1,000–1,000,000	FR-38.13 upload limit	Excel budget plan layout limits	KP06 planner profile (KP34) layout
`plan.generationMode`	planning process	enum	UpdateIfUnchanged	Replace / Add / UpdateIfUnchanged	FR-38.14	Generate budget plan from … → "Replace / Add"	KP97 copy planning (overwrite / reset)
`position.costElements`	legal entity	table	Salary, Benefits 20%, Payroll tax 7.65% capped	element, formula, ceiling	FR-38.15	Budget cost elements (HcmBudgetPurposeType)	PCP cost items / cost planning variants
`reservation.documentTypes`	legal entity	table	4 types seeded	type, number sequence, consumable	FR-38.20	Budget reservation types (PSN)	FMEF earmarked funds document types, number ranges
`program.types`	tenant	table	Capex (6 levels)	levels, budget categories	FR-38.21	none	IM program types (TAIF), budget categories, plan / budget profiles
`ledger.costAccountingLedger`	legal entity	struct	one per entity	currency, fiscal calendar, chart of cost elements	FR-38.6	Cost accounting ledger (CAMCostAccountingLedger)	OKKP controlling area
`ledger.versions`	ledger	table	Actual (0), Plan (1)	version code, type, locked periods	plan / actual separation	Cost accounting versions (CAMVersion)	OKEQ CO versions
`ledger.periodLock`	ledger	table	none	period × activity (allocation, entry)	blocks runs in closed periods	Cost accounting → Ledger period status	OKP1 period lock
`ledger.elementMapping`	ledger	rules	main-account range → primary element	ranges	journal mirroring (FR-38.6)	Cost element dimension members from main accounts (CAMCostElementDimension)	KA01 primary / automatic creation of cost elements (S/4 GL account type "primary costs")
`ledger.defaultCostObject`	ledger	rules	none	main account → cost object	default assignment for journal lines without object	Cost accounting → default cost objects	OKB9 default account assignment
`alloc.exactSolveMaxN`	ledger	int	2,000	100–10,000	FR-38.7 solver choice	none	KSU5 iteration (no exact solve)

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`alloc.maxIterations`	ledger	int	100	10–1,000	FR-38.7	none	cycle iteration flag (KSU1 / KSV1)
`alloc.cycles`	ledger	policy	none	steps, sender / receiver filters, basis	FR-38.7	Cost allocation / distribution policies (CAMCostAllocationPolicy)	KSU1 assessment cycles, KSV1 distribution cycles (T811C)
`alloc.templateEnvironment`	ledger	enum	Controlling	Controlling / CostObject / Segment	which attributes formulas may reference (FR-38.17)	none	CPT1 template environments
`policy.costBehavior`	ledger	policy	element default	rules / regression	FR-38.16	Cost behavior policies	cost center categories (OKA2), fixed / variable plan split (KP06 layouts)
`policy.overheadRate`	ledger	policy	none	rate tables	FR-38.16	Overhead rate policies	KZS2 costing sheet on cost centers / orders, KZZ2 overhead rates
`abc.activityTypes`	ledger	table	none	activity type, unit, planned rate	FR-38.8	Statistical dimension / cost behavior templates	KL01 activity types, KP26 activity prices
`fund.dimensions`	legal entity	bool	false	true / false	seeds `Fund` and `FundedProgram` dimensions and adds them to control dimensions	Financial dimensions (Fund, PSN)	FM5I funds, FMMEASURE funded programs

7.38.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Budget control statistics	drill-down	rule, combination, time span	budget, actuals, encumbrances, pre-encumbrances, reservations, available, % used	`budget_control_balance`	Budget control statistics (BudgetControlStatistics)	FMAVCR01 / FMAVCR02
Budget vs actual vs committed	operational report	entity, hierarchy node, period range, version	plan, actual, committed, variance, variance %	cost ledger + budget balance	Budget control statistics by period, Actual vs budget (D365 report)	S_ALR_87013611, FMRP_RFFMEP1AX
Budget register entries	list inquiry	model, type, status, date	entry, type, lines total, workflow status	`budget_register_entry`	Budget register entries (BudgetTransactionHeader)	FMBB document display, FMEDDW
Open encumbrances	list inquiry	entity, source type, age	document, reserved, relieved, remaining, status	`encumbrance`	Encumbrance inquiry / BudgetSourceTracking	KSB2 commitments, FMRP_RFFMEP1OX
Earmarked funds list	list inquiry	type, status, expiry	document, amount, consumed, remaining, expiry	`budget_reservation`	Budget reservation list (PSN)	S_P99_41000099 (earmarked funds journal)
Cost object line items	drill-down	cost object, element, period, origin	entry, amount, origin, source document	`cost_entry`	Cost object statement (CAMCostObjectStatement)	KSB1, KOB1
Allocation run log	operational report	policy / template, period, version	step, senders, receivers, in, out, residual, iterations	`allocation_run`	Overhead calculation results	KSU5 / KSV5 / CPTA logs
Plan scenario comparison	drill-down	plan, scenarios (≤ 3), dimension rows	scenario values, deltas, %	`budget_plan_line`	Budget plan comparison	KP06 version comparison, S_ALR_87013612
Activity price and quantity	operational report	activity type, period	planned rate, actual rate, quantity, rate variance	`activity_type`	none	KSBT activity prices, KSII actual price calculation
Investment program overview	KPI / drill-down	program, year, position level	budget, distributed, plan, actual, commitments, available	`program_position`	none	IM information system program reports
Position forecast cost	operational report	department, scenario, year	positions, FTE, salary, benefits, tax, total by month	`position_forecast`	Position forecasting reports	PCP cost plan reports
Cost behavior classification	list inquiry	ledger, element, object type	fixed, variable, unclassified amounts, policy rule applied	`cost_entry`	Cost behavior inquiry	KSB1 by cost element category

7.38.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Budget plan worksheet	export (FR-38.13)	header sheet (plan, stage, template version), data sheet, hidden checksum sheet	xlsx	n/a	none
Budget register entry approval record	workflow completion	entry, lines, approvers, timestamps	PDF	register entry number	7 years (internal control evidence, SOX 404 where applicable)
Budget transfer advice	transfer posted	from / to combinations, amount, reason	PDF, email to budget owners	register entry number	7 years
Earmarked funds document	create / change	type, lines, expiry, approver	PDF	per-type sequence	7 years (public-sector packs 10 years)
Cost center report	period close	plan / actual / variance per element	PDF, XLSX	none	none (management)
Allocation run statement	run completion	sender → receiver matrix, totals, residual	PDF, CSV	run id	7 years (cost allocation audit trail; government contract cost accounting standards where applicable)
Investment program budget letter	distribution	position, budget, conditions	PDF	program number	7 years

7.38.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`cost-mirror-lag-check`	every 5 min	ledger	offsets per Kafka partition	< 10 s	alert only	lag > 60 s
`cost-gl-reconcile`	nightly 02:15	(ledger, period)	(ledger, period, date)	< 5 min	report differences	difference ≠ 0
`allocation-schedule`	per policy (default period close day 2)	(policy, period)	(policy, period, version); rerun reverses	< 10 min for 1M entries	rollback run; retry	non-convergence / residual > 0.01
`template-allocation`	per template	(template, period)	as above	< 5 min	as above	formula errors
`hierarchy-distribution`	period end after allocations	(hierarchy, period)	(node, period)	< 5 min	residual left on node	residual > 0
`budget-balance-rebuild`	on demand	rule version	event replay offset	< 10 min for 1M documents	old cache serves until swap	drift detected
`encumbrance-carry-forward`	fiscal year end (close checklist)	legal entity	(entity, year)	< 10 min for 100k encumbrances	atomic per combination	items failed
`reservation-expiry`	daily 01:00	legal entity	(reservation, date)	< 1 min	retry	expiring in 7 days
`program-carry-forward`	approval year end	program	(position, year)	< 2 min	per-position isolation	skipped positions
`position-forecast-refresh`	nightly 03:30 (when wave 42 active)	legal entity	snapshot version	< 5 min	keep previous	source failure

7.38.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles
BudgetView	GET /budget/*, budgeting workspace, 7.38.14 budget reports	none	Budget owner, Controller
BudgetMaintain	/register-entries, submit	BudgetApprove (same entry)	Budget analyst

7.38.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Budget check	20,000 checks/day; peak 50/s at month-end PO runs	30 / 150 / 300 ms	50 checks/s sustained	7M check results ≈ 4 GB (7-year retention ≈ 28 GB)	BudgetControlBalance unique (rule_version, key, span); results partitioned monthly	row locks serialize hot combinations; p95 < 400 ms; timeouts fail open to `warn` only if rule sets `fail-open` (default fail closed)
Available funds query	10,000/day	20 / 80 / 150 ms	100 req/s	n/a	same	cached 5 s

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Cost entry mirroring	2M journal lines/day	lag 1 / 5 / 15 s	500 lines/s	730M entries ≈ 180 GB	CostEntry partitioned by period_key; index (cost_object_id, cost_element_id, period_key)	lag up to 60 s; alert
Allocation run	1M entries, 5 steps	n/a	< 10 min	allocation entries ≈ 20% of mirrored volume	per-run batch insert, COPY	< 30 min
Template / top-down run	200k receivers	n/a	< 5 min	small	receivers streamed by partition	< 15 min
Plan grid load	500,000 lines per plan; 50 concurrent planners	300 ms / 1.2 s / 2.5 s per 10k-row page	50 concurrent users	5M plan lines ≈ 3 GB	plan lines by (plan_id, scenario_id, combination)	page size drops to 2k rows
Worksheet import	200 uploads/day near deadline	5 / 20 / 40 s for 200k cells	10 concurrent	xlsx stored 1 year ≈ 20 GB	n/a	uploads queue, status polled
Budget balance rebuild	1M documents	n/a	< 10 min	n/a	replay by rule version	< 30 min, old cache serves

7.38.20 Localization and compliance hooks

- **Public-sector budgeting**: US federal (USSGL, appropriation / apportionment / allotment, Treasury Account Symbol) and state / local GASB 34 fund accounting are out of v1; the `fund.dimensions` parameter and earmarked funds (FR-38.20) cover nonprofit restricted funds (ASC 958) and EU grant tracking. Public-sector packs (post-v1) extend through `BudgetStructureProvider`.
- **Government contract cost accounting**: US CAS (FAR Part 30) and DCAA require documented, consistently applied allocation bases with an audit trail; allocation run statements (7.38.15) and versioned policies satisfy the trail; indirect rate (fringe, overhead, G&A) pools are configured as assessment steps.
- **Statutory cost accounting**: FR comptabilité analytique is not statutory; DE Betriebsabrechnungsbogen (BAB) is a report layout over the cost ledger (wave-48 DE pack template).
- **Personnel cost planning**: payroll tax and social security ceilings in FR-38.15 cost elements are country data from wave-43 payroll packs once available; privacy: position forecasts with named workers are personal data and use wave-42 HR visibility rules.
- **Retention**: budget check results and approval records 7 years; plan worksheets 1 year online then archive.
- **Fiscal calendars**: 4-4-5 and 13-period calendars from wave 14 drive time spans and allocation periods.

7.38.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX 12.4.1 Budget plan → Budget plan templates / worksheets (BudgetPlanTemplate)	PARTIAL-38	ADDED as FR-38.13	
AX 12.4.3 Budget planning → Generate budget plan from source (GL actuals, previous plan, FA, projects, demand forecast, HR positions)	PARTIAL-38	ADDED as FR-38.14	project source activates with wave 41

SAP 13.27 IM27 / IM32 / IM52 Investment program budget distribution, rollup, carry-forward (handed over from wave 37)	PARTIAL-37	ADDED as FR-38.21	see 7.37.21

7.39 Wave 39: Product Costing, Cost Roll-Up & Variance Analysis

7.39.1 Scope and business context

Wave 20 delivered the inventory costing engine with a standard cost method but no way to derive the standard: standards were keyed. Wave 39 computes them. Cost accountants define cost groups, costing sheets with indirect cost nodes, and costing versions; roll up costs from BOMs and routings per site and quantity with explosion modes and fallback rules; compare estimates; activate pending costs, which revalues on-hand inventory and posts the revaluation; and analyze purchase price and production variances decomposed into lot size, quantity, price and substitution by cost component. At the end of the wave the demo plant runs on standard cost with a monthly variance report.

Out of scope: actual costing / material ledger periodic unit price (wave 20 covers FIFO/weighted average), mixed costing across procurement alternatives, co-product cost allocation for process manufacturing beyond fixed percentage (wave 24 rules reused), sales-order costing for configured items.

Scope amendment (gap closure). The registers (coverage-ax §12.99 rows 50 and 54; coverage-sap §13.99 rows 89–101 mapped to wave 39; plus SAP row 90 mapped to wave 27 and AX rows 20–21 proposed for wave 20, whose notes point here) add standard cost conversion (FR-39.12), ad-hoc cost estimates with costing models (FR-39.13), mixed costing over procurement alternatives (FR-39.14), COGS and price-difference posting by cost component (FR-39.15), sales order cost estimates for configured and make-to-order lines (FR-39.16), parallel valuation views (FR-39.17) and parallel inventory valuation ledgers (FR-39.18, flag-gated). These supersede the out-of-scope notes above for mixed costing and sales-order costing. Material-ledger actual costing remains with wave 20.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
AX BOMCalcTable "Calculate items" for a costing version runs single-threaded; 50k items take 6–10 h and lock InventItemPriceSim	Sequential explosion per item re-exploding shared subassemblies	Topological roll-up computes each node once; parallel by level	50k items 8 h → < 15 min
CK40N costing run in SAP: selection, structure explosion, costing, analysis, marking, release as separate steps with logs in CKAPP; errors found at release	Multi-step batch with late validation	One run with upfront validation (missing prices, cycles, inactive routes) and per-item diagnostics	Rework runs per cycle 3 → 1
Cost component split lost in AX when a subassembly rolls into its parent (only cost group breakdown if "cost breakdown" enabled, which doubles InventCostTrans volume)	Breakdown as optional duplicate storage	Split is the primary representation; parent carries child split natively	Items with full split 40% → 100%
Production variance report in AX shows lot size/quantity/price/substitution totals that do not sum to the posted variance when rounding occurs across InventCostTrans	Independent rounding per variance type	Decomposition with residual assignment rule; property-tested	Unexplained variance per order 0.00
Standard cost activation (InventItemPrice activate / CK24 release) revalues inventory in a batch without preview; controllers discover the P&L hit after posting	No simulation of revaluation	Activation preview shows revaluation by item/site before commit	Unplanned revaluation surprises 0; preview < 60 s

7.39.2 AX / SAP parity map

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Costing versions	CostingVersion (type Standard cost / Planned cost), blocking, fallback principle, InventItemPrice, InventItemPriceSim	Costing variant OKKN, valuation variant, costing version (OKKN), KEKO header	CostingVersion with status, fallback, site scope	full
Cost groups and categories	CostGroup (direct material / direct manufacturing / indirect / undefined; fixed/variable), CostCategory with cost category prices, BOMCalcGroup	Cost component structure OKTZ (TCKH1–3), cost elements per component, activity types/prices KP26	CostGroup, CostComponent, CostCategory rate tables	full
Costing sheet	CostSheetNodeTable, CostSheetCalculationBasis, CostSheetCalculationFactor (surcharge/rate nodes, absorption basis)	Costing sheet (KZS2): base rows, overhead rows (percentage/quantity), credit rows; T683	CostingSheet with Basis/Surcharge/Rate/Total nodes	full
BOM calculation	BOMCalcTable, BOMCalcTrans, BOMCalcItem, explosion mode (multilevel / single level / make-to-order / according to BOM line type), profit settings	CK11N single item, CK40N run, CKIS items, KEPH component split, CK13N display	CostCalculation with explosion mode, split retained	full
Mass roll and activation	Costing version "Calculate items", "Activate pending prices", InventSettlement cost change variance	CK40N marking (CK24 mark/release), MBEW STPRS update, MR21	Mass roll (Temporal), activation with revaluation preview	improved
Purchase price variance	InventCostTrans variance type PurchPrice posted on receipt for standard cost items	Price difference account PRD on GR/IR (OBYC PRD)	VarianceEntry type PurchasePrice from wave 18 receipts/invoices	full
Production variances	ProdCalcTrans estimate, InventCostTransVariance (ProdLotSize, ProdQuantity, ProdPrice, ProdSubstitution) at ending	KKS1/KKS2 variance calculation categories (input price, input quantity, resource usage, remaining input, lot size, output price, remaining), CO88 settlement	Variance decomposition on production order end	full
Inventory cost revaluation	Cost change variance (InventSettlement), inventory value report	Price change document (MR21/CKMPRPUNMARK), ML revaluation	Revaluation journal posted on activation	full
Standard cost conversion	Standard cost conversion checklist (D365 InventStdCostConv, InventStdCostConvItem), "Convert to standard cost"	Price control change S → V / V → S on MBEW-VPRSV (MM02) with MR21 price change	ConversionRun with checklist (FR-39.12)	improved (preview, validation)
Ad-hoc cost estimate	none (Excel)	CKECP / CKECP1 easy cost planning, costing models (CKF*), CKUC unit costing	CostingModel and AdHocEstimate (FR-39.13)	full
Mixed costing	none (single source per costing version)	CK91N procurement alternatives, CK94 mixing ratios, OMXL quantity structure types	ProcurementAlternative with mixing ratios (FR-39.14)	full
COGS and PPV by component	Cost breakdown posting (InventCostTrans cost group detail), limited	S/4 COGS splitting (FINSC_COGS*), price-difference splitting	Component-split posting option (FR-39.15)	full
Sales order cost estimate	Item price for configured items (PCConfiguration → BOMCalcTable for order)	CK51N / CK53N sales order cost estimate, KKE1 base planning	CostCalculation type SalesOrder (FR-39.16)	full
Parallel valuation views	none	Legal / group / profit-center valuation (OKKP, TKA01 valuation views, transfer price variants)	Costing version valuation view (FR-39.17)	partial (no ML actual costing per view)
Global inventory accounting	Global inventory accounting add-in (D365 10.0.3x: inventory accounting ledgers, accounting conventions, costing policies)	Material ledger multiple currencies / valuations (CKMLCP per valuation view)	InventoryAccountingLedger per convention (FR-39.18)	partial (flag-gated; periodic settlement per ledger only)

7.39.3 Functional requirements

- **FR-39.1 Cost groups and components** — Must. The system shall classify item costs, cost categories (labor/machine) and indirect nodes into cost groups with type and behavior, and map cost groups to cost components for the split.
  - Notes: ≤ 50 cost groups, ≤ 20 components per tenant; an item has exactly one cost group per site override.
- **FR-39.2 Costing sheet** — Must. The system shall define a costing sheet tree with Basis nodes (cost groups selected), Surcharge nodes (% on a basis), Rate nodes (amount per routing hour or per unit), and Total nodes, per site and costing version.

    - Notes: surcharge basis evaluates only the current level's direct lines unless the node is flagged `include-rolled-subassemblies`; absorption posts to indirect accounts via posting profiles at production end.
- **FR-39.3 Costing versions** — Must. The system shall maintain costing versions (Standard, Planned, Simulation) with blocking of pending prices, fallback principle (None / Active version / Specified version), site scope, and effective date.
- **FR-39.4 Cost roll-up algorithm** — Must. The system shall compute item costs by: (1) building the BOM graph for the selection and detecting cycles (reject with path); (2) ordering nodes topologically, leaves first, ≤ 20 levels; (3) for each node computing direct material = Σ child quantity × (1 + scrap%) × child cost (purchased: price from version, else fallback; manufactured: rolled value with its split); direct manufacturing = Σ operations (setup time / costing lot size + run time per unit) × cost category rate; indirect = costing sheet nodes evaluated on this level's basis; (4) retaining the cost component split of every child inside the parent (not collapsed); (5) storing the result as a pending price in the version with explanation lines.
    - Notes: worked 2-level example (USD). Subassembly SA-200: 3 × RM-301 at 2.50 = 7.50; 1 × RM-302 at 1.00 with 10% scrap = 1.10; machining 0.25 h × 60.00 = 15.00; sheet: material overhead 10% on direct material = 0.86; labor overhead 50% on direct labor = 7.50. SA-200 = 31.96 (DM 8.60, DL 15.00, IND-MAT 0.86, IND-LAB 7.50). Finished item FG-100: 2 × SA-200 = 63.92 carried as split (DM 17.20, DL 30.00, IND-MAT 1.72, IND-LAB 15.00); 1 × RM-300 at 4.00 → DM 4.00; assembly 0.5 h × 40.00 = 20.00 plus setup 1 h × 40.00 / costing lot size 10 = 4.00 → DL 24.00; material overhead 10% on own direct material purchased lines = 0.40; labor overhead 50% × 24.00 = 12.00. FG-100 = 104.32 with split DM 21.20, DL 54.00, IND-MAT 2.12, IND-LAB 27.00 (sums to 104.32). Explosion modes: multilevel (as above), single level (children at their active cost), make-to-order (explode only phantom and MTO lines), by BOM line type.
- **FR-39.5 Mass roll** — Must. The system shall roll all items in a version/site selection in parallel by topological level, with per-item diagnostics (missing price, inactive BOM/route, cycle), completing 50,000 items in < 15 minutes.
- **FR-39.6 Activation and revaluation** — Must. The system shall activate pending prices as of a date, compute on-hand revaluation = Σ on-hand quantity × (new – old standard) per item/site/dimension, show a preview, and post the revaluation journal (Dr/Cr Inventory vs cost change variance account).
    - Notes: activation is atomic per version/site; wave-20 standard cost engine switches at the activation timestamp; open production orders estimated at the old standard keep their estimate but variance at end uses the new standard for output (configurable).
- **FR-39.7 Purchase price variance** — Must. The system shall post PPV = (receipt unit cost – standard) × quantity at product receipt and adjust at invoice for standard-cost items, by cost component DM.
- **FR-39.8 Production variance decomposition** — Must. The system shall, when a production order ends, compute total variance = actual cost – standard cost of reported-as-finished (RAF) output, decomposed per cost component as: lot size variance LSV = Σ over fixed-per-lot elements (setup, constant scrap) of (standard per unit × Q_raf – estimated per lot ÷ Q_order × Q_raf); quantity variance QV = Σ_i (actual qty_i – standard qty_i for Q_raf) × standard unit cost_i for planned inputs i (inputs planned but not consumed give negative QV); price variance PV = Σ_i actual qty_i × (actual unit cost_i – standard unit cost_i) for inputs whose cost differs from standard (labor rate differences, components not on standard cost at that site, subcontract invoices); substitution variance SV = Σ_j actual qty_j × actual unit cost_j for inputs j not in the estimate. Identity: LSV + QV + PV + SV = total variance to the cent; residual from rounding assigned to QV of the largest planned line.
    - Notes: unfavorable is positive; output quantity variance for co-products handled by wave 24 percentages; variances post to GL by posting profile per type and component.
- **FR-39.9 Variance analysis workspace** — Must. The system shall present variances by order, item, site, period, type and component with drill to consumption and route transactions, and the monthly variance report.
- **FR-39.10 Cost estimate comparison and what-if** — Should. The system shall compare two versions or dates item-by-item by component, and allow a simulation version with overridden prices, rates and routes.
- **FR-39.11 Standard cost reconciliation** — Must. The system shall reconcile Σ on-hand quantity × active standard to GL inventory accounts per site nightly (extends the wave-20 inventory value report).
- **FR-39.12 Standard cost conversion** — Should. The system shall convert items from an actual costing method (FIFO, LIFO, weighted average) to standard cost at a conversion date through a checklist: select items and sites, roll pending standards into a conversion version, validate, preview the conversion revaluation, run inventory close up to the conversion date, and activate.
    - Notes: validation blocks conversion for items with negative physical on-hand, open in-transit transfers, or production orders started but not ended (option: allow, with variance at the new standard); conversion revaluation = Σ on-hand × standard – on-hand value at actual cost after the close, posted Dr / Cr Inventory vs cost change variance; after conversion the wave-20 engine stops settling issues for converted items; the checklist records each step's user and timestamp; reverse conversion (standard → actual) uses the same checklist with value carried at the last standard.
- **FR-39.13 Ad-hoc cost estimates (easy cost planning)** — Should. The system shall define costing models with characteristics (for example cavities, machine hours, material weight) whose formulas produce item, activity, subcontract and overhead lines, and compute estimates for non-material objects (quotes, internal orders, project tasks) with the costing sheet applied.
    - Notes: formula grammar shared with FR-38.17; prices resolved from the selected costing version with fallback; an estimate can be copied as plan to an internal order (wave 38), as a project estimate (wave 41), or as quote cost on a sales quotation (wave 27); estimates are versioned and comparable through FR-39.10.
- **FR-39.14 Mixed costing** — Should. The system shall maintain procurement alternatives per item and site (purchase from vendor, production version or BOM / route alternative, transfer from another site) with mixing ratios per costing version and compute the item's cost as the ratio-weighted cost of the alternatives with a weighted component split.
    - Notes: ratios must total 100.00% per item, site and version; each alternative is rolled with its own quantity structure; worked example: purchase from vendor A at 10.00 (60%) and in-house production at 12.50 (40%) → mixed cost = 0.6 × 10.00 + 0.4 × 12.50 = 11.00, and the split is weighted the same way (DM = 0.6 × 10.00 + 0.4 × production DM, other components 0.4 × production amounts); alternatives without a valid cost fail the item unless fallback applies; ratios can be derived from the last 12 months of receipts with `derive-ratios`.
- **FR-39.15 COGS and price-difference posting by cost component** — Should. The system shall, per site option, post cost of goods sold on sales issues (wave 28) to separate accounts per cost component from the item's active split, and split purchase price variances proportionally to the purchased item's own components.
    - Notes: worked example: 10 × FG-100 at 104.32 issued → Dr COGS-material 212.00, Dr COGS-labor 540.00, Dr COGS-material overhead 21.20, Dr COGS-labor overhead 270.00 / Cr Inventory 1,043.20; PPV split uses the ratio of each component in the standard of the purchased item (for example material 92%, freight surcharge 5%, duty 3%); rounding residual to the largest component; option is off by default so wave-28 postings are unchanged unless enabled.
- **FR-39.16 Sales order cost estimates** — Should. The system shall cost a configured or make-to-order sales order line using its order-specific BOM and route (wave 27 configurator output, wave 9 versions) at the order quantity, store the result as a calculation of type SalesOrder linked to the line, and show the margin.
    - Notes: margin = net line amount – estimated cost; the estimate recomputes on configuration change before confirmation and freezes at confirmation; option `use-order-estimate-as-standard` makes the MTO production order's variance compare against the order estimate instead of the item standard; estimates for lines with ≤ 6 levels return in < 2 s.
- **FR-39.17 Parallel valuation views** — Should. The system shall maintain costing versions per valuation view (Legal, Group, ProfitCenter): the Group view rolls intercompany-purchased components at the supplying entity's Legal-view cost (excluding intercompany markup), and the ProfitCenter view uses internal transfer prices between profit centers within an entity.
    - Notes: the Group view standard is stored alongside the Legal view per item and site; inventory receipts from IC partners (wave 40) store the group cost per receipt layer so that unrealized profit = Legal-view value – Group-view value of remaining stock; ProfitCenter view transfer prices come from a

transfer-price table or cost-plus % per profit-center pair; only the Legal view posts to the statutory ledger, other views post to dedicated ledger layers (wave 12) when the flag `costing.valuation-views-post` is on.

- **FR-39.18 Parallel inventory valuation ledgers (global inventory accounting)** — Could. The system shall maintain inventory accounting ledgers per legal entity, each with an accounting convention (costing method per item group, currency, target ledger layer), and run the wave-20 costing engine per ledger on the same inventory transactions to produce per-ledger inventory values, COGS and settlements.
  - Notes: flag `costing.global-inventory-accounting`; example: IFRS layer FIFO, local GAAP layer weighted average, group layer standard (FR-39.17 Group view); each ledger has its own inventory close, value report and GL reconciliation; the primary ledger is the one wave 20 already posts, additional ledgers post adjustments into their layer only; capacity budget: 3 ledgers per entity in v1.

7.39.4 Data model

CostingVersion: id, legal_entity_id, code, type (Standard/Planned/Simulation), status (Open/Blocked/Active/Closed), fallback_principle, fallback_version_id, site_ids[], effective_from, activated_at.

CostCalculation

Field	Type	Required	Notes
id	uuid	yes	PK
costing_version_id	uuid	yes	FK
item_id, site_id	uuid	yes	
calc_quantity	numeric(19,4)	yes	costing lot size
explosion_mode	enum	yes	Multilevel/SingleLevel/MakeToOrder/ByLineType
bom_version_id, route_version_id	uuid	yes	wave 9
unit_cost	numeric(19,6)	yes	6-decimal unit cost
status	enum	yes	Pending/Active/Superseded/Error
diagnostics	jsonb	no	[{code, message, ref}]
run_id	uuid	no	mass roll

CostComponentSplit

Field	Type	Required	Notes
calculation_id	uuid	yes	FK, part of PK
component_id	uuid	yes	FK CostComponent, part of PK
level	enum	yes	Own/Rolled (child-carried)
amount	numeric(19,6)	yes	per calc_quantity
fixed_amount, variable_amount	numeric(19,6)	yes	behavior split

CostingSheetNode: id, sheet_id, parent_id, type (Basis/Surcharge/Rate/Total), cost_group_ids[], percentage numeric(9,4), rate numeric(19,6), rate_unit (Hour/Unit), include_rolled bool, absorption_account_id, order.

VarianceEntry

Field	Type	Required	Notes
id	uuid	yes	PK
source_type, source_id	enum, uuid	yes	ProductionOrder/Receipt/Invoice/Activation
type	enum	yes	LotSize/Quantity/Price/Substitution/PurchasePrice/CostChange
component_id	uuid	yes	
item_id, site_id	uuid	yes	
amount	numeric(19,4)	yes	unfavorable positive
journal_entry_id	uuid	yes	
detail	jsonb	no	per input line actual/standard qty and cost

Entities added by FR-39.12–FR-39.18: **ConversionRun** (id, legal_entity_id, site_ids[], item_ids[], conversion_date, costing_version_id, checklist jsonb [{step, status, user, at}], revaluation_journal_id, status Draft/Validated/Closed/Activated/Reversed); **CostingModel** (id, code, characteristics [{name, unit, default}], lines [{type Item/Activity/Subcontract/Overhead, ref, quantityFormula, priceFormula}], version) and **AdHocEstimate** (id, model_id, object_type Quote/InternalOrder/ProjectTask, object_id, characteristic_values jsonb, costing_version_id, total, split jsonb); **ProcurementAlternative** (id, item_id, site_id, costing_version_id, type Purchase/Production/Transfer, vendor_id or production_version_id or source_site_id, ratio numeric(7,4)); **CostCalculation** gains `calc_type` (Item/SalesOrder/AdHoc/Mixed) and `valuation_view` (Legal/Group/ProfitCenter), with the unique-Active partial index extended to (version, item, site, valuation_view); **InventoryAccountingLedger** (id, legal_entity_id, code, currency, ledger_layer, costing_policies [{itemGroupId, method}], primary bool).

Invariants: Σ CostComponentSplit.amount per calculation = unit_cost × calc_quantity (6 decimals); exactly one Active calculation per (version, item, site); Σ VarianceEntry per production order = actual − standard of RAF to the cent. Indexes: CostCalculation unique partial (version, item, site) where status = Active; VarianceEntry by (site_id, period, type).

7.39.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	/api/v1/costing/versions	Create version	Idempotency-Key	CostingMaintain
POST	/api/v1/costing/sheets	Create/version sheet	Idempotency-Key	CostingMaintain

7.39.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Costing workspace	Roll, activate, compare, diagnostics tile	version, pending count, errors, last activation	CostingView
Costing sheet designer	Add node, set basis/%/rate, validate	tree, cost groups, percentage, rate, absorption account	CostingMaintain
Calculation explain	Expand levels, view split, export	level, line, qty, unit cost, component amounts	CostingView
Activation preview	Filter item/site, approve	item, old, new, on-hand, revaluation	CostingActivate
Variance analysis	Pivot by type/component/order, drill	order, item, standard, actual, LSV, QV, PV, SV	CostingView

Interaction rules: the explain tree lazy-loads levels; keyboard `e` expands all; activation preview requires an explicit confirmation of the total revaluation amount; variance pivot persists per user.

7.39.7 Business rules and edge cases

- **BR-39.1** Unit costs are stored with 6 decimals; postings round to the currency minor unit at the transaction level; split rounding residual goes to the DM component.
- **BR-39.2** Version state machine: Open → Blocked (no edits of pending) → Active (per site activation) → Closed; Simulation versions cannot activate.
- **BR-39.3** A cyclic BOM (item appears in its own explosion path) fails the calculation with the path listed; phantoms are exploded in place.
- **BR-39.4** Fallback: missing price with fallback Active uses the active standard; with None, the calculation errors; fallback use is recorded in diagnostics.
- **BR-39.5** Setup cost per unit = setup time × rate ÷ costing lot size; costing lot size defaults from the item's default order settings (wave 8) and can be overridden per calculation.
- **BR-39.6** Scrap: BOM line scrap % multiplies quantity; route operation scrap % compounds backward through preceding operations.
- **BR-39.7** Activation while a mass roll is running for the same version/site is rejected (advisory lock).
- **BR-39.8** Revaluation uses on-hand at the activation timestamp from the wave-16 projection; inventory transactions timestamped after activation use the new standard.
- **BR-39.9** Variance identity: if ILSV + QV + PV + SV − totall > 0.00 after residual assignment, the computation fails and the order end is blocked with an error.
- **BR-39.10** Ended orders reopened (wave 21) reverse their variance entries; re-ending recomputes.
- **BR-39.11** Standard cost conversion requires a completed wave-20 inventory close with end date = conversion date − 1 day; activation without it is rejected (CST-0731).
- **BR-39.12** Mixing ratios are validated per (item, site, version) to total 100.00%; a ratio of 0.00% keeps the alternative for reporting but excludes it from the roll.
- **BR-39.13** COGS component posting: Σ component lines = total COGS of the issue to the cent; residual from rounding goes to the material component.
- **BR-39.14** A sales order estimate freezes at line confirmation; later configuration changes create a new estimate version and mark the old one Superseded; production order variance uses the frozen version when `use-order-estimate-as-standard` is on.
- **BR-39.15** Group-view unit cost of an IC-purchased component equals the supplier entity's Legal-view cost at the receipt date converted at the receipt's rate; when the supplier has no Legal-view standard, the IC purchase price applies and the receipt is flagged `groupCostUnknown` for wave 40 elimination review.

7.39.8 Acceptance criteria

- **AC-39.1** (FR-39.4) Given the worked SA-200/FG-100 fixture, when rolled multilevel, then FG-100 = 104.32 with split DM 21.20 / DL 54.00 / IND-MAT 2.12 / IND-LAB 27.00.
- **AC-39.2** (FR-39.4) Given 50 multi-level fixture products, when rolled, then every component amount matches the reference workbook to the cent.
- **AC-39.3** (FR-39.5) Given 50,000 items across 8 levels, when mass rolled, then the run completes in < 15 min with diagnostics for every error.
- **AC-39.4** (FR-39.6) Given 1,000 units on hand at 10.00 and a new standard 10.50, when activated, then a journal Dr Inventory 500.00 / Cr Cost change variance 500.00 posts and the inventory value report ties.
- **AC-39.5** (FR-39.8) Given an order for 100 planned, 90 RAF, consuming 290 of a component standard 3/unit at 2.00 plus 5 units of an unplanned part at 1.50, with setup 40.00 per lot and costing lot size 100, then QV = (290 − 270) × 2.00 = 40.00, SV = 7.50, LSV = 90 × (0.40 − 0.40) = 0.00 and total = 47.50 (plus any labor PV), and the identity holds.
- **AC-39.6** (FR-39.8) Given 200 ended fixture orders, when variances compute, then Σ types = total for every order.
- **AC-39.7** (FR-39.7) Given a receipt of 10 at 5.20 for an item standard 5.00, when posted, then PPV = 2.00 posts to DM.
- **AC-39.8** (FR-39.3) Given a cyclic BOM, when rolled, then the calculation errors with the cycle path and the run continues for other items.
- **AC-39.9** (FR-39.11) Given month end, when reconciliation runs, then Σ on-hand × standard equals GL inventory per site.
- **AC-39.10** (FR-39.12) Given 500 units of an item at FIFO value 4,925.00 and a standard of 10.00, when conversion activates on 2026-11-01 after the October close, then a journal Dr Inventory 75.00 / Cr Cost change variance 75.00 posts and later issues use 10.00.
- **AC-39.11** (FR-39.14) Given alternatives vendor A 10.00 at 60% and production 12.50 at 40%, when rolled, then the mixed cost is 11.00 and the split totals 11.00.

- **AC-39.12** (FR-39.15) Given the component posting option and an issue of 10 × FG-100, when posted, then four COGS lines 212.00 / 540.00 / 21.20 / 270.00 post and total 1,043.20.
- **AC-39.13** (FR-39.16) Given a configured line priced at 2,400.00 whose configuration rolls to 1,860.00, when costed, then the estimate shows margin 540.00 (22.50%) and freezes on confirmation.
- **AC-39.14** (FR-39.17) Given a component bought from IC partner B at 120.00 whose Legal-view cost in B is 100.00, when the Group view rolls, then the parent's Group-view material component uses 100.00 and the Legal view uses 120.00.

7.39.9 Test plan and fixtures

Fixtures: `rollup-50` (50 products, up to 6 levels, phantoms, scrap, setup, reference workbook); `rollup-50k` (generated 50,000 items, 8 levels, for performance); `variance-200` (ended orders with each variance type, reference workbook); `activation-demo` (demo plant on-hand with old/new standards).

Test	Type	Target	Pass criterion
Node cost formulas	Unit	roll-up	worked example exact
Split conservation	Property	roll-up	Σ split = unit cost × qty for random BOMs
Cycle detection	Unit	graph	every planted cycle reported
Mass roll time	Performance	run	50k items < 15 min on 4 workers
Activation revaluation	E2E	activation + journal	journal = preview; value report ties
Variance identity	Property	decomposition	LSV + QV + PV + SV = total for random orders

Reconciliation checks: inventory at standard = GL inventory per site; Σ variance journals per period = Σ VarianceEntry; activation revaluation journal = Σ preview rows.

7.39.10 Deployment and operations

Helm chart `costing-svc` (extends wave 20 chart, Postgres `costing`); env `COSTING_MAX_LEVELS=20`, `COSTING_ROLL_WORKERS=4`; flags `costing.whatif`, `costing.variance-new-standard-for-open-orders`; jobs: `variance-compute` on production order end events, `standard-cost-reconcile` nightly, `monthly-variance-report` on period close. SLOs: single calculation p95 < 500 ms for ≤ 6 levels; explain API p95 < 300 ms; mass roll as above. Alerts: roll error rate > 2%, variance identity failures > 0, reconciliation difference ≠ 0. Rollback: Helm; activation reversal is a new activation of the prior version (reversing journal), never a delete.

7.39.11 Migration from AX / SAP

Source	Passage entity	Notes
CostingVersion, InventItemPrice (active standard)	CostingVersion, CostCalculation (Active, no explanation)	active standards loaded as calculations with status Active and diagnostics `Migrated`
CostGroup, CostCategory, CostSheetNodeTable/CalculationBasis/Factor	CostGroup, CostCategory, CostingSheet	
BOMCalcTable/BOMCalcTrans	not migrated	re-rolled from migrated BOMs; comparison report vs legacy
InventCostTransVariance history	lakehouse archive	
MBEW (STPRS, PEINH), KEKO/KEPH released estimates	CostCalculation, CostComponentSplit	KEPH components mapped to CostComponent
OKTZ cost component structure, KZS2 sheets, KP26 rates	CostComponent, CostingSheet, CostCategory rates	
COSS/CO88 settled variance history	lakehouse archive	

Validation: re-rolled standard within 1% of legacy active standard for 95% of items (exceptions listed with explanation); Σ on-hand × migrated standard = migrated GL inventory. Not migrated: simulation versions, legacy calculation logs.

7.39.12 Dependencies, risks, open questions

Depends on: wave 9 BOM/route versions, wave 16 on-hand, wave 20 standard cost engine and inventory value report, wave 21 production order end and consumption, wave 24 co-product rules, wave 38 cost elements for absorption.

Risk	Likelihood	Impact	Mitigation
Legacy standards unreproducible	High	Medium	Load active standards as-is; re-roll comparison
Deep BOMs exceed memory in parallel roll	Low	Medium	Level batching; worker memory limit 2 GiB

Open questions: (1) Surcharge basis includes rolled subassemblies by default? Proposed no (AX behavior); decide by wave 39 start. (2) Variance for open orders at new standard? Proposed flag off; decide by wave 39. (3) Store split at 6 or 4 decimals? Proposed 6; decide by wave 39.

7.39.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`costing.versionType`	costing version	enum	Standard	Standard / Planned / Simulation / Conversion	allowed operations (FR-39.3)	Costing versions → Costing type (Standard cost / Planned cost)	OKKN costing variant + OKKI costing type
`costing.valuationVariant`	costing version	struct	price strategy: version → active → purchase price	ordered price sources per item type	price lookup order for purchased items	Costing versions → Fallback principle, "Use purchase price"	OKK4 valuation variant (material price strategy)
`costing.fallback`	costing version	enum	Active	None / Active / SpecifiedVersion	BR-39.4	Fallback principle	valuation variant strategy sequence
`costing.blockPending`	costing version	bool	false	true / false	blocks edits of pending prices (BR-39.2)	Costing version → Block pending prices	costing run marking allowance (CK24 "allow marking")
`costing.componentStructure`	tenant	table	DM, DL, IND-MAT, IND-LAB, SUB	≤ 20 components, element / cost group assignment	split layout (FR-39.1)	Cost groups (CostGroup) and cost group types	OKTZ cost component structure (TCKH1–3)

7.39.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Cost estimate sheet	explain export	item, version, quantity, levels, split, sheet nodes	PDF, XLSX	calculation id	supporting evidence for inventory valuation; 10 years
Activation revaluation report	activation	item, site, old / new standard, on-hand, revaluation, journal id	PDF, CSV	activation id	10 years (inventory valuation audit)
Standard cost conversion record	conversion activated	checklist steps with users and timestamps, revaluation	PDF	conversion run id	10 years
Monthly variance report	period close	variance by type / component / order	PDF, XLSX	none	management; 7 years
Sales order cost estimate	line confirmation	configuration summary, cost by component, margin	PDF (internal)	calculation id	7 years (pricing evidence)
Transfer-price evidence (cost basis)	period end	Group vs Legal view cost per IC item	CSV feeding FR-40.4 export	none	transfer-pricing documentation 10 years

7.39.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`mass-roll`	on demand; typical yearly + quarterly	(version, site, level)	per-level checkpoint; item results upserted	< 15 min for 50k items	per-item error, run continues	error rate > 2%
`variance-compute`	on production order end event	production order	(order, version)	< 2 s per order	retries 3×; order end blocked on identity failure	identity failures > 0
`standard-cost-reconcile`	nightly 02:45	site	(site, date)	< 5 min	report	difference ≠ 0
`monthly-variance-report`	period close	site	(site, period)	< 2 min	rerun	not generated by close day 3
`mixing-ratio-derive`	quarterly	site	(site, quarter)	< 3 min	keep previous ratios	ratio change > 20 pts
`valuation-view-roll`	after each Legal mass roll	(version, site, view)	per-level checkpoint	< 15 min	view marked stale	stale views at activation
`gia-ledger-settlement`	per inventory close	(entity, ledger)	(ledger, close date)	< 30 min per ledger for 1M transactions	per-ledger isolation	ledger close failed
`sales-order-estimate-refresh`	on configuration change event	sales line	(line, config version)	< 2 s	warning on line	estimate missing at confirmation

7.39.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles
CostingView	GET /costing/*, explain, variances, compare	none	Cost accountant, Controller, Plant manager

7.39.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Single calculation	2,000/day interactive	150 / 500 / 1,000 ms (≤ 6 levels)	20/s	≈ 1 KB per calculation + split	unique partial (version, item, site, view) where Active	p95 < 1.5 s
Mass roll	50k items × 2 views, 4×/year	n/a	50k items < 15 min per view	400k calculations × 3 KB ≈ 1.2 GB	level batches; worker memory 2 GiB	workers scale to 8; < 30 min
Explain API	500/day	80 / 300 / 600 ms	10/s	n/a	lazy load per level	page levels
Variance compute	3,000 orders ended/day; peak 300/h	400 ms / 2 s / 4 s per order	5 orders/s	1M variance entries ≈ 0.6 GB	VarianceEntry by (site_id, period, type)	queue; order end confirmed async
Sales order estimate	5,000 configured lines/day	400 ms / 2 s / 4 s	10/s	5,000 × 365 × 3 KB ≈ 5.5 GB	by (sales_line_id)	estimates queue; confirmation waits ≤ 10 s
COGS component posting	200k issues/day	adds ≤ 10 ms per issue	300 issues/s	4× COGS lines in journal ≈ +40 GB	journal partitions (wave 11)	posting batched
GIA ledger settlement	1M inventory transactions/month × 3 ledgers	n/a	< 30 min per ledger	3× settlement rows ≈ 10 GB	per-ledger partitions	ledgers run sequentially

7.39.20 Localization and compliance hooks

- **Inventory valuation rules** differ: IFRS (IAS 2) prohibits LIFO; US GAAP allows LIFO (LIFO conformity rule ties tax and book); DE HGB allows Festwert and group valuation; FR PCG allows CUMP / FIFO. Global inventory accounting ledgers (FR-39.18) let one entity keep an IFRS FIFO ledger and a US LIFO tax ledger; country packs (wave 48) seed accounting conventions.
- **Standard cost capitalization**: IAS 2.13 requires fixed production overhead absorption at normal capacity; the costing sheet rate nodes carry `normalCapacityHours` and the variance report shows under-absorption that must be expensed; US §263A (UNICAP) additional costs are a tax-ledger costing sheet variant supplied by the US pack.
- **Transfer pricing**: Group and ProfitCenter views feed OECD Guidelines evidence (cost-plus margins) exported in FR-40.4; local file requirements (DE §90 AO, MX, IN Form 3CEB) consume it through wave 48.
- **Retention**: cost estimates and activation revaluation evidence 10 years (DE HGB §257, FR), 7 years (US).
- **Rounding**: 6-decimal unit costs, posting in currency minor unit; JPY and other zero-decimal currencies round to whole units at posting.

7.39.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX 12.8.3 Standard cost → Revaluation on activation / Conversion to standard cost (Standard cost conversion checklist)	PARTIAL-39	ADDED as FR-39.12	revaluation on activation already FR-39.6
AX 12.8.4 Standard cost conversion setup	PARTIAL-39	ADDED as FR-39.12	`costing.conversionBlockers`
AX 12.8.1 Global inventory accounting (multiple cost ledgers / accounting conventions)	GAP (proposed 20)	ADDED as FR-39.18	costing-svc extends the wave-20 engine; flag-gated
AX 12.8.4 Global inventory accounting setup (ledgers, accounting policies, conventions)	GAP (proposed 20)	ADDED as FR-39.18	`costing.globalInventoryAccounting`
SAP 13.8 CKECP / CKECP1 Easy cost planning / ad-hoc cost estimate	PARTIAL-39	ADDED as FR-39.13	project use in wave 41 consumes the estimate
SAP 13.8 CK51N / CK53N Sales order cost estimate	PARTIAL-27 (note proposes 39)	ADDED as FR-39.16	
SAP 13.8 CK91N / CK92 Procurement alternatives / mixing ratios	PARTIAL-39	ADDED as FR-39.14	
SAP 13.8 Mixed costing customizing: quantity structure types, procurement alternatives (OMXL)	PARTIAL-39	ADDED as FR-39.14	`costing.mixedCosting`, `costing.mixingRatioSource`
SAP 13.8 Easy cost planning customizing: costing models, characteristics (CKF*)	PARTIAL-39	ADDED as FR-39.13	CostingModel entity
SAP 13.8 COGS split by cost component (FINSC_COGS*)	PARTIAL-39	ADDED as FR-39.15	
SAP 13.8 Price-difference splitting (S/4)	PARTIAL-39	ADDED as FR-39.15	

7.40 Wave 40: Intercompany & Financial Consolidation

7.40.1 Scope and business context

Wave 40 closes phase 7 and delivers finance parity. Groups with several legal entities trade with each other, share costs and must report as one. Before this wave each entity is an island: an intercompany sale is keyed twice, due-to/due-from balances drift, and consolidated statements are assembled in spreadsheets. After it, pairing a customer in entity A with a vendor in entity B makes every sales order, packing slip, invoice and payment create its mirror in the partner automatically (including direct-delivery chains); intercompany journal lines post due-to/due-from entries in both entities; a reconciliation workspace matches both sides and flags mismatches; and the consolidation service builds group structures with ownership percentages, collects balances per unit, translates under IAS 21, eliminates intercompany balances, transactions, unrealized profit in inventory and investments, computes non-controlling interest, and produces consolidated statements through the wave-15 reporting designer with drill-down to the entity journal.

Out of scope: equity-method accounting for associates (v1.x), complex multi-tier ownership changes mid-year (step acquisitions), statutory group tax, transfer-pricing calculation itself (hooks only: documented IC prices and margin evidence export).

Scope amendment (gap closure). The registers (coverage-ax §12.99 rows 11, 73, 82, 97, 103, 126, 135, 190, 192, 193; coverage-sap §13.99 rows 87–116 mapped to wave 40; plus the regrouping rows proposed for wave 14) add centralized payments (FR-40.12), intercompany charges for expenses, time and vendor-invoice lines (FR-40.13), intercompany on-hand visibility (FR-40.14), intercompany planning groups (FR-40.15), group valuation for unrealized profit (FR-40.16), reclassification and regrouping rules (FR-40.17), consolidation of investments including the equity method and divestitures (FR-40.18), top-side group journals (FR-40.19) and the consolidation monitor with validation rules (FR-40.20). This supersedes the out-of-scope note above for equity-method accounting; step acquisitions (remeasuring a previously held interest when control is obtained) and proportional consolidation remain out of scope, with dispositions in 7.40.21.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
D365 intercompany: the mirror PO/SO is created by a synchronous X++ call; if the partner entity's number sequence or dimension validation fails, the user sees an infolog and the pair is left half-created (SalesTable without InterCompanyPurchId)	No saga; no compensation	Temporal saga with compensating cancel; both documents or neither	Orphan IC documents per month 5–20 → 0
SAP cross-company FB01 posts via OBYA clearing accounts; FBICR3 (ICR) reconciles weeks later by downloading both ledgers	Reconciliation is a separate batch extract	Every IC posting carries a pair id; reconciliation is continuous per posting	Mismatch detection latency 30 days → < 1 min
Intercompany billing in SAP SD (RD04 output → INVOIC IDoc → FB01 vendor invoice) fails silently in WE02 when a tax code is missing; AP sees nothing	Message-based integration inside one system	Mirror vendor invoice created in the same saga with validation before commit	IDoc-style failures to triage per month 10–30 → 0
AX consolidation (LedgerConsolidate online) copies balances into a consolidation company; eliminations (LedgerEliminationRule) are posted journals with no drill to source entity; reruns duplicate unless reversed manually	Copy-based consolidation into a ledger	Consolidation run is a derived, versioned dataset with elimination entries linked to source balances; rerun supersedes	Rerun effort 2 h → < 2 min; drill to entity 100%
Currency translation differences computed in Excel because AX "Consolidate online" translates all accounts at one rate type unless per-account overrides are maintained	Rate type per account instead of per statement category	IAS 21 methods by account category with CTA derived automatically	Manual CTA journals per period 1–3 → 0

7.40.2 AX / SAP parity map

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Trading partner setup	InterCompanyTradingPartner, InterCompanyEndpoint, InterCompanyEndpointActionPolicy, InterCompanyTradingValueMap, CustTable/VendTable intercompany flags	Customer/vendor with company code assignment, VBAK-VKORG IC sales org, OBYA clearing	IntercompanyPartner (customer in A ↔ vendor in B) with action policies and value maps	full
Mirror sales/purchase orders	SalesTable.InterCompanyOriginalPurchId, PurchTable.InterCompanyOriginalSalesId, InterCompanySalesOrder/PurchaseOrder classes, chains	Cross-company stock transport order (ME21N NB) with delivery and IC billing (VF01 IV)	Mirror document saga	full
Direct delivery chains	InterCompany direct delivery, SalesLine.InterCompanyInventDim, chain of orders	Third-party order processing, cross-company drop-ship	DirectDeliveryChain entity (3 orders linked)	full
Intercompany invoices	InterCompany invoice posting (sales invoice → vendor invoice), InterCompanyPurchInvoice	SD IV intercompany billing, RD04 → INVOIC → FB01	Mirror invoice creation in same saga	improved
Intercompany accounting (journals)	LedgerJournalTrans.OffsetCompany, LedgerIntercompany (due-to/due-from accounts), intercompany journal	FB01 cross-company (BVORG), OBYA, FAGL cross-company postings	IcJournal with due-to/due-from derivation	full
Intercompany reconciliation	Intercompany reconciliation report (D365 10.0.x)	ICR FBICR3 / FBIC010 (GL open items), FBICS3	IcReconciliationItem continuous matching	improved
Group structure and ownership	Consolidation legal entity, LedgerConsolidate, LedgerConsolidateLegalEntity (share %)	Consolidation units/groups (CXCUNIT), ownership in COI, ECCS CX5x	ConsolidationGroup, ConsolidationUnit, Ownership	full
Eliminations	LedgerEliminationRule, LedgerEliminationRuleLine, elimination journal (LedgerJournalType Elimination), ConsolidationAccount	Group Reporting reclassification/elimination tasks (ACDOCU document types 2x), IC profit in inventory, COI	EliminationRule engine, ConsolidationEntry	full
Currency translation	Consolidate online rate types per account, LedgerConsolidateExchangeRate	Translation methods (closing, average, historical), CTA	IAS 21 per account category, CTA derived	full
Consolidated statements	Management Reporter consolidated reporting tree	Group Reporting reports, ACDOCU-based analytics	Wave 15 designer over consolidated dataset with drill	full
Centralized payments	Centralized payments (Organization administration → Centralized payments, VendPaymentJournal paying for other legal entities), LedgerInterCompany	FBZP paying company code / sending company code, F110 cross-company payment	CentralizedPaymentSetup with due-to / due-from settlement (FR-40.12)	full
Intercompany charges (expenses, timesheets)	TrvExpTrans intercompany legal entity, ProjIntercompany parameters (lending / borrowing), intercompany timesheets and vendor invoices (R3)	CO cross-company allocations, PS intercompany billing (DP90 with cross-company resource-related billing)	IcChargeRequest contract (FR-40.13)	full
Intercompany on-hand	Intercompany on-hand (R3 Inventory → On-hand across legal entities)	MMBE across plants of different company codes	IC on-hand read model (FR-40.14)	full
Intercompany master planning	Intercompany planning groups (ReqIntercompanyPlanningGroup), intercompany master scheduling	MRP with special procurement key (cross-company stock transfer), MD01 sequence by plant	IcPlanningGroup run sequence (FR-40.15)	full
Group valuation of IC profit	none (profit in inventory computed manually)	Group / profit-center valuation views (OKKP, TKA01), transfer prices 8KEM / 8KEN	Group view cost per receipt layer (FR-40.16, with FR-39.17)	partial (no ML actual group costing)
Reclassification and regrouping	Financial reports reclass rows; no posting rule	FAGLF101 / FAGL_CL_REGROUP regrouping, Group Reporting reclassification methods and runs	ReclassificationRule engine (FR-40.17)	full
Consolidation of investments	LedgerConsolidate share % only	CoI activities (first consolidation, subsequent, increase / decrease, divestiture), equity method (ECCS CoI, Group Reporting "Manage Investments / Equity data")	ConsolidationOfInvestments activities (FR-40.18)	partial (no step acquisition)
Top-side group journals	Consolidation company journals (LedgerJournal in consolidation company)	Group Reporting "Post Group Journal Entries" (document types 0C / 1x / 2x), ECCS manual postings	GroupJournal per run with document types (FR-40.19)	full
Consolidation monitor and validation	Consolidate online process log	CXCD data monitor, consolidation monitor tasks, validation rules (Group Reporting "Define Validation Rules")	ConsolidationMonitor tasks and ValidationRule (FR-40.20)	full

7.40.3 Functional requirements

- **FR-40.1 Trading partners** — Must. The system shall pair a customer in entity A with a vendor in entity B (and vice versa) with action policies (auto-create, auto-confirm, auto-post packing slip, auto-post invoice), value maps (item numbers, units, dimensions, charges) and an IC pricing policy (agreed price list, cost plus %, transfer price table).
  - Notes: one active pairing per entity pair and direction; policies versioned; mirror creation requires both entities on the same tenant.
- **FR-40.2 Mirror-document matrix** — Must. The system shall create mirror documents per the matrix below in a Temporal saga with compensation.
  - Notes: matrix (source in selling/holding entity → mirror in buying/receiving entity): sales order → purchase order; sales order change (qty/date/price) → PO change with re-approval if beyond policy tolerance; packing slip → product receipt; sales invoice → vendor invoice (matched 3-way to the mirror PO and receipt); customer payment received → vendor payment settled (optional, when netting is not used); sales return (RMA) → purchase return; free-text invoice → vendor invoice journal; IC journal line with offset entity → due-to/due-from entries both sides; fixed asset IC transfer (wave 37) → disposal + acquisition; reverse direction (PO created in buyer first) → sales order in seller. Saga steps: validate partner and policy → reserve number sequences in both entities → create source → create mirror → link (`IcDocumentLink`) → publish; on any failure compensate by canceling created documents.
- **FR-40.3 Direct delivery chains** — Must. The system shall support customer order in A, IC PO from A to B, IC SO in B shipping directly to A's customer, with B's packing slip posting A's product receipt and A's customer packing slip in one saga.
- **FR-40.4 Intercompany pricing and transfer-pricing hooks** — Should. The system shall price IC lines from the policy, record the pricing basis on the link, and export a transfer-pricing evidence file (item, qty, price, basis, cost, margin) per period.
- **FR-40.5 Intercompany accounting** — Must. The system shall derive due-to/due-from accounts per entity pair from the IC accounting setup and post balanced entries in both entities for IC journal lines, allocations (wave 14/38) and expense re-charges, each carrying a shared `ic_pair_id`.
  - Notes: both entries post atomically through the journal API per entity; if the second post fails the first is reversed; amounts in the counterparty entity convert at the document rate with FX difference booked to IC FX accounts.
- **FR-40.6 Intercompany reconciliation** — Must. The system shall match IC balances and transactions per entity pair, currency and period, classifying each as Matched (difference ≤ 0.01 or FX tolerance), Timing (counterpart exists in the next period), or Mismatch, with a workspace to resolve.
  - Notes: FX tolerance default 0.5% of amount; period-end summary required to be free of Mismatch before consolidation unless overridden by `ConsolidationApprove`.
- **FR-40.7 Group structure** — Must. The system shall define consolidation groups and units (legal entities or sub-groups) with effective-dated ownership %, consolidation method (full / proportional — v1 full only), group currency and chart mapping (entity main account → consolidation account).
- **FR-40.8 Data collection and translation** — Must. The system shall collect trial balances per unit and period from the wave-11 balance projection, translate under IAS 21: assets/liabilities at closing rate, income/expense at average rate (or transaction-date rates by option), equity at historical rates, and derive CTA = translated closing net assets − (translated opening net assets + translated net income); CTA posts to the OCI consolidation account.
- **FR-40.9 Eliminations** — Must. The system shall apply elimination rules in order: (E1) IC revenue/COGS and other P&L; (E2) IC receivables/payables and loans with translation differences to CTA; (E3) unrealized profit in inventory (upstream shared with NCI, downstream parent only); (E4) investment in subsidiary against equity at acquisition with goodwill; (E5) NCI share of current-year profit and equity; (E6) dividends within group. Each produces ConsolidationEntry lines linked to the source balances.
  - Notes: worked 2-entity example (group currency USD; P owns 80% of S, S in EUR; closing rate 1.10, average 1.08, historical at acquisition 1.05). S sold goods to P for EUR 100,000 (cost EUR 70,000); 40% remain in P's inventory; S's receivable EUR 100,000 open; P's payable recorded at USD 108,500. E1: Dr Revenue 108,000.00 / Cr COGS 108,000.00 (100,000 × 1.08). E2: Dr AP 108,500.00, Dr CTA 1,500.00 / Cr AR 110,000.00 (100,000 × 1.10). E3: unrealized profit = 30,000 × 40% = EUR 12,000 × 1.08 = 12,960.00: Dr COGS 12,960.00 / Cr Inventory 12,960.00; upstream so NCI shares 20%: Dr NCI (equity) 2,592.00 / Cr NCI share of profit 2,592.00. E4: S share capital EUR 500,000 and pre-acquisition retained earnings EUR 200,000 at 1.05 = 735,000.00; P investment USD 620,000.00; Dr Share capital 525,000.00, Dr Pre-acquisition RE 210,000.00, Dr Goodwill 32,000.00 / Cr Investment in S 620,000.00, Cr NCI 147,000.00 (20% × 735,000). E5: S net income EUR 150,000 × 1.08 = 162,000.00; Dr Profit attributable to NCI 32,400.00 / Cr NCI (equity) 32,400.00. Each entry balances; the run reports Σ debits = Σ credits = 1,032,952.00 across eliminations E1–E5.
- **FR-40.10 Consolidation run** — Must. The system shall execute collection → translation → eliminations → NCI → validation as one versioned run per group/period with partial recompute for changed units, producing a consolidated trial balance and statements.
  - Notes: run of 50 units × 10,000 accounts in < 5 min; validation: consolidated balance sheet balances; Σ eliminations per rule balanced; no unresolved Mismatch items.
- **FR-40.11 Consolidated reporting and drill** — Must. The system shall expose the consolidated dataset to the wave-15 designer with drill from a consolidated line to unit balances, elimination entries and entity journal lines.
- **FR-40.12 Centralized payments** — Must. The system shall let a paying entity settle vendor invoices of other entities (pay on behalf of) and receive customer payments for other entities, posting due-to / due-from in both entities and settling the open item in the owning entity.
  - Notes: setup per (paying entity, owning entity, payment method) with the due-to / due-from accounts from the BR-40.4 matrix; worked example: P pays S's vendor invoice EUR 10,000.00 → P: Dr Due from S 10,000.00 / Cr Bank 10,000.00; S: Dr Vendor 10,000.00 / Cr Due to P 10,000.00, open item settled in S; cash discount belongs to the owning entity; FX difference in the owning entity when currencies differ; customer receipts work in reverse; a payment proposal in the paying entity (wave 19) selects open items across the owning entities it is set up for; both postings carry one `ic_pair_id` and run in the mirror saga (FR-40.2 compensation rules).
- **FR-40.13 Intercompany charges** — Must. The system shall accept intercompany charge requests from expense lines (wave 43), timesheet and project transactions (wave 41) and vendor invoice lines (wave 18) whose cost belongs to another entity, price them by the IC charge pricing policy, and post the cost in the borrowing entity with a due-to and the recovery in the lending entity with a due-from or an IC invoice.
  - Notes: `IcChargeRequest` fields: source document, lending entity, borrowing entity, category (Expense / Hour / Item / Fee), quantity, cost amount, dimensions in the borrowing entity; pricing: cost, cost-plus % per category, or transfer price table per resource role and category (AX intercompany transfer prices); settlement mode Journal (due-to / due-from) or Invoice (IC customer invoice in lender → vendor invoice in borrower through FR-40.2); tax on cross-border recharges from wave 13; the consuming waves (41, 43) call the same API, so no IC logic lives in those services.
- **FR-40.14 Intercompany on-hand** — Should. The system shall show on-hand and available quantities of trading partners' sites for items mapped by the partner value map when entering IC orders, without exposing cost.
  - Notes: read model built from wave-16 on-hand events of partner entities in the same tenant, filtered by the IC partner's allowed sites; refresh lag p95 < 60 s; visibility requires the partner policy `share-on-hand = true` in both directions.
- **FR-40.15 Intercompany planning groups** — Should. The system shall define planning groups of entities with a run sequence so that planned IC purchase orders created by MRP in a buying entity become IC demand in the supplying entity before that entity is planned, and firming creates the mirror documents through FR-40.2.
  - Notes: sequence derived from the IC partner graph (buyers before suppliers) with cycle detection; each entity is planned by the wave-22 engine in sequence inside one Temporal workflow; IC demand carries the requested date minus the IC transport lead time; replanning a buyer after its supplier marks the supplier plan stale (IC-0815).
- **FR-40.16 Group valuation for unrealized profit** — Must. The system shall compute unrealized profit in inventory (E3) per IC receipt layer as remaining quantity × (Legal-view unit cost in the holder − Group-view unit cost from the supplier, FR-39.17), and fall back to the seller's average margin (BR-40.7) when a layer carries `groupCostUnknown`.

    - Notes: layers follow the holder's costing method (FIFO for remaining layers by default); supplier group cost converts at the receipt-date rate and the elimination translates at the average rate of the period; the elimination detail lists every layer for drill.
- **FR-40.17 Reclassification and regrouping rules** — Must. The system shall run rule-based reclassifications at entity level (posting through the journal with automatic reversal on the first day of the next period) and at group level (consolidation entries), covering sign-based moves, remaining-term splits and two-sided intercompany elimination methods with difference accounts and thresholds.
    - Notes: entity-level rule types: DebitBalanceVendors → other receivables, CreditBalanceCustomers → other payables, RemainingTerm (receivables / payables / loans due > 12 months → non-current, per open item due date), invoked as a wave-14 close checklist task (SAP FAGLF101 / FAGL_CL_REGROUP equivalent); group-level types: SignBased (for example negative consolidated cash → bank overdrafts), FS item remap, and two-sided IC elimination with difference posted to an IC difference account when |difference| ≤ threshold (default 1,000.00 group currency) and blocking the run above it; rules are ordered, versioned and dry-runnable.
- **FR-40.18 Consolidation of investments and equity method** — Should. The system shall record investments and equity holdings per investor and investee with effective-dated ownership and cost, and run CoI activities: first consolidation (goodwill per E4), subsequent consolidation, ownership increase or decrease without change of control (equity transaction, no goodwill change), full divestiture with deconsolidation gain or loss, and the equity method for associates and joint ventures.
    - Notes: divestiture gain = proceeds – (group carrying amount of net assets + goodwill – NCI) + CTA recycled from OCI; equity method: share of profit = ownership % × associate net income, dividends received reduce the investment, worked example: 30% associate, investment USD 300,000.00, associate net income 200,000.00, dividends paid to the investor 20,000.00 → Dr Investment in associate 60,000.00 / Cr Share of profit of associates 60,000.00; Dr Dividend income 20,000.00 / Cr Investment in associate 20,000.00; closing carrying amount 340,000.00; associates are not line-consolidated and need only net income, equity and dividends, collected through FR-40.8 or imported (`/consol/imports`).
- **FR-40.19 Top-side group journals** — Must. The system shall let consolidation accountants post manual group journals per run and document type (Adjustment, Reclassification, Elimination, CoI) at group or unit level, with optional carry-forward into later periods and approval.
    - Notes: document types decide whether entries are period-only or cumulative (carry forward in the same fiscal year) and whether they need approval (default: amount ≥ 100,000.00 group currency); top-side entries survive reruns (they attach to the group and period, not to a run version) and are re-applied to each new version; every entry needs a reason text and attachment.
- **FR-40.20 Consolidation monitor and validation rules** — Must. The system shall present a monitor per group and period with tasks per unit (collect, release, validate, translate) and per group (IC eliminations, profit in inventory, CoI, reclassification, top-side, group validation), enforce task dependencies, lock released unit data, and evaluate validation rules at unit and group level.
    - Notes: task status NotStarted / Running / Completed / CompletedWithWarnings / Error / Blocked; unit data release locks the unit's collected balances for the period (re-collection needs `ConsolidationApprove`); validation rules are expressions over FS items (for example total assets = total liabilities + equity; IC partner present on IC FS items; change in retained earnings = net income – dividends ± tolerance 1.00) with severity Error (blocks) or Warning; the monitor feeds the wave-14 close checklist.

7.40.4 Data model

IcDocumentLink

Field	Type	Required	Notes
id	uuid	yes	PK
ic_pair_id	uuid	yes	shared by all documents in a chain
partner_id	uuid	yes	FK IntercompanyPartner
source_entity_id, source_doc_type, source_doc_id	uuid, enum, uuid	yes	
mirror_entity_id, mirror_doc_type, mirror_doc_id	uuid, enum, uuid	yes	
chain_id	uuid	no	direct delivery chain
saga_id	text	yes	Temporal workflow id
status	enum	yes	Creating/Linked/Compensated/Failed
pricing_basis	jsonb	no	policy, price list, markup

IcReconciliationItem: id, entity_a_id, entity_b_id, period_key, currency, ic_pair_id, amount_a, amount_b, difference, fx_tolerance_applied, status (Matched/Timing/Mismatch/Resolved), resolution_note, resolved_by.

ConsolidationUnit: id, group_id, legal_entity_id (or child_group_id), functional_currency, ownership[] ({from, to, percent numeric(7,4)}), method (Full), acquisition_date, historical_rate numeric(19,8), chart_mapping_id.

ConsolidationRun

Field	Type	Required	Notes
id	uuid	yes	PK
group_id	uuid	yes	
period_key	text	yes	
version	int	yes	increments per rerun
status	enum	yes	Collecting/Translating/Eliminating/Validating/Completed/Failed/Superseded
rates	jsonb	yes	closing, average, historical by currency
cta_amount	numeric(19,4)	no	
validation	jsonb	no	checks and results
started_at, completed_at	timestamptz	yes/no	

ConsolidationEntry: id, run_id, rule_code (E1–E6/Translation/Collection), unit_id, consolidation_account_id, debit, credit, group_currency, source_refs jsonb ({unitId, accountId, amount, rate}), nci_share numeric(19,4).

Entities added by FR-40.12–FR-40.20: **CentralizedPaymentSetup** (paying_entity_id, owning_entity_id, payment_method, direction Pay/Receive, due_to_account, due_from_account, effective_from); **IcChargeRequest** (id, source_type Expense/Timesheet/ProjectTransaction/VendorInvoiceLine, source_id, lending_entity_id, borrowing_entity_id, category, quantity, cost_amount, price_amount, pricing_basis jsonb, settlement_mode Journal/Invoice, ic_pair_id, status Received/Priced/Posted/Failed); **IcTransferPrice** (lending_entity_id, borrowing_entity_id, category, resource_role, method Cost/CostPlus/Table, markup_pct, price, currency, effective_from); **IcPlanningGroup** (id, members [{entityId, sequence}], lead_time_days per pair); **ReclassificationRule** (id, level Entity/Group, type, selection jsonb, target_account_or_fs_item, threshold, order, version, auto_reverse bool); **Investment** (investor_unit_id, investee_unit_id, method Full/Equity,

ownership[] {from, percent}, cost, acquisition_date, goodwill, fair_value_adjustments jsonb); **GroupJournal** (id, group_id, period_key, document_type, unit_id, lines [{fsItem, debit, credit, partnerUnit}], carry_forward bool, approval_status, reason); **ConsolidationTask** (group_id, period_key, unit_id, task_type, status, started_at, completed_at, messages jsonb); **ValidationRule** (id, level, expression, severity, tolerance, version).

Invariants: every IcDocumentLink with status Linked has both documents existing and amounts equal at document rate; Σ ConsolidationEntry debit = Σ credit per run and per rule_code; ownership percentages per unit never exceed 100.00% at any date; a Completed run is immutable (rerun creates a new version and marks the old Superseded). Indexes: IcDocumentLink by ic_pair_id, by (mirror_entity_id, mirror_doc_id); ConsolidationEntry by (run_id, consolidation_account_id); IcReconciliationItem by (entity_a_id, entity_b_id, period_key, status).

7.40.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	/api/v1/interco/partners	Create pairing and policy	Idempotency-Key	IntercompanyConfigure
POST	/api/v1/interco/mirrors	Start mirror saga for a source document (system)	sourceDocId+version	IntercompanySystem

GET	/api/v1/interco/onhand?partner=&item=	Partner on-hand	n/a	IntercompanyView
POST	/api/v1/interco/planning-groups/{id}/run	Sequenced IC planning run	runId	IntercompanyPlan
POST	/api/v1/consol/reclassification-runs	Entity- or group-level reclass (dryRun option)	(scope, period, version)	ConsolidationRun
POST	/api/v1/consol/group-journals	Post top-side journal	Idempotency-Key	ConsolidationJournal
POST	/api/v1/consol/investments	Record investment / ownership change	Idempotency-Key	ConsolidationConfigure
GET	/api/v1/consol/monitor?group=&period=	Monitor tasks and statuses	n/a	ConsolidationView
POST	/api/v1/consol/units/{id}/release?period=	Release and lock unit data	state check	ConsolidationUnitRelease

Validation: mirror saga rejects when the partner policy is inactive or the mirror entity's period is closed; consolidation run rejects unresolved Mismatch items unless override; rates must exist for every unit currency.

Event	Trigger	Payload fields	Consumers
`dev.passage.interco.mirror.created.v1`	saga linked	icPairId, sourceDocId, sourceEntity, mirrorDocId, mirrorEntity, type	sales, procurement, analytics
`dev.passage.interco.mirror.compensated.v1`	saga failed	icPairId, failedStep, reason	workflow, alerts
`dev.passage.interco.journal.posted.v1`	IC journal both sides posted	icPairId, entityA, entityB, amount, currency, journalIds[]	reconciliation, consol-svc
`dev.passage.interco.reconciliation.flagged.v1`	mismatch	itemId, entities, difference	workspace, workflow
`dev.passage.consol.run.completed.v1`	run completed	runId, groupId, period, version, unitCount, eliminationCount, ctaAmount	reporting, analytics
`dev.passage.interco.charge.posted.v1`	IC charge posted in both entities	chargeId, icPairId, lendingEntity, borrowingEntity, amount, settlementMode	wave 41 projects, wave 43 expenses, reconciliation
`dev.passage.interco.planning.completed.v1`	planning group run done	runId, groupId, entitiesPlanned[], icDemandCount	master planning (22), workspace
`dev.passage.consol.unit.released.v1`	unit data released	groupId, unitId, period, balancesHash	consol-svc monitor
`dev.passage.consol.validation.failed.v1`	validation rule error	runId, ruleId, unitId, difference	workspace, close checklist (14)

7.40.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Intercompany workspace	Pending sagas, failed mirrors, mismatches, netting link	pair, source, mirror, status, age	IntercompanyView
Partner setup	Pair, policies, value maps, pricing	entity A/B, customer/vendor, actions, tolerances	IntercompanyConfigure
Chain view	Open any document in chain, retry/compensate	SO, PO, receipts, invoices, payments with status	IntercompanyView
IC reconciliation	Run, filter status, resolve, drill both sides	pair, currency, amount A, amount B, difference, status	IntercompanyReconcile
Consolidation workspace	Define group, start run, view validation, open statements	group, period, version, status, CTA, checks	ConsolidationRun
Elimination entries	Filter by rule/unit, drill to source	rule, unit, account, debit, credit, NCI share	ConsolidationView

Interaction rules: chain view renders as a graph with keyboard navigation between nodes; reconciliation grid pairs rows side by side with difference highlighted; consolidation run progress streams per step; statements open in the wave-15 viewer with a "consolidated" badge and drill menu.

7.40.7 Business rules and edge cases

- **BR-40.1** Mirror saga state machine: Creating → Linked; Creating → Compensated (all created documents canceled) → Failed when compensation itself fails (alert, manual); Linked documents cannot be deleted, only canceled through the chain.
- **BR-40.2** Source and mirror amounts are equal in document currency; each entity's accounting currency conversion uses its own rate at the document date; differences surface in reconciliation as FX-tolerated.
- **BR-40.3** A change to a linked sales order beyond policy tolerance (default qty ±0, price ±0.5%, date ±2 days) puts the mirror PO into re-approval (wave 17 workflow); within tolerance it updates silently.

- **BR-40.4** Due-to/due-from derivation: entity A line with offset entity B posts A: Dr/Cr account, Cr/Dr "Due from B"; B: Dr/Cr "Due to A", Cr/Dr the offset account; accounts resolved from the IC accounting matrix (A,B); missing matrix entry fails the post.
- **BR-40.5** Reconciliation Timing status requires the counterpart within the next period; after that it becomes Mismatch.
- **BR-40.6** Translation: historical rate per equity movement date; CTA computed per unit, then NCI share of CTA (ownership %) reclassified to NCI.
- **BR-40.7** Unrealized profit in inventory uses the seller's margin on the remaining quantity (FIFO assumption on IC receipts) and the average rate of the sale period.
- **BR-40.8** Ownership changes mid-period apply from the effective date; income is split pro rata by days unless a measured sub-period balance is provided.
- **BR-40.9** Consolidation rounding: entries computed at 6 decimals, rounded to the group currency minor unit per line; a per-rule rounding line keeps each rule balanced.
- **BR-40.10** Rerun with no changed units and same rates returns the existing version (idempotent); any change creates version +1 and supersedes.
- **BR-40.11** Centralized payment: the owning entity's open item is settled only when the paying entity's payment posts; a failed bank payment (wave 19 return) reverses both entities' postings in one saga.
- **BR-40.12** IC charge pricing resolves the transfer price effective on the source transaction date; a missing price fails the charge with IC-0821 and the source document stays posted in the lending entity on a suspense IC account until repriced.
- **BR-40.13** IC planning sequence: an entity appears once per run; cycles in the partner graph are broken by the group's explicit sequence, else the run fails with IC-0816.
- **BR-40.14** Entity-level reclassification entries reverse on the first calendar day of the next period with the same journal source; a rerun in the same period reverses the previous run first.
- **BR-40.15** Two-sided IC elimination: difference = Σ receivable side − Σ payable side per partner pair and FS item group after translation; |difference| ≤ threshold posts to the IC difference item; above threshold the task ends in Error.
- **BR-40.16** Ownership change without loss of control posts the difference between consideration and the NCI carrying amount to group equity; goodwill is unchanged.
- **BR-40.17** Unit data released for a period cannot be re-collected without `ConsolidationApprove`; re-collection invalidates every downstream task of that unit and period.
- **BR-40.18** Carry-forward top-side journals are re-applied to every later period of the same fiscal year and stop at year end unless the document type is `Cumulative`.

7.40.8 Acceptance criteria

- **AC-40.1** (FR-40.2) Given a sales order of 100 × 25.00 EUR in A to the IC customer, when confirmed, then a PO 100 × 25.00 EUR exists in B linked by ic_pair_id, and both documents balance.
- **AC-40.2** (FR-40.2) Given 1,000 random IC orders including planted number-sequence failures, when sagas run, then every pair is either Linked with equal amounts or Compensated with no orphan document.
- **AC-40.3** (FR-40.3) Given a direct-delivery chain, when B posts the packing slip, then A's product receipt and A's customer packing slip post in the same saga with matching quantities.
- **AC-40.4** (FR-40.5) Given an IC journal line of USD 1,000.00 expense in A offset to B, when posted, then A shows Dr Expense 1,000.00 / Cr Due from B 1,000.00 and B shows Dr Due to A 1,000.00 / Cr Cash 1,000.00 with one ic_pair_id.
- **AC-40.5** (FR-40.6) Given 50 planted mismatches (missing mirror, wrong amount, wrong period), when reconciliation runs, then all 50 are flagged and no matched pair is flagged.
- **AC-40.6** (FR-40.8) Given unit S with opening net assets EUR 700,000 at 1.05, net income EUR 150,000 at 1.08, closing net assets EUR 850,000 at 1.10, when translated, then CTA = 935,000 − (735,000 + 162,000) = 38,000.00 USD.
- **AC-40.7** (FR-40.9) Given the worked P/S example, when the run executes, then entries E1–E5 post with the stated amounts and each rule balances.
- **AC-40.8** (FR-40.9) Given the 3-entity, 2-currency demo group fixture, when consolidated, then the consolidated balance sheet and P&L match the accountant-reviewed eliminations to the cent.
- **AC-40.9** (FR-40.11) Given a consolidated revenue line, when drilled, then unit balances, E1 entries and entity journal lines are reachable within 3 clicks.
- **AC-40.10** (FR-40.12) Given P pays S's vendor invoice of EUR 10,000.00, when the payment posts, then P shows Dr Due from S / Cr Bank 10,000.00, S shows Dr Vendor / Cr Due to P 10,000.00 with the invoice settled, and both lines share one ic_pair_id.
- **AC-40.11** (FR-40.13) Given 8 hours by a lending-entity consultant at cost 60.00 with cost-plus 10%, when the charge posts in Journal mode, then the borrower books 528.00 project cost with Due to lender, and the lender books Due from borrower 528.00 against cost recovery 480.00 and IC margin 48.00.
- **AC-40.12** (FR-40.16) Given 40 units remaining from an IC receipt at Legal cost 120.00 and Group cost 100.00, when E3 runs, then unrealized profit of 800.00 in the receipt currency is eliminated and the detail lists the layer.
- **AC-40.13** (FR-40.17) Given a vendor with a debit balance of USD 5,000.00 at period end, when the regrouping rule runs, then Dr Other receivables 5,000.00 / Cr Vendor reclass 5,000.00 posts and reverses on the first day of the next period.
- **AC-40.14** (FR-40.18) Given the 30% associate example, when the equity method runs, then the investment carrying amount is 340,000.00 and the share of profit is 60,000.00.
- **AC-40.15** (FR-40.20) Given a unit whose balance sheet does not balance by 12.00, when validation runs, then the unit task ends in Error and the group translation task is Blocked.
- **AC-40.16** (FR-40.15) Given buyer A with a planned IC PO of 100 units for 2026-12-10 and transport lead time 3 days, when the planning group runs, then supplier B is planned after A with IC demand of 100 units on 2026-12-07.

7.40.9 Test plan and fixtures

Fixtures: `ic-orders-1000` (generated across 3 entities, 2 currencies, with planted failures and direct-delivery chains); `ic-recon-planted-50` (mismatch types); `consol-group-3` (P in USD, S1 in EUR 80%, S2 in USD 100%, IC sales, inventory, loans, dividends; accountant workbook); `translation-cases` (rate scenarios, mid-year acquisition).

Test	Type	Target	Pass criterion
Saga compensation	Property	interco-svc	no orphan documents under random failures
Mirror amount equality	Property	links	source = mirror in document currency
Due-to/due-from derivation	Unit	IC accounting	matrix cases
Reconciliation classifier	Unit	matcher	Matched/Timing/Mismatch per table
Translation and CTA	Unit	consol-svc	worked example exact
Elimination rules	Unit/E2E	run	P/S example; demo group workbook
Run performance	Performance	run	50 units × 10k accounts < 5 min
Drill-down	E2E	reporting	3 clicks to journal

Reconciliation checks: Σ due-from in A = Σ due-to in B per pair and currency (after FX tolerance); consolidated TB balances; Σ eliminations per rule = 0; consolidated equity = parent equity + NCI + CTA.

7.40.10 Deployment and operations

Helm charts `interco-svc` (TS, Temporal workers), `consol-svc` (Go), Postgres `group`; env `IC_SAGA_TIMEOUT_S=120`, `IC_FX_TOLERANCE_PCT=0.5`, `CONSOL_MAX_UNITS=500`; flags `interco.payment-mirroring`, `consol.external-import`; jobs: `ic-reconcile` hourly and at period close, `ic-saga-sweeper` every 5 min for stuck sagas, `consol-run-scheduled` on close checklist task (wave 14). SLOs: mirror saga p95 < 5 s, reconciliation run < 2 min for 100k items, consolidation as above. Alerts: compensated sagas > 0 per hour, stuck sagas > 10 min, run failures. Runbook: retry saga, manual compensation, rerun consolidation version. Rollback: Helm; runs are versioned datasets, links are append-only.

7.40.11 Migration from AX / SAP

Source	Passage entity	Notes
InterCompanyTradingPartner, InterCompanyEndpoint*, value maps	IntercompanyPartner, policies	
SalesTable/PurchTable IC links (open orders)	IcDocumentLink	open chains only, status Linked
LedgerIntercompany (due-to/due-from setup)	IC accounting matrix	
LedgerConsolidate*, LedgerEliminationRule/Line, ConsolidationAccount mapping	ConsolidationGroup, Unit, EliminationRule, chart mapping	
OBYA clearing accounts, customer/vendor IC assignments	IC accounting matrix, IntercompanyPartner	
Open cross-company STOs and IC billing documents	IcDocumentLink	
Group Reporting units/groups/FS item mapping, ECCS CX hierarchy	ConsolidationGroup, Unit, chart mapping	
ACDOCU / ECMCT history	lakehouse archive	prior consolidated results kept for comparison, not re-run

Validation: IC balances per pair equal legacy after migration; first Passage consolidation for the last closed legacy period matches legacy consolidated statements within 0.01% per line (differences explained). Not migrated: closed IC chains, legacy elimination journals (replaced by derived runs).

7.40.12 Dependencies, risks, open questions

Depends on: waves 11–15 (journal, rates, period control, reporting), wave 17 PO and approval, wave 18 vendor invoice matching, wave 27–29 sales orders, shipping and invoicing, wave 30 payments, wave 36 netting, wave 37 IC asset transfers, wave 39 cost for unrealized profit.

Risk	Likelihood	Impact	Mitigation
Cross-domain saga partial failure leaves stuck state	Medium	High	Sweeper job, compensation tests, manual runbook
Accountant disagreement on NCI/CTA presentation	Medium	Medium	Workbook-driven fixtures; sign-off gate
Group chart mapping effort per customer	High	Medium	Mapping import template; validation report

Open questions: (1) Mirror customer payments by default or rely on netting? Proposed netting; decide by wave 40 start. (2) Proportional consolidation in v1? Proposed no; decide at phase exit. (3) Transfer-pricing evidence format (CSV vs OECD XML)? Proposed CSV; decide by wave 40.

7.40.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`ic.accountingMatrix`	entity pair	table	none	(A, B) → due-to, due-from, IC FX accounts	BR-40.4 derivation	Intercompany accounting setup (LedgerInterCompany)	OBYA cross-company clearing accounts
`ic.partnerPolicy`	entity pair × direction	struct	auto-create on, auto-post off	create / confirm / post packing slip / post invoice flags	FR-40.1 action policies	InterCompanyEndpointActionPolicy	IC billing output (VF01 IV, RD04 output type), customer / vendor per company code
`ic.valueMaps`	entity pair	table	none	item, unit, dimension, charge maps	FR-40.1 mapping	InterCompanyTradingValueMap	customer-material info records (VD51), plant assignment
`ic.pricingPolicy`	entity pair	enum	PriceList	PriceList / CostPlus / TransferPriceTable	IC line price (FR-40.4)	Intercompany trade → Price / InterCompanyTradingRelation pricing	pricing procedure with PI01 / IV01 conditions, 8KEM / 8KEN transfer price variants
`ic.changeTolerance`	entity pair	struct	qty ±0, price ±0.5%, date ±2 days	ranges	BR-40.3	none	none
`ic.fxTolerancePct`	tenant	decimal	0.5%	0–5%	FR-40.6 Matched	none	FBICR3 tolerance settings (ICR)
`ic.sagaTimeoutS`	tenant	int	120	30–600	saga timeout (env `IC_SAGA_TIMEOUT_S`)	none	none

`consol.documentTypes`	group	table	Adjustment, Reclassification, Elimination, CoI	period / cumulative, approval threshold	FR-40.19	Consolidation journal names	Group Reporting document types (0C, 1x, 2x, 3x)
`consol.validationRules`	unit / group	expressions	3 seeded	expression, severity, tolerance	FR-40.20	none	validation rules (Define Validation Rules)
`consol.maxUnits`	tenant	int	500	1–2,000	env `CONSOL_MAX_UNITS`	none	none

7.40.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
IC chain view	drill-down	pair id, document, status	documents in chain, status, amounts	`ic_document_link`	Intercompany sales order / purchase order references	VF03 / ME23N document flow
Failed / compensated sagas	operational report	date, partner, failed step	saga, source, step, reason, age	`ic_document_link` status Compensated / Failed	none	WE02 IDoc errors (INVOIC)
IC reconciliation	list inquiry	pair, period, currency, status	amount A, amount B, difference, status, resolution	`ic_reconciliation_item`	Intercompany reconciliation report (D365)	FBICR3, FBIC010, FBICS3
Due-to / due-from balances	statutory report	entity pair, period	due-to, due-from, difference, ageing	journal balances by IC accounts	Intercompany accounting balances	FAGLB03 on clearing accounts, ICR reports
Centralized payments log	list inquiry	paying entity, owning entity, date	payment, invoices settled, amounts, ic pair	`ic_document_link` type CentralPayment	Centralized payments journal lines	F110 payment list by paying company code
IC charges	list inquiry	lender, borrower, category, period	charge, source, cost, price, margin, mode	`ic_charge_request`	Intercompany expense / timesheet lines	KSB1 cross-company allocations
Transfer-pricing evidence	statutory report	entity pair, period	item / category, qty, price, basis, cost, margin %	`ic_document_link.pricing_basis` + FR-39.17	none	TP documentation from 8KEM conditions
Consolidated trial balance	statutory report	group, period, version	FS item, unit amounts, eliminations, consolidated	`consolidation_entry`	SSRS Consolidation (consolidated balances)	ECCS CX5x reports, Group Reporting "Group Data Analysis"
Elimination detail	drill-down	run, rule, unit	entry, FS item, debit, credit, NCI, source refs	`consolidation_entry`	Elimination journal lines	CoI / elimination document display
Consolidation monitor	KPI	group, period	tasks by unit / group, status, duration	`consolidation_task`	none	Consolidation monitor (Group Reporting), CXCD data monitor
CTA and NCI roll-forward	statutory report	group, period	opening, translation movement, NCI share, closing	`consolidation_entry` (Translation, E5)	none	Group Reporting statement of changes in equity
Investment / equity holdings	list inquiry	group, investor, method	investee, ownership %, cost, goodwill, carrying amount	`investment`	Consolidation legal entity share %	Manage Investments / Equity data

7.40.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
IC invoice (sales) and mirror vendor invoice	FR-40.2 invoice step, FR-40.13 Invoice mode	standard invoice layout (wave 29) plus IC partner, pair id, transfer-pricing basis	PDF, e-invoice per country pack (wave 48) where IC invoices are in mandate scope	seller's invoice sequence	VAT invoice rules apply to cross-border IC supplies; 10 years
IC netting / settlement statement	centralized payment or netting (FR-36.10)	pair, documents settled, amounts, FX	PDF, email to both entity controllers	settlement number	10 years
IC balance confirmation	period end	pair, balances by account and currency, difference, confirm box	PDF, portal acknowledgment	per pair per period	audit evidence 10 years
Transfer-pricing evidence file	period / year end	per FR-40.4 and FR-39.17	CSV (OECD XML optional per open question 3)	none	local file / master file support 10 years
Consolidated financial statements	run completed	balance sheet, P&L, OCI, equity changes, cash flow (wave 15 designer)	PDF, XLSX, iXBRL / ESEF via wave 15	run id + version	statutory group accounts; 10 years
Elimination and top-side journal listing	run completed	rule, entries, reasons, approvers	PDF, CSV	run id	10 years

7.40.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`ic-reconcile`	hourly + period close	(pair, period)	(pair, period, version)	< 2 min for 100k items	rerun	mismatches > 0 at close
`ic-saga-sweeper`	every 5 min	saga id	Temporal workflow id	< 30 s	compensate or alert	stuck > 10 min
`ic-onhand-projection`	continuous (events)	partner pair	event offset	lag < 60 s	replay from offset	lag > 5 min
`ic-planning-run`	nightly 01:00 before entity MRP	planning group	(group, run date)	< 60 min for 5 entities	entity-level retry; plan marked stale	stale supplier plan
`regrouping-run`	period end (close checklist task)	legal entity	(entity, period, version) with reversal	< 5 min for 200k open items	rollback and retry	not run by close day 2
`regrouping-reversal`	first calendar day of period	legal entity	(run id)	< 2 min	retry	reversal missing
`consol-run-scheduled`	on close checklist task	(group, period)	(group, period, version)	< 5 min for 50 units × 10k accounts	task-level error, run Failed	run failure
`equity-method-run`	inside consolidation run	investment	(investment, period)	< 1 min	task Error	missing associate data
`ic-balance-confirmation`	period close day 3	pair	(pair, period)	< 2 min	resend	unconfirmed after 5 days

7.40.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles
IntercompanyView	GET /interco/*, chain view, IC on-hand, reconciliation read	none	IC accountant, Controllers of both entities
IntercompanyConfigure	/partners, matrix, value maps, pricing, centralized payment setup, planning groups	IntercompanyPost, IntercompanyReconcile	Group finance system admin
IntercompanyPost	/interco/journals	IntercompanyReconcile (same pair and period)	IC accountant
IntercompanyReconcile	/reconciliations/*, resolve	IntercompanyPost	Group accountant
IntercompanySystem	/mirrors, /charges (service accounts only)	n/a	interco-svc, project-svc, expense-svc
IntercompanyPlan	/planning-groups/*/run	none	Supply chain planner (group)
ConsolidationConfigure	/consol/groups, investments, chart mapping, rules, validation rules	ConsolidationRun, ConsolidationApprove	Consolidation lead
ConsolidationUnitRelease	/units/*/release	ConsolidationApprove for the same unit	Entity controller
ConsolidationRun	/consol/runs, reclassification runs	ConsolidationConfigure	Consolidation accountant
ConsolidationJournal	/group-journals	ConsolidationApprove for own journals	Consolidation accountant
ConsolidationApprove	override Mismatch gate, approve top-side ≥ threshold, re-collect released unit	ConsolidationJournal, ConsolidationRun	Group CFO
ConsolidationView	GET /consol/*, monitor, statements	none	Group controller, Auditor

7.40.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
IC-0801	error	No active IC partner policy between `{a}` and `{b}`	missing / inactive pairing	create or activate partner	FR-40.1

7.40.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Mirror saga	5,000 IC documents/day; peak 300/min at invoicing	1.5 / 5 / 10 s	10 sagas/s	1.8M links ≈ 1 GB	IcDocumentLink by ic_pair_id and (mirror_entity_id, mirror_doc_id)	Temporal task queue backlog; p95 < 15 s; no lost sagas
IC charge posting	50,000 charges/day (time + expense)	200 ms / 800 ms / 2 s	50/s	18M charges ≈ 9 GB	partitioned monthly by created_at	batched by pair per minute
IC reconciliation run	100k items per pair-period	n/a	< 2 min	1.2M items ≈ 0.6 GB	(entity_a, entity_b, period, status)	< 6 min
IC on-hand query	3,000/day	30 / 120 / 250 ms	50 req/s	read model ≈ size of partner on-hand	keyed (partner, item, site)	stale data with age shown
Consolidation run	50 units × 10k accounts, 5 versions per close	n/a	< 5 min	50 × 10k × 12 × 5 ≈ 30M entries ≈ 12 GB	ConsolidationEntry partitioned by period; index (run_id, account)	partial recompute for changed units; < 15 min
Drill-down consolidated → journal	2,000/day during close	200 ms / 800 ms / 1.5 s	20 req/s	n/a	source_refs GIN index	paginated drill
Regrouping run	200k open items per entity	n/a	< 5 min	2.4M reclass lines ≈ 1 GB	open items by due date (wave 19 / 30 indexes)	< 15 min

7.40.20 Localization and compliance hooks

- **Consolidation frameworks**: IFRS 10 / IFRS 3 / IAS 21 / IAS 28 (equity method) default; US GAAP ASC 810 / 830 / 323 differences (for example, NCI measured at fair value vs proportionate share, a choice under IFRS 3) are set per group; local GAAP group accounts (DE HGB §§290–315, FR règlement ANC 2020-01) through wave-48 pack chart mappings and statement layouts; ESEF iXBRL tagging for EU listed groups through the wave-15 designer.
- **Proportional consolidation** is dropped because IFRS 11 removed it for joint ventures (equity method applies); HGB §310 still allows it, so a DE pack may request it post-v1.
- **Transfer pricing**: OECD Guidelines master / local file and country-by-country reporting (CbCR, OECD XML schema) for groups with revenue ≥ EUR 750 million; Passage supplies the data export (FR-40.4, FR-40.13, FR-39.17); filing formats are wave-48 pack outputs (`TransferPricingReport` extension point).
- **IC invoicing tax**: cross-border IC supplies follow wave-13 VAT rules (EU intra-community supply, reverse charge); IC invoices fall under e-invoicing mandates where applicable (MX CFDI, IN IRP, FR / DE B2B schedules) through wave-48 packs.
- **Regrouping**: balance-sheet classification of current / non-current (IAS 1.66–1.76) and HGB §268 (residual terms > 1 year disclosed); the RemainingTerm rule threshold is a pack parameter (12 months default).
- **Retention**: consolidation runs, top-side journals and IC confirmations 10 years.
- **Currency**: translation of hyperinflationary units (IAS 29) out of v1; rounding per group currency minor unit (BR-40.9).

7.40.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX 12.2.1 Payments → Centralized payments (cross-company)	PARTIAL-40	ADDED as FR-40.12	
AX 12.10.1 Expense reports → Intercompany expenses (R3)	PARTIAL-40	ADDED as FR-40.13	expense UI arrives with wave 43 and calls the IC charge API
AX 12.10.3 Expense → Intercompany expense posting (due-to / due-from)	PARTIAL-40	ADDED as FR-40.13	Journal settlement mode
AX 12.11.3 Project → Intercompany project invoicing (intercompany timesheets / expenses)	PARTIAL-40	ADDED as FR-40.13	posting and invoicing contract here; project resource lending screens DEFERRED to wave 41
AX 12.11.4 Intercompany → Intercompany project parameters (lending / borrowing, timesheet / expense / vendor invoice transfer)	PARTIAL-40	ADDED as FR-40.13	`ic.chargeSettlementMode`, `ic.transferPrices`
AX 12.11 Prices → Transfer prices (intercompany) (noted PARTIAL-40 in the COVERED-41 row)	PARTIAL-40	ADDED as FR-40.13	IcTransferPrice
AX 12.14.2 Inventory → Intercompany on-hand (R3)	PARTIAL-40	ADDED as FR-40.14	
AX 12.14.3 Inventory → Intercompany: on-hand sync	PARTIAL-40	ADDED as FR-40.14	event-driven projection, no batch sync
AX 12.21.1 Intercompany planned orders (R3 intercompany master scheduling)	PARTIAL-40	ADDED as FR-40.15	

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX 12.21.3 Intercompany master scheduling (run across entities)	PARTIAL-40	ADDED as FR-40.15	`ic-planning-run`
AX 12.21.4 Intercompany planning groups / members (sequence, plan)	PARTIAL-40	ADDED as FR-40.15	`ic.planningGroups`
SAP 13.7 CO versions for parallel valuation (TKA07, TKA09, TKA01)	PARTIAL-40	ADDED as FR-40.16 (with FR-39.17)	
SAP 13.8 Transfer prices / multiple valuation views (OKKP, OKEQ group)	PARTIAL-40	ADDED as FR-40.16 (with FR-39.17)	
SAP 13.9 8KEM / 8KEN Transfer prices: pricing procedures, conditions, variants	PARTIAL-40	ADDED as FR-40.13 / FR-39.17	profit-center valuation view in FR-39.17; IC pricing in FR-40.4 / FR-40.13
SAP 13.10 Manage Reclassifications / Define Reclassification Rules	PARTIAL-40	ADDED as FR-40.17	
SAP 13.10 Consolidation of Investments (first, subsequent, step acquisition, divestiture, equity method)	PARTIAL-40	ADDED as FR-40.18	step acquisition OUT-OF-SCOPE for v1 (IFRS 3.42 remeasurement of the previously held interest is rare in the target segment); CNS-0910 directs users to top-side journals (FR-40.19)
SAP 13.10 Manage Investments / Equity data	PARTIAL-40	ADDED as FR-40.18	Investment entity
SAP 13.10 Consolidation monitor tasks (IC elimination incl. dividends, profit in inventory, CoI, group validation)	PARTIAL-40	ADDED as FR-40.20	dividends are E6 (FR-40.9); CoI FR-40.18
SAP 13.10 Reclassification runs	PARTIAL-40	ADDED as FR-40.17	
SAP 13.10 Reclassification / elimination methods (two-sided, differences to FS item, thresholds, dividends)	PARTIAL-40	ADDED as FR-40.17	BR-40.15
SAP 13.10 CoI methods (purchase, equity, proportional), activities	PARTIAL-40	ADDED as FR-40.18	proportional OUT-OF-SCOPE: IFRS 11 removed proportional consolidation for joint ventures (7.40.20)
SAP 13.1 FAGLF101 / F101 Regroup receivables / payables	GAP (proposed 14)	ADDED as FR-40.17	runs as a wave-14 close checklist task; engine lives in consol-svc rules
SAP 13.1 FAGL_CL_REGROUP / FAGL_CL_MIGRATION Closing regrouping (S/4)	GAP (proposed 14)	ADDED as FR-40.17	
SAP 13.1 FAGL_CL_RGRP sort method and adjustment accounts for regrouping	GAP (proposed 14)	ADDED as FR-40.17	`consol.reclassRules`
SAP 13.2 FAGLF101 (AP) Regroup vendors with debit balances	GAP (proposed 14)	ADDED as FR-40.17	DebitBalanceVendors rule
SAP 13.3 FAGLF101 (AR) Regroup customers with credit balances	GAP (proposed 14)	ADDED as FR-40.17	CreditBalanceCustomers rule

Part 8 — Phase 8: Projects, People & Service (waves 41–45)

8.0 Phase overview

Business outcome at phase exit. At the end of wave 45 the demo group (manufacturer plus the engineering-services entity added in wave 41) runs project operations, HR core, payroll, expense management, plant maintenance and field service on Passage, with every financial effect posted through the universal journal (wave 11) and reconciled daily. A project manager plans a WBS, books resources, captures time and expense, bills by T&M, fixed-price milestone or retainer, and recognizes revenue by percentage-of-completion. An HR administrator manages workers, positions and jobs with effective dating; employees self-serve absence and benefits. A payroll administrator runs a US gross-to-net cycle that matches IRS Publication 15-T to the cent and posts to the GL. A maintenance planner keeps plant machines on preventive and counter-based plans whose work orders cost to the asset and GL. A service coordinator dispatches field technicians under SLA with OR-Tools, and technicians execute offline on a PWA. This phase is where Passage reaches parity with AX Project management and accounting, HR, Payroll, Expense management, D365 Asset Management and Service management, and with SAP PS, HCM PA/OM/PT, PY, Concur, PM and CS/FSM.

Phase-exit sign-off criteria

- Percentage-of-completion estimate fixtures (12 projects, 4 periods each) match the accountant-reviewed workbook to 0.01 USD/EUR per period.
- Property test over 10,000 generated transaction sets: every invoice proposal contains exactly the billable transactions selected by its billing rule, no duplicates, no omissions.
- Effective-dated position/manager as-of queries return the correct answer for 100% of 50,000 randomized dates across the demo workforce (1,200 workers).
- 200 US payroll fixture scenarios match Pub 15-T percentage-method computations to the cent; payroll posting reconciles to GL accounts 6100–6199 and 2300–2349 with zero variance.
- Expense policy engine flags violations exactly per rule set on a 500-report fixture; reimbursements post to AP and settle in a wave-19 payment run.
- Maintenance plan fixtures (40 plans, time and counter) generate work orders on the expected dates/readings; work order cost (parts + labor) reconciles to asset cost and GL maintenance accounts.
- IoT threshold breach creates a maintenance request in p95 < 5 s; recorded downtime reduces wave-23 scheduling capacity.
- Dispatch property test: 1,000 generated schedules are feasible (skills, time windows, shifts) with a solver time p95 < 30 s for 200 work orders × 25 technicians.
- Recorded phase-exit walkthrough: projects, HR, payroll, maintenance and field service end-to-end on `stage`, signed off by both owners.

Cross-wave data model summary

Entity	Owning service	Key relationships
Project, WbsNode, ProjectTransaction, InvoiceProposal, ProjectEstimate	`projects` (Go, Postgres `projects`)	Customer (wave 7 party), Worker (wave 42), Journal (wave 11), Fixed asset CIP (wave 37)
Worker, Employment, Position, Job, Department, AbsencePlan, BenefitPlan	`hr` (TS, Postgres `hr`)	Legal entity/org hierarchy (wave 6), Time registrations (wave 25), User (Keycloak)
PayCycle, PayRun, PayStatement, EarningCode, DeductionCode, TaxRuleSet	`payroll` (Go, Postgres `payroll`)	Worker/Employment (wave 42), Journal (wave 11), Bank/payment file (wave 36)
ExpenseReport, ExpenseLine, ExpensePolicyRule, CardTransaction	`expense` (TS, Postgres `expense`)	Worker, Project (wave 41), AP invoice (wave 18), Tax (wave 13)
FunctionalLocation, Asset, MaintenancePlan, MaintenanceRequest, MaintWorkOrder, Counter	`eam` (Go, Postgres `eam`)	Resource (wave 22), Inventory item (wave 16), Fixed asset (wave 37), IoT reading (wave 25)
ServiceObject (installed base), ServiceAgreement, Case, ServiceWorkOrder, DispatchAssignment	`service` (TS) + `dispatch` (Python/OR-Tools), Postgres `service`	Customer, Sales shipment serial (wave 28), Worker (technician), Truck stock location (wave 16), Invoice (wave 29)

Cross-wave event catalog

Event (CloudEvents type)	Producer	Consumers	Payload summary
`dev.passage.projects.transaction.posted.v1`	projects	journal, analytics, expense (link-back)	projectId, wbsId, txType, qty, cost, salesPrice, currency, journalId
`dev.passage.hr.employment.changed.v1`	hr	payroll, projects (resource validity), service (technician), Keycloak sync	workerId, employmentId, action, effectiveFrom, effectiveTo
`dev.passage.hr.absence.approved.v1`	hr	time (wave 25), projects (availability), payroll (paid-leave earnings)	workerId, planId, from, to, hours
`dev.passage.payroll.run.posted.v1`	payroll	journal, bank (wave 36), analytics	payRunId, payCycleId, grossTotal, netTotal, employerTaxTotal, journalId
`dev.passage.expense.report.approved.v1`	expense	ap (wave 18), projects	reportId, workerId, totalAmount, currency, lines[]
`dev.passage.eam.request.created.v1`	eam (or IoT bridge)	service desk UI, notifications	requestId, assetId, source, severity, readingValue
`dev.passage.eam.workorder.completed.v1`	eam	journal (cost settlement), fixed assets, scheduling (wave 23) capacity release	workOrderId, assetId, partsCost, laborCost, downtimeMinutes
`dev.passage.service.sla.breached.v1`	service	notifications, analytics	caseId or workOrderId, slaType, dueAt, breachedAt
`dev.passage.service.dispatch.published.v1`	dispatch	technician PWA, service	scheduleDate, assignments[] (workOrderId, technicianId, start, end)

Phase-level risks

Risk	Likelihood	Impact	Mitigation	Owner
Payroll tax legal exposure (wrong withholding, late forms)	Medium	High	Table-driven rule sets versioned per tax year; 200-scenario Pub 15-T fixture gate; ADP/Gusto-style provider adapter as alternative path	Engineering/security
PII breach or over-exposure of HR/payroll data	Medium	High	PII fields in a separate vaulted schema with column-level encryption, OPA duty `HcmPIIRead`, masked by default, every read audited	Engineering/security
POC revenue disputes with auditors	Low	High	Accountant-reviewed workbook fixtures; estimate reversal/re-run is idempotent; loss-provision rule explicit	Product
Dispatch optimizer infeasible or slow at scale	Medium	Medium	CP-SAT with 30 s cap and greedy fallback; property test over generated instances	Engineering
Offline technician PWA conflicts	Medium	Medium	Per-work-order append-only action log with server-side merge; last-writer-wins only for free-text	Engineering

Risk	Likelihood	Impact	Mitigation	Owner
Scope of five large modules in five waves	High	High	Each wave ships the thin vertical slice in its deliverable list; talent/recruitment, subscriptions and predictive maintenance are explicitly basic	Product

8.41 Wave 41: Project Operations: WBS, Time, Expense, Billing & Accounting

8.41.1 Scope and business context

Project-centric businesses (engineering services, contract manufacturing, construction-adjacent, professional services) need a project ledger that AX delivers through Project management and accounting (ProjTable, ProjGroup, ProjWBS, hour/expense/item journals, ProjProposalJour, ProjEstimate) and SAP through PS (PROJ/PRPS WBS, AUFK networks, CJ20N, DP90 resource-related billing, KKA2 results analysis, CJ88 settlement). At the end of this wave a user can create a project hierarchy and WBS with scheduled tasks and resource bookings, record hour/expense/item/fee transactions that cost the project and post to the GL, generate invoice proposals by T&M, fixed-price milestone or retainer, run percentage-of-completion estimates that post WIP and accrued revenue, and read committed cost, EVM and profitability. A demo engineering-services legal entity (`ES-US`) is added alongside the manufacturer.

Out of scope: grant management beyond customer funding sources with limits; project quotations (use wave 26 quotes with a project link); multi-currency funding-rule splitting beyond percentage splits; resource scheduling optimization (wave 23 engine is reused for capacity only); D365 Project Operations "Project for the web" scheduling parity.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
AX invoice proposal (ProjProposalJour via "Create invoice proposal" dialog) takes 9–12 clicks per project and silently skips transactions whose line property changed after posting; SAP DP90 requires a DIP profile (ODP1) that most sites never get right, so billing runs produce missing lines nobody notices until the customer disputes	Selection is a batch class with no explainable predicate; eligibility state lives on the transaction and is mutated by other processes	Declarative billing rules with a stated predicate (BR-41.3), a "why not billed" explain endpoint per transaction, and proposals built in one action from the project workspace	Clicks 12 → 2 per proposal; omitted-billable-transaction rate 0 (property test); dispute rate attributable to billing errors –90%
Fixed-price estimates (ProjEstimate, "Create estimate" periodic job; SAP KKA2 + CJ88) run as month-end batch taking 1–4 h on 2,000 projects; reversal (ProjEstimate "Reverse") and re-run is manual and frequently leaves orphan WIP	Batch framework; estimate and settlement are two separate steps with separate postings	Estimate run as a Temporal workflow per project with idempotent reverse-and-rerun in one call; WIP projection reconciled nightly to GL	Estimate run 4 h → < 10 min for 2,000 projects; orphan WIP incidents 0; re-run effort 30 min → 1 click
Committed cost (ProjCommittedCost) refreshed by batch ("Update committed costs") so budget checks are hours stale; SAP availability control fires only at PO save and cannot be queried live	Polling batch over PurchLine; no event stream	Committed cost projection updated from PO/receipt events within 10 s and queryable per WBS node	Staleness 4 h batch → < 10 s; PO-over-budget surprises at month-end –95%
WBS scheduling in ProjWBS form recalculates the whole plan synchronously (30–90 s on 1,000 activities) and ignores worker calendars unless "Scheduling with resources" is enabled; SAP CJ20N networks require AFVC maintenance per activity	Form-bound X++ scheduler; calendars optional	CPM scheduler over role calendars, < 500 ms for 2,000 nodes, baseline versioning	Reschedule 60 s → < 0.5 s; calendar-violating task dates 0
Hour journal → ledger reconciliation (ProjEmplTrans vs LedgerTrans) done in Excel each close; SAP CATS → CO → PS needs three transfer steps (CAT5/CAT7)	Separate posting paths with no shared id	Every transaction carries journal_id; subledger-to-GL reconciliation is an automated nightly check with zero tolerance	Reconciliation effort 2 person-days per close → 0; variance 0.00
External systems (PLM, MES, BI) read project cost via nightly SQL extracts of ProjTable/ProjCostTrans	No supported API/event surface	REST/GraphQL endpoints plus CloudEvents on Kafka and MCP exposure (wave 47)	Integration lead time weeks → same day; data latency 24 h → < 60 s

8.41.2 AX / SAP parity map

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Project master and hierarchy	ProjTable, ProjGroup, ProjType (TimeMaterial, FixedPrice, Internal, Cost, Investment, Time), form ProjTable	PROJ (project definition), PRPS (WBS elements), CJ20N Project Builder	`projects` service, `Project` entity, screen Projects › Project	full
WBS and scheduling	ProjWBS, ProjPlanVersion, ProjWBSActivityEstimate	PRPS, AUFK networks, AFVC activities, CJ20N	`WbsNode`, `WbsDependency`, CPM scheduler	full
Hour/expense/item journals	ProjJournalTable/ProjJournalTrans → ProjEmplTrans, ProjCostTrans, ProjItemTrans, ProjRevenueTrans	CATS (CATSDB) → CO postings; MM goods issue to WBS; KB21N activity allocation	`ProjectJournal`, `ProjectTransaction` (type HOUR/COST/ITEM/FEE)	full
Invoice proposals	ProjProposalJour, ProjProposalEmpl/Cost/Item/OnAcc, ProjInvoiceJour	DP90/DP91 resource-related billing, billing request → VF01	`InvoiceProposal` → wave-29 `Invoice`	full
Fixed-price estimates	ProjEstimate, ProjPeriodTable, completed-contract / percentage-of-completion, cost template	KKA2 results analysis (RA keys, RA version), CJ88 settlement to CO-PA/GL	`ProjectEstimate` with method COMPLETED_CONTRACT / POC_COST / POC_MILESTONE	full
Ledger posting profiles	ProjPosting (ProjLedgerPostingSetup), ProjLinePropertySetup, ProjCategory	Cost elements, OKB9 default account assignment, settlement profile	`ProjectPostingProfile` keyed by (projectGroup, category, lineProperty)	full
Customer funding / grants	ProjFundingSource, ProjFundingRule, ProjFundingLimit, ProjGrant	Not native (grants management GM module)	`FundingSource`, `FundingRule` (percentage split, limits)	partial — grant compliance reporting dropped; v1.x
Resource roles and bookings	ResResource, ResRole, ResResourceRole, PSAProjectTeam; D365 PO bookable resources	HR mini-master in PS, capacity planning CMP2	`ResourceRole`, `ResourceBooking` (soft/hard)	full
Committed cost	ProjCommittedCost, ProjCommitmentTmp	Commitment items, CJI5	`CommittedCost` projection from PO/requisition events	full
EVM and reporting	Project statements, cash flow, invoice control	CJI3, S_ALR_87013532 cost/revenue reports	`/reports/projects/evm` (PV/EV/AC, CPI, SPI)	improved — live rather than batch
Project quotations	SalesQuotationTable (type Project), "Transfer to project" (ProjQuotationTransfer)	VA21 quotation with WBS account assignment, DP80 sales pricing on project	`ProjectQuotation` = wave-27 quotation kind PROJECT with estimate lines, convert-to-project (FR-41.12)	full
Weekly timesheets	TSTimesheetTable/TSTimesheetLine, TSTimesheetPeriod, TSFavorites, TSTimesheetDelegate, timesheet workflow	CATS: CAT2 (data entry profile CAC1/CAC2), CATS_APPR_LITE approval, CAT5 transfer to PS, CADO/CATC inquiries	`Timesheet`, `TimesheetPeriod`, `TimesheetFavorite`, `TimesheetDelegate` (FR-41.13)	full

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Retention (retainage) terms	ProjRetentionTerms (customer), vendor retention terms on project PO, "Retention release"	Retention in payment terms (OBB9 installments), S/4 PO retention (ME21N "Retention" tab), special G/L indicator for retention	`RetentionTerm`, `RetentionLedger` (FR-41.14)	full
Indirect cost components	ProjIndirectCostComponentGroup, ProjIndirectCostComponent, ProjIndirectCostRule (R3 PSA)	Costing sheet KZS2, overhead calculation CJ44/CJ45 (KGI2) on WBS	`IndirectCostComponent`, `IndirectCostRule` (FR-41.15)	full
Project interest	not native	CJZ1/CJZ2/CJZ3/CJZ5 interest calculation on projects; interest profiles OPIB/OPIC/OPID	`InterestProfile`, interest run (FR-41.16)	full
Simulation versions	ProjPlanVersion copy (no transfer)	CJV1–CJV6 simulation versions, OPTS/OPT version profiles	`PlanVersion.kind = SIMULATION` with transfer and diff (FR-41.17)	full
Change orders / claims	not native (PSA change requests via workflow)	CLM1/CLM2/CLM3/CLM10/CLM11 claims, TQ80 claim notification type CL	`ProjectChangeOrder` (FR-41.18)	full
Project stock and deliveries	Item requirements (ProjItemRequirement), project inventory journals	Special stock Q (project stock), OPS valuated/non-valuated, MD51 project MRP, CN33 BOM transfer, CNS0 delivery from project	wave-16 ownership dimension `project_id`, wave-22 planning scope PROJECT, wave-28 shipment from project stock (FR-41.19)	full
Forecasts, risks and issues	ProjForecastEmpl/Cost/Item/Revenue/OnAcc forecast models	CPM (Commercial Project Management) financial planning, risk/issue management	`ProjectForecast` models, `ProjectRiskIssue` (FR-41.20)	partial — CPM multi-version financial plans reduced to forecast models

8.41.3 Functional requirements

- **FR-41.1 Project master and hierarchy** — Must. The system shall maintain projects with type (TIME_MATERIAL, FIXED_PRICE, INTERNAL, COST, INVESTMENT, TIME), group, customer, contract, currency, dates, stage and an unlimited parent/child hierarchy.
  - Stages: CREATED → IN_PROCESS → FINISHED (and ON_HOLD from IN_PROCESS); transitions gated by duty `ProjManage`.
  - Sub-projects inherit group, customer and contract unless overridden; a sub-project cannot change customer.
  - Project ID from wave-5 number sequence `PROJ`, 20 chars max.
- **FR-41.2 WBS with scheduling** — Must. The system shall maintain WBS nodes per project plan version with effort, duration, dependencies (FS/SS/FF/SF with lag), constraints and a CPM scheduler respecting resource calendars.
  - Plan versions: one BASELINE (immutable after approval), one WORKING; copying creates a new version.
  - Scheduler recomputes early/late start/finish, slack and critical path in < 500 ms for 2,000 nodes.
  - Calendars come from wave-8 resource calendars; a task cannot be scheduled on a non-working day of its assigned role calendar.
- **FR-41.3 Resource roles and bookings** — Must. The system shall define roles with cost and sales prices and allow soft/hard bookings of workers (wave 42) or generic resources to WBS nodes.
  - Hard booking over 100% utilization on a day is rejected; soft booking is warned.
  - Price precedence for hours: worker-specific → role × project → role × customer → role.
- **FR-41.4 Project transactions** — Must. The system shall record HOUR, COST (expense), ITEM, FEE and ON_ACCOUNT transactions through journals or integrated documents (timesheets wave 25, expense wave 43, PO/receipt wave 17, inventory journal wave 16).
  - Each transaction carries cost price, sales price, line property (chargeable/non-chargeable), category, WBS node, quantity, three-currency amounts.
  - Posting is atomic with the universal journal through the wave-11 posting API with idempotency key `projects:txn:{journalId}:{lineNo}`.
- **FR-41.5 Posting profiles** — Must. The system shall resolve GL accounts for cost, WIP, accrued revenue, invoiced revenue and on-account by (projectGroup, category, lineProperty) with fallbacks to (group, *, *) and (*, *, *).
  - Resolution failure blocks posting with error `PROJ-POST-001` naming the missing key.
- **FR-41.6 Invoice proposals** — Must. The system shall build invoice proposals selecting billable transactions per billing rule (T&M, fixed-price milestone, retainer/on-account, unit-of-delivery) and hand them to wave-29 invoicing.
  - Selection filters: project set, date range, transaction types, line property CHARGEABLE, not previously proposed, funding-rule allocation.
  - A proposal is editable until POSTED; removing a line returns it to the pool.
- **FR-41.7 Fixed-price estimates** — Must. The system shall run periodic estimates with methods COMPLETED_CONTRACT, POC_COST (cost-to-cost) and POC_MILESTONE, posting WIP, accrued revenue and loss provisions, with reversal and re-run.
  - Period source: wave-14 fiscal periods; one estimate per project per period; re-run reverses the prior posting first.
- **FR-41.8 Committed cost** — Should. The system shall project committed costs from requisitions, POs and item requirements in near-real time (< 10 s lag) and surface remaining budget.
- **FR-41.9 Customer funding sources** — Should. The system shall split project costs/revenue among funding sources by percentage with per-source limits and a limit-exceeded hold.
- **FR-41.10 EVM and profitability reporting** — Must. The system shall compute PV, EV (POC × BAC), AC, CPI, SPI, EAC and gross margin per project and WBS node as of any date.
- **FR-41.11 Project purchase orders and subcontracts** — Must. The system shall allow wave-17 POs to reference project/WBS so that receipts create ITEM/COST transactions and open POs appear as committed cost.
- **FR-41.12 Project quotations** — Should. The system shall create project quotations as wave-27 quotations of kind PROJECT with estimate lines (hours by role, expenses, items, fees, on-account milestones) and convert a WON quotation into a project with a BASELINE plan version built from the estimate lines.
  - Conversion creates the project in stage CREATED, copies customer, contract, currency and dimensions, and keeps `quotation_id` for quote-to-actual comparison.
  - A quotation converts once; a second attempt raises `PROJ-QUO-001`.
  - Hour estimate lines are priced by role sales price (FR-41.3 precedence); margin preview shows cost, sales and margin % before sending.
- **FR-41.13 Weekly timesheets** — Must. The system shall provide per-worker timesheets per timesheet period (period types WEEK, SEMI_MONTH, MONTH per legal entity) with lines by project, WBS node, category and line property, hours per day, internal/external comments, favorites, delegates, workflow approval routed per project and posting to HOUR transactions.
  - Favorites are saved (project, WBS, category) combinations; "copy previous period" copies lines without hours.
  - A delegate (TimesheetDelegate with validity) may enter and submit on behalf of a worker; the audit log records both identities.
  - Periodic creation generates DRAFT timesheets from favorites at period start; the missing-timesheets inquiry lists workers without a SUBMITTED sheet after period end.
  - Wave-25 time registrations on project jobs appear as lines with source TIME_REG and cannot be edited in the timesheet.
  - Validation per BR-41.9; statuses DRAFT → SUBMITTED → APPROVED (per line) → POSTED; RETURNED → DRAFT.
- **FR-41.14 Retention terms** — Should. The system shall apply customer retention terms (percent held per invoice until milestone or project completion, release schedule) on invoice proposals and vendor retention terms on project purchase orders, keep a retention ledger per project and party, and release retention through release proposals (customer) or released vendor due lines (wave 18).

- **FR-41.15 Indirect cost components** — Should. The system shall define indirect cost component groups, components (basis HOUR_COST, HOUR_QTY or EXPENSE_COST; rate or amount per unit; cost and optional sales side) and rules by (legal entity, project group, category, worker group, effective date), and post INDIRECT transactions at hour posting time per BR-41.11.
- **FR-41.16 Project interest** — Could. The system shall define interest profiles (annual rate source, basis WIP or cost balance, day count ACT/365 or ACT/360, treatment CAPITALIZE or EXPENSE) assigned per project group or project, and run a monthly interest calculation that posts capitalized interest to WIP/CIP for INVESTMENT and FIXED_PRICE projects per BR-41.12.
- **FR-41.17 Simulation plan versions** — Should. The system shall allow plan versions of kind SIMULATION (copied from WORKING or BASELINE), scheduled and costed independently, compared side by side (dates, effort, cost, critical path) and transferred into WORKING with a diff and conflict resolution per BR-41.14.
- **FR-41.18 Change orders and claims** — Must. The system shall record project change orders of type SCOPE_CHANGE, CLAIM_CUSTOMER, CLAIM_VENDOR or INTERNAL with cost and revenue impact lines per WBS node, attachments, customer approval evidence, and a lifecycle DRAFT → SUBMITTED → APPROVED | REJECTED → APPLIED that adjusts contract value, budget and baseline per BR-41.13.
- **FR-41.19 Project stock and deliveries** — Should. The system shall segregate project-owned inventory through the wave-16 ownership dimension `project_id` (VALUATED, NON_VALUATED or NONE per project group), plan project demand per project in wave 22, and ship from project stock through wave-28 shipments that create ITEM transactions on the WBS node.
- **FR-41.20 Forecasts, risks and issues** — Should. The system shall maintain forecast models (hour, expense, item, fee, on-account lines by period and WBS node) with copy-to-budget and forecast-vs-actual, and a risk and issue register per project (probability 1–5, impact 1–5, owner, mitigation, due date, status).

8.41.4 Data model

Project

Field	Type	Required	Notes
id	text(20)	yes	PK; number sequence PROJ
tenant_id	uuid	yes	RLS
legal_entity_id	uuid	yes	FK wave 6
parent_project_id	text(20)	no	FK self
project_group_id	text(10)	yes	FK ProjectGroup (type, posting profile)
project_type	enum	yes	TIME_MATERIAL, FIXED_PRICE, INTERNAL, COST, INVESTMENT, TIME
customer_party_id	uuid	cond	required for external types
contract_id	uuid	cond	FK ProjectContract (billing rules, funding)
currency	char(3)	yes	project currency
stage	enum	yes	CREATED, IN_PROCESS, ON_HOLD, FINISHED
start_date, end_date	date	yes/no	end_date ≥ start_date
dimension_set_id	uuid	yes	default financial dimensions
version	int	yes	optimistic concurrency

WbsNode

Field	Type	Required	Notes
id	uuid	yes	PK
project_id, plan_version_id	text, uuid	yes	FK; plan version BASELINE/WORKING
wbs_code	text(40)	yes	unique per plan version, e.g. `1.2.3`
parent_id	uuid	no	FK self
name	text(120)	yes	
effort_hours	numeric(12,2)	no	≥ 0
duration_days	numeric(8,2)	no	working days
early_start, early_finish, late_start, late_finish	date	computed	scheduler output
constraint_type, constraint_date	enum, date	no	ASAP, SNET, FNLT, MSO
role_id	uuid	no	default resource role
is_billable_milestone	bool	yes	default false

ProjectTransaction

Field	Type	Required	Notes
id	uuid	yes	PK
project_id, wbs_node_id	text, uuid	yes/no	
txn_type	enum	yes	HOUR, COST, ITEM, FEE, ON_ACCOUNT
category_id	text(20)	yes	FK ProjectCategory (type-bound)
line_property	enum	yes	CHARGEABLE, NON_CHARGEABLE
txn_date	date	yes	
quantity	numeric(14,3)	yes	hours, units
cost_amount, sales_amount	numeric(18,4)	yes	in project currency; plus accounting and reporting currency columns
currency	char(3)	yes	
worker_id, item_id, vendor_party_id	uuid	cond	by txn_type
source_doc_type, source_doc_id	text, uuid	yes	TIMESHEET, EXPENSE, PO_RECEIPT, INV_JOURNAL, MANUAL
journal_id	uuid	yes	universal journal reference
proposal_id, invoice_id	uuid	no	set when billed
estimate_id	uuid	no	set when captured in POC

InvoiceProposal: id, project_id (or contract_id for multi-project), billing_rule_id, customer_party_id, currency, status (DRAFT, APPROVED, POSTED, CANCELED), from_date, to_date, total_cost, total_sales, tax_amount, lines[] (transaction_id, qty, unit_price, amount, funding_source_id).

ProjectEstimate: id, project_id, period_id, method, cost_to_date, estimated_cost_to_complete, estimated_total_cost, contract_value, poc_percent numeric(7,4), revenue_to_date, revenue_this_period, billed_to_date, accrued_revenue, deferred_revenue, loss_provision, status (DRAFT, POSTED, REVERSED), journal_id.

Timesheet

Field	Type	Required	Notes
id	uuid	yes	PK; number sequence PROJ-TS
worker_id, legal_entity_id	uuid	yes	
period_id	uuid	yes	FK TimesheetPeriod (period_type WEEK/SEMI_MONTH/MONTH, from, to, status OPEN/CLOSED)
status	enum	yes	DRAFT, SUBMITTED, APPROVED, RETURNED, POSTED
entered_by_worker_id	uuid	yes	delegate when ≠ worker_id
lines[]	TimesheetLine	yes	(project_id, wbs_node_id, category_id, line_property, hours[7..31] by day, internal_comment, external_comment, source MANUAL/FAVORITE/TIME_REG, line_status, approver_id)
total_hours	numeric(8,2)	computed	
submitted_at, posted_at	timestamptz	no	
version	int	yes	optimistic concurrency

ProjectChangeOrder: id (sequence PROJ-CO), project_id, co_type (SCOPE_CHANGE, CLAIM_CUSTOMER, CLAIM_VENDOR, INTERNAL), title, description, status (DRAFT, SUBMITTED, APPROVED, REJECTED, APPLIED), lines[] (wbs_node_id, cost_impact, revenue_impact, effort_hours_delta, schedule_days_delta), customer_approval_ref, vendor_party_id (claims), applied_baseline_version_id, applied_at. **RetentionTerm**: id, party_role (CUSTOMER/VENDOR), retention_pct numeric(5,2), release_trigger (MILESTONE, PROJECT_FINISHED, DATE_OFFSET), release_schedule[] (milestone_wbs_id or offset_days, release_pct). **RetentionLedger**: project_id, party_id, party_role, source_doc_id, retained_amount, released_amount, currency. **IndirectCostComponent**: group_id, code, basis (HOUR_COST, HOUR_QTY, EXPENSE_COST), rate numeric(9,4), amount_per_unit, cost_category_id, sales_applicable bool. **IndirectCostRule**: component_id, legal_entity_id, project_group_id, category_id, worker_group_id, validity. **InterestProfile**: code, rate_source (FIXED, wave-12 rate table), annual_rate numeric(7,4), basis (WIP, COST), day_count (ACT_365, ACT_360), treatment (CAPITALIZE, EXPENSE). **PlanVersion**: id, project_id, kind (BASELINE, WORKING, SIMULATION), sequence, copied_from_version_id, locked bool. **ProjectForecast**: model_id, project_id, wbs_node_id, period_id, txn_type, qty, cost_amount, sales_amount. **ProjectRiskIssue**: id, project_id, kind (RISK, ISSUE), probability smallint, impact smallint, owner_worker_id, mitigation, due_date, status (OPEN, MITIGATED, CLOSED). **ProjectQuotation**: wave-27 quotation id, project_id (after conversion), estimate_lines[] (txn_type, role_id/category_id/item_id, qty, cost_price, sales_price).

Invariants: Σ ProjectTransaction.cost_amount per project equals the project cost subledger balance and the GL WIP+cost accounts for the posting profile; a transaction appears on at most one POSTED proposal; one POSTED estimate per (project, period); WBS codes unique per plan version. Indexing: `ProjectTransaction (tenant_id, project_id, txn_date)`, partial index on `proposal_id IS NULL AND line_property = 'CHARGEABLE'` for proposal selection; `WbsNode (plan_version_id, parent_id)`; table partitioned by tenant hash (16).

8.41.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	`/api/v1/projects`	Create project	`Idempotency-Key` header	ProjMaintain
PUT	`/api/v1/projects/{id}/plans/{ver}/wbs`	Replace WBS (bulk)	version ETag	ProjPlan
POST	`/api/v1/projects/{id}/plans/{ver}/schedule`	Run CPM scheduler	pure	ProjPlan
POST	`/api/v1/projects/journals`	Create hour/cost/item/fee journal	key	ProjJournalMaintain
POST	`/api/v1/projects/journals/{id}/post`	Post journal to project and GL	key	ProjJournalPost
POST	`/api/v1/projects/invoice-proposals`	Build proposal from selection criteria	key	ProjBillingMaintain
POST	`/api/v1/projects/invoice-proposals/{id}/post`	Hand to invoicing	key	ProjBillingPost
POST	`/api/v1/projects/estimates/run`	Run estimates for period	key per (project, period)	ProjEstimatePost
POST	`/api/v1/projects/estimates/{id}/reverse`	Reverse estimate	key	ProjEstimatePost
GET	`/api/v1/projects/{id}/evm?asOf=`	EVM metrics	n/a	ProjInquire
POST	`/api/v1/projects/timesheets`	Create/copy timesheet for (worker, period)	key per (worker, period)	ProjTimesheetEnter
POST	`/api/v1/projects/timesheets/{id}/submit`	Submit for approval	key + version	ProjTimesheetEnter
POST	`/api/v1/projects/timesheets/{id}/lines/{lineId}/decide`	Approve/return a line	key	ProjTimesheetApprove
POST	`/api/v1/projects/timesheets/{id}/post`	Post approved lines as HOUR transactions	key	ProjJournalPost
GET	`/api/v1/projects/timesheets/missing?periodId=`	Missing timesheets	n/a	ProjInquire
POST	`/api/v1/projects/quotations/{id}/convert`	Convert WON project quotation to project	key	ProjMaintain
POST	`/api/v1/projects/change-orders`	Create change order / claim	key	ProjMaintain
POST	`/api/v1/projects/change-orders/{id}/apply`	Apply APPROVED change order (new baseline)	key	ProjChangeOrderApprove
POST	`/api/v1/projects/{id}/plans/{ver}/transfer`	Transfer SIMULATION into WORKING	key + ETag	ProjPlan
POST	`/api/v1/projects/interest/run`	Monthly interest calculation	key per (project, period)	ProjEstimatePost
POST	`/api/v1/projects/retention/release`	Build retention release proposal	key	ProjBillingMaintain
GET	`/api/v1/projects/{id}/forecasts/{modelId}`	Forecast vs actual	n/a	ProjInquire

Commands validate: journal lines must reference a project in IN_PROCESS; category type must match txn_type; posting date within open period for module PROJECTS (wave 14); proposal selection requires a billing rule whose currency equals project currency.

Event	Trigger	Payload fields	Consumers
`dev.passage.projects.transaction.posted.v1`	journal/document posted	see 8.0	journal, analytics, expense
`dev.passage.projects.invoice-proposal.posted.v1`	proposal → POSTED	proposalId, invoiceId, lines[]	invoicing (wave 29), analytics
`dev.passage.projects.estimate.posted.v1`	estimate posted or reversed	estimateId, projectId, periodId, pocPercent, revenueThisPeriod, journalId, reversed	journal, analytics

Event	Trigger	Payload fields	Consumers
`dev.passage.projects.wbs.scheduled.v1`	scheduler run	projectId, planVersionId, criticalPath[], finishDate	resource planning, notifications
`dev.passage.projects.timesheet.submitted.v1`	timesheet SUBMITTED	timesheetId, workerId, periodId, totalHours, projectIds[]	workflow (wave 4), notifications
`dev.passage.projects.change-order.applied.v1`	change order APPLIED	changeOrderId, projectId, contractValueDelta, budgetDelta, newBaselineVersionId	budget control (wave 38), analytics
`dev.passage.projects.retention.released.v1`	release proposal POSTED	projectId, partyId, releasedAmount, invoiceId	invoicing, AP

8.41.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Projects workspace	tiles: proposals to approve, estimates due, over-budget, unposted journals	project, stage, budget remaining, CPI/SPI	ProjInquire
Project detail	stage, copy, open WBS, forecasts, statements	header fields, funding, posting profile	ProjMaintain
WBS Gantt	add/indent/outdent, link dependencies, schedule, baseline	code, name, effort, dates, slack, role, % complete	ProjPlan
Resource board	book, split, resolve over-allocation	worker/role × week heatmap	ProjPlan
Journals (hour/cost/item/fee)	add line, validate, post	project, WBS, category, qty, cost, sales, line property	ProjJournalMaintain
Invoice proposals	build, review, remove line, approve, post	transaction rows, totals, funding split	ProjBillingMaintain
Estimates	run, review, reverse, post	cost to date, ETC, POC, revenue, WIP	ProjEstimatePost
Project statements / EVM	drill to transaction and journal	PV/EV/AC, CPI, SPI, EAC, margin	ProjInquire
My timesheet (ESS)	add favorite, copy previous period, enter hours per day, comment, submit; delegate switch	project, WBS, category, Mon–Sun hours, period total, status per line	ProjTimesheetEnter
Timesheet approval (MSS / project manager)	approve/return per line or whole sheet, view comments	worker, project, hours, line property	ProjTimesheetApprove
Change orders	create, add impact lines, attach approval, submit, approve, apply	type, WBS, cost/revenue impact, status	ProjMaintain / ProjChangeOrderApprove
Plan version compare	pick two versions, diff dates/effort/cost, transfer simulation	node, Δ start, Δ finish, Δ effort, Δ cost	ProjPlan
Forecasts, risks and issues	add forecast lines by period, copy to budget, add risk/issue	model, period, qty, cost, sales; probability, impact, owner	ProjPlan
Retention ledger	view retained/released by party, build release	party, source invoice/PO, retained, released, open	ProjBillingMaintain

Interaction rules: Gantt supports keyboard indent (Tab), outdent (Shift+Tab), link (Ctrl+L); bulk edit of category/line property on journal lines; validation on line commit with inline errors; proposal grid personalization (column set saved per user).

8.41.7 Business rules and edge cases

- **BR-41.1 Cost-to-cost POC** — poc = cost_to_date ÷ estimated_total_cost, rounded to 4 decimals; revenue_to_date = contract_value × poc, rounded to currency minor unit; revenue_this_period = revenue_to_date − prior revenue_to_date. Worked example (USD, fixed-price, contract 500,000.00, original estimate 400,000.00): period 1 cost to date 120,000.00, ETC 280,000.00 → EAC 400,000.00, poc 0.3000, revenue to date 150,000.00, billed to date 100,000.00 → accrued revenue 50,000.00 (debit accrued revenue, credit revenue). Period 2 cost to date 260,000.00, ETC revised to 190,000.00 → EAC 450,000.00, poc 0.5778 (260,000/450,000 = 0.57777…), revenue to date 288,888.89, period revenue 138,888.89, billed to date 300,000.00 → deferred (billed in excess) 11,111.11 as liability; gross profit to date 28,888.89. A EUR project uses the same arithmetic in EUR with accounting-currency amounts at the period-end rate.
- **BR-41.2 Loss provision** — if EAC > contract_value, the full expected loss (EAC − contract_value) is provisioned in the period discovered; later improvements release the provision, never below zero.
- **BR-41.3 Invoice proposal selection** — a transaction is selected when: line_property = CHARGEABLE, proposal_id IS NULL, txn_date ∈ [from, to], project stage ∈ {IN_PROCESS, FINISHED}, txn_type ∈ rule.types, and for FIXED_PRICE rules only ON_ACCOUNT milestones with is_billable_milestone WBS nodes whose % complete = 100 or whose date ≤ to. Transactions under a funding source whose limit is reached are selected on the next source by priority; if none, the line is HELD with reason `FUND-LIMIT`.
- **BR-41.4 Retainers** — on-account (retainer) invoices create ON_ACCOUNT transactions with negative sales; T&M proposals apply open retainer balance before invoicing net, oldest first.
- **BR-41.5 Price precedence and rounding** — hour sales price resolved per FR-41.3; amounts = qty × price rounded half-even to minor unit per line, never per total.
- **BR-41.6 Period control** — a transaction with txn_date in a closed PROJECTS period is rejected (`PROJ-PERIOD-001`); estimates run only after the period's projects sub-ledger is closed for transactions.
- **BR-41.7 Stage FINISHED** — allowed only when no open journals, no DRAFT/APPROVED proposals, WIP balance zero or an estimate with method COMPLETED_CONTRACT posted for the final period.
- **BR-41.8 Concurrency** — proposal building takes a `SELECT … FOR UPDATE SKIP LOCKED` on candidate transactions; two concurrent builds for overlapping criteria never select the same transaction.
- **BR-41.9 Timesheet validation** — one timesheet per (worker, period); the period must be OPEN and every line date inside it; Σ hours per calendar day across lines ≤ 24.00 (`PROJ-TS-003`), hours in 0.25 increments by default (parameter); the project must be IN_PROCESS (`PROJ-TS-002`); a delegate must hold a valid TimesheetDelegate row (`PROJ-TS-004`); approval routes each line to the project manager of its project (parameter "workflow by project", else to the worker's manager as-of period end per BR-42.1); a sheet is APPROVED when all lines are approved; posting creates one HOUR transaction per line per day with source TIMESHEET, idempotency key `projects:ts:{timesheetId}:{lineId}:{date}`; returned lines reopen the sheet as RETURNED; lines with source TIME_REG are read-only and pre-approved.
- **BR-41.10 Retention arithmetic** — retained amount per invoice line = round_half_even(line amount × retention_pct); retention is excluded from the invoice due amount and recorded in RetentionLedger; release is triggered by the release schedule (milestone WBS node reaches 100 % complete, project stage FINISHED, or offset days after invoice) and billed as RETENTION_RELEASE lines on a release proposal; vendor retention is withheld at wave-18 invoice posting as a separate due line whose due date is the release trigger date; a release before its trigger raises `PROJ-RET-001` unless duty ProjBillingPost overrides with a reason.
- **BR-41.11 Indirect cost application** — at HOUR posting, for each component of the project's component group the most specific matching rule (worker group > category > project group > legal entity) applies: amount = basis × rate (HOUR_COST: cost amount; HOUR_QTY: hours × amount_per_unit) rounded half-even per line; posted as INDIRECT transactions with the same WBS node and date, line property NON_CHARGEABLE unless component.sales_applicable, and with `source_doc_id` = the hour transaction; reversing the hour transaction reverses its indirect lines.

- **BR-41.12 Project interest** — monthly interest = average daily balance of the basis (WIP or cost) × annual_rate × days_in_month ÷ 365 (ACT/365) or ÷ 360 (ACT/360), rounded half-even to the minor unit; CAPITALIZE debits WIP (or CIP via wave 37 for INVESTMENT projects) and credits capitalized-interest contra; EXPENSE debits project interest expense; capitalization stops when the project reaches FINISHED or the asset is placed in service; reversal follows the estimate reversal of the same period. Example: average WIP 1,000,000.00 USD, 6.00 %, October (31 days), ACT/365 → 5,095.89.
- **BR-41.13 Change order application** — only APPROVED change orders apply; application is atomic: contract_value += Σ revenue_impact, project budget (wave 38) += Σ cost_impact, a new BASELINE plan version is created from the current baseline plus effort/schedule deltas, and the change order becomes APPLIED and immutable (`PROJ-CO-001` on a second apply); CLAIM_VENDOR creates a wave-18 vendor debit note draft for Σ cost_impact; CLAIM_CUSTOMER requires `customer_approval_ref` when the parameter "customer approval required" is on.
- **BR-41.14 Simulation transfer** — transfer computes a three-way diff (common ancestor = copied_from version, SIMULATION, current WORKING); nodes changed only in the simulation are applied; nodes changed in both since the copy are listed as conflicts (`PROJ-SIM-001`) and must be resolved node by node (keep working / take simulation); after transfer the simulation is locked; at most N simulation versions per project (parameter, default 20).

Estimate state machine: DRAFT → POSTED → REVERSED; REVERSED → (new DRAFT for same period). Proposal: DRAFT → APPROVED → POSTED; DRAFT/APPROVED → CANCELED.

8.41.8 Acceptance criteria

- **AC-41.1** (FR-41.7, BR-41.1) Given the fixture project in BR-41.1, when estimates run for periods 1 and 2, then revenue_this_period is 150,000.00 and 138,888.89 and the posted journal balances per the posting profile.
- **AC-41.2** (FR-41.7, BR-41.2) Given EAC revised to 520,000.00 in period 3, when the estimate runs, then loss_provision = 20,000.00 and the GL loss-provision account carries 20,000.00.
- **AC-41.3** (FR-41.6, BR-41.3) Given 10,000 generated transactions and a T&M rule for 2026-09, when a proposal builds, then every selected line satisfies the predicate and no qualifying line is omitted (property test).
- **AC-41.4** (FR-41.2) Given a WBS with FS dependency and lag 2 days on a role calendar closed on weekends, when scheduled, then successor early start is the next working day after lag.
- **AC-41.5** (FR-41.4, FR-41.5) Given an hour journal line with category LABOR and line property CHARGEABLE, when posted, then the journal debits WIP-cost and credits payroll allocation per profile and the transaction's journal_id is set.
- **AC-41.6** (FR-41.11) Given a PO line referencing WBS 1.2, when the receipt posts, then an ITEM transaction exists and committed cost decreases by the received amount within 10 s.
- **AC-41.7** (FR-41.9) Given two funding sources 70/30 with a 10,000.00 limit on source B, when proposals exceed the limit, then the excess line is HELD with reason FUND-LIMIT.
- **AC-41.8** (FR-41.10) Given BAC 400,000, poc 0.30, AC 120,000 and PV 100,000, when EVM is queried, then EV = 120,000, CPI = 1.00, SPI = 1.20.
- **AC-41.9** (FR-41.13, BR-41.9) Given a worker with two favorites and WEEK period 2026-10-19 to 2026-10-25, when periodic creation runs, then a DRAFT timesheet with two zero-hour lines exists; when 25.00 h are entered on 2026-10-21, then submit is rejected with `PROJ-TS-003`; when 8.00 h per weekday are approved and posted, then 10 HOUR transactions exist with source TIMESHEET.
- **AC-41.10** (FR-41.14, BR-41.10) Given a customer retention term of 10 % released at PROJECT_FINISHED and a T&M proposal of 20,000.00 USD, when posted, then the invoice due amount is 18,000.00 and the retention ledger shows 2,000.00 retained; when the project reaches FINISHED and the release proposal posts, then a RETENTION_RELEASE invoice of 2,000.00 exists.
- **AC-41.11** (FR-41.15, BR-41.11) Given component OVH-LABOR at 12 % of HOUR_COST for category LABOR, when an hour line of 8.00 h × 50.00 posts, then an INDIRECT transaction of 48.00 exists on the same WBS node, and reversing the hour line reverses it.
- **AC-41.12** (FR-41.18, BR-41.13) Given an APPROVED SCOPE_CHANGE with +50,000.00 revenue and +30,000.00 cost on WBS 1.3, when applied, then contract_value increases by 50,000.00, the wave-38 budget by 30,000.00, a new BASELINE version exists and a second apply returns `PROJ-CO-001`.
- **AC-41.13** (FR-41.16, BR-41.12) Given average WIP 1,000,000.00 USD and profile 6.00 % ACT/365 CAPITALIZE, when the October 2026 interest run posts, then 5,095.89 debits WIP and the estimate for October includes it in cost_to_date.
- **AC-41.14** (FR-41.12) Given a WON project quotation with 3 estimate lines, when converted, then a project in CREATED with a BASELINE plan version of 3 nodes exists and a second conversion returns `PROJ-QUO-001`.
- **AC-41.15** (FR-41.17, BR-41.14) Given a SIMULATION copied from WORKING where node 1.2 was later moved in WORKING and node 1.4 only in the simulation, when transferred, then 1.4 is applied, 1.2 is reported as a conflict, and the simulation is locked after resolution.

8.41.9 Test plan and fixtures

Fixtures: `proj-estimates-12x4` (12 projects × 4 periods, accountant workbook `fixtures/projects/poc-workbook.xlsx`); `proj-txn-gen` (Hypothesis generator, 10,000 transactions, seeds committed); `proj-wbs-2000` (2,000-node WBS with 3,500 dependencies); `es-us-demo` (demo entity with 25 live projects derived from wave-29 customers).

Test	Type	Target	Pass criterion
POC arithmetic	unit	estimate engine	matches workbook to 0.01
Proposal selection	property	selection predicate	0 false positives/negatives over 10k
CPM scheduling	unit/perf	scheduler	correct dates; 2,000 nodes < 500 ms
Posting profile resolution	contract	posting API	every (group, category, property) in fixture resolves
Journal → GL	E2E	journals, journal service	balanced entries; event emitted
EVM	unit	report service	CPI/SPI per formulas
Proposal build concurrency	integration	two parallel builds	disjoint selections

Reconciliation: Σ transactions cost by project = project cost subledger = GL cost/WIP accounts; Σ POSTED proposal sales = invoiced revenue per wave-29; accrued – deferred revenue = GL accrued/deferred accounts.

8.41.10 Deployment and operations

Helm chart `passage-projects` (API, scheduler worker, estimate worker), Postgres cluster `projects` (CloudNativePG, 3 replicas), Atlas migration `projects/0001_initial`. Config: `PROJ_SCHEDULER_MAX_NODES=5000`, `PROJ_PROPOSAL_BATCH=500`. Feature flags: `projects.intercompany-hours`, `projects.funding-limits`. Temporal schedules: nightly `projects-reconcile` 02:00 tenant-local, `committed-cost-refresh` every 60 s. SLOs: journal post p95 < 400 ms for 100 lines; proposal build p95 < 5 s for 5,000 candidates; availability 99.9%. Alerts: reconciliation variance ≠ 0; estimate run failure; outbox lag > 60 s. Runbook: re-run estimate (reverse then run), rebuild committed cost projection from events. Rollback: Argo digest rollback; migrations are additive within the wave.

8.41.11 Migration from AX / SAP

Source	Passage entity	Notes
ProjTable, ProjGroup, ProjType	Project, ProjectGroup	Status map: Created→CREATED, InProcess→IN_PROCESS, Finished→FINISHED
ProjWBS, ProjPlanVersion	WbsNode, PlanVersion	AX activity numbers → wbs_code
ProjEmplTrans, ProjCostTrans, ProjItemTrans, ProjRevenueTrans, ProjOnAccTrans	ProjectTransaction	open (unbilled) only; billed history as read-only archive
ProjPosting, ProjCategory, ProjLinePropertySetup	ProjectPostingProfile, ProjectCategory, line property	
ProjEstimate, ProjPeriodTable	ProjectEstimate	last posted estimate per project as opening balance
PROJ, PRPS, AUFK/AFVC	Project, WbsNode	PRPS.POSID → wbs_code; networks flattened to nodes
CATSDB (released, unbilled)	ProjectTransaction HOUR	
KKA2 RA results (COSB)	ProjectEstimate opening	RA version 0 only

Validation: per-project cost to date, billed to date and WIP must equal source within 0.01; count of unbilled chargeable transactions equal. Not migrated: billed history detail (archived in lakehouse, wave 46), ProjForecast models older than current year, SAP settlement rules (CJ88) — replaced by posting profiles.

8.41.12 Dependencies, risks, open questions

Depends on: wave 11 posting API, wave 14 periods, wave 17 PO project references, wave 25 timesheets, wave 29 invoicing, wave 37 CIP, wave 38 budget control, wave 40 intercompany. Coverage-closure additions also depend on: wave 27 quotations (FR-41.12), wave-16 ownership dimension `project_id` and wave-22 planning scope PROJECT (FR-41.19), wave-28 shipments (FR-41.19), wave 18 vendor invoices for vendor retention and claims (FR-41.14, FR-41.18), wave 12 rate tables (FR-41.16) and wave-4 workflow for timesheet routing (FR-41.13).

Risk	Likelihood	Impact	Mitigation
POC method disputes	Low	High	Workbook sign-off before wave close
Proposal performance on large backlogs	Medium	Medium	Partial index + batch 500

Open questions: (1) Support POC by effort (hours) in v1? Default no; decide by wave 42. (2) Grant compliance reporting (AX ProjGrant)? Default v1.x; decide by wave 46. (3) Intercompany resource hours at transfer price (wave 40 mirror documents)? Default v1.x; decide by wave 42.

8.41.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
Default project group per project type	legal entity	lookup	—	ProjectGroup	Pre-fills group and posting profile on project create	Project management and accounting parameters › General › Default project group (ProjParameters)	OPSA project profile (TCJ41) default values
Journal approval required (HOUR / COST / ITEM / FEE)	legal entity	bool per type	false		Routes journal post through wave-4 workflow before FR-41.4 posting	PM&A parameters › Journals › Approval required	CATS approval profile (CAC2) for hours; n/a for KB21N
Timesheet period type	legal entity	enum	WEEK	WEEK, SEMI_MONTH, MONTH	Generates TimesheetPeriod rows (FR-41.13)	PM&A parameters › Timesheet › Period type; Timesheet periods (ProjPeriodTable)	CATS data entry profile period (CAC1)
Timesheet workflow by project	legal entity	bool	true		Line approval routed to project manager (BR-41.9)	PM&A parameters › Timesheet › Enable workflow by project	CATS_APPR_LITE approver determination by WBS
Timesheet hour increment	legal entity	numeric	0.25	0.01, 0.10, 0.25, 0.50, 1.00	Validation on line hours	PM&A parameters › Timesheet › Hour increments	CAC1 "rounding of hours"
Timesheet max hours per day	legal entity	numeric	24.00	1.00–24.00	BR-41.9 `PROJ-TS-003`	PM&A parameters › Timesheet › Max hours per day	CAC1 "max. hours per day"
Allow timesheet delegates	tenant	bool	true		Enables TimesheetDelegate (FR-41.13)	PM&A parameters › Timesheet › Allow delegates (TSTimesheetDelegate)	CATS substitutes (CATS_DELEGATE / HR substitution)
Default line property	legal entity	lookup	CHARGEABLE	CHARGEABLE, NON_CHARGEABLE	Pre-fills line property by (project group, category)	Line property setup (ProjLinePropertySetup)	DIP profile ODP1 material determination / billing relevance
Proposal selection includes FINISHED projects	legal entity	bool	true		Stage set in BR-41.3	PM&A parameters › Invoice › Include finished projects	DP90 selection variant
Estimate method default	project group	enum	POC_COST	COMPLETED_CONTRACT, POC_COST, POC_MILESTONE	FR-41.7 default on new projects	Project groups › Estimate › Completion method (ProjGroup)	OKG1 RA method per RA key; OKG2 RA version
Estimate cost template	legal entity	lookup	—	ProjectCostTemplate	Which categories count toward cost_to_date and ETC	Cost templates (ProjCostTemplate)	OKG4 line IDs / OKG5 assignment of cost elements
Committed cost sources	legal entity	multi-enum	PO, REQUISITION, ITEM_REQUIREMENT	+ VENDOR_INVOICE_UNPOSTED	FR-41.8 projection inputs	PM&A parameters › Cost control › Committed cost sources	OPSA "commitment management" indicator; OKKP activate commitments
Committed cost refresh fallback interval	tenant	int (s)	60	10–600	Fallback poll when the event stream lags	"Update committed costs" batch recurrence	CJI5 batch variant
Customer retention default term	legal entity	lookup	—	RetentionTerm	FR-41.14 default on project contracts	Project contracts › Retention terms (ProjRetentionTerms)	OBB9 installment terms / S/4 PO retention settings

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
Vendor retention default term	legal entity	lookup	—	RetentionTerm	Applied to project POs (wave 17)	Vendor retention terms (ProjVendRetentionTerms)	S/4 MM retention (ME21N Retention tab)
Indirect cost component group	legal entity / project group	lookup	—	IndirectCostComponentGroup	FR-41.15 / BR-41.11	PM&A parameters › Indirect costs › Default component group	KZS2 costing sheet in OPSA project profile
Interest profile	project group / project	lookup	—	InterestProfile	FR-41.16	n/a	OPIB/OPIC/OPID interest profile in project profile
Interest day count	interest profile	enum	ACT_365	ACT_365, ACT_360	BR-41.12	n/a	OPIC interest indicator calendar type
Scheduling with resource calendars	legal entity	bool	true		FR-41.2 calendar enforcement	PM&A parameters › Scheduling › Scheduling with resources	OPUU network profile scheduling parameters
Max simulation versions per project	tenant	int	20	1–100	BR-41.14	n/a	OPTS simulation profile
Change order customer approval required	legal entity	bool	true		BR-41.13 for CLAIM_CUSTOMER	n/a	TQ80 claim type (notification type CL) settings
Project stock valuation	project group	enum	VALUATED	VALUATED, NON_VALUATED, NONE	FR-41.19	Item requirements consumption setting (ProjParameters › Item requirements)	OPS project stock (TCJ41 valuated project stock)
Funding limit hold	legal entity	bool	true		BR-41.3 `FUND-LIMIT`	Project contracts › Funding limits	n/a (GM budget)
Number sequences	legal entity	lookup	PROJ, PROJ-TS, PROJ-PROP, PROJ-EST, PROJ-CO	wave-5 sequences	Identifiers	PM&A parameters › Number sequences	OPSJ project number ranges; OPSK project coding mask

8.41.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Projects list	list inquiry	stage, type, group, customer, project manager, legal entity	id, name, stage, budget, actual, committed, remaining, CPI, SPI	`proj_summary`	Projects list page (ProjTable)	CN41N structure overview
Project statement	drill-down	project (set), date range, cost/revenue/hours/WIP tabs	cost by category, revenue invoiced/accrued, hours, WIP, gross margin	`proj_statement`	Project statements (ProjStatement); SSRS Project statements	S_ALR_87013531 / 87013532 / 87013533 cost-revenue-commitment; CJI3 line items
Posted transactions	list inquiry	project, WBS, type, category, date, worker, source document	transaction fields, journal id, proposal id, estimate id	`proj_txn`	Posted transactions (ProjTransPosted), Hour/Cost/Item/Revenue transactions forms	CJI3 actual line items; CJI5 commitment line items
Invoice control	drill-down	project, customer, period	proposed, invoiced, retainer applied, retention held, open to bill	`proj_billing`	Invoice control (ProjInvoiceControl); Project invoice journals (ProjInvoiceJour)	DP90 billing request list; VF05 billing documents by WBS
WIP and estimates	drill-down	project group, period, method	cost to date, ETC, EAC, POC, revenue to date, accrued/deferred, loss provision	`proj_estimate`	Estimates (ProjEstimate); SSRS Project WIP	KKA2 / KKAJ results analysis; S_ALR_87013537 WIP
Project cash flow	operational report	project, horizon, forecast model	expected receipts (proposals, retention release), payments (POs, timesheets), net by period	`proj_cashflow`	Cash flow (ProjCashFlow); SSRS Project cash flow	S_ALR_87013567 project cash flow
Budget vs actual vs committed	drill-down	project, WBS, period, dimension	budget, actual, committed, remaining, % consumed	`proj_budget` with wave-38	Project budget balances; Committed costs (ProjCommittedCost)	S_ALR_87013558 budget/actual/commitment; CJ31 budget display
EVM	KPI	project, as-of date, WBS level	PV, EV, AC, CPI, SPI, EAC, VAC	`proj_evm`	none native (BI cube)	CNE5 progress analysis; CNE1 progress determination
Missing timesheets	list inquiry	period, legal entity, department	worker, period, status, days missing, manager	`ts_missing`	Missing timesheets (TSMissingTimesheets); SSRS Timesheet report	CATC time leveling; CADO display working times
Timesheet hours	list inquiry	worker, project, period, line status	hours by day, line property, approver, posted	`ts_hours`	Timesheet hours inquiry (TSTimesheetTable)	CATS_DA display CATS data
Utilization	KPI	role, worker, department, period	billable hours, non-billable, available, utilization %	`proj_utilization`	Hour utilization (ProjUtilization); SSRS Utilization	CMP9 workforce planning evaluation
Retention ledger	list inquiry	project, party, role, open only	retained, released, open, next release trigger	`proj_retention`	Retention transactions (ProjRetentionTrans)	FBL5N / FBL1N with retention special G/L
Change order log	list inquiry	project, type, status	change order, type, cost impact, revenue impact, applied baseline	`proj_change_order`	n/a	CLM10 claim list
Forecast vs actual	drill-down	project, model, period	forecast qty/cost/sales, actual, variance	`proj_forecast`	Project forecasts (ProjForecastEmpl/Cost/Item)	CJ40/CJ42 cost planning vs actual (S_ALR_87013543)
Risks and issues	list inquiry	project, kind, status, owner	probability, impact, score, owner, due	`proj_risk_issue`	n/a	CPM risk/issue list

8.41.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Project invoice	invoice proposal POSTED → wave-29 invoice	header: customer, project, contract, period, billing rule; lines: transactions (detail or summary per rule), retainer applied, retention held; footer: tax by code, totals, payment terms, bank details	PDF, e-invoice (wave-29 country formats), email	wave-29 `INV`	Fiscal invoice; retention per wave-29 country rule (US 7 years, DE 10 years)
Invoice proposal (pre-bill review)	proposal DRAFT/APPROVED	same as invoice plus "why not billed" exclusions list	PDF, XLSX, email	`PROJ-PROP`	none (internal)
Retention release invoice	release proposal POSTED	header: project, original invoices; lines: RETENTION_RELEASE per source invoice	PDF, e-invoice, email	wave-29 `INV`	fiscal invoice
Project quotation	wave-27 quotation SENT	header: customer, validity; lines: estimate lines by type, totals, margin hidden	PDF, email	wave-27 `QUO`	none
Timesheet	print from sheet or approval	header: worker, period, status; lines: project/WBS/category × days; footer: totals, approvals with timestamps	PDF	`PROJ-TS`	labor record: FLSA 3 years (US), ArbZG §16 2 years (DE)
Project statement	on demand	cost/revenue/hours/WIP sections per filter	PDF, XLSX	none	none
Change order (customer-facing)	change order SUBMITTED	header: project, contract, change order no; lines: scope, cost/revenue impact, schedule impact; footer: signature blocks	PDF, email, e-signature link (wave 35 hub)	`PROJ-CO`	contract amendment; keep with contract (10 years DE HGB §257 for commercial letters)
Estimate voucher	estimate POSTED	wave-11 journal voucher with estimate id, POC, revenue, WIP	PDF	wave-11 voucher	accounting record
Project purchase order	wave-17 PO with project reference	wave-17 PO layout plus project/WBS and vendor retention clause	PDF, EDI, email	wave-17 `PO`	per wave 17

8.41.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`projects-reconcile`	02:00 tenant-local daily	tenant, legal entity	run id per (tenant, date); re-run replaces results	< 10 min for 2,000 projects	retry 3×; variance report written on failure	variance ≠ 0.00 → page project accountant; run missing by 03:00
`committed-cost-refresh`	event-driven; fallback every 60 s	tenant, project	Kafka consumer offset; projection rebuild from events is idempotent	< 10 s lag	consumer restart; rebuild on checksum mismatch	lag > 60 s
`projects-estimate-run`	on demand at period close (Temporal workflow per project)	project, period	key (project, period); reverse-and-rerun in one workflow	< 10 min for 2,000 projects	workflow retry per project; failed projects listed, others continue	any project failed; run > 30 min
`timesheet-periodic-create`	period start 00:00 tenant-local (Monday for WEEK)	legal entity, worker	key (worker, period)	< 2 min for 10,000 workers	per-worker retry	created count < active workers – exemptions
`timesheet-missing-reminder`	day after period end 09:00; repeat daily until submitted	legal entity	idempotent per (worker, period, day)	< 1 min	notification retry via wave 35	reminders undelivered
`projects-interest-run`	monthly after period close	project	key (project, period)	< 5 min for 2,000 projects	per-project retry	missing interest for projects with a profile
`retention-release-check`	nightly 03:00	project	evaluates triggers; creates release proposals once per trigger	< 2 min	retry	proposals not created for FINISHED projects with open retention
`projects-schedule-recalc`	nightly 01:00 for projects whose calendars changed; on demand	project	pure recompute	< 500 ms per 2,000 nodes	retry	runtime > 5 s per project
`projects-forecast-rollover`	first day of fiscal period	project, model	key (model, period)	< 1 min	retry	none rolled

8.41.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
ProjMaintain	POST/PUT `/api/v1/projects`, change orders create, quotation convert; screens Project detail, Change orders	with ProjChangeOrderApprove on the same change order; with ProjSetupAdmin	Project manager, Project administrator
ProjPlan	WBS replace, schedule, plan version transfer, forecasts, risks; screens WBS Gantt, Resource board, Plan version compare	none	Project manager, Resource manager
ProjJournalMaintain	journals create/edit; screens Journals	with ProjJournalPost	Project accountant, Project coordinator
ProjJournalPost	journals post, timesheet post	with ProjJournalMaintain; with ProjTimesheetEnter on own sheet	Project accountant
ProjBillingMaintain	proposals build/edit, retention release build; screens Invoice proposals, Retention ledger	with ProjBillingPost	Project accountant
ProjBillingPost	proposals post, release post	with ProjBillingMaintain; with ProjMaintain (contract value)	Project controller
ProjEstimatePost	estimates run/reverse/post, interest run	with ProjSetupAdmin (posting profiles)	Project controller
ProjTimesheetEnter	timesheets create/submit for self or delegated worker; screen My timesheet	with ProjTimesheetApprove on own sheet	Employee (ESS), Contractor
ProjTimesheetApprove	timesheet line decide; screen Timesheet approval	with ProjTimesheetEnter (own)	Project manager, Line manager (MSS)
ProjChangeOrderApprove	change order approve/apply	with ProjMaintain on the same change order (creator ≠ approver)	Project controller, Account executive
ProjInquire	all GET inquiries and reports	none	Project manager, Project accountant, Executive
ProjSetupAdmin	parameters (8.41.13), posting profiles, categories, retention terms, indirect cost components, interest profiles	with ProjEstimatePost, ProjJournalPost	Project administrator

8.41.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
PROJ-POST-001	error	No posting profile for project group {group}, category {category}, line property {property}	Resolution failed at all fallback levels	Add a profile row or a wildcard fallback	FR-41.5
PROJ-PERIOD-001	error	Transaction date {date} is in a closed PROJECTS period	Period closed in wave 14	Change the date or reopen the period	BR-41.6
PROJ-STAGE-001	error	Project {id} cannot move from {from} to {to}	Transition not allowed	Use an allowed transition	FR-41.1
PROJ-STAGE-002	error	Project {id} cannot be FINISHED: {reasons}	Open journals, proposals or non-zero WIP	Post or cancel the listed items; post a final estimate	BR-41.7
PROJ-WBS-001	error	Dependency {a} → {b} creates a cycle	Circular dependency	Remove one dependency	FR-41.2
PROJ-WBS-002	error	WBS code {code} already exists in plan version {ver}	Duplicate code	Change the code	FR-41.2
PROJ-BOOK-001	error	Hard booking exceeds 100 % on {date} for {resource}	Over-allocation	Reduce hours or use a soft booking	FR-41.3
PROJ-BOOK-002	warning	Soft booking exceeds 100 % on {date} for {resource}	Over-allocation	Review on the resource board	FR-41.3
PROJ-PROP-001	error	Billing rule currency {a} differs from project currency {b}	Mismatch	Pick a rule in the project currency	FR-41.6
PROJ-PROP-002	info	No billable transactions matched the selection	Empty candidate set	Widen the date range or check line properties with "why not billed"	FR-41.6
FUND-LIMIT	warning	Line held: funding source {source} limit {limit} reached	Funding limit	Raise the limit or add a source	BR-41.3
PROJ-EST-001	error	A POSTED estimate already exists for {project} in period {period}	Duplicate run	Reverse it first (or use reverse-and-rerun)	FR-41.7
PROJ-EST-002	error	Projects sub-ledger for period {period} is not closed for transactions	Sequence	Close the sub-ledger period	BR-41.6
PROJ-TS-001	error	Timesheet period {period} is closed	Period CLOSED	Ask the administrator to reopen	BR-41.9
PROJ-TS-002	error	Project {id} is not IN_PROCESS	Stage check	Pick another project or change stage	BR-41.9
PROJ-TS-003	error	Hours on {date} total {hours}, more than {max}	Daily cap	Correct the hours	BR-41.9
PROJ-TS-004	error	You are not a delegate for {worker} on {date}	Missing or expired delegation	Ask the worker or administrator to add a delegate row	BR-41.9
PROJ-TS-005	warning	Hours on line {line} are not a multiple of {increment}	Increment parameter	Round the entry	8.41.13
PROJ-QUO-001	error	Quotation {id} has already been converted to project {project}	Second conversion	Open the existing project	FR-41.12
PROJ-CO-001	error	Change order {id} is already APPLIED	Second apply	None required	BR-41.13
PROJ-CO-002	error	Customer approval reference required for a customer claim	Parameter on	Attach the approval evidence	BR-41.13
PROJ-RET-001	error	Retention for {invoice} cannot be released before its trigger ({trigger})	Early release	Wait for the trigger or override with ProjBillingPost and a reason	BR-41.10
PROJ-INT-001	warning	Project {id} has no interest profile; skipped	No profile	Assign a profile on the project or group	FR-41.16
PROJ-SIM-001	warning	{n} nodes changed in both WORKING and simulation {ver}; resolve conflicts	Three-way diff conflicts	Resolve node by node	BR-41.14
PROJ-STOCK-001	error	Insufficient project stock for item {item} on project {project}	Project-owned on-hand short	Transfer to project stock or change ownership	FR-41.19

8.41.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Journal post (100 lines)	2,000 journals/day per tenant; peak 50/min	150 / 400 / 800 ms	200 lines/s sustained	ProjectTransaction ≈ 1.2 KB × 5 M rows = 6 GB	partitioned by tenant hash (16); (tenant, project, txn_date)	queue journals; posting API back-pressure; no partial posts
Timesheet submit + line approval	10,000 workers × 1 sheet/week; peak Monday 09:00 2,000/min	100 / 300 / 600 ms	100 submits/s	Timesheet + lines ≈ 3 GB	(worker_id, period_id) unique; lines by timesheet	submit accepted, workflow routing lags; UI shows "pending routing"
Invoice proposal build (5,000 candidates)	500 proposals/month	1 / 5 / 10 s	20 builds in parallel	small	partial index proposal_id IS NULL AND CHARGEABLE	batch of 500 per transaction; longer builds, same result
Estimate run	2,000 projects per period	per project 50 / 300 / 800 ms; run < 10 min	10 workflows in parallel	ProjectEstimate ≈ 50 MB	(project_id, period_id) unique	Temporal rate-limits; run completes later
CPM scheduler	2,000 nodes, 3,500 dependencies	120 / 500 / 900 ms	5 runs/s	PlanVersion copies ≈ 200 MB	(plan_version_id, parent_id)	reject > 5,000 nodes (`PROJ_SCHEDULER_MAX_NODES`)
EVM / statement as-of query	5,000 queries/day	80 / 250 / 500 ms	50 q/s	projections ≈ 1 GB	materialized daily rollup + delta	serve rollup without delta, flagged stale
Committed cost projection update	20,000 PO events/day	1 / 5 / 10 s lag	100 events/s	≈ 300 MB	(project_id, wbs_node_id)	consumer lag alert; projection remains consistent
Interest run	2,000 projects monthly	run < 5 min	—	negligible	—	later completion
Change order apply	200/month	200 / 600 / 1,200 ms	—	negligible	—	serialized per project

8.41.20 Localization and compliance hooks

- Revenue recognition: POC_COST and POC_MILESTONE map to the input and output methods of ASC 606 / IFRS 15; COMPLETED_CONTRACT remains for tax books under local GAAP (e.g. DE HGB §252 realization principle). The method is a per-project-group parameter (8.41.13) and a ledger-specific override is exposed through the wave-11 multi-ledger posting (statutory vs IFRS ledger).
- Capitalized interest: IAS 23 (mandatory capitalization on qualifying assets) vs ASC 835-20; the interest profile treatment and the stop rule ("placed in service") are per legal entity; wave-48 country packs set the default profile.
- Retention: statutory retainage caps and release deadlines vary — US state prompt-payment acts (5–10 % caps, release within 30–45 days of substantial completion), DE VOB/B §17 Sicherheitseinbehalt (5 %, bank guarantee substitution), FR retenue de garantie (5 %, 1 year); the RetentionTerm model carries

`max_pct` and `release_deadline_days` that wave-48 packs populate; extension point `projects.retention.validate.<cc>`.

- Project invoices follow wave-29 e-invoicing per country (DE XRechnung/ZUGFeRD, IT SDI FatturaPA, FR Factur-X, US none); wave 41 only supplies line content and the project reference tags (buyer reference / contract number per EN 16931).
- Timesheet records retention: FLSA 29 CFR 516 (3 years payroll, 2 years time cards) in the US; EU Working Time Directive implementations (DE ArbZG §16: 2 years; FR Code du travail: 1 year for durations); retention class `LABOR_TIME` in the wave-5 retention policy with per-country durations from wave 48.
- Calendars and holidays for scheduling come from wave-8 calendars per site/country; timesheet period boundaries follow the legal entity's calendar week (ISO 8601 Monday start by default, Sunday start where the pack says so, e.g. US).
- Currency rounding: per-line rounding to the minor unit (JPY 0 decimals, CHF cash rounding to 0.05 only on printed totals per wave 29); accounting-currency amounts at the period-end rate for estimates (wave 12 rate types `CLOSING` for WIP, `AVERAGE` for revenue when the pack prescribes it).
- Language: category names, line properties and billing-rule descriptions are translatable through wave-3 metadata registry labels; invoice line texts print in the customer's language (wave 7 party language).
- Privacy: timesheet comments and worker names on external invoice detail are redacted when the customer contract flag `redact_worker_names` is set (GDPR data minimization); worker ids never print.

8.41.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX #88 — 12.11.1 Project quotations (SalesQuotationTable type Project, transfer to project)	PARTIAL	ADDED as FR-41.12	Quotation document stays in wave 27; conversion, estimate lines and link live here
AX #89 — 12.11.1 Timesheets list page (TSTimesheetTableListPage)	PARTIAL	ADDED as FR-41.13	Screen "My timesheet" / "Timesheet approval" in 8.41.6
AX #90 — 12.11.1 Timesheet details (TSTimesheetTable)	PARTIAL	ADDED as FR-41.13	Lines, comments, submit; BR-41.9
AX #93 — 12.11.1 Project → Retention terms (ProjRetentionTerms)	PARTIAL	ADDED as FR-41.14	Customer and vendor terms; BR-41.10
AX #94 — 12.11.2 Timesheet inquiries (missing timesheets, timesheet hours)	PARTIAL	ADDED as FR-41.13	Rows "Missing timesheets", "Timesheet hours" in 8.41.14
AX #95 — 12.11.2 SSRS Timesheet report / Missing timesheets	PARTIAL	ADDED as FR-41.13	Timesheet document in 8.41.15; missing-timesheets inquiry
AX #96 — 12.11.3 Timesheets → Timesheet workflow / Post timesheets / Create periodic timesheets	PARTIAL	ADDED as FR-41.13	Jobs `timesheet-periodic-create`, `timesheet-missing-reminder`; post endpoint
AX #98 — 12.11.3 Project → Retention release (vendor/customer)	PARTIAL	ADDED as FR-41.14	Job `retention-release-check`; endpoint `/retention/release`
AX #99 — 12.11.4 Billing → Billing rule templates / Retention terms	PARTIAL	ADDED as FR-41.14	Billing rule templates are the wave-41 billing rules (FR-41.6) stored as reusable templates per contract; retention terms setup in 8.41.13
AX #100 — 12.11.4 Timesheets → Timesheet periods / Period types / Timesheet parameters (favorites, delegates, workflow by project)	PARTIAL	ADDED as FR-41.13	Parameters rows in 8.41.13
AX #101 — 12.11.4 Indirect costs (component groups, components, rules — R3 PSA)	PARTIAL	ADDED as FR-41.15	BR-41.11; parameter "Indirect cost component group"
AX #272 — 12.31.1 Timesheets (Home → Timesheets link)	PARTIAL	ADDED as FR-41.13	ESS entry "My timesheet"
AX #91 — 12.11.1 Beginning balance journals (ProjJournalTable beginning balance)	PARTIAL (wave 49)	DEFERRED to wave 49	8.41.11 loads opening WIP/estimates through the migration pack; a user-facing beginning-balance journal type is delivered with the wave-49 migration tooling
SAP #310 — 13.27 CJZ1/CJZ2/CJZ3/CJZ5 Interest calculation on projects	GAP	ADDED as FR-41.16	BR-41.12; capitalized interest IAS 23 / ASC 835-20
SAP #311 — 13.27 CJV1–CJV6 Simulation versions	PARTIAL	ADDED as FR-41.17	BR-41.14 transfer with three-way diff
SAP #312 — 13.27 CLM1/CLM2/CLM3/CLM10/CLM11 Claims	PARTIAL	ADDED as FR-41.18	Change orders and claims; BR-41.13
SAP #313 — 13.27 CNS0 Project deliveries	PARTIAL	ADDED as FR-41.19	Shipment from project stock via wave 28
SAP #314 — 13.27 Project stock (Q), PS material components, MD51, CN33	PARTIAL	ADDED as FR-41.19	Ownership dimension `project_id` in wave 16; planning scope PROJECT in wave 22; CN33 BOM transfer = copy wave-9 BOM lines as item estimate lines
SAP #316 — 13.27 Commercial Project Management (risks/issues, financial planning)	PARTIAL	ADDED as FR-41.20	Forecast models and risk/issue register; CPM multi-version financial plans remain partial (parity map row)
SAP #318 — 13.27 CJZ2 Interest calculation run	GAP	ADDED as FR-41.16	Job `projects-interest-run`
SAP #320 — 13.27 OPS project stock settings (valuated/non-valuated), OPUV, MRP for project	PARTIAL	ADDED as FR-41.19	Parameter "Project stock valuation"
SAP #322 — 13.27 Claim management customizing (TQ80)	PARTIAL	ADDED as FR-41.18	Parameter "Change order customer approval required"; co_type enum replaces claim types
SAP #323 — 13.27 Simulation / project version profiles (OPTS/OPT)	PARTIAL	ADDED as FR-41.17	Parameter "Max simulation versions per project"
SAP #324 — 13.27 Interest profiles (OPIB/OPIC/OPID)	GAP	ADDED as FR-41.16	InterestProfile entity; parameters "Interest profile", "Interest day count"

8.42 Wave 42: Human Resources Core: Workers, Positions, Absence & Talent

8.42.1 Scope and business context

HR core replaces AX Human resources (HcmWorker, HcmEmployment, HcmPosition, HcmJob, HcmPositionWorkerAssignment, LeaveRequest/LeavePlan, HcmBenefit) and SAP HCM PA/OM (PA20/PA30 infotypes 0000 Actions, 0001 Org Assignment, 0002 Personal Data, 0008 Basic Pay, 2001 Absences; HRP1000/HRP1001 objects and relationships; PT time types; benefits PA-BN). After this wave, an HR administrator manages workers, employments, positions, jobs and departments with effective dating; employees request absence and enroll in benefits; managers approve and run simple reviews. The wave also establishes the PII vault used by payroll.

Out of scope: full recruitment (ATS), learning management, compensation cycles beyond fixed/variable plans, SuccessFactors-style succession, country-specific HR legal fields beyond the framework.

Coverage closure (8.42.21) narrows those exclusions as follows: an internal course catalog with sessions, registrations and completion-to-skills is in scope (FR-42.14) while external LMS content players (SCORM/xAPI) are not; a questionnaire engine (FR-42.15), injury and illness register (FR-42.16), loaned items (FR-42.17), skill mapping (FR-42.18), onboarding/offboarding checklists (FR-42.19), HR reminders (FR-42.20), requisitions and offers (FR-42.21), compensation planning cycles with budgets and manager worksheets (FR-42.22) and concurrent/global assignments (FR-42.23) are in scope; career sites, candidate sourcing and succession/talent pools stay out.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
AX HcmPositionWorkerAssignment edits in the Position form require "Maintain versions" dialogs; as-of reporting needs SQL over ValidFrom/ValidTo and routinely returns two managers for a day because ranges are inclusive-inclusive; SAP PA30 infotype splits (BEGDA/ENDDA) produce the same overlap at delimit time	Date-effective framework with inclusive end dates and no exclusion constraints	`[from, to)` ranges with Postgres exclusion constraints; one `as-of` endpoint; org chart with a date picker	Duplicate/overlapping manager answers 0 (property test over 50,000 dates); as-of query p95 < 50 ms vs 2–5 s SSRS reports
Hire in AX takes 25+ clicks across Worker, Employment, Position assignment, Compensation and User relation forms; SAP PA40 hire action walks 8–12 infotype screens and aborts midway on validation, leaving a partial employee	Action not modeled as a unit; each screen commits separately	One `PersonnelAction` with a diff, workflow approval, and atomic apply (future-dated via Temporal); SCIM provisions the user automatically	Clicks 25 → 4; partial-hire records 0; user provisioning 1–2 days manual → < 60 s
Leave accruals (LeaveBankTransaction) in AX and SAP time evaluation (PT60, schema TM04) run as batch and silently truncate proration to whole days; carry-over expiry needs custom PCRs	Accrual arithmetic hidden in batch/schema code; no stated formula	Formula stated in BR-42.3 with proration, caps, carry-over buckets and expiry; balance change events to ESS in real time	Accrual disputes –90%; balance visible to employee at T+0 instead of next payroll run
Benefits eligibility in HcmBenefit relies on static "Eligibility rules" with a query form that administrators cannot test; SAP PA-BN eligibility groupings need feature trees (PESTA)	Rule engine not simulatable	CEL eligibility expressions with a simulate endpoint over the whole workforce	Eligibility errors at open enrollment 0 on 100-employee fixture; rule authoring 1 day consultant → 10 min admin
PII (national ID, bank) is readable by any user with HR tables access; DB log auditing (AX) off by default, SAP PA20 display not logged	PII stored inline with no masking layer	Vaulted `hr_pii` schema, column encryption, masked default, every unmasked read audited with reason	Unaudited PII reads 0; fields exposed to non-HR roles 0

8.42.2 AX / SAP parity map

Capability	AX 2012 / D365	SAP ECC / S/4	Passage equivalent	Parity
Worker/person	HcmWorker, DirPerson, HcmPersonPrivateDetails	PA0002 Personal Data, PA0006 Address	`Worker` (links wave-7 party person), `WorkerPII` vault	full
Employment	HcmEmployment (ValidFrom/To), HcmEmploymentDetail	PA0000 Actions, PA0001 Org Assignment	`Employment` (effective-dated)	full
Positions and assignments	HcmPosition, HcmPositionDetail, HcmPositionWorkerAssignment, HcmPositionHierarchy	HRP1000 (S objects), HRP1001 A/B 008 holder, A 002 reports-to	`Position`, `PositionAssignment`, `PositionHierarchy`	full
Jobs	HcmJob, HcmJobDetail, HcmJobType, HcmJobFunction	HRP1000 C (job)	`Job`	full
Departments/org	OMOperatingUnit (Department), HcmPositionHierarchyType	HRP1000 O (org unit), PPOME	wave-6 org hierarchy, type DEPARTMENT	full
Compensation	HcmCompensationFixedPlan, HcmCompensationVariablePlan, HcmEmploymentFixedCompensation	PA0008 Basic Pay, wage types	`CompensationPlan`, `FixedCompensation` (effective-dated)	partial — no grade/step matrices in v1
Leave and absence	LeavePlan, LeaveBankTransaction, LeaveRequest; D365 HR leave types	PA2001 Absences, PT quota types (PA2006), accrual via time evaluation	`AbsencePlan`, `AbsenceBalance`, `AbsenceRequest`	full
Benefits	HcmBenefit, HcmBenefitPlan, HcmBenefitOption, HcmWorkerEnrolledBenefit	PA0167/0168/0169 benefit infotypes, PA-BN plans	`BenefitPlan`, `BenefitEnrollment`, `LifeEvent`	full
Skills/certifications	HcmSkill, HcmPersonSkill, HcmPersonCertificate	PD qualifications (Q objects), HRP1001 A 032	`Skill`, `WorkerSkill`, `Certification`	full
Performance	HcmDiscussion, HcmGoal, HcmRatingModel	Performance management (PMP), appraisals	`Review`, `Goal`	partial — basics only
Personnel actions	HcmPersonnelAction, HcmPersonnelActionType	PA40 actions, PA0000	`PersonnelAction` with workflow	full
Courses / learning	HRMCourseTable, HRMCourseSession, HRMCourseAttendee, HRMCourseInstructor, HRMCourseLocation/Classroom, agenda templates, course confirmation, "Transfer course completion to competencies"	PSV1/PSV2/PSV3 business events (training & event management), PSVP, LSO_PSV; SF Learning	`Course`, `CourseSession`, `CourseRegistration` (FR-42.14)	partial — no SCORM/xAPI content player
Questionnaires	KMQuestionnaire, KMQuestion, KMAnswerGroup, KMQuestionnaireSchedule, KMResultGroup, results analysis (Org admin › Questionnaires; Home › My questionnaires)	Appraisal templates (PHAP_CATALOG), HR surveys; SAP Qualtrics	`Questionnaire`, `QuestionnaireSchedule`, `AnswerSession` (FR-42.15)	full
Injury and illness	HRMInjuryIncident, HRMInjuryTreatment, HRMInjuryBodyPart, OSHA 300/300A/301	EHS Incident Management (EHSM) incident recording	`IncidentReport` (FR-42.16); OSHA layouts via wave 48	full for register; forms via US pack
Loaned items	HRMLoanTable, HRMLoanItem, loan types	PA0040 Objects on loan	`LoanedItem` (FR-42.17) linked to wave-44 assets	full
Skill mapping	HcmSkillMapping (skill mapping, skill gap analysis)	PEPM profile matchup, PPPM qualification search	skill search and gap analysis (FR-42.18)	full
Worker tasks / onboarding checklists	HcmWorkerTask, checklist templates	SF Onboarding/Offboarding tasks	`ChecklistTemplate`, `WorkerTask` (FR-42.19)	full
Reminders	Worker reminders (certificate expiry, probation end) via alerts	PA0019 Monitoring of tasks (date monitoring)	`HrReminderRule` on wave-5 alert rules (FR-42.20)	full
Recruitment requisitions and offers	HRMRecruitingTable, HRMApplication, HRMApplicantTable	E-Recruiting (HRRCF_*), SF Recruiting	`Requisition`, `Candidate`, `Offer` (FR-42.21)	partial — no career site
Compensation planning cycles	HcmCompensationProcessEvent, HcmCompensationBudget, merit guideline matrix	PECM_* enterprise compensation management (T71*); SF Compensation	`CompensationCycle`, `CompensationWorksheet` (FR-42.22)	full
Concurrent / global employment	several HcmEmployment per worker (per legal entity only)	HRUS_D2 / HRPAD concurrent employment, global employment (host/home)	`Employment.assignment_kind` PRIMARY/CONCURRENT/GLOBAL_HOST (FR-42.23)	full

Capability	AX 2012 / D365	SAP ECC / S/4	Passage equivalent	Parity
COBRA (US)	n/a	HRBEN00COBRA / HRBEN00ICOBRA	qualifying-event record on enrollment end; notices in wave-48 US pack	partial — deferred

8.42.3 Functional requirements

- **FR-42.1 Worker records** — Must. The system shall maintain workers (EMPLOYEE, CONTRACTOR) linked to one wave-7 person party, with personnel number from sequence `WRK`, and PII in a vaulted schema.
  - PII fields (national ID, date of birth, bank details, home address) encrypted at column level (AES-256-GCM, tenant key in Vault); masked in all reads unless duty `HcmPIIRead`.
- **FR-42.2 Effective-dated employment** — Must. The system shall maintain employments per legal entity with validity ranges and derived status (ACTIVE, ON_LEAVE, TERMINATED).
  - Multiple employments allowed across entities; at most one ACTIVE per entity at any instant.
- **FR-42.3 Positions, jobs, departments** — Must. The system shall maintain positions (FTE, job, department, reports-to position, cost dimensions) and jobs (title, type, function) with effective dating.
  - Position FTE default 1.00, range 0.05–2.00 (job-share); position assignments cannot exceed FTE in total unless `allowOverfill`.
- **FR-42.4 Position hierarchy as-of** — Must. The system shall answer manager, chain-of-command and direct reports for any worker as-of any date within p95 < 50 ms.
- **FR-42.5 Personnel actions** — Must. The system shall model hire, rehire, transfer, promotion, compensation change, leave of absence and termination as personnel actions with workflow approval and future-dated effect.
- **FR-42.6 Absence plans and accruals** — Must. The system shall accrue balances per plan (frequency MONTHLY/BIWEEKLY/ANNUAL/PER_HOUR_WORKED), with proration, caps, carry-over limits and expiry, and reconcile balances to approved requests and wave-25 time registrations.
- **FR-42.7 Absence requests** — Must. The system shall let employees request absence in hours or days, validate against balance and blackout periods, route to manager, and publish to time and payroll.
- **FR-42.8 Benefits** — Must. The system shall define plans (MEDICAL, DENTAL, VISION, LIFE, RETIREMENT_401K, HSA, FSA, OTHER) with options, eligibility rules, employee/employer rates, open enrollment windows and life events.
- **FR-42.9 Employee and manager self-service** — Must. The system shall provide ESS (personal data, absence, benefits, pay statements from wave 43) and MSS (approvals, team calendar, team positions).
- **FR-42.10 Skills and certifications** — Should. The system shall maintain skill profiles with rating scales and certifications with expiry, feeding service technician skills (wave 45).
- **FR-42.11 Performance basics** — Should. The system shall support goals, review templates and a review cycle with manager/employee sign-off.
- **FR-42.12 Compliance framework** — Must. The system shall support consent records, retention policies per data class and a country-specific field framework (extension slots per country code).
- **FR-42.13 Identity sync** — Must. The system shall provision/deprovision Keycloak users via SCIM on hire/termination actions.
- **FR-42.14 Courses and learning** — Should. The system shall maintain a course catalog (course types, groups, agenda templates), sessions (dates, location/classroom or virtual link, instructor, capacity, cost), registrations with waitlist, attendance and completion, and transfer completion into skills and certifications.
  - Registration statuses: REQUESTED → CONFIRMED | WAITLISTED → ATTENDED | NO_SHOW | CANCELED; manager approval optional per course.
  - Completion with result PASS writes `WorkerSkill` rows (rating from the course's skill outcomes) and/or a `Certification` whose expiry = completion date + validity months.
  - Course confirmation letters and attendance lists are documents (8.42.15); registering over capacity goes to the waitlist, and a full waitlist raises `HCM-CRS-001`.
- **FR-42.15 Questionnaire engine** — Should. The system shall design questionnaires (question types SINGLE, MULTI, SCALE 1–n, NUMERIC, TEXT, DATE; answer groups; result groups with weights and scoring; media attachments), schedule them to a population (CEL over worker/department/position/course session, or external respondents by wave-35 link), collect answers in ESS "My questionnaires", and analyze results by question, result group and respondent group for reuse by reviews (FR-42.11), course evaluation (FR-42.14) and wave-32 quality audits.
  - Anonymous mode stores no respondent id and refuses breakdowns with fewer than 5 respondents (`HCM-QST-002`).
- **FR-42.16 Injury and illness register** — Should. The system shall record workplace injury and illness incidents (incident type, occurred/reported timestamps, site and location, body parts, severity, treatments, days away and restricted, outcome, witnesses, root cause, corrective action, privacy-case flag, OSHA-recordable flag) and provide OSHA 300/300A/301 data extracts that the wave-48 US pack renders and submits (ITA).
- **FR-42.17 Loaned items** — Could. The system shall track items loaned to workers (loan type, free-text item or wave-44 asset, serial, issued/due/returned dates, condition out/in) with due reminders and an offboarding task that blocks the termination checklist while items are OUT.
- **FR-42.18 Skill mapping and gap analysis** — Should. The system shall search workers (and FR-42.21 candidates) by required skills with minimum ratings, certifications (unexpired) and availability, and compute the gap between a job's or position's skill profile and a worker's profile as a list of (skill, required, actual, delta).
- **FR-42.19 Worker tasks and checklists** — Should. The system shall define checklist templates (ONBOARDING, OFFBOARDING, TRANSFER) with tasks (owner role, due offset from the action's effective date, instructions, evidence required) and instantiate them as worker tasks when a personnel action applies; completion is tracked on the action, in MSS and in ESS.
- **FR-42.20 HR reminders** — Should. The system shall provide reminder rules (certificate expiry, probation end, contract end, visa/permit expiry, loaned item due, review due) on the wave-5 alert rule engine with HR selectors, recipients (worker, manager, HR partner) and lead times (default 60/30/7 days), replacing BR-42.8's fixed certification notification.
- **FR-42.21 Requisitions, candidates and offers** — Could. The system shall manage job requisitions (position, headcount, hiring manager, approval workflow, budget check against the wave-38 position forecast), a candidate pipeline (APPLIED → SCREEN → INTERVIEW → OFFER → HIRED | REJECTED), offer letters generated from templates with compensation and start date, and hire-from-offer that creates the hire personnel action and the onboarding checklist.
- **FR-42.22 Compensation planning cycles** — Should. The system shall run merit and bonus planning cycles with a budget per department, a guideline matrix (performance rating × compa-ratio band → recommended % range), manager worksheets with proposed amounts and justification, roll-up approval through the position hierarchy, and bulk application as compensation-change personnel actions on the cycle effective date.
- **FR-42.23 Concurrent and global assignments** — Should. The system shall allow a worker to hold several concurrent employments (within one legal entity or across entities) with `assignment_kind` PRIMARY, CONCURRENT or GLOBAL_HOST (home entity, assignment type, planned end date), each with its own position, compensation and pay group, while absence balances, PII and the user identity remain per worker.

8.42.4 Data model

Worker

Field	Type	Required	Notes
id	uuid	yes	PK
personnel_number	text(20)	yes	unique per tenant; sequence WRK
party_person_id	uuid	yes	FK wave-7 person
worker_type	enum	yes	EMPLOYEE, CONTRACTOR
preferred_name, legal_name	text	yes	legal_name from party
user_id	uuid	no	Keycloak subject
pii_ref	uuid	cond	FK WorkerPII (vault schema)
status	enum	computed	from employments

Employment

Field	Type	Required	Notes
id	uuid	yes	PK
worker_id	uuid	yes	FK
legal_entity_id	uuid	yes	FK
validity	tstzrange	yes	`[start, end)`; exclusion constraint on (worker_id, legal_entity_id) && validity
employment_type	enum	yes	FULL_TIME, PART_TIME, TEMP, CONTRACTOR
hire_date, seniority_date, termination_date	date	yes/no/no	
termination_reason	text(20)	cond	code table
pay_group_id	uuid	no	FK payroll (wave 43)
work_calendar_id	uuid	yes	FK wave 8

Position

Field	Type	Required	Notes
id	uuid	yes	PK
position_number	text(20)	yes	unique; sequence POS
job_id	uuid	yes	FK Job
department_id	uuid	yes	FK org unit type DEPARTMENT
legal_entity_id	uuid	yes	
fte	numeric(4,2)	yes	0.05–2.00
validity	tstzrange	yes	position existence
reports_to_position_id	uuid	no	effective-dated via PositionHierarchy
dimension_set_id	uuid	no	default dims for payroll/projects
allow_overfill	bool	yes	default false

PositionAssignment: id, position_id, worker_id, employment_id, validity tstzrange, fte_share numeric(4,2), is_primary bool. Exclusion constraint: (position_id && validity) unless allow_overfill; (worker_id, is_primary = true && validity).

AbsencePlan: id, code, unit (HOURS/DAYS), accrual_frequency, accrual_rate numeric(8,4), accrual_day (LAST_DAY/FIRST_DAY/PAYDATE), proration (DAYS_IN_PERIOD/NONE), max_balance, carry_over_max, carry_over_expiry_months, plan_year_start (MM-DD), negative_balance_allowed, min_service_days. **AbsenceBalance**: id, worker_id, plan_id, bucket (CURRENT/CARRY_OVER), period_start, accrued, used, adjusted, expired, balance. **AbsenceRequest**: id, worker_id, plan_id, from, to, quantity, status (DRAFT, SUBMITTED, APPROVED, REJECTED, CANCELED), approver_id, reason.

BenefitPlan: id, code, type, provider_party_id, options[] (code, coverage level, employee_rate, employer_rate, rate_basis PER_PAY_PERIOD/MONTHLY), eligibility_rule (CEL expression), enrollment_window, waiting_days, pre_tax bool, payroll_deduction_code. **BenefitEnrollment**: worker_id, plan_id, option_code, validity, dependents[], life_event_id, end_reason (TERMINATION, LIFE_EVENT, PLAN_END), cobra_qualifying_event bool (US; notices via wave 48).

Course / CourseSession / CourseRegistration

Field	Type	Required	Notes
course.id, code, name	uuid, text(20), text(120)	yes	course_type_id, course_group_id, agenda_template_id
course.skill_outcomes[]	jsonb	no	(skill_id, rating) written on completion
course.certification_id, validity_months	uuid, int	no	certification issued on PASS
course.requires_manager_approval	bool	yes	default false
session.id, course_id	uuid	yes	
session.starts_at, ends_at	timestamptz	yes	agenda lines for multi-day sessions
session.location_id, classroom_id, virtual_url	uuid, uuid, text	cond	one of location or virtual
session.instructor_worker_id / instructor_party_id	uuid	no	internal or external instructor
session.capacity, waitlist_capacity	int	yes	≥ 1
session.cost_per_attendee, currency	numeric(12,2), char(3)	no	charged to the attendee's department dimension
registration.worker_id, session_id, status	uuid, uuid, enum	yes	REQUESTED, CONFIRMED, WAITLISTED, ATTENDED, NO_SHOW, CANCELED
registration.result, score	enum, numeric(5,2)	no	PASS, FAIL

Questionnaire: id, code, type_id, questions[] (id, text, question_type, answer_group_id, weight, mandatory, media_ref), result_groups[] (code, question_ids[], scoring), anonymous bool, status (DRAFT, ACTIVE, RETIRED). **QuestionnaireSchedule**: id, questionnaire_id, population (CEL), opens_at, closes_at, reminder_days[], status (PLANNED, OPEN, CLOSED). **AnswerSession**: id, schedule_id, respondent_worker_id (NULL when anonymous), answers[] (question_id, value), started_at, completed_at, score_by_result_group jsonb.

IncidentReport: id (sequence HCM-INC), worker_id, legal_entity_id, site_id, incident_type_id, occurred_at, reported_at, location_text, body_parts[], severity_id, treatment_ids[], days_away, days_restricted, outcome_id, privacy_case bool, description, witnesses[], root_cause, corrective_action, osha_recordable bool, asset_id

(wave 44, optional), status (REPORTED, UNDER_REVIEW, CLOSED). **LoanedItem**: id, worker_id, loan_type_id, item_description, asset_id, serial, issued_on, due_on, returned_on, condition_out, condition_in, status (OUT, RETURNED, LOST). **ChecklistTemplate**: id, kind (ONBOARDING, OFFBOARDING, TRANSFER), tasks[] (code, title, owner_role, due_offset_days, instructions, evidence_required). **WorkerTask**: id, worker_id, action_id, template_task_code, owner_worker_id, due_on, status (OPEN, DONE, SKIPPED), evidence_ref. **HrReminderRule**: id, selector (CERT_EXPIRY, PROBATION_END, CONTRACT_END, VISA_EXPIRY, LOAN_DUE, REVIEW_DUE), lead_days[], recipients[], alert_rule_id (wave 5). **Requisition**: id (sequence HCM-REQ), position_id, headcount, hiring_manager_worker_id, status (DRAFT, APPROVED, OPEN, FILLED, CANCELED), budget_check_ref. **Candidate**: id, party_person_id, requisition_id, stage, source, skills[]. **Offer**: id, candidate_id, compensation jsonb, start_date, template_id, status (DRAFT, SENT, ACCEPTED, DECLINED, WITHDRAWN), document_ref. **CompensationCycle**: id, name, effective_date, kind (MERIT, BONUS, BOTH), budget_lines[] (department_id, budget_amount, currency), guideline_matrix jsonb (rating × compa_ratio_band → pct_min, pct_max), status (PLANNING, MANAGER_INPUT, APPROVAL, APPLIED, CANCELED). **CompensationWorksheet**: cycle_id, manager_worker_id, rows[] (worker_id, current_pay, rating, compa_ratio, guideline_pct_min, guideline_pct_max, proposed_pct, proposed_amount, justification), status (DRAFT, SUBMITTED, APPROVED). **Employment** adds: assignment_kind (PRIMARY, CONCURRENT, GLOBAL_HOST; default PRIMARY), home_legal_entity_id, planned_end_date, global_assignment_type.

Invariants: every ACTIVE employment has exactly one primary position assignment or an explicit `unassigned` flag; balances = accrued – used + adjusted – expired per bucket; hierarchy is acyclic at every instant (checked on write with a recursive CTE as-of the new validity range). Indexing: GiST on validity ranges; `PositionHierarchy (tenant_id, child_position_id, validity)`; PII schema `hr_pii` with separate role and no RLS bypass.

8.42.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	`/api/v1/hr/workers`	Create worker (+ party)	key	HcmWorkerMaintain
POST	`/api/v1/hr/actions`	Submit personnel action (hire/transfer/terminate…)	key	HcmActionMaintain
GET	`/api/v1/hr/workers/{id}/as-of?date=`	Employment, position, manager as-of	n/a	HcmWorkerInquire
GET	`/api/v1/hr/positions/{id}/reports?asOf=&depth=`	Direct/indirect reports	n/a	HcmOrgInquire
POST	`/api/v1/hr/absence/requests`	Create request	key	EssAbsence
POST	`/api/v1/hr/absence/requests/{id}/decide`	Approve/reject	key	MssApprove
POST	`/api/v1/hr/absence/accrue`	Run accrual for plan/period	key per (plan, period)	HcmAbsenceAdmin
POST	`/api/v1/hr/benefits/enrollments`	Enroll (open enrollment or life event)	key	EssBenefits
GET	`/api/v1/hr/workers/{id}/pii`	Unmasked PII (audited)	n/a	HcmPIIRead
POST	`/api/v1/hr/courses/sessions/{id}/registrations`	Register worker (self or manager)	key per (worker, session)	EssLearning / HcmLearningAdmin
POST	`/api/v1/hr/courses/sessions/{id}/complete`	Record attendance and results; transfer to skills	key	HcmLearningAdmin
POST	`/api/v1/hr/questionnaires/schedules`	Schedule questionnaire to a population	key	HcmQuestionnaireAdmin
POST	`/api/v1/hr/questionnaires/answer-sessions/{id}/submit`	Submit answers	key	EssBase
GET	`/api/v1/hr/questionnaires/schedules/{id}/results`	Results analysis	n/a	HcmQuestionnaireAdmin
POST	`/api/v1/hr/incidents`	Report injury or illness incident	key	HcmIncidentReport
GET	`/api/v1/hr/incidents/osha-extract?year=&siteId=`	OSHA 300/300A/301 data extract	n/a	HcmIncidentAdmin
POST	`/api/v1/hr/loaned-items`	Issue loaned item	key	HcmWorkerMaintain
POST	`/api/v1/hr/loaned-items/{id}/return`	Return item	key	HcmWorkerMaintain
GET	`/api/v1/hr/skills/search?skills=&minRating=&certs=&availableFrom=`	Skill mapping search	n/a	HcmOrgInquire
GET	`/api/v1/hr/workers/{id}/skill-gap?positionId=`	Gap analysis	n/a	HcmOrgInquire
POST	`/api/v1/hr/worker-tasks/{id}/complete`	Complete checklist task	key	MssBase / EssBase
POST	`/api/v1/hr/requisitions`	Create requisition	key	HcmRecruitMaintain
POST	`/api/v1/hr/offers/{id}/hire`	Hire from accepted offer (creates hire action)	key	HcmActionMaintain
PUT	`/api/v1/hr/compensation/cycles/{id}/worksheets/{managerId}`	Save manager worksheet	ETag	MssBase
POST	`/api/v1/hr/compensation/cycles/{id}/apply`	Apply cycle as compensation-change actions	key	HcmCompAdmin

Validation: action effective date may be future-dated up to 365 days; termination date ≥ hire date; absence request quantity ≤ balance + negative allowance; benefit enrollment only inside window or within 30 days of a life event.

Event	Trigger	Payload	Consumers
`dev.passage.hr.employment.changed.v1`	action applied	see 8.0	payroll, projects, service, SCIM
`dev.passage.hr.position.assignment.changed.v1`	assignment start/end	workerId, positionId, validity, managerPositionId	authorization (manager roles), workflow routing
`dev.passage.hr.absence.approved.v1`	request approved	workerId, planId, from, to, hours	time, projects, payroll
`dev.passage.hr.benefit.enrollment.changed.v1`	enrollment start/end	workerId, planId, option, validity, employeeRate	payroll deductions
`dev.passage.hr.course.completed.v1`	registration ATTENDED with PASS	workerId, courseId, sessionId, skills[], certificationId	wave-45 dispatch skills, notifications
`dev.passage.hr.incident.reported.v1`	incident created	incidentId, siteId, severity, oshaRecordable, assetId	EHS notifications, wave-44 asset history
`dev.passage.hr.compensation.cycle.applied.v1`	cycle APPLIED	cycleId, effectiveDate, actionIds[]	payroll (wave 43), budget (wave 38)

8.42.6 User experience

Screen	Primary actions	Key fields/columns	Duty
HR workspace	tiles: pending actions, expiring certifications, open enrollment		HcmWorkerInquire
Worker detail	tabs: employment, positions, compensation, absence, benefits, skills, documents	masked PII with reveal (audited)	HcmWorkerMaintain
Org chart	navigate as-of date, drag worker to position (creates action)	position, incumbent, FTE, vacancies	HcmOrgInquire
Personnel actions	create, approve, apply	type, effective date, changes diff	HcmActionMaintain

Screen	Primary actions	Key fields/columns	Duty
Absence admin	run accrual, adjust, view balances	plan, bucket, accrued/used/balance	HcmAbsenceAdmin
ESS portal	request absence, view balances, update address, enroll benefits, view pay statements		EssBase
MSS portal	approve requests, team calendar, team positions		MssBase
Benefits enrollment wizard	select options, add dependents, confirm	per-pay-period cost preview	EssBenefits
Course catalog and sessions	browse, register, waitlist, print confirmation; admin: record attendance/results	course, session dates, location, instructor, seats left, cost	EssLearning / HcmLearningAdmin
Questionnaire designer and results	design questions, schedule, view statistics	question, type, answer group, result group, response rate	HcmQuestionnaireAdmin
My questionnaires (ESS)	answer, resume, submit	open questionnaires, due date	EssBase
Incident register	report, review, close; OSHA extract	incident, site, severity, days away/restricted, recordable	HcmIncidentReport / HcmIncidentAdmin
Loaned items	issue, return, mark lost	worker, item/asset, due, condition	HcmWorkerMaintain
Skill search and gap	search by skills/certs/availability; compare to position profile	worker, skill, rating, required, delta	HcmOrgInquire
Checklist tasks (MSS / ESS)	complete task, attach evidence, skip with reason	task, owner, due, status	MssBase / EssBase
Requisitions and candidates	create requisition, move candidate stage, generate offer, hire	requisition, position, stage, offer status	HcmRecruitMaintain
Compensation worksheet (MSS)	propose %, justify, submit; cycle admin: budgets, guidelines, apply	worker, current pay, rating, compa-ratio, guideline, proposed, budget used	MssBase / HcmCompAdmin

Rules: as-of date picker persists per session in Org chart; PII reveal requires reason text (≥ 10 chars) and logs to audit; all ESS screens pass axe WCAG 2.1 AA and work at 360 px width.

8.42.7 Business rules and edge cases

- **BR-42.1 Effective-dated position logic** — assignments, hierarchy edges and position attributes are stored as `[valid_from, valid_to)` ranges; a change on date D closes the current row at D and opens a new row from D; as-of queries use `validity @> asOf::timestamptz`. Manager of worker W as-of D = incumbent (primary assignment) of `reports_to_position` of W's primary position as-of D; if that position is vacant as-of D, walk up until an incumbent is found, max 10 levels, else NULL (AX "vacant position" behavior).
- **BR-42.2 Future-dated actions** — applied by a Temporal timer at 00:00 tenant-local on the effective date; the action can be withdrawn until then; applied rows are immutable (corrections create new actions).
- **BR-42.3 Accrual formula** — per period: `accrual = rate × proration_factor`, proration_factor = days_employed_in_period ÷ days_in_period when proration = DAYS_IN_PERIOD, rounded half-up to 2 decimals; balance capped at max_balance (excess discarded, logged). Example plan `US-PTO-15` (DAYS, MONTHLY, rate 1.25 on LAST_DAY, max 22.50, carry_over_max 5.00, expiry 3 months, plan year 01-01): hire 2026-03-16 → March accrual 1.25 × 16/31 = 0.65; April–December 9 × 1.25 = 11.25; total accrued 11.90; used 4.00; balance 7.90 at 2026-12-31. Year-end: carry-over bucket = min(7.90, 5.00) = 5.00; 2.90 expired. 2027-01-31: CURRENT accrues 1.25, total 6.25; consumption takes CARRY_OVER first; unused carry-over expires 2027-03-31 23:59:59.
- **BR-42.4 Negative balances** — allowed only if plan.negative_balance_allowed, down to –(rate × 2); termination with negative balance raises a payroll deduction suggestion.
- **BR-42.5 Overlapping absence** — a request overlapping an APPROVED request for the same worker is rejected; overlapping a SUBMITTED one warns.
- **BR-42.6 Benefit eligibility** — evaluated as-of enrollment effective date with CEL expression over {employment_type, fte, service_days, job.type, legal_entity, age}; waiting_days counted from hire_date; a terminated employment ends enrollments at the end of the month of termination (COBRA handling is v1.x).
- **BR-42.7 Hierarchy cycles** — rejected on write (`HCM-ORG-001`).
- **BR-42.8 Certifications** — expiry generates a notification at 60/30/7 days; expired certification removes skill match from wave-45 dispatch.
- **BR-42.9 Course registration and completion** — seats are allocated in registration order; when confirmed = capacity, new registrations are WAITLISTED up to waitlist_capacity, else `HCM-CRS-001`; a cancellation promotes the oldest waitlisted registration; ATTENDED with PASS writes skill outcomes (rating = max(existing, course rating)) and a certification valid from the session end date for validity_months; session cost per attendee posts to the attendee's department dimension through the wave-11 posting API when the parameter "Post course costs" is on.
- **BR-42.10 Questionnaire scoring and anonymity** — result group score = Σ(answer value × question weight) ÷ Σ weights, rounded to 2 decimals; a schedule closes at closes_at and late submissions are rejected (`HCM-QST-001`); anonymous schedules store no respondent id and the population list is kept only as a count; any breakdown with fewer than 5 respondents returns `HCM-QST-002`.
- **BR-42.11 Incident recordability** — osha_recordable defaults to true when the incident involves death, days away, restricted work or transfer, medical treatment beyond first aid, or loss of consciousness (29 CFR 1904.7); privacy_case = true hides the worker name in extracts and lists; a CLOSED incident is immutable (corrections are new rows linked by `supersedes_id`).
- **BR-42.12 Checklist instantiation** — when a personnel action applies, tasks are created with due_on = effective date + due_offset_days (negative offsets allowed for pre-boarding) and owner = the worker holding the owner role as-of the effective date (manager via BR-42.1, HR partner from the department, IT from the role mapping); a termination action's OFFBOARDING checklist includes an automatic task "Return loaned items" that stays OPEN while any LoanedItem is OUT.
- **BR-42.13 Compensation cycle arithmetic** — compa_ratio = current annual pay ÷ job pay range midpoint, rounded to 2 decimals; guideline band from the matrix row (rating) and column (compa_ratio band); proposed_pct outside [pct_min, pct_max] requires justification (`HCM-CMP-001` warning); Σ proposed amounts per department ≤ budget_amount, else submit is blocked (`HCM-CMP-002`) unless the cycle flag `allow_over_budget` is on; apply creates one COMPENSATION_CHANGE action per row with effective date = cycle effective date and new pay = current × (1 + proposed_pct), rounded to the minor unit.
- **BR-42.14 Concurrent assignments** — a worker may have at most one PRIMARY employment per legal entity at an instant (existing exclusion constraint) plus any number of CONCURRENT or GLOBAL_HOST employments; each employment carries its own pay group and position assignment; a GLOBAL_HOST employment requires home_legal_entity_id ≠ legal_entity_id and a planned_end_date; absence balances accrue on the PRIMARY employment only unless the plan is marked per-employment.
- **BR-42.15 Requisition and offer** — a requisition requires an approved position with vacancy as-of the planned start date or `allow_overfill`; the budget check calls the wave-38 position forecast and blocks OPEN when the forecast is exceeded (`HCM-REQ-001`); an ACCEPTED offer converts to a hire action once (`HCM-OFR-001` on repeat); DECLINED or WITHDRAWN offers reopen the requisition headcount.

Absence request state machine: DRAFT → SUBMITTED → APPROVED | REJECTED; SUBMITTED/APPROVED → CANCELED (approved cancellation reverses usage if start date is in the future or within 30 days past with manager approval).

8.42.8 Acceptance criteria

- **AC-42.1** (FR-42.4, BR-42.1) Given 1,200 workers with 50,000 randomized as-of dates, when manager is queried, then results match the reference model 100%, p95 < 50 ms.
- **AC-42.2** (FR-42.3) Given position POS-100 with FTE 1.00 and an active assignment, when a second overlapping assignment is created, then it is rejected unless allow_overfill.
- **AC-42.3** (FR-42.6, BR-42.3) Given plan US-PTO-15 and hire 2026-03-16, when accruals run through 2027-01-31, then balances equal 0.65, 11.90, 7.90, 5.00 carry-over, 2.90 expired, 6.25 as computed.
- **AC-42.4** (FR-42.7) Given a balance of 2.00 days and a request for 3.00 on a plan that forbids negatives, when submitted, then it is rejected with `HCM-ABS-002`.
- **AC-42.5** (FR-42.8, BR-42.6) Given 100 fixture employees and eligibility rule `employment_type in ['FULL_TIME'] && service_days >= 30`, when evaluated, then eligible set matches the fixture expectation exactly.
- **AC-42.6** (FR-42.5, BR-42.2) Given a transfer action effective 2026-12-01, when the date arrives, then the old assignment closes at 2026-12-01T00:00 tenant-local and the new one opens.
- **AC-42.7** (FR-42.1) Given a user without HcmPIIRead, when reading a worker, then national ID is `***-**-1234` and the audit log records the masked read.
- **AC-42.8** (FR-42.13) Given a hire action applied, when SCIM sync runs, then a Keycloak user exists within 60 s; on termination it is disabled within 60 s.
- **AC-42.9** (FR-42.14, BR-42.9) Given a session with capacity 10 and waitlist 2, when 13 workers register, then 10 are CONFIRMED, 2 WAITLISTED and the 13th receives `HCM-CRS-001`; when one confirmed registration cancels, then the oldest waitlisted becomes CONFIRMED; when attendance is recorded with PASS for a course mapping skill FORKLIFT rating 3 and a 24-month certification, then the worker's skill rating is 3 and the certification expires 24 months after the session end.
- **AC-42.10** (FR-42.15, BR-42.10) Given an anonymous questionnaire scheduled to 12 workers with 4 responses, when results are requested by department, then the overall statistics return and the department breakdown returns `HCM-QST-002`.
- **AC-42.11** (FR-42.16, BR-42.11) Given an incident with 3 days away, when saved, then osha_recordable = true and the OSHA 300 extract for the year lists it with days away 3 and the worker name masked when privacy_case is set.
- **AC-42.12** (FR-42.19, BR-42.12) Given an ONBOARDING template with a task at offset –5 days and a hire action effective 2026-11-02, when the action is approved, then a task due 2026-10-28 is assigned to the manager as-of 2026-11-02.
- **AC-42.13** (FR-42.22, BR-42.13) Given a MERIT cycle with department budget 50,000.00 USD and a worksheet whose proposals sum to 52,000.00, when submitted, then it is blocked with `HCM-CMP-002`; at 49,500.00 it submits, and apply creates one COMPENSATION_CHANGE action per row on the cycle effective date.
- **AC-42.14** (FR-42.23, BR-42.14) Given a worker with a PRIMARY employment in US-01 and a GLOBAL_HOST employment in DE-01 with planned end 2027-06-30, when the as-of query runs for 2027-01-15, then both employments and positions are returned, and payroll (wave 43) receives separate pay-group memberships.
- **AC-42.15** (FR-42.17, BR-42.12) Given a worker with a laptop loaned item OUT, when a termination action applies, then the offboarding task "Return loaned items" stays OPEN until the item is returned, and the checklist cannot complete before that.
- **AC-42.16** (FR-42.18) Given position POS-200 requiring skills WELDING ≥ 3 and PLC ≥ 2, when the gap analysis runs for a worker rated WELDING 4, PLC 1, then the result lists (PLC, required 2, actual 1, delta –1) only.

8.42.9 Test plan and fixtures

Fixtures: `hr-workforce-1200` (generated workers, employments, positions across 3 entities with 5 years of actions); `hr-accrual-cases` (36 hire-date/plan combinations with expected balances); `hr-benefit-100` (100 employees, 6 plans, expected eligibility); `hr-pii-contract` (role × field masking matrix).

Test	Type	Target	Pass criterion
As-of manager/position	property	hierarchy queries	100% match reference, p95 < 50 ms
Accrual engine	unit	accrual formula	all 36 cases exact
Eligibility CEL	unit	rule evaluator	100/100
PII masking	security contract	OPA + API	matrix holds; every unmasked read audited
Action workflow	E2E	Temporal + API	future-dated transfer applies on date
SCIM	integration	Keycloak	user lifecycle within 60 s

Reconciliation: Σ absence usage = approved request hours = wave-25 absence time registrations; headcount by department as-of = Σ primary assignments.

8.42.10 Deployment and operations

Chart `passage-hr` (API, workflow worker, SCIM worker, ESS BFF), Postgres `hr` with schema `hr_pii` under a separate role and Vault-managed key. Flags: `hr.performance`. Schedules: `hr-apply-actions` 00:00 tenant-local, `hr-accrue` per plan frequency, `hr-cert-expiry` daily. SLOs: as-of query p95 < 50 ms; ESS page p95 < 300 ms; availability 99.9%. Alerts: action application failures; PII decrypt errors; SCIM lag > 5 min. Runbook: replay actions from event log; rotate tenant PII key (re-encrypt job). Rollback by digest; `hr_pii` migrations never drop columns.

8.42.11 Migration from AX / SAP

Source	Passage entity	Notes
HcmWorker, DirPerson, HcmPersonPrivateDetails	Worker, WorkerPII	PII to vault at load time
HcmEmployment, HcmEmploymentDetail	Employment	ValidFrom/ValidTo → validity range
HcmPosition, HcmPositionDetail, HcmPositionDuration	Position	
HcmPositionWorkerAssignment	PositionAssignment	
HcmPositionHierarchy	PositionHierarchy	type Line only
HcmJob, HcmJobDetail	Job	
LeavePlan, LeaveBankTransaction, LeaveRequest	AbsencePlan, AbsenceBalance (opening), AbsenceRequest (future only)	
HcmBenefit*, HcmWorkerEnrolledBenefit	BenefitPlan, BenefitEnrollment	
PA0000/0001/0002/0006/0008	Employment, Position assignment, Worker, PII, FixedCompensation	infotype BEGDA/ENDDA → ranges
HRP1000/HRP1001 (O, S, C; A/B 002, 003, 007, 008)	org units (wave 6), Position, Job, hierarchy, assignments	
PA2006 quotas, PA2001	AbsenceBalance opening, historical absences (archive)	

Validation: active headcount per entity equal; per-worker current position/manager equal; quota balances within 0.01. Not migrated: closed historical actions older than 5 years (archive), AX HRM recruiting history, SAP PD development plans.

8.42.12 Dependencies, risks, open questions

Depends on: wave 6 org hierarchy, wave 7 person party, wave 8 calendars, wave 2 Keycloak/OPA, wave 4 workflow, wave 25 time registration.

Risk	Likelihood	Impact	Mitigation
Effective-dating bugs	Medium	High	Range types + exclusion constraints + property tests
Country HR field explosion	High	Medium	Extension slot framework; first countries via wave 48

Open questions: (1) Should contractors live in HR or only in the party model? Default HR with worker_type CONTRACTOR; decide by wave 43. (2) ESS as separate PWA or shell module? Default shell module; decide at wave 42 start.

8.42.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent

Org chart / reporting lines	drill-down	as-of date, root position, depth	position, incumbent, FTE, manager	`hr_hierarchy`	Organization chart (HcmPositionHierarchy)	PPOSE / PPOME; S_AHR_61016497 staff assignments
Personnel actions log	list inquiry	type, status, effective range, department	action, worker, effective date, approver, diff	`hr_actions`	Personnel actions (HcmPersonnelAction)	S_AHR_61016373 / S_AHR_61016380 entries/leavings
Absence balances	list inquiry	plan, bucket, as-of, department	accrued, used, adjusted, expired, balance	`hr_absence_bal`	Leave balances (LeaveBankTransaction inquiry)	PT_QTA10 quota overview; PT50 quota overview
Absence calendar	operational report	department, period, plan	worker × day grid of absences	`hr_absence_cal`	Leave calendar; SSRS Absence report	PT90 / PT_BAL00 absence data overview; S_AHR_61016369
Benefits enrollment	list inquiry	plan, option, as-of	worker, option, dependents, employee/employer cost	`hr_benefits`	Enrolled benefits (HcmWorkerEnrolledBenefit)	HRBEN0001 participation; HRBEN0005 costs
Certifications expiring	list inquiry	days ahead, type, department	worker, certification, expiry	`hr_certs`	Certificates expiring (HcmPersonCertificate)	S_AHR_61015532 qualifications expiring
Skill search / gap	drill-down	skills, min rating, position	worker, rating, required, delta	`hr_skills`	Skill mapping / skill gap (HcmSkillMapping)	PEPM profile matchup
Course attendance	operational report	course, session, date range	registrations by status, attendance %, pass %, cost	`hr_courses`	Course inquiries; SSRS Attendance list, Course confirmation	S_PH9_46000424 attendance list; S_AHR_61016216 attendance statistics
Questionnaire results	drill-down	schedule, result group, respondent group	response rate, score by question and result group, distribution	`hr_qst_results`	Questionnaire results analysis; SSRS Questionnaire statistics	Appraisal results (APPCREATE reports)
Injury and illness log	statutory report	year, site, recordable only	OSHA 300 columns (case no, name or "privacy case", job, date, location, description, classification, days away/restricted, injury type)	`hr_incidents`	SSRS OSHA 300/300A/301	EHS incident reports (EHSM)
Loaned items outstanding	list inquiry	loan type, overdue only	worker, item, issued, due, days overdue	`hr_loans`	Loaned items inquiry (HRMLoanItem)	S_AHR_61016399 objects on loan (IT0040)
Onboarding progress	KPI	action type, department, period	open tasks, overdue tasks, % complete per action	`hr_tasks`	Worker tasks	SF Onboarding dashboard
Compensation cycle status	KPI	cycle, department	budget, proposed, % used, worksheets submitted/approved	`hr_comp_cycle`	Compensation process results	PECM_EVALUATE_CRV / PECM_DISPLAY_BUDGETS
PII access audit	operational report	worker, user, period	read time, user, fields, reason	`hr_pii_audit`	Database log (not default)	S_AHR_61016380 n/a; SM20 security audit log

8.42.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Personnel action letter (hire, transfer, promotion, termination)	action APPLIED (template per action type)	header: worker, entity, effective date; body: position, job, compensation, reason; footer: signature blocks	PDF, email, e-signature (wave 35)	action id	employment record; retention per data class (US 7 years after termination common practice; DE 3 years after end of employment per §195 BGB limitation)
Offer letter	offer SENT	candidate, position, start date, compensation, conditions, acceptance block	PDF, email, e-signature	`HCM-OFR`	candidate record (EU GDPR: delete 6 months after rejection unless consent)
Course confirmation letter	registration CONFIRMED	course, session dates, location/link, agenda, instructor	PDF, email, iCalendar	none	none
Course attendance list	session start / end	session, attendee list with signature column, result	PDF	session id	safety training evidence (OSHA 29 CFR 1910 training records per standard)
Course certificate	registration ATTENDED with PASS	worker, course, date, validity, issuer	PDF	certificate id	per certification body
OSHA 301 incident report data / 300 log / 300A summary	incident saved; year end (300A posting Feb 1–Apr 30)	OSHA form fields	data extract (CSV/JSON) to wave-48 US pack for PDF and ITA CSV	HCM-INC	29 CFR 1904.33: 5 years after year end
Loaned item receipt	item issued / returned	worker, item, serial, condition, due date, signatures	PDF	loan id	until return + 1 year
Compensation statement (total rewards)	cycle APPLIED	current/new pay, bonus, benefits employer cost	PDF, ESS	none	employment record
Questionnaire	schedule OPEN (external respondents)	questions and answer controls	web form, PDF	none	per questionnaire data class

8.42.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`hr-apply-actions`	00:00 tenant-local daily	tenant, legal entity	action id; applied actions skipped	< 2 min for 1,000 actions	per-action retry 3×; failures listed in HR workspace	any failed action; run not complete by 00:30
`hr-accrue`	per plan frequency (month end, pay date)	plan, period	key (plan, period, worker)	< 5 min for 10,000 workers	per-worker retry; partial results kept	accrual missing for active workers
`hr-carryover-expiry`	plan-year start and carry-over expiry date	plan	key (plan, plan year)	< 5 min	retry	balances not rolled
`hr-cert-expiry` / `hr-reminders`	daily 06:00	tenant	key (rule, subject, lead day)	< 1 min	wave-5 alert retry	undelivered reminders
`hr-questionnaire-distribute`	schedule opens_at; reminders per reminder_days	schedule	key (schedule, respondent, day)	< 2 min for 5,000 respondents	retry	distribution count ≠ population
`hr-course-completion-transfer`	on attendance save; nightly sweep 02:00	session	key (registration)	< 1 min	retry	ATTENDED+PASS without skill rows

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`hr-scim-sync`	event-driven; reconcile hourly	tenant	Keycloak subject id	< 60 s per event	retry with backoff; reconcile job fixes drift	SCIM lag > 5 min
`hr-retention-purge`	weekly Sunday 03:00	data class	key (record, policy version)	< 30 min	stop on error; legal holds respected	purge errors; records past retention > 0
`hr-pii-rekey`	on demand (key rotation)	tenant	per-row key version	< 1 h for 100,000 workers	resumable from checkpoint	decrypt errors

8.42.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
HcmWorkerMaintain	`/hr/workers`, loaned items; Worker detail	with PayrollWorkerMaintain (bank details) for the same user	HR administrator
HcmActionMaintain	`/hr/actions`, hire from offer; Personnel actions	with approving own action; with PayrollRunFinalize	HR administrator, HR partner
HcmPIIRead	`/hr/workers/{id}/pii`; reveal control	none (audited)	HR administrator (restricted), Payroll administrator
HcmOrgInquire / HcmWorkerInquire	as-of, reports, skill search/gap; Org chart	none	HR partner, Manager (own subtree via OPA)
HcmAbsenceAdmin	accrue, adjust balances; Absence admin	with EssAbsence approval of own requests	Absence administrator
HcmLearningAdmin	course catalog, sessions, attendance, completion	none	Training coordinator
HcmQuestionnaireAdmin	questionnaire design, schedule, results	with answering an anonymous schedule's breakdown below threshold (blocked by rule)	HR partner, Quality auditor
HcmIncidentReport / HcmIncidentAdmin	report incidents / review, close, OSHA extract	admin cannot close an incident they reported	Supervisor (report), EHS manager (admin)
HcmRecruitMaintain	requisitions, candidates, offers	with HcmCompAdmin approving own offer compensation above range	Recruiter
HcmCompAdmin	compensation cycles, budgets, guidelines, apply	with MssBase worksheet approval of own pay	Compensation manager
EssBase / EssAbsence / EssBenefits / EssLearning	own data, requests, enrollments, registrations, questionnaires, tasks	none	Employee
MssBase / MssApprove	team approvals, worksheets, team tasks	approve own request blocked	Manager
HcmSetupAdmin	parameters 8.42.13, plans, templates, reminder rules	with HcmAbsenceAdmin adjustments	HR system administrator

8.42.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
HCM-ORG-001	error	Position {a} cannot report to {b}: creates a cycle on {date}	Hierarchy cycle	Choose another reports-to position	BR-42.7

HCM-CRS-001	error	Session {s} and its waitlist are full	Capacity	Pick another session	BR-42.9
HCM-CRS-002	warning	Manager approval required for course {c}	Course setting	Await approval	FR-42.14
HCM-QST-001	error	Questionnaire closed on {date}	Late submission	Contact the owner	BR-42.10
HCM-QST-002	error	Breakdown hidden: fewer than {n} respondents	Anonymity threshold	Use a wider group	BR-42.10
HCM-INC-001	warning	Incident appears OSHA-recordable; confirm classification	BR-42.11 default	Confirm or justify override	BR-42.11
HCM-LOAN-001	warning	{n} loaned items still out for {worker}	Offboarding block	Record returns or mark lost	BR-42.12
HCM-CMP-001	warning	Proposed {pct} % is outside guideline {min}–{max} %; justification required	Guideline	Enter justification	BR-42.13
HCM-CMP-002	error	Proposals {sum} exceed budget {budget} for {department}	Budget	Reduce proposals	BR-42.13
HCM-REQ-001	error	Requisition exceeds position forecast for {department}	Budget check	Adjust forecast (wave 38) or headcount	BR-42.15
HCM-OFR-001	error	Offer {id} has already been converted to hire action {a}	Repeat conversion	Open the existing action	BR-42.15

8.42.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
As-of manager/position query	50,000/day; peak 500/min	10 / 50 / 120 ms	200 q/s	n/a	GiST on validity; PositionHierarchy (tenant, child, validity)	cache by (worker, date) 5 min; never stale across an applied action
Personnel action submit/apply	1,000/day	100 / 300 / 600 ms	20/s	≈ 200 MB	(worker_id, effective_date)	queue apply; ordering per worker preserved
Absence request + balance check	2,000/day; peak 200/min	60 / 200 / 400 ms	50/s	≈ 300 MB	(worker_id, plan_id, period_start)	balance read from projection; request still validated on write

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Accrual run	10,000 workers per period	run < 5 min	50 workers/s	≈ 120k rows/year	partition AbsenceBalance by plan year	longer run; ESS shows "accrual in progress"
ESS page load	10,000 workers, peak 2,000/min at open enrollment	120 / 300 / 600 ms	100 pages/s	n/a	BFF caching per user	shed non-critical tiles; enrollment path preserved
Skill search	500/day	100 / 400 / 800 ms	10 q/s	n/a	GIN on WorkerSkill (skill_id, rating)	limit 500 results
Questionnaire submit	5,000 respondents in 48 h	80 / 250 / 500 ms	50/s	≈ 1 GB answers	AnswerSession by schedule	accept and score asynchronously
PII reveal (audited)	200/day	50 / 150 / 300 ms	10/s	audit ≈ 50 MB	audit log append-only, monthly partitions	no degradation allowed: reveal fails closed if audit write fails

8.42.20 Localization and compliance hooks

- Country fields: the extension-slot framework (FR-42.12) holds per-country worker fields (US SSN, I-9 status, EEO ethnicity/veteran codes; DE Steuer-ID, Sozialversicherungsnummer, Konfession for Kirchensteuer; UK NI number); wave-48 packs register the slot schemas, validation and masking.
- US statutory: OSHA 300/300A/301 layouts and the ITA electronic submission, EEO-1 Component 1, VETS-4212, ACA 1095-C, I-9 document tracking, FMLA eligibility (12 months / 1,250 hours / 50 employees within 75 miles) and COBRA notices are produced by the wave-48 US pack from wave-42 data (incident register, worker slots, benefit end reasons, absence plans).
- EU: GDPR Art. 9 special-category data (health data in incidents, religion for Kirchensteuer) stored only in `hr_pii` with explicit purpose; works-council (DE BetrVG §87) approval flag on questionnaires and monitoring reminders; candidate data deletion 6 months after rejection by default (retention class `CANDIDATE`).
- Absence: statutory minimum leave (DE BUrlG 20 days for a 5-day week; EU WTD 4 weeks), sick-leave certification rules and public holidays come from wave-8 calendars and country absence plan templates; extension point `hr.absence.validate.<cc>`.
- Language and formats: names follow wave-7 party name formats (family-name-first locales); dates ISO 8601 in APIs, locale formats in UI; documents print in the worker's preferred language.
- Retention: per data class (EMPLOYMENT, PAYROLL_LINK, INCIDENT 5 years after year end, CANDIDATE, TRAINING) in the wave-5 retention policy, durations from the country pack; legal holds suspend purge.
- Compensation: pay transparency (EU Directive 2023/970 pay ranges in offers and reports from 2026-06-07) supported by job pay ranges on `Job` and gender pay gap report hooks in the wave-48 pack.

8.42.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX #27 — 12.12.1 Courses (HRMCourseTable, sessions, registrations, instructors, locations)	GAP	ADDED as FR-42.14	BR-42.9
AX #31 — 12.12.2 Course inquiries	GAP	ADDED as FR-42.14	"Course attendance" in 8.42.14
AX #35 — 12.12.2 SSRS Course reports (Attendance, Course confirmation letters)	GAP	ADDED as FR-42.14	Documents in 8.42.15
AX #38 — 12.12.3 Course confirmations / Transfer course completion to competencies	GAP	ADDED as FR-42.14	Job `hr-course-completion-transfer`
AX #40 — 12.12.4 Course types, groups, locations, classrooms, instructors, agenda templates	GAP	ADDED as FR-42.14	Course entities in 8.42.4
AX #28 — 12.12.1 Questionnaires (design, schedules, answer sessions, results)	GAP	ADDED as FR-42.15	BR-42.10
AX #32 — 12.12.2 Questionnaire results analysis	GAP	ADDED as FR-42.15	"Questionnaire results" in 8.42.14
AX #36 — 12.12.2 SSRS Questionnaire reports	GAP	ADDED as FR-42.15	Results export PDF/XLSX
AX #39 — 12.12.3 Distribute questionnaires / Collect results	GAP	ADDED as FR-42.15	Job `hr-questionnaire-distribute`
AX #41 — 12.12.4 Questionnaire types, question types, answer groups, result groups, media types, parameters	GAP	ADDED as FR-42.15	Parameters in 8.42.13
AX #83 — 12.29.1 Questionnaires (Org admin link)	GAP	ADDED as FR-42.15	One engine for HR, quality (wave 32) and org admin
AX #89 — 12.29.4 Questionnaires setup (link)	GAP	ADDED as FR-42.15	Same setup
AX #93 — 12.31.1 My questionnaires / Answer questionnaire / Results	GAP	ADDED as FR-42.15	ESS "My questionnaires"

AX #29 — 12.12.1 Injury and illness (incidents, treatments, body parts, OSHA logs)	GAP	ADDED as FR-42.16	BR-42.11
AX #33 — 12.12.2 Injury/illness inquiries	GAP	ADDED as FR-42.16	"Injury and illness log"
AX #37 — 12.12.2 SSRS OSHA 300/300A/301	GAP	ADDED as FR-42.16	Data extract here; form layouts and ITA submission DEFERRED to wave 48 US pack
AX #42 — 12.12.4 Incident types, body parts, treatments, severity levels, outcomes	GAP	ADDED as FR-42.16	Code tables in wave-3 registry
AX #30 — 12.12.1 Loaned items (HRMLoanTable, HRMLoanItem)	GAP	ADDED as FR-42.17	Linked to wave-44 assets
AX #34 — 12.12.2 Loaned items inquiry	GAP	ADDED as FR-42.17	"Loaned items outstanding"
AX #43 — 12.12.4 Loan types	GAP	ADDED as FR-42.17	Code table
AX #104 — 12.12.1 Skill mapping / skill gap analysis (HcmSkillMapping)	PARTIAL	ADDED as FR-42.18	AC-42.16
AX #106 — 12.12.1 Worker tasks / reminders / checklists (HcmWorkerTask)	PARTIAL	ADDED as FR-42.19	BR-42.12
AX #113 — 12.12.4 Worker tasks / checklist templates	PARTIAL	ADDED as FR-42.19	ChecklistTemplate
AX #110 — 12.12.3 Worker reminders (certificate expiry, probation end)	PARTIAL	ADDED as FR-42.20	On wave-5 alert rule engine
AX #105 — 12.12.1 Worker compliance (US) I-9, ADA, immigration/visa, union agreements	PARTIAL (wave 48)	DEFERRED to wave 48	Extension slots and visa-expiry reminder (FR-42.20) exist here; US records in the US pack
AX #112 — 12.12.4 I-9 document types, ADA requirements, visa types, union agreements	PARTIAL (wave 48)	DEFERRED to wave 48	Same

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX #109 — 12.12.2 SSRS EEO-1 / VETS	PARTIAL (wave 48)	DEFERRED to wave 48	Source fields in US extension slots
AX #111 — 12.12.3 HR year-end US ACA 1095-C	PARTIAL (wave 48)	DEFERRED to wave 48	Uses benefit enrollment and hours data
AX #118 — 12.13.4 Leave of absence / FMLA tracking (US)	PARTIAL (wave 48)	DEFERRED to wave 48	Absence plan type FMLA with eligibility CEL is configurable here; entitlement tracking rules in US pack
SAP #328 — 13.28 HRBEN00COBRA / HRBEN00ICOBRA COBRA	PARTIAL-42	DEFERRED to wave 48	`cobra_qualifying_event` captured on BenefitEnrollment; notices and premium billing in US pack
SAP #329 — 13.28 E-Recruiting (HRRCF_*) / SF Recruiting & Onboarding	PARTIAL-42	ADDED as FR-42.21	Requisitions, candidates, offers; career site and sourcing OUT-OF-SCOPE (non-goal)
SAP #330 — 13.28 PPCP / PPSS succession planning / SF Succession	PARTIAL-42	OUT-OF-SCOPE talent-suite non-goal for v1	Skill gap (FR-42.18) and reviews (FR-42.11) cover the data; succession pools via wave-35 connector to a talent suite
SAP #331 — 13.28 PECM_* enterprise compensation management	PARTIAL-42	ADDED as FR-42.22	BR-42.13; long-term incentives OUT-OF-SCOPE
SAP #337 — 13.28 SPRO compensation areas, plans, guidelines, budgets (T71*)	PARTIAL-42	ADDED as FR-42.22	Parameters in 8.42.13
SAP #332 — 13.28 PSV1/PSV2/PSV3/PSVP/LSO_PSV training & event management	PARTIAL-42	ADDED as FR-42.14	No SCORM/xAPI player
SAP #338 — 13.28 SPRO training & event management / LSO settings (T77*)	PARTIAL-42	ADDED as FR-42.14	8.42.13
SAP #333 — 13.28 HRUS_D2 / HRPAD concurrent / global employment	PARTIAL-42	ADDED as FR-42.23	BR-42.14
SAP #340 — 13.28 SPRO concurrent / global employment configuration	PARTIAL-42	ADDED as FR-42.23	Parameter "Concurrent employment enabled"
SAP #334 — 13.28 SF Onboarding / Offboarding	PARTIAL-42	ADDED as FR-42.19	BR-42.12
AX #108 — 12.12.1 Human resources → Cases (HR cases)	PARTIAL (wave 45)	DEFERRED to wave 45	Closed by FR-45.12 generic case management with category type HR; listed in 8.45.21

8.43 Wave 43: Payroll Engine & Expense Management

8.43.1 Scope and business context

This wave delivers a country-pluggable gross-to-net payroll engine replacing AX 2012 Payroll (PayrollPayStatement, PayrollEarningCode, PayrollTaxCode, PayrollBenefit, PayrollPayCycle) and SAP PY (schemas, PCRs, wage types, RT results table), and expense management replacing AX Travel and expense (TrvExpTable, TrvExpTrans, TrvPolicy, TrvPerDiem, TrvCreditCardTrans) and SAP Concur. After the wave, a payroll administrator runs a pay cycle from HR and time data, reviews gross-to-net, posts to the GL and produces a payment file; employees submit expense reports with receipts, policy checks, per diems and card transactions, and get reimbursed through AP.

Out of scope: country packs beyond US and the EU reference (DE assumed, see open question 3 in the master PRD); year-end form filing (structures only); garnishment court-order interfaces; Concur-style travel booking.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
AX 2012 payroll tax updates arrive as hotfix-delivered PayrollTaxCode data (Ceridian engine) with no diff view; SAP PY tax changes ship as HR support packs (BSI TUBs) that require a Basis transport cycle and regression of schemas/PCRs; a wrong table version is discovered only when net pay looks wrong	Rules embedded in code/transports, not versioned data	Rule sets as signed, versioned JSON packs with diff, publish approval and a frozen binding on each run (PayStatement.rule_version per line)	Tax-table deployment 1–2 weeks transport cycle → < 1 h; mis-versioned runs 0 (binding recorded on every line)
Gross-to-net results are opaque: AX pay statement lines do not show basis or bracket; SAP RT (PC_PAYRESULT) shows wage types only decipherable by a payroll consultant	No explain path from result to rule	Each `PayResultLine` stores basis_amount, rule_version and bracket; statement viewer drills to the rule	"Why is my tax X?" tickets resolved by admin in < 2 min vs consultant escalation; 200/200 fixtures explainable
Retro pay: AX PayrollRetroactiveEarning only handles earning-rate changes; SAP retro recalculation (`/551`, `/552` wage types) reruns whole periods and produces deltas nobody can reconcile	Recalculation designed around the batch, not around the delta	Retro engine replays original rule-set versions and books explicit RETRO_* delta lines	Retro reconciliation effort 4 h per run → 0; delta fixtures 25/25
Payroll GL posting (AX "Generate ledger journal" → LedgerJournalTrans; SAP PC00_M99_CIPE) is a separate step, often weeks late, and rounds per-worker amounts so the journal differs from statements by cents	Separate batch with its own rounding	Posting in the same workflow as finalize, per-line rounded amounts summed (no re-rounding) through the wave-11 posting API	Statement-to-GL variance 0.00; posting lag days → same run
Expense policy in TrvPolicy uses X++ expressions a consultant must change; violations appear only at submit; Concur audit rules are a separate SaaS admin console with no API to test	Policy not data, evaluated late	CEL rule schema (BR-43.5) evaluated at line commit and submit with a simulate-against-history endpoint	Rule change lead time 1–2 weeks → 10 min; employee rework (returned reports) –80%; 500/500 fixture exactness
Card transactions (TrvCreditCardTrans) imported by batch and matched by hand; receipts re-keyed	No matching logic, no OCR	Hourly feed import, tolerance matching, OCR draft lines	Manual line keying –90%; auto-match ≥ 95%

8.43.2 AX / SAP parity map

Capability	AX 2012 / D365	SAP ECC / S/4	Passage equivalent	Parity
Pay cycles and periods	PayrollPayCycle, PayrollPayPeriod	Payroll area, period parameters (T549A/T549Q)	`PayCycle`, `PayPeriod`	full
Earnings	PayrollEarningCode, PayrollEarningCodeRate, earning statements	Wage types (T512W), PCR rules	`EarningCode` (rule set versioned)	full
Deductions/benefits	PayrollBenefit, PayrollDeductionCode (AX via benefits)	Deduction wage types, PA0014/0015	`DeductionCode` (pre/post-tax, limits)	full
Taxes	PayrollTaxCode, PayrollTaxEngine (Ceridian), PayrollWorkerTaxCode	Tax schemas (US: UTAX via BSI TaxFactory)	`TaxRuleSet` per country/year; US federal/state tables	full for US; EU reference
Gross-to-net	PayrollPayStatement, PayrollPayStatementLine	Schema U000/D000, RT results table, CRT	`PayStatement` with `PayResultLine`	full
Retro pay	PayrollRetroactiveEarning	Retroactive accounting (recalculation)	`RetroCalculation`	full
GL posting	PayrollPayStatement distribution → LedgerJournal	PC00_M99_CIPE posting run	journal via wave-11 posting API	full

Capability	AX 2012 / D365	SAP ECC / S/4	Passage equivalent	Parity
Pay statement/payment	PayrollPayStatement, direct deposit	Pay slip (PE51), DME (PC00_M99_FPAYM)	`PayStatement` PDF; NACHA/SEPA via wave 36	full
Year-end	W-2 data (PayrollW2)	Tax reporter (PU19)	`YearEndForm` structures W-2, 1099, DE Lohnsteuerbescheinigung	partial — structures, not filing
Expense reports	TrvExpTable, TrvExpTrans, TrvCategory	Concur expense reports; PR05 (classic)	`ExpenseReport`, `ExpenseLine`	full
Policies and per diems	TrvPolicy, TrvPolicyRule, TrvPerDiem	Concur audit rules, per diem tables (T706*)	`ExpensePolicyRule`, `PerDiemRate`	full
Card feeds	TrvCreditCardTrans import	Concur card feeds	`CardTransaction` (CSV/OFX/Visa VCF)	full
Cash advances	TrvCashAdvance (request, approve, pay via AP, settle against reports), cash advance parameters	PR02/PR05 advances, advance wage types, settlement on trip posting (PRRW)	`CashAdvance` (FR-43.15)	full
Travel requisitions (pre-approval)	TrvRequisitionTable/Line, requisition policies	TP01/TP02/TP03/PR01 travel request, T702 travel plan settings, approval workflow	`TravelRequisition` (FR-43.16)	full — booking stays out
Deduction arrears	Arrears recovery processing (PayrollArrears), deduction priority	ARRRS / DDNTK tables, deduction priority T51P6	arrears ledger per deduction code (FR-43.17)	full
Off-cycle runs	Manual pay statements, PayrollPayStatement (off-cycle)	PUOC_10 off-cycle workbench (bonus, correction, manual check, check replacement)	`PayRun.run_type` OFF_CYCLE subtypes (FR-43.18)	full
Overpayment claims	Negative net carried as advance (manual)	PC00_M10_CLAIMS claims processing	`PayrollClaim` (FR-43.19)	full
Quarterly/annual statutory data	Payroll tax reports (941, 940, state UI)	PC00_M10_* tax reporter, PU19	`StatutoryWageAggregate` (FR-43.20); filing via wave 48	partial — filing in US pack
Workers' compensation	Workers' compensation report (US)	US workers' comp (IT0001 WC code via feature)	class code on job/position by state (FR-43.21)	full for data; state reports via wave 48

8.43.3 Functional requirements

- **FR-43.1 Pay groups, cycles, periods** — Must. The system shall define pay groups per legal entity with frequency (WEEKLY, BIWEEKLY, SEMIMONTHLY, MONTHLY), generated pay periods and pay dates, and a cutoff for time/absence.
- **FR-43.2 Versioned rule sets** — Must. The system shall express earnings, deductions, taxes and employer contributions as rule sets versioned by country and effective date; a pay run binds to the rule-set versions active on its period end.
- **FR-43.3 Earnings** — Must. The system shall compute REGULAR, OVERTIME (1.5×, 2.0×), PTO, HOLIDAY, BONUS, COMMISSION and SHIFT_DIFF from salary (FixedCompensation ÷ periods) and wave-25 time registrations.
- **FR-43.4 Deductions and contributions** — Must. The system shall compute pre-tax (401(k), Section 125 medical, HSA/FSA) and post-tax deductions with per-period, annual and percent-of-gross limits, and employer contributions (match with cap).
- **FR-43.5 US tax engine** — Must. The system shall compute federal income tax withholding per Pub 15-T percentage method (automated payroll systems), Social Security (6.2% to the annual wage base), Medicare (1.45% + 0.9% additional over 200,000), FUTA, and state income tax/SUI for the states covered by the year's table pack.
- **FR-43.6 EU reference pack (DE)** — Should. The system shall compute Lohnsteuer (via the BMF programmablauf tables), Solidaritätszuschlag, Kirchensteuer and social insurance contributions (KV/PV/RV/AV with Beitragsbemessungsgrenzen) for a demo employee set.
- **FR-43.7 Gross-to-net and pay statements** — Must. The system shall produce a pay statement per worker per period with earnings, pre-tax, taxes, post-tax, net, employer costs and YTD; statements are immutable after the run is FINALIZED.
- **FR-43.8 Retro pay** — Must. The system shall recalculate prior periods when backdated changes arrive (rate, hours, absence) and post deltas in the current period with an explanatory line.
- **FR-43.9 GL posting and payments** — Must. The system shall post the run to the GL by (earning/deduction/tax code × dimension from position) and generate NACHA/SEPA payment batches through wave 36.
- **FR-43.10 Provider adapter** — Should. The system shall export a provider payroll file (ADP/Gusto-style CSV/JSON) and import results for entities that outsource payroll, posting the same GL structure.
- **FR-43.11 Expense reports** — Must. The system shall let workers create reports with lines (category, date, amount, currency, merchant, project/WBS, attendees, receipt), split lines, itemize hotels and submit for approval.
- **FR-43.12 Policy engine** — Must. The system shall evaluate rule sets at line commit and submit, producing WARN, BLOCK, REQUIRE_JUSTIFICATION or REQUIRE_RECEIPT outcomes, with per-diem computation by location/date.
- **FR-43.13 Card feeds and receipts** — Must. The system shall import card transactions (CSV, OFX, Visa VCF 4.0) into a worker's unassigned pool, match receipts by amount/date/merchant (tolerance ±1% or 2 days), and OCR receipts into draft lines.
- **FR-43.14 Reimbursement** — Must. The system shall post approved reports as wave-18 vendor invoices against the worker's employee-vendor account (company-paid card lines against the card issuer vendor), with tax recovery lines where VAT is recoverable.
- **FR-43.15 Cash advances** — Should. The system shall let workers request cash advances (amount, currency, purpose, optional travel requisition and project), route them for approval, pay them through wave-18/19 as a prepayment to the employee vendor, and settle them against expense reports per BR-43.9 with return or payroll recovery of unused amounts.
  - Statuses: DRAFT → SUBMITTED → APPROVED → PAID → PARTIALLY_SETTLED → SETTLED; SUBMITTED → REJECTED.
  - Aging: unsettled advances older than the parameter limit (default 30 days after trip end) raise reminders and block new advances.
- **FR-43.16 Travel requisitions** — Should. The system shall capture pre-trip requisitions (purpose, destinations, dates, estimated lines by category, project/WBS, attendees) with policy checks, approval workflow, an optional linked cash advance, and comparison of the resulting expense report against the approved estimate.
- **FR-43.17 Deduction arrears recovery** — Should. The system shall, when net pay is insufficient, take deductions in priority order, record untaken amounts in an arrears ledger per deduction code (policy ARREARS, NO_ARREARS or PARTIAL), and recover arrears in later periods within a per-period recovery limit per BR-43.10.
- **FR-43.18 Off-cycle runs** — Must. The system shall run OFF_CYCLE pay runs of subtype BONUS, FINAL_PAY, MANUAL_CHECK, CHECK_REPLACEMENT and REVERSAL for single or selected workers, with supplemental-wage tax methods per BR-43.11 and the same finalize/post/pay workflow as regular runs.
  - FINAL_PAY includes accrued unused paid leave per the absence plan's payout flag (wave 42) and state final-pay deadlines from the US pack.
  - CHECK_REPLACEMENT voids the original payment (wave 36) and reissues without recalculation.
- **FR-43.19 Overpayment claims** — Should. The system shall create a payroll claim when a recalculation (retro, correction, reversal) yields negative net for a worker, with recovery as a payroll deduction schedule, direct repayment or write-off, and gross-vs-net treatment by tax year per BR-43.12.
- **FR-43.20 Statutory wage aggregates** — Should. The system shall aggregate wages and taxes per legal entity, jurisdiction and quarter/year (federal 941/940 lines, state UI wages and excess wages, local tax) from finalized statements, reconcile them to GL liability accounts, and expose them to the wave-48 country pack that renders and files the returns.
- **FR-43.21 Workers' compensation class codes** — Could. The system shall assign workers' compensation class codes per state to jobs (override per position), compute the premium base (gross minus overtime premium portion, minus excluded earnings flagged on earning codes), and report premium base by class, state and period.

8.43.4 Data model

PayRun

Field	Type	Required	Notes
id	uuid	yes	PK
pay_group_id, pay_period_id	uuid	yes	FK
run_type	enum	yes	REGULAR, OFF_CYCLE, CORRECTION
status	enum	yes	DRAFT, CALCULATED, REVIEWED, FINALIZED, POSTED, PAID, CANCELED
rule_set_binding	jsonb	yes	{country, taxYear, versions{}} frozen at calculate
gross_total, net_total, employer_cost_total	numeric(18,2)	computed	
journal_id, payment_batch_id	uuid	no	
calculated_at, finalized_by	timestamptz, uuid	no	

PayStatement

Field	Type	Required	Notes
id	uuid	yes	PK
pay_run_id, worker_id, employment_id	uuid	yes	
gross, taxable_wages_fed, fica_wages, net	numeric(14,2)	yes	
lines[]	PayResultLine	yes	(code, kind EARNING/PRETAX/TAX/POSTTAX/EMPLOYER, hours, rate, amount, ytd_amount, basis_amount, rule_version)
w4	jsonb	cond	{filingStatus, multipleJobs, dependentsCredit, otherIncome, deductions, extraWithholding}
pdf_ref	text	no	object store key
hash	text	yes	SHA-256 of lines; immutability check

TaxRuleSet: id, country, jurisdiction (FED, state code, locality), tax_year, version, effective_from, brackets[] (filing_status, over, not_over, base_tax, rate), wage_base, rates{}, status (DRAFT, PUBLISHED). **EarningCode**: code, name, kind (HOURLY/SALARY/FLAT), multiplier, taxable flags (fed, fica, futa, state), gl_account_rule. **DeductionCode**: code, pre_tax bool, basis (FLAT/PERCENT_GROSS), limits {per_period, annual}, employer_match {percent, cap_percent}, gl_rule, priority.

ExpenseReport: id, worker_id, legal_entity_id, purpose, status (DRAFT, SUBMITTED, APPROVED, REJECTED, POSTED, PAID), total_amount, reimbursable_amount, company_paid_amount, currency, approver_chain[], ap_invoice_id. **ExpenseLine**: id, report_id, category_id, txn_date, amount, currency, exchange_rate, amount_accounting, merchant, city/country, project_id, wbs_node_id, card_txn_id, receipt_id, attendees[], itemizations[], policy_results[] (rule_id, outcome, justification), tax_code, personal bool. **ExpensePolicyRule** (schema in BR-43.5). **CardTransaction**: id, worker_id, card_last4, txn_date, post_date, merchant, mcc, amount, currency, status (UNASSIGNED, ASSIGNED, DISPUTED, PERSONAL).

CashAdvance: id (sequence EXP-ADV), worker_id, legal_entity_id, amount, currency, purpose, travel_requisition_id, project_id, status (DRAFT, SUBMITTED, APPROVED, REJECTED, PAID, PARTIALLY_SETTLED, SETTLED), paid_amount, settled_amount, returned_amount, recovered_via_payroll_amount, ap_prepayment_id, due_settlement_date. **TravelRequisition**: id (sequence EXP-TR), worker_id, purpose, destinations[] (country, city, from, to), estimate_lines[] (category_id, amount, currency), estimated_total, project_id, wbs_node_id, status (DRAFT, SUBMITTED, APPROVED, REJECTED, CLOSED), linked_report_ids[]. **ArrearsLedger**: worker_id, deduction_code, pay_run_id, amount_due, amount_taken, arrears_created, arrears_recovered, balance. **PayrollClaim**: id, worker_id, origin_pay_run_id, tax_year, gross_amount, net_amount, recovery_method (PAYROLL_DEDUCTION, DIRECT_REPAYMENT, WRITE_OFF), per_period_amount, balance, status (OPEN, RECOVERING, SETTLED, WRITTEN_OFF). **StatutoryWageAggregate**: legal_entity_id, jurisdiction, form_code (941, 940, SUI_, …), period (YYYY-Qn or YYYY), line_code, amount, statement_count, reconciled_at. **WorkersCompClass**: state, class_code, description, rate_per_100, job_ids[]. PayRun adds `off_cycle_subtype` (BONUS, FINAL_PAY, MANUAL_CHECK, CHECK_REPLACEMENT, REVERSAL) and `original_pay_run_id`; DeductionCode adds `arrears_policy` and `recovery_limit_pct`; EarningCode adds `supplemental` bool and `wc_excluded` bool.

Invariants: Σ PayStatement.net = PayRun.net_total = payment batch total; Σ GL debits = gross + employer cost; a FINALIZED statement's hash never changes; a card transaction belongs to at most one line; report total = Σ lines (reimbursable + company-paid). Indexing: `PayStatement (worker_id, pay_run_id)` unique; `CardTransaction (worker_id, status)`; payroll tables partitioned by tax_year.

8.43.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	`/api/v1/payroll/runs`	Create run for pay period	key	PayrollRunMaintain
POST	`/api/v1/payroll/runs/{id}/calculate`	Gross-to-net calculation (Temporal workflow)	key + status guard	PayrollRunMaintain
POST	`/api/v1/payroll/runs/{id}/finalize`	Freeze statements	key	PayrollRunFinalize
POST	`/api/v1/payroll/runs/{id}/post`	GL post + payment batch	key	PayrollRunPost
PUT	`/api/v1/payroll/rule-sets/{id}/publish`	Publish rule-set version	ETag	PayrollRuleAdmin
POST	`/api/v1/expense/reports`	Create report	key	EssExpense
POST	`/api/v1/expense/reports/{id}/lines`	Add line (policy evaluated)	key	EssExpense
POST	`/api/v1/expense/reports/{id}/submit`	Submit	key	EssExpense

8.43.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Payroll workspace	tiles: runs by status, retro pending, exceptions		PayrollInquire
Pay run detail	calculate, review exceptions, compare to prior run (variance %), finalize, post	worker, gross, taxes, net, Δ vs prior	PayrollRunMaintain
Statement viewer	drill line → rule version and basis	earnings, pre-tax, taxes, post-tax, net, YTD	PayrollInquire / EssPayStatement
Rule-set editor	edit brackets/rates, diff versions, publish	jurisdiction, tax year, brackets	PayrollRuleAdmin
Worker payroll profile	W-4 (2020+ fields), state forms, direct deposit (vaulted), garnishments		PayrollWorkerMaintain
Expense report (ESS, mobile)	add line, attach receipt (camera), match card, itemize, submit	category, amount, policy badges	EssExpense
Expense approval (MSS)	approve/reject/return, view receipt side-by-side		MssApprove
Policy admin	rule list, simulate against past reports		ExpenseAdmin
Cash advances (ESS / admin)	request, view settlement, record return; admin aging list	amount, paid, settled, open, due date	EssExpense / ExpenseAdmin
Travel requisition (ESS / MSS)	create with estimates, submit, approve, link report	destinations, dates, estimate by category, actual vs estimate	EssExpense / MssApprove
Off-cycle workbench	pick workers and subtype, calculate, finalize, void/reissue	worker, subtype, gross, supplemental tax, net	PayrollRunMaintain
Claims and arrears	view balances, set recovery schedule, write off	worker, code, arrears balance, claim balance	PayrollRunMaintain
Statutory aggregates	review quarter totals, reconcile, release to pack	form, line, amount, GL balance, variance	PayrollInquire

Rules: pay run variance view highlights workers whose net changed > 20% vs prior period; rule-set publish requires a second approver (SoD); expense mobile works offline for draft lines and receipt capture.

8.43.7 Business rules and edge cases

- **BR-43.1 US gross-to-net worked example** (rule set `US-FED-2025.1`, biweekly, 26 periods; Colorado flat 4.40% on federal taxable wages; W-4 2020+, Single, no Step 2/3/4 entries; 401(k) 6% pre-tax; employer match 50% of first 6%). Gross REGULAR 4,000.00. Pre-tax 401(k) 240.00. Federal taxable wages 3,760.00; FICA wages 4,000.00 (401(k) does not reduce FICA). Pub 15-T Step 1: adjusted annual wage = 3,760.00 × 26 = 97,760.00. Step 2 (standard withholding schedule, Single, 2025 table): bracket 54,875–115,125 → 5,578.50 + 22% × (97,760.00 – 54,875.00) = 5,578.50 + 9,434.70 = 15,013.20; ÷ 26 = 577.43. Step 3 credits 0; Step 4 extra 0 → federal withholding 577.43. Social Security 4,000.00 × 6.2% = 248.00 (YTD below wage base 176,100.00). Medicare 4,000.00 × 1.45% = 58.00. Colorado 3,760.00 × 4.40% = 165.44. Net = 4,000.00 – 240.00 – 577.43 – 248.00 – 58.00 – 165.44 = 2,711.13. Employer: match 120.00, SS 248.00, Medicare 58.00, FUTA 0.6% × 4,000 = 24.00 until YTD 7,000. GL: Dr salary expense 4,000.00, Dr employer tax expense 330.00, Dr 401(k) match expense 120.00; Cr net pay clearing 2,711.13, Cr 401(k) payable 360.00, Cr federal WH payable 577.43, Cr FICA payable 612.00, Cr FUTA payable 24.00, Cr CO WH payable 165.44.
- **BR-43.2 Rounding** — each tax computed on unrounded basis and rounded half-up to 0.01 per line; annualized federal amount divided by periods then rounded; YTD caps applied on the rounded cumulative.
- **BR-43.3 Wage base caps** — SS stops when YTD FICA wages reach the wage base, applying partial tax on the crossing period; additional Medicare starts on the crossing period for wages over 200,000.00 regardless of filing status.
- **BR-43.4 Retro** — a retro trigger is any change with effective date < current period start affecting a FINALIZED statement; recalculation re-runs the original rule-set versions, computes delta per line, and books deltas as RETRO_* lines in the current period; taxes on retro use current-period method (no amended returns).
- **BR-43.5 Expense policy rule schema** — JSON: `{ "id": "EXP-MEAL-075", "version": 3, "scope": {"legalEntities": ["ES-US"], "categories": ["MEALS"], "workerGroups": ["*"]}, "basis": "PER_DAY" | "PER_LINE" | "PER_REPORT" | "PER_TRIP", "condition": "line.amountAccounting > 75.00 && !line.attendees.size() > 0" (CEL over line, report, worker, perDiem), "threshold": {"amount": 75.00, "currency": "USD"}, "outcome": "WARN" | "BLOCK" | "REQUIRE_JUSTIFICATION" | "REQUIRE_RECEIPT", "message": "Meals over 75 USD/day need attendees", "effectiveFrom": "2026-01-01" }`. Example set: receipts required for any line ≥ 25.00 USD/EUR; lodging per night ≤ GSA/per-diem table × 1.5 else justification; mileage at IRS rate from table; alcohol category BLOCK; submission later than 60 days after txn_date BLOCK; duplicate (same merchant, amount, date within worker) BLOCK.
- **BR-43.6 Per diem** — rate by (country, city tier, date); first/last day 75%; meals provided reduce by 20/30/50% (breakfast/lunch/dinner); computed in rate currency then converted at line date.
- **BR-43.7 Finalization** — FINALIZED statements are immutable; corrections are OFF_CYCLE or CORRECTION runs that reference the original.
- **BR-43.8 Separation of duties** — the user who calculates cannot finalize; the user who publishes a rule set cannot be its author (enforced by wave-48 SoD engine, interim OPA check).
- **BR-43.9 Cash advance settlement** — at expense report approval, open PAID advances of the worker in the report currency are applied oldest first to reimbursable lines: applied = min(advance open, reimbursable total); the AP invoice for the report is reduced by the applied amount and the prepayment is settled against it (wave 18); if the report total < advance, the open remainder stays on the advance until (a) the worker records a cash return, (b) the settlement due date passes and the parameter "recover through payroll" creates a post-tax deduction in the next regular run, or (c) it is written off with ExpenseAdmin approval. Advances in another currency are converted at the report approval date rate (wave 12) and the FX difference posts to the realized FX account. Example: advance 1,000.00 USD; report 820.00 → applied 820.00, open 180.00; worker returns 180.00 → SETTLED. Report 1,150.00 → applied 1,000.00, AP invoice 150.00.

- **BR-43.10 Arrears** — deductions are taken in ascending priority (taxes and court-ordered garnishments first, then pre-tax benefits, then post-tax voluntary); when net would go below zero (or below the state minimum-net rule from the pack), the remaining deduction is: NO_ARREARS → skipped; ARREARS → full untaken amount added to the ledger; PARTIAL → taken up to net, rest to ledger. Recovery in later periods adds up to recovery_limit_pct (default 100 %) of the normal per-period deduction; pre-tax arrears recovered in a later tax year are recovered post-tax. Example: net before medical 150.00, medical 200.00 (PARTIAL) → take 150.00, arrears 50.00; next period normal 200.00 + recovery 50.00 = 250.00.
- **BR-43.11 Supplemental wage tax (US)** — earning codes flagged supplemental, paid in an OFF_CYCLE BONUS run or identified separately, are withheld at the flat supplemental rate (22 % for 2025; 37 % on the portion of YTD supplemental wages above 1,000,000.00) unless the worker's W-4 or the parameter selects the aggregate method; FICA applies as for regular wages. Example: bonus 5,000.00 USD → federal 1,100.00, SS 310.00, Medicare 72.50, state per pack (CO 4.40 % → 220.00), net 3,297.50.
- **BR-43.12 Overpayment claims** — a claim is created when the recalculated net for a worker < 0; in the same tax year the claim is recovered net (taxes reversed through the recalculation); across tax years the claim amount is gross (W-2c correction data flagged for the pack) per IRS rules; recovery as payroll deduction is limited by the pack's state rule (e.g. written consent and maximum per period); write-off posts to payroll overpayment expense.
- **BR-43.13 Travel requisition variance** — an expense report linked to an approved requisition is compared by category; when actual total > estimated total × (1 + tolerance) (parameter, default 10 %) the report requires justification (REQUIRE_JUSTIFICATION outcome); travel on dates outside the requisition's range is flagged WARN; a requisition closes when its linked report is POSTED or 60 days after the last travel date.

Pay run state machine: DRAFT → CALCULATED → REVIEWED → FINALIZED → POSTED → PAID; CALCULATED/REVIEWED → DRAFT (recalculate); DRAFT… REVIEWED → CANCELED. Expense report: DRAFT → SUBMITTED → APPROVED → POSTED → PAID; SUBMITTED → REJECTED ! RETURNED (→ DRAFT).

8.43.8 Acceptance criteria

- **AC-43.1** (FR-43.5, BR-43.1) Given the worked-example worker, when the run calculates, then federal WH = 577.43, SS = 248.00, Medicare = 58.00, CO = 165.44, net = 2,711.13.
- **AC-43.2** (FR-43.5, BR-43.3) Given YTD FICA wages 174,000.00 and gross 4,000.00, when calculated, then SS = 130.20 (6.2% × 2,100.00).
- **AC-43.3** (FR-43.5) Given 200 fixture scenarios across filing statuses, Step 2 checkbox, Step 3/4 values and 6 states, when calculated, then all match Pub 15-T expectations to 0.01.
- **AC-43.4** (FR-43.8, BR-43.4) Given a rate increase effective two periods back, when retro evaluates and the next run calculates, then RETRO_REGULAR equals the summed delta and taxes recompute on the new gross.
- **AC-43.5** (FR-43.9) Given a posted run, when reconciliation runs, then GL payroll expense and liability accounts tie to Σ statements with 0.00 variance.
- **AC-43.6** (FR-43.12, BR-43.5) Given the 500-report fixture, when submitted, then policy outcomes equal the expected matrix exactly (0 false flags).
- **AC-43.7** (FR-43.13) Given a card feed with 1,000 transactions and 800 receipts, when matched, then ≥ 95% auto-match within tolerance and no cross-worker matches.
- **AC-43.8** (FR-43.14) Given an approved report with 300.00 USD reimbursable and 200.00 company-paid, when posted, then an AP invoice of 300.00 exists for the employee vendor and 200.00 for the issuer vendor, and the next payment run pays 300.00.
- **AC-43.9** (FR-43.15, BR-43.9) Given a PAID advance of 1,000.00 USD and an approved report of 820.00, when the report posts, then 820.00 settles against the prepayment, the advance shows open 180.00 and status PARTIALLY_SETTLED; after a recorded return of 180.00 it is SETTLED.
- **AC-43.10** (FR-43.16, BR-43.13) Given an approved requisition estimating 2,000.00 and a linked report totaling 2,300.00 with tolerance 10 %, when submitted, then the report requires justification.
- **AC-43.11** (FR-43.17, BR-43.10) Given net before medical 150.00 and a PARTIAL medical deduction of 200.00, when calculated, then 150.00 is taken, the arrears ledger holds 50.00, and the next period takes 250.00.
- **AC-43.12** (FR-43.18, BR-43.11) Given a BONUS off-cycle run of 5,000.00 for the BR-43.1 worker, when calculated, then federal 1,100.00, SS 310.00, Medicare 72.50, CO 220.00 and net 3,297.50.
- **AC-43.13** (FR-43.19, BR-43.12) Given a correction that reduces a finalized gross by 1,000.00 after net was paid, when recalculated in the same tax year, then a claim with net amount equal to the net difference is created and a recovery schedule of 4 equal deductions can be set.
- **AC-43.14** (FR-43.20) Given a quarter with 13 finalized biweekly runs, when the 941 aggregate closes, then lines 2 (wages), 3 (federal withholding), 5a/5c (SS/Medicare wages) equal Σ statements and tie to GL liability accounts with 0.00 variance.

8.43.9 Test plan and fixtures

Fixtures: `payroll-us-200` (200 scenarios, expected values in `fixtures/payroll/us-2025-expected.csv` derived from Pub 15-T worksheets); `payroll-de-20` (20 DE employees against BMF test cases); `payroll-retro-25`; `expense-policy-500` (reports × rules with expected outcomes); `card-feed-1000` (VCF and OFX samples).

Test	Type	Target	Pass criterion
Federal/state withholding	unit	tax engine	200/200 to 0.01
Caps and crossing periods	property	FICA/FUTA	never over-withholds; crossing period correct
Retro deltas	unit	retro engine	25/25
GL posting	contract	posting API	balanced; account per code rule
Policy engine	unit	CEL evaluator	500/500
Receipt OCR	integration	OCR service	amount/date extracted ≥ 90% on sample set
Pay run perf	performance	calculate workflow	10,000 workers < 10 min

Reconciliation: Σ statement net = payment batch; Σ tax lines by jurisdiction = liability accounts; Σ reimbursable = AP employee-vendor invoices.

8.43.10 Deployment and operations

Charts `passage-payroll` (Go API, Temporal calc workers, statement renderer) and `passage-expense` (TS API, OCR Python worker, feed importer); Postgres `payroll` (encrypted bank columns via `hr_pii` key pattern) and `expense`. Rule-set packs delivered as signed JSON bundles (`rulesets/us/2025.1.json`) loaded by migration job. Flags: `payroll.de-pack`, `payroll.provider-adapter`, `expense.ocr`. Schedules: `payroll-cutoff-reminder`, `expense-card-import` hourly (SFTP pull), `expense-aging` daily. SLOs: calculate 10k workers < 10 min; statement fetch p95 < 200 ms; policy evaluation p95 < 100 ms per line. Alerts: calculation failures; tax table pack missing for period end; card import failures. Runbook: re-run calculation from DRAFT; reissue payment batch; rotate SFTP keys. Rollback by digest; FINALIZED data is never altered by migrations.

8.43.11 Migration from AX / SAP

Source	Passage entity	Notes
PayrollPayCycle, PayrollPayPeriod	PayCycle, PayPeriod	
PayrollEarningCode, PayrollTaxCode, PayrollBenefit	EarningCode, TaxRuleSet mapping, DeductionCode	AX tax engine codes mapped to jurisdictions
PayrollWorkerTaxCode, PayrollWorkerTaxRegion, W-4 data	worker payroll profile	
PayrollPayStatement (current year)	PayStatement (YTD opening balances only)	historical statements archived
TrvExpTable/TrvExpTrans (open)	ExpenseReport/ExpenseLine	DRAFT/SUBMITTED only
TrvPolicy/TrvPolicyRule, TrvPerDiem	ExpensePolicyRule, PerDiemRate	X++ expression rules rewritten to CEL (manual)
T512W wage types, T549*	EarningCode/DeductionCode, PayCycle	
RT (PCL2 cluster) current year	YTD opening balances	
PA0210 (W-4), PA0207/0208/0209	worker payroll profile	
Concur exports	ExpenseReport (open)	via CSV

Validation: YTD gross/tax per worker equal to source within 0.01; count of open expense reports equal. Not migrated: prior-year statements (lakehouse archive), SAP schemas/PCRs (rebuilt as rule sets), closed expense reports.

8.43.12 Dependencies, risks, open questions

Depends on: wave 42 HR, wave 25 time, wave 18 AP, wave 19 payments, wave 36 bank files, wave 13 tax codes, wave 12 FX.

Risk	Likelihood	Impact	Mitigation
Tax table maintenance each year	High	High	Signed rule-set packs; provider adapter path
OCR accuracy	Medium	Low	Draft lines always user-confirmed

Open questions: (1) EU reference DE vs UK (master PRD Q3). Default DE; decide before wave 43 start. (2) Store direct-deposit details in payroll or wave-36 bank domain? Default payroll with vault; decide by wave 43.

8.43.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
Pay group frequency and pay-date offset	pay group	enum + int	BIWEEKLY, +5 days after period end	WEEKLY, BIWEEKLY, SEMIMONTHLY, MONTHLY; 0–15	FR-43.1 period generation	Payroll parameters › Pay cycles (PayrollPayCycle)	T549A payroll area; T549Q periods; PA03 control record
Time/absence cutoff (hours before pay date)	pay group	int	72	0–240	Calculate precondition	Payroll parameters › Cutoff	PA03 control record "released for payroll"; T549S date modifiers
Unapproved time policy	pay group	enum	ZERO_HOURS	ZERO_HOURS, INCLUDE, BLOCK	8.43.5 validation	Payroll parameters › Pay statements	CATS transfer status / PT time evaluation
Rule-set pack per country/year	legal entity	lookup	latest PUBLISHED	TaxRuleSet versions	FR-43.2 binding	Tax engine update (PayrollTaxEngine)	T511K constants, T5UTZ US tax authorities, BSI TaxFactory version
Supplemental tax method	legal entity	enum	FLAT	FLAT, AGGREGATE	BR-43.11	Payroll parameters › Supplemental tax	T5UTN tax models / BSI method
Variance highlight threshold	tenant	pct	20 %	1–100 %	Pay run variance view	n/a	PC00_M99_PA03_CORR / payroll log thresholds n/a
Rounding mode	country pack	enum	HALF_UP per line	HALF_UP, HALF_EVEN	BR-43.2	Payroll parameters › Rounding	T511K rounding constants
Arrears policy per deduction code	deduction code	enum	ARREARS	ARREARS, NO_ARREARS, PARTIAL	BR-43.10	Deduction code › Arrears (PayrollDeductionCode)	T51P6 processing class / deduction priority and arrears
Arrears recovery limit	deduction code	pct	100 %	0–500 %	BR-43.10	Arrears recovery settings	T51P6 recovery rules
Payment method default	pay group	enum	DIRECT_DEPOSIT	DIRECT_DEPOSIT, CHECK, PAYCARD	FR-43.9	Payroll parameters › Payment	T042Z payment methods; IT0009 bank details
Payroll GL posting granularity	legal entity	enum	CODE_X_DIMENSION	SUMMARY, CODE_X_DIMENSION, WORKER	FR-43.9	Payroll parameters › Ledger › Summarize	T52EL / T52EK symbolic accounts; PC00_M99_CIPE variant

Card match tolerance	tenant	pct + days	±1 %, 2 days	0–10 %, 0–10 days	FR-43.13	Credit card parameters	Concur card matching
Cash advance max per request	legal entity	amount	2,000.00	≥ 0	FR-43.15	Expense management parameters › Cash advance limit	T706* advance limits
Cash advance settlement due (days after trip end)	legal entity	int	30	1–180	BR-43.9 aging	Cash advance parameters › Settlement	PR05 advance settlement
Recover unsettled advances through payroll	legal entity	bool	false		BR-43.9	Cash advance parameters › Recover via payroll	Trip transfer to payroll (PRPY)
Travel requisition required	legal entity / category	bool	false		FR-43.16	Travel requisition parameters	T702 travel plan settings: request required

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
Requisition variance tolerance	legal entity	pct	10 %	0–100 %	BR-43.13	Requisition policies	Travel request estimated cost check
Workers' comp class code source	legal entity	enum	JOB	JOB, POSITION	FR-43.21	Workers compensation setup	Feature for WC code (IT0001 assignment)

8.43.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Payroll register	operational report	pay run, pay group, department	worker, hours, earnings, pre-tax, taxes, post-tax, net, employer cost	`pay_register`	Pay statement report (PayrollPayStatementReport)	PC00_M10_CEDT remuneration statement; PC00_M10_REC payroll reconciliation
Wage type / code reporter	drill-down	code, period range, entity	amount, hours, worker count by code	`pay_codes`	Earning statements inquiry	H99CWTR0 / PC00_M99_CWTR wage type reporter
Tax liability reconciliation	operational report	jurisdiction, period	withheld, employer tax, GL liability, variance	`pay_tax_recon`	Payroll tax reports	PC00_M10_RPCTRCU0 tax reconciliation
Variance vs prior run	drill-down	pay run, threshold	worker, Δ gross, Δ net, Δ %	`pay_variance`	n/a	PC00_M99_PA03_CHECK / payroll journal comparison
Arrears and deductions not taken	list inquiry	code, worker, open only	due, taken, arrears balance	`pay_arrears`	Arrears inquiry	ARRRS / DDNTK cluster tables via H99CWTR0
Claims	list inquiry	status, tax year	worker, gross, net, balance, method	`pay_claims`	n/a	PC00_M10_CLAIMS
Statutory aggregates (941/940/SUI)	statutory report	entity, form, period	form lines, amounts, variance to GL	`pay_statutory`	Payroll tax forms (941, 940)	PU19 tax reporter; PC00_M10_*
YTD by worker	list inquiry	worker, year	YTD per code, wage bases	`pay_ytd`	Pay statement YTD	PC00_M10_CLJN payroll journal
Workers' comp premium base	operational report	state, class, period	premium base, overtime premium excluded, estimated premium	`pay_wc`	SSRS Workers compensation report	US workers' comp report (RPCWCOU0)
Expense reports	list inquiry	status, worker, period, project	report, total, reimbursable, company-paid, policy flags	`exp_reports`	Expense reports list (TrvExpTableListPage); SSRS Expense report	PRTE trip data; PR10 trip overview
Policy violations	KPI	rule, department, period	violation count, amount, justified %	`exp_violations`	Policy violation inquiry	Concur audit rule reports
Unassigned card transactions	list inquiry	worker, age	txn, merchant, amount, days unassigned	`exp_cards`	Unattached credit card transactions (TrvPBSMaindata)	Concur card feed exceptions
Cash advance aging	operational report	status, days overdue, worker	advance, paid, settled, open, days past due	`exp_advances`	Cash advance inquiry; SSRS Cash advance report	PR05 advances list
Requisition vs actual	drill-down	requisition, department	estimate by category, actual, variance	`exp_req_variance`	Travel requisition inquiry	Travel request vs trip (TP03 / PRTE)

8.43.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Pay statement	statement FINALIZED	header: employer, worker, pay period, pay date; lines: earnings (hours, rate, amount, YTD), pre-tax, taxes, post-tax, employer contributions, arrears/claims; footer: net, payment split, accrued leave balances	PDF, ESS	pay run id + worker	US state pay-stub content laws (e.g. CA Labor Code §226, 3 years); DE GewO §108 Entgeltabrechnung; retain 7 years (payroll records)
Direct deposit advice	payment batch released	net, bank last 4, pay date	PDF, email	statement id	as pay statement
Payroll check	MANUAL_CHECK / CHECK payment / CHECK_REPLACEMENT	MICR line, check number, payee, amount in words, stub	PDF (check stock), positive-pay file to bank (wave 36)	check number per bank account	bank and payroll record retention
NACHA / SEPA payment file	run POSTED	wave-36 layouts (PPD entries, pain.001 salary category SALA)	NACHA, ISO 20022 pain.001	wave-36 batch id	bank record
W-2 / 1099 data, DE Lohnsteuerbescheinigung data	year end	form box structures	data to wave-48 pack (PDF, EFW2, ELSTER)	year + worker	4 years (IRS), 6 years (DE AO §147)
Payroll GL voucher	run POSTED	wave-11 voucher with code × dimension lines	PDF	voucher	accounting record
Expense report	report SUBMITTED / POSTED	header: worker, purpose, period; lines: date, category, merchant, amount, currency, rate, project, policy outcome; receipts appendix	PDF, ESS	EXP-REP	tax receipt retention (US IRS 3 years; DE 10 years for Belege under AO §147)
Cash advance request	advance SUBMITTED	worker, amount, purpose, approval, settlement	PDF	EXP-ADV	accounting record
Travel requisition	SUBMITTED	destinations, dates, estimates, approval	PDF	EXP-TR	none beyond 2 years

8.43.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`payroll-calculate` (Temporal)	on demand per run	pay run, worker shard of 500	key per (run, worker); status guard	10,000 workers < 10 min	per-shard retry; failed workers listed; run stays CALCULATED-with-errors	failure count > 0; runtime > 15 min
`payroll-cutoff-reminder`	cutoff – 24 h	pay group	key (group, period)	< 1 min	retry	reminders undelivered

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`payroll-retro-detect`	on every effective-dated change event; nightly sweep	worker	key (worker, change id)	< 1 s per event	retry	retro pending > 2 periods
`payroll-statutory-aggregate`	quarter end + 5 days; year end	legal entity, form	key (entity, form, period); re-run replaces	< 5 min	retry; variance report	variance ≠ 0.00
`payroll-ruleset-load`	on pack release (migration job)	country, year	signature + version unique	< 1 min	reject unsigned	pack missing for next period end (14 days ahead)
`expense-card-import`	hourly (SFTP pull)	issuer feed	key per file hash	< 2 min per 10,000 txns	quarantine bad file	import failure; no file for 24 h
`expense-aging`	daily 07:00	legal entity	key (report, day)	< 1 min	retry	reports older than submission deadline
`cash-advance-aging`	daily 07:00	legal entity	key (advance, day)	< 1 min	retry	advances past due; payroll recovery created
`travel-requisition-close`	daily 02:00	legal entity	key (requisition)	< 1 min	retry	none closed for 7 days

8.43.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
PayrollRunMaintain	runs create/calculate, off-cycle, claims recovery; Pay run detail, Off-cycle workbench	with PayrollRunFinalize (same run); with HcmActionMaintain	Payroll administrator
PayrollRunFinalize	`/runs/{id}/finalize`	with PayrollRunMaintain for the same run (BR-43.8)	Payroll manager
PayrollRunPost	`/runs/{id}/post`, payment batch release	with PayrollWorkerMaintain (bank details)	Payroll manager, Treasury
PayrollRuleAdmin	rule-set edit/publish	author ≠ publisher (BR-43.8)	Payroll configuration specialist
PayrollWorkerMaintain	W-4, state forms, direct deposit, garnishments	with PayrollRunPost	Payroll administrator
PayrollInquire / EssPayStatement	registers, reports, statutory aggregates; own statements	none	Payroll administrator, Controller; Employee
EssExpense	reports, receipts, cash advances, requisitions (own)	with MssApprove on own items	Employee
MssApprove	approve/reject/return reports, advances, requisitions	own items blocked	Manager
ExpenseAdmin	card import, policy rules, advance returns, write-offs	with EssExpense for own items	Expense administrator
ExpenseAuditor	read all reports, receipts, violations; return to worker	with ExpenseAdmin rule publish	Internal audit

8.43.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
PAY-RUN-001	error	Cutoff for {period} has not passed	Calculate too early	Wait for cutoff or change parameter	8.43.5 validation
PAY-RUN-002	error	{n} time registrations for {period} are not approved	Unapproved time with BLOCK policy	Approve time or change policy	8.43.5
PAY-RUN-003	error	Run has {n} blocking validation results	Finalize precondition	Resolve exceptions	8.43.5
PAY-RUN-004	error	You calculated this run; another user must finalize	SoD	Ask a payroll manager	BR-43.8
PAY-RULE-001	error	No published rule set for {country} {year} on {date}	Missing pack	Load and publish the pack	FR-43.2
PAY-RULE-002	error	Publisher must differ from author	SoD	Second approver	BR-43.8
PAY-STMT-001	error	Statement {id} is FINALIZED and cannot change	Immutability	Use a CORRECTION or OFF_CYCLE run	BR-43.7
PAY-ARR-001	warning	Deduction {code} short by {amount}; added to arrears	Insufficient net	Review arrears ledger	BR-43.10
PAY-CLM-001	warning	Negative net {amount} for {worker}; claim {id} created	Overpayment	Set recovery method	BR-43.12
PAY-OFF-001	error	Original payment {id} not found or already voided	Check replacement	Select the original payment	FR-43.18
PAY-STAT-001	error	Aggregate {form} {period} differs from GL by {variance}	Reconciliation	Investigate postings before release	FR-43.20
EXP-POL-001	error	{rule message}	BLOCK outcome	Correct the line	BR-43.5
EXP-POL-002	warning	{rule message}	WARN outcome	Optional justification	BR-43.5
EXP-REC-001	error	Receipt required for lines ≥ {threshold}	REQUIRE_RECEIPT	Attach receipt	BR-43.5
EXP-CARD-001	error	Card transaction {id} already linked to line {line}	Double use	Unlink first	8.43.4 invariant
EXP-CARD-002	error	Feed file {hash} was already imported	Duplicate import	None	FR-43.13
EXP-ADV-001	error	Advance exceeds limit {limit}	Parameter	Reduce amount	FR-43.15
EXP-ADV-002	error	You have advances past settlement due; new advances blocked	Aging	Settle open advances	FR-43.15
EXP-ADV-003	info	{amount} of advance {id} applied to report {report}	Settlement	None	BR-43.9
EXP-TR-001	warning	Report exceeds approved requisition by {pct} %; justification required	Variance	Justify	BR-43.13
EXP-TR-002	error	Requisition required for category {category}	Parameter	Create a requisition	FR-43.16

8.43.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Pay run calculate	10,000 workers per run; 4 runs/month	run < 10 min; per worker 20 / 60 / 150 ms	20 workers/s per worker process, 8 processes	PayResultLine ≈ 40 lines × 260k statements = 10 M rows/year ≈ 4 GB	partitioned by tax_year; (worker_id, pay_run_id) unique	add Temporal workers; run takes longer, never partial-finalizes
Statement fetch (ESS)	10,000 views on pay date; peak 2,000/min	50 / 200 / 400 ms	100/s	PDFs ≈ 150 KB × 260k = 39 GB object store	object store key per statement	serve PDF from cache; drill-down delayed
Policy evaluation per line	50,000 lines/month; peak 300/min	20 / 100 / 200 ms	50/s	policy_results inline	rules cached per (entity, category)	evaluate at submit only, line-commit warnings deferred
Card import	100,000 txns/month	per file 10,000 rows < 2 min	100 rows/s	≈ 200 MB	(worker_id, status); file hash unique	queue files; matching delayed

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Receipt OCR	40,000/month	2 / 6 / 12 s	5/s	images ≈ 400 KB each = 16 GB	object store	draft lines created later; user can key manually
Statutory aggregate	4 quarters × 20 forms per entity	< 5 min	—	negligible	(entity, form, period)	runs later
Cash advance settlement at approval	1,000/month	100 / 300 / 600 ms	10/s	negligible	(worker_id, status)	settlement queued; AP invoice waits

8.43.20 Localization and compliance hooks

- Payroll is country-pluggable through rule-set packs (FR-43.2); wave 43 ships US (federal, 6 reference states) and DE as the EU reference; wave-48 packs add jurisdictions, statutory forms (941, 940, state UI, W-2/W-3 EFW2, 1099-NEC, DE Lohnsteueranmeldung, DEÜV/SV-Meldungen, Beitragsnachweis), e-filing (IRS FIRE/EFW2, ELSTER, sv.net/dakota) and local taxes.
- Supplemental tax rates, wage bases (SS 176,100.00 for 2025), FUTA credit-reduction states, state minimum-net and final-pay deadlines, and garnishment limits (CCPA 25 % of disposable earnings) are pack data, never code.
- New-hire reporting (state directories), workers' comp state reports and ACA hours data are rendered by the US pack from wave 42/43 data; extension point `payroll.statutory.<cc>.<form>`.
- Expense: VAT recovery per country (wave 13 tax codes; DE Vorsteuer on hotel 7 %/19 % split, UK VAT receipts), per diem tables (US GSA/DoD, DE BMF Verpflegungsmehraufwand 14/28 EUR, 2025 values), mileage (IRS 0.70 USD/mile 2025; DE 0.30 EUR/km) and fringe-benefit treatment of non-reimbursable items are pack data.
- Currency: pay in the pay group currency only; expense lines in any currency converted at the transaction-date rate type configured by the pack (card issuer rate when present).
- Privacy: pay statements and bank details use the `hr_pii` key pattern; receipt images may contain card data — OCR masks PANs to last 4 before storage (PCI DSS); EU retention limits on receipts follow the country pack.
- Calendars: pay dates shift for bank holidays per wave-8 bank calendar (US Federal Reserve, TARGET2); semi-monthly periods follow the 15th/last-day convention.

8.43.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX #71 — 12.10.1 Cash advances (TrvCashAdvance)	PARTIAL	ADDED as FR-43.15	BR-43.9
AX #74 — 12.10.2 Cash advance inquiry	PARTIAL	ADDED as FR-43.15	"Cash advance aging" in 8.43.14
AX #76 — 12.10.2 SSRS Cash advance report	PARTIAL	ADDED as FR-43.15	Document in 8.43.15
AX #79 — 12.10.3 Reconcile/settle cash advances	PARTIAL	ADDED as FR-43.15	Settlement at report approval + `cash-advance-aging`
AX #83 — 12.10.4 Expense management parameters — Intercompany / Cash advance	PARTIAL	ADDED as FR-43.15	Cash advance parameters in 8.43.13; intercompany part stays with wave 40 (register #73/#82)
AX #84 — 12.10.4 Cash advance parameters, posting	PARTIAL	ADDED as FR-43.15	Prepayment posting via wave 18
AX #72 — 12.10.1 Travel requisitions (TrvRequisitionTable)	PARTIAL	ADDED as FR-43.16	BR-43.13
AX #75 — 12.10.2 Travel requisition inquiry	PARTIAL	ADDED as FR-43.16	"Requisition vs actual"
AX #85 — 12.10.4 Requisition policies / types	PARTIAL	ADDED as FR-43.16	Policy engine (BR-43.5) evaluates requisition lines
AX #117 — 12.13.3 Arrears recovery processing	PARTIAL	ADDED as FR-43.17	BR-43.10
AX #115 — 12.13.2 SSRS Workers compensation report	PARTIAL (wave 48)	ADDED as FR-43.21	Class codes and premium base here; state-specific report layouts DEFERRED to wave 48
AX #116 — 12.13.2 SSRS New hire reporting (US state)	PARTIAL (wave 48)	DEFERRED to wave 48	Source: `hr.employment.changed.v1` HIRE events; state layouts in US pack
SAP #326 — 13.28 PC00_M10_OSUP / PUOC_10 off-cycle workbench	PARTIAL-43	ADDED as FR-43.18	BR-43.11
SAP #327 — 13.28 PC00_M10_CLAIMS claims processing	PARTIAL-43	ADDED as FR-43.19	BR-43.12
SAP #335 — 13.28 PC00_M10_* US reports (941, 940, W-2, SUI, new hire, EEO-1, workers' comp)	PARTIAL-43	ADDED as FR-43.20	Aggregates and reconciliation here; rendering/filing DEFERRED to wave 48; EEO-1 is wave-42 data via wave 48
SAP #336 — 13.28 PU19 tax reporter runs	PARTIAL-43	ADDED as FR-43.20	Job `payroll-statutory-aggregate`
SAP #341 — 13.29 TP01/TP02/TP03/PR01 travel request	PARTIAL-43	ADDED as FR-43.16	Booking (TP01 planning) OUT-OF-SCOPE per 8.43.1
SAP #342 — 13.29 PR02/PR05 cash advances	PARTIAL-43	ADDED as FR-43.15	
SAP #343 — 13.29 Travel request / plan settings, approval workflows, substitutes (T702)	PARTIAL-43	ADDED as FR-43.16	Substitutes via wave-4 workflow delegation

8.44 Wave 44: Enterprise Asset Management (Maintenance)

8.44.1 Scope and business context

EAM replaces D365 Asset Management (EntAssetObject, EntAssetFunctionalLocation, EntAssetMaintenancePlan, EntAssetWorkOrder, EntAssetCounter, EntAssetMaintenanceRequest, EntAssetBOM) and SAP PM (IFLOT functional locations, EQUI equipment, MPLA/MPOS plans with IP10 scheduling, QMEL notifications IW21, AUFK orders IW31/IW32, IMPTT measuring points, AFIH order header). After this wave a maintenance planner models the plant as functional locations and assets, sets time/counter/condition-based plans that generate work orders, dispatches technicians against wave-23 resource capacity, consumes spares from wave-16 inventory, records labor and downtime, and sees costs settle to the asset and GL. IoT readings from wave 25 trigger requests.

Out of scope: predictive ML models (hooks only), calibration management, fleet management, linear assets.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
SAP IP10/IP30 deadline monitoring is a batch job (RISTRA20) run daily or weekly; calls are generated late or in bursts and counter-based plans need IK11 readings entered by hand; D365 "Schedule maintenance plans" is likewise a batch with a fixed horizon	Scheduling is periodic recalculation, not event-driven	Scheduler runs on every completion/reading event plus nightly; forecast from rolling usage; algorithm stated in BR-44.1	Call latency 1–7 days batch → < 60 s after triggering event; 40/40 plan fixtures exact
Creating a corrective work order in D365 Asset Management from a request takes 8–10 clicks across Maintenance request → Work order → Job → Lines; SAP IW21 → IW31 → components → IW32 release is 4 transactions	Request and order are separate forms with re-keyed fields	Request triage converts to a WO in one action carrying asset, location, symptom, parts and checklist	Clicks 10 → 2; re-keyed fields 0
IoT condition data lives in a separate product (D365 IoT Intelligence, SAP ASPM/IoT) and raises alerts in another UI; maintenance requests are created by people copying values	No in-ERP condition engine	Condition rules on the wave-25 stream create deduplicated requests in < 5 s	Reading-to-request 1 h–1 day manual → p95 < 5 s; duplicate requests 0
Maintenance downtime never reaches production scheduling: SAP PM order has no capacity link to PP work-center scheduling except manual CM01 entries; D365 AM downtime is reporting-only	Separate modules without a shared resource model	WOs reference wave-22 resources; downtime emits a capacity exception consumed by the wave-23 scheduler	Planned-downtime scheduling conflicts –90%; capacity reflects downtime within 10 s
WO cost reconciliation: SAP KO88 settlement to asset/cost center with settlement rules per order; D365 AM costs post via project and need "project invoice/estimate" steps	Order cost is a separate settlement object	Cost rolls to the asset and GL on completion through the posting API; nightly reconciliation	Settlement step eliminated; WO-cost-to-GL variance 0.00

8.44.2 AX / SAP parity map

Capability	AX / D365	SAP ECC / S/4	Passage equivalent	Parity
Functional locations	EntAssetFunctionalLocation, types, structure	IFLOT, IFLOTX, IL01/IL02	`FunctionalLocation` (ltree path)	full
Assets/equipment	EntAssetObject, EntAssetObjectType, asset lifecycle states	EQUI, EQKT, IE01/IE02, equipment categories	`Asset` with `AssetType` and lifecycle	full
Counters/measuring points	EntAssetCounter, EntAssetObjectCounter, counter registration	IMPTT measuring points, IMRG measurement documents (IK11)	`Counter`, `CounterReading`	full
Maintenance plans	EntAssetMaintenancePlan, plan lines (time/counter), plan job types	MPLA/MPOS, IP10 scheduling, IP30 deadline monitoring, strategy plans (IP11)	`MaintenancePlan`, `PlanLine`, scheduler	full
Requests/notifications	EntAssetMaintenanceRequest, request lifecycle	QMEL/QMIH notifications M1/M2/M3, IW21/IW22	`MaintenanceRequest`	full
Work orders	EntAssetWorkOrder, EntAssetWorkOrderLine, job types, lifecycle states, checklists	AUFK/AFIH orders PM01/PM02/PM03, IW31/IW32, operations AFVC	`MaintWorkOrder`, `WorkOrderJob`, `Checklist`	full
Scheduling	Work order scheduling against resources (production resources)	Capacity planning CM01, work centers	wave-23 scheduler with `MAINTENANCE` job class	full
Parts and labor	Work order item requirements → inventory journal; hour journal	Component reservation (RESB), goods issue MIGO 261, confirmation IW41 (AFRU)	`WorkOrderPart` → wave-16 reservation/issue; `WorkOrderLabor`	full
Costing	Work order costs to asset (project-based in D365 AM)	Order settlement KO88 to cost center/asset, cost analysis	cost rollup to asset and GL via posting API; optional wave-37 capitalization	full
Condition monitoring	Counter thresholds; IoT Intelligence	PM-PRM, IoT via SAP IoT/ASPM	`ConditionRule` on IoT readings (wave 25)	improved
KPIs	Asset KPIs (D365 AM)	MCI7 MTTR/MTBF	`/reports/eam/kpis` MTBF, MTTR, availability, cost/asset	full
Maintenance rounds	EntAssetMaintenanceRound (route of assets inspected together)	Object list on order (OBJK), task list for multiple objects, IP41 single-cycle plan with object list	`MaintenanceRound`, plan line type ROUND (FR-44.14)	full
Maintenance sequences	EntAssetMaintenanceSequence (ordered job types)	Strategy plans IP11/IP42 with packages and hierarchy (T351P)	`MaintenanceSequence` with step hierarchy (FR-44.15)	full
Fault registration and designer	EntAssetFault (symptoms, areas, types, causes, remedies), fault designer per asset type	Catalog profiles (QS41 code groups/codes, OIS2 catalog profile), notification items damage/cause/activity (QMFE/QMUR/QMMA)	`FaultCatalog` per asset type (FR-44.16)	full
Asset warranties	EntAssetWarranty, warranty types, vendor warranty setup, warranty check on work order	Warranty master BGMK (BGM1), equipment warranty (IE02 warranty tab), warranty check on IW31	`AssetWarranty` (FR-44.17)	full
Maintenance budgets	EntAssetMaintenanceBudget, budget calculation from plans	IP30 cost estimates / plan cost simulation (IP31 / IP-costing), investment programs	`MaintenanceBudget` (FR-44.18) → wave 38	full
Permits and LOTO	not native	Permits (T357G, IPMD), Work Clearance Management WCM (WCA* objects: work approval, application, lockout/tagout)	`Permit`, `IsolationPoint`, `LotoLock` (FR-44.19)	full
Refurbishment	not native	IW81 refurbishment order (PM04), IW8W goods receipt, OMWC split valuation by condition (T025)	refurbishment WO type + wave-16 condition valuation (FR-44.20)	full
Fleet objects	Asset type attributes	IE31/IE36/IE37 fleet objects (FLEET table: license plate, VIN, fuel), MCIZ fuel analysis	asset type FLEET_VEHICLE attributes + fuel counters (FR-44.21)	full
Criticality / RCM	Asset criticality field	ASPM (Asset Strategy and Performance Management) criticality assessment, RCM; Predictive Asset Insights	`CriticalityAssessment` (FR-44.22); predictive models as hooks	partial — no ML models in v1

8.44.3 Functional requirements

- **FR-44.1 Functional locations** — Must. The system shall maintain a functional-location hierarchy per site (max depth 12) with types, with assets installable at locations and location history.
- **FR-44.2 Assets** — Must. The system shall maintain assets (type, manufacturer/model, serial, criticality 1–5, lifecycle state, parent asset, production resource link, fixed asset link, warranty) with install/remove history.
    - Lifecycle: CREATED → ACTIVE → INACTIVE → DISPOSED; only ACTIVE assets can receive work orders (override duty).

- **FR-44.3 Counters** — Must. The system shall maintain counters (unit, cumulative/reset, source MANUAL/IOT) with readings validated monotonic for cumulative counters and an average daily usage rate (rolling 30 days).
- **FR-44.4 Maintenance plans** — Must. The system shall define plans with lines of type TIME (interval + unit, calendar), COUNTER (interval + counter), or TIME_OR_COUNTER (whichever first) / TIME_AND_COUNTER, with job type, checklist, estimated hours and parts, early/late tolerances and generation horizon.
- **FR-44.5 Plan scheduling and generation** — Must. The system shall compute next-due dates/readings per BR-44.1 and generate work orders within the horizon, merging lines due within a merge window into one work order per asset.
- **FR-44.6 Maintenance requests** — Must. The system shall capture requests from users, mobile, IoT condition rules and wave-32 quality, with triage to work order, reject or defer.
- **FR-44.7 Work orders** — Must. The system shall manage work orders with jobs (asset, job type, trade, variant), lifecycle, checklists, planned/actual parts and hours, downtime, failure codes (symptom/cause/remedy) and completion notes.
- **FR-44.8 Scheduling** — Must. The system shall schedule work order jobs against wave-23 resources (maintenance teams, technicians via wave-42 workers) with finite capacity and record planned downtime on the production resource.
- **FR-44.9 Parts** — Must. The system shall reserve, pick and issue parts through wave-16 inventory journals with cost flowing to the work order.
- **FR-44.10 Labor** — Must. The system shall record labor via hour registrations (wave 25 kiosk or mobile) at trade cost rates.
- **FR-44.11 Costing and GL** — Must. The system shall accumulate parts, labor, external services (wave-17 PO) and overhead per work order, post to maintenance expense accounts by (asset type, job type, cost dimension of the functional location) and roll up to the asset; CAPITAL job types create wave-37 CIP postings.
- **FR-44.12 Condition rules** — Must. The system shall evaluate IoT readings against thresholds (above/below/rate-of-change over window) and create requests within 5 s of breach, with deduplication.
- **FR-44.13 KPIs** — Should. The system shall compute MTBF, MTTR, availability, cost per asset and backlog hours by asset, location and type.
- **FR-44.14 Maintenance rounds** — Should. The system shall define rounds (ordered stops of assets or functional locations, each with a job type and checklist, optional walking/driving minutes between stops) scheduled by plan lines of type ROUND that generate one work order per round occurrence with one job per stop.
    - A stop that cannot be performed is marked SKIPPED with a reason; skipped stops generate a follow-up request when the job type is mandatory.
- **FR-44.15 Maintenance sequences** — Should. The system shall define sequences of job types on an asset or asset type with interval multiples and a hierarchy (e.g. step A every 1×, B every 4×, C every 12× of a base interval of 250 h), generating for each due occurrence only the highest-hierarchy step plus steps not included in it, per BR-44.10.
- **FR-44.16 Fault catalog and analysis** — Must. The system shall maintain fault catalogs per asset type (symptoms, areas, types, causes, remedies, with allowed combinations), require fault registration on CORRECTIVE and EMERGENCY work orders at completion, and analyze faults by asset, type, symptom, cause and period (count, downtime, cost, repeat rate within 30 days).
    - Replaces the free-text failure_symptom/cause/remedy codes on `MaintWorkOrder` with FK references; existing columns stay for migration (populated from the catalog code).
- **FR-44.17 Asset warranties** — Should. The system shall record vendor/manufacturer warranties per asset (warranty type, vendor party, start from purchase/installation, duration in months or counter units, parts/labor coverage, exclusions), check coverage when a work order is created or parts are issued, flag covered lines and create a vendor warranty claim (wave-45 FR-45.15) on completion.
- **FR-44.18 Maintenance budgets** — Should. The system shall calculate maintenance budgets per asset, functional location and period from active plans over a horizon (forecast occurrences × est_hours × trade cost rate + planned parts at standard cost + external services), allow manual budget lines, transfer the result to a wave-38 budget plan, and report budget vs actual vs committed.
- **FR-44.19 Permits and lockout/tagout** — Must. The system shall define permit types (HOT_WORK, CONFINED_SPACE, ELECTRICAL_ISOLATION, WORKING_AT_HEIGHT, LINE_BREAKING, custom) required by job type, asset type or functional location; maintain isolation points per asset (energy type, location, isolation method, verification step); and manage permits with lifecycle REQUESTED → APPROVED → ISSUED → SUSPENDED → CLOSED and personal LOTO locks per technician per BR-44.11.
- **FR-44.20 Refurbishment orders** — Should. The system shall support rotable spares valued by condition (NEW, REFURBISHED, DAMAGED as a wave-16 inventory condition dimension with cost per condition) and refurbishment work orders that issue DAMAGED units, collect labor, parts and external repair cost, and receive the same serials as REFURBISHED at the condition's valuation per BR-44.12.
- **FR-44.21 Fleet attributes** — Could. The system shall provide asset type FLEET_VEHICLE with license plate, VIN, fuel type, tank capacity, assigned driver (wave-42 worker), registration and inspection expiry dates, and fuel log entries (date, quantity, cost, odometer) that update odometer and fuel-consumption counters.
- **FR-44.22 Criticality assessment** — Should. The system shall assess asset criticality by a matrix of consequence categories (SAFETY, ENVIRONMENT, PRODUCTION, QUALITY, COST, each 1–5) and failure likelihood (1–5), derive the asset criticality (1–5) per BR-44.15, version assessments, and use criticality to default work order priority and plan review frequency; predictive models remain hooks (`eam.predictive-hooks`).

8.44.4 Data model

Asset

Field	Type	Required	Notes
id	uuid	yes	PK
asset_number	text(30)	yes	unique; sequence AST
asset_type_id	uuid	yes	FK
name	text(120)	yes	
functional_location_id	uuid	no	current location
parent_asset_id	uuid	no	
site_id	uuid	yes	wave 6
serial_number, manufacturer, model	text	no	
criticality	smallint	yes	1–5
lifecycle_state	enum	yes	
production_resource_id	uuid	no	wave 22
fixed_asset_id	uuid	no	wave 37
warranty_until	date	no	
cost_dimension_set_id	uuid	no	

MaintenancePlan / PlanLine

Field	Type	Required	Notes
id	uuid	yes	PK (line)
plan_id	uuid	yes	FK plan (name, asset or asset type/location scope, active)
line_type	enum	yes	TIME, COUNTER, TIME_OR_COUNTER, TIME_AND_COUNTER
interval_value, interval_unit	int, enum	cond	DAYS, WEEKS, MONTHS, YEARS
calendar_id	uuid	no	wave 8; default 7-day
counter_id, counter_interval	uuid, numeric(14,2)	cond	
job_type_id, trade_id, variant	uuid, uuid, text	yes/no/no	
checklist_id	uuid	no	
est_hours, parts[]	numeric, jsonb	no	
early_tolerance_pct, late_tolerance_pct	smallint	yes	default 10/10 (SAP tolerance analog)
shift_factor_early, shift_factor_late	smallint	yes	0–100%, default 0/100
horizon_days, merge_window_days	int	yes	default 90 / 7
last_completed_at, last_completed_reading	timestamptz, numeric	no	updated on completion
next_due_at, next_due_reading, next_due_forecast_at	computed		

MaintWorkOrder

Field	Type	Required	Notes
id	uuid	yes	PK; number WO-{seq}
asset_id, functional_location_id	uuid	yes/no	
work_order_type	enum	yes	PREVENTIVE, CORRECTIVE, INSPECTION, CAPITAL, EMERGENCY
status	enum	yes	CREATED, SCHEDULED, RELEASED, IN_PROGRESS, ON_HOLD, COMPLETED, CLOSED, CANCELED
priority	smallint	yes	1 (emergency)–5
request_id, plan_line_id	uuid	no	provenance
due_at, planned_start, planned_end, actual_start, actual_end	timestamptz		
jobs[]	WorkOrderJob	yes	(job_type, trade, est_hours, actual_hours, checklist results)
parts[]	WorkOrderPart	no	(item, qty_planned, qty_issued, reservation_id, cost)
downtime_minutes	int	no	
failure_symptom, failure_cause, remedy	text(20)	no	code tables
cost_parts, cost_labor, cost_external, cost_overhead	numeric(14,2)	computed	
journal_ids[]	uuid[]		

Counter: id, asset_id, name, unit, kind (CUMULATIVE/RESETTABLE), source, last_reading, last_reading_at, avg_daily_usage numeric(12,4). **CounterReading**: id, counter_id, reading_at, value, source, iot_message_id. **MaintenanceRequest**: id, asset_id, source (USER, MOBILE, IOT, QUALITY), severity, description, reading_value, status (NEW, TRIAGED, CONVERTED, REJECTED, DEFERRED), work_order_id, dedupe_key.

MaintenanceRound: id, code, site_id, stops[] (sequence, asset_id or functional_location_id, job_type_id, checklist_id, travel_minutes_from_previous), est_total_minutes, active. **MaintenanceSequence**: id, scope (asset_id or asset_type_id), base_interval_value, base_interval_unit or counter_id, steps[] (code, job_type_id, multiple int, hierarchy smallint, includes_step_codes[]), last_occurrence_number. **FaultCatalog**: asset_type_id, symptoms[], areas[], types[], causes[], remedies[] (code, text), allowed_combinations[] (symptom, area, type). **WorkOrderFault**: work_order_id, symptom_code, area_code, type_code, cause_code, remedy_code, notes. **AssetWarranty**: id, asset_id, warranty_type_id, vendor_party_id, start_basis (PURCHASE, INSTALL), starts_on, months, counter_id, counter_limit, parts_covered, labor_covered, exclusions[], status. **MaintenanceBudget**: id, version, scope (asset/location), period_id, source (PLAN_CALC, MANUAL), labor_amount, parts_amount, external_amount, total, wave38_plan_id. **PermitType**: code, name, checklist_id, approver_role, max_validity_hours, requires_gas_test bool. **Permit**: id (sequence EAM-PMT), permit_type_code, work_order_id, asset_id, valid_from, valid_to, status (REQUESTED, APPROVED, ISSUED, SUSPENDED, CLOSED, CANCELED), approved_by, issued_by, checklist_results[]. **IsolationPoint**: id, asset_id, energy_type (ELECTRICAL, PNEUMATIC, HYDRAULIC, MECHANICAL, THERMAL, CHEMICAL), location_text, method, verification_step, tag_code. **LotoLock**: id, permit_id, isolation_point_id, technician_worker_id, lock_number, applied_at, verified_at, removed_at. **CriticalityAssessment**: id, asset_id, version, consequence {SAFETY, ENVIRONMENT, PRODUCTION, QUALITY, COST}, likelihood, risk_score, criticality, assessed_by, assessed_at. **Asset** adds: fleet attributes (license_plate, vin, fuel_type, tank_capacity, driver_worker_id, registration_expiry, inspection_expiry) for type FLEET_VEHICLE; `rotable` bool and `condition` for serialized rotables. MaintWorkOrder adds work_order_type REFURBISHMENT and ROUND, `fault_id`, `permit_ids[]`, `warranty_covered` bool.

Invariants: cumulative counter readings are non-decreasing in time; a COMPLETED work order has actual_start ≤ actual_end; Σ work order costs = Σ linked journal lines to maintenance accounts; one open (NEW/TRIAGED) IoT request per (asset, rule) dedupe_key. Indexing: `FunctionalLocation.path ltree` GiST; `PlanLine (next_due_at)` and `(next_due_forecast_at)`; `MaintWorkOrder (site_id, status, due_at)`; `CounterReading` partitioned monthly.

8.44.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	`/api/v1/eam/assets`	Create asset	key	EamAssetMaintain
POST	`/api/v1/eam/counters/{id}/readings`	Register reading	key (source + message id)	EamCounterRegister / IoT bridge
POST	`/api/v1/eam/plans/schedule`	Recompute next due and generate WOs	key per (plan, run date)	EamPlanAdmin
POST	`/api/v1/eam/requests`	Create request	key (dedupe_key)	EamRequestCreate
POST	`/api/v1/eam/requests/{id}/convert`	Convert to work order	key	EamPlanner
POST	`/api/v1/eam/work-orders`	Create WO	key	EamPlanner
POST	`/api/v1/eam/work-orders/{id}/status`	Transition status	key + version	EamPlanner / EamTechnician
POST	`/api/v1/eam/work-orders/{id}/parts/issue`	Issue parts (inventory journal)	key	EamTechnician
POST	`/api/v1/eam/work-orders/{id}/labor`	Record labor	key	EamTechnician
GET	`/api/v1/eam/kpis?scope=&from=&to=`	MTBF/MTTR/cost	n/a	EamInquire
POST	`/api/v1/eam/rounds`	Create maintenance round	key	EamPlanAdmin
POST	`/api/v1/eam/sequences`	Create maintenance sequence	key	EamPlanAdmin

Method	Path	Purpose	Idempotency	Auth duty
PUT	`/api/v1/eam/fault-catalogs/{assetTypeId}`	Maintain fault catalog	ETag	EamPlanAdmin
POST	`/api/v1/eam/work-orders/{id}/faults`	Register fault	key	EamTechnician
POST	`/api/v1/eam/budgets/calculate`	Calculate budget from plans (scope, horizon, version)	key per (scope, version)	EamBudgetAdmin
POST	`/api/v1/eam/permits`	Request permit for a work order	key	EamPlanner
POST	`/api/v1/eam/permits/{id}/transition`	Approve / issue / suspend / close permit	key + version	EamPermitIssuer
POST	`/api/v1/eam/permits/{id}/locks`	Apply / verify / remove LOTO lock	key per lock action	EamTechnician
POST	`/api/v1/eam/work-orders/refurbishment`	Create refurbishment WO for rotable serials	key	EamPlanner
POST	`/api/v1/eam/assets/{id}/criticality`	Record criticality assessment	key	EamAssetMaintain
POST	`/api/v1/eam/assets/{id}/fuel-log`	Record fuel entry (fleet)	key	EamCounterRegister

Validation: readings for cumulative counters must be ≥ last_reading else `EAM-CTR-001` (reset requires explicit reset flag); COMPLETED requires all checklist mandatory items answered and all reserved parts issued or released; CAPITAL work orders require a fixed_asset_id or CIP project.

Event	Trigger	Payload	Consumers
`dev.passage.eam.request.created.v1`	request created	see 8.0	planner UI, notifications
`dev.passage.eam.workorder.status.changed.v1`	transition	workOrderId, from, to, at, actor	mobile, analytics
`dev.passage.eam.workorder.completed.v1`	COMPLETED	see 8.0	journal, fixed assets, scheduling
`dev.passage.eam.counter.reading.registered.v1`	reading	counterId, assetId, value, at, source	plan scheduler, condition rules
`dev.passage.eam.downtime.recorded.v1`	downtime on resource	resourceId, from, to, workOrderId	scheduling (wave 23), OEE (wave 25)
`dev.passage.eam.permit.status.changed.v1`	permit transition	permitId, workOrderId, from, to, at, actor	mobile, safety notifications
`dev.passage.eam.warranty.claimable.v1`	covered WO completed	workOrderId, assetId, warrantyId, vendorPartyId, coveredParts, coveredLabor	service (FR-45.15 supplier claims)
`dev.passage.eam.budget.calculated.v1`	budget calculation done	budgetVersion, scope, periods[], total	budgeting (wave 38)

8.44.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Asset management workspace	tiles: requests to triage, WOs due in 7 days, overdue, backlog hours		EamInquire
Plant structure tree	expand locations, install/move assets, open asset	location path, asset, state, criticality	EamStructureMaintain
Asset detail	counters, plans, WO history, costs, KPIs, documents		EamAssetMaintain
Maintenance plan editor	add line, simulate schedule 12 months, activate	type, interval, counter, next due, forecast	EamPlanAdmin
Request triage	convert, reject, defer, merge	severity, source, asset, age	EamPlanner
Work order board (kanban + Gantt)	schedule, release, assign, print	status, priority, due, assigned team	EamPlanner
Technician mobile (PWA)	start/stop, checklist, parts scan, labor, photos, complete		EamTechnician
KPI dashboard	filter by site/type/period	MTBF, MTTR, availability, cost	EamInquire
Round and sequence editor	order stops, set jobs and checklists; define steps and hierarchy; simulate 12 months	stop, asset, job type, minutes; step, multiple, hierarchy	EamPlanAdmin
Fault catalog designer	add codes, allowed combinations per asset type	symptom, area, type, cause, remedy	EamPlanAdmin
Fault analysis	filter, Pareto by symptom/cause	count, downtime, cost, repeat %	EamInquire
Permit board	request, approve, issue, suspend, close; LOTO lock status	permit, type, WO, valid to, locks applied/verified/removed	EamPermitIssuer
Maintenance budget	calculate, adjust, transfer to wave 38, budget vs actual	asset/location, period, labor, parts, external, actual, variance	EamBudgetAdmin
Rotables and refurbishment	view serials by condition, create refurbishment WO	item, serial, condition, location, value	EamPlanner

Rules: board drag changes planned_start with conflict warning; checklist items support numeric with tolerance (auto-flag out of range); mobile offline for up to 72 h with action replay.

8.44.7 Business rules and edge cases

- **BR-44.1 Plan scheduling algorithm** — run nightly and on each completion/reading event for the affected plan lines. For each active line: (a) base = last_completed_at (or plan start if none); time due `T = calendar.add(base, interval)` — if shift factors apply and completion was late/early by Δ versus the previous due, shift base by `Δ × shift_factor_late/early` (SAP IP10 analog); (b) counter due `R = last_completed_reading + counter_interval`; forecast date `F = now + (R − counter.last_reading) ÷ avg_daily_usage` (if avg_daily_usage = 0, F = NULL); (c) next_due_at = T for TIME; = F for COUNTER (next_due_reading = R); = min(T, F) for TIME_OR_COUNTER; = max(T, F) for TIME_AND_COUNTER; (d) generate a work order when `next_due_at − early_tolerance_pct × interval ≤ now + horizon_days` and no open WO exists for the line; (e) lines for the same asset due within merge_window_days are merged into one WO with multiple jobs; (f) a counter-based WO is released only when the actual reading ≥ R – tolerance or the forecast date arrives. Example: line TIME_OR_COUNTER, 90 days or 500 hours; last completed 2026-08-01 at 12,000 h; counter 12,300 h on 2026-10-21 with avg usage 6.5 h/day → T = 2026-10-30, R = 12,500, F = 2026-10-21 + 30.8 days = 2026-11-21 → next_due_at = 2026-10-30; generated on 2026-10-21 (horizon 90) with due 2026-10-30.
- **BR-44.2 Completion resets** — completion sets last_completed_at = actual_end and last_completed_reading = reading at completion (prompted if counter-based); the line reschedules immediately.
- **BR-44.3 Status transitions** — CREATED → SCHEDULED → RELEASED → IN_PROGRESS → COMPLETED → CLOSED; IN_PROGRESS ↔ ON_HOLD; any pre-COMPLETED → CANCELED (releases reservations). CLOSED requires all costs posted (no pending inventory or hour journals) and is final; cost corrections after CLOSED use a CORRECTION WO.
- **BR-44.4 Condition rules** — rule {counter or tag, operator >, <, RATE_OVER(window), value, severity, cooldown_minutes}; breach creates one request with dedupe_key `(asset, rule)` while a request is NEW/TRIAGED or within cooldown (default 60 min); latency target from reading ingest to request event p95 < 5 s.
- **BR-44.5 Downtime** — recording downtime on an asset linked to a production resource creates a capacity exception on wave-23 for [from, to]; planned downtime from SCHEDULED work orders is tentative and becomes firm at RELEASED.

- **BR-44.6 Parts costing** — issued at wave-16 running cost at issue time; returns credit at the same cost; partial issues allowed.
- **BR-44.7 Emergency WOs** — priority 1 skips SCHEDULED and may be IN_PROGRESS before RELEASED; must be regularized within 24 h (alert).
- **BR-44.8 KPIs** — MTBF = Σ uptime ÷ number of failures (CORRECTIVE/EMERGENCY WOs with failure codes) over the window; MTTR = Σ (actual_end – actual_start) of those WOs ÷ count; availability = 1 – downtime ÷ scheduled time.
- **BR-44.9 Rounds** — a ROUND plan line schedules per BR-44.1 (TIME only); one work order per occurrence with jobs in stop sequence; the work order completes when every stop is DONE or SKIPPED with a reason; completion resets the line once for the whole round; a skipped mandatory stop creates a MaintenanceRequest (source ROUND) for that asset.
- **BR-44.10 Sequence step selection** — for occurrence number k (1-based, k = last_occurrence_number + 1), candidate steps = {s : k mod s.multiple = 0}; the selected step is the candidate with the highest hierarchy; steps listed in its `includes_step_codes` are suppressed; remaining candidates not included are added as extra jobs. Example: A×1 (h1), B×4 (h2, includes A), C×12 (h3, includes A, B): k = 4 → B; k = 12 → C; k = 6 → A.
- **BR-44.11 Permits and LOTO** — a job requiring a permit type cannot move its work order to IN_PROGRESS until a permit of that type is ISSUED and valid now (`EAM-PMT-001`); approver ≠ requester; ELECTRICAL_ISOLATION and other isolation permits are ISSUED only when every isolation point of the asset has a LotoLock applied and verified (zero-energy check recorded); each technician working the job applies a personal lock (one lock per technician per point); the permit can CLOSE only when all locks are removed and the work order is COMPLETED or the work is suspended; permits past valid_to move to SUSPENDED automatically and IN_PROGRESS jobs are flagged; all transitions are append-only audit records retained 5 years.
- **BR-44.12 Refurbishment valuation** — issue of a DAMAGED serial to a refurbishment WO credits inventory at the DAMAGED condition value; WO costs (labor, parts, external) accumulate; receipt as REFURBISHED debits inventory at the REFURBISHED condition standard (or moving average) value; the difference between (damaged value + WO costs) and the refurbished value posts to the refurbishment variance account; serials keep their identity and history across conditions.
- **BR-44.13 Budget calculation** — for each active plan line, forecast occurrences in the horizon per BR-44.1 (counter lines use avg_daily_usage; usage 0 → no occurrences); amount per occurrence = est_hours × trade cost rate (wave-42/23 rate effective at the occurrence date) + Σ planned parts × standard cost + planned external amount; amounts roll up per (asset, period); sequence lines use BR-44.10 step selection; recalculation creates a new budget version and never overwrites a version transferred to wave 38.
- **BR-44.14 Warranty check** — at WO creation and at each part issue, a warranty covers the line when the asset's warranty is ACTIVE on the WO date (and counter ≤ counter_limit when set), the coverage flag matches the line kind, and the job type/part is not in exclusions; covered lines still cost the WO, and a warranty claimable event is emitted at completion with covered amounts.
- **BR-44.15 Criticality** — risk_score = max(consequence categories) × likelihood (1–25); criticality = 5 when risk ≥ 20 or SAFETY = 5, 4 when ≥ 15, 3 when ≥ 10, 2 when ≥ 5, else 1; a new assessment version replaces asset.criticality; work orders default priority = 6 – criticality for CORRECTIVE types; assets with criticality ≥ 4 require plan review every 12 months (reminder).

8.44.8 Acceptance criteria

- **AC-44.1** (FR-44.5, BR-44.1) Given the BR-44.1 example, when the scheduler runs on 2026-10-21, then a WO exists with due 2026-10-30 and next_due_reading 12,500.
- **AC-44.2** (FR-44.5) Given 40 plan fixtures, when scheduled across a simulated year, then generated WO dates/readings match expected within 0 days / 0 units.
- **AC-44.3** (FR-44.11) Given a completed WO with 350.00 USD parts and 8 h labor at 45.00/h, when posted, then the GL maintenance expense is 710.00 and the asset cost history shows 710.00.
- **AC-44.4** (FR-44.12, BR-44.4) Given a bearing temperature rule > 85 °C, when a reading of 87 °C arrives, then a request exists within 5 s and a second reading of 88 °C within 60 min creates none.
- **AC-44.5** (FR-44.8, BR-44.5) Given a RELEASED WO with planned downtime 4 h on resource M-12, when wave-23 schedules, then M-12 capacity for that window is zero.
- **AC-44.6** (FR-44.3) Given a cumulative counter at 12,300, when a reading of 12,250 is posted without reset flag, then it is rejected with EAM-CTR-001.
- **AC-44.7** (FR-44.7, BR-44.3) Given a WO with an unanswered mandatory checklist item, when COMPLETED is requested, then it is rejected with `EAM-WO-004`.
- **AC-44.8** (FR-44.13, BR-44.8) Given 3 failures and 2,700 h uptime in a window, when KPIs are queried, then MTBF = 900 h.
- **AC-44.9** (FR-44.14, BR-44.9) Given a weekly round of 6 stops, when the occurrence WO is completed with stop 4 SKIPPED on a mandatory job, then the round line resets once and a MaintenanceRequest with source ROUND exists for stop 4's asset.
- **AC-44.10** (FR-44.15, BR-44.10) Given sequence A×1, B×4 (includes A), C×12 (includes A, B), when occurrences 1–12 generate, then jobs are A, A, A, B, A, A, A, B, A, A, A, C.
- **AC-44.11** (FR-44.19, BR-44.11) Given a WO whose job requires ELECTRICAL_ISOLATION on an asset with 3 isolation points, when IN_PROGRESS is requested with 2 verified locks, then it is rejected with `EAM-PMT-002`; with 3 verified locks and an ISSUED permit it succeeds; closing the permit with one lock still applied returns `EAM-PMT-003`.
- **AC-44.12** (FR-44.20, BR-44.12) Given a DAMAGED pump serial valued 400.00 USD, WO costs 650.00 and REFURBISHED standard 1,000.00, when the serial is received REFURBISHED, then inventory shows the serial at 1,000.00 and the refurbishment variance account carries 50.00 debit.
- **AC-44.13** (FR-44.17, BR-44.14) Given an asset with a 24-month parts-only vendor warranty started 2025-11-01, when a part is issued to a WO on 2026-10-21, then the part line is warranty-covered, labor is not, and completion emits `eam.warranty.claimable.v1` with the part amount.
- **AC-44.14** (FR-44.18, BR-44.13) Given a TIME plan line every 90 days with 6 h at 45.00/h and parts 120.00, when a 12-month budget calculates from 2027-01-01 with last completion 2026-12-15, then 4 occurrences budget 390.00 each (1,560.00 total) in the periods of 2027-03-15, 2027-06-13, 2027-09-11 and 2027-12-10.
- **AC-44.15** (FR-44.16) Given a CORRECTIVE WO with no fault registered, when COMPLETED is requested, then it is rejected with `EAM-FLT-001`; a symptom/area/type combination not allowed for the asset type returns `EAM-FLT-002`.
- **AC-44.16** (FR-44.22, BR-44.15) Given consequences SAFETY 3, PRODUCTION 5 and likelihood 4, when assessed, then risk_score = 20, criticality = 5 and a new CORRECTIVE WO defaults to priority 1.

8.44.9 Test plan and fixtures

Fixtures: `eam-plant-demo` (3 sites, 120 locations, 400 assets, 60 counters from wave-22 resources); `eam-plans-40` with a 365-day expected generation calendar; `eam-iot-stream` (10 readings/s replay from wave-25 fixture); `eam-wo-cost-50`.

Test	Type	Target	Pass criterion
Scheduler	unit/property	next-due computation	matches calendar; monotonic under completions
WO generation	E2E	nightly job	40/40 plans
IoT → request	performance	condition engine	p95 < 5 s at 10 readings/s
Cost posting	contract	posting API	balanced; asset rollup equal
Downtime → capacity	integration	scheduling API	capacity reflects downtime
Mobile offline	E2E (Playwright, offline mode)	PWA	72 h replay without loss

Reconciliation: Σ WO costs by account = GL maintenance accounts; Σ parts issued = inventory transactions with reference WO.

8.44.10 Deployment and operations

Chart `passage-eam` (Go API, scheduler worker, condition engine consumer, mobile BFF); Postgres `eam` with ltree and monthly partitions on readings. Flags: `eam.capital-wo`, `eam.predictive-hooks`. Schedules: `eam-plan-schedule` nightly 01:00 site-local plus event-driven; `eam-kpi-rollup` hourly. SLOs: condition engine p95 < 5 s; WO status API p95 < 200 ms; availability 99.9%. Alerts: scheduler run failure; condition consumer lag > 30 s; emergency WO not regularized in 24 h. Runbook: replay readings from Kafka by offset; re-run scheduler for a plan. Rollback by digest.

8.44.11 Migration from AX / SAP

Source	Passage entity	Notes
EntAssetFunctionalLocation	FunctionalLocation	
EntAssetObject, EntAssetObjectType	Asset, AssetType	lifecycle state map
EntAssetCounter, EntAssetObjectCounter	Counter, last reading	
EntAssetMaintenancePlan (+ lines)	MaintenancePlan, PlanLine	last completed from WO history
EntAssetWorkOrder (open)	MaintWorkOrder	closed as history
EntAssetMaintenanceRequest (open)	MaintenanceRequest	
IFLOT/IFLOTX	FunctionalLocation	TPLNR structure indicator → path
EQUI/EQKT/EQUZ	Asset	EQUZ for location/time slices
MPLA/MPOS/MHIS	MaintenancePlan, PlanLine, last call	
IMPTT/IMRG	Counter, CounterReading (last 12 months)	
QMEL (open), AUFK/AFIH PM orders (open)	MaintenanceRequest, MaintWorkOrder	

Validation: asset count per site; open WO count and planned cost equal; next due dates within tolerance of source IP30 output. Not migrated: closed orders older than 3 years (archive), SAP strategy packages (converted to explicit lines).

8.44.12 Dependencies, risks, open questions

Depends on: wave 16 inventory, wave 17 PO, wave 22 resources, wave 23 scheduler, wave 25 IoT, wave 37 fixed assets, wave 42 workers. Coverage-closure additions also depend on: wave-16 inventory condition dimension with cost per condition (FR-44.20 refurbishment; if wave 16 ships without it, refurbishment runs as a valuation-adjustment journal until wave 16 is extended), wave 38 budget plans (FR-44.18), wave 42 workers for permit roles and fleet drivers (FR-44.19, FR-44.21), and the wave-45 supplier warranty claim (FR-45.15) consuming `eam.warranty.claimable.v1`.

Risk	Likelihood	Impact	Mitigation
Counter forecast inaccuracy	Medium	Low	Rolling usage; manual override
IoT volume	Medium	Medium	Partitioned readings; downsampled retention 13 months

Open questions: (1) Capitalize CAPITAL WOs directly to fixed assets or always via CIP project? Default CIP project; decide by wave 44. (2) Calibration in v1? Default no.

8.44.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
Asset / WO / request / permit number sequences	site	lookup	AST, WO, MR, EAM-PMT	wave-5 sequences	Identifiers	Asset management parameters › Number sequences (EntAssetParameters)	IW order number ranges (OION / T003O), notification ranges (OIN1/TQ80), equipment ranges (OIEN)
Work order types enabled	site	multi-enum	PREVENTIVE, CORRECTIVE, INSPECTION, EMERGENCY	+ CAPITAL, ROUND, REFURBISHMENT	FR-44.7	Asset management parameters › Work orders › Work order types	Order types PM01–PM04 (T003O, T350, T399X)
Request types and auto-convert priority	site	lookup + int	auto-convert priority 1	1–5	FR-44.6	Maintenance request types (EntAssetRequestType)	Notification types M1/M2/M3 (TQ80); notification-order type link (T399A)
Plan generation horizon / merge window	plan line	int	90 / 7 days	1–730 / 0–60	BR-44.1 (d), (e)	Asset management parameters › Maintenance plans › Schedule horizon	IP10 call horizon, scheduling period (MPLA, T399W plan category)
Early/late tolerance and shift factors	plan line	pct	10/10; 0/100	0–100	BR-44.1 (a)	Maintenance plan line tolerances	Scheduling parameters: shift factor late/early, tolerance (IP42 / MPLA)
Counter avg-usage window	counter	int days	30	7–365	FR-44.3 forecast	Counter setup (EntAssetCounterType)	IK11 estimated annual performance (IMPTT)
Counter reading tolerance for release	plan line	pct	5 %	0–50	BR-44.1 (f)	n/a	Call horizon % for performance-based plans
Default criticality → priority map	site	table	6 – criticality	1–5	BR-44.15	Criticality setup	Priority type PM (T356)
Fault registration required on completion	work order type	bool	true for CORRECTIVE, EMERGENCY		FR-44.16	Asset management parameters › Fault registration mandatory	Catalog profile mandatory on notification (OIS2, T352B)
Permit required by job type / asset type	job type / asset type	multi-lookup	—	PermitType	BR-44.11	n/a	Permit categories (T357G) assigned to equipment/FL; WCM work clearance usage (WCA*)
Permit max validity (hours)	permit type	int	12	1–168	BR-44.11 auto-suspend	n/a	WCM approval validity

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
Emergency WO regularization window	site	int hours	24	1–72	BR-44.7	n/a	Order type "immediate order" settings
Mobile offline limit	tenant	int hours	72	8–168	8.44.6 rule	Mobile app (D365 Field) settings	SAP Asset Manager offline settings
Parts issue at release vs on demand	site	enum	ON_DEMAND	AT_RELEASE, ON_DEMAND	FR-44.9	Work order item requirements	Reservation relevance / goods movement on release (T399X)
Maintenance expense posting key	site	lookup	(asset type, job type, FL dimension)	posting profiles	FR-44.11	Asset management parameters › Journals / project link	Settlement profile (OKO7) and default settlement rule (KO88 replacement)
Condition valuation for rotables	item group	bool + table	false	conditions NEW/REFURBISHED/DAMAGED with value basis	BR-44.12	n/a	Split valuation by condition (OMWC, T025 valuation types)
Budget calculation horizon and version	site	int months + text	12, "BUD-{year}"	1–60	BR-44.13	Maintenance budget parameters	IP30/IP31 cost simulation horizon
Warranty check on WO create	site	bool	true		BR-44.14	Warranty parameters › Check on work order	Warranty check on order (IW31 warranty indicator, BGMK)
Condition rule cooldown default	rule	int minutes	60	1–1,440	BR-44.4	n/a	n/a (ASPM / IoT rules)

8.44.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Work order list	list inquiry	site, status, type, priority, due range, team, asset/location	WO, asset, status, due, planned/actual dates, est/actual hours, cost	`eam_wo`	All work orders (EntAssetWorkOrderListPage)	IW38 change / IW39 display orders
Request list	list inquiry	status, source, severity, age	request, asset, source, severity, age, WO	`eam_req`	Maintenance requests (EntAssetRequestTable)	IW28 / IW29 notifications
Scheduling overview	operational report	plan, date range	plan line, next due, forecast, generated WO, status	`eam_schedule`	Maintenance schedule (EntAssetMaintenanceSchedule)	IP24 scheduling overview list; IP19 scheduling overview graphic
Asset structure and history	drill-down	site, location path, type	asset, location history, WO history, counters	`eam_structure`	Functional location / asset views	IH01 structural display; IH06 FL list; IH08 equipment list
Measurement documents	list inquiry	counter, period, source	readings, deltas, source	`eam_readings`	Counter registrations	IK17 measurement documents list
Cost per asset	drill-down	asset, type, period	parts, labor, external, overhead, total vs budget	`eam_cost`	Asset cost (EntAssetObjectCost)	MCI3 cost analysis (PMIS); KOB1 order line items
MTBF / MTTR / availability	KPI	site, type, criticality, window	MTBF, MTTR, availability, failures	`eam_kpi`	Asset KPIs	MCI7 breakdown statistics; MCI1 object statistics
Fault analysis	KPI	asset type, symptom, cause, period	count, downtime, cost, repeat rate 30 days, Pareto	`eam_faults`	Fault analysis; SSRS Fault report	IW69 notification items; MCI5 damage analysis
Backlog	KPI	site, trade, priority	open WOs, backlog hours, weeks of backlog	`eam_backlog`	Work order backlog	IW38 with capacity; CM01 capacity load
Budget vs actual	drill-down	scope, version, period	budget, actual, committed, variance	`eam_budget`	Budget vs actual (maintenance)	IP31 cost simulation vs KOB1 actuals; S_ALR_87013611
Warranty inquiry	list inquiry	vendor, expiring within, asset type	asset, warranty, vendor, ends, covered cost YTD	`eam_warranty`	Warranty inquiry (EntAssetWarranty)	BGM3 display warranty; IE03 warranty tab
Permit register	list inquiry	status, type, site, valid range	permit, WO, asset, valid from/to, locks open	`eam_permits`	n/a	WCM work clearance document lists (WCM_WCD)
Round compliance	KPI	round, period	occurrences, stops done, skipped %, on-time %	`eam_rounds`	Maintenance rounds results	IW38 for object-list orders
Rotables by condition	list inquiry	item, condition, location	serial, condition, value, refurbishment count	`eam_rotables`	n/a	MMBE / MB52 split valuation stock; IW8W history
Fuel consumption (fleet)	KPI	vehicle, driver, period	liters/gallons, cost, distance, consumption per 100 km / mpg	`eam_fuel`	n/a	MCIZ fleet consumption analysis

8.44.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Work order package	WO RELEASED (print from board)	header: WO, asset, location, priority, due, permits required; jobs: instructions, checklist, safety notes; parts pick list; labor sign-off; footer: QR code to mobile	PDF, mobile	WO	maintenance record: life of asset + 3 years; regulated assets per country (e.g. pressure vessels DE BetrSichV records)
Permit to work	permit ISSUED	permit type, WO, asset, hazards, isolation points with lock numbers, gas test results, validity, signatures (requester, approver, issuer, each technician)	PDF (posted at worksite), mobile	EAM-PMT	OSHA 29 CFR 1910.147 periodic inspection certification records; retain 5 years
LOTO lock tag	lock applied	technician name, lock number, point, date/time, contact	label PDF (thermal printer)	lock number	per 29 CFR 1910.147(c)(5)
Round checklist	round WO released	ordered stops, checklist items, readings fields	PDF, mobile	WO	maintenance record
Maintenance request acknowledgment	request created (user/mobile)	request no, asset, description, status link	email, notification	MR	none
Refurbishment shipment to repair vendor	external refurbishment step	serials, condition, vendor PO reference	PDF with wave-28 shipment / wave-17 PO	wave-17 PO	per wave 17/28
Fault report	on demand	fault Pareto per filter	PDF, XLSX	none	none

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Maintenance budget	version transferred	scope × period budget lines	XLSX, PDF	budget version	budget record

8.44.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`eam-plan-schedule`	nightly 01:00 site-local + on completion/reading events	site, plan line	key per (plan line, run date); open-WO check prevents duplicates	< 5 min for 10,000 lines	per-line retry; failures listed	run failure; lines with next_due in past and no WO
`eam-condition-engine`	streaming (Kafka consumer)	asset hash	dedupe_key + cooldown	p95 < 5 s per reading	consumer restart from offset	consumer lag > 30 s
`eam-kpi-rollup`	hourly	site	rollup per (site, hour) replace	< 2 min	retry	stale > 3 h
`eam-permit-expiry`	every 5 min	site	key (permit, transition)	< 10 s	retry	permits ISSUED past valid_to
`eam-emergency-regularize-check`	hourly	site	key (WO, hour)	< 10 s	retry	emergency WO not regularized within window
`eam-budget-calculate`	on demand; annual budget cycle	site, version	key (scope, version)	< 10 min for 10,000 lines × 12 months	resumable per site	calculation failed
`eam-warranty-expiry`	daily 06:00	site	key (warranty, lead day)	< 1 min	retry	none
`eam-readings-retention`	monthly	counter partition	drop/downsample partitions older than 13 months	< 30 min	retry next day	partition count over budget

8.44.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
EamStructureMaintain / EamAssetMaintain	functional locations, assets, warranties, criticality; Plant structure tree, Asset detail	none	Maintenance engineer
EamPlanAdmin	plans, rounds, sequences, fault catalogs, schedule run	none	Maintenance planner (senior)
EamPlanner	requests convert, WO create/schedule/release, permits request, refurbishment WOs	with EamPermitIssuer on the same permit	Maintenance planner, Supervisor
EamTechnician	WO status (IN_PROGRESS/COMPLETED), parts issue, labor, faults, LOTO lock actions; Technician mobile	with EamPermitIssuer approving a permit for own job	Technician
EamPermitIssuer	permit approve/issue/suspend/close	requester ≠ approver; issuer cannot be the only lock holder	Area authority, Safety officer
EamCounterRegister	readings, fuel log	none	Operator, IoT bridge service account
EamBudgetAdmin	budget calculate, adjust, transfer	with BudgetApprove (wave 38) on the same plan	Maintenance manager
EamInquire	all GET reports and KPIs	none	Maintenance manager, Plant manager
EamSetupAdmin	parameters 8.44.13, permit types, isolation points, posting keys	with EamPermitIssuer	EAM system administrator

8.44.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
EAM-CTR-001	error	Reading {v} is below last reading {last} for cumulative counter {c}	Non-monotonic	Set the reset flag or correct the value	FR-44.3
EAM-AST-001	error	Asset {a} is {state}; work orders need ACTIVE	Lifecycle	Activate or use override duty	FR-44.2
EAM-FL-001	error	Functional location depth exceeds 12	Hierarchy limit	Flatten the structure	FR-44.1
EAM-PLN-001	warning	Counter {c} has zero average usage; forecast unavailable	No usage	Register readings or set manual usage	BR-44.1
EAM-PLN-002	info	{n} work orders generated, {m} merged	Scheduler result	None	FR-44.5
EAM-WO-001	error	Transition {from} → {to} not allowed	State machine	Use an allowed transition	BR-44.3
EAM-WO-002	error	Work order cannot CLOSE: {n} pending journals	Costs not posted	Post or cancel journals	BR-44.3
EAM-WO-003	warning	Emergency work order {wo} not regularized within {h} h	BR-44.7	Complete planning fields	BR-44.7
EAM-WO-004	error	Mandatory checklist item {i} unanswered	Completion check	Answer the item	8.44.5 validation
EAM-WO-005	error	CAPITAL work order needs a fixed asset or CIP project	Validation	Link a fixed asset or project	FR-44.11
EAM-FLT-001	error	Register a fault before completing {type} work orders	Fault mandatory	Add symptom/cause/remedy	FR-44.16
EAM-FLT-002	error	Combination {symptom}/{area}/{type} not allowed for {assetType}	Catalog	Choose an allowed combination	FR-44.16
EAM-PMT-001	error	Job requires an ISSUED {permitType} permit	No valid permit	Request and issue the permit	BR-44.11
EAM-PMT-002	error	{n} isolation points lack a verified lock	LOTO incomplete	Apply and verify locks	BR-44.11
EAM-PMT-003	error	Permit cannot close: {n} locks still applied	Locks open	Remove locks	BR-44.11
EAM-PMT-004	warning	Permit {p} expired and was suspended	Validity passed	Revalidate or reissue	BR-44.11
EAM-PMT-005	error	Approver must differ from requester	SoD	Another approver	BR-44.11
EAM-REF-001	error	Serial {s} is not in condition DAMAGED	Refurbishment input	Select a damaged unit	BR-44.12
EAM-WAR-001	info	Line covered by warranty {w} ({vendor})	Warranty check	Claim created at completion	BR-44.14
EAM-BUD-001	error	Budget version {v} already transferred; create a new version	Immutability	Recalculate as new version	BR-44.13
EAM-IOT-001	info	Duplicate breach suppressed for {asset}/{rule}	Dedupe/cooldown	None	BR-44.4

8.44.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
IoT reading → request	10 readings/s per site, 30 sites; peak 1,000/s	1 / 5 / 8 s	1,000 readings/s	CounterReading ≈ 9.5 B rows raw → downsampled to 1/min after 30 days ≈ 200 GB	monthly partitions; (counter_id, reading_at)	evaluate thresholds on every reading, rate-of-change rules sampled at 1/s; lag alert
Plan scheduling (nightly)	10,000 plan lines per tenant	run < 5 min; per line 5 / 20 / 50 ms	100 lines/s	negligible	PlanLine (next_due_at), (next_due_forecast_at)	event-driven part continues; nightly sweep extends
WO status transition (mobile)	20,000 transitions/day; peak 300/min	50 / 200 / 400 ms	50/s	WO ≈ 2 KB × 150k/year = 300 MB	(site_id, status, due_at)	mobile action log buffers; server applies in order
Work order board load	200 planners, 2,000 open WOs per site	300 / 800 / 1,500 ms	20 loads/s	n/a	projection per site	Gantt lazy-loads by week
Permit transition	1,000/day	80 / 250 / 500 ms	10/s	permits + locks ≈ 100 MB	(work_order_id), (status, valid_to)	none permitted: permit checks fail closed
Budget calculation	10,000 lines × 12 months	< 10 min	20 lines/s per worker	MaintenanceBudget ≈ 120k rows/version	(version, scope, period)	longer run
KPI query	2,000/day	100 / 400 / 900 ms	20 q/s	rollups ≈ 2 GB	hourly rollup tables	serve last rollup

8.44.20 Localization and compliance hooks

- Lockout/tagout: US OSHA 29 CFR 1910.147 (energy control procedures, periodic inspection at least annually, lock per authorized employee), EU Directive 2009/104/EC and DE BetrSichV / TRBS 1112 (Instandhaltung), UK PUWER 1998; permit types and checklists are pack templates per country; extension point `eam.permit.template.<cc>`.
- Statutory inspections: pressure equipment (EU PED, DE BetrSichV §§15–16 intervals), lifting equipment (UK LOLER 6/12 months), fire systems (NFPA 25), vehicle inspection (DE HU §29 StVZO, US DOT 49 CFR 396.17 annual) delivered as plan templates with mandatory checklists by the wave-48 packs.
- Environmental: refrigerant leak checks (EU F-gas Regulation 2024/573 intervals by CO2-equivalent; US EPA Section 608 for ≥ 50 lb appliances) as plan templates using counter "refrigerant charge".
- Records retention: maintenance and inspection records retained for the asset life plus country-specific periods (US OSHA 1910.147 certification records; DE BetrSichV records until next inspection; aviation/rail regulated sectors out of scope).
- Units: counters support metric and US customary units with wave-8 UoM conversion; temperature thresholds stored in SI with display conversion.
- Fleet: fuel tax and mileage logs for company vehicles (DE Fahrtenbuch per §6 EStG; US IRS Pub 463 substantiation) use fuel log and odometer counters; wave-48 packs format the log.
- Language: checklists, permit texts and LOTO procedures are translatable (wave-3 labels); permits print in the site language plus English when the site parameter requests a second language.

8.44.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX #299 — 12.35.1 Maintenance rounds (EntAssetMaintenanceRound)	PARTIAL	ADDED as FR-44.14	BR-44.9
AX #300 — 12.35.1 Maintenance sequences (EntAssetMaintenanceSequence)	PARTIAL	ADDED as FR-44.15	BR-44.10
AX #301 — 12.35.1 Work order fault registration (EntAssetFault)	PARTIAL	ADDED as FR-44.16	WorkOrderFault
AX #302 — 12.35.1 Warranties (EntAssetWarranty, warranty check on WO)	PARTIAL	ADDED as FR-44.17	BR-44.14; vendor claim in FR-45.15
AX #303 — 12.35.1 Maintenance budgets (EntAssetMaintenanceBudget)	PARTIAL	ADDED as FR-44.18	BR-44.13
AX #304 — 12.35.2 Fault analysis	PARTIAL	ADDED as FR-44.16	"Fault analysis" in 8.44.14
AX #305 — 12.35.2 Warranty inquiry	PARTIAL	ADDED as FR-44.17	"Warranty inquiry"
AX #306 — 12.35.2 Budget vs actual (maintenance)	PARTIAL	ADDED as FR-44.18	"Budget vs actual"
AX #307 — 12.35.2 SSRS Fault report	PARTIAL	ADDED as FR-44.16	Document in 8.44.15
AX #308 — 12.35.3 Schedule maintenance rounds / sequences	PARTIAL	ADDED as FR-44.14	Covered by `eam-plan-schedule` with ROUND and sequence lines (also FR-44.15)
AX #309 — 12.35.3 Maintenance budget calculation	PARTIAL	ADDED as FR-44.18	Job `eam-budget-calculate`
AX #310 — 12.35.4 Plan types, plan line defaults, rounds setup, sequences setup	PARTIAL	ADDED as FR-44.14	Parameters in 8.44.13; sequences setup via FR-44.15
AX #311 — 12.35.4 Fault symptoms, areas, types, causes, remedies, fault designer	PARTIAL	ADDED as FR-44.16	Fault catalog designer screen
AX #312 — 12.35.4 Warranty types, vendor warranty setup	PARTIAL	ADDED as FR-44.17	AssetWarranty.warranty_type_id
AX #313 — 12.35.4 Maintenance budget parameters	PARTIAL	ADDED as FR-44.18	Parameter "Budget calculation horizon and version"
SAP #297 — 13.25 IE31/IE36/IE37 fleet objects	PARTIAL-44	ADDED as FR-44.21	Fuel log and odometer counters
SAP #298 — 13.25 IW81/IW8W refurbishment order / GR for refurbishment	PARTIAL-44	ADDED as FR-44.20	BR-44.12; needs wave-16 condition dimension (flagged in 8.44.12)
SAP #299 — 13.25 IW32 permits (IPMD) / WCM lockout/tagout	PARTIAL-44	ADDED as FR-44.19	BR-44.11

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
SAP #300 — 13.25 Asset Intelligence Network / Predictive Asset Insights / ASPM	PARTIAL-44	ADDED as FR-44.22	Criticality/RCM-lite here; predictive ML OUT-OF-SCOPE for v1 (hooks only; models candidate for wave 47); AIN manufacturer network OUT-OF-SCOPE
SAP #301 — 13.25 SPRO refurbishment valuation types (OMWC), order type PM04	PARTIAL-44	ADDED as FR-44.20	Parameter "Condition valuation for rotables"; WO type REFURBISHMENT
SAP #302 — 13.25 SPRO permits (T357G), WCM objects/applications/approvals	PARTIAL-44	ADDED as FR-44.19	PermitType, IsolationPoint setup

8.45 Wave 45: Service Management & Field Service

8.45.1 Scope and business context

Service management replaces AX Service management (SMAServiceAgreementTable, SMAServiceOrderTable, SMAServiceObjectTable, SMADispatchBoard, SMARepair, service subscriptions), D365 Field Service (work orders, bookings, agreements, IoT alerts, mobile) and SAP CS/FSM (service notifications, service orders, IBase, warranties, SAP Field Service Management). After this wave: an installed base is built from shipped serials; agreements define entitlements, SLAs and pricing; cases become service work orders; a dispatcher schedules technicians with OR-Tools respecting skills, territories, time windows and travel; technicians execute offline on a PWA with photos, signatures and truck-stock parts; billing posts to the customer or warranty. This is the phase-exit wave.

Out of scope: customer-facing self-scheduling portal (v1.x), subscription billing beyond wave-29 recurring invoices, remote assist/AR, depot repair RMA beyond wave-30 RMA linkage.

Coverage closure (8.45.21) adds the cross-module case framework that earlier waves deferred to this wave: generic case management with categories, processes, activities and associations to any record (FR-45.12), a knowledge base of symptom/solution articles (FR-45.13), activities on cases, projects and other records (FR-45.14), supplier warranty claims (FR-45.15) and email-to-case intake (FR-45.16). Telephony/CTI and omnichannel contact-center routing remain out of scope (CRM non-goal).

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
AX SMADispatchBoard is a manual Gantt: a dispatcher drags each SMAServiceOrderTable row by hand, with no skill or travel check; SAP FSM/RSO optimization is a separate licensed product with its own master data sync	No optimizer in the ERP; duplicated technician master	OR-Tools CP-SAT dispatch inside the service domain using wave-42 skills and wave-16 truck stock (BR-45.3)	Dispatch time per territory-day 2–3 h → < 30 s solve + 10 min review; skill/window violations 0
Entitlement: AX service orders pick the agreement the user chooses (SMAServiceOrderTable.ServiceAgreementId) with no SLA clock; SAP CS warranty check (IW31 "warranty" pop-up) is informational and SLA profiles live in CRM only	No deterministic entitlement or SLA engine in ERP	Resolver (BR-45.1) and business-hour SLA clocks with pause states and breach events (BR-45.2)	Wrong-agreement billing 0 on fixtures; SLA breaches discovered after the fact → warning at 75%
Installed base built by hand: AX service objects created manually after shipment; SAP IBase needs IB51/IB52 maintenance or a custom user exit from delivery	No event from shipment to service	Service objects created from wave-28 serialized shipment events with warranty start	Manual IBase upkeep 100% → 0; serial-to-object lag days → < 60 s
Technician execution on paper or a disconnected app; parts used from vans re-keyed into inventory journals days later, causing negative stock and wrong COGS	No mobile execution or truck-location model	Offline PWA with append-only action log; TRUCK locations with consumption at completion	Parts re-keying 0; inventory accuracy on trucks ≥ 99%; completion-to-invoice 5–10 days → same day
Service billing in AX goes through project invoice proposals (service orders post to ProjEmplTrans/ProjItemTrans), a second module to learn; SAP DP90 again	Service reuses project billing plumbing	Work order lines carry coverage (BILLABLE/WARRANTY/AGREEMENT) and post directly to wave-29 invoicing	Billing steps 6 → 1; warranty-vs-billable misclassification 0 on 30 fixtures

8.45.2 AX / SAP parity map

Capability	AX / D365	SAP ECC / S/4	Passage equivalent	Parity
Installed base / service objects	SMAServiceObjectTable, SMAServiceObjectRelationTable; D365 FS customer assets	IBase (IBIN/IBIB), equipment with customer, serial numbers (SERI)	`ServiceObject` from wave-28 shipment serials	full
Warranties	Limited (SMAServiceObject + agreement) ; D365 FS warranties	Warranty master (BGMK), warranty check on order	`Warranty` (parts/labor/travel, start trigger)	improved
Service agreements	SMAServiceAgreementTable/Line, SMAAgreementLine, service intervals	Service contracts (VA41, VBAK type WV/SC), SLA profiles	`ServiceAgreement`, `Entitlement`, `SlaProfile`	full
Cases/notifications	smmCase (CRM case), D365 FS cases	QMEL service notifications (IW51), CRM cases	`Case`	full
Service orders	SMAServiceOrderTable/Line, stages	Service orders (IW31 type SM01/SM02), CS order	`ServiceWorkOrder`	full
Dispatch board	SMADispatchBoard (Gantt), SMAServiceTechnician	SAP FSM planning board / Resource Scheduling Optimizer; CRM MRS	`dispatch` service (OR-Tools CP-SAT) + board	improved
Technician mobile	D365 FS mobile (Power Apps)	SAP FSM mobile	technician PWA	full
Parts from trucks	D365 FS warehouse per resource	Van stock (storage location per technician)	wave-16 location type TRUCK per technician	full
Billing	SMAServiceOrder → project invoice (service orders post via projects)	DP90 to billing, warranty claim	`ServiceWorkOrder` → wave-29 invoice; WARRANTY lines no-charge	full
KPIs	Service management reports	CS reports	SLA attainment, first-time fix, utilization	improved
Generic case management	CaseDetail, CaseCategory (category types: HR, customer service, collections, product change, audit, service, project…), CaseProcess (stages), case associations, case category security	QMEL notifications by type, S/4 Service cases, CRM case management (CRMD_ORDER case), dispute cases (UDM)	`Case` with `CaseCategory`, `CaseProcess`, `CaseAssociation` (FR-45.12)	full
Knowledge base	CaseKnowledgeArticle (knowledge articles on cases)	Solution database IS01/IS02 (symptoms/solutions), CRM knowledge articles	`KnowledgeArticle` (FR-45.13)	full
Activities	smmActivities (tasks, appointments) on cases and projects	Notification tasks/activities (QMSM/QMMA), CRM activities	`Activity` (FR-45.14)	full
Supplier warranty claims	n/a	WTY warranty claim processing (WTY1, claim types, vendor recovery)	`SupplierWarrantyClaim` (FR-45.15)	full

Capability	AX / D365	SAP ECC / S/4	Passage equivalent	Parity
Front office intake	Case via email (manual)	CIC0 customer interaction center, CRM IC email	email-to-case via wave-35 hub (FR-45.16)	partial — no CTI/telephony
Service subscriptions	SMASubscriptionTable, fee transactions, indexation	Service contract billing plans (VA42 billing plan), periodic billing	wave-29 subscription billing with agreement billing_model SUBSCRIPTION	improved — single engine

8.45.3 Functional requirements

- **FR-45.1 Installed base** — Must. The system shall create service objects automatically from wave-28 shipments of serialized items (and manually), with customer, site address, parent/child structure, install date and current status.
- **FR-45.2 Warranties** — Must. The system shall attach warranty terms (parts/labor/travel coverage flags, duration from SHIP/INSTALL/REGISTRATION, exclusions) to service objects and evaluate coverage per work order line.
- **FR-45.3 Service agreements** — Must. The system shall define agreements per customer with lines covering service objects or categories, entitlements (included visits/hours, discounts, price lists), SLA profile, validity and billing (prepaid, per-visit, subscription via wave 29).
- **FR-45.4 SLA profiles** — Must. The system shall define response and resolution targets by priority with business-hour calendars and pause states per BR-45.2.
- **FR-45.5 Cases** — Must. The system shall capture cases (phone, email, portal, IoT from wave 44/25) and resolve entitlement to the best agreement per BR-45.1, starting the SLA clock.
- **FR-45.6 Service work orders** — Must. The system shall create work orders from cases or agreements (preventive visits) with incident type, required skills, estimated duration, time window, service object, address, and lines (labor, parts, travel, fees) each billable, covered-by-warranty or covered-by-agreement.
- **FR-45.7 Dispatch optimization** — Must. The system shall produce daily schedules per territory with OR-Tools CP-SAT satisfying BR-45.3 constraints, with manual override on the board and incremental re-optimization on changes.
- **FR-45.8 Technician mobile PWA** — Must. The system shall provide an offline-capable PWA: today's route, navigate, start travel/work, checklists, photos, parts from truck stock, signature capture, customer-facing summary.
- **FR-45.9 Truck stock** — Must. The system shall treat each technician's vehicle as a wave-16 location (type TRUCK) with replenishment transfer orders and consumption on work order completion.
- **FR-45.10 Billing** — Must. The system shall post completed work orders to wave-29 invoicing: billable lines at agreement/standard prices, warranty lines at zero with a warranty cost record, agreement-covered lines consuming entitlement.
- **FR-45.11 Service KPIs** — Should. The system shall compute SLA attainment, first-time-fix rate, mean time to respond/resolve, technician utilization and travel ratio.
- **FR-45.12 Generic case management** — Must. The system shall generalize `Case` to any business domain through case categories (hierarchical, with category type SERVICE, CUSTOMER_SERVICE, HR, COLLECTIONS, PRODUCT_CHANGE, AUDIT, PROJECT, VENDOR, INTERNAL), case processes (ordered stages with entry/exit criteria and required activities), associations to any record (entity type + id from the wave-3 metadata registry: customer, vendor, worker, invoice, item, project, asset, work order, audit finding), a case log, resolution codes, per-category SLA profile and per-category OPA security.
  - SERVICE and CUSTOMER_SERVICE categories keep the entitlement and SLA behavior of FR-45.5 (BR-45.1, BR-45.2); other categories use the category's SLA profile (or none).
  - customer_party_id becomes optional; required for SERVICE/CUSTOMER_SERVICE/COLLECTIONS categories.
  - Minimal case entities used by earlier waves (wave-30 disputes, wave-9 product change requests) migrate into categories COLLECTIONS and PRODUCT_CHANGE with their ids kept as associations (migration job `case-consolidate`).
- **FR-45.13 Knowledge base** — Should. The system shall maintain knowledge articles (title, symptom, cause, solution steps, applicability to item, item group, incident type, asset type and case category, language, attachments) with versioning and lifecycle DRAFT → IN_REVIEW → PUBLISHED → RETIRED, full-text and structured search, suggestions on case creation, linking of articles to cases, and usage and helpfulness statistics.
- **FR-45.14 Activities** — Should. The system shall record activities (TASK, APPOINTMENT, CALL_NOTE, EMAIL_NOTE) with owner, due/start/end, status (OPEN, DONE, CANCELED) and reminders on cases, projects (wave 41), service work orders and any associable record, with a personal "My activities" list and calendar export (iCalendar).
- **FR-45.15 Supplier warranty claims** — Should. The system shall create supplier warranty claims from WARRANTY-covered service work order lines and from `eam.warranty.claimable.v1` events, with claim lines (part, serial, failure code, labor hours at the vendor's agreed rate), submission to the vendor (PDF/email or wave-35 EDI), vendor decision (ACCEPTED, PARTIALLY_ACCEPTED, REJECTED), failed-part return through a wave-30/17 vendor return, and settlement by matching the vendor credit note (wave 18) per BR-45.12.
- **FR-45.16 Email-to-case intake** — Should. The system shall create or update cases from inbound email to category mailboxes through the wave-35 integration hub, threading replies by a case token in the subject (`[CS-{seq}]`) or the Message-ID chain, storing attachments, matching the sender to a customer contact, sending an acknowledgment, and logging outbound replies on the case.

8.45.4 Data model

ServiceAgreement

Field	Type	Required	Notes
id	uuid	yes	PK; number SA-{seq}
customer_party_id	uuid	yes	
legal_entity_id	uuid	yes	
validity	daterange	yes	
sla_profile_id	uuid	yes	
billing_model	enum	yes	PREPAID, PER_VISIT, SUBSCRIPTION
price_list_id, discount_pct	uuid, numeric(5,2)	no	
priority_rank	smallint	yes	entitlement tie-break
lines[]	AgreementLine	yes	(service_object_id or category, included_visits, included_hours, parts_covered bool, labor_covered bool, travel_covered bool)
status	enum	yes	DRAFT, ACTIVE, SUSPENDED, EXPIRED, CANCELED

Case

Field	Type	Required	Notes
id	uuid	yes	PK; number CS-{seq}
customer_party_id, service_object_id	uuid	yes/no	
channel	enum	yes	PHONE, EMAIL, PORTAL, IOT, INTERNAL

Field	Type	Required	Notes
priority	smallint	yes	1–4
agreement_id, entitlement_result	uuid, jsonb	no	resolution trace
sla_response_due, sla_resolution_due	timestamptz	computed	
sla_state	enum	yes	RUNNING, PAUSED, MET, BREACHED
sla_paused_minutes	int	yes	
status	enum	yes	NEW, IN_PROGRESS, WAITING_CUSTOMER, WAITING_PARTS, RESOLVED, CLOSED, CANCELED
opened_at, responded_at, resolved_at	timestamptz		

ServiceWorkOrder

Field	Type	Required	Notes
id	uuid	yes	PK; number SWO-{seq}
case_id, agreement_id, service_object_id	uuid	no/no/no	
customer_party_id, address_id, geo (lat, lon)		yes	
territory_id	uuid	yes	
incident_type_id, required_skills[]	uuid, uuid[]	yes	
est_duration_minutes	int	yes	
time_window	tstzrange	no	customer-promised
priority, sla_due	smallint, timestamptz		
status	enum	yes	UNSCHEDULED, SCHEDULED, DISPATCHED, TRAVELING, IN_PROGRESS, ON_HOLD, COMPLETED, POSTED, CANCELED
assignment (technician_id, start, end, sequence)		no	from dispatch
lines[]	WorkOrderLine		(kind LABOR/PART/TRAVEL/FEE, qty, unit_price, coverage BILLABLE/WARRANTY/AGREEMENT, amount)
signature_ref, photos[]		no	object store
first_time_fix	bool	no	set at completion

CaseCategory: id, code, parent_id, category_type, process_id, sla_profile_id, default_priority, opa_policy_ref, resolution_codes[]. **CaseProcess**: id, stages[] (code, sequence, entry_criteria CEL, exit_criteria CEL, required_activity_templates[]). Case adds: category_id, stage_code, resolution_code, resolution_text, case_log[] (at, actor, kind, text), and customer_party_id becomes conditional. **CaseAssociation**: case_id, entity_type (registry name), entity_id, role (SUBJECT, RELATED). **KnowledgeArticle**: id (sequence KB-{seq}), version, title, symptom, cause, solution, applicability {item_ids[], item_group_ids[], incident_type_ids[], asset_type_ids[], category_ids[]}, language, status (DRAFT, IN_REVIEW, PUBLISHED, RETIRED), author_id, reviewer_id, published_at, tsv tsvector, views, helpful_yes, helpful_no. **CaseArticleLink**: case_id, article_id, article_version, outcome (SOLVED, NOT_HELPFUL). **Activity**: id, kind, subject, owner_worker_id, due_at, start_at, end_at, status, reminder_minutes, associations[] (entity_type, entity_id). **SupplierWarrantyClaim**: id (sequence SWC-{seq}), vendor_party_id, source (SERVICE_WO, EAM_WO), source_ids[], lines[] (item_id, serial, failure_code, part_amount, labor_hours, labor_rate, claimed_amount, accepted_amount), status (DRAFT, SUBMITTED, ACCEPTED, PARTIALLY_ACCEPTED, REJECTED, SETTLED, CLOSED), submitted_at, vendor_reference, return_order_id, credit_note_id, recovered_amount. **InboundMessage**: id, mailbox, message_id, in_reply_to, from_address, subject, received_at, case_id, attachments[].

ServiceObject: id, item_id, serial, customer_party_id, site_address_id, parent_id, installed_at, status (ACTIVE, INACTIVE, RETURNED), shipment_line_id, warranty_id. **Warranty**: id, template, starts_on (SHIP/INSTALL/REGISTRATION), months, parts_covered, labor_covered, travel_covered, exclusions[]. **Technician**: worker_id, territory_ids[], skills[] (from wave 42), shift calendar, home geo, truck_location_id, max_daily_minutes, overtime_allowed. **DispatchRun**: id, territory_id, date, status, solver_seconds, objective, assignments[].

Invariants: a case has at most one resolved agreement; SLA due timestamps are recomputed whenever paused minutes change; a work order has at most one active assignment; parts lines must reference the technician's truck location or a wave-16 reservation; invoiced amount = Σ BILLABLE lines. Indexing: `ServiceWorkOrder (territory_id, status, sla_due)`; geo via PostGIS point index; `Case (sla_state, sla_resolution_due)` for the breach monitor.

8.45.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	`/api/v1/service/agreements`	Create agreement	key	SvcAgreementMaintain
POST	`/api/v1/service/cases`	Create case (entitlement + SLA start)	key	SvcCaseCreate
POST	`/api/v1/service/cases/{id}/status`	Transition (pauses/resumes SLA)	key + version	SvcCaseMaintain
POST	`/api/v1/service/work-orders`	Create WO	key	SvcWoMaintain
POST	`/api/v1/service/dispatch/runs`	Optimize territory/date	key per (territory, date, version)	SvcDispatch
POST	`/api/v1/service/dispatch/runs/{id}/publish`	Publish schedule	key	SvcDispatch
POST	`/api/v1/service/work-orders/{id}/actions`	Mobile action log (travel start, work start, part, photo, signature, complete)	key per action id	SvcTechnician
POST	`/api/v1/service/work-orders/{id}/post`	Bill / warranty post	key	SvcBillingPost
GET	`/api/v1/service/kpis?territory=&from=&to=`	KPIs	n/a	SvcInquire
POST	`/api/v1/cases`	Create case in any category (generic)	key	CaseCreate (category-scoped by OPA)
POST	`/api/v1/cases/{id}/stage`	Advance case process stage	key + version	CaseMaintain
POST	`/api/v1/cases/{id}/associations`	Associate a record	key	CaseMaintain
GET	`/api/v1/knowledge/articles/search?q=&itemId=&incidentTypeId=&lang=`	Search / suggest articles	n/a	KbRead
POST	`/api/v1/knowledge/articles/{id}/publish`	Publish article version	key + ETag	KbPublish
POST	`/api/v1/activities`	Create activity on any record	key	ActivityMaintain
POST	`/api/v1/service/supplier-claims`	Create supplier warranty claim	key	SvcClaimMaintain

Method	Path	Purpose	Idempotency	Auth duty
POST	`/api/v1/service/supplier-claims/{id}/decision`	Record vendor decision	key	SvcClaimMaintain

Validation: case creation requires a customer; dispatch run requires all WOs to have geo and skills; complete action requires signature unless incident type exempts; post requires COMPLETED and all parts lines consumed.

Event	Trigger	Payload	Consumers
`dev.passage.service.case.opened.v1`	case created	caseId, customerId, priority, agreementId, responseDue, resolutionDue	notifications, analytics
`dev.passage.service.sla.breached.v1`	breach monitor	see 8.0	notifications, analytics
`dev.passage.service.dispatch.published.v1`	publish	see 8.0	PWA, customer notifications
`dev.passage.service.workorder.completed.v1`	complete action	workOrderId, technicianId, lines[], firstTimeFix, durationMinutes	billing, inventory (truck consumption), KPIs
`dev.passage.service.workorder.posted.v1`	billing post	workOrderId, invoiceId, billableTotal, warrantyCost, entitlementConsumed	invoicing, analytics
`dev.passage.case.stage.changed.v1`	stage transition (any category)	caseId, categoryId, from, to, at, actor	workflow, notifications, domain owners (HR, collections, audit)
`dev.passage.knowledge.article.published.v1`	article PUBLISHED	articleId, version, language, applicability	search index, copilot retrieval (wave 47)
`dev.passage.service.supplier-claim.settled.v1`	credit note matched	claimId, vendorId, claimedAmount, recoveredAmount	analytics, GL warranty recovery

8.45.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Service workspace	tiles: SLA at risk (> 75% elapsed), unscheduled WOs, today's completion rate		SvcInquire
Case detail	entitle, create WO, pause/resume, resolve	SLA timers, agreement, object, timeline	SvcCaseMaintain
Agreement detail	lines, entitlement usage, SLA profile, billing		SvcAgreementMaintain
Dispatch board (Gantt + map)	optimize, drag assign, lock, publish, re-optimize	technician rows, WO blocks, travel segments, SLA due markers	SvcDispatch
Work order detail	lines, coverage, parts, photos, signature, post		SvcWoMaintain
Technician PWA	route, navigate, start/stop, checklist, parts, photos, signature, complete	offline indicator, sync queue	SvcTechnician
Installed base explorer	search by customer/serial, hierarchy, history		SvcInquire
KPI dashboard	filter by territory/technician	SLA %, FTF %, utilization	SvcInquire
My cases / case list (any category)	create, filter by category/stage/SLA, bulk assign	case, category, stage, owner, SLA due, associations	CaseMaintain
Case category and process setup	define categories, stages, criteria, SLA, security	category tree, process stages	CaseSetupAdmin
Knowledge base	search, view, rate helpful, author, review, publish	title, applicability, language, version, status, helpful %	KbRead / KbAuthor / KbPublish
My activities	list, calendar, complete, reschedule	activity, related record, due, status	ActivityMaintain
Supplier warranty claims	create from WO lines, submit, record decision, match credit note	claim, vendor, lines, claimed, accepted, recovered	SvcClaimMaintain
Case mailbox	view unmatched inbound email, attach to case, create case	sender, subject, received, match suggestion	CaseMaintain

Rules: board locks (pinned assignments) survive re-optimization; dragging a WO outside skill/time window shows a hard-block explanation; PWA photo max 5 per action at 1,600 px long edge; signature stored as PNG with timestamp and geo.

8.45.7 Business rules and edge cases

- **BR-45.1 Entitlement resolution** — candidates = ACTIVE agreements of the customer (or parent party) whose validity covers opened_at and whose lines match the service object (exact object > object category > any) ; rank by match specificity, then priority_rank, then latest start; the chosen agreement sets the SLA profile and coverage; if none, the default SLA profile of the legal entity applies and all lines are BILLABLE unless warranty covers them.
- **BR-45.2 SLA clock rules** — response target measured from opened_at to first of (responded_at, assignment DISPATCHED); resolution target from opened_at to resolved_at. Clocks count only business minutes of the SLA profile calendar (e.g. Mon–Fri 08:00–18:00 in the service site's time zone, holidays excluded), unless the profile is 24×7. Pause states: WAITING_CUSTOMER pauses both clocks; WAITING_PARTS pauses resolution only if profile.pause_on_parts = true. Due timestamps are stored as absolute times and recomputed on each pause/resume: due = add_business_minutes(opened_at, target_minutes + paused_minutes). Warning event at 75% elapsed; breach event when now > due while RUNNING; a breached SLA stays BREACHED even if resolved later (attainment reporting counts it as missed). Example: priority 2 resolution target 480 business minutes, opened Fri 2026-10-23 16:00 (America/Chicago), paused 120 minutes Mon → due Tue 2026-10-27 12:00.
- **BR-45.3 Dispatch optimization constraints** — decision: assign each WO to at most one technician and a start time. Hard constraints: required_skills ⊆ technician.skills (certifications unexpired per BR-42.8); WO.territory ∈ technician.territory_ids; start ≥ time_window.lower and end ≤ time_window.upper if set; start/end within technician shift; sequence feasibility with travel time from an OSRM/Valhalla matrix (self-hosted) plus 5-minute buffer; Σ (work + travel) ≤ max_daily_minutes (+ overtime up to 120 min if overtime_allowed); pinned assignments fixed; parts required must be on the truck or a reservation picked. Objective (lexicographic weights): minimize SLA lateness minutes × 100, unassigned priority-weighted WOs × 1,000, travel minutes × 1, overtime minutes × 5, technician count × 50. Solver: CP-SAT with 30 s time limit, 8 workers; fallback greedy insertion when no feasible solution in time; incremental re-optimization only moves WOs not yet DISPATCHED or with the dispatcher's consent. Scale target: 200 WOs × 25 technicians per territory-day.
- **BR-45.4 Coverage per line** — PART: WARRANTY if warranty.parts_covered and within term and not excluded; else AGREEMENT if line.parts_covered; else BILLABLE. LABOR/TRAVEL analogous. Agreement included_hours consumed FIFO; when exhausted, remaining hours BILLABLE at agreement price list.
- **BR-45.5 Work order status machine** — UNSCHEDULED → SCHEDULED → DISPATCHED → TRAVELING → IN_PROGRESS → COMPLETED → POSTED; IN_PROGRESS ↔ ON_HOLD; any pre-COMPLETED → CANCELED; a COMPLETED WO with follow-up creates a new WO linked by `follow_up_of` and sets first_time_fix = false.
- **BR-45.6 Offline merge** — mobile actions are append-only with client-generated UUIDs and device timestamps; server orders by (device timestamp, receipt order); conflicting status transitions resolve to the furthest valid state; free text last-writer-wins; parts consumption is idempotent per action id.

- **BR-45.7 Truck stock** — consumption posts an inventory issue from the TRUCK location at completion; negative truck stock blocked unless policy `service.allow-negative-truck`; replenishment transfer orders generated when below min per item.
- **BR-45.8 Pricing** — BILLABLE labor at agreement price list → customer price group → standard rate; parts via wave-27 pricing engine with agreement discount; rounding per line half-even.
- **BR-45.9 Case process stages** — a case starts at the first stage of its category's process; advancing requires the current stage's exit criteria (CEL over case, associations, activities) to be true and all required activities of the stage DONE (`CASE-STG-001`); moving back one stage is allowed with a reason; RESOLVED requires a resolution code; CLOSED is final, and reopening creates a new case linked by `reopened_from` unless the category allows reopen within N days (parameter, default 14).
- **BR-45.10 Case category security** — read and write access to a case is the union of: owner, members of the category's owning team, and users whose OPA policy for the category type grants access (e.g. HR cases only to HR partners and the case subject's manager chain; COLLECTIONS to the customer's collector); associations to records the user cannot read are shown as "restricted record"; HR category cases store free text in the `hr_pii`-protected column set.
- **BR-45.11 Knowledge article lifecycle and suggestion** — only one PUBLISHED version per (article, language); publishing a new version retires the previous one; reviewer ≠ author; suggestions on case creation rank PUBLISHED articles by ts_rank of the case description against the article tsvector × 0.6 + applicability match (item 0.25, incident type 0.10, asset type 0.05) and return the top 5; helpfulness % = helpful_yes ÷ (helpful_yes + helpful_no) shown when ≥ 10 votes.
- **BR-45.12 Supplier warranty claims** — claimable amount per line = part cost at issue (wave 16) + labor_hours × vendor labor_rate (from the vendor warranty agreement; default 0 when labor not covered); claims must be submitted within the vendor's claim window (default 30 days after WO completion, `SVC-SWC-001` after); accepted_amount ≤ claimed_amount; settlement matches the wave-18 vendor credit note by vendor_reference, and the recovered amount credits the warranty expense account; rejected claims close with reason and no posting; a failed-part return is required when the vendor flag `return_required` is set before SUBMITTED.
- **BR-45.13 Email threading** — an inbound message is attached to case X when the subject contains `[CS-X]` and the case is not CLOSED, or when In-Reply-To matches a message already on case X; otherwise a new case is created in the mailbox's default category with the sender matched to a party contact by email (exact, case-insensitive); messages to a CLOSED case create a new case linked by `reopened_from`; auto-acknowledgment is sent once per new case and suppressed for auto-replies (headers `Auto-Submitted`, `X-Autoreply`).

8.45.8 Acceptance criteria

- **AC-45.1** (FR-45.5, BR-45.1) Given 50 entitlement fixtures (overlapping agreements, categories, parent parties), when cases open, then each resolves to the expected agreement and SLA profile.
- **AC-45.2** (FR-45.4, BR-45.2) Given the BR-45.2 example, when the case is paused 120 minutes on Monday, then resolution due = 2026-10-27T12:00-05:00.
- **AC-45.3** (BR-45.2) Given a RUNNING case at 75% elapsed, when the monitor runs, then a warning notification fires; at 100% a `sla.breached` event fires once.
- **AC-45.4** (FR-45.7, BR-45.3) Given 1,000 generated territory-days (≤ 200 WOs, ≤ 25 technicians), when optimized, then every assignment satisfies skills, windows, shifts and travel feasibility, and solver time p95 < 30 s (property test).
- **AC-45.5** (FR-45.7) Given a pinned assignment, when re-optimization runs, then it is unchanged.
- **AC-45.6** (FR-45.10, BR-45.4) Given a WO with a part covered by warranty and 3 labor hours under an agreement with 1 included hour, when posted, then the invoice contains 2 billable labor hours, the part is zero-priced with warranty cost recorded, and entitlement usage shows 1 hour consumed.
- **AC-45.7** (FR-45.8, BR-45.6) Given a technician offline for 8 h performing start/part/complete actions, when reconnected, then the server state equals the device state and inventory shows one issue per part action.
- **AC-45.8** (FR-45.1) Given a wave-28 shipment of 10 serialized units, when confirmed, then 10 ACTIVE service objects exist with warranty starting on ship date.
- **AC-45.9** (phase exit) Given the demo group, when the recorded walkthrough runs projects → HR → payroll → maintenance → field service, then every step completes on `stage` with reconciliations at zero variance.
- **AC-45.10** (FR-45.12, BR-45.9) Given an HR category with stages INTAKE → INVESTIGATION → RESOLUTION and a required "Interview" activity in INVESTIGATION, when the case advances to RESOLUTION with the activity OPEN, then it is rejected with `CASE-STG-001`; after the activity is DONE it advances.
- **AC-45.11** (FR-45.12, BR-45.10) Given an HR case on worker W, when a collector without HR policy queries it, then 403 is returned; the subject's manager (as-of today per BR-42.1) can read it.
- **AC-45.12** (FR-45.13, BR-45.11) Given 3 PUBLISHED articles of which one applies to the case item, when a case is created with matching description text, then that article ranks first in the suggestions; a reviewer equal to the author cannot publish (`KB-PUB-001`).
- **AC-45.13** (FR-45.15, BR-45.12) Given a WO with a WARRANTY part line of 180.00 USD and 1.5 labor hours at a vendor rate of 60.00, when a claim is created and the vendor accepts 250.00 with credit note matched, then recovered_amount = 250.00, the warranty expense account is credited 250.00 and the claim is SETTLED.
- **AC-45.14** (FR-45.16, BR-45.13) Given an open case CS-1042, when an email with subject "Re: [CS-1042] pump noise" arrives, then it is logged on CS-1042 and no new case or acknowledgment is created; an email with no token from an unknown sender creates a new case in the mailbox's default category.
- **AC-45.15** (FR-45.14) Given a project (wave 41) and a case each with an open TASK for the same owner, when "My activities" loads, then both appear with their related records, and completing one sets status DONE with timestamp.

8.45.9 Test plan and fixtures

Fixtures: `svc-installed-base` (derived from wave-28 shipped serials, 2,000 objects); `svc-entitlement-50`; `svc-dispatch-gen` (Hypothesis generator for WOs/technicians with seeded travel matrix); `svc-mobile-replay` (offline action logs); `svc-billing-30`.

Test	Type	Target	Pass criterion
Entitlement	unit	resolver	50/50
SLA calendar arithmetic	property	business-minute functions	add/subtract inverse; DST-safe
Dispatch feasibility	property	CP-SAT model	1,000/1,000 feasible; p95 < 30 s
Offline merge	unit/E2E	action log merge	deterministic result
Billing coverage	contract	invoicing API	30/30
PWA	E2E (Playwright, offline)	technician flow	complete with signature offline
Breach monitor	performance	100k open cases	scan < 60 s

Reconciliation: Σ POSTED billable = wave-29 invoices with source SWO; Σ warranty cost = GL warranty expense; truck stock issues = Σ part actions.

8.45.10 Deployment and operations

Charts `passage-service` (TS API, breach monitor, mobile BFF) and `passage-dispatch` (Python OR-Tools worker, OSRM sidecar with regional extracts); Postgres `service` with PostGIS. Flags: `service.allow-negative-truck`. Schedules: `service-sla-monitor` every 60 s; `service-dispatch-auto` 18:00 territory-local for next day; `service-truck-replenish` nightly. SLOs: case create p95 < 300 ms; dispatch run ≤ 30 s; PWA sync p95 < 2 s per 100 actions; availability 99.9%. Alerts: SLA monitor lag > 2 min; solver fallback rate > 10%; OSRM unavailable. Runbook: re-run dispatch with greedy; replay mobile actions; refresh OSRM extract. Rollback by digest; dispatch runs are versioned and republishable.

8.45.11 Migration from AX / SAP

Source	Passage entity	Notes
SMAServiceObjectTable, SMAServiceObjectRelationTable	ServiceObject	link to inventory serials where found
SMAServiceAgreementTable/Line, SMAAgreementLine	ServiceAgreement, lines	interval lines → preventive visit WOs
SMAServiceOrderTable/Line (open)	ServiceWorkOrder	stage map to status
SMAServiceTechnician	Technician	links to wave-42 workers
D365 FS msdyn_workorder, msdyn_agreement, msdyn_customerasset	ServiceWorkOrder, ServiceAgreement, ServiceObject	via Dataverse export
IBase (IBIN/IBIB/IBST), EQUI with customer	ServiceObject	
BGMK warranties	Warranty	
VBAK/VBAP contracts type WV/SC, SLA profiles	ServiceAgreement, SlaProfile	
QMEL service notifications (open), CS orders (open)	Case, ServiceWorkOrder	
SAP FSM activities (open)	ServiceWorkOrder assignments	via FSM API

Validation: installed-base count per customer equal; open WO count and value equal; active agreement count equal. Not migrated: closed service orders (archive), AX subscriptions (recreated as wave-29 recurring invoices), FSM historical GPS traces.

8.45.12 Dependencies, risks, open questions

Depends on: wave 16 locations (TRUCK), wave 27 pricing, wave 28 serial shipments, wave 29 invoicing, wave 35 notification hub, wave 42 workers/skills, wave 44 condition rules, wave 23 scheduler patterns.

Risk	Likelihood	Impact	Mitigation
Travel matrix accuracy/availability	Medium	Medium	Self-hosted OSRM; cached matrix; straight-line fallback × 1.3
Offline conflict edge cases	Medium	Medium	Append-only actions; replay fixtures
Phase-exit demo breadth	High	High	Walkthrough script frozen at wave start; dry run at week 4

Open questions: (1) Customer self-scheduling portal in v1? Default v1.x; decide by wave 46. (2) Should IoT-originated cases bypass the case stage and create WOs directly? Default create case with auto-conversion for priority 1; decide by wave 45 start.

8.45.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
Agreement / case / WO / claim number sequences	legal entity	lookup	SA, CS, SWO, SWC, KB	wave-5 sequences	Identifiers	Service management parameters › Number sequences (SMAParameters)	Service order number ranges (T003O SM01/SM02), notification ranges (TQ80 S1/S2/S3)
Default SLA profile	legal entity	lookup	—	SlaProfile	BR-45.1 fallback	Service management parameters › Service level agreements	SLA profiles (CRM service profile / response profile)
SLA warning threshold	tenant	pct	75 %	50–95 %	BR-45.2 warning event	n/a	Response profile escalation
Pause resolution on WAITING_PARTS	SLA profile	bool	false		BR-45.2	n/a	Status-dependent SLA pause (CRM date profile)
Entitlement match includes parent party	legal entity	bool	true		BR-45.1	Service agreement › Customer hierarchy	Contract determination (VA41 partner functions)
Warranty start trigger default	item group	enum	SHIP	SHIP, INSTALL, REGISTRATION	FR-45.2	Service object › Warranty dates	Warranty start (BGMK master warranty; IE01 warranty tab)
Installed base auto-creation from shipments	legal entity	bool	true		FR-45.1	Service management parameters › Create service objects	IB creation from delivery (IBase user exit / VL02N serial)
Dispatch auto-run time	territory	time	18:00	00:00–23:59	`service-dispatch-auto`	Dispatch board parameters	FSM planning settings
Solver time limit / workers	tenant	int s / int	30 / 8	5–300 / 1–32	BR-45.3	n/a	RSO optimization run settings
Travel buffer minutes	territory	int	5	0–60	BR-45.3	Service management parameters › Travel time	FSM travel time setup
Overtime allowance	technician	int minutes	120	0–240	BR-45.3	Technician setup	FSM workforce rules
Signature required by incident type	incident type	bool	true		8.45.5 validation	Service order › Sign-off (SMASignOff)	Service confirmation completion
Allow negative truck stock	tenant	bool	false		BR-45.7	n/a	Van stock storage location settings (T001L negative stock)
Truck replenishment min/max per item	truck location	numeric	from item	≥ 0	BR-45.7	Warehouse per resource (D365 FS)	MRP area per storage location (OMIZ)
Case category default and reopen window	category	lookup + int days	14	0–365	BR-45.9	Case management › Case categories, Case parameters (Organization administration › Setup › Cases)	Notification type settings (TQ80), CRM case types
Case process per category	category	lookup	—	CaseProcess	BR-45.9	Case processes (CaseProcess)	Notification status profile (BS02) / task lists (QMSM)
Knowledge article review required	tenant	bool	true		BR-45.11	Knowledge article parameters	Solution database settings (IS01 symptom/solution types)

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
Suggestion count and weights	tenant	int + weights	5; 0.6/0.25/0.10/0.05	1–20	BR-45.11	n/a	n/a
Supplier claim window (days)	vendor	int	30	1–365	BR-45.12	n/a	WTY claim types and deadlines (WTY customizing)
Case mailboxes and default categories	legal entity	list	—	email addresses	BR-45.13	Email to case (not native)	CIC email routing (CRM ERMS)

8.45.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Service work order list	list inquiry	territory, status, priority, SLA due, technician, agreement	WO, customer, object, status, window, SLA due, assigned	`svc_wo`	Service orders (SMAServiceOrderTable list)	IW72 change / IW73 display service orders
Case list (any category)	list inquiry	category, stage, owner, SLA state, association	case, category, stage, priority, SLA due, age	`case_list`	Cases list page (CaseDetailListPage); Case inquiries	IW58 / IW59 notifications; CRM case search
Case report / case activities	operational report	category, period	opened, resolved, backlog, mean time to resolve, activities per case	`case_stats`	SSRS Case report / Case activities	IW65 notification activities; IW69 notification items
SLA attainment	KPI	territory, category, priority, period	response %, resolution %, breaches, mean minutes	`svc_sla`	n/a (SSRS service level reports)	CRM SLA analysis
First-time fix and utilization	KPI	technician, territory, period	FTF %, utilization %, travel ratio	`svc_kpi`	Service management reports	FSM analytics
Installed base	drill-down	customer, item, serial, warranty status	object, structure, install date, warranty end, history	`svc_ib`	Service objects (SMAServiceObjectTable)	IB53 IBase display; IH08 equipment with customer
Agreement entitlement usage	list inquiry	agreement, period	included vs consumed visits/hours, revenue	`svc_entitlement`	Service agreements › Lines	IW73 by contract; VA45 contract list
Warranty cost and recovery	KPI	item, vendor, period	warranty cost, claimed, recovered, recovery %	`svc_warranty`	n/a	WTY claim worklist and claim analysis
Supplier claims	list inquiry	vendor, status, age	claim, lines, claimed, accepted, recovered, days open	`svc_claims`	n/a	WTY claim worklist (WTY)
Knowledge article usage	KPI	category, language, period	views, links to cases, solved %, helpful %	`kb_stats`	Knowledge articles (CaseKnowledgeArticle)	IS02 solution usage
My activities	list inquiry	owner, due range, status	activity, related record, due	`activities`	Activities (smmActivities)	CRM activity search
Truck stock	list inquiry	technician, item, below min	on hand, min, max, open transfers	`svc_truck`	On-hand by resource warehouse	MMBE by van storage location

8.45.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Service report (customer-facing summary)	WO COMPLETED	header: customer, site, object, WO; work performed, parts used, labor and travel, coverage per line, photos (optional), signature with timestamp/geo	PDF, email, PWA	SWO	service record; consumer-repair disclosure laws where applicable (e.g. EU right-to-repair directive 2024/1799 information)
Service invoice	WO POSTED	wave-29 invoice with WO reference, BILLABLE lines only	PDF, e-invoice, email	wave-29 `INV`	fiscal invoice
Service agreement	agreement ACTIVE	parties, validity, covered objects, entitlements, SLA targets, pricing, billing model, terms	PDF, e-signature	SA	contract record, 10 years (DE HGB §257)
Case acknowledgment / resolution notice	case created / RESOLVED	case no, category, summary, SLA targets or resolution	email, portal	CS	none
Dispatch schedule (technician day sheet)	schedule published	route order, windows, addresses, required parts	PWA, PDF	dispatch run id	none
Supplier warranty claim	claim SUBMITTED	vendor, claim no, lines (item, serial, failure code, part amount, labor), return reference	PDF, email, EDI (wave 35)	SWC	supporting document for credit note; accounting retention
Knowledge article	on demand	title, applicability, solution steps, version	PDF, portal	KB-{seq} version	none

8.45.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
`service-sla-monitor`	every 60 s	tenant, category	event once per (case, threshold)	100k open cases < 60 s	retry; skip-locked batches	lag > 2 min
`service-dispatch-auto`	18:00 territory-local	territory, date	key per (territory, date, version)	≤ 30 s solve per territory	greedy fallback	fallback rate > 10 %
`service-truck-replenish`	nightly 02:00	truck location	key (location, date)	< 5 min	retry	below-min items without transfer
`service-ib-from-shipments`	event-driven	shipment	key (shipment line, serial)	< 60 s per shipment	retry from offset	serial without object after 5 min
`service-agreement-visits`	daily 03:00	agreement	key (agreement line, visit date)	< 5 min	retry	missed preventive visit WOs
`case-email-ingest`	every 1 min (wave-35 mailbox poll or push)	mailbox	Message-ID unique	< 30 s per batch	quarantine parse failures	mailbox backlog > 100
`case-consolidate` (one-off per tenant at cut-in)	on demand	source entity	key (source id)	< 30 min for 100k	resumable	unmapped source cases
`supplier-claim-deadline`	daily 07:00	vendor	key (claim, day)	< 1 min	retry	drafts within 5 days of window end
`kb-reindex`	on publish; nightly verify	language	article version	< 10 s per article	retry	index lag > 5 min

8.45.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
SvcAgreementMaintain	agreements create/change; Agreement detail	with SvcBillingPost for the same customer	Service contract manager
SvcCaseCreate / SvcCaseMaintain	service cases create, transitions	none	Service agent
CaseCreate / CaseMaintain (category-scoped)	`/api/v1/cases`, stage, associations; case list, mailbox	per-category OPA policy (BR-45.10)	Agent of the owning team (HR partner, collector, auditor)
CaseSetupAdmin	categories, processes, mailboxes, SLA profiles	with CaseMaintain on HR categories (setup admin cannot read HR cases by default)	Case administrator
SvcWoMaintain / SvcDispatch	WOs, dispatch runs, publish	none	Service coordinator, Dispatcher
SvcTechnician	mobile action log, parts, signatures	none	Field technician
SvcBillingPost	WO post to invoicing	with SvcAgreementMaintain	Service billing clerk
SvcClaimMaintain	supplier claims create, submit, decision	with AP credit note posting (wave 18) for the same claim	Warranty administrator
KbRead / KbAuthor / KbPublish	search, author, publish	author ≠ publisher (BR-45.11)	All users / Senior agent / Knowledge manager
ActivityMaintain	activities on readable records	none	All internal users
SvcInquire	KPIs, lists, reports	none	Service manager

8.45.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
SVC-ENT-001	info	No agreement matched; default SLA {profile} applied, lines billable	Entitlement	Check agreements	BR-45.1
SVC-SLA-001	warning	SLA {type} at {pct} % for case {case}	Warning threshold	Prioritize	BR-45.2
SVC-SLA-002	error	SLA {type} breached for {case}	Breach	Escalate	BR-45.2
SVC-DSP-001	error	Work order {wo} lacks geo or skills; cannot optimize	Precondition	Complete address/skills	8.45.5 validation
SVC-DSP-002	warning	Solver fell back to greedy for {territory} {date}	Time limit	Review assignments	BR-45.3
SVC-DSP-003	error	Technician {t} lacks skill {s} or certification expired	Hard constraint on drag	Choose another technician	BR-45.3
SVC-WO-001	error	Signature required to complete	Incident type rule	Capture signature	8.45.5 validation
SVC-WO-002	error	Parts lines not consumed; cannot post	Post precondition	Consume or remove parts	8.45.5 validation
SVC-TRK-001	error	Truck stock for {item} would go negative	BR-45.7	Transfer stock or use reservation	BR-45.7
SVC-SYNC-001	warning	{n} offline actions merged; {m} status conflicts resolved to {state}	Offline merge	Review timeline	BR-45.6
CASE-STG-001	error	Stage {stage} exit criteria not met: {reasons}	Process gate	Complete required activities	BR-45.9
CASE-SEC-001	error	You do not have access to cases in category {category}	Category security	Request access	BR-45.10
CASE-RES-001	error	Resolution code required	RESOLVED transition	Pick a code	BR-45.9
CASE-MAIL-001	info	Email attached to case {case}	Threading	None	BR-45.13
KB-PUB-001	error	Reviewer must differ from author	SoD	Assign another reviewer	BR-45.11
KB-PUB-002	warning	Publishing retires version {v}	Versioning	None	BR-45.11
SVC-SWC-001	error	Claim window for vendor {v} ended on {date}	Deadline	Request vendor exception	BR-45.12
SVC-SWC-002	error	Failed-part return required before submission	Vendor flag	Create return	BR-45.12
SVC-SWC-003	error	Accepted amount exceeds claimed amount	Validation	Correct decision	BR-45.12

8.45.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation behavior under 3× load
Case create (entitlement + SLA)	5,000/day; peak 100/min	100 / 300 / 600 ms	20/s	Case + log ≈ 5 KB × 1.8 M = 9 GB	(category_id, status), (sla_state, sla_resolution_due)	entitlement result cached per (customer, object) 5 min
SLA monitor scan	100k open cases	< 60 s per cycle	—	n/a	partial index on RUNNING	cycle extends; warning events late by ≤ 1 cycle
Dispatch optimization	200 WOs × 25 technicians per territory-day; 50 territories	≤ 30 s per territory	8 territories in parallel	DispatchRun ≈ 1 GB	(territory_id, date)	greedy fallback; staggered start times
Mobile sync	1,000 technicians × 200 actions/day	2 s p95 per 100 actions	500 actions/s	action log ≈ 40 GB incl. photos refs	(work_order_id, action_id)	queue; device retries with backoff
Knowledge search	20,000/day; peak 50/s	50 / 150 / 300 ms	50 q/s	articles ≈ 50k × 20 KB = 1 GB	GIN on tsvector per language	return top 5 from title-only index
Email ingest	10,000 messages/day	< 30 s to case	20 msg/s	attachments ≈ 200 GB object store	Message-ID unique	backlog processed in order; ack delayed
Supplier claim lifecycle	2,000/month	100 / 300 / 600 ms	5/s	≈ 100 MB	(vendor_party_id, status)	none required

8.45.20 Localization and compliance hooks

- Consumer warranty law: EU Directive 2019/771 (2-year legal guarantee, 1-year burden-of-proof reversal), DE BGB §§437–439, UK Consumer Rights Act 2015, US Magnuson-Moss Warranty Act; legal minimum coverage is a pack-provided warranty template that `Warranty` cannot undercut for consumer customers; extension point `service.warranty.minimum.<cc>`.
- Right to repair: EU Directive 2024/1799 repair information obligations reflected in the service report fields (repair price, parts availability) when the pack enables them.
- SLA calendars: business hours and public holidays per service site from wave-8 calendars; time zone of the service site, DST-safe arithmetic (8.45.9 property test).
- Privacy: technician location (geo on signatures, travel traces) is personal data; retention 90 days for traces by default, works-council approval flag (DE BetrVG §87(1) 6) before enabling live tracking; HR-category cases inherit HR retention and `hr_pii` protection; email intake honors data-subject requests by purging

InboundMessage bodies with the case.

- Language: case acknowledgments, service reports and knowledge articles per customer language (articles are per-language versions; fallback to English).
- E-invoicing for service invoices follows wave 29 per country; supplier claims to EU vendors can be sent as EN 16931 credit requests when the vendor supports it (pack data).
- Tax: warranty replacements free of charge are non-taxable supplies in most jurisdictions, but recovered supplier claim amounts follow the vendor's tax treatment (wave 13 tax codes on the credit note).

8.45.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX #233 — 12.29.1 Cases list page / case details (CaseDetailListPage / CaseDetail)	PARTIAL	ADDED as FR-45.12	Categories, processes, associations, log, resolution
AX #234 — 12.29.1 Cases → Knowledge articles (CaseKnowledgeArticle)	PARTIAL	ADDED as FR-45.13	CaseArticleLink
AX #241 — 12.29.1 Case processes / case categories (CaseProcess, CaseCategory)	PARTIAL	ADDED as FR-45.12	BR-45.9
AX #242 — 12.29.2 Case inquiries (by category/status, SLA)	PARTIAL	ADDED as FR-45.12	"Case list (any category)", "SLA attainment"
AX #244 — 12.29.2 SSRS Case report / Case activities	PARTIAL	ADDED as FR-45.12	"Case report / case activities"
AX #248 — 12.29.3 Close cases / case SLA breach notifications	PARTIAL	ADDED as FR-45.12	`service-sla-monitor` extended to all categories; BR-45.9 close rules
AX #254 — 12.29.4 Case categories / category types / processes / category security	PARTIAL	ADDED as FR-45.12	BR-45.10 OPA per category
AX #271 — 12.31.1 Cases (My cases)	PARTIAL	ADDED as FR-45.12	Screen "My cases / case list"
AX #275 — 12.31.4 Cases → Case setup (link)	PARTIAL	ADDED as FR-45.12	Screen "Case category and process setup"
AX #108 — 12.12.1 Human resources → Cases (HR cases)	PARTIAL	ADDED as FR-45.12	Category type HR with `hr_pii` protection (BR-45.10)
AX #92 — 12.11.1 Project → Activities (smmActivities)	PARTIAL	ADDED as FR-45.14	Activities associate to projects (wave 41)
AX #227 — 12.28.1 Service subscriptions (SMASubscriptionTable, fee transactions, index)	PARTIAL (wave 29)	SUPERSEDED by wave-29 subscription billing	Agreement billing_model SUBSCRIPTION drives wave-29 recurring invoices; fee indexation uses wave-29 price escalation
AX #228 — 12.28.2 Subscription inquiries	PARTIAL (wave 29)	SUPERSEDED by wave-29 subscription billing	wave-29 subscription inquiries filtered by agreement
AX #229 — 12.28.2 SSRS Subscription report / fee transactions	PARTIAL (wave 29)	SUPERSEDED by wave-29 subscription billing	
AX #230 — 12.28.3 Create subscription fee transactions / accrue subscription revenue / index subscriptions	PARTIAL (wave 29)	SUPERSEDED by wave-29 subscription billing	Revenue accrual by wave-29 revenue recognition schedules
AX #231 — 12.28.4 Subscription groups, fee categories, index rules, periods	PARTIAL (wave 29)	SUPERSEDED by wave-29 subscription billing	
SAP #303 — 13.26 Warranty claim processing (WTY1, vendor recovery)	PARTIAL-45	ADDED as FR-45.15	BR-45.12; dealer-to-OEM claims (automotive WTY inbound) OUT-OF-SCOPE
SAP #307 — 13.26 SPRO warranty claim processing (WTY)	PARTIAL-45	ADDED as FR-45.15	Parameter "Supplier claim window"
SAP #304 — 13.26 Solution database IS01/IS02 (knowledge base)	GAP	ADDED as FR-45.13	BR-45.11; wave-47 copilot consumes published articles
SAP #308 — 13.26 Solution database / knowledge base settings	GAP	ADDED as FR-45.13	Parameters "Knowledge article review required", "Suggestion count and weights"
SAP #305 — 13.26 CIC0 / CRM Service / S/4 Service front office	PARTIAL-45	ADDED as FR-45.16	Email-to-case; telephony/CTI OUT-OF-SCOPE (CRM non-goal); service quotations via wave-27 quotations linked to cases
SAP #309 — 13.26 CIC / contact center framework	PARTIAL-45	OUT-OF-SCOPE CRM/contact-center non-goal	Mailbox routing covered by FR-45.16; CTI, agent desktop and channel routing are external (integrate via wave 35)

Part 9 — Phase 9: Intelligence, Compliance & Go-Live (waves 46–50)

9.0 Phase overview

Business outcome at phase exit. A manufacturer runs its entire business on Passage in production, off AX/SAP, with the vendor dependencies of the legacy systems removed: analytics no longer needs Entity store, BYOD or BW extractors because every domain streams into one governed lakehouse; users ask questions and delegate work to agents that act only within their own permissions; the tenant runs legally in seven countries with statutory outputs validated against regulator schemas; segregation of duties, SOC 2 evidence and privacy requests are system functions rather than spreadsheets; the customer's open items, balances and history were moved by a migration factory that reconciled every control total; and the platform has demonstrated 10k concurrent users, a region failover and a reconciled production month-end. v1.0 is tagged, signed and published.

Phase-exit sign-off criteria (all measured in the production-candidate environment unless stated)

- Lakehouse freshness: p95 OLTP-commit-to-dashboard-visible lag < 60 s while the wave-50 load profile runs.
- Semantic-layer `revenue` equals GL revenue (universal journal, account category REVENUE) to the cent for 30 consecutive days; `inventory_value` equals the inventory subledger within USD 0.01 / EUR 0.01.
- Agent evals in CI: AP coding ≥ 92% top-1 accuracy, cash application ≥ 90% precision; permission-inheritance contract tests 100% pass; per-tenant token budget enforced with an alert fired in a test.
- Seven country packs (US, UK, DE, FR, IN, MX, CA) each ship a statutory-report fixture that validates against the regulator's XSD/JSON schema in CI.
- 50 planted SoD conflicts detected (0 misses); mitigation workflow records approver, reason and expiry.
- Backup/restore drill: tenant restored to a point in time with RPO ≤ 5 min and RTO ≤ 1 h; external penetration test shows zero open high/critical findings.
- Synthetic AX and SAP datasets (full year, 3 entities each) migrate with 100% match on all control totals; a parallel-run month shows zero unexplained variances; cutover rehearsal < 48 h; rollback rehearsal restores legacy coexistence.
- Load test: 10k concurrent users, 1M journal lines/h, 100k order lines/h with p99 within the SLO table in 9.50.10.
- DR game day: region failover RTO ≤ 1 h, RPO ≤ 5 min, zero committed-transaction loss (ledger hash chain verified).
- First customer closes a full production month-end with all subledgers reconciled to the journal; hypercare exit criteria (9.50.1) met.
- v1.0 tag signed (cosign), SBOMs attached, release notes and documentation published, v2 roadmap opened.

Cross-wave data model summary

Entity	Owning service	Key relationships
`lake_table` / `cdc_pipeline_state`	analytics-ingest	1 per (domain, table); references schema-registry subject
`semantic_metric`, `semantic_model`	semantic (Cube)	metric → model → lake tables; metric → `reconciliation_check`
`dashboard`, `dashboard_tile`, `report_schedule`	analytics-ui	tile → metric; schedule → dashboard or export
`document_template`, `document_render`	docgen	template → source entity type (SalesInvoice, PurchOrder, PackingSlip, Check)
`tool_definition`, `agent`, `agent_run`, `agent_action`, `approval_task`	mcp-gateway, agent-runtime	run → agent version; action → tool_definition; approval → Temporal task
`eval_dataset`, `eval_run`, `prompt_version`, `token_budget`	agent-evals	eval_run → agent version; budget → tenant
`country_pack`, `er_format`, `er_mapping`, `mandate`	localization, ereporting	format → mandate → country; pack → legal entity
`sod_rule`, `sod_conflict`, `mitigation`, `certification_campaign`	sod	rule → (duty_a, duty_b); conflict → user, rule; mitigation → conflict
`control`, `control_evidence`, `subject_request`, `retention_policy`, `legal_hold`	compliance, privacy	evidence → control; hold overrides policy
`migration_pack`, `pack_run`, `control_total`, `legacy_xref`, `parallel_run`, `variance`	migration-factory	run → pack; variance → parallel_run; xref → every migrated entity
`cutover_plan`, `cutover_step`, `go_nogo_item`	cutover	step → plan; item → step, owner
`region`, `failover_event`, `capacity_model`, `tenant_cost`	platform-ops	failover → region pair; cost → tenant, month
`print_rule`, `text_block`, `correspondence_type`, `dq_rule`, `archive_partition`	docgen, catalog, analytics-ingest	rule → document type, account; archive partition → retention policy (wave 48)
`esign_requirement`, `esign_record`, `audit_policy`, `audit_violation`, `audit_case`, `e_message`	compliance, ereporting	esign record → record version hash; violation → document, case; message → er_format run
`screening_list`, `screening_hit`, `trade_classification`, `export_license`, `elevated_session`, `security_incident`	trade-compliance, security	hit → party/document (blocks release); incident → breach regimes

Cross-wave event catalog

Event (CloudEvents type)	Producer	Consumers	Payload summary

`dev.passage.migration.pack.reconciled.v1`	migration-factory	cutover	run_id, pack, control_totals[], status
`dev.passage.migration.parallelrun.diffed.v1`	migration-factory	cutover	run_id, period, variances_unexplained, variances_explained
`dev.passage.ops.failover.completed.v1`	platform-ops	all services (fencing)	from_region, to_region, promoted_lsn, rpo_seconds, rto_seconds
`dev.passage.documents.print.routed.v1`	docgen	print agent, audit	render_id, rule_id, destinations[]
`dev.passage.compliance.esign.signed.v1`	compliance	quality, production, audit	esign_id, record, meaning, signer
`dev.passage.trade.screening.hit.v1`	trade-compliance	sales, procurement, payments	subject, list_code, score
`dev.passage.security.incident.breach_confirmed.v1`	security	privacy, notifications	incident_id, regimes[], deadlines[]

Phase-level risks

Risk	Likelihood	Impact	Mitigation	Owner
Lakehouse metrics drift from GL (duplicate CDC, late data)	Medium	High	Daily reconciliation job with hard fail; equality-delete upserts keyed on LSN	Analytics lead
Agent takes an action outside user permission	Low	Critical	Tool calls carry the user's token; OPA evaluated at the API, never in the agent; contract tests per tool	Security lead
Country-pack legal error (wrong tax box, wrong XML)	Medium	High	Regulator schema fixtures in CI; provider adapters (Avalara, Sovos) as fallback; packs behind flags	Localization lead
Migration reconciliation hides netting errors	Medium	High	Control totals at line grain, not just sums (counts, hashes, by-dimension)	Migration lead
Cutover window overrun	Medium	High	Two full rehearsals; runbook timed per step; abort criteria at T+36 h	Cutover manager
Region failover loses committed journal entries	Low	Critical	Synchronous quorum replication for ledger Postgres; hash-chain verification post-failover	SRE lead
Two-person team cannot staff hypercare	High	High	Implementation partner on-call rota; agents in suggest-mode triage support tickets	Product

9.46 Wave 46: Data Platform, Analytics & Embedded BI

9.46.1 Scope and business context

AX customers build analytics on Entity store aggregate measurements refreshed by batch, BYOD exports to Azure SQL and Power BI embedded workspaces; SSRS runs document layouts through `SrsReportDataProvider` classes. SAP customers extract into BW/4HANA InfoProviders via ODP, expose `@Analytics.dataCategory: #CUBE` CDS views and embed SAC stories. Both put analytical load on OLTP or on a copy that is hours stale. This wave gives every Passage domain a CDC path into an Apache Iceberg lakehouse, a Cube semantic layer with governed metrics whose row-level security mirrors OPA, embedded dashboards in each workspace, a self-service explorer, scheduled reports, an operational document designer that replaces SSRS layouts, and OpenMetadata for catalog and lineage. At wave exit a controller sees revenue on a dashboard within 60 s of posting and knows it equals the GL. Out of scope: natural-language querying (wave 47), historical legacy data (wave 49), customer-built ML models.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
Entity store refresh (`AggregateMeasurement`, batch job "Refresh entity store") runs hourly at best; Power BI tiles show numbers up to 4 h old and controllers re-query the GL to confirm	Batch copy from OLTP into a separate star schema; no change feed	Debezium CDC → Iceberg → Cube; freshness badge on every tile	Latency 4 h batch → p95 < 60 s
Revenue on a dashboard and revenue on the trial balance disagree; nobody knows which is right (BYOD export gaps, BW extractor delta failures in `RSA7`)	Export jobs drop deltas silently; no reconciliation step	Daily automated metric ↔ GL reconciliation with hard fail and banner	Reconciliation effort 2 person-days/month → 0; delta tolerance 0.005
Changing an SSRS invoice layout needs a developer: edit `.rdl`, extend `SrsReportDataProvider`, build, deploy through LCS; SAP needs `SE71`/`SFP` ABAP skills	Layout bound to code artifacts in a deployable package	Metadata document designer with fixture preview and visual regression	Turnaround 2 weeks → same day; 0 code deploys
Building one BW query or SSAS cube perspective for a new KPI takes an analyst through `RSA1`, transformations, DTPs and authorizations (`RSECADMIN`)	Separate security and modeling stack from the application	Metric registry; RLS compiled from the same OPA policies as OLTP	New governed metric 10 days → 1 h; 0 separate security objects
Exporting to Excel from a data entity (`Open in Office`) caps at 10k rows or times out; users build shadow spreadsheets	OLTP OData serving analytical loads	Explorer exports via Trino as Temporal jobs	1M rows in < 10 min; OLTP load from reporting 0

9.46.2 AX / SAP parity map

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Analytical store	Entity store, `AggregateMeasurement` (e.g. `LedgerActivityMeasure`), batch refresh	BW/4HANA ADSO, CompositeProvider, ODP extractors (`RSA1`)	Debezium CDC → Iceberg `raw.*`, dbt `core.*`/`mart.*`	Improved (streaming, no batch refresh)
Data export for BI	BYOD (`DMFDataEntity` export to Azure SQL), Export to Data Lake	SLT, Datasphere replication flows	Iceberg tables queryable via Trino; CDC is the export	Improved
Embedded dashboards	Power BI embedded workspaces (`PBIWorkspace`, `SysPBIReportController`)	SAC stories in Fiori launchpad, Overview pages	`<DashboardHost>` web component per workspace	Full
Operational documents	SSRS `SalesInvoice.Report`, `PurchPurchaseOrder.Report`, `SrsReportDataProvider`, Print management	SAPscript (`SE71`), Smart Forms, Adobe Forms (`SFP`), `NACE` output	Document designer, `document_template` with print-management rules	Full
OLAP cubes	SSAS cubes (`SalesCube`, `GeneralLedgerCube`), perspectives	BEx queries (`RSRT`), BW queries	Cube semantic models and measures	Improved
Embedded analytical views	Data entities with `IsAggregateDataEntity`	CDS `@Analytics.dataCategory #CUBE`, `@Analytics.query`	Cube `cubes/views` generated from entity metadata	Full
Self-service / Excel	Open in Excel (`DataEntity` + OData), Power BI Desktop over BYOD	Analysis for Office, Query Browser (`/UI2/QUERY_BROWSER`)	Explorer; export to XLSX, Power BI (ODBC via Trino), Tableau	Full
Row-level security	XDS policies, Power BI RLS roles	Analysis authorizations (`RSECADMIN`)	OPA policy compiled to Cube `queryRewrite` filters	Full
Financial statements	Management Reporter	FSV (`FSE2`), Fiori financial statement apps	Wave-15 statement designer; marts feed trend tiles	Full
Catalog and lineage	None (AOT only)	BW metadata repository, Datasphere catalog	OpenMetadata with Debezium/dbt/Cube lineage ingestion	Improved
Print management routing	Print management setup (`PrintMgmtSettings`, `PrintMgmtDocInstance`, conditional settings by query, original/copy destinations), Form setup, Form sorting	`NACE` output determination (condition tables, access sequences, `NAST`), S/4 Output Parameter Determination (BRF+ `OPD`), `SPAD` printers	`print_rule` with condition expressions, original/copy destinations and print agent (FR-46.14)	Full
Form notes and standard texts	Form notes (`FormLetterRemarks`), document notes (`DocuRef`) printed per document type	`SO10` standard texts, text IDs (`SE75`), text determination (`VOTXN`)	`text_block` with placeholders and language versions (FR-46.15)	Full
Correspondence	Customer/vendor account statements (`CustAccountStatementExt`), payment advice	`F.27` periodic statements, `F.64` correspondence (`OB77` types, `T048`), `SAP01`–`SAP19`	`correspondence_type` with trigger and template (FR-46.15)	Full
Data quality monitoring	Data validation checklist (DMF), none for production data	Information Steward rules and scorecards	`dq_rule` on catalog assets with scorecard tile (FR-46.16)	Full

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Process mining	None	Signavio Process Intelligence, Process Observer (`POC`), Process AI	`mart.process_event` event log, variant explorer, OCEL/XES export (FR-46.17)	Partial (no conformance engine in v1)
Data archiving	D365 Archive (long-term retention via Dataverse), `SysDatabaseLog` cleanup	`SARA` archiving objects, `SARI` archive info system, ILM retention warehouse	Archive tier `archive.<domain>.<table>` in Iceberg driven by wave-48 residence times (FR-46.18)	Full

9.46.3 Functional requirements

- **FR-46.1 CDC from every domain** — Must. The system shall run one Debezium Postgres connector per domain database using `pgoutput`, publishing to topics `cdc.<domain>.<table>` keyed on `(tenant_id, primary key)`, Avro-encoded with schema-registry compatibility `BACKWARD_TRANSITIVE`.
    - Notes: every table listed in entity metadata with `analytics: true` is captured; `REPLICA IDENTITY FULL` enforced by the Atlas migration generator; snapshot mode `initial` on first run then `never`; heartbeat every 10 s to advance slots on idle domains; slot lag > 1 GB alerts.
- **FR-46.2 Iceberg landing contract** — Must. The system shall write each CDC topic into Iceberg table `raw.<domain>.<table>` (format v2, merge-on-read, equality deletes on the key) partitioned by `days(_source_ts)` and `bucket(16, tenant_id)`.
    - Notes: every row carries `_op` (c/u/d), `_source_lsn`, `_source_ts`, `_ingested_at`; commits every 30 s or 50 MB, whichever first; snapshot expiry 7 days, orphan-file cleanup daily; compaction rewrites files < 64 MB nightly.
- **FR-46.3 Schema evolution** — Must. The system shall apply additive source changes automatically and quarantine incompatible ones.
    - Notes: add column → add nullable Iceberg column; type widening (`int→bigint`, `decimal(18,4)→decimal(28,6)`) applied; dropped column retained and tagged `deprecated_since`; rename → new column plus `renamed_from` property in catalog; narrowing or NOT NULL additions pause the sink, route to `cdc.dlq.<domain>` and alert within 60 s.
- **FR-46.4 Late-arriving data and exactly-once effect** — Must. The system shall produce exactly one logical state per key regardless of Kafka redelivery.
    - Notes: sink deduplicates on `(tenant_id, pk, _source_lsn)`; Iceberg commit and Kafka offset are written atomically by the sink coordinator (control topic `iceberg.control`), so replay after crash is idempotent; watermark = max(`_source_ts`) − 5 min; rows with `_source_ts` older than the watermark are merged into closed partitions; dbt incremental models use a 3-day lookback; a row arriving more than 30 days late is written and flagged `late=true` for reconciliation.
- **FR-46.5 dbt transformation layers** — Must. The system shall maintain `core.*` (deduplicated current-state and history tables, SCD2 on master data) and `mart.*` (finance, sales, procurement, inventory, production, projects, HR) dbt models with tests on every primary key, every FK and every reconciled measure.
    - Notes: `mart.fin_journal_line` is the only source for monetary metrics; models run every 60 s incremental, nightly full for SCD2 rebuild; dbt test failure blocks downstream models and raises `metric.reconciled` with status `BLOCKED`.
- **FR-46.6 Governed metrics** — Must. The system shall define metrics in the semantic layer with owner, version, grain, allowed dimensions and formula; the initial set is:
    - `revenue` = `-SUM(amount_reporting) FROM mart.fin_journal_line WHERE account_category='REVENUE' AND status='POSTED'` (credit shown positive).
    - `cogs` = `SUM(amount_reporting) WHERE account_category='COGS'`; `gross_margin` = `revenue − cogs`; `gross_margin_pct` = `gross_margin / NULLIF(revenue,0)`.
    - `dso_days` = `ar_open_balance_at(end) / NULLIF(revenue_trailing(90d),0) * 90`; countback variant selectable per tenant.
    - `dpo_days` = `ap_open_balance_at(end) / NULLIF(cogs_trailing(90d),0) * 90`.
    - `inventory_turns` = `cogs_trailing(365d) / NULLIF(AVG(inventory_value_eom over last 13 month-ends),0)`.
    - `otif_pct` = `COUNT(sales_line WHERE shipped_ts <= requested_ship_date AND qty_shipped = qty_ordered) / NULLIF(COUNT(sales_line shipped),0)`.
    - `oee_pct` = `availability * performance * quality` where `availability = run_time / planned_time`, `performance = (ideal_cycle_time * total_count) / run_time`, `quality = good_count / total_count`, sourced from `mart.prod_resource_shift`.
- **FR-46.7 Row-level security mirrored from OPA** — Must. The system shall compile the user's OPA data-scope decision (legal entities, sites, dimension ranges) into Cube `queryRewrite` filters on every query, using the same Keycloak token as the OLTP APIs.
    - Notes: cache keyed by `(user_id, policy_bundle_version)` for 5 min; a query touching a model with no scope mapping is rejected (`403 SCOPE_UNMAPPED`); aggregations never bypass filters (pre-aggregations are built per security context).
- **FR-46.8 Embedded dashboards** — Must. The system shall render a dashboard host in every workspace with tiles bound to semantic metrics, auto-refresh ≤ 60 s, and drill-through to the OLTP record.
- **FR-46.9 Self-service explorer and export** — Should. The system shall let users compose metric × dimension × filter queries, save them, and export to XLSX (≤ 1M rows), CSV, Power BI (Trino ODBC/JDBC connection string) and Tableau (same).
    - Notes: exports > 100k rows run as Temporal jobs and deliver via signed URL valid 24 h; every export is audit-logged with row count and filter.
- **FR-46.10 Scheduled reports** — Should. The system shall schedule dashboards and explorer queries (cron, time-zone aware) with delivery to email, SFTP or in-app inbox, PDF/XLSX, retry 3× with backoff.
- **FR-46.11 Operational document designer** — Must. The system shall provide a layout designer (bands, repeaters, barcodes, conditional sections, locale formats) for SalesInvoice, PurchOrder, PackingSlip, Check, Statement, PickList and Remittance with versioned templates and print-management rules (per entity, per customer/vendor, per destination).
    - Notes: render via headless Chromium to PDF/A-3; data source is the document's REST read model, not the lakehouse; p95 render < 800 ms for a 50-line invoice.
- **FR-46.12 Catalog and lineage** — Should. The system shall register every Postgres table, Iceberg table, dbt model, Cube metric and dashboard in OpenMetadata with column-level lineage and owner, refreshed hourly.

- **FR-46.13 Daily metric reconciliation** — Must. The system shall compare `revenue`, `cogs`, `ar_open_balance`, `ap_open_balance`, `inventory_value` against the universal journal and subledgers at 02:00 tenant local time and fail the dashboard with a banner if ldeltal > 0.005.
- **FR-46.14 Print management routing** — Must. The system shall resolve, for every document render, the destinations of the ORIGINAL and each COPY from `print_rule` sets maintained per (document type, legal entity), with account-level overrides (customer, vendor, project, bank) and conditional rules evaluated by priority.
    - Notes: destinations are PRINTER (IPP queue reached through the site print agent), EMAIL (template, recipients from party contact roles such as `INVOICE_TO`, `REMIT_TO`), E_INVOICE (wave-35 channel), ARCHIVE_ONLY, PORTAL, NONE; resolution order is account override → first matching conditional rule → legal-entity default → tenant default; conditions use the wave-3 expression subset (FR-3.3) over the document read model, or reference a FR-3.13 decision table by code (`rules.eval`) (e.g. `amount_total >= 10000 AND customer.group = 'KEY'`); a rule may override the template version, copy count (0–9) and the caption printed per copy (`ORIGINAL`, `COPY 1`, `FILE COPY`); the resolved destination is shown on the posting dialog and recorded on `document_render.destinations_json`; the print agent is a Go sidecar per site polling `/api/v1/documents/print-queue`, buffering 24 h offline and acknowledging each job with the printer's job id.
- **FR-46.15 Standard text blocks and correspondence** — Should. The system shall maintain `text_block` (id, language versions, placeholders such as `{{customer.name}}`, `{{document.due_date|date}}`), form notes per (document type, legal entity, position header/footer), and `correspondence_type` definitions (periodic account statement, payment notice, balance confirmation, dunning cover letter, remittance cover) with trigger (schedule, event, manual), selection (party group, open-item age) and template.
    - Notes: placeholders are resolved against the document read model; a missing placeholder renders empty and raises `DOC-0407`; periodic statements run on the wave-46 schedule engine (default last calendar day, 20:00 local); correspondence output follows FR-46.14 routing; text blocks are exported with country packs for statutory wording (wave 48).
- **FR-46.16 Data-quality rules** — Should. The system shall evaluate `dq_rule` definitions (completeness: null share per column; validity: regex or domain list; uniqueness; referential; freshness: max age of `_ingested_at`) against catalog assets every 60 min, compute a score per entity (0–100), and show a scorecard tile with drill-down to failing rows.
    - Notes: rules compile to dbt tests or Trino queries; a rule has an owner, a threshold (default: fail below 98% pass rate) and a severity; failures create a task in the owner's wave-4 inbox once per rule per day; scores are stored in `dq_score` (asset, rule, date, pass_pct, failed_rows) and are exposed as Cube measures.
- **FR-46.17 Process event log and mining views** — Could. The system shall build `mart.process_event` (case_id, case_type, activity, event_ts, actor, resource, amount, source_event_type) from the CloudEvents stream, chaining documents into cases (P2P: requisition → PO → receipt → invoice → payment; O2C: quote → order → shipment → invoice → cash; production: order → release → RAF → close), and provide a variant explorer tile (top 20 variants, median and p90 cycle time per step, rework count, automation share) with export to OCEL 2.0 JSON and XES.
    - Notes: case stitching uses document reference fields, not heuristics; events older than 24 months are rolled up; conformance checking against a reference model is not in v1 (external tools consume the export).
- **FR-46.18 Archive tier** — Should. The system shall move closed OLTP partitions (journal lines, inventory transactions, audit, workflow history, agent runs) whose age exceeds the wave-48 `retention_policy.residence_months` (default 24) to Iceberg `archive.<domain>.<table>` in a Temporal job, verify row count and content hash per partition, then detach and drop the OLTP partition.
    - Notes: records under legal hold or in an open fiscal period are never moved; archived records stay readable from the record detail (badge `ARCHIVED`) and in explorer with `source=archive`; a partition can be restored into a side table for 30 days on `ArchiveAdmin` request; archive moves are evidence for wave-48 control CC6.5 (data disposal).

9.46.4 Data model

`semantic_metric` (semantic service, Postgres `analytics`)

Field	Type	Required	Notes
metric_id	text	Y	PK, e.g. `revenue`
version	int	Y	monotonically increasing; (metric_id, version) unique
formula	text	Y	Cube measure SQL
grain	text	Y	`journal_line`, `sales_line`, `resource_shift`
allowed_dimensions	text[]	Y	from `semantic_model.dimensions`
owner_user_id	uuid	Y	FK users
status	enum	Y	DRAFT, PUBLISHED, DEPRECATED
reconciliation_source	text	N	e.g. `ledger.balance_by_account`
tolerance	numeric(18,6)	N	default 0.005

`cdc_pipeline_state` (analytics-ingest)

Field	Type	Required	Notes
domain	text	Y	PK part
table_name	text	Y	PK part
schema_version	int	Y	registry version last applied
last_lsn	bigint	Y	last committed source LSN
last_snapshot_id	bigint	Y	Iceberg snapshot
watermark_ts	timestamptz	Y	
status	enum	Y	RUNNING, PAUSED_SCHEMA, PAUSED_ERROR
dlq_count_24h	int	Y	default 0

`document_template` (docgen)

Field	Type	Required	Notes
template_id	uuid	Y	PK
tenant_id	uuid	Y	RLS
document_type	enum	Y	SalesInvoice, PurchOrder, PackingSlip, Check, Statement, PickList, Remittance
version	int	Y	unique with template_id
locale	text	Y	BCP 47, e.g. `de-DE`
layout_json	jsonb	Y	band tree; max 512 KB
status	enum	Y	DRAFT, PUBLISHED, RETIRED
visual_hash	text	N	perceptual hash of fixture render
published_at	timestamptz	N	

`report_schedule`: schedule_id, tenant_id, target_type (DASHBOARD/QUERY), target_id, cron, timezone, format, destination_json, last_run_at, next_run_at, failure_count.

Invariants: a PUBLISHED metric is immutable (changes create a new version); every mart measure has exactly one reconciliation source or is tagged `non_financial`; a template can be PUBLISHED only if its visual regression delta ≤ 0.1%; `last_lsn` never decreases. Indexing: `cdc_pipeline_state` PK (domain, table_name); Iceberg partition spec as FR-46.2 plus sort order `(tenant_id, _source_lsn)`; `document_template` index (tenant_id, document_type, status).

Additional entities (FR-46.14–46.18). `print_rule`: rule_id, tenant_id, legal_entity_id, document_type, scope (DEFAULT, ACCOUNT, CONDITIONAL), account_ref (party or project), priority, condition_expr (wave-3 expression subset or `rules.eval` reference, ≤ 2 KB), destinations_json (per ORIGINAL/COPY n: type, target, template_version, caption), copies int default 1, status (ACTIVE, RETIRED), version. `text_block`: block_id, tenant_id, code (unique per tenant), language (BCP 47), body (≤ 16 KB), placeholders_json, status. `correspondence_type`: type_id, tenant_id, code, trigger (SCHEDULE, EVENT, MANUAL), cron, selection_json, template_id, status. `dq_rule`: rule_id, asset_fqn, rule_type (COMPLETENESS, VALIDITY, UNIQUENESS, REFERENTIAL, FRESHNESS), expression, threshold_pct numeric(5,2) default 98, severity, owner_user_id, status. `archive_partition`: partition_id, domain, table_name, period, rows_oltp, rows_archive, content_hash, moved_at, status (PENDING, VERIFIED, DROPPED, RESTORED), legal_hold_checked_at.

9.46.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
GET	`/api/v1/analytics/metrics`	list published metrics with formulas	n/a	AnalyticsView
POST	`/api/v1/analytics/query`	Cube query (measures, dimensions, filters, timeDimensions)	n/a (read)	AnalyticsView + data scope
GET	`/api/v1/analytics/dashboards/{id}`	dashboard definition and tiles	n/a	AnalyticsView
PUT	`/api/v1/analytics/dashboards/{id}`	create/update dashboard	ETag	AnalyticsAuthor
POST	`/api/v1/analytics/exports`	start export job	`Idempotency-Key`	AnalyticsExport
POST	`/api/v1/analytics/schedules`	create schedule	`Idempotency-Key`	AnalyticsAuthor
GET	`/api/v1/analytics/reconciliation?date=`	reconciliation results per metric	n/a	FinanceView
POST	`/api/v1/documents/templates/{id}/versions`	publish template version	`Idempotency-Key`	DocumentDesign
POST	`/api/v1/documents/render`	render document (type, record_id, template override)	by (record, version)	per-document duty
GET	`/api/v1/catalog/lineage/{asset_fqn}`	upstream/downstream lineage	n/a	CatalogView
GET/PUT	`/api/v1/documents/print-rules`	list/maintain print rules per document type and entity	ETag	PrintManagementSetup
POST	`/api/v1/documents/print-rules/resolve`	resolve destinations for a record without rendering	n/a (read)	per-document duty
GET	`/api/v1/documents/print-queue?site=`	print agent pulls pending jobs; `PATCH` acknowledges	by job id	PrintAgent (service account)
GET/PUT	`/api/v1/documents/text-blocks/{code}`	maintain text block language versions	ETag	DocumentDesign
POST	`/api/v1/documents/correspondence/{type}/run`	run a correspondence type (statements, notices)	`Idempotency-Key`	per-module duty
GET/PUT	`/api/v1/catalog/dq-rules`	maintain data-quality rules; `GET /scores?asset=` returns history	ETag	CatalogSteward
POST	`/api/v1/analytics/process-events/export`	export OCEL/XES for a case type and period	`Idempotency-Key`	AnalyticsExport
POST	`/api/v1/archive/partitions/{id}/restore`	restore an archived partition for 30 days	by partition id	ArchiveAdmin

Query validation: ≤ 10 measures, ≤ 8 dimensions, time range ≤ 5 years at day grain, result cap 50k rows interactive; otherwise redirected to export.

Event	Trigger	Payload fields	Consumers
`dev.passage.analytics.snapshot.committed.v1`	Iceberg commit	domain, table, snapshot_id, rows_added, rows_deleted, max_lsn, watermark_ts	semantic (cache invalidation), catalog
`dev.passage.analytics.metric.reconciled.v1`	daily job	metric_id, tenant_id, date, semantic_value, source_value, delta, status	compliance evidence, alerting
`dev.passage.analytics.report.delivered.v1`	schedule run	schedule_id, run_id, format, destination, row_count, bytes	audit
`dev.passage.documents.template.published.v1`	version publish	template_id, version, document_type, visual_hash	print management, catalog
`dev.passage.documents.print.routed.v1`	destination resolved at render	render_id, document_type, record_id, rule_id, destinations[]	print agent, audit
`dev.passage.catalog.dq.scored.v1`	hourly evaluation	asset_fqn, rule_id, pass_pct, failed_rows, severity	data owner inbox, dashboard
`dev.passage.archive.partition.moved.v1`	archive job verified a partition	domain, table, period, rows, content_hash	compliance evidence (CC6.5), catalog

9.46.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Workspace dashboard host	refresh, drill-through, change period, pin tile	metric tiles, sparklines, freshness badge	AnalyticsView
Explorer	add measure/dimension, filter, pivot, save, export	metric picker with formula tooltip, dimension tree	AnalyticsView
Metric registry	publish version, set owner, view reconciliation history	metric_id, formula, grain, tolerance, last delta	AnalyticsAuthor
Pipeline health	pause/resume, replay from LSN, view DLQ	domain, table, lag_s, status, dlq_count	AnalyticsAdmin
Document designer	drag bands, bind fields, preview with fixture, publish	band tree, locale, print-management rules	DocumentDesign
Schedules	create, run now, view deliveries	cron, timezone, destination, last status	AnalyticsAuthor

Screen	Primary actions	Key fields/columns	Duty
Print management setup	add rule, set condition, order by priority, preview resolution for a record	document type, scope, account, condition, destinations, copies	PrintManagementSetup
Text blocks and correspondence	edit language versions, insert placeholder, run statement job	code, language, body, placeholders, correspondence trigger	DocumentDesign
Data-quality scorecard	drill failing rows, assign owner, mute rule for 7 days	asset, rule, pass %, failed rows, trend	CatalogSteward
Process variant explorer	pick case type and period, compare variants, export OCEL	variant, count, median cycle time, rework	AnalyticsView
Archive partitions	view moved partitions, request restore	domain, table, period, rows, hash, status	ArchiveAdmin

Interaction rules: explorer queries run on 500 ms debounce; `Ctrl+E` exports current grid; freshness badge turns amber at lag > 60 s, red at > 300 s; designer preview reruns on each property change with a 300 ms debounce; personalization (pinned tiles, saved explorer views) stored per user and exported with user profile.

9.46.7 Business rules and edge cases

- **BR-46.1** Monetary metrics use `amount_reporting` in the ledger's reporting currency; rounding at display only, half-even, to the currency's minor units.
- **BR-46.2** A deleted OLTP row (`_op='d'`) is tombstoned in `raw.*`, removed from `core.*` current tables and kept in history with `valid_to`.
- **BR-46.3** Reversal journals net to zero in `revenue` on the reversal's posting date, not the original date.
- **BR-46.4** DSO/DPO use calendar days; trailing windows end at the selected period end inclusive; if the trailing window has zero revenue, the metric is NULL, never infinity.
- **BR-46.5** OEE `planned_time` excludes shifts flagged `no_production`; `performance` is capped at 100%.
- **BR-46.6** Pipeline state machine: RUNNING → PAUSED_SCHEMA (incompatible change) → RUNNING after operator approves mapping; RUNNING → PAUSED_ERROR after 5 consecutive sink failures → RUNNING on replay from `last_lsn`.
- **BR-46.7** Export files are deleted 24 h after creation; a second identical request within 1 h returns the existing file.
- **BR-46.8** Template version state: DRAFT → PUBLISHED (requires visual regression pass) → RETIRED; a RETIRED version remains renderable for re-prints of documents posted under it.
- **BR-46.9** Dashboard queries for a user with no legal-entity scope return an empty result with reason `NO_SCOPE`, not an error.
- **BR-46.10** A reconciliation delta inside tolerance for 30 days auto-marks the metric `TRUSTED`; one failure resets the counter.
- **BR-46.11** Print rule resolution is deterministic: account override beats conditional rules; among conditional rules the lowest `priority` number wins and ties are rejected at save; a rule referencing a RETIRED template version cannot be ACTIVE.
- **BR-46.12** Copies are numbered from 1 and carry the caption of their rule; a re-print of a posted document always renders with the template version recorded on `document_render`, never the current one.
- **BR-46.13** A print job unacknowledged by the print agent for 30 min is marked `STALE`, re-queued once, then `FAILED` with `DOC-0412` to the requesting user.
- **BR-46.14** An archive partition is dropped from OLTP only after `rows_oltp = rows_archive` and the content hash matches; a mismatch leaves both copies and opens an incident of severity Sev-3.
- **BR-46.15** DQ scores below threshold for 3 consecutive evaluations escalate to the catalog steward; a muted rule still scores but does not notify.
- **BR-46.16** Process event case ids are the originating document id; a document that cannot be chained lands in case type `UNLINKED` and is excluded from cycle-time measures.

9.46.8 Acceptance criteria

- **AC-46.1** (FR-46.1, 46.2) Given a journal posted in `ledger` with 1,000 lines, when 60 s elapse, then `mart.fin_journal_line` contains all 1,000 rows with matching `_source_lsn` order.
- **AC-46.2** (FR-46.3) Given a migration adds nullable column `memo2` to `sales_line`, when CDC resumes, then the Iceberg table has the column and no DLQ rows.
- **AC-46.3** (FR-46.3) Given a migration changes `qty` from `decimal(28,6)` to `decimal(18,4)`, when CDC resumes, then the pipeline is PAUSED_SCHEMA within 60 s and an alert fires.
- **AC-46.4** (FR-46.4) Given Kafka redelivers 10,000 already-applied change events, when the sink processes them, then row counts and sums in `core.*` are unchanged.
- **AC-46.5** (FR-46.4) Given a row with `_source_ts` 10 days in the past arrives, when dbt runs, then the row is present in the correct day partition and `late=true`.
- **AC-46.6** (FR-46.6, 46.13) Given a day's postings, when reconciliation runs, then semantic `revenue` equals ledger REVENUE balance movement to USD 0.00 and EUR 0.00.
- **AC-46.7** (FR-46.7) Given user A scoped to legal entity USMF and user B to DEMF, when both open the sales dashboard, then A sees only USMF rows and B only DEMF rows, including in totals.
- **AC-46.8** (FR-46.11) Given the 7 standard document templates and their fixtures, when rendered in CI, then perceptual-hash delta vs baseline ≤ 0.1% for each.
- **AC-46.9** (FR-46.9) Given an explorer query returning 250k rows, when the user exports XLSX, then a Temporal job produces the file and a signed URL within 5 min.
- **AC-46.10** (FR-46.10) Given a schedule `0 6 * * 1` Europe/Berlin, when Monday 06:00 CET arrives, then the PDF is delivered and `report.delivered` is emitted.
- **AC-46.11** (FR-46.14) Given a customer with account override EMAIL and a conditional rule `amount_total >= 10000 → PRINTER + COPY 1 ARCHIVE_ONLY`, when a USD 12,000 invoice is posted, then the original goes to the customer's e-mail (override wins) and `document_render.destinations_json` records the rule id.

- **AC-46.12** (FR-46.14) Given the site print agent offline for 2 h, when 40 packing slips are posted, then all 40 print within 5 min of the agent reconnecting and none duplicates.
- **AC-46.13** (FR-46.15) Given correspondence type `ACCOUNT_STATEMENT` scheduled monthly for customer group `KEY`, when the schedule fires, then one statement per customer with open items is rendered in the customer's language and routed per FR-46.14.
- **AC-46.14** (FR-46.16) Given a completeness rule on `vendor.tax_id` with threshold 98%, when 3% of vendors lack a tax id, then the scorecard shows the rule failed, the owner receives one inbox task, and the failing vendor list is downloadable.
- **AC-46.15** (FR-46.18) Given journal-line partitions older than 24 months and no legal hold, when the archive job runs, then the partitions exist in `archive.ledger.journal_line`, hashes match, the OLTP partitions are dropped, and the records still open from the journal inquiry with badge `ARCHIVED`.
- **AC-46.16** (FR-46.17) Given one month of P2P documents, when `mart.process_event` is built, then every paid invoice traces to its PO case and the variant explorer lists the straight-through variant with its share.

9.46.9 Test plan and fixtures

Fixtures: `fx-lake-usmf-year` (one fiscal year, 3 entities, 2.4M journal lines, 180k sales lines, from the wave-30 demo dataset replayed); `fx-schema-evolution` (12 migration scripts: add, widen, drop, rename, narrow, not-null); `fx-late-data` (5k events with `_source_ts` skewed 1 h–45 d); `fx-docs-7` (7 document types × 3 locales × fixture records); `fx-oee-shifts` (90 days, 12 resources).

Test	Type	Target	Pass criterion
Sink idempotency	property	Iceberg sink	any permutation/duplication of events yields identical table state
Schema evolution matrix	contract	connector + sink	12 scripts classified correctly (8 auto, 4 pause)
Metric formula unit tests	unit	dbt/Cube	each metric matches hand-computed value on 20-row fixture
OPA→Cube filter equivalence	contract	semantic	for 200 users, Cube result set ⊆ OLTP API result set
Dashboard lag	performance	end-to-end	p95 < 60 s at 1M journal lines/h
Visual regression	E2E	docgen	21 renders ≤ 0.1% delta
Export at scale	performance	explorer	1M-row XLSX in < 10 min
Lineage completeness	contract	OpenMetadata	100% of dbt models and metrics have upstream edges

Reconciliation: `revenue`, `cogs` ↔ ledger balance movements by account category; `ar_open_balance`, `ap_open_balance` ↔ open-item subledgers; `inventory_value` ↔ inventory close valuation; row counts `raw.*` ↔ `core.*` current ↔ Postgres `COUNT(*)` per tenant.

9.46.10 Deployment and operations

Helm charts: `passage-cdc` (Kafka Connect cluster with Debezium and Iceberg sink, 3 workers), `passage-lakehouse` (Iceberg REST catalog, Nessie-compatible, object storage via S3 API), `passage-trino` (coordinator + 4 workers, autoscaling to 16), `passage-clickhouse` (optional accelerator for `mart.*` pre-aggregations), `passage-cube` (API + refresh workers), `passage-dbt-runner` (Temporal worker), `passage-docgen`, `passage-openmetadata`. Config: `CDC_DOMAINS` list, `ICEBERG_COMMIT_INTERVAL=30s`, `LATE_DATA_WATERMARK=5m`, `RECON_TOLERANCE=0.005`, object-store credentials from Vault. Migrations: `analytics` database (Atlas); Iceberg schemas managed by the sink. Feature flags: `analytics.dashboards`, `analytics.explorer`, `docgen.designer` per tenant. Jobs: dbt incremental every 60 s, SCD2 nightly 01:00, reconciliation 02:00, compaction 03:00, lineage sync hourly. SLOs: dashboard lag p95 < 60 s; query p95 < 2 s for ≤ 50k rows; document render p95 < 800 ms; pipeline availability 99.9%. Alerts: slot lag > 1 GB, DLQ > 0 for 5 min, reconciliation delta > tolerance, Trino queue > 50. Runbook: replay from LSN, rebuild `core.*` from `raw.*`, rotate object-store keys. Rollback: Helm rollback of services; Iceberg `rollback_to_snapshot` per table; connectors restart from stored offsets.

9.46.11 Migration from AX / SAP

Source	Passage	Notes
Entity store `AggregateMeasurement` definitions	`semantic_metric`	mapped by hand; measures become Cube measures, dimensions become joins
Power BI `.pbix` over BYOD	Dashboards	not converted; rebuilt on Cube; Power BI Desktop can connect to Trino
SSRS `.rdl` layouts via `SrsReportDataProvider`	`document_template`	semi-automatic: bands, fields and expressions imported; SSRS expressions in VB are flagged for manual rewrite
Print management settings (`PrintMgmtSettings`)	print-management rules	full
BW InfoProviders, BEx queries	`mart.*` + metrics	metadata import creates draft metrics; data not migrated here (wave 49)
SAC stories	Dashboards	rebuilt
Smart Forms / Adobe Forms	`document_template`	layout imported from XDP where possible; scripting rewritten

Not migrated: SSAS cube partitions, BYOD Azure SQL contents, Power BI datasets — all derivable from the lakehouse.

9.46.12 Dependencies, risks, open questions

Depends on: wave 3 (outbox/CDC infrastructure), wave 5 (audit from CDC), wave 11–15 (universal journal, statements), wave 30 (sales and AR marts), wave 25 (OEE source data), wave 45 (all domains emitting).

Risk	Likelihood	Impact	Mitigation
Iceberg small-file explosion at 30 s commits	High	Medium	nightly compaction; adaptive commit size
Cube pre-aggregations leak across security contexts	Low	Critical	pre-aggregations partitioned by legal entity; contract test
Trino cost at 10k users	Medium	Medium	ClickHouse accelerator for top-20 dashboards

Open questions: (1) Trino-only vs Trino+ClickHouse by default — proposed default: Trino only, ClickHouse behind flag; decide by wave 47. (2) Document rendering engine fallback (Chromium vs Typst) — default Chromium; decide by wave 48.

9.46.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`analytics.cdc.commit_interval_s`	tenant (platform default)	int	30	10–300	Iceberg commit cadence per sink	Entity store refresh batch recurrence (`AggregateMeasurement`)	ODP delta queue schedule (`ODQMON`), DTP frequency
`analytics.cdc.late_watermark_min`	tenant	int	5	1–60	watermark lag before partitions close	none	BW late-arriving delta handling
`analytics.recon.tolerance`	legal entity	numeric	0.005	0–1.00	max	delta	before dashboard banner
`analytics.recon.run_time_local`	tenant	time	02:00	any	daily reconciliation start	batch job recurrence	`SM36` job start
`analytics.dashboard.refresh_s`	user	int	60	15–600	tile auto-refresh	Power BI tile refresh	SAC story auto-refresh
`analytics.freshness.amber_s` / `red_s`	tenant	int	60 / 300	≥ 10	badge thresholds	none	none
`analytics.query.max_rows_interactive`	tenant	int	50,000	1,000–200,000	redirect to export above cap	OData `maxpagesize`	BICS result limit (`RSADMIN MAX_NUMBER_OF_CELLS`)
`analytics.export.max_rows`	tenant	int	1,000,000	≤ 5,000,000	export job cap	Open in Excel row limit	ALV/AfO export limits
`analytics.export.link_ttl_h`	tenant	int	24	1–168	signed URL validity	none	none
`analytics.schedule.retry`	tenant	int/backoff	3 / 1,4,16 min	0–5	delivery retry	batch retry count	`SM37` restart
`docgen.engine`	tenant	enum	CHROMIUM	CHROMIUM, TYPST (flag)	render engine	SSRS	ADS (`SFP`)
`docgen.pdf_profile`	legal entity	enum	PDF/A-3	PDF/A-3, PDF 1.7	archival format	none	ADS PDF/A setting
`docgen.visual_regression_max_pct`	tenant	numeric	0.1	0–5	publish gate	none	none
`print.default_destination.<document_type>`	legal entity	enum	ARCHIVE_ONLY	PRINTER, EMAIL, E_INVOICE, ARCHIVE_ONLY, PORTAL, NONE	fallback when no rule matches	Print management default	`NACE` default condition record
`print.copies_default`	legal entity	int	1	0–9	copies when rule silent	Print management copies	`NAST` number of messages
`print.agent_offline_buffer_h`	site	int	24	1–72	job retention while agent offline	Document routing agent	`SPAD` spool retention
`print.stale_job_min`	site	int	30	5–240	BR-46.13 threshold	none	spool request timeout
`text.default_language`	legal entity	BCP 47	entity language	installed languages	fallback for text blocks	Form notes language	`SO10` logon language
`correspondence.statement_schedule`	legal entity	cron	`0 20 L * *`	cron	periodic statements	Account statement batch	`F.27` variant
`dq.eval_interval_min`	tenant	int	60	15–1440	rule evaluation cadence	none	Information Steward task schedule
`dq.default_threshold_pct`	tenant	numeric	98	50–100	default rule threshold	none	IS rule threshold
`process.event_retention_months`	tenant	int	24	6–120	event-log roll-up age	none	Process Observer retention
`archive.residence_months.<domain>`	tenant	int	24	6–120 (≥ wave-48 statutory minimum)	FR-46.18 move age	none	`AOBJ` residence time
`archive.restore_ttl_days`	tenant	int	30	1–90	restored partition lifetime	none	`SARI` retrieval
`catalog.sync_interval_min`	tenant	int	60	15–1440	lineage refresh	none	BW metadata repository refresh

Setup sequence per legal entity: install document templates → map party contact roles for e-mail routing → define print rules (defaults, then overrides) → load text blocks and form notes → enable dashboards per workspace → register reconciliation sources for financial metrics → assign DQ rule owners → set archive residence per domain (must not undercut the wave-48 retention minimum for the entity's country).

9.46.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Workspace dashboards	KPI	period, legal entity, site, dimension filters	governed metrics, sparklines, freshness	Cube over `mart.*`	Workspace tiles, Power BI embedded, role center KPIs	Fiori Overview Pages, SAC stories, Smart Business tiles
Explorer	drill-down	measures × dimensions × filters, time grain	any published metric and dimension	Cube/Trino	Open in Excel, Power BI Desktop over BYOD	Analysis for Office, Query Browser, Multidimensional apps
Metric reconciliation results	operational report	metric, date range, status	semantic value, source value, delta, status, days trusted	`metric_reconciliation`	none	none
Pipeline health	list inquiry	domain, status	lag seconds, last LSN, DLQ count, snapshot id	`cdc_pipeline_state`	Entity store refresh status	`RSA7` delta queue, `ODQMON`
Export log	list inquiry	user, date, format	rows, bytes, filter hash, destination	`export_job`	none	download audit (`SM20` partial)
Schedule deliveries	list inquiry	schedule, status	run time, destination, format, retries, error	`report_delivery`	Batch job history	`SM37`, `SOST`, `RSRD_LOG`

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Document output log	list inquiry	document type, record, destination, status	render id, template version, destinations, agent ack, error	`document_render`	Print management journal / document history	`VV13` / `VV23` NAST status, Manage Output Items
Print rule resolution trace	drill-down	record	matched rule, evaluated conditions, final destinations	`print_rule` + read model	none	`NACE` determination analysis
Data-quality scorecard	KPI	asset, rule type, owner	pass %, failed rows, trend, score	`dq_score`	none	Information Steward scorecard
Process variant explorer	drill-down	case type, period, entity	variants, cycle times, rework, automation share	`mart.process_event`	none	Signavio Process Intelligence
Archive partition inquiry	list inquiry	domain, period, status	rows, hash, moved_at, restore state	`archive_partition`	none	`SARI`, `SARA` job log
Lineage view	drill-down	asset	upstream/downstream assets, owners, last refresh	OpenMetadata	none	BW metadata repository, Datasphere catalog
Usage statistics	KPI	period	dashboard opens, explorer queries, exports per user	`analytics_usage`	none	`RSRT` statistics, SAC usage

9.46.15 Printed and electronic documents

Document	Trigger	Layout elements (header/line/footer)	Formats	Numbering sequence	Legal / retention requirement
Sales invoice	invoice posting (wave 30)	entity branding, bill-to/ship-to, tax ids, invoice number/date, payment terms, IBAN; lines with item, qty, unit price, discount, tax code; totals per tax rate, footer text blocks	PDF/A-3 with embedded e-invoice XML (wave 35), e-mail, EDI, portal	invoice sequence per legal entity (gap-free where the country pack requires)	country pack statutory content; retain 7–10 years per wave-48 policy
Purchase order	PO confirmation (wave 17)	vendor, delivery address, terms, buyer; lines with item, qty, price, requested date; footer terms text block	PDF, e-mail, cXML/EDI (wave 35), portal	PO number	retain with PO record
Packing slip	shipment confirmation (wave 28)	ship-to, carrier, tracking; lines with item, qty, batch/serial, weight	PDF, label printer (wave 32)	packing slip sequence	customs copy per wave-48 export rules
Check	payment run (wave 19)	MICR line, payee, amount in words, remittance stub	PDF to check printer; positive-pay file	check number per bank account	bank retention; voided checks kept
Customer/vendor statement	correspondence schedule or manual	balance forward, open items by age, totals	PDF, e-mail, portal	statement run id	none
Pick list	wave release (wave 31)	wave, locations in pick sequence, item, qty, license plate	PDF, mobile	pick list id	none
Remittance advice	payment run	payee, invoices paid, discounts, net	PDF, e-mail, ISO 20022 `remt.001`	payment id	none
Payment notice / balance confirmation	correspondence type	party, period, items, confirmation text block, signature line	PDF, e-mail	correspondence run id	audit support
Scheduled report	schedule	dashboard snapshot or explorer grid, parameters, generated-at, freshness	PDF, XLSX, CSV	run id	none; deleted after 30 days
Export file	explorer export	grid as requested, filter manifest sheet	XLSX, CSV	export job id	audit log kept 1 year; file deleted after 24 h
Process event export	FR-46.17	cases, events, objects	OCEL 2.0 JSON, XES	export job id	none

9.46.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
dbt incremental run	every 60 s	domain	`_source_lsn` high-water mark per model	< 45 s for 1M lines/h	skip cycle, alert after 5 consecutive failures	`dbt_run_duration_s`, lag p95
SCD2 rebuild	nightly 01:00	master-data entity	full rebuild into staging then swap	< 20 min	keep previous tables; alert	job status
Metric reconciliation	daily 02:00 local	tenant, metric	(tenant, metric, date) unique	< 5 min	banner on dashboard; `metric.reconciled` BLOCKED	delta > tolerance
Iceberg compaction and snapshot expiry	nightly 03:00	table	Iceberg commit	< 60 min	retry next night; small-file count alert	files < 64 MB count
Lineage sync	hourly	asset type	OpenMetadata ingestion checkpoint	< 10 min	retry 3×	missing-edge count
Schedule dispatcher	every minute	schedule	`(schedule_id, next_run_at)`	< 1 s dispatch	BR: retry 3× with backoff, then `report_delivery` FAILED	failed deliveries
Export cleanup	hourly	export job	delete files > 24 h	< 1 min	none	none
Periodic correspondence (statements)	per `correspondence_type.cron`	legal entity, party group	run id	< 15 min per 10k statements	partial run resumable per party	failed renders
Print queue sweeper	every 5 min	site	job state	< 1 s	BR-46.13	stale jobs > 0
DQ evaluation	every 60 min	asset	`(rule, evaluated_at)`	< 10 min	skip rule after timeout 5 min	rules failing
Process event build	every 15 min	case type	event offset	< 5 min	resume from offset	build lag
Archive mover	weekly Sunday 04:00	domain, partition	`archive_partition` state machine	< 2 h per 100M rows	BR-46.14	hash mismatch, partitions pending > 7 days

9.46.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
AnalyticsView	`GET /analytics/metrics`, `POST /analytics/query`, dashboard host, explorer (read)	none	every business role

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
AnalyticsAuthor	`PUT /analytics/dashboards`, `POST /analytics/schedules`, metric registry publish	with FinanceClose when publishing financial metrics (MEDIUM, `RPT-001`)	Controller, Analytics author
AnalyticsExport	`POST /analytics/exports`, process-event export	subject to wave-48 export governance	Controller, Analyst
AnalyticsAdmin	pipeline health, replay from LSN, DLQ release, Cube cache flush	with AnalyticsAuthor (LOW)	Platform operator
DocumentDesign	template designer, `POST /documents/templates/{id}/versions`, text blocks	with PrintManagementSetup when the same user routes payments (`P2P-007`, MEDIUM)	Application administrator
PrintManagementSetup	`PUT /documents/print-rules`, resolution trace	with ProcessVendorPayments (HIGH, check and remittance redirection)	Application administrator
PrintAgent (service)	`GET/PATCH /documents/print-queue`	n/a	site print agent identity
CatalogView	lineage, catalog browse	none	every business role
CatalogSteward	DQ rules, owners, asset metadata	none	Data steward
ArchiveAdmin	archive partitions, restore	with LegalHoldAdmin (MEDIUM)	Platform operator, Compliance

9.46.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
ANA-0101	error	Query exceeds the interactive limit of {max_rows} rows. Use Export.	result cap	run as export job	FR-46.9
ANA-0102	error	You have no data scope for this model (NO_SCOPE).	OPA scope returns empty	request legal-entity access	BR-46.9
ANA-0103	error	Model {model} has no security mapping (SCOPE_UNMAPPED).	missing scope mapping	AnalyticsAdmin maps the model	FR-46.7
ANA-0104	warning	Metric {metric} failed reconciliation on {date}: delta {delta}.		delta	> tolerance
ANA-0105	error	CDC for {domain}.{table} paused: incompatible schema change ({detail}).	narrowing or NOT NULL	operator approves mapping, resume	FR-46.3
ANA-0106	warning	Data is {lag} s old.	freshness above amber threshold	wait or check pipeline health	FR-46.8
ANA-0107	info	Export ready: {rows} rows, link valid until {expires_at}.	export completed	download	FR-46.9
ANA-0108	error	Schedule {name} failed after 3 attempts: {error}.	delivery failure	fix destination, run now	FR-46.10
ANA-0109	warning	Data-quality rule {rule} on {asset} at {pass_pct}% (threshold {threshold}%).	rule below threshold	owner reviews failing rows	FR-46.16
ANA-0110	error	Archive verification failed for {domain}.{table} {period}: counts {a} vs {b}.	mismatch	incident opened; partition kept	BR-46.14
DOC-0401	error	Template version {v} is RETIRED and cannot be assigned to a print rule.	rule references retired version	pick a PUBLISHED version	BR-46.11
DOC-0402	error	Two print rules have priority {p} for {document_type} in {entity}.	tie	change priority	BR-46.11
DOC-0403	error	Visual regression delta {pct}% exceeds {max}%; version not published.	render drift	review diff, re-baseline with reason	BR-46.8
DOC-0404	error	Render failed for {document_type} {id}: {reason}.	data or engine error	retry; check read model	FR-46.11
DOC-0405	warning	No print rule matched; using entity default {destination}.	fallback	add rule if unwanted	FR-46.14
DOC-0406	error	Recipient role {role} has no e-mail on party {party}.	missing contact	maintain contact	FR-46.14
DOC-0407	warning	Placeholder {name} is empty in text block {code}.	unresolved placeholder	fix binding or text	FR-46.15
DOC-0412	error	Print job {id} failed: no acknowledgment from print agent at {site}.	agent offline > 2 × stale window	check agent, reprint	BR-46.13

9.46.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation under 3× load
CDC commit to `raw.*`	1M journal lines/h peak, 20M change events/day	lag 10 s / 30 s / 60 s	6k events/s per domain	400 GB raw (Parquet, zstd)	`days(_source_ts)`, `bucket(16, tenant_id)`	commit size adapts to 100 MB; lag badge amber
dbt incremental cycle	60 s cadence	20 s / 45 s / 60 s	n/a	`core.*` 250 GB, `mart.*` 120 GB	lookback 3 days	cycle stretches to 120 s; no data loss
Cube query (≤ 50k rows)	10k users, 5% querying, peak 500 queries/min	300 ms / 2 s / 4 s	50 queries/s	pre-aggregation 50 GB	pre-aggregations per legal entity and day	queue; p95 4 s; explorer debounce raised to 1 s
Dashboard load (8 tiles)	10k opens/day	800 ms / 2 s / 3 s	100 loads/s	n/a	cached per (user scope, tile, minute)	cache TTL 2 min
Export job	200/day, up to 1M rows	1 min / 8 min / 10 min	4 concurrent per tenant	24 h retention only	Trino spill to disk	queued; ETA shown
Document render (50 lines)	50k documents/day, peak 2k/min	300 ms / 800 ms / 1.5 s	40 renders/s per docgen pod	1.5 TB PDF/A per 10M docs (object store)	by tenant prefix and month	autoscale to 12 pods; print queue absorbs
Print rule resolution	per render	5 ms / 20 ms / 50 ms	n/a	negligible	index (tenant, document_type, scope, priority)	n/a
DQ evaluation	500 rules	2 min / 8 min / 10 min	n/a	`dq_score` 2 GB	by (asset, date)	interval doubles
Archive move	100M rows/week	< 2 h	15k rows/s	OLTP shrinks ~40%	partition by month	job spans two windows

9.46.20 Localization and compliance hooks

- Document layouts vary by country: legal mentions (DE §14 UStG invoice contents, FR mention of late-payment penalties, IN GSTIN and HSN codes, MX CFDI UUID and QR, UK VAT number), address formats and number/date formats come from the wave-48 `country_pack.document_layouts[]` which installs template variants keyed by `locale`; the designer refuses to publish a `SalesInvoice` variant lacking the pack's mandatory elements.
- Currency rounding at display uses the currency's minor units (JPY 0, KWD 3) and the entity's rounding rule from wave 11; amounts in words on checks use the pack's language rules.
- Fiscal calendars (wave 11) drive the Cube `timeDimension` for period comparisons; 4-4-5 and IN April–March years are first-class.
- Retention of rendered documents, exports and archive partitions follows wave-48 `retention_policy` per record class and country (DE 10 years GoBD, US 7 years, FR 10 years, IN 8 years); the archive mover reads the minimum and never undercuts it.
- Privacy: explorer and exports are subject to wave-48 export governance (FR-48.24) and the PII classification from wave 42; the process event log stores actor ids, not names, and is pseudonymized on erasure.

- Language: dashboards, metric names and text blocks are translated through the wave-2 label framework; text blocks keep per-language bodies and the document locale picks them.
- Extension points: `country_pack.document_layouts[]`, `country_pack.text_blocks[]`, `print_rule.condition_expr` (wave-3 expression subset / FR-3.13 decision tables with a `country` input column), Cube `queryRewrite` for country-specific data scopes, `retention_policy.residence_months` per domain.

9.46.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX 12.99.4 row 17 — 12.2.4 Forms → Print management (AP)	PARTIAL-46	ADDED as FR-46.14	conditional routing per vendor and query, original/copy destinations
AX 12.99.4 row 30 — 12.3.4 Form setup (sales documents) / Form notes / Print management	PARTIAL-46	ADDED as FR-46.14, FR-46.15	form notes via text blocks; routing via print rules
AX 12.99.4 row 102 — 12.11.4 Form setup (project invoices) / Print management	PARTIAL-46	ADDED as FR-46.14	project account override scope
AX 12.99.4 row 167 — 12.16.4 Form setup (purchase documents) / Form notes / Print management (purchase)	PARTIAL-46	ADDED as FR-46.14, FR-46.15	
AX 12.99.4 row 173 — 12.17.4 Form setup (sales), Form notes, Print management (sales), Form sorting	PARTIAL-46	ADDED as FR-46.14, FR-46.15	form sorting already in designer (line sort band property)
AX 12.99.4 row 240 — 12.29.1 Print management (org-wide) (`PrintMgmtDocType`)	PARTIAL-46	ADDED as FR-46.14	tenant and legal-entity defaults
AX 12.99.4 row 259 — 12.29.4 Print management setup (per module/document: original/copy destinations, conditional settings by query)	PARTIAL-46	ADDED as FR-46.14	query conditions via wave-3 expression subset or FR-3.13 decision table
AX 12.30 inventory rows "Data archiving / Long-term retention", "Archive/purge jobs (D365)"	COVERED-46 (by name only)	ADDED as FR-46.18	archive tier now specified; retention minimums from wave 48
SAP 13.99.2 row 33 — 13.2 `F.64` AP correspondence (PARTIAL-19, "define on wave 46 designer")	PARTIAL-19	ADDED as FR-46.15	correspondence types with triggers; wave 19/30 bind their events
SAP 13.99.2 row 349 — 13.31 `S010`/`S072`/`SE75` standard texts (PARTIAL-5, "propose wave 46 designer text blocks")	PARTIAL-5	ADDED as FR-46.15	text blocks with placeholders and language versions
SAP 13.99.2 row 353 — 13.31 SAP Process Mining (Signavio) / Process Observer (`POC`)	PARTIAL-46	ADDED as FR-46.17 (partial: event log, variants, OCEL/XES export; no conformance engine)	conformance checking remains OUT-OF-SCOPE for v1 — external tools consume the export
SAP 13.99.2 row 399 — 13.36 Data quality dashboards (Information Steward)	PARTIAL-46	ADDED as FR-46.16	DQ rules on catalog assets, scorecard tile
SAP 13.99.2 row 401 — 13.37 Signavio Process AI / Process Insights	PARTIAL-46	SUPERSEDED by FR-46.17 + wave-47 copilot (`ask_data` over `mart.process_event`)	recommendations are copilot answers over the event log, not a separate product
SAP 13.31 rows "S/4 Output Management (BRF+ OPD)", "output control: output types, determination"	SUPERSEDED-46	ADDED as FR-46.14	determination rules are print rules; channels map 1:1
SAP 13.99.2 rows 348/352/354 — BRF+ / decision tables (PARTIAL-3, not this wave)	PARTIAL-3	SUPERSEDED by FR-3.13 (wave 3 `RuleSet`/`DecisionTable`); output determination here consumes it via `print_rule.condition_expr`, no private rules engine	listed for traceability only
AX 12.99.1 theme "Alerts and notification rules" (wave 5, not this wave)	GAP-5	DEFERRED to wave 5 (owner); reconciliation banners, DQ failures and schedule failures deliver through the wave-5 notification center	listed for traceability only

9.47 Wave 47: AI Copilots, Agents & Automation

9.47.1 Scope and business context

D365 ships Copilot for finance and operations (summaries, draft e-mails, Copilot in workflow history) and Power Automate flows triggered from business events; SAP ships Joule and SAP Build Process Automation. Neither lets a governed agent execute a multi-step ERP process under the invoking user's exact permissions with an eval gate. This wave exposes every Passage API, entity and report as MCP tools through a gateway that forwards the user's token to OPA-protected APIs; adds a copilot in the shell (ask-the-data over the wave-46 semantic layer, explain-this-record, draft documents, summarize workflows); runs agents on Temporal with approval gates; gates deployment on an eval harness; and enforces responsible-AI controls with a provider-agnostic model layer (Claude default; Bedrock, Azure OpenAI, open-weights via vLLM selectable). Out of scope: training custom models, autonomous posting without approval in v1, voice.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
Coding a vendor invoice in `VendInvoiceJour`/`MIRO` means opening the PO, the vendor history and the chart of accounts in three forms, then keying account, dimensions and tax code per line	No suggestion engine; copilots cannot read the posting context	AP coding agent proposes account, dimensions, tax code, PO match per line; approver confirms	Clicks per invoice 18 → 2; coding time 4 min → 20 s; top-1 accuracy ≥ 92%
Cash application: `CustPaymMatch` rules and `F-28` match exact amounts only; partials and multi-invoice remittances go to a manual queue	Rule-based matching without reading remittance text	Cash application agent ranks settlements from remittance text and tolerances	Auto-matched share 60% → 90%+; unapplied cash aged > 7 d reduced 10×
Power Automate / SAP Build flows need a connector project, a service account with broad rights and a separate audit trail	Automation runs outside the ERP's authorization model	MCP tools with user-token inheritance; Temporal agent runtime; `agent_action` audit	Integration project 6 weeks → 0 (tools generated); 0 actions beyond user permission
"Why is this number what it is?" requires reading workflow history, `SysDatabaseLog` and voucher transactions across forms	Context scattered across tables with no narrative	Explain-this-record over audit trail and related documents with citations	Investigation 15 min → 30 s
D365 Copilot / Joule answer from a vendor model with no accuracy gate, no cost control and no kill switch	Vendor-managed black box	Eval harness in CI, token budgets, kill switch, provider choice	100% of agent releases gated by evals; kill in ≤ 10 s

9.47.2 AX / SAP parity map

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Conversational assistant	D365 Copilot sidecar (`CopilotFeatureManagement`), Copilot summaries on workflow history	Joule in S/4HANA Cloud, Fiori launchpad	Copilot panel in shell	Improved (acts, not only answers)
Ask the data	Copilot "ask about data" over Dataverse virtual entities	Joule analytics via SAC	`ask_data` tool → Cube query with OPA scope	Full
Process automation	Power Automate flows on business events (`BusinessEventsCatalog`), Flow connectors	SAP Build Process Automation, workflow agents	Agent runtime on Temporal, triggered by CloudEvents	Full
Invoice coding suggestions	Vendor invoice automation, `VendInvoiceAutomation`	Cash Application ML, Invoice assistant (Business AI)	AP coding agent (suggest → approve)	Full
Cash application	Customer payment advanced matching rules (`CustPaymMatch`)	Cash Application ML (`FINS_CASH_ML`)	Cash application agent	Full
Planning exceptions	Planning Optimization action messages	MRP Cockpit (`MD04`, `PPH_MRP_COCKPIT`), Situation Handling	MRP exception triage agent	Improved
Collections outreach	Collections workspace, `CustCollectionLetter`	FSCM Collections worklist (`UDM_SUPERVISOR`)	Collections agent drafts outreach	Full
Anomaly detection	Finance insights (cash-flow forecast, late-payment prediction)	Business AI journal anomaly detection	Journal anomaly agent	Full
Audit of AI actions	None dedicated	None dedicated	`agent_action` audit with inputs, tool calls, outputs, approver	Improved
Payment-date prediction	Customer payment predictions (Finance insights, Dataverse ML)	Cash Application ML, FSCM collections scoring	`payment_prediction` model and scores on open invoices (FR-47.15)	Full
Knowledge retrieval	Copilot over Microsoft Learn docs	Joule answers from SAP Help, solution database (`IS01`/`IS02`)	`search_knowledge` tool over wave-45 knowledge articles and the wave-50 docs site (FR-47.14)	Full
AI scenario activation and thresholds	Feature management flags, `VendInvoiceAutomation` parameters	`ISLM` intelligent scenarios, Business AI activation per company code	`agent.<id>.mode` per legal entity with thresholds (FR-47.5, 9.47.13)	Full

9.47.3 Functional requirements

- **FR-47.1 MCP gateway** — Must. The system shall expose Passage capabilities as MCP tools from a single gateway (`mcp.passage.<tenant>`), generated from OpenAPI/AsyncAPI and entity metadata.
    - Notes: tool names `passage.<domain>.<entity>.<verb>` (e.g. `passage.ap.invoice.list`, `passage.ap.invoice.propose_coding`, `passage.ledger.journal.get`); `inputSchema` is the endpoint's JSON Schema with tenant_id removed (injected from token); each tool declares `annotations.readOnlyHint`, `destructiveHint`, `idempotentHint`, and a Passage extension `x-passage-duty` (required duty) and `x-passage-approval` (`none`, `suggest`, `approve_before_commit`); read tools return ≤ 200 rows per call with cursor; a tool call carries `traceparent` and `x-agent-run-id`.
- **FR-47.2 Permission inheritance** — Must. The system shall execute every tool call with the invoking user's Keycloak token (on-behalf-of exchange, `act` claim = agent id), so OPA evaluates the user's duties and data scope at the API; agents hold no credentials of their own.
    - Notes: token lifetime for agent runs 15 min, refreshed by Temporal activity; a tool whose `x-passage-duty` the user lacks is not listed to the model; contract test: for each of 400 tools, a user without the duty receives 403 from the gateway and the API.
- **FR-47.3 Copilot UI** — Must. The system shall provide a shell panel with modes ask-the-data, explain-this-record, draft (e-mail, PO text, dunning letter), summarize (workflow history, case) with citations to records and metrics used.
    - Notes: streaming responses; every answer lists tool calls made; "explain" uses the record's audit trail and related documents; drafts are inserted only on user click.
- **FR-47.4 Agent runtime** — Must. The system shall run agents as Temporal workflows (`AgentRunWorkflow`) with steps plan → tool calls → proposal → approval gate → commit, each tool call an activity with retry policy and 60 s timeout, run timeout 24 h including approval wait.
- **FR-47.5 AP invoice coding agent** — Must. The system shall propose account, dimensions, tax code and PO match for an unposted vendor invoice using vendor history, PO lines and text, in suggest mode (approver confirms) or auto mode when confidence ≥ 0.95 and amount < tenant threshold (default USD 5,000 / EUR 4,500).
- **FR-47.6 Cash application agent** — Must. The system shall propose settlements for unapplied customer payments (remittance text, amounts, tolerances), ranked by confidence; applies only after approval in v1.
- **FR-47.7 MRP exception triage, collections outreach, journal anomaly agents** — Should. The system shall ship these three in suggest mode: triage groups action messages by cause and proposes expedite/postpone; collections drafts outreach per dunning policy; anomaly scores journals on amount, account pairing, time of posting and user, flagging score > 0.8.
- **FR-47.8 Approval gates** — Must. The system shall route any `approve_before_commit` action to the wave-4 workflow inbox with proposed change, diff, confidence and rationale; approver decisions are recorded on `agent_action`.
- **FR-47.9 Eval harness** — Must. The system shall maintain golden datasets per agent and run evals in CI on every prompt, model or tool change, blocking deploy below thresholds.
    - Metrics and thresholds: AP coding top-1 accuracy ≥ 0.92, top-3 ≥ 0.98; cash application precision ≥ 0.90, recall ≥ 0.75; MRP triage macro-F1 ≥ 0.80; anomaly AUROC ≥ 0.85, false-positive rate ≤ 0.05; ask-the-data metric-selection accuracy ≥ 0.95 and SQL-equivalence ≥ 0.90; refusal correctness ≥ 0.99 on an adversarial set of 500 prompts; p95 latency per agent run < 30 s excluding approval; cost per run ≤ budgeted USD; regression gate = no metric drops > 1 point vs last release.
- **FR-47.10 Prompt and version registry** — Must. The system shall version system prompts, tool lists, model id and parameters as `agent_version`; production pins a version; rollback is a pointer change.
- **FR-47.11 Token budgets** — Must. The system shall enforce per-tenant monthly token budgets (default 50M input / 10M output), soft alert at 80%, hard stop at 100% with copilot degraded to deterministic features; per-run cap 400k tokens.
- **FR-47.12 Responsible-AI controls** — Must. The system shall: redact PII (names, IBAN, tax ids, emails) from prompts to external providers using the wave-42 PII classification, replacing with stable pseudonyms resolved after response; log every action (prompt hash, tool calls, outputs, approver); provide a tenant and

global kill switch that halts all runs within 10 s; prohibit model-initiated posting without `approve_before_commit` or auto-mode policy; label all generated text in UI; keep a model card per agent version; allow provider selection per tenant with data-residency constraint checked against wave-48 tenant residency.

- **FR-47.13 Provider layer** — Must. The system shall abstract chat completion, tool use and embeddings behind one interface with adapters for Anthropic API, Amazon Bedrock, Azure, and OpenAI-compatible open-weights endpoints; feature parity test per adapter.
- **FR-47.14 Knowledge retrieval tool** — Should. The system shall expose `passage.knowledge.search` (hybrid BM25 + embedding search over wave-45 knowledge articles, wave-50 documentation, and tenant policy documents uploaded by an administrator) so copilot answers to "how do I" questions cite the article or document section; the tool respects article visibility (internal, portal) through the user's token.
    - Notes: embeddings are computed by the provider layer (FR-47.13) and stored in Postgres `pgvector` in the `knowledge` database; index refresh within 5 min of article publish; answers without a citation above similarity 0.75 say so instead of guessing.
- **FR-47.15 Payment-date prediction** — Should. The system shall train a per-tenant model (Python, gradient-boosted trees) weekly on paid invoices (customer, terms, amount, invoice day-of-month, dunning history, disputes, seasonality) and score every open customer invoice with `predicted_payment_date` and `p_late_30d`, feeding the collections agent (FR-47.7), the wave-30 collections workspace and the `dso_days` forecast tile.
    - Notes: minimum 500 paid invoices per tenant before scoring is enabled, else a terms-plus-average-delay heuristic is used and labeled; model card per version; MAE on held-out set ≤ 6 days or the previous model stays active.

9.47.4 Data model

`tool_definition` (mcp-gateway)

Field	Type	Required	Notes
tool_name	text	Y	PK, `passage.<domain>.<entity>.<verb>`
version	int	Y	from OpenAPI version
input_schema	jsonb	Y	JSON Schema draft 2020-12
output_schema	jsonb	Y	
required_duty	text	Y	OPA duty id
approval_mode	enum	Y	none, suggest, approve_before_commit
read_only	bool	Y	
source_ref	text	Y	OpenAPI operationId or report id

`agent_run` (agent-runtime)

Field	Type	Required	Notes
run_id	uuid	Y	PK = Temporal workflow id
tenant_id	uuid	Y	RLS
agent_id	text	Y	e.g. `ap_coding`
agent_version	int	Y	FK agent_version
invoked_by_user_id	uuid	Y	whose permissions apply
trigger	enum	Y	USER, EVENT, SCHEDULE
status	enum	Y	PLANNING, ACTING, AWAITING_APPROVAL, COMMITTED, REJECTED, FAILED, KILLED
tokens_in / tokens_out	bigint	Y	
cost_usd	numeric(12,6)	Y	
started_at / ended_at	timestamptz	Y/N	

`agent_action`: action_id, run_id, seq, tool_name, input_json (redacted), output_hash, output_json (redacted, ≤ 64 KB), approval_task_id, approver_user_id, decision (APPROVED/REJECTED/AUTO), decided_at, committed_entity_ref.

`eval_run`: eval_run_id, agent_id, agent_version, dataset_id, dataset_version, metrics_json, passed bool, ci_ref, created_at. **`token_budget`**: tenant_id, month, limit_in, limit_out, used_in, used_out, state (OK/SOFT/HARD).

Invariants: `agent_action.input_json` never contains raw PII (checked by a redaction scanner at write); an action with approval_mode `approve_before_commit` has `committed_entity_ref` only if decision ∈ {APPROVED}; a run's `invoked_by_user_id` is immutable; a production `agent_version` has a passing `eval_run`. Indexing: `agent_run` (tenant_id, status, started_at), partition by month; `agent_action` (run_id, seq).

Additional entities (FR-47.14, 47.15). `knowledge_chunk`: chunk_id, tenant_id, source_type (ARTICLE, DOC, POLICY), source_ref, section, text (≤ 2 KB), embedding vector(1024), visibility, updated_at. `payment_prediction`: invoice_id, tenant_id, model_version, predicted_payment_date, p_late_30d numeric(5,4), features_hash, scored_at; `prediction_model`: model_version, tenant_id, trained_at, rows, mae_days, status (CANDIDATE, ACTIVE, RETIRED).

9.47.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
GET	`/mcp` (SSE/streamable HTTP)	MCP server endpoint; `tools/list`, `tools/call`	per JSON-RPC id	user token
POST	`/api/v1/copilot/chat`	copilot conversation turn (stream)	n/a	CopilotUse
POST	`/api/v1/agents/{agent_id}/runs`	start a run	`Idempotency-Key`	AgentInvoke + agent's duty
GET	`/api/v1/agents/runs/{run_id}`	run status, actions, costs	n/a	AgentView
POST	`/api/v1/agents/runs/{run_id}/actions/{id}/decision`	approve/reject	by action id	approver duty
POST	`/api/v1/agents/kill-switch`	halt tenant or global	by scope	AgentAdmin / PlatformAdmin
GET	`/api/v1/agents/budgets/{tenant}`	budget status	n/a	AgentAdmin
POST	`/api/v1/agents/evals/runs`	trigger eval (CI)	by commit sha	CI service account
PUT	`/api/v1/agents/{agent_id}/versions/{v}/promote`	pin production version	ETag	AgentAdmin

Method	Path	Purpose	Idempotency	Auth duty
POST	`/api/v1/knowledge/search`	hybrid search with citations (also exposed as MCP tool)	n/a (read)	CopilotUse
POST	`/api/v1/knowledge/documents`	upload tenant policy document for retrieval	`Idempotency-Key`	KnowledgeAdmin
GET	`/api/v1/ar/invoices/{id}/prediction`	payment prediction for an open invoice	n/a	CollectionsView
POST	`/api/v1/predictions/payment/retrain`	trigger retrain (also weekly job)	by week	AgentAdmin

Validation: run start rejects when tenant budget state HARD, kill switch active, or agent version lacks passing eval; decision endpoint rejects if the approver equals `invoked_by_user_id` and the action's amount exceeds the SoD self-approval limit (wave 48).

Event	Trigger	Payload fields	Consumers
`dev.passage.agent.run.completed.v1`	run end	run_id, agent_id, version, status, tool_calls[], tokens, cost_usd	audit, evals, copilot
`dev.passage.agent.approval.requested.v1`	gate reached	run_id, action_id, tool_name, proposal, confidence, risk_score	workflow inbox
`dev.passage.agent.budget.threshold.v1`	80%/100%	tenant_id, month, pct, state	alerting, admin UI
`dev.passage.agent.killswitch.changed.v1`	toggle	scope, active, by_user	all agent workers
`dev.passage.prediction.payment.scored.v1`	weekly scoring or invoice change	invoice_id, model_version, predicted_payment_date, p_late_30d	collections workspace, analytics
`dev.passage.agent.version.promoted.v1`	production pointer change	agent_id, from_version, to_version, eval_run_id, by_user	audit, workers

9.47.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Copilot panel (shell)	ask, explain record, draft, summarize, view tool calls	conversation, citations, "insert draft"	CopilotUse
Agent inbox (in workflow inbox)	approve, reject, edit proposal, bulk approve ≤ 50	proposal diff, confidence, rationale, amount	approver duty
Agent runs	filter, inspect timeline, replay in sandbox	run_id, agent, status, tokens, cost	AgentView
Agent administration	enable/disable per entity, set mode, thresholds, kill switch	agent, version, mode, auto threshold	AgentAdmin
Eval dashboard	compare versions, open failing cases	metric per version, trend	AgentAdmin

Rules: `Ctrl+/` opens copilot with current record context; approvals support keyboard `A/R`; generated text is marked with a badge and never auto-saved; copilot remembers mode per workspace per user.

9.47.7 Business rules and edge cases

- **BR-47.1** Run state machine: PLANNING → ACTING → (AWAITING_APPROVAL → COMMITTED | REJECTED) | COMMITTED (auto) | FAILED | KILLED; no transition out of COMMITTED/REJECTED/KILLED.
- **BR-47.2** Auto mode commits only when confidence ≥ threshold AND amount < limit AND the vendor/customer is not flagged `high_risk` AND no SoD conflict exists for the invoking user.
- **BR-47.3** Approval requests expire after 72 h → REJECTED with reason `EXPIRED`; the source document stays unposted.
- **BR-47.4** Token accounting uses provider-reported usage; if absent, estimated at 4 chars/token and flagged `estimated`.
- **BR-47.5** Kill switch active → running activities finish their current API call, no new tool calls; runs move to KILLED within 10 s.
- **BR-47.6** A tool error 4xx is not retried; 5xx/timeouts retry 3× with exponential backoff (1 s, 4 s, 16 s).
- **BR-47.7** Redaction pseudonyms are stable per (tenant, value) for 24 h so the model can refer back; the mapping is stored only in memory of the run worker and in Vault transit-encrypted form on `agent_run`.
- **BR-47.8** Eval datasets are versioned; a dataset change requires re-baselining all agent versions before promotion.
- **BR-47.9** Provider failover: if the default provider returns 5xx for 60 s, runs switch to the tenant's secondary provider only if it satisfies residency; otherwise runs pause.
- **BR-47.10** Cash application proposals never split a payment across more than 20 invoices, and never create write-offs above the wave-30 tolerance.
- **BR-47.11** A copilot answer that would require a tool the user lacks is answered with the reason (`AGT-0203`) and never with partial data from another user's cache.
- **BR-47.12** Payment predictions are recomputed for an invoice on any dunning, dispute or partial-payment event; a prediction older than 7 days is shown with a stale badge.
- **BR-47.13** Generated drafts inserted into a dunning letter or e-mail keep `origin=agent` and the run id on the resulting document; editing by the user clears neither.

9.47.8 Acceptance criteria

- **AC-47.1** (FR-47.1) Given an authenticated user, when `tools/list` is called, then only tools whose `required_duty` the user holds are returned.
- **AC-47.2** (FR-47.2) Given user without duty `APInvoicePost`, when the agent calls `passage.ap.invoice.post`, then gateway returns 403 and the action is logged `DENIED`.
- **AC-47.3** (FR-47.5, 47.9) Given the `eval-ap-coding-v3` dataset (2,000 invoices), when evals run, then top-1 accuracy ≥ 0.92 and the CI job passes.
- **AC-47.4** (FR-47.6, 47.9) Given `eval-cash-app-v2` (1,500 payments), when evals run, then precision ≥ 0.90.
- **AC-47.5** (FR-47.8) Given a coding proposal with confidence 0.80, when the run reaches the gate, then an approval task appears in the inbox and nothing is posted.
- **AC-47.6** (FR-47.12) Given a tenant kill switch toggled, when 10 s elapse, then all runs for that tenant are KILLED and no provider calls occur.

- **AC-47.7** (FR-47.11) Given a tenant at 100% budget, when a run is started, then it is rejected with `BUDGET_EXHAUSTED` and an alert was raised at 80%.
- **AC-47.8** (FR-47.12) Given an invoice containing a vendor IBAN, when the prompt is sent, then the provider request contains a pseudonym and the response shows the real IBAN only in the UI.
- **AC-47.9** (FR-47.3) Given "what was USMF revenue last month vs the month before", when asked, then the answer cites metric `revenue`, the two periods, and matches the explorer to the cent.
- **AC-47.10** (FR-47.13) Given provider switched to Bedrock, when the AP coding eval runs, then thresholds are still met.
- **AC-47.11** (FR-47.14) Given a published knowledge article "How to reverse a posted journal", when a user asks the copilot how to reverse a journal, then the answer cites the article section and no tool call touches ledger data.
- **AC-47.12** (FR-47.15) Given a tenant with 2,000 paid invoices, when the weekly retrain runs, then a model with MAE ≤ 6 days becomes ACTIVE and every open invoice has a prediction within 10 min.

9.47.9 Test plan and fixtures

Fixtures: `eval-ap-coding-v3` (2,000 labeled invoices, 40 vendors, 3 entities, from wave-19 fixtures plus hand labels); `eval-cash-app-v2` (1,500 payments with remittances, 12% partials, 5% multi-invoice); `eval-mrp-triage-v1` (800 action messages); `eval-anomaly-v1` (50k journals, 400 injected anomalies); `eval-ask-data-v1` (300 questions with expected Cube queries); `adv-prompts-500` (injection, exfiltration, policy bypass).

Test	Type	Target	Pass criterion
Permission inheritance	contract	gateway + 400 tools	0 cases where agent exceeds user
Tool schema conformance	contract	gateway	every tool validates against MCP spec and `x-passage-*`
Agent evals	eval	5 agents	thresholds in FR-47.9
Adversarial refusal	eval	copilot	≥ 0.99 correct refusals
Redaction scanner	unit/property	redaction	0 PII patterns in stored prompts across 100k generated samples
Kill switch latency	E2E	runtime	≤ 10 s
Run throughput	performance	runtime	500 concurrent runs, p95 < 30 s
Provider parity	contract	4 adapters	identical tool-use round trips

Reconciliation: tokens billed by provider ↔ `agent_run.tokens_*` within 1%; `agent_action` COMMITTED count ↔ posted documents tagged `origin=agent`.

9.47.10 Deployment and operations

Helm: `passage-mcp-gateway` (TS, 3 replicas), `passage-agent-runtime` (TS workers on Temporal namespace `agents`), `passage-copilot-bff`, `passage-agent-evals` (Python job runner). Config: `MODEL_PROVIDER_DEFAULT=anthropic`, `MODEL_ID` pinned per agent version, provider keys in Vault, `TOKEN_BUDGET_DEFAULT_IN=50000000`. Flags: `copilot.enabled`, `agent.<id>.mode` (off/suggest/auto) per tenant and legal entity. Jobs: budget rollover monthly, eval nightly on production datasets, model-card export weekly. SLOs: copilot first-token p95 < 2 s; run success rate ≥ 99%; gateway availability 99.9%. Alerts: eval regression, budget 80/100%, provider error rate > 5%, kill switch toggled. Runbook: rotate provider keys, replay a run in sandbox, demote version. Rollback: `promote` previous `agent_version`; Helm rollback.

9.47.11 Migration from AX / SAP

Source	Passage	Notes
Power Automate flows on business events	Agent or Temporal workflow definitions	catalogued; rebuilt by hand; the business-event catalog maps to CloudEvents types
`VendInvoiceAutomation` parameters	AP coding agent thresholds	tolerance and auto-post limits imported
`CustPaymMatch` rules	Cash application agent rules	matching rules become deterministic pre-filters
SAP Build Process Automation projects	Agent definitions	not convertible; documented
Joule / D365 Copilot settings	Copilot flags	n/a

Not migrated: conversation histories, Copilot usage data (no business value).

9.47.12 Dependencies, risks, open questions

Depends on: wave 46 (semantic layer for ask-the-data), wave 4 (Temporal, workflow inbox), wave 2 (OPA duties, token exchange), wave 19/30 (AP invoices, cash application APIs), wave 42 (PII classification).

Risk	Likelihood	Impact	Mitigation
Prompt injection via invoice text	High	High	tool allow-list per agent; adversarial eval; `approve_before_commit`
Eval datasets overfit to demo data	Medium	Medium	customer-labeled holdout from wave 49 parallel run
Provider cost spikes	Medium	Medium	budgets; prompt caching; smaller models for classification

Open questions: (1) Auto mode for AP coding in v1 for amounts below threshold — proposed default on, decide by wave 49 with first customer. (2) Open-weights model as residency fallback for DE tenants — default: vLLM adapter shipped, not certified; decide by wave 50.

9.47.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivale
`ai.provider.default`	tenant	enum	ANTHROPIC	ANTHROPIC, BEDROCK, AZURE, OPENAI_COMPATIBLE	provider for new runs	Copilot (Azure OpenAI, Microsoft-managed)	Joule (SAP-managed), AI Core deploym
`ai.provider.secondary`	tenant	enum	none	same, residency-checked (BR-47.9)	failover target	none	none
`ai.residency_region`	tenant	enum	from wave-48 residency	EU, US, IN, CA, UK, MX	restricts provider endpoints	LCS region	RISE region / Core region

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivale
`ai.model.<agent_id>`	tenant	text	per `agent_version`	provider model ids	model pinned per agent version	none	`ISLM` model version
`copilot.enabled`	tenant / legal entity	bool	true		shell panel on/off	Feature management "Copilot"	Joule activatic
`copilot.modes`	tenant	set	ask, explain, draft, summarize	subset	enabled modes	`CopilotFeatureManagement`	Joule capabili
`agent.<id>.mode`	legal entity	enum	SUGGEST	OFF, SUGGEST, AUTO	FR-47.5 behavior	`VendInvoiceAutomation` automatic posting switch	Business AI "propose vs a apply"
`agent.ap_coding.auto_threshold`	legal entity	numeric	0.95	0.80–1.00	min confidence for AUTO	none	Cash App ML threshold (`FINS_CASH_`
`agent.ap_coding.auto_amount_limit`	legal entity	money	USD 5,000 / EUR 4,500	≥ 0	AUTO cap	invoice automation tolerance	none
`agent.cash_app.max_invoices_per_payment`	tenant	int	20	1–50	BR-47.10	`CustPaymMatch` settings	Cash App ML parameters
`agent.approval_expiry_h`	tenant	int	72	1–240	BR-47.3	workflow escalation timeout	`SWWA` deadlin
`agent.run_timeout_h`	tenant	int	24	1–72	run including approval wait	none	none
`agent.tool_timeout_s`	tenant	int	60	10–300	per activity	none	none
`ai.budget.monthly_in` / `monthly_out`	tenant	bigint	50M / 10M	≥ 0	FR-47.11	none	AI Core quota
`ai.budget.soft_pct`	tenant	int	80	50–99	alert threshold	none	none
`ai.run_token_cap`	tenant	int	400,000	≤ 2M	per run	none	none
`ai.redaction.external`	tenant	bool	true (locked for external providers)	true	FR-47.12	none	Joule "no trair on customer c
`ai.pseudonym_ttl_h`	tenant	int	24	1–72	BR-47.7	none	none
`ai.killswitch`	tenant / global	bool	false		halt runs	none	`ISLM` deactiv scenario
`ai.run_log_retention_months`	tenant	int	24	6–120	`agent_run` / `agent_action` retention (archived per FR-46.18)	none	none
`ai.eval.regression_points`	global	numeric	1.0	0–5	FR-47.9 gate	none	none
`knowledge.sources`	tenant	set	ARTICLES, DOCS	ARTICLES, DOCS, POLICY	FR-47.14	none	none
`prediction.payment.min_rows`	tenant	int	500	100–10,000	FR-47.15 enablement	none	none
`prediction.payment.mae_max_days`	tenant	numeric	6	1–30	promotion gate	none	none

Setup sequence: confirm tenant residency (wave 48) → select provider and store keys in Vault → enable copilot per legal entity → set each agent to OFF/SUGGEST/AUTO with thresholds → assign approver duties → set budgets → run the eval suite against the tenant's labeled holdout before switching any agent to AUTO.

9.47.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Agent runs	list inquiry	agent, status, user, date, entity	run id, version, trigger, tokens, cost, duration, outcome	`agent_run`	Vendor invoice automation workspace, Workflow history	`ISLM` scenario monitoring, Cash App ML log
Agent action audit	drill-down	run	seq, tool, redacted input/output hash, decision, approver, committed ref	`agent_action`	`SysDatabaseLog` (partial)	change documents (`CDHDR`) partial
Approval queue (agent)	list inquiry	agent, amount, confidence	proposal, diff, rationale, age	workflow inbox view	Workflow work items	`SBWP` inbox
Eval dashboard	KPI	agent, version, dataset	accuracy, precision, recall, F1, AUROC, latency, cost per run, trend	`eval_run`	none	none
Token budget status	KPI	tenant, month	used/limit in and out, state, forecast exhaustion date	`token_budget`	none	AI Core quota usage
Copilot usage	KPI	period, workspace	sessions, questions per mode, citation rate, refusal rate	`copilot_session`	none	Joule usage analytics
Tool catalog	list inquiry	domain, duty, approval mode	tool name, version, read-only, required duty	`tool_definition`	none	none
Kill-switch and promotion log	list inquiry	scope, date	action, by user, reason, timestamp	audit events	none	none
Prompt and version registry	drill-down	agent	versions, model id, prompt hash, eval status, production pointer	`agent_version`	none	`ISLM` versions
Payment prediction accuracy	operational report	period, customer group	MAE days, p_late calibration, predicted vs actual	`payment_prediction`	Customer payment predictions (Finance insights)	FSCM collections scoring reports
Provider error and latency	operational report	provider, period	5xx rate, p95 latency, failovers	OpenTelemetry metrics	none	none

9.47.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Model card	agent version promoted	agent, version, model id, training/eval data description, metrics, limitations, residency, approver	Markdown + PDF	agent version	retained with version (EU AI Act transparency support); evidence for CC7.2
Eval report	CI eval run	dataset version, per-metric results vs thresholds, regressions, failing cases sample	HTML/PDF attached to CI	eval run id	24 months
Agent run audit extract	request by auditor	run timeline, actions, approvals, redaction markers	JSON + PDF	run id	per wave-48 retention (24 months then archive)
Generated drafts (dunning letter, e-mail, PO text)	user clicks "insert draft"	the wave-30/17 document carries the text; badge `origin=agent`	as the host document	host document's sequence	host document's rules

No document is posted or sent by this wave on its own; every outbound artifact is a host document from another wave with the agent origin recorded.

9.47.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
Budget rollover	monthly, 1st 00:00 UTC	tenant	(tenant, month) unique	< 1 min	retry; previous month frozen	missing rollover
Token reconciliation	daily 03:00	tenant, provider	provider usage report id	< 5 min	flag `estimated` rows	variance > 1%
Nightly production eval	daily 01:00	agent	(agent_version, dataset_version, date)	< 30 min	alert on regression	metric drop > 1 pt
Approval expiry sweeper	hourly	tenant	action state	< 1 min	BR-47.3	expired count
Model-card export	weekly Monday	agent	version	< 5 min	retry	none
Tool catalog regeneration	on deploy	domain	OpenAPI hash	< 2 min	deploy blocked if schema invalid	catalog drift
Knowledge index refresh	every 5 min / on publish event	source	source updated_at	< 1 min	retry 3×	index lag > 15 min
Payment model retrain and scoring	weekly Sunday 02:00	tenant	model_version	< 20 min per tenant	keep previous ACTIVE	MAE > max
Run-log archive	weekly	tenant, month	FR-46.18 mover	< 30 min	as FR-46.18	pending > 7 days
Provider health probe	every 30 s	provider	n/a	< 1 s	BR-47.9 failover	error rate > 5%

9.47.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
CopilotUse	`POST /copilot/chat`, `/mcp` tools/list and read tools, `POST /knowledge/search`	none (tools are gated by the user's own duties)	every business role when `copilot.enabled`
AgentInvoke	`POST /agents/{id}/runs`	with the agent's commit duty when in AUTO mode (`AI-001`, HIGH: a user cannot both invoke AUTO and approve)	AP clerk (ap_coding), Cash clerk (cash_app), Planner (mrp_triage), Collector (collections)
AgentApprove (per agent)	`POST /agents/runs/{id}/actions/{a}/decision`	with AgentInvoke for the same run (BR: approver ≠ invoker) and SoD rules of the underlying posting duty	AP supervisor, AR supervisor, Planning lead, Credit manager
AgentView	`GET /agents/runs`, timeline, costs	none	Auditor, Finance manager
AgentAdmin	mode and thresholds, `PUT /versions/{v}/promote`, tenant kill switch, budgets	with AgentApprove (MEDIUM, `AI-002`)	Application administrator
PlatformAdmin (global kill switch)	`POST /agents/kill-switch` scope=global	n/a	Platform operator (break-glass, wave 48 FR-48.23)
PromptAuthor	create `agent_version` drafts, edit prompts and tool lists	with AgentAdmin promote (MEDIUM, `AI-003`: author cannot promote own version)	AI engineer
EvalRun (service)	`POST /agents/evals/runs`	n/a	CI service account
KnowledgeAdmin	`POST /knowledge/documents`, source settings	none	Application administrator

9.47.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
AGT-0201	error	Agent runs are halted by the {scope} kill switch.	kill switch active	AgentAdmin/PlatformAdmin clears it	FR-47.12
AGT-0202	error	Monthly token budget exhausted (BUDGET_EXHAUSTED); copilot runs in deterministic mode until {reset_date}.	budget state HARD	raise budget or wait	FR-47.11
AGT-0203	info	I cannot do that: you do not hold duty {duty} required by {tool}.	missing duty	request access	FR-47.2 / BR-47.11
AGT-0204	error	Agent version {v} has no passing evaluation and cannot be promoted.	eval missing or failed	run evals	FR-47.9
AGT-0205	warning	Token budget at {pct}% for {month}.	soft threshold	review usage	FR-47.11
AGT-0206	error	Provider {provider} is unavailable and no residency-compliant secondary is configured; run paused.	provider outage	configure secondary or wait	BR-47.9
AGT-0207	error	Provider endpoint {endpoint} is outside tenant residency {region}.	residency violation	choose compliant endpoint	FR-47.12 / BR-48.7
AGT-0208	warning	Approval request expired after {hours} h; nothing was posted.	BR-47.3	re-run agent	BR-47.3
AGT-0209	error	You cannot approve an action from a run you started above the self-approval limit.	approver = invoker	route to another approver	9.47.5 validation
AGT-0210	error	Prompt rejected: unredacted PII detected before provider call.	redaction scanner	report; run is FAILED	FR-47.12

Code	Severity	User text	Cause	Remediation	Raised by
AGT-0211	info	Token usage estimated (provider reported no usage).	BR-47.4	none	BR-47.4
AGT-0212	warning	No knowledge source matches your question with sufficient confidence.	similarity < 0.75	rephrase or ask an administrator	FR-47.14
AGT-0213	warning	Payment prediction not available: fewer than {min_rows} paid invoices.	enablement threshold	heuristic shown	FR-47.15
AGT-0214	error	Tool {tool} failed with {status}; not retried.	4xx	fix input or permissions	BR-47.6

9.47.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation under 3× load
Copilot first token	10k users, 3 questions/user/day, peak 200 questions/min	800 ms / 2 s / 4 s	50 concurrent streams per BFF pod	`copilot_session` 20 GB	by (tenant, month)	queue with position shown; deterministic answers for ask-data when provider saturated
`tools/list`	per session	20 ms / 80 ms / 150 ms	500/s	n/a	cached per (user duties hash, catalog version) 5 min	n/a
Tool call via gateway	5M/month	+5 ms / +15 ms / +30 ms over API	1k/s	n/a	n/a	gateway autoscale
Agent run (excl. approval)	20k runs/day, peak 500 concurrent	8 s / 30 s / 60 s	500 concurrent per Temporal namespace	`agent_run` 15 GB, `agent_action` 80 GB (redacted)	partition by month	runs queue; SLA warning at 2×
Eval suite (5 agents)	per commit	< 30 min	n/a	`eval_run` 5 GB	n/a	nightly only
Redaction pass	per prompt ≤ 100 KB	20 ms / 60 ms / 120 ms	n/a	n/a	n/a	n/a
Knowledge search	50k/day	100 ms / 300 ms / 600 ms	50/s	`knowledge_chunk` 10 GB per 100k articles	`pgvector` HNSW (m=16, ef=64) per tenant	ef lowered to 32
Payment scoring	1M open invoices	< 10 min batch	2k invoices/s	`payment_prediction` 3 GB	(tenant, invoice)	spreads over 2 windows

9.47.20 Localization and compliance hooks

- Response language follows the user's locale (wave 2); glossary terms (duty names, document types) come from the label framework so German users see "Buchungsbeleg", not a translation of the English.
- PII categories redacted before external providers follow the wave-42 classification extended by country packs (DE: religion, works-council membership; IN: Aadhaar; US: SSN; MX: CURP/RFC; FR: NIR); pseudonymization is mandatory for all tenants with residency EU or UK.
- Provider residency: tenants with residency EU/UK/IN may only use endpoints in-region (BR-48.7); the open-weights adapter is the fallback where no in-region hosted provider exists; the admin console shows the compliant provider list per region.
- Transparency: generated text is labeled in the UI in the user's language; the model card and action audit are the evidence objects for AI-governance questions (EU AI Act Article 50 transparency support; NIST AI RMF map/measure functions).
- Extension points: `country_pack.pii_categories[]`, `ai.residency_region` from wave-48 tenant residency, `agent.<id>.mode` per legal entity, prompt glossaries per language in `agent_version`.

9.47.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
(no GAP or PARTIAL register row carries current or proposed wave 47)	—	—	rows below are secondary references and inventory COVERED-47 rows verified against this wave
SAP 13.99.2 row 304 — 13.26 Solution database `IS01` / `IS02` (GAP, propose 45 "or wave 47 copilot answers")	GAP-45	ADDED as FR-47.14 (retrieval over wave-45 articles); article authoring itself DEFERRED to wave 45 (owner)	copilot cites knowledge articles; symptom/solution structure lives in wave 45
SAP 13.99.2 row 401 — 13.37 Signavio Process AI / Process Insights (PARTIAL-46)	PARTIAL-46	SUPERSEDED by FR-46.17 + copilot `ask_data` over `mart.process_event`	closed in 9.46.21
AX 12.3 inventory row "Customer payment predictions (D365 Finance insights)"	COVERED-47 (by name only)	ADDED as FR-47.15	prediction model now specified with gates
AX 12.30 inventory row "AI: model provider configuration, token budgets, kill switch"	COVERED-47	confirmed by FR-47.11–47.13 and 9.47.13	
AX 12.31 inventory rows "Copilot / Ask-the-data", "Copilot → Agent runs", "Copilot settings"	COVERED-47	confirmed by FR-47.3, 47.4, 9.47.13	
AX 12.21 inventory row "Planning → MRP exception triage agent"	COVERED-47	confirmed by FR-47.7	
SAP 13.37 inventory rows "Responsible AI", "Agent action audit", "Token/cost budget", "AI governance policies", "Business AI scenario activation"	COVERED-47	confirmed by FR-47.5, 47.11, 47.12 and 9.47.13 (`agent.<id>.mode`)	
SAP 13.99.2 rows 348/352/354 — BRF+ / decision tables (PARTIAL-3, not this wave)	PARTIAL-3	SUPERSEDED by FR-3.13 (wave 3); `POST /v1/rules/{code}/evaluate` is exposed as MCP tool `passage.rules.ruleset.evaluate`, agents never embed rules in prompts	listed for traceability only

9.48 Wave 48: Globalization, Localization & Compliance Controls

9.48.1 Scope and business context

AX delivers country/region localizations, Electronic Reporting (`ERModel`, `ERFormat`, `ERModelMapping` configurations from the Regulatory Configuration Service), segregation of duties (`SysSecSegregationOfDutiesRule`, conflict table `SysSecSegregationOfDutiesConflict`) and `SysDatabaseLog`. SAP delivers country versions, Document and Reporting Compliance (e-documents, statutory reports), GRC Access Control rulesets with risk ids, and the Audit Information System. This wave adds a localization framework with seven country packs, an electronic reporting designer with a mandates registry, an SoD engine with mitigation and access certification, security hardening with SOC 2 control mapping and evidence automation, and GDPR/CCPA subject requests with retention and legal holds. Out of scope: additional countries (v1.x), payroll localizations beyond wave 43, ISO 27001 certification itself (evidence only).

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
A regulator changes an XML schema; the ER configuration must be re-imported from RCS/LCS, tested in a sandbox and deployed, or an SAP note applied via `SNOTE` with a transport	Formats bundled with the application release cycle	Mandates registry with effective-dated `er_format` versions, schema validation in CI	Schema update 3 weeks → 1 day; 0 regulator rejections for schema errors
SoD conflicts in `SysSecSegregationOfDutiesConflict` are found after assignment; GRC AC risk analysis runs as a batch and mitigations live in a separate system	Detection decoupled from role assignment	`sod/simulate` before save; nightly evaluation; mitigation workflow in the same workspace	Detection latency 1 day batch → < 2 s at assignment; unmitigated HIGH conflicts 0
SOC 2 evidence is screenshots and exports gathered by hand each audit (realm settings, backup logs, scan reports)	No system of record for controls	Control library with scheduled collectors and hashed artifacts	Evidence effort 20 person-days/audit → 1; 100% evidence machine-collected
GDPR requests require searching every table by hand (person search report in AX, IRF in SAP) and erasure risks breaking postings	PII not classified; no fan-out workflow	Classification-driven discovery, Temporal fan-out per domain, pseudonymization	Request fulfillment 25 days → 2; 0 broken financial references
`SysDatabaseLog` slows posting and fills the database; `CDHDR/CDPOS` is incomplete for custom tables	Application-side audit writes	CDC-derived audit, configuration only chooses what to surface	Posting overhead from audit 15% → 0%; 100% field coverage

9.48.2 AX / SAP parity map

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Country localization	Country/region-specific features gated by `CountryRegionCodes`, Localization feature keys	Country versions, `T005` country settings, localization BC sets	`country_pack` with tax, reports, layouts, bank formats, calendars	Full (7 countries)
Electronic reporting	ER `ERModel`, `ERFormat`, `ERModelMapping`, RCS, `ERFormatMappingRun`	DRC e-documents (`EDOC_COCKPIT`), statutory reports (`SRF`), Advanced Compliance Reporting	ER designer: `er_model`, `er_mapping`, `er_format` with mandates registry	Full
E-invoicing mandates	Electronic invoicing service (Italy SDI, Mexico CFDI)	DRC eDocument Framework (SDI, CFDI, Peppol, India IRN)	Mandate adapters: MX CFDI 4.0, IN IRP e-invoice, Peppol BIS 3 (wave 35), UK MTD VAT	Full for first set
Statutory tax reports	Sales tax reporting, EU sales list, Intrastat (`Intrastat` form)	`RFUMSV00` VAT return, ESL (`RFASLM00`), Intrastat (`VE01`)	ER formats: US sales tax, UK MTD VAT return, DE UStVA/ZM, FR CA3/DEB, IN GSTR-1/3B, MX DIOT, CA GST/HST	Full
Segregation of duties	`SysSecSegregationOfDutiesRule`, conflict detection, `SysSecSegregationOfDutiesConflict` resolution	GRC Access Control rulesets, risk ids (e.g. P001, F002), mitigating controls, UAR	`sod_rule`, `sod_conflict`, `mitigation`, `certification_campaign`	Improved (campaigns included)
Audit log	`SysDatabaseLog`, `DatabaseLog` form	`CDHDR/CDPOS`, AIS (`SECR`), `SM20` security audit log	wave-5 CDC audit + compliance evidence views	Full
Security compliance	Microsoft-managed SOC reports	SAP-managed for RISE; customer for on-prem	SOC 2 control mapping with automated evidence	Improved (customer-visible)
Data privacy	Person search report, GDPR request form (`GDPR request`)	Information Retrieval Framework (IRF), ILM retention (`IRM_CUST`), blocking	`subject_request`, `retention_policy`, `legal_hold`	Full
Data residency	LCS region selection	RISE region	tenant residency policy enforced on storage, lakehouse, AI provider	Full
Electronic signatures (21 CFR Part 11)	Electronic signature parameters, Signature requirements (`SIGSignatureSetup`), Signature log (`SIGSignatureLog`), Reason codes, user certificates	Digital signature (`DSIG`) in PI sheets/EBR, `ELSIG*` signature strategies, SSF	`esign_requirement`, `esign_record` with re-authentication and meaning (FR-48.13)	Full
Audit policies and audit cases	Audit policies (`AuditPolicyRule`, `AuditPolicyViolation`), rule types duplicate/keyword/list search/sampling, Audit cases (`CaseDetail`)	GRC Process Control continuous monitoring, Fraud Management detection strategies, AIS	`audit_policy` rules on FR-3.13 decision tables, `audit_violation`, `audit_case` (FR-48.14, 48.15)	Full
Process, risk and control library	Internal controls (`SysComplianceProcess`, `SysComplianceRisk`, `SysComplianceFiles`)	GRC Process Control (`GRFN_*`: processes, subprocesses, controls, risks, test plans)	`process_node`, `risk`, `control` linked to SOC 2 controls and evidence (FR-48.16)	Full
Electronic messaging	Electronic messages (`EMElectronicMessage`, `EMMessageProcessing`, processing actions, web service settings)	DRC eDocument cockpit (`EDOC_COCKPIT`), statutory reporting submission and response	`e_message` with type, status machine, processing actions, response tracking (FR-48.17)	Full
XBRL / iXBRL disclosure	Financial reporting XBRL export (limited), ER XBRL formats	Disclosure Management, Group Reporting XBRL, SAC for financial statements	`er_format` output type IXBRL with taxonomy registry (FR-48.18)	Full
Sanctions / denied-party screening	Third-party add-ons only	GTS Sanctioned Party List screening, Business Partner Screening (`/SAPSLL/SPL*`)	`screening_list`, `screening_hit` on parties and documents (FR-48.19)	Full
Export control and customs documents	Foreign trade parameters, Intrastat, commodity codes; export documents via third parties	GTS export management, license determination, customs declarations (`/SAPSLL/*`), `VX11N`	`trade_classification`, `export_license`, export document set (FR-48.20)	Partial (declarations through customs broker adapters)
Preference / origin	none	GTS preference processing (vendor declarations, long-term vendor declaration `/SAPSLL/PRE*`)	`origin_determination` from BOM roll-up (FR-48.21)	Full for USMCA and EU PEM
Emergency access	none (temporary security role assignment by admin)	GRC EAM firefighter IDs, FF log review	`elevated_session` with reason, time box and reviewer sign-off (FR-48.23)	Full
Read access logging	none	Read Access Logging (`SRAL`)	`read_log_policy` on classified fields (FR-48.25)	Full

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Masked tenant copy	LCS database refresh (no masking)	TDMS, client copy with scrambling (`SCC4`/`SCCL`)	masked tenant clone (FR-48.26)	Improved
US workforce compliance	Worker compliance (US): I-9, ADA, visa, union agreements, EEO, VETS, ACA, FMLA	US HR infotypes (0077, 0094, 0442, 0495), ACA reporting (`PU_ACA`), new-hire reporting	US pack workforce data and outputs (FR-48.22, 48.31)	Full
Security incident and breach	none	none (customer ITSM)	`security_incident` with breach clock and notification tasks (FR-48.29)	Improved

9.48.3 Functional requirements

- **FR-48.1 Country pack framework** — Must. The system shall package per-country tax rules, statutory report formats, document layouts, bank formats (NACHA, BACS, SEPA CT/DD, NEFT/RTGS, SPEI, EFT), holiday calendars and address/tax-id validators as a versioned `country_pack`, installable per legal entity.
    - Notes: packs are metadata plus ER formats, never code forks; a legal entity has exactly one primary pack; pack upgrade is a versioned migration with preview.
- **FR-48.2 First seven packs** — Must. US (sales/use tax, 1099-NEC/MISC, ACH), UK (MTD VAT, BACS, Companies House XBRL tags), DE (USt‑VA, ZM, SEPA, GoBD export, DATEV), FR (CA3, DEB, FEC file, SEPA), IN (GST returns GSTR-1/3B, e-invoice IRP, TDS), MX (CFDI 4.0 with PAC, DIOT, SPEI), CA (GST/HST/PST, EFT, T4A).
- **FR-48.3 Electronic reporting designer** — Must. The system shall provide `er_model` (logical data model), `er_mapping` (Passage entities → model), `er_format` (XML/JSON/CSV/fixed-width output with XSD/JSON-schema validation), versioned with effective dates and a mandates registry (`mandate`: regulator, jurisdiction, schema version, effective_from, sunset).
    - Notes: format execution is a Temporal job; every output is stored with hash and regulator acknowledgment; schema validation failure blocks submission.
- **FR-48.4 SoD rules engine** — Must. The system shall evaluate rules of the form `duty_a CONFLICTS duty_b` (and privilege-level) against every user's effective roles on each assignment change and nightly, raising conflicts with severity.
    - Rule schema: `rule_id`, `name`, `duty_a`, `duty_b`, `severity` (HIGH/MEDIUM/LOW), `risk_id` (GRC-style, e.g. `P2P-001`), `description`, `mitigation_allowed` bool, `max_mitigation_days` (default 365), `status`.
    - Seed rules (10 of 50): `P2P-001` MaintainVendors ↔ ProcessVendorPayments (HIGH); `P2P-002` CreatePurchaseOrders ↔ ApprovePurchaseOrders (HIGH); `P2P-003` PostVendorInvoices ↔ ApproveVendorInvoices (HIGH); `P2P-004` ReceiveGoods ↔ PostVendorInvoices (MEDIUM); `O2C-001` MaintainCustomers ↔ PostCustomerPayments (HIGH); `O2C-002` CreateSalesOrders ↔ ApproveCreditLimits (HIGH); `O2C-003` IssueCreditNotes ↔ PostCustomerPayments (HIGH); `GL-001` PostGeneralJournals ↔ ApproveGeneralJournals (HIGH); `GL-002` MaintainChartOfAccounts ↔ PostGeneralJournals (MEDIUM); `SEC-001` MaintainUsersAndRoles ↔ any posting duty (HIGH); `HR-001` MaintainWorkerBankDetails ↔ RunPayroll (HIGH).
- **FR-48.5 Mitigation workflow** — Must. The system shall allow a conflict to be mitigated with a compensating control, approver (not the conflicted user), reason, and expiry ≤ `max_mitigation_days`; unmitigated HIGH conflicts block role assignment when tenant policy `sod.block_high=true`.
- **FR-48.6 Access certification campaigns** — Should. The system shall run campaigns where managers certify or revoke each direct report's roles within a window (default 14 days), auto-revoking uncertified roles at close when policy says so, with evidence export.
- **FR-48.7 SOC 2 control mapping and evidence** — Must. The system shall ship a control library mapped to TSC and automate evidence collection on a schedule.
    - Excerpt: CC6.1 logical access — evidence: Keycloak realm export, OPA bundle hash, RLS policy list (daily); CC6.2 provisioning — SCIM join/leave log, certification results (weekly); CC6.3 role changes — `sod_conflict` report, role-assignment audit (daily); CC6.6 boundary protection — Envoy Gateway TLS config, NetworkPolicy manifests (daily); CC6.7 data in transit/at rest — cert-manager inventory, CNPG encryption settings (weekly); CC6.8 malware/unauthorized software — image signature verification logs, SBOM diff (per deploy); CC7.1 vulnerability detection — Trivy scan results, pen-test tracker (daily/quarterly); CC7.2 anomaly monitoring — alert rule inventory, journal-anomaly agent summary (daily); CC7.3 incident evaluation — incident records with severity and timeline (per incident); CC7.4 incident response — post-incident review, runbook link (per incident); CC7.5 recovery — backup/restore drill results, RPO/RTO measured (monthly).
- **FR-48.8 Security hardening** — Must. The system shall rotate all secrets ≤ 90 days via Vault, enforce signed images, run Trivy and dependency scanning per build, remediate external pen-test findings (high/critical = 0 at exit), and enforce tenant data residency (region for Postgres, object store, lakehouse, AI provider).
- **FR-48.9 Backup and restore** — Must. The system shall take continuous WAL archives and daily base backups per domain cluster (CloudNativePG), support point-in-time restore of one tenant into an isolated namespace, and run a monthly drill measuring RPO ≤ 5 min and RTO ≤ 1 h.
- **FR-48.10 Subject requests** — Must. The system shall process GDPR/CCPA requests of type ACCESS, PORTABILITY, ERASURE, RECTIFICATION, RESTRICTION with the flow: intake (portal or admin) → identity verification (two attributes + e-mail link) → scope discovery (search party, worker, user, contact across all domains via the PII classification) → legal-hold and retention check → domain fan-out (Temporal child workflow per domain) → compile (ACCESS/PORTABILITY: JSON + PDF bundle) or apply (ERASURE: pseudonymize PII fields, keep financial records with `erased=true`) → approval by privacy officer → deliver via signed link → close within 30 days (GDPR) / 45 days (CCPA), with the deadline tracked.
- **FR-48.11 Retention and legal hold** — Must. The system shall apply retention policies per record class (e.g. financial documents 10 years DE, 7 years US; HR 6 years post-termination; logs 1 year) and legal holds that suspend erasure and retention purge for named scopes.
- **FR-48.12 Database log equivalent** — Should. The system shall offer `SysDatabaseLog`-style configuration: pick entities/fields to surface in the compliance audit view, backed by the wave-5 CDC audit, with no extra write path.
- **FR-48.13 Electronic signatures** — Must. The system shall require an electronic signature, configured in `esign_requirement` per (entity type, action or field, legal entity), before the guarded action commits: the signer re-authenticates (password plus TOTP or WebAuthn through Keycloak step-up, `acr=esign`), selects a reason code, sees the meaning of the signature (authored, reviewed, approved, released, verified) and the record summary, and the system stores an `esign_record` bound to the record version hash.
    - Notes: satisfies 21 CFR Part 11 §11.50 (name, date/time, meaning on the signed record and its printouts), §11.70 (signature-to-record linking by hash), §11.200 (two components at the first signing of a session, one at subsequent signings within 15 min); optional X.509 user certificate (PAdES/XAdES) for

documents leaving the system; three failed re-authentications lock signing for 30 min and raise `ESG-0603`; consumers: quality release (wave 33), batch record and PI-sheet steps (wave 24), master-recipe approval, ECO release (wave 9), payment approval, period close; signatures are never editable — a "reset" creates a revocation record with reason by `ESignAdmin` and invalidates downstream approvals; the signature log is a read projection of `esign_record`.

- **FR-48.14 Audit policies** — Must. The system shall run post-hoc audit policies over expense reports (wave 43), vendor invoices (wave 19), purchase orders (wave 17) and general journals (wave 11), with rule types DUPLICATE (same vendor + amount ± tolerance + date window), KEYWORD (list match in text fields), LIST_SEARCH (party in a watch list, e.g. employees as vendors), SAMPLING (random n% or every k-th, seeded), THRESHOLD (amount above a value per category, premium/mileage limits), WEEKEND_HOLIDAY (posted outside business calendar) and AGGREGATE (sum per party per period above limit).
    - Notes: rule conditions and thresholds are FR-3.13 decision tables (`rules.eval('audit.<rule_type>', …)`), never a private engine; policies are scoped by organization node (legal entity, department) and effective-dated; a run evaluates documents in a date window, creates `audit_violation` rows (document, rule, score, evidence fields) and is idempotent on (policy version, document id); SAMPLING uses a stored seed so a rerun selects the same documents.
- **FR-48.15 Audit cases** — Must. The system shall group violations into `audit_case` records by case category (e.g. duplicate payment, policy breach, sampled review) with assignee, due date, status (OPEN, IN_REVIEW, RESOLVED_NO_ISSUE, RESOLVED_ISSUE, CLOSED, ARCHIVED), findings, recovery amount and linked documents; closing requires a resolution code; closed cases older than `audit.case_archive_days` move to the archive tier (FR-46.18).
- **FR-48.16 Process, risk and control library** — Should. The system shall maintain a hierarchical process library (process → subprocess → activity, up to 5 levels), a risk library (risk id, description, likelihood, impact, owner) and controls (control id, type preventive/detective, automation manual/automated/IT-dependent, frequency, owner, test procedure) linked many-to-many; controls map to SOC 2 TSC ids, SoD rules, audit policies and evidence collectors; process documents are files in the wave-5 document store with templates per document type and versions.
    - Notes: an automated control links to its evidence collector (FR-48.7) so the library shows last evidence and status; control tests (design and operating effectiveness) are recorded with sample, tester, result and exceptions.
- **FR-48.17 Electronic messaging lifecycle** — Must. The system shall track statutory submissions as `e_message` records of a message type (UK MTD VAT return, DE ELSTER USt VA, FR EDI-TVA, IN GSTR-1, MX DIOT, CA GST34 NETFILE, US 1099 FIRE) through statuses defined per type (e.g. CREATED → GENERATED → VALIDATED → SENT → ACKNOWLEDGED | REJECTED → CORRECTED), with processing actions per transition (run ER format, validate schema, call web service, import response, await user input) and additional fields (period key, receipt id, obligation id).
    - Notes: web service settings (endpoint, OAuth client or certificate from Vault, fraud-prevention headers for HMRC MTD) are per message type and legal entity; responses are parsed into structured status and stored with the raw payload; a rejected message keeps its history and a correction creates a new item with `supersedes` (BR-48.3); e-invoice clearance (CFDI, IRP, Peppol) stays in wave 35 and reports its status here for one inbox.
- **FR-48.18 XBRL and iXBRL disclosure** — Should. The system shall add output type IXBRL and XBRL to `er_format`, with a taxonomy registry (UK FRS 102/IFRS taxonomies for Companies House and HMRC CT600, ESEF ESMA taxonomy, US GAAP taxonomy reference) and a tagging map from wave-15 financial statement lines to taxonomy concepts, contexts (entity, period, dimensions) and units.
    - Notes: output validates against the taxonomy (XBRL 2.1 and Inline XBRL 1.1 conformance via Arelle in a Python job); ESEF packages are zipped per the reporting-package spec with the block-tagged notes; filing itself is through electronic messaging (FR-48.17) where the regulator offers an API, else a download.
- **FR-48.19 Denied-party and sanctions screening** — Must. The system shall screen parties (customers, vendors, contacts, banks, workers on request) and documents (sales orders, deliveries, purchase orders, payments) against `screening_list` sources (OFAC SDN and Consolidated, EU Consolidated Financial Sanctions, UK HMT/OFSI, UN Security Council, US BIS Entity List, Denied Persons List, Unverified List) refreshed daily, using normalized fuzzy matching (token-set ratio plus transliteration; default hit threshold 0.88) on name, address and country.
    - Notes: a hit sets the party to `SCREENING_BLOCK` and blocks order release, shipment, PO send and payment until a `TradeComplianceOfficer` clears it as false positive (with reason; whitelist entry per party and list entry) or confirms it; rescreening runs on any list delta and on party change; a provider adapter (e.g. Descartes, LexisNexis Bridger, Dow Jones) can replace the internal matcher per tenant; every decision is retained 5 years.
- **FR-48.20 Export control and foreign trade documents** — Should. The system shall classify products by export classification (US ECCN/EAR99, EU dual-use Annex I number, HS/HTS tariff codes from wave 13 Intrastat setup), determine license requirements per (classification, destination country, end use) from a FR-3.13 decision table shipped by the pack, track `export_license` quantities and values, block deliveries that need a missing or exhausted license, and generate the export document set: commercial invoice, packing list for customs, certificate of origin, EUR.1 / origin statement, and US EEI data (AES) or EU export declaration data for the broker.
    - Notes: shipment execution and carrier documents are wave 34; this FR adds the compliance decision, documents and broker data file (JSON/EDIFACT CUSDEC via wave-35 hub); direct submission to customs systems (ACE, ATLAS, Delta G) is through broker adapters only in v1.
- **FR-48.21 Origin and preference determination** — Could. The system shall compute preferential origin for manufactured items per trade agreement (USMCA, EU–UK TCA, EU PEM) by rolling up the wave-21 BOM with component origins from supplier declarations (`supplier_origin_declaration`, long-term, validity ≤ 24 months), applying tariff-shift and regional-value-content rules (USMCA RVC transaction-value and net-cost methods; EU max non-originating content %) and storing the result per (item, agreement, period) for the commercial invoice and origin statement.
- **FR-48.22 US workforce compliance data** — Should. The system shall add to the US pack the worker compliance fields and workflows: Form I-9 (sections 1–3, document types List A/B/C, expiry tickler 90/30 days, E-Verify case number), ADA accommodation requests, visa/immigration records (type, expiry, sponsor), union agreements (local, seniority date, dues), FMLA leave tracking (12-week entitlement on a rolling 12-month look-back, intermittent leave in hours, eligibility check 1,250 hours/12 months) and workers' compensation class codes per position and state.
    - Notes: fields use the wave-42 country-specific fields framework; I-9 documents are stored with access limited to `HRComplianceUS` and are covered by read access logging (FR-48.25).
- **FR-48.23 Emergency (break-glass) access** — Must. The system shall grant elevated roles through an `elevated_session` request with reason code, ticket reference, requested roles and duration (≤ 4 h, default 1 h), approved by a designated approver (or self-activated with mandatory post-review when `breakglass.self_activate=true`), issued as a short-lived Keycloak token with claim `elev=<session_id>`, and every API call in the session logged; the session log is assigned to a reviewer who signs off within 3 business days.
    - Notes: SoD evaluation still runs and records conflicts for the session; sessions end automatically; unreviewed sessions older than 3 business days raise `SEC-0708` and appear on the CC6.3 evidence report.

- **FR-48.24 Export governance** — Should. The system shall apply download policies per data classification (PII, FINANCIAL, CONFIDENTIAL from wave 42 and entity metadata): allow, allow with watermark and audit, require reason, require approval, deny; per role and per channel (grid export, explorer export, report download, API bulk read > 10k rows, MCP tool bulk read).
    - Notes: every export records user, purpose, row count, columns, classification and file hash; XLSX/PDF carry a visible watermark with user and timestamp when the policy says so; the export log is evidence for CC6.1/CC6.7.
- **FR-48.25 Read access logging** — Should. The system shall log reads of fields marked in `read_log_policy` (default: national ids, bank accounts, salary, health, I-9 documents, date of birth) at the API layer — who, when, which record and field set, channel, purpose — without logging the values, retained per policy (default 2 years) and searchable by subject for subject-access requests.
- **FR-48.26 Masked tenant clone** — Should. The system shall clone a tenant (all domain schemas, lakehouse namespace, documents optional) into a non-production tenant with masking rules applied in-flight per field classification: deterministic tokenization for keys that must stay joinable (party names, e-mails), format-preserving randomization (IBAN with valid checksum, tax ids), date shifting (± 0–30 days per subject, consistent), nulling (free text notes), keeping amounts and quantities.
    - Notes: masking runs in the clone pipeline, never on the source; clones are tagged `masked=true` and refuse outbound integrations (bank, e-invoice, e-mail) by default; used by wave-49 rehearsals and wave-50 load tests (BR-50.5).
- **FR-48.27 India pack depth** — Must. The IN pack shall cover GST components (CGST, SGST/UTGST, IGST, cess) with place-of-supply rules, reverse charge, ITC eligibility and GSTR-2B reconciliation; TDS sections (194C, 194J, 194I, 194Q, 194H) with thresholds, PAN-based rates (206AA), lower-deduction certificates, challan ITNS 281 generation and CIN capture, quarterly 26Q/27Q returns (FVU file) and Form 16A certificates; TCS (206C(1H)) with collection and 27EQ return; 26AS/AIS reconciliation import.
- **FR-48.28 HR legal content per country pack** — Should. Each pack shall ship HR-legal fields, rules and outputs: DE (works-council co-determination flags on HR actions, contract types befristet/unbefristet, statutory leave minimums, Mutterschutz/Elternzeit), FR (CDI/CDD/intérim contract types with CDD maximum durations, DPAE pre-hire declaration data, mutuelle), UK (right-to-work checks, statutory sick/maternity pay eligibility, pension auto-enrolment flags), IN (PF/ESI numbers, gratuity eligibility after 5 years), MX (IMSS registration, aguinaldo and PTU entitlements), CA (Record of Employment data, provincial statutory holidays).
- **FR-48.29 Security incident and breach notification** — Must. The system shall maintain `security_incident` records (source: alert, user report, vendor, pen test; severity Sev-1–4; affected tenants, data categories and approximate subject count; timeline entries; containment, eradication, recovery steps; root cause; post-incident review) and, when a personal-data breach is confirmed, start breach clocks per applicable regime: GDPR Art. 33 supervisory authority within 72 h of awareness, Art. 34 subjects without undue delay when high risk, UK ICO 72 h, US state laws (per state table, e.g. 30–60 days), CA PIPEDA "as soon as feasible", IN CERT-In 6 h for reportable incidents, with notification tasks, templates and a record of what was sent when.
    - Notes: incidents are evidence for CC7.3/CC7.4 (FR-48.7); a Sev-1 incident automatically links its on-call page (wave 50 FR-50.10); customer-facing notifications are generated per affected tenant with the tenant's DPA contact.
- **FR-48.30 Evidence store and auditor access** — Must. The system shall store control evidence artifacts in an object-store bucket with object lock (compliance mode, retention = audit period + 1 year, default 2 years), hash each artifact (SHA-256) into a per-control hash chain, and give external auditors a time-boxed read-only `Auditor` role scoped to an audit period, with sample requests (auditor selects population items, owners attach evidence) tracked to completion.
    - Notes: the audit package export (ZIP with manifest, hashes and chain heads) can be verified offline with a published script; evidence cannot be deleted before lock expiry by any role.
- **FR-48.31 US pack statutory outputs (workforce and assets)** — Should. The US pack shall produce EEO-1 Component 1 (job category × race/ethnicity × sex), VETS-4212, ACA 1094-C/1095-C (IRS AIR XML), state new-hire reports (state formats, 20-day deadline tracking), workers' compensation payroll report by class code and state, OSHA Forms 300/300A/301 and the ITA CSV upload from the wave-42 injury and illness register, and IRS Form 4562 depreciation detail from the wave-37 tax book.

9.48.4 Data model

`sod_rule` (sod)

Field	Type	Required	Notes
rule_id	text	Y	PK, e.g. `P2P-001`
duty_a / duty_b	text	Y	OPA duty ids; `*POST*` wildcard allowed
severity	enum	Y	HIGH, MEDIUM, LOW
risk_id	text	Y	GRC-style id
mitigation_allowed	bool	Y	default true
max_mitigation_days	int	Y	default 365
status	enum	Y	ACTIVE, RETIRED
version	int	Y	

`sod_conflict`: conflict_id, tenant_id, user_id, rule_id, roles_json (which roles grant each duty), severity, detected_at, state (OPEN, MITIGATED, RESOLVED, ACCEPTED_RISK), mitigation_id, resolved_at.

`er_format` (ereporting)

Field	Type	Required	Notes
format_id	uuid	Y	PK
mandate_id	uuid	Y	FK mandate
version	int	Y	
output_type	enum	Y	XML, JSON, CSV, FIXED, PDF
schema_ref	text	N	XSD/JSON schema location, hash
template_json	jsonb	Y	element tree with bindings
effective_from / effective_to	date	Y/N	

Field	Type	Required	Notes
status	enum	Y	DRAFT, PUBLISHED, SUPERSEDED

`subject_request`: request_id, tenant_id, type, subject_ref (party/worker/user), verified_at, deadline_at, state (RECEIVED, VERIFIED, DISCOVERED, HELD, APPROVED, DELIVERED, CLOSED, REJECTED), domains_json, bundle_ref, privacy_officer_id.

`control_evidence`: evidence_id, control_id (e.g. `CC6.1`), collected_at, collector, artifact_ref (object store), hash, period_start, period_end, status (COLLECTED, REVIEWED, EXCEPTION).

Invariants: a user cannot approve their own mitigation; a PUBLISHED `er_format` with a schema_ref has a validated fixture; an ERASURE cannot complete while a legal hold covers the subject; `control_evidence.hash` matches the stored artifact. Indexing: `sod_conflict` (tenant_id, state, severity); `subject_request` (tenant_id, deadline_at); `control_evidence` (control_id, collected_at).

Additional entities (FR-48.13–48.31).

`esign_record` (compliance)

Field	Type	Required	Notes
esign_id	uuid	Y	PK
tenant_id	uuid	Y	RLS
requirement_id	uuid	Y	FK `esign_requirement` (entity_type, action, legal_entity, meaning, reason_codes[], certificate_required)
entity_type / record_id	text / uuid	Y	signed record
record_version_hash	text	Y	SHA-256 of the canonical record version
signer_user_id	uuid	Y	
meaning	enum	Y	AUTHORED, REVIEWED, APPROVED, RELEASED, VERIFIED
reason_code	text	Y	from `esign_reason`
auth_method	enum	Y	PASSWORD_TOTP, WEBAUTHN, CERTIFICATE
signed_at	timestamptz	Y	server time, UTC
certificate_fingerprint	text	N	when certificate signing is used
revoked_by_id	uuid	N	FK to revocation record

`audit_policy` / `audit_violation` / `audit_case`: `audit_policy` (policy_id, tenant_id, document_type EXPENSE/VENDOR_INVOICE/PURCHASE_ORDER/GENERAL_JOURNAL, rule_type, ruleset_code (FR-3.13), org_scope_json, effective_from/to, schedule, version, status); `audit_violation` (violation_id, policy_id, policy_version, document_type, document_id, score, evidence_json, run_id, case_id, state OPEN/IN_CASE/DISMISSED); `audit_case` (case_id, tenant_id, category, assignee_id, due_at, status, resolution_code, recovery_amount, currency, findings, closed_at, archived_at).

`e_message`: message_id, tenant_id, legal_entity_id, message_type, period_key, status, format_run_id, payload_ref, payload_hash, response_ref, receipt_id, supersedes_id, additional_fields_json, last_action, last_action_at.

`screening_hit`: hit_id, tenant_id, subject_type (PARTY/DOCUMENT), subject_id, list_code, list_entry_id, score numeric(4,3), matched_fields, state (OPEN, FALSE_POSITIVE, CONFIRMED), decided_by, reason, decided_at; `screening_list`: list_code, source_url, version, loaded_at, entry_count.

`trade_classification` / `export_license` / `origin_determination`: classification (item_id, regime US_EAR/EU_DUALUSE/HS, code, valid_from); license (license_id, regime, number, destination_countries[], items[], qty_limit, value_limit, used_qty, used_value, expires_at); origin (item_id, agreement, period, originating bool, method, rvc_pct, non_originating_pct, computed_at, declaration_refs[]).

`elevated_session`: session_id, user_id, roles[], reason_code, ticket_ref, requested_minutes, approved_by, started_at, ended_at, reviewer_id, reviewed_at, review_result.

`security_incident`: incident_id, severity, source, detected_at, aware_at, affected_tenants[], data_categories[], subject_estimate, personal_data_breach bool, regimes_json (regime, deadline_at, notified_at), status (TRIAGE, CONTAINED, ERADICATED, RECOVERED, CLOSED), root_cause, pir_ref.

Other entities: `read_log_policy` (field_fqn, classification, retention_days), `read_log` (partitioned by day), `export_policy`, `export_log`, `process_node`, `risk`, `control`, `control_test`, `supplier_origin_declaration`, `taxonomy`, `xbrl_tag_map`, `clone_job`.

Invariants (additional): an `esign_record` is append-only and its `record_version_hash` equals the hash of the version committed by the guarded action; a document blocked by an OPEN `screening_hit` cannot transition to released/shipped/paid; `elevated_session.ended_at − started_at ≤ 240 min`; an `audit_violation` belongs to at most one case; evidence objects are under object lock until `retain_until`. Indexing: `esign_record` (entity_type, record_id); `audit_violation` (policy_id, state); `screening_hit` (subject_type, subject_id, state); `read_log` partition by day, index (subject_ref, read_at); `e_message` (legal_entity_id, message_type, period_key).

9.48.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	`/api/v1/localization/packs/{code}/install`	install pack on legal entity	by (entity, version)	LocalizationAdmin
POST	`/api/v1/ereporting/formats/{id}/run`	execute format for period	`Idempotency-Key`	per report duty
POST	`/api/v1/ereporting/submissions/{id}/submit`	submit to regulator adapter	by submission id	per report duty
GET	`/api/v1/sod/conflicts?state=OPEN`	list conflicts	n/a	SoDReview
POST	`/api/v1/sod/conflicts/{id}/mitigations`	create mitigation	`Idempotency-Key`	SoDApprove
POST	`/api/v1/sod/simulate`	simulate role assignment	n/a	SecurityAdmin
POST	`/api/v1/sod/campaigns`	start certification campaign	`Idempotency-Key`	SoDAdmin
GET	`/api/v1/compliance/controls/{id}/evidence?period=`	evidence listing	n/a	ComplianceView
POST	`/api/v1/privacy/requests`	intake subject request	`Idempotency-Key`	PrivacyIntake or portal
POST	`/api/v1/privacy/holds`	create legal hold	`Idempotency-Key`	LegalHoldAdmin
POST	`/api/v1/ops/backups/restore-drill`	run PITR drill into namespace	by drill id	PlatformAdmin

Method	Path	Purpose	Idempotency	Auth duty
GET/PUT	`/api/v1/compliance/esign/requirements`	maintain signature requirements and reason codes	ETag	ESignAdmin
POST	`/api/v1/compliance/esign/sign`	sign a pending action (step-up token required)	by (requirement, record_version_hash)	signer's action duty
POST	`/api/v1/compliance/esign/{id}/revoke`	revoke with reason	by id	ESignAdmin
POST	`/api/v1/compliance/audit-policies/{id}/runs`	run audit policy for a window	by (policy version, window)	AuditPolicyRun
POST	`/api/v1/compliance/audit-cases`	create case from violations	`Idempotency-Key`	AuditCaseManage
POST	`/api/v1/ereporting/messages/{id}/actions/{action}`	execute processing action on an electronic message	by (message, action, status)	per report duty
POST	`/api/v1/trade/screening/check`	screen a party or document on demand	n/a (read)	TradeComplianceView
POST	`/api/v1/trade/screening/hits/{id}/decision`	clear or confirm a hit	by hit	TradeComplianceOfficer
POST	`/api/v1/trade/export-checks`	license determination for a delivery	n/a (read)	TradeComplianceView
POST	`/api/v1/security/elevated-sessions`	request break-glass session	`Idempotency-Key`	any user with an eligible role mapping
POST	`/api/v1/security/incidents`	open security incident	`Idempotency-Key`	SecurityIncidentManage
POST	`/api/v1/ops/tenants/{id}/masked-clone`	clone tenant with masking	by clone job id	PlatformAdmin + second approver

Validation: pack install rejects if the entity's fiscal calendar is open-period incompatible; `sod/simulate` returns conflicts before assignment is saved; a `run` of a format outside `effective_from..to` is rejected.

Event	Trigger	Payload fields	Consumers
`dev.passage.ereporting.document.submitted.v1`	regulator ack	mandate_id, format_version, document_ref, ack_id, status	AR/AP (mark invoice sent), compliance
`dev.passage.sod.conflict.detected.v1`	evaluation	user_id, rule_id, severity, roles[]	workflow, compliance
`dev.passage.sod.mitigation.approved.v1`	approval	conflict_id, approver, expires_at	audit
`dev.passage.privacy.request.completed.v1`	close	request_id, type, affected_domains[], delivered_at	audit
`dev.passage.compliance.evidence.collected.v1`	collector	control_id, evidence_id, hash	compliance UI
`dev.passage.compliance.esign.signed.v1`	signature stored	esign_id, entity_type, record_id, meaning, signer, signed_at	quality, production, audit
`dev.passage.compliance.audit.violation.created.v1`	audit policy run	policy_id, document_type, document_id, score	audit case UI, workflow
`dev.passage.trade.screening.hit.v1`	screening match	subject_type, subject_id, list_code, score	sales, procurement, payments (block)
`dev.passage.security.elevated.started.v1` / `.ended.v1`	break-glass	session_id, user_id, roles[], reason	SOC, audit, reviewer inbox
`dev.passage.security.incident.breach_confirmed.v1`	breach flag set	incident_id, regimes[], deadlines[]	privacy, notifications
`dev.passage.ereporting.message.status_changed.v1`	e-message transition	message_id, type, from, to, receipt_id	compliance UI, tax

9.48.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Country packs	install, upgrade preview, view contents	code, version, entity, components	LocalizationAdmin
ER designer	edit model/mapping/format, validate against schema, run with fixture	element tree, binding, schema status	ERDesign
Mandates registry	add mandate, set effective dates, link formats	regulator, jurisdiction, schema version	ERDesign
SoD conflicts	mitigate, resolve, accept risk, export	user, rule, severity, roles, age	SoDReview/SoDApprove
Role assignment (wave 2)	simulate conflicts before save	conflicts preview	SecurityAdmin
Certification campaign	certify/revoke per user, progress	manager, user, roles, decision	Manager
Compliance workspace	evidence calendar, exceptions, export audit package	control, last evidence, status	ComplianceView
Privacy requests	verify, review scope, approve, deliver	type, subject, deadline, state	PrivacyOfficer
Signature requirements	add requirement per entity/action, set meaning and reason codes	entity, action, entity scope, meaning, certificate flag	ESignAdmin
Signature dialog (shell component)	re-authenticate, pick reason, sign	record summary, meaning, reason, signer	signer
Signature log	filter by record, user, meaning; export	signed_at, signer, meaning, reason, record, hash	ComplianceView
Audit policies	define rule, link decision table, schedule, run now	policy, rule type, scope, schedule, last run	AuditPolicyAdmin
Audit cases	assign, review evidence, resolve, close	case, category, violations, assignee, due, status	AuditCaseManage
Process, risk and control library	tree edit, link risks/controls/evidence, record tests	process, risk, control, owner, last test	ComplianceAdmin
Electronic messages	run next action, view response, correct	type, period, status, receipt, last action	per report duty
Screening workbench	review hits, compare fields, clear/confirm	subject, list, entry, score, matched fields	TradeComplianceOfficer
Export compliance	classify items, maintain licenses, view blocked deliveries	item, ECCN/HS, license, usage, blocks	TradeComplianceOfficer
Break-glass sessions	request, approve, review log	user, roles, reason, duration, review state	SecurityAdmin / reviewer
Security incidents	triage, timeline, breach clocks, notifications	severity, status, deadlines, notified	SecurityIncidentManage

Rules: SoD grid supports bulk mitigation ≤ 25 with one approver; evidence exports as a ZIP with manifest hash; privacy request deadline shows days remaining with red at ≤ 5.

9.48.7 Business rules and edge cases

- **BR-48.1** Conflict state machine: OPEN → MITIGATED (expires → OPEN) | RESOLVED (role removed) | ACCEPTED_RISK (LOW/MEDIUM only, by SoDAdmin).
- **BR-48.2** Conflicts are evaluated on effective duties including inherited roles and temporary delegations; a delegation that creates a HIGH conflict is refused.
- **BR-48.3** ER format outputs are immutable once submitted; corrections create a new submission with `supersedes`.
- **BR-48.4** Tax-period statutory runs lock the source tax settlement; re-running requires reversal of the settlement (wave 13).

- **BR-48.5** Erasure pseudonymizes `name`, `address`, `email`, `phone`, `tax_id`, `bank_account`, `date_of_birth` fields; monetary documents keep amounts, dates and dimension values.
- **BR-48.6** Retention purge runs monthly and skips any record under hold, in an open fiscal period, or referenced by an open document.
- **BR-48.7** Residency: a tenant with `residency=EU` cannot be assigned an AI provider endpoint outside the EU; the API rejects the configuration.
- **BR-48.8** Backup drill failing RPO or RTO opens a Sev-2 incident automatically.
- **BR-48.9** Certification campaign close: uncertified roles are revoked only when `campaign.auto_revoke=true`; otherwise flagged.
- **BR-48.10** Country-pack upgrade with a changed tax rate effective-dates the new rate; it never rewrites posted tax.
- **BR-48.11** E-signature: the guarded action and the `esign_record` commit in one transaction; if the record changed between dialog open and sign (hash mismatch), signing fails with `ESG-0602` and the user re-reviews.
- **BR-48.12** Within a continuous session a second signature needs only the password component if the first signing was ≤ 15 min ago; after 15 min of inactivity both components are required again.
- **BR-48.13** A signed record's printouts and PDF renders show signer name, date/time in the legal entity's time zone with UTC offset, and meaning (wave-46 template element `esign_block`).
- **BR-48.14** Audit DUPLICATE rule: two vendor invoices are duplicates when vendor equal, amount within max(0.01, 0.5%), invoice date within 30 days and normalized invoice numbers (strip non-alphanumerics, leading zeros) equal or Levenshtein ≤ 1; posted credit notes are excluded.
- **BR-48.15** Screening: a party cleared as false positive is not re-flagged for the same list entry unless the party's name, address or country changes or the list entry changes.
- **BR-48.16** A delivery to a destination with a comprehensive embargo (pack table, e.g. CU, IR, KP, SY, Crimea/DNR/LNR regions) is blocked regardless of classification; only `TradeComplianceOfficer` with a license reference can release.
- **BR-48.17** Electronic message transitions follow the type's status machine; an action not allowed from the current status is rejected; a message in SENT for longer than the type's response timeout (default 72 h) raises `EMS-0904`.
- **BR-48.18** Breach clock starts at `aware_at`, not `detected_at`; deadlines are computed per regime in UTC and displayed in the tenant time zone; a missed deadline cannot be closed without a late-notification justification.
- **BR-48.19** Break-glass sessions cannot grant `SecurityAdmin` or `PlatformAdmin` to the requester's own user; those require a second PlatformAdmin.
- **BR-48.20** FMLA entitlement uses the rolling 12-month period measured backward from the first day of leave; intermittent leave is deducted in hours at the worker's scheduled weekly hours.

9.48.8 Acceptance criteria

- **AC-48.1** (FR-48.2, 48.3) Given each of the 7 packs' statutory fixture, when the format runs, then the output validates against the regulator schema with 0 errors.
- **AC-48.2** (FR-48.4) Given 50 users with planted conflicting role combinations, when evaluation runs, then 50 conflicts are detected with the correct rule ids and 0 false negatives.
- **AC-48.3** (FR-48.5) Given an OPEN HIGH conflict and `sod.block_high=true`, when the role assignment is saved, then it is rejected with the rule id.
- **AC-48.4** (FR-48.5) Given a mitigation, when approved by a non-conflicted approver with reason and 180-day expiry, then the conflict is MITIGATED and `mitigation.approved` is emitted.
- **AC-48.5** (FR-48.9) Given a tenant with 10 GB across domains, when a PITR drill to T–20 min runs, then the restored namespace is queryable within 1 h and the lost-data window ≤ 5 min.
- **AC-48.6** (FR-48.10) Given an ACCESS request for a customer contact, when processed, then the bundle contains data from every domain holding the subject and the request closes within 30 days.
- **AC-48.7** (FR-48.10, 48.11) Given an ERASURE request for a party under legal hold, when processed, then state is HELD and no field is changed.
- **AC-48.8** (FR-48.7) Given control CC7.1, when the daily collector runs, then a Trivy report evidence record exists with a matching hash.
- **AC-48.9** (FR-48.8) Given the external pen-test report, when wave exit is reviewed, then open high/critical findings = 0.
- **AC-48.10** (FR-48.1) Given the DE pack installed on DEMF, when an invoice is printed, then the layout uses `de-DE` formats and the UStVA mapping includes the invoice's tax lines.
- **AC-48.11** (FR-48.13) Given a signature requirement on quality-order release with meaning RELEASED, when an inspector releases a lot, then the dialog requires password plus TOTP, the `esign_record` hash matches the released version, and the certificate of analysis PDF shows name, time and meaning.
- **AC-48.12** (FR-48.13) Given three failed re-authentications, when the user tries a fourth time within 30 min, then signing is locked with `ESG-0603` and a security event is logged.
- **AC-48.13** (FR-48.14, 48.15) Given 1,000 vendor invoices with 12 planted duplicates, when the DUPLICATE policy runs, then 12 violations are created, a rerun creates none, and grouping them yields one case per vendor.
- **AC-48.14** (FR-48.17) Given a UK MTD VAT return for period 26A1, when the user runs GENERATE → VALIDATE → SEND, then HMRC sandbox returns a receipt id stored on the message and status ACKNOWLEDGED.
- **AC-48.15** (FR-48.18) Given the UK entity's annual statements, when the iXBRL format runs, then the file passes Arelle validation against the FRS 102 taxonomy with 0 errors.

- **AC-48.16** (FR-48.19) Given a customer named like an OFAC SDN entry at score 0.92, when a sales order is released, then release is blocked, a hit is OPEN, and after clearance as false positive the order releases and no hit recurs on rescreen.
- **AC-48.17** (FR-48.20) Given an item with ECCN 5A002 shipped to a destination requiring a license and no license on file, when the delivery is confirmed, then it is blocked with `TRD-1003`.
- **AC-48.18** (FR-48.23) Given a break-glass session of 60 min, when it ends, then the token is invalid, every call is in the session log, and the reviewer inbox has a review task due in 3 business days.
- **AC-48.19** (FR-48.29) Given a confirmed personal-data breach affecting EU subjects with `aware_at` 2026-11-02T09:00Z, when the incident is saved, then a GDPR authority deadline of 2026-11-05T09:00Z and a notification task exist.
- **AC-48.20** (FR-48.26) Given a masked clone of the demo tenant, when compared to source, then 0 original e-mails, IBANs or tax ids appear, IBAN checksums are valid, and trial balances are identical.
- **AC-48.21** (FR-48.27) Given TDS section 194J at 10% on a vendor without PAN, when an invoice is posted, then 20% is withheld (206AA) and the next 26Q FVU file includes the deduction.

9.48.9 Test plan and fixtures

Fixtures: `fx-statutory-7` (one period of postings per country with expected outputs and regulator schemas: UK HMRC MTD VAT JSON, DE ELSTER USt VA XML, FR FEC, IN GSTR JSON, MX CFDI 4.0 XSD, US 1099 IRS FIRE, CA GST34 fields); `fx-sod-50` (50 planted users); `fx-privacy-subjects` (20 subjects spanning 9 domains); `fx-residency` (3 tenants EU/US/IN).

Test	Type	Target	Pass criterion
Schema validation	contract	7 formats	0 schema errors
SoD detection	unit/property	engine	50/50; random role sets never miss a seeded conflict
Mitigation workflow	E2E	sod	approver ≠ user enforced; expiry reopens
Privacy fan-out	E2E	privacy	all domains respond; bundle complete
PITR drill	performance	CNPG	RPO ≤ 5 min, RTO ≤ 1 h
Secrets rotation	contract	Vault	all leases ≤ 90 days
Residency enforcement	contract	config API	cross-region assignment rejected
Evidence collectors	unit	11 controls	artifact + hash per schedule

Reconciliation: statutory VAT return boxes ↔ tax settlement totals (wave 13) to the cent; conflicts count ↔ independent recomputation from role assignments; evidence count ↔ schedule expectations.

9.48.10 Deployment and operations

Helm: `passage-localization`, `passage-ereporting` (TS + Temporal), `passage-sod` (Go), `passage-compliance`, `passage-privacy`. Config: `COUNTRY_PACKS_ENABLED`, regulator adapter credentials (HMRC, PAC, IRP) in Vault, `SOD_BLOCK_HIGH`, `PRIVACY_DEADLINE_DAYS`. Migrations: `compliance` and `localization` databases. Flags per tenant: `pack.<code>`, `sod.enforce`, `privacy.portal`. Jobs: SoD nightly 00:30, evidence collectors per control schedule, retention purge monthly, backup drill monthly, secrets rotation. SLOs: format run p95 < 5 min for 100k lines; SoD evaluation < 2 s per assignment. Alerts: schema validation failure, regulator rejection, HIGH conflict unmitigated > 7 days, drill failure. Rollback: pack version downgrade with preview; ER format supersede; Helm rollback.

9.48.11 Migration from AX / SAP

Source	Passage	Notes
`SysSecSegregationOfDutiesRule`	`sod_rule`	duties mapped via wave-2 role mapping; severity imported
`SysSecSegregationOfDutiesConflict` with resolution	`sod_conflict` + `mitigation`	open conflicts re-evaluated; mitigations imported with original approver and expiry
GRC AC rulesets (risk ids, functions, actions)	`sod_rule`	function→duty mapping table; mitigating controls → `mitigation`
ER configurations (`ERModel`, `ERFormat` XML exports)	`er_model`, `er_format`	importer parses ER XML; formulas in ER expression language are translated where possible, else flagged
`SysDatabaseLog` configuration	FR-48.12 configuration	table/field list
`CDHDR/CDPOS` history	wave-49 lakehouse history	read-only
GDPR request logs	`subject_request` history	import closed requests for evidence

Not migrated: Microsoft/SAP SOC reports (vendor-owned), regulator credentials (re-issued).

9.48.12 Dependencies, risks, open questions

Depends on: wave 2 (roles/duties, OPA), wave 5 (CDC audit), wave 13 (tax), wave 35 (Peppol, e-invoicing transport), wave 42 (PII classification), wave 46 (evidence from reconciliation).

Risk	Likelihood	Impact	Mitigation
Regulator schema changes mid-wave	High	Medium	mandates registry with effective dates; schema fixtures pinned
SoD rule set incomplete for customer	Medium	High	50-rule seed plus GRC import
Erasure breaks referential integrity	Medium	High	pseudonymize, never delete rows

Open questions: (1) PAC provider for MX (default: Finkok sandbox); decide by wave 49. (2) Whether to pursue SOC 2 Type I before go-live — proposed yes, readiness assessment by wave 50.

9.48.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`pack.primary`	legal entity	code	none	US, UK, DE, FR, IN, MX, CA	installed country pack	Legal entity country/region, `CountryRegionCodes` features	Company code country (`OBY6`), country version
`pack.version_pin`	legal entity	semver	latest	published versions	blocks auto-upgrade	Feature management	Support package level
`er.schema_validation`	tenant	enum	BLOCK	BLOCK, WARN	FR-48.3 gate	ER format validation	DRC validation
`er.output_retention_years`	legal entity	int	from pack (DE 10, FR 10, US 7, UK 6, IN 8, MX 5, CA 6)	≥ pack minimum	output archive	ER job archive document type	DRC archive, ILM
`emsg.response_timeout_h.<type>`	legal entity	int	72	1–720	BR-48.17	Electronic message processing settings	eDocument cockpit timeout
`sod.block_high`	tenant	bool	true		FR-48.5 enforcement	SoD rule "block" behavior	GRC AC mitigation required before provisioning
`sod.max_mitigation_days`	tenant	int	365	1–730	mitigation expiry cap	none	Mitigating control validity
`sod.nightly_time`	tenant	time	00:30		batch evaluation	Verify compliance batch	GRC batch risk analysis (`GRAC_BATCH_RISK_ANALYSIS`)
`certification.window_days`	tenant	int	14	3–60	campaign window	none	UAR review period
`certification.auto_revoke`	tenant	bool	false		BR-48.9	none	UAR auto-remove
`esign.second_component`	tenant	enum	TOTP	TOTP, WEBAUTHN	Part 11 two-component	Electronic signature parameters (certificate/password)	`ELSIG` strategy (system signature with authorization)
`esign.session_reuse_min`	tenant	int	15	0–30	BR-48.12	none	none
`esign.lockout_attempts` / `lockout_min`	tenant	int	3 / 30	1–10 / 5–1440	lock after failures	none	SU01 lock
`audit.case_archive_days`	tenant	int	365	30–3650	FR-48.15 archiving	Close/archive audit cases	none
`audit.sampling_seed_policy`	tenant	enum	PER_RUN_STORED	PER_RUN_STORED, FIXED	reproducible samples	Audit sampling parameters	none
`screening.threshold`	tenant	numeric	0.88	0.70–0.99	hit score	none	SPL comparison threshold (`/SAPSLL/SPL_CUS`)
`screening.lists`	tenant	set	OFAC_SDN, OFAC_CONS, EU_CFSP, UK_OFSI, UN_SC, BIS_EL, BIS_DPL, BIS_UVL		sources	none	SPL list types
`screening.provider`	tenant	enum	INTERNAL	INTERNAL, DESCARTES, BRIDGER, DOWJONES	adapter	none	GTS or third party
`trade.license_check`	legal entity	enum	BLOCK	BLOCK, WARN, OFF	FR-48.20	none	GTS legal control (`/SAPSLL/LCLIC*`)
`breakglass.max_minutes`	tenant	int	60	15–240	session length	none	Firefighter validity
`breakglass.self_activate`	tenant	bool	false		FR-48.23	none	EAM decentralized firefighting
`breakglass.review_days`	tenant	int	3	1–10	review SLA	none	FF log review workflow
`readlog.retention_days`	tenant	int	730	90–3650	FR-48.25	none	`SRAL` log retention
`export.policy.<classification>`	tenant / role	enum	PII: REASON+WATERMARK; FINANCIAL: AUDIT	ALLOW, AUDIT, WATERMARK, REASON, APPROVAL, DENY	FR-48.24	none	none (custom)
`privacy.deadline_days`	tenant	int	30 (GDPR) / 45 (CCPA)	regulation table	FR-48.10	GDPR request settings	DPW deadlines
`retention.<record_class>`	legal entity	int years	from pack	≥ statutory	FR-48.11	D365 data retention (archive)	ILM policies (`IRMPOL`), residence rules
`residency.region`	tenant	enum	at provisioning	deployed regions	BR-48.7	LCS region	RISE region
`secrets.max_age_days`	platform	int	90	1–90	FR-48.8	none	none
`backup.drill_cron`	platform	cron	monthly 1st Sun 03:00	cron	FR-48.9	LCS DR	HANA backup test
`evidence.lock_years`	tenant	int	2	1–10	FR-48.30	none	none
`incident.breach_regimes`	tenant	set	from packs + residency	GDPR, UK_GDPR, US_STATE, PIPEDA, CERT_IN, LFPDPPP	FR-48.29	none	none
`masking.profile`	tenant	code	`default-v1`	profiles	FR-48.26	none	TDMS scrambling rules

Setup sequence per legal entity: assign primary pack → review pack upgrade preview → set retention per record class (cannot go below pack minimum) → map ER formats to mandates and message types → configure regulator credentials in Vault → load SoD seed rules and GRC import → define signature requirements (regulated tenants) → configure audit policies → enable screening lists → set export policies → schedule evidence collectors.

9.48.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Statutory reports catalog	list inquiry	country, mandate, period	report, format version, due date, last run, status	`mandate`, `er_format`	Electronic reporting workspace	DRC Run Statutory Reports
Electronic messages	list inquiry	type, entity, period, status	message, status, receipt id, last action, response	`e_message`	Electronic messages	`EDOC_COCKPIT`
VAT return (per pack)	statutory report	entity, period	boxes per pack (UK 1–9, DE Kz 81/86/66…, FR CA3 lines)	tax settlement (wave 13)	Sales tax payment report, ER VAT declaration	`RFUMSV00`, DRC VAT return

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
SoD conflicts	list inquiry	state, severity, rule, user	user, rule, roles, age, mitigation expiry	`sod_conflict`	SoD conflicts / unresolved	GRC risk analysis (user level)
Mitigation report	operational report	expiry window, approver	conflict, control, approver, expires_at	`mitigation`	none	GRC mitigation reports
Certification campaign status	KPI	campaign	% certified, revoked, overdue by manager	`certification_campaign`	none	UAR status
Signature log	list inquiry	record, signer, meaning, date	signed_at, signer, meaning, reason, hash	`esign_record`	Electronic signature log / report	`ELSIG` log, DSIG log
Audit policy violations	list inquiry	policy, document type, state	document, rule, score, case	`audit_violation`	Audit policy violations	GRC PC exceptions
Audit cases	list inquiry / operational report	category, status, assignee	case, violations, recovery, age	`audit_case`	Audit case inquiry / report	Fraud Management alerts
Control matrix	operational report	process, TSC, owner	control, risk, last test result, last evidence, exceptions	library + evidence	Internal control documents	GRC PC control matrix
Screening hits	list inquiry	state, list, subject type	subject, list entry, score, age, decision	`screening_hit`	none	`/SAPSLL/SPL_BL` blocked documents
Export-blocked deliveries	list inquiry	reason, destination	delivery, item, classification, license needed	`export_check`	none	GTS blocked documents (`/SAPSLL/BLRGSD`)
Read access log	drill-down	subject, user, field, date	read_at, user, record, fields, channel, purpose	`read_log`	none	`SRALMANAGER` log
Export log	list inquiry	user, classification, date	rows, columns, purpose, hash, policy	`export_log`	none	none
Break-glass sessions	list inquiry	user, review state	roles, reason, duration, calls, reviewer, result	`elevated_session`	none	GRC firefighter log report
Subject requests	list inquiry	type, state, deadline	days remaining, domains, officer	`subject_request`	GDPR request list	DPW, IRF results
Security incidents and breach clocks	KPI	severity, status	open incidents, MTTR, deadlines, notified on time %	`security_incident`	none	none
Evidence calendar	KPI	control, period	expected vs collected, exceptions	`control_evidence`	none	AIS (`SECR`)

9.48.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
VAT / GST / sales-tax returns (7 packs)	tax period close	boxes per regulator schema, entity tax id, period, declarant	UK MTD JSON, ELSTER XML, FR EDI-TVA, GSTR JSON, DIOT TXT, GST34 fields, US state files	`e_message` id; regulator receipt	statutory; 6–10 years per pack
FEC (FR), GoBD export (DE), DATEV export	on demand / year-end	journal lines with prescribed columns	FEC TXT (18 columns), GoBD index.xml + CSV, DATEV CSV	run id	10 years
SAF-T / audit file (where pack requires)	on demand	header, master files, GL entries, source documents	XML per national schema	run id	statutory
iXBRL accounts / ESEF package	annual	tagged statements and notes	XHTML iXBRL, ESEF ZIP	filing id	10 years
1099-NEC/MISC, 1096 (US)	year-end	payer, recipient, boxes	PDF copy B, IRS FIRE file	form sequence	7 years
ACA 1094-C/1095-C, EEO-1, VETS-4212, OSHA 300/300A/301, Form 4562 (US)	annual	per form	PDF, IRS AIR XML, EEOC/OSHA ITA CSV	form year	5–7 years (OSHA 5 years)
TDS 26Q/27Q, Form 16A, TCS 27EQ (IN)	quarterly	deductor TAN, deductees, sections, challans	FVU text file, PDF certificate	quarter + certificate number	8 years
CFDI 4.0 (MX)	invoice (wave 35 clearance)	per SAT schema with UUID and QR	XML + PDF	series/folio	5 years
Commercial invoice, packing list, certificate of origin, EUR.1/origin statement	export delivery	exporter, consignee, HS codes, origin, Incoterms, values, weights, license refs	PDF, broker JSON/EDIFACT	export document number per delivery	5 years (customs)
E-signature manifest	signed record print	signer, date/time with offset, meaning, reason	PDF block (wave-46 element), PAdES when certificate	n/a	with the signed record
Subject access bundle	privacy request	index, data per domain, processing purposes	JSON + PDF	request id	delivery receipt kept 3 years
Breach notification letters	breach confirmed	controller, nature, categories, counts, contact, measures	PDF, e-mail, regulator portal forms	incident id	5 years
SOC 2 audit package	on request	manifest, hashes, evidence index	ZIP	package id	evidence lock period
Certification campaign evidence	campaign close	manager decisions per user and role	XLSX, PDF	campaign id	3 years

9.48.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
SoD nightly evaluation	00:30 tenant time	tenant, user hash	(tenant, date)	< 10 min for 10k users	retry; last good result kept	new HIGH conflicts
Mitigation expiry sweep	daily 01:00	tenant	conflict state	< 1 min	reopen per BR-48.1	expiring in 30 days
Evidence collectors	per control (daily/weekly/per deploy)	control	(control, period)	< 5 min each	EXCEPTION status, retry 3×	missing evidence
Statutory format runs	per mandate calendar	entity, period	`Idempotency-Key` per (format, period)	< 5 min per 100k lines	message stays GENERATED with error	schema failure

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
Electronic message response poller	every 15 min	message type	receipt id	< 1 min	BR-48.17 timeout	SENT > timeout
Audit policy runs	per policy schedule (default nightly 02:30)	policy, document type	(policy version, document id)	< 15 min per 1M documents	partial resume by window slice	violations spike > 3× baseline
Screening list refresh and delta rescreen	daily 05:00 UTC	list	list version	< 20 min for 1M parties	keep previous list; alert	list age > 48 h
Retention purge	monthly 2nd Sunday	record class, domain	purge manifest	< 4 h	BR-48.6 skips; manifest diff	purge errors
Read-log partition roll	daily	day	partition	< 5 min	retry	none
Secrets rotation	per secret ≤ 90 days	secret	Vault lease	< 1 min	rollback to previous version	lease age > 80 days
Backup PITR drill	monthly	tenant sample	drill id	< 1 h	Sev-2 (BR-48.8)	RPO/RTO breach
Breach deadline monitor	every 15 min	incident	n/a	< 1 s	page at T−12 h	deadline at risk
Certification campaign close	at window end	campaign	campaign state	< 10 min	BR-48.9	overdue managers
Masked clone	on request	tenant, domain	clone job checkpoint per table	< 2 h for 100 GB	resume per table	masking rule miss

9.48.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
LocalizationAdmin	pack install/upgrade, `retention.*` minimum checks	with ERDesign on the same pack (LOW)	Application administrator
ERDesign	ER designer, mandates registry, message types	with statutory submission duty (MEDIUM, `TAX-002`: design and submit)	Tax technologist
TaxReportSubmit	`ereporting/formats/{id}/run`, `submissions/{id}/submit`, message actions	with ERDesign (MEDIUM)	Tax accountant
SoDReview / SoDApprove / SoDAdmin	conflicts, mitigations, campaigns, rule maintenance	SoDApprove with SecurityAdmin (HIGH, `SEC-002`)	Internal control, Compliance officer
ESignAdmin	signature requirements, reason codes, revoke	with any signing duty on the same requirement (HIGH, `QA-001`)	QA systems administrator
AuditPolicyAdmin / AuditPolicyRun	audit policies, decision-table links, runs	with AP invoice posting (MEDIUM, `AUD-001`: audit own postings)	Internal audit
AuditCaseManage	cases, findings, recovery	with the audited document's posting duty (HIGH)	Internal audit
ComplianceAdmin / ComplianceView	control library, tests, evidence, audit package	ComplianceAdmin with PlatformAdmin (MEDIUM)	Compliance officer; Auditor (view, time-boxed)
TradeComplianceOfficer	screening decisions, licenses, classifications, embargo release	with SalesOrderRelease (HIGH, `TRD-001`)	Trade compliance
PrivacyOfficer / PrivacyIntake / LegalHoldAdmin	subject requests, holds	LegalHoldAdmin with ArchiveAdmin (MEDIUM)	DPO, Legal
SecurityIncidentManage	incidents, breach clocks, notifications	none	Security lead
BreakGlassApprove	approve and review elevated sessions	with requesting the same session (HIGH, BR-48.19)	Security lead
HRComplianceUS	I-9, visa, ADA, FMLA records	with Payroll run (MEDIUM, `HR-002`)	HR compliance

9.48.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
LOC-0501	error	Pack {code} {version} cannot be installed: fiscal calendar {cal} has open periods incompatible with the pack.	calendar mismatch	close or align periods	9.48.5 validation
LOC-0502	error	Retention for {class} cannot be below the statutory minimum of {years} years for {country}.	parameter under minimum	raise value	FR-48.11
ERP-0801	error	Output fails schema {schema}: {n} errors (first: {xpath} {msg}).	schema validation	fix mapping or data	FR-48.3
ERP-0802	error	Format {format} is not effective for period {period}.	effective dates	choose correct version	9.48.5 validation
EMS-0901	error	Action {action} is not allowed in status {status} for message type {type}.	status machine	run allowed action	BR-48.17
EMS-0904	warning	No response from {regulator} for {hours} h on message {id}.	timeout	poll manually; contact regulator	BR-48.17
EMS-0905	error	Regulator rejected message {id}: {code} {text}.	rejection	correct and resubmit	FR-48.17
SOD-1101	error	Assignment blocked: conflict {rule_id} ({severity}) between {duty_a} and {duty_b}.	HIGH conflict with block policy	remove role or mitigate	FR-48.5

9.48.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation under 3× load
SoD simulate at assignment	500 assignments/day	200 ms / 2 s / 3 s	20/s	`sod_conflict` < 1 GB	(tenant, user)	5 s; never skipped
SoD nightly	10k users × 300 roles	< 10 min	n/a	n/a	in-memory duty bitsets	30 min
ER format run	100k lines per return	1 min / 5 min / 8 min	10 concurrent per tenant	outputs 50 GB (10 years)	by (entity, period)	queued
E-signature commit	5k signatures/day (regulated tenant)	300 ms / 800 ms / 1.5 s (excl. user step-up)	20/s	`esign_record` 2 GB	(entity_type, record_id)	n/a
Audit policy run	1M documents/night	< 15 min	1.5k docs/s	`audit_violation` 1 GB	(policy, state), by month	window split
Screening on document release	50k checks/day, peak 200/min	30 ms / 120 ms / 250 ms	50/s	`screening_hit` < 1 GB; lists 2 GB	trigram + phonetic index on list names	fall back to async check that holds release
Delta rescreen	1M parties	< 20 min	1k parties/s	n/a	name token index	completes in next window
Read access logging	2M sensitive reads/day	+2 ms / +5 ms / +10 ms	async write via Kafka	300 GB/year	partition by day	buffer in Kafka, never drop
Subject request discovery	50 requests/month	< 10 min per request	n/a	bundles 5 GB	PII classification index	queued
Evidence collection	11 controls, ~400 artifacts/month	< 5 min each	n/a	50 GB/year (locked)	by control/period	delayed, flagged
Masked clone	100 GB tenant	< 2 h	15 MB/s per table stream	n/a	per-table parallelism 8	4 h

9.48.20 Localization and compliance hooks

This wave is the localization layer for every other wave. What varies and where it plugs in:

Area	Varies by	Country packs touching it	Extension point
Tax determination and returns	country, state/province, item and party tax groups	all 7	FR-3.13 decision tables with `country` input (sys layer), `er_format` per mandate, `e_message` types
Withholding	country, section	US (backup withholding, 1099), IN (TDS/TCS), MX (ISR/IVA retention)	wave-13 withholding engine rule sets; FR-48.27
Statutory files and audit exports	country	DE (GoBD, DATEV), FR (FEC), IN, MX (contabilidad electrónica), UK (MTD)	`er_format`
Document layouts and legal mentions	country, language	all 7	`country_pack.document_layouts[]`, wave-46 text blocks
Bank formats	country, bank	NACHA (US), BACS (UK), SEPA (DE, FR), NEFT/RTGS (IN), SPEI (MX), CPA 005 EFT (CA)	wave-19 payment format registry fed by pack
Calendars and fiscal years	country	IN April–March; holidays all	wave-6 calendars from pack
Number formats, address formats, tax-id validation	country	all	pack validators (GSTIN, RFC, USt-IdNr, SIREN/SIRET, VAT GB, BN)
Currency rounding	currency	JPY 0, KWD 3, CHF 0.05 cash rounding	wave-11 rounding rules
Retention	country, record class	DE/FR 10 y, IN 8 y, US 7 y, UK/CA 6 y, MX 5 y	`retention_policy`, archive mover (FR-46.18)
Privacy and breach regimes	residency, subject country	GDPR (DE, FR), UK GDPR, CCPA/US state, PIPEDA (CA), DPDP Act 2023 (IN), LFPDPPP (MX)	`incident.breach_regimes`, `privacy.deadline_days`
E-signature regimes	industry, country	US 21 CFR Part 11; EU eIDAS advanced signatures via certificate option	`esign_requirement.certificate_required`
Export control	exporter country, destination	US EAR, EU dual-use Regulation 2021/821, UK export control order, CA ECL	screening lists, classification regimes, license decision tables
HR legal	country	all 7 (FR-48.28, 48.22)	wave-42 country-specific fields framework
Language	user and document locale	en-US, en-GB, de-DE, fr-FR, hi-IN/en-IN, es-MX, fr-CA/en-CA	label framework import/export (wave 2 / AX "Translations")

AX 12.99.4 row 87 — 12.10.4 Expense → Audit policies (link)	PARTIAL-48	ADDED as FR-48.14	
AX 12.99.4 row 105 — 12.12.1 Worker compliance (US) → I-9, ADA, Immigration/visa, Union agreements	PARTIAL-48	ADDED as FR-48.22	
AX 12.99.4 row 109 — 12.12.2 SSRS: EEO-1 / VETS (US)	PARTIAL-48	ADDED as FR-48.31	
AX 12.99.4 row 111 — 12.12.3 HR → Year-end (US ACA 1095-C)	PARTIAL-48	ADDED as FR-48.31	
AX 12.99.4 row 112 — 12.12.4 Worker compliance (US) setup: I-9 document types, ADA, visa types, union agreements	PARTIAL-48	ADDED as FR-48.22	
AX 12.99.4 row 115 — 12.13.2 SSRS: Workers compensation report	PARTIAL-48	ADDED as FR-48.22 (class codes), FR-48.31 (report)	
AX 12.99.4 row 116 — 12.13.2 SSRS: New hire reporting (US state)	PARTIAL-48	ADDED as FR-48.31	
AX 12.99.4 row 118 — 12.13.4 Leave of absence / FMLA tracking (US)	PARTIAL-48	ADDED as FR-48.22	BR-48.20
AX 12.99.4 row 260 — 12.29.4 Organization → Audit policies (link)	PARTIAL-48	ADDED as FR-48.14	
AX 12.99.4 row 276 — 12.33.1 Electronic messages (`EMElectronicMessage*`)	PARTIAL-48	ADDED as FR-48.17	
AX 12.99.4 row 277 — 12.33.2 Electronic messages inquiry	PARTIAL-48	ADDED as FR-48.17	
AX 12.99.4 row 278 — 12.33.3 Electronic messages → Generate / Send / Receive response	PARTIAL-48	ADDED as FR-48.17	poller in 9.48.16
AX 12.99.4 row 279 — 12.33.4 Electronic messages setup (message types, item types, statuses, processing actions, web service settings)	PARTIAL-48	ADDED as FR-48.17	

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
SAP 13.99.2 row 112 — 13.10 Disclosure management / XBRL (SAP DM, SAC)	GAP	ADDED as FR-48.18	
SAP 13.99.2 row 206 — 13.17 Preference determination (GTS)	GAP	ADDED as FR-48.21	Could priority; USMCA and EU PEM first
SAP 13.99.2 row 205 — 13.17 Foreign trade / export documents in delivery (GTS) (PARTIAL-13, propose 48)	PARTIAL-13	ADDED as FR-48.20	shipment execution stays wave 34; customs submission via broker adapters
SAP 13.99.2 row 339 — 13.28 Country-specific HR infotypes and legal changes	PARTIAL-48	ADDED as FR-48.28 (non-US), FR-48.22 (US)	
SAP 13.99.2 row 344 — 13.30 GRC EAM firefighter	PARTIAL-48	ADDED as FR-48.23	
SAP 13.99.2 row 345 — 13.30 Anonymized production-to-test refresh (TDMS / client copy)	PARTIAL-48	ADDED as FR-48.26	used by waves 49 and 50
SAP 13.99.2 row 347 — 13.30 Read Access Logging (`SRAL`)	PARTIAL-48	ADDED as FR-48.25	
SAP 13.99.2 row 350 — 13.31 Business Partner Screening / Watch List Screening (GTS)	GAP	ADDED as FR-48.19	
SAP 13.99.2 row 355 — 13.31 Watch list screening / GTS compliance configuration	GAP	ADDED as FR-48.19	parameters in 9.48.13
SAP 13.99.2 row 400 — 13.36 Export governance (Excel export restrictions, download audit)	PARTIAL-48	ADDED as FR-48.24	
SAP 13.99.2 row 25 — 13.2 `J1INCHLN`/`J1INBANK`/`J1INCERT` (PARTIAL-13, IN pack)	PARTIAL-13	ADDED as FR-48.27	challans, CIN, Form 16A
SAP 13.99.2 row 53 — 13.4 `S_ALR_87010127`/`87010129` US Form 4562 (PARTIAL-37, US pack)	PARTIAL-37	ADDED as FR-48.31	from wave-37 tax book
SAP 13.99.2 row 257 — 13.22 `COEBR` electronic batch record (GAP-24, +48)	GAP-24	ADDED as FR-48.13 (signature service); EBR itself DEFERRED to wave 24 (owner)	
SAP 13.99.2 row 261 — 13.22 Digital signature in PI sheets / batch records (`DSIG`) (GAP-24, cross-cutting 24/48)	GAP-24	ADDED as FR-48.13	wave 24 binds PI-sheet steps to `esign_requirement`
SAP 13.99.2 row 24 — 13.2 `F-40`/`F-36`/`FBW6` bills of exchange (GAP-36, or v1.x pack under 48)	GAP-36	DEFERRED to wave 36 (owner of instruments); FR LCR and MX pagaré formats ship as pack ER formats once wave 36 provides the instrument lifecycle	none of the first 7 packs is blocked without it
SAP 13.99.2 row 383 — 13.35 PLM labeling (GLM) / specification management (PARTIAL-9, propose 48 labeling)	PARTIAL-9	DEFERRED to wave 33 (product compliance owner); packs supply GHS/CLP phrase sets as text blocks (FR-46.15)	
AX 12.99.1 theme "Compliance extras" — SOC 2 evidence store (task brief)	PARTIAL (FR-48.7 collection only)	ADDED as FR-48.30	object lock, hash chain, auditor role
AX 12.99.1 theme "Compliance extras" — incident/breach process (CC7.3/7.4 evidence without an incident record)	PARTIAL	ADDED as FR-48.29	
AX 12.99.1 theme "Compliance extras" — license usage reporting (3)	PARTIAL-3	SUPERSEDED by FR-3.14 (wave 3 usage snapshot)	listed for traceability
SAP 13.99.2 rows 348/352/354 — BRF+ in GRC (PARTIAL-3)	PARTIAL-3	SUPERSEDED by FR-3.13; audit policies, license determination and embargo rules are FR-3.13 rule sets	
AX 12.99.1 theme "Alerts and notification rules" (wave 5)	GAP-5	DEFERRED to wave 5 (owner); SoD, breach, screening and evidence alerts deliver through it	

9.49 Wave 49: Migration Factory: Full AX/SAP Transactional Cutover Tooling

9.49.1 Scope and business context

AX 2012 → D365 uses the data upgrade scripts (`ReleaseUpdateDB` classes, LCS data-upgrade deployable package) and DIXF; SAP uses SUM with DMO for conversion, the Migration Cockpit (`LTMC`/`LTMOM`, staging tables) and Selective Data Transition. None of them moves a customer to a different ERP. Building on the wave-10 framework (connectors, declarative mapping, idempotent runs), this wave adds transactional packs with control totals, historical loads into the lakehouse with legacy cross-references, a parallel-run harness, a cutover runbook generator and coexistence adapters. Out of scope: code migration (X++/ABAP), custom-table migration beyond the mapping DSL, SAP archive (ADK) files.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
Open items loaded through DIXF (`DMFDefinitionGroup`) or Migration Cockpit staging tables (`/1LT/DS*`) are reconciled in Excel against `VendTransOpen`/`BSIK` totals; mismatches found days later	No built-in control totals at sub-total grain	`control_total` per pack at (entity, account, currency) grain with hashes, computed in-run	Reconciliation 5 person-days per entity → 10 min automated; mismatches found in-run
Re-running a failed load creates duplicates (`InventSum` doubled, duplicate `BKPF` opening documents)	Loaders without natural-key idempotency	Idempotent packs keyed on `legacy_xref`	Duplicate rate after re-run 0
Parallel runs compare printed trial balances by eye; variances are explained in e-mail threads	No diff tooling	Normalized tuple diff with EXPECTED/EXPLAINED/UNEXPLAINED classification and sign-off	Variance review 3 weeks → 2 days; 0 unexplained at sign-off
Cutover plans are spreadsheets; step durations are guesses; rollback is untested	No runbook tooling tied to the data loads	Generated `cutover_plan` with timed steps from rehearsals, go/no-go gates, rehearsed rollback	Cutover < 48 h; 2 rehearsals; rollback rehearsed
Users lose the legacy voucher/document id after migration and keep the old system online for lookups	No cross-reference model	`legacy_xref` on every record and in the lakehouse history	Legacy lookups needing the old system 100% → 0

9.49.2 AX / SAP parity map

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Open AP/AR items	`VendTrans`/`VendTransOpen`, `CustTrans`/`CustTransOpen`, `VendSettlement`	`BSIK`/`BSID` (ECC), `ACDOCA` open items (S/4), `BSEG`	pack `open_items` → AP/AR open items with `legacy_xref`	Full
GL balances	`GeneralJournalAccountEntry`, `DimensionAttributeValueCombination`, `LedgerBalance*`	`GLT0`/`FAGLFLEXT` (ECC), `ACDOCA` (S/4)	pack `gl_balances` → opening journal per dimension	Full

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
On-hand inventory	`InventSum`, `InventTrans`, `InventDim`, `InventTransOrigin`	`MARD`, `MCHB` (batch), `MSKA`, `MBEW` valuation	pack `onhand` → inventory opening transactions by dimension	Full
Open POs / SOs	`PurchTable`/`PurchLine`, `SalesTable`/`SalesLine` with remaining qty	`EKKO`/`EKPO`/`EKET`, `VBAK`/`VBAP`/`VBEP`	pack `open_orders` → orders with delivered/invoiced quantities	Full
In-process production	`ProdTable`, `ProdBOM`, `ProdRoute`, `ProdJournalProd`	`AFKO`/`AFPO`/`AFVC`, `AUFK`	pack `wip_prod` → orders at status with consumed/reported quantities and WIP value	Full
Fixed assets	`AssetTable`, `AssetBook`, `AssetTrans`	`ANLA`/`ANLB`/`ANLC`/`ANEP`	pack `fixed_assets` → NBV per book with depreciation profile	Full
Project WIP	`ProjTable`, `ProjTrans*`, `ProjWIP*`	`PRPS`, `COSP`/`COSS`, RA results	pack `project_wip`	Full
Employee/payroll YTD	`HcmWorker`, `PayrollEarningStatement*`	`PA0001`/`PA0008`, payroll results cluster (`PCL2`)	pack `payroll_ytd`	Partial (US + DE only)
Upgrade tooling	AX 2012→D365 data upgrade (LCS), DIXF	SUM/DMO, Migration Cockpit, SDT	migration factory packs + runbook generator	Improved (cross-vendor)
History	Legacy database kept online	Archive / SDT history	lakehouse `history.*` with `legacy_xref`	Full (read-only)
Project beginning balances	Project beginning balance journals (`ProjJournalTable` type Beginning balance, `ProjBegBalJournalTrans_CostSales`, `ProjBegBalJournalTrans_OnAcc`)	Migration Cockpit objects for WBS, settlement rules; RA results transfer (`KKA2`), legacy cost transfer (`KB11N`/`KB15N`)	pack `project_wip` posting `project_opening_line` by category (FR-49.12)	Full

9.49.3 Functional requirements

- **FR-49.1 Transactional packs** — Must. The system shall provide packs `open_items`, `gl_balances`, `onhand`, `open_orders`, `wip_prod`, `fixed_assets`, `project_wip`, `payroll_ytd`, `bank_balances`, each with AX and SAP extractors, mapping, validation (Great Expectations suites), load and reconciliation steps.
- **FR-49.2 Control totals** — Must. The system shall compute and compare per pack: `open_items`: count, sum amount in transaction currency per currency, sum in accounting currency, per (entity, account, currency) sub-totals, hash of sorted (legacy_id, amount); `gl_balances`: per (entity, account, dimension combination, currency) balance, trial balance debit = credit, count of non-zero combinations; `onhand`: per (item, site, warehouse, location, batch, serial) quantity and per (item, site) value, total value per entity; `open_orders`: order count, line count, remaining quantity, remaining amount; `wip_prod`: order count, WIP value per order; `fixed_assets`: count, acquisition cost, accumulated depreciation, NBV per book; `project_wip`: WIP value per project; `payroll_ytd`: gross, tax, net per worker; `bank_balances`: per account.
  - Notes: every total must match exactly (0.00) unless a tolerance rule is explicitly configured with reason; totals are stored on `control_total` with source and target values and timestamp.
- **FR-49.3 Legacy cross-reference** — Must. The system shall store `legacy_xref` (system, company, table, legacy_id → passage entity, id) for every migrated record and expose it on every record detail and in the lakehouse.
- **FR-49.4 Historical load** — Must. The system shall load closed legacy transactions (journals, invoices, inventory transactions, orders) for N years (default 7) into Iceberg `history.<system>.*` with the legacy schema preserved, mapped views `history.unified.*` on the Passage model, queryable in explorer with `source=legacy` filter.
- **FR-49.5 Parallel-run harness** — Must. The system shall replay a legacy period's source documents (vendor invoices, customer invoices, inventory movements, journals, production postings) into a Passage rehearsal tenant through the public posting APIs in original sequence and compare results.
  - Diff algorithm: (1) normalize both sides to canonical tuples `(entity, account, dimension set, currency, period, amount)` for trial balance, `(item, dims, qty, value)` for inventory, `(subledger, open item id, amount)` for subledgers; (2) outer-join on key; (3) classify each difference: EXPECTED (rule-based: known rounding ≤ 0.01, policy differences registered in `variance_rule`, e.g. different FX rounding step), EXPLAINED (operator attaches a reason), UNEXPLAINED; (4) aggregate by rule; (5) report unexplained count and amount; (6) exit criterion unexplained = 0 and explained amount ≤ 0.1% of period revenue.
- **FR-49.6 Cutover runbook generator** — Must. The system shall generate `cutover_plan` with timed steps from T−14d to T+30d from the selected packs, entities and legacy systems, with owners, durations from the last rehearsal, go/no-go items and rollback steps.
  - Timeline baseline: T−14d freeze master-data changes in legacy, final pack dry run; T−7d second rehearsal, sign-off on variance report; T−3d freeze configuration in Passage; T−1d 18:00 legacy transaction freeze, final extracts of master data and static reference data; T−0 00:00 extract transactional packs; T+4h load and reconcile master and balances; T+12h load open items, orders, on-hand, WIP; T+24h reconciliation complete, go/no-go meeting; T+30h user access opened; T+36h abort deadline if go/no-go fails; T+1d first postings, hypercare starts; T+7d first weekly reconciliation; T+30d first month-end close, hypercare review.
- **FR-49.7 Coexistence adapters** — Should. The system shall support entity-by-entity cutover with intercompany documents and consolidation data exchanged with the legacy system through wave-35 integration hub adapters (AX OData/`DMF` entities; SAP IDoc/BAPI) for `INVOIC`, `ORDERS`, GL postings, and master-data sync one way (legacy → Passage) until the last entity cuts over.
- **FR-49.8 Rehearsal environment** — Must. The system shall provision a rehearsal tenant from pipeline (Terraform + Helm + seed) in ≤ 2 h, with masked extracts, and tear it down.
- **FR-49.9 Rollback plan** — Must. The system shall generate a rollback plan per cutover: stop Passage access, restore legacy write access, export any Passage postings made after go-live as journal/document files for re-keying, with a decision point at T+36h.
- **FR-49.10 Idempotent re-runs** — Must. The system shall re-run any pack without duplicates (wave-10 natural keys plus `legacy_xref` uniqueness) and record every run with inputs' hashes.
- **FR-49.11 Validation suites** — Must. The system shall run Great Expectations suites per pack before load: referential (every vendor on open items exists), domain (currency codes ISO 4217), balance (debit = credit), uniqueness; failures above 0 block load unless the record is quarantined to `pack_quarantine` with reason.
- **FR-49.12 Project beginning balance journals** — Must. The system shall load, per open project, opening transactions by category (hours, expense, item, fee, on-account billing) with quantity, cost, sales value, transaction date, worker/resource, activity and dimensions as `project_opening_line`, flagged

`beginning_balance=true`, together with WIP already recognized (WIP cost, WIP sales value, accrued revenue, invoiced on-account) and the remaining estimate, so that wave-41 estimates, billing rules and revenue recognition continue from the cutover state.

- Notes: opening lines never post to the GL (the GL WIP and revenue balances arrive in pack `gl_balances`); control totals per project and category (cost, sales value, WIP, on-account) must equal the legacy `ProjTrans*/COSP-COSS` and RA results to 0.00; lines marked "chargeable, not invoiced" are invoiceable in Passage with the legacy transaction date; fixed-price projects carry percent complete and recognized revenue to date; time-and-material projects carry unbilled transactions at legacy sales price.

9.49.4 Data model

`pack_run` (migration-factory)

Field	Type	Required	Notes
run_id	uuid	Y	PK = Temporal workflow id
tenant_id	uuid	Y	
pack	enum	Y	the 9 packs
source_system	enum	Y	AX2012, D365FO, SAPECC, S4HANA
source_company	text	Y	`DataAreaId` / `BUKRS`
cutoff_ts	timestamptz	Y	extraction cutoff
input_hash	text	Y	sha256 of extract
status	enum	Y	EXTRACTED, VALIDATED, LOADED, RECONCILED, FAILED, ROLLED_BACK
records_in / records_loaded / records_quarantined	int	Y	

`control_total`: total_id, run_id, name, key_json (e.g. {entity, account, currency}), source_value numeric(28,6), target_value numeric(28,6), delta, tolerance, status (MATCH, WITHIN_TOLERANCE, MISMATCH), computed_at.

`legacy_xref`: xref_id, tenant_id, source_system, source_company, source_table, source_id, passage_entity, passage_id, run_id; unique (source_system, source_company, source_table, source_id).

`parallel_run`: parallel_run_id, tenant_id, period, source_system, documents_replayed, state (REPLAYING, DIFFING, REVIEW, SIGNED_OFF), unexplained_count, unexplained_amount, explained_amount, signed_off_by. **`variance`**: variance_id, parallel_run_id, area (TB/INV/AP/AR/FA), key_json, legacy_value, passage_value, delta, class (EXPECTED/EXPLAINED/UNEXPLAINED), rule_id, reason.

`cutover_step`: step_id, plan_id, seq, offset_minutes (from T–0), name, owner, planned_duration_min, actual_start, actual_end, status, rollback_step_id, go_nogo bool.

Invariants: a pack run reaches RECONCILED only if every `control_total.status != MISMATCH`; `legacy_xref` is append-only; a `parallel_run` can be SIGNED_OFF only when unexplained_count = 0; cutover steps with `go_nogo=true` must all be complete before the "open user access" step can start. Indexing: `legacy_xref` unique index as above plus (passage_entity, passage_id); `control_total` (run_id, status); `variance` (parallel_run_id, class).

Additional entity (FR-49.12). `project_opening_line`: line_id, tenant_id, project_id, category (HOUR, EXPENSE, ITEM, FEE, ON_ACCOUNT), transaction_date, qty numeric(28,6), cost_amount, sales_amount, currency, worker_id, activity_id, dimensions_json, billing_status (CHARGEABLE_UNBILLED, BILLED, NON_CHARGEABLE), wip_cost, wip_sales, legacy_xref_id, run_id; unique (tenant_id, legacy_xref_id).

9.49.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	`/api/v1/migration/packs/{pack}/runs`	start extract/validate/load	by input_hash	MigrationRun
GET	`/api/v1/migration/runs/{id}/control-totals`	totals and status	n/a	MigrationView
POST	`/api/v1/migration/runs/{id}/quarantine/{rec}/release`	fix and release quarantined record	by record	MigrationRun
POST	`/api/v1/migration/history/loads`	start historical load	by (system, years)	MigrationRun
GET	`/api/v1/migration/xref?system=&table=&id=`	resolve legacy id	n/a	any authenticated
POST	`/api/v1/migration/parallel-runs`	start replay for period	by (period, system)	MigrationRun
POST	`/api/v1/migration/parallel-runs/{id}/variances/{v}/explain`	attach reason	by variance	MigrationReview
POST	`/api/v1/cutover/plans/generate`	generate plan from packs	by inputs hash	CutoverManager
POST	`/api/v1/cutover/plans/{id}/steps/{s}/complete`	mark step done	by step	step owner
POST	`/api/v1/cutover/plans/{id}/rollback`	execute rollback plan	by plan	CutoverManager + second approver
GET	`/api/v1/migration/runs/{id}/projects/{project}/opening`	opening lines and totals per project and category	n/a	MigrationView

Validation: pack run rejects extracts with `cutoff_ts` later than the legacy freeze; `complete` rejects out-of-sequence go/no-go steps; `rollback` requires two distinct approvers.

Event	Trigger	Payload fields	Consumers
`dev.passage.migration.pack.reconciled.v1`	reconciliation done	run_id, pack, totals_match, totals_mismatch, quarantined	cutover, notifications
`dev.passage.migration.parallelrun.diffed.v1`	diff done	parallel_run_id, period, unexplained_count, unexplained_amount	cutover
`dev.passage.cutover.step.completed.v1`	step done	plan_id, step_id, actual_duration_min, status	cutover dashboard
`dev.passage.cutover.decision.recorded.v1`	go/no-go	plan_id, decision, approvers[], timestamp	audit, platform-ops

9.49.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Migration factory workspace	run pack, view totals, open quarantine, re-run	pack, source, status, records, mismatches	MigrationRun
Control-total board	drill mismatch to records, export	name, key, source, target, delta	MigrationView
Quarantine	edit field, release, reject	record, rule failed, reason	MigrationRun
Parallel-run review	classify variances, attach reason, sign off	area, key, legacy, passage, delta, class	MigrationReview

Screen	Primary actions	Key fields/columns	Duty
Cutover runbook	start/complete step, timer, go/no-go checklist, rollback	seq, T-offset, owner, planned vs actual, status	CutoverManager
Legacy reference (on any record)	open xref	system, company, table, id	all

Rules: control-total board auto-refreshes every 10 s during a run; variance grid supports bulk classify by rule; runbook shows elapsed vs planned with amber at 110%, red at 125%.

9.49.7 Business rules and edge cases

- **BR-49.1** Pack run state machine: EXTRACTED → VALIDATED → LOADED → RECONCILED; any step → FAILED; LOADED/RECONCILED → ROLLED_BACK (compensating journals and deletion of unposted documents).
- **BR-49.2** Open items are loaded against an opening-balance clearing account; the sum of open items per control account must equal the GL balance migrated for that account to 0.00 before RECONCILED.
- **BR-49.3** On-hand is loaded at legacy cost per dimension; the inventory GL account opening balance is migrated as a single line and must equal the loaded value per entity.
- **BR-49.4** Open orders are loaded with `qty_delivered` and `qty_invoiced` history so remaining quantities match; prior deliveries are not re-posted.
- **BR-49.5** WIP production orders carry consumed material and reported hours as a WIP opening entry; remaining operations are rebuilt from the Passage route.
- **BR-49.6** Fixed assets load acquisition date and accumulated depreciation per book; the next depreciation run must equal legacy's projected amount within 0.01 or the asset is flagged.
- **BR-49.7** Amount rounding during replay follows Passage rules; a difference ≤ 0.01 per document is classified EXPECTED by rule `RND-001`.
- **BR-49.8** Historical loads are read-only; a legacy document with no mapped Passage type lands in `history.<system>.unmapped`.
- **BR-49.9** Cutover abort at T+36h: if any go/no-go item is open, the rollback plan executes automatically after CutoverManager confirmation.
- **BR-49.10** Coexistence: a document received from legacy that already exists by `legacy_xref` is acknowledged and ignored.
- **BR-49.11** Project opening lines are excluded from GL posting and from the wave-41 cost-to-GL reconciliation for the cutover period; they are included in project estimates, billing and revenue-recognition calculations.
- **BR-49.12** A project whose opening totals do not reconcile to the legacy project subledger cannot be invoiced or estimated in Passage until the mismatch is resolved (status `OPENING_MISMATCH`).

9.49.8 Acceptance criteria

- **AC-49.1** (FR-49.1, 49.2) Given the synthetic AX dataset (3 entities, full year), when all packs run, then every `control_total.status = MATCH`.
- **AC-49.2** (FR-49.1, 49.2) Given the synthetic SAP dataset, when all packs run, then every `control_total.status = MATCH`.
- **AC-49.3** (FR-49.11) Given an open item for a vendor missing in master data, when validation runs, then the record is quarantined and load proceeds for the rest.
- **AC-49.4** (FR-49.10) Given a completed `open_items` run, when the same extract is run again, then records_loaded = 0 and totals are unchanged.
- **AC-49.5** (FR-49.5) Given one month of legacy documents replayed, when the diff runs, then unexplained_count = 0 and explained amount ≤ 0.1% of revenue.
- **AC-49.6** (FR-49.6) Given the generated runbook, when the rehearsal is executed, then all steps from T−0 to "open user access" complete in < 48 h.
- **AC-49.7** (FR-49.9) Given a rehearsal cutover, when rollback executes, then the legacy coexistence adapters resume and Passage postings since T−0 are exported as re-keying files.
- **AC-49.8** (FR-49.3) Given migrated customer invoice legacy id `CIV-00123` (AX `CustInvoiceJour.InvoiceId`), when a user opens the Passage invoice, then the legacy reference panel shows system, company and id.
- **AC-49.9** (FR-49.4) Given 7 years of legacy journals loaded, when the explorer queries `revenue` with `source=legacy` for a closed year, then it equals the legacy trial balance for that year.
- **AC-49.10** (FR-49.8) Given a pipeline trigger, when a rehearsal tenant is requested, then it is ready in ≤ 2 h with masked data.
- **AC-49.11** (FR-49.12) Given an AX T&M project with 120 chargeable unbilled hour transactions, when `project_wip` loads, then 120 opening lines exist, totals per category match legacy, no GL posting was created, and the first Passage invoice proposal lists the 120 lines at legacy sales price.

9.49.9 Test plan and fixtures

Fixtures: `fx-ax-synth-year` (AX 2012 R3 schema: `CustTrans`, `VendTrans`, `InventSum`, `GeneralJournalAccountEntry`, `PurchLine`, `SalesLine`, `ProdTable`, `AssetBook`, 3 `DataAreaId`, 1.1M rows); `fx-sap-synth-year` (ECC 6.0 and S/4 2023 variants: `BSID/BSIK/ACDOCA`, `MARD/MBEW`, `EKPO`, `VBAP`, `AFKO`, `ANLC`, 3 `BUKRS`, 1.3M rows); `fx-replay-month` (one month, 42k documents); `fx-cutover-plan` (plan with 84 steps).

Test	Type	Target	Pass criterion
Pack reconciliation	E2E	9 packs × 2 systems	100% MATCH
Idempotent re-run	property	loader	re-run of any subset loads 0 new rows
GE suites	unit	validation	all expectations defined per pack with ≥ 95% coverage of mapped fields
Parallel-run diff	E2E	harness	0 unexplained
Diff classifier	unit	classifier	100 seeded variances classified per rule
Cutover timing	performance	runbook	< 48 h; each step within 125% of plan

Test	Type	Target	Pass criterion
Rollback	E2E	rollback	coexistence resumes; exported files complete
History load throughput	performance	Iceberg	≥ 200k rows/min

Reconciliation: trial balance (Passage opening) ↔ legacy trial balance per entity/currency; open items ↔ control accounts; on-hand value ↔ inventory account; NBV ↔ asset accounts; parallel-run TB ↔ legacy period TB.

9.49.10 Deployment and operations

Helm: `passage-migration-factory` (Go extractors, TS orchestration on Temporal namespace `migration`), `passage-legacy-adapters` (AX OData/SQL, SAP RFC/ODP via wave-35 hub), `passage-rehearsal-provisioner` (pipeline job). Config: legacy connection strings in Vault, `HISTORY_YEARS=7`, `MASK_PII=true` for rehearsal. Flags: `migration.coexistence` per entity. Jobs: nightly delta extract during coexistence; weekly reconciliation post go-live for 30 days. SLOs: pack load ≥ 50k records/min; control totals computed within 10 min of load. Alerts: MISMATCH, quarantine > 1%, step overrun > 125%. Runbook entries: resume a failed pack from VALIDATED; rebuild xref; execute rollback. Rollback: per BR-49.1 and FR-49.9.

9.49.11 Migration from AX / SAP

This wave is the migration. Summary mapping:

Source	Passage entity	Transformation
`CustTransOpen/VendTransOpen`, `BSID/BSIK`	AR/AP open items	amount in transaction and accounting currency; due date; settlement history collapsed to remaining amount
`GeneralJournalAccountEntry` + `DimensionAttributeValueCombination`, `ACDOCA/FAGLFLEXT`	opening journal	balances per account × dimension × currency at cutoff; P&L closed to retained earnings if cutoff is year-end
`InventSum/InventDim/MBEW/MARD/MCHB`	inventory opening transactions	qty and cost per dimension; batch/serial attributes
`PurchLine/SalesLine`, `EKPO/VBAP`	open order lines	remaining = ordered − delivered; price and tax re-derived and compared
`ProdTable/AFKO`	production orders	status mapping (Started → RELEASED+WIP); WIP value
`AssetBook/ANLC`	asset books	NBV, accumulated depreciation, remaining life
`ProjTrans*/COSP`	project WIP	WIP per project, by category

Not migrated: legacy number sequences (new sequences, old ids kept in xref); AX `SysDatabaseLog` rows and SAP `CDHDR` (loaded to history only); settled items and closed orders (history only); X++/ABAP customizations.

9.49.12 Dependencies, risks, open questions

Depends on: wave 10 (framework, connectors), wave 35 (integration hub for coexistence), wave 46 (lakehouse for history), wave 48 (PII masking rules), all transactional waves for posting APIs.

Risk	Likelihood	Impact	Mitigation
Legacy dimension model does not map 1:1	High	High	mapping DSL with default dimension and exception report; sign-off before load
Extract window exceeds freeze	Medium	High	delta extracts; parallelized extractors; rehearsal timing
Coexistence creates duplicate intercompany documents	Medium	Medium	xref dedupe (BR-49.10)

Open questions: (1) History years default 7 vs 10 for DE GoBD — proposed 10 when DE pack installed; decide by wave 50. (2) Payroll YTD for countries without a Passage payroll engine — proposed: load as balances only; decide by wave 50.

9.49.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`migration.source_system`	legal entity	enum	none	AX2012, D365FO, SAPECC, S4HANA	extractor selection	DIXF source data format	Migration Cockpit project source (`LTMC` direct transfer / staging)
`migration.cutoff_ts`	legal entity	timestamptz	none	≤ freeze	extract cutoff	Data upgrade cutoff	Legacy data transfer date (`OAYE`)
`migration.opening_clearing_account`	legal entity	account	per pack	balance-sheet accounts	BR-49.2 offset	Opening balance journal offset	Data transfer clearing accounts (`OASV` offset)
`migration.tolerance.<pack>`	legal entity	money + reason	0.00	≥ 0 with mandatory reason	FR-49.2	none	none
`migration.quarantine_max_pct`	tenant	numeric	1.0	0–10	load blocks above share	DIXF error threshold	Migration Cockpit error handling
`migration.history_years`	tenant	int	7 (10 when DE pack installed)	1–20	FR-49.4	none	SDT / archive
`migration.parallel.unexplained_max`	tenant	int	0	0	FR-49.5 exit	none	none
`migration.parallel.explained_max_pct_revenue`	tenant	numeric	0.1	0–1	FR-49.5 exit	none	none
`migration.variance_rules`	tenant	rule set	`RND-001`	FR-3.13 decision table	EXPECTED classification	none	none
`migration.extract_parallelism`	tenant	int	8	1–32	extractor workers	DIXF threads (bundle size)	Migration Cockpit background jobs
`migration.load_batch_size`	tenant	int	5,000	500–50,000	API batch	DIXF bundle size	Migration Cockpit portion size
`migration.mask_pii`	rehearsal tenant	bool	true		FR-48.26 profile	none	TDMS scrambling
`cutover.t0`	plan	timestamptz	none		runbook anchor	none	none

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`cutover.abort_offset_h`	plan	int	36	12–72	BR-49.9	none	none
`cutover.step_overrun_amber_pct` / `red_pct`	plan	int	110 / 125	≥ 100	runbook colors	none	none
`coexistence.entities`	tenant	list	none	legal entities	FR-49.7 scope	none	none
`coexistence.sync_cron`	tenant	cron	`*/15 * * * *`	cron	master-data sync	none	ALE distribution model schedule (`BD64`)
`migration.project_opening.categories`	legal entity	set	HOUR, EXPENSE, ITEM, FEE, ON_ACCOUNT	subset	FR-49.12	Beginning balance journal line types	Migration object project cost categories

9.49.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Pack runs	list inquiry	pack, system, entity, status	records in/loaded/quarantined, duration, input hash	`pack_run`	DIXF execution history (`DMFExecution`)	Migration Cockpit monitoring (`LTMC` → Monitoring)
Control-total board	operational report	run, status	name, key, source, target, delta, tolerance	`control_total`	none (Excel)	Migration Cockpit "Migration results"
Quarantine	list inquiry	run, rule	record, rule failed, reason, age	`pack_quarantine`	DIXF staging errors	Staging table messages
Opening trial balance vs legacy	statutory/operational report	entity, currency	account × dimension, legacy, Passage, delta	`control_total` + ledger	Trial balance	`S_ALR_87012277`, `FAGLB03`
Open items reconciliation	operational report	entity, control account	open items sum, GL balance, delta	AP/AR + ledger	Vendor/customer balance list with aging	`S_ALR_87012082`/`87012172`
Inventory opening valuation	operational report	entity, site	qty, value by item/dims vs legacy	inventory + `control_total`	Inventory value report	`MB5L`, `MC.9`
Project opening balances	operational report	project, category	cost, sales, WIP, on-account vs legacy	`project_opening_line`	Project beginning balance journal list	`CJI3`/RA results (`KKA3`)
Parallel-run variance report	drill-down	parallel run, area, class	key, legacy, Passage, delta, rule, reason	`variance`	none	none
Cutover runbook status	KPI	plan	steps done/total, elapsed vs plan, overruns, go/no-go items	`cutover_step`	none	none
Legacy cross-reference lookup	list inquiry	system, table, legacy id	Passage entity and id	`legacy_xref`	none	none
History queries	drill-down	`source=legacy`, period	any metric	`history.unified.*`	AX legacy database kept online	SARI/archive, SDT history

9.49.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Reconciliation certificate per pack	pack RECONCILED	run, entity, cutoff, each control total with source/target/delta, signer	PDF with e-signature (FR-48.13)	run id	audit evidence; 10 years with opening balances
Opening trial balance sign-off	`gl_balances` RECONCILED	entity, currency, account × dimension balances, legacy reference, controller signature	PDF, XLSX	entity + cutoff	statutory link between legacy and Passage books (GoBD/FEC continuity)
Parallel-run sign-off report	parallel run SIGNED_OFF	period, unexplained = 0, explained by rule, approvers	PDF	parallel run id	audit evidence
Cutover runbook and go/no-go record	plan generated / decision	steps, owners, timings, decision, approvers	PDF, CSV	plan id	7 years
Rollback re-keying files	rollback executed	postings since T–0 as journals and documents	CSV, legacy import formats (AX DIXF package, SAP `LTMC` template)	rollback id	until re-keyed and reconciled
Legacy cross-reference export	on demand	system, table, legacy id, Passage id	CSV, Parquet	n/a	retained with history (FR-49.4)

9.49.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
Pack run (extract → validate → load → reconcile)	on demand / runbook step	pack, entity	`input_hash`, `legacy_xref` uniqueness	≥ 50k records/min	resume from last completed stage (BR-49.1)	MISMATCH, quarantine > 1%
Historical load	on demand	system, table, year	Iceberg snapshot per (table, year)	≥ 200k rows/min	resume per year	rows vs source count
Parallel-run replay	on demand per period	document type, day	replay cursor (legacy doc id order)	42k documents in < 6 h	pause on API 5xx; resume	replay errors
Variance diff	after replay	area	`parallel_run_id`	< 30 min	rerun idempotent	unexplained > 0
Coexistence delta sync	every 15 min	entity, object	legacy change pointer / timestamp	< 2 min	BR-49.10 dedupe; retry	backlog > 1 h
Post-go-live weekly reconciliation	weekly for 30 days	entity	(entity, week)	< 20 min	ticket	delta ≠ 0
Rehearsal tenant provision / teardown	on pipeline trigger	tenant	clone job (FR-48.26)	≤ 2 h	retry stage	> 2 h
Cutover step timer	continuous during cutover	plan	step state	n/a	amber/red per parameters	overrun > 125%

9.49.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
MigrationRun	start pack runs, history loads, release quarantine, parallel runs	with MigrationReview (HIGH, `MIG-001`: load and sign off own variances)	Migration engineer
MigrationView	control totals, runs, xref	none	Controller, Auditor, Migration team
MigrationReview	classify and explain variances, sign off parallel run	with MigrationRun (HIGH)	Controller
OpeningBalanceSign	sign reconciliation certificates and opening trial balance (FR-48.13)	with MigrationRun (HIGH)	Controller, CFO
CutoverManager	generate plan, record go/no-go, initiate rollback (with second approver)	with step owner of go/no-go items they approve (MEDIUM)	Cutover manager
CutoverStepOwner	complete assigned steps	none	named per step
LegacyConnectionAdmin	legacy connection strings, coexistence adapter settings	with MigrationRun in production (MEDIUM)	Platform operator

9.49.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
MIG-1501	error	Extract cutoff {cutoff} is after the legacy freeze {freeze}.	late cutoff	re-extract	9.49.5 validation
MIG-1502	error	Control total {name}{key} mismatch: source {s}, target {t}, delta {d}.	load difference	drill to records	FR-49.2
MIG-1503	warning	{n} records quarantined ({pct}%) in run {run}.	validation failures	fix and release	FR-49.11
MIG-1504	error	Quarantine share {pct}% exceeds {max}%; load stopped.	too many failures	fix mapping	FR-49.11
MIG-1505	info	Re-run loaded 0 new records; all {n} already present by cross-reference.	idempotent re-run	none	FR-49.10
MIG-1506	error	Open items for control account {acct} ({sum}) differ from migrated GL balance ({bal}).	BR-49.2	reconcile both packs	BR-49.2
MIG-1507	warning	Asset {asset}: next depreciation {p} differs from legacy projection {l}.	BR-49.6	review depreciation profile	BR-49.6
MIG-1508	error	Project {project} opening totals do not reconcile ({category} delta {d}).	FR-49.12 mismatch	fix extract or mapping	BR-49.12
MIG-1509	error	Parallel run cannot be signed off: {n} unexplained variances ({amount}).	open variances	explain or fix	FR-49.5
CUT-1601	error	Step {step} cannot start: go/no-go items {items} are open.	sequence rule	complete items	9.49.4 invariant
CUT-1602	warning	Step {step} at {pct}% of planned duration.	overrun	escalate	9.49.6 rules
CUT-1603	error	Rollback requires two distinct approvers.	single approver	add second	9.49.5 validation
CUT-1604	warning	Abort deadline T+{h} h in {minutes} min with open go/no-go items.	BR-49.9	decide	BR-49.9

9.49.19 Performance budgets and capacity

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation under 3× load
Pack load	1.3M rows per synthetic year, up to 50M for large customers	n/a (batch)	≥ 50k records/min	`legacy_xref` ~1 KB per migrated record (50 GB per 50M)	`legacy_xref` unique (system, company, table, id) + (passage_entity, passage_id)	parallelism capped; window extends, rehearsal timing updated
Control-total computation	per run	< 10 min after load	n/a	`control_total` < 1 GB	(run_id, status)	30 min
Historical load	7 years, 300M rows	n/a	≥ 200k rows/min	1–3 TB Parquet	`history.<system>.*` partitioned by (year, company)	longer load before cutover, not during
Parallel-run replay	42k–500k documents/month	per document p95 < 1 s via public APIs	50 docs/s	rehearsal tenant only	n/a	replay over two nights
Xref lookup	per record detail open	5 ms / 15 ms / 30 ms	500/s	n/a	as above	n/a
Coexistence sync	20k changes/day	delivery lag p95 < 15 min	100 msgs/s	n/a	n/a	lag up to 1 h; alert

9.49.20 Localization and compliance hooks

- Opening balances must preserve statutory continuity: DE GoBD and FR FEC require that the closing balances of the legacy books equal the opening balances in Passage and that the link is documented (opening trial balance sign-off, 9.49.15); the FR FEC for the cutover year is produced from legacy history plus Passage postings with `history.unified.*`.
- History years default to 10 when the DE or FR pack is installed (retention minimum), 8 for IN, 7 for US, 6 for UK/CA, 5 for MX (`migration.history_years` cannot go below the wave-48 retention minimum).
- Gap-free document numbering: legacy invoice numbers are kept in `legacy_xref` and shown on reprints; new fiscal sequences start in Passage per pack rules (MX CFDI series/folio, IN invoice series per GSTIN and fiscal year, FR chronological numbering).
- Tax: open AR/AP items keep their original tax amounts and tax codes mapped through the pack tax mapping; IN GST ITC balances and TDS certificates pending issue are migrated as balances with references; MX CFDI UUIDs of open invoices are retained for payment complements (REP).
- Payroll YTD (pack `payroll_ytd`) is limited to US and DE engines in v1; other countries load balances only (open question 2).
- Privacy: rehearsal extracts are masked per FR-48.26; production extracts are encrypted in transit and at rest, retained 90 days after go-live then deleted with a destruction record.
- Extension points: pack-specific mapping tables (tax code, payment method, chart of accounts) as FR-3.13 decision tables; `variance_rule` set per tenant; extractor plug-ins per source schema version.

9.49.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
AX 12.99.4 row 91 — 12.11.1 Project management → Beginning balance journals	PARTIAL-49	ADDED as FR-49.12	opening lines by category with WIP and estimate state
AX 12.32 inventory row "Parallel-run replay (Passage migration factory)"	COVERED-49	confirmed by FR-49.5	

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
SAP 13.4 inventory rows `AS91`–`AS94` legacy asset transfer, `OASV` balance transfer, `OAYE`/`OAYF` legacy transfer date	COVERED-49	confirmed by FR-49.1 (`fixed_assets`, `gl_balances`) and `migration.cutoff_ts`	
SAP 13.99.2 row 345 — TDMS masked refresh (PARTIAL-48)	PARTIAL-48	ADDED as FR-48.26; consumed here by FR-49.8 rehearsal tenants	closed in 9.48.21
AX 12.99.1 theme "Project depth — beginning balance journals (49)"	PARTIAL	ADDED as FR-49.12	same row as above, theme view
SAP 13.99.2 row 24 — bills of exchange (GAP-36)	GAP-36	DEFERRED to wave 36 (owner); pack `open_items` carries a `instrument_type` column mapped once wave 36 ships	migration of open bills of exchange depends on the instrument lifecycle

9.50 Wave 50: Scale Hardening, Multi-Region & Production Go-Live

9.50.1 Scope and business context

AX customers rely on LCS-managed production environments and Microsoft SLAs; SAP customers on Basis operations, HA/DR setups (HANA system replication, cluster failover) or RISE. Passage must prove the same in a self-operated, cloud-agnostic stack: a performance campaign to 10k concurrent users, 1M journal lines/h and 100k order lines/h; active/passive multi-region with cross-region Postgres replication, Kafka MirrorMaker 2 and DNS failover; SRE runbooks, capacity and cost models, zero-downtime upgrades, tenant provisioning automation; complete documentation; the first customer's production go-live and the public v1.0 release. Out of scope: active/active multi-region, per-tenant dedicated clusters, marketplace listings.

Pain points solved (10x lens)

Pain point in AX/SAP today	Root cause	Passage answer in this wave	Measurable 10x target
D365 One Version updates and SAP SUM upgrades require a downtime window (hours) and a sandbox cycle; customers defer and accumulate risk	Monolithic application server; schema changes applied in place	Rolling deploys with expand/contract migrations and N/N–1 API contract tests	Upgrade downtime 4–8 h → 0; release cadence quarterly → weekly
DR is a service request to LCS or a Basis project with HANA system replication; failover is rarely rehearsed and RPO/RTO are unknown	DR owned by vendor or built per customer	One-command failover, quarterly game day with measured RTO/RPO	RTO ≤ 1 h, RPO ≤ 5 min, measured every quarter
Performance regressions appear in production (`SysOperation` batch queues, `ST05` traces after the fact)	No standing load test tied to releases	k6 scenarios S1–S7 and SLO burn-rate gates in the release pipeline	Regressions caught pre-release 100%; p99 SLOs published
Environment sizing is a vendor estimator (LCS subscription estimator, Quick Sizer) with opaque cost	No per-tenant metering in the product	Capacity model and `tenant_cost` meter per month	Cost estimate error ±50% → ±5%
Provisioning a new company environment takes days of service requests	Manual environment lifecycle	One-call tenant provisioning with residency and license	Provisioning 3 days → ≤ 15 min

Cutover go/no-go checklist (phase exit, executed at T+24h of the production cutover): (1) all wave-49 packs RECONCILED, 0 MISMATCH; (2) parallel run for the prior month SIGNED_OFF with 0 unexplained; (3) opening trial balance signed by the customer controller; (4) SoD evaluation shows 0 unmitigated HIGH conflicts for go-live users; (5) country packs installed and one statutory fixture executed per entity; (6) load test on the production cluster at 50% of target passed within SLOs; (7) DR game day passed within 30 days before cutover; (8) backup verified: PITR drill on production data within 7 days; (9) security: pen-test high/critical = 0, secrets rotated, images signed; (10) integration endpoints (bank, EDI, e-invoicing, carriers) smoke-tested in production; (11) user acceptance sign-off for 12 core processes; (12) support rota, escalation and rollback decision owner named; (13) monitoring dashboards and alerts green for 24 h; (14) legacy freeze confirmed and rollback plan rehearsed. Any open item = NO-GO; the decision is recorded via `cutover.decision.recorded`.

Hypercare (T+1d to T+30d): 24×5 on-call with 15-minute response for Sev-1, 1 h for Sev-2; daily 09:00 customer stand-up; daily reconciliation of all subledgers to the journal and of lakehouse metrics; weekly reconciliation against legacy coexistence feeds; agents in suggest mode only; change freeze except Sev-1 fixes; exit criteria: first month-end closed and reconciled, Sev-1 count = 0 for 14 consecutive days, Sev-2 backlog ≤ 5, SLOs met for 30 days, customer sign-off.

v1.0 release criteria: all 50 waves' proofs green in CI on the release commit; phase-exit criteria of 9.0 met; CVE scan 0 critical, 0 high older than 30 days; API reference generated from OpenAPI/AsyncAPI with 0 undocumented operations; administrator, implementer and per-module functional guides published; upgrade path from the last stage build tested; license and pricing published; tag `v1.0.0` signed with cosign, SBOM (SPDX) attached, Helm charts and images published by digest.

9.50.2 AX / SAP parity map

Capability	AX 2012 / D365 F&SCM	SAP ECC / S/4	Passage equivalent	Parity
Production environment management	LCS production, sandbox tiers (Tier-2–5), service requests	Basis: `SM51` servers, `RZ10` profiles, RISE managed	Tenant provisioning automation, environment tiers via Helm values	Full
HA/DR	Microsoft-managed geo-secondary, LCS disaster recovery	HANA system replication, Pacemaker clusters, DR site	CNPG replica clusters cross-region, MirrorMaker 2, DNS failover	Full
Capacity and sizing	LCS subscription estimator, usage profile	Quick Sizer, SAPS	Capacity model per tenant (users, lines/h → nodes, storage)	Full
Performance tooling	Performance SDK, Trace parser, `SysOperation` batch tuning	`ST05`, `ST12`, `SAT`, `SQLM`, HANA PlanViz	k6 scenarios, OpenTelemetry traces, pg_stat_statements dashboards	Full
Monitoring	LCS Environment monitoring, Application Insights	`RZ20` CCMS, Solution Manager, Focused Run	Prometheus/Grafana SLO dashboards, Loki, Tempo	Full
Upgrades	One Version monthly updates, LCS deployable packages, downtime	SUM, maintenance planner, zero-downtime option (ZDO)	Expand/contract Atlas migrations, rolling deploys, no downtime	Improved
Batch and job scheduling	Batch framework (`SysOperation`), batch groups	`SM36`/`SM37`, Redwood	Temporal schedules (from wave 4) with multi-region continuity	Full
Licensing	Dynamics 365 per-user licenses	SAP named user licenses, FUE	Passage license file per tenant, user-type metering	Full
Documentation	Microsoft Learn	SAP Help Portal	Docs site: admin, implementer, API, functional guides, training	Full

9.50.3 Functional requirements

- **FR-50.1 Load-test scenarios** — Must. The system shall meet the SLOs below under the k6 scenario set run for 2 h sustained with 10k virtual users on the production-sized cluster:

- S1 journal posting: 1M lines/h via `/api/v1/ledger/journals` (batches of 500); S2 order intake: 100k order lines/h via sales order API plus pricing and ATP; S3 interactive mix: 10k users with 60% list/detail reads, 25% form saves, 10% dashboard loads, 5% explorer queries (think time 10 s); S4 warehouse mobile: 2k scanners at 1 scan/5 s; S5 MRP: 50k-item regeneration concurrent with S3; S6 month-end: inventory close, FX revaluation, allocations concurrent with S1 at 25%; S7 CDC lag: lakehouse freshness measured during S1+S2.

Operation	SLO (p99 unless noted)	Error budget
Entity read (generated)	p95 < 50 ms, p99 < 150 ms	0.1%
Form save	p99 < 400 ms	0.1%
Order intake (line)	p99 < 500 ms	0.1%
Pricing	p95 < 20 ms	0.1%
Journal post (500-line batch)	p99 < 2 s; sustained 5k lines/s	0.05%
Mobile scan round trip	p99 < 300 ms	0.1%
Dashboard load	p95 < 2 s	0.5%
Lakehouse lag	p95 < 60 s	n/a
MRP 50k items	< 10 min	n/a
Availability per tenant	99.9% (99.95% with multi-region)	monthly

- **FR-50.2 Postgres tuning** — Must. The system shall partition the journal line table by month (range) and hash by tenant (16), inventory transactions by month, audit by week; CNPG clusters with 1 primary + 2 synchronous-quorum replicas (`synchronous_standby_names ANY 1`); PgBouncer transaction pooling; `pg_stat_statements` top-50 reviewed with indexes added before exit.
- **FR-50.3 Kafka and cache tuning** — Must. The system shall run Strimzi with 6 brokers, `min.insync.replicas=2`, `acks=all`, topic partitions sized at ≥ 2× consumer parallelism, and Redis-compatible caches for pricing and policy bundles with ≤ 5 s invalidation.
- **FR-50.4 Multi-region active/passive** — Must. The system shall run a passive region with CNPG replica clusters streaming from the primary (async, lag SLO < 30 s; ledger cluster quorum-synchronous across regions when the customer accepts the latency), MirrorMaker 2 for all topics with offset translation, object-store replication for lakehouse and documents, Temporal multi-cluster replication, and DNS failover (health-checked, TTL 60 s).
- **FR-50.5 Failover procedure** — Must. The system shall promote the passive region by one command (`passage-ops failover --to eu-west`), which fences the old primary (revoke writes, scale to zero), promotes CNPG replicas, switches MirrorMaker direction, activates Temporal, flips DNS, and verifies the ledger hash chain; RTO ≤ 1 h, RPO ≤ 5 min.
- **FR-50.6 DR game day** — Must. The system shall run a quarterly game day: (1) announce window, freeze deploys; (2) take baseline hashes (ledger chain head per tenant, row counts per domain, Kafka end offsets); (3) inject failure (primary region network partition via NetworkPolicy, then node pool scale-down); (4) on-call executes failover runbook with timer; (5) verify: hash chain head matches or exceeds baseline, no gap in gap-free sequences, in-flight Temporal workflows resumed, reconciliation jobs green; (6) run smoke suite of 12 processes; (7) measure RTO/RPO; (8) fail back during a planned window; (9) post-game review with actions. Pass: RTO ≤ 1 h, RPO ≤ 5 min, zero committed-transaction loss.
- **FR-50.7 Zero-downtime upgrades** — Must. The system shall deploy services with rolling updates and expand/contract schema migrations (add → backfill → switch → drop in separate releases), with API compatibility tests between N and N−1 and a 30-minute automatic rollback window on SLO breach.
- **FR-50.8 Tenant provisioning** — Must. The system shall create a tenant (Keycloak realm, databases/schemas with RLS, Kafka ACLs, lakehouse namespace, object-store prefixes, residency region, license) from one API call in ≤ 15 min, and decommission with retention export.
- **FR-50.9 Capacity and cost model** — Must. The system shall publish a model mapping (concurrent users, journal lines/h, order lines/h, storage GB) to node counts, Postgres sizes, Kafka brokers and monthly cost per provider, and meter per-tenant resource usage monthly into `tenant_cost`.
- **FR-50.10 SRE runbooks and on-call** — Must. The system shall ship runbooks for the 30 alert rules shipped by the platform, incident severity definitions, escalation, and a status page; every alert links to its runbook.
- **FR-50.11 Documentation** — Must. The system shall publish the administrator guide, implementer guide (migration, localization, cutover), API reference (OpenAPI/AsyncAPI generated), functional guides per module (one per phase 1–8 module), and a training curriculum (role-based, 6 tracks).
- **FR-50.12 Licensing and release** — Must. The system shall enforce a signed license file per tenant (user types: full, operational, self-service; expiry; grace 30 days), and the release pipeline shall tag, sign, attach SBOMs and publish charts and images by digest.

9.50.4 Data model

`region` (platform-ops)

Field	Type	Required	Notes
region_id	text	Y	PK, e.g. `us-east`, `eu-west`
role	enum	Y	PRIMARY, PASSIVE, FENCED
provider	text	Y	eks/gke/aks/bare
cnpg_lag_seconds	int	Y	observed
mm2_lag_messages	bigint	Y	observed
last_failover_event_id	uuid	N	
dns_weight	int	Y	0 or 100

`failover_event`: event_id, from_region, to_region, initiated_by, started_at, dns_flipped_at, promoted_at, completed_at, rpo_seconds, rto_seconds, ledger_hash_ok bool, gapfree_ok bool, notes.

`tenant_license`: tenant_id, license_id, issued_at, expires_at, full_users, operational_users, selfservice_users, signature, state (VALID, GRACE, EXPIRED).

`tenant_cost`: tenant_id, month, cpu_core_hours, memory_gb_hours, storage_gb, kafka_gb, lakehouse_gb, ai_tokens, cost_usd, cost_eur, model_version.

`capacity_model`: model_version, inputs_json (users, lines/h, storage), outputs_json (nodes, pg size, brokers), provider, cost_usd_month.

Invariants: exactly one region is PRIMARY; a FENCED region accepts no writes (enforced by revoking the application role); license `full_users` ≥ active full users else state GRACE; `tenant_cost` is computed from Prometheus data with a stored query version. Indexing: `failover_event` (started_at); `tenant_cost` PK (tenant_id, month).

9.50.5 APIs and events

Method	Path	Purpose	Idempotency	Auth duty
POST	`/api/v1/ops/tenants`	provision tenant	`Idempotency-Key`	PlatformAdmin
DELETE	`/api/v1/ops/tenants/{id}`	decommission with export	by id	PlatformAdmin + second approver
POST	`/api/v1/ops/failover`	initiate failover	by event id	PlatformAdmin (break-glass)
GET	`/api/v1/ops/regions`	region status and lag	n/a	PlatformView
POST	`/api/v1/ops/gameday`	start game day workflow	by id	PlatformAdmin
GET	`/api/v1/ops/capacity/estimate`	capacity estimate for inputs	n/a	PlatformView
GET	`/api/v1/ops/tenants/{id}/cost?month=`	metered cost	n/a	TenantAdmin
PUT	`/api/v1/ops/tenants/{id}/license`	install license	ETag	PlatformAdmin
GET	`/api/v1/ops/slo`	SLO status and error budgets	n/a	PlatformView
GET	`/healthz/region`	region health for DNS checks	n/a	public

Validation: failover rejects if target region replication lag > 300 s unless `--accept-data-loss` with second approver; provisioning rejects a residency region not deployed.

Event	Trigger	Payload fields	Consumers
`dev.passage.ops.failover.completed.v1`	promotion done	from_region, to_region, promoted_lsn, rpo_seconds, rto_seconds	all services (reconnect), audit
`dev.passage.ops.tenant.provisioned.v1`	provisioning done	tenant_id, region, realm, databases[]	billing, catalog
`dev.passage.ops.slo.breached.v1`	SLO burn rate	slo_id, window, burn_rate, tenant_id	alerting, release gate
`dev.passage.ops.license.state_changed.v1`	license check	tenant_id, state, expires_at	shell banner, admin

9.50.6 User experience

Screen	Primary actions	Key fields/columns	Duty
Platform operations console	view regions, initiate failover (two-person), view game-day timeline	region, role, lag, last failover	PlatformAdmin
Tenant management	provision, license, residency, decommission	tenant, region, license state, users	PlatformAdmin
SLO dashboard (Grafana embedded)	filter by tenant/service, view burn rate	SLO, target, current, budget remaining	PlatformView
Cost and capacity	estimate, view monthly meter, export	inputs, outputs, cost USD/EUR	TenantAdmin
Status page (public)	subscribe	component, status, incidents	public
Release notes / docs site	search, version switch	version, module	public

Rules: failover button requires two distinct PlatformAdmin confirmations within 5 min; SLO dashboard default window 30 days; license banner appears in the shell at GRACE.

9.50.7 Business rules and edge cases

- **BR-50.1** Region state machine: PASSIVE → PRIMARY (promotion) with the former PRIMARY → FENCED; FENCED → PASSIVE only after re-sync verified; never two PRIMARY.
- **BR-50.2** During failover, any request to the fenced region returns 503 with `Retry-After: 30`; clients retry idempotent requests with the same key, so no double posting.
- **BR-50.3** Ledger hash chain: each journal carries `prev_hash`; after promotion the chain head per tenant must be verifiable; a break is a Sev-1 and blocks user access.
- **BR-50.4** Gap-free sequences (fiscal invoice numbers) are allocated in the ledger Postgres (synchronous replication), never in caches, so failover cannot duplicate numbers.
- **BR-50.5** Load tests run against a copy of the first customer's masked data, never production.
- **BR-50.6** An SLO burn rate > 14.4× over 1 h (fast burn) pages; > 6× over 6 h (slow burn) tickets; a release with any fast-burn alert in the 30-minute window auto-rolls back.
- **BR-50.7** Expand/contract: a migration that drops a column cannot ship in the same release as the code that stops using it.
- **BR-50.8** License GRACE allows logins for 30 days with a banner; EXPIRED blocks new logins but never data export or admin access.
- **BR-50.9** Tenant decommission retains an encrypted export for the retention period defined by the tenant's country packs before deletion.
- **BR-50.10** Cost model rounds to USD 0.01 / EUR 0.01; FX for EUR at the month-average ECB rate.

9.50.8 Acceptance criteria

- **AC-50.1** (FR-50.1) Given scenarios S1–S7 run concurrently for 2 h, when results are published, then every SLO row is met and error rates are within budget.
- **AC-50.2** (FR-50.2) Given 1M journal lines/h, when posting runs, then ledger Postgres replica lag p95 < 5 s and no query exceeds 1 s in pg_stat_statements.
- **AC-50.3** (FR-50.5, 50.6) Given the game day partition, when on-call runs the failover command, then RTO ≤ 1 h, RPO ≤ 5 min, ledger hash chain verified, gap-free sequences continuous.
- **AC-50.4** (FR-50.6) Given failover completed, when the 12-process smoke suite runs in the new primary, then all pass and CDC lag recovers to < 60 s within 15 min.
- **AC-50.5** (FR-50.7) Given release N+1 with an expand migration, when rolled out, then zero failed requests and N clients continue to work.
- **AC-50.6** (FR-50.8) Given a provisioning request with residency EU, when it runs, then the tenant exists in `eu-west` with RLS, realm, ACLs and license in ≤ 15 min.
- **AC-50.7** (FR-50.9) Given one month of production, when the cost meter runs, then `tenant_cost` is within 5% of provider billing for the cluster.
- **AC-50.8** (FR-50.12) Given a tenant whose license expired 31 days ago, when a user logs in, then login is blocked and admin export works.
- **AC-50.9** (9.50.1 checklist) Given the production cutover, when T+24h arrives, then all 14 go/no-go items are complete and the decision is recorded.
- **AC-50.10** (9.50.1 hypercare) Given the first production month, when month-end closes, then all subledgers reconcile to the journal, lakehouse revenue equals GL, and the customer signs off.
- **AC-50.11** (FR-50.11, 50.12) Given the release commit, when the pipeline runs, then `v1.0.0` is tagged and signed, SBOMs attached, docs published with 0 broken links and 0 undocumented API operations.

9.50.9 Test plan and fixtures

Fixtures: `fx-load-10k` (masked copy of the first customer plus synthetic growth to 10k users, 3 years of transactions, 40M journal lines); `k6-scenarios` (S1–S7 scripts with data pools); `fx-gameday` (baseline hash manifest generator); `fx-smoke-12` (12 core processes: PO→receipt→invoice→payment, SO→ship→invoice→cash, production order→RAF, journal post, bank reconciliation, asset depreciation, project invoice, payroll run, statutory report, dashboard, copilot query, mobile pick).

Test	Type	Target	Pass criterion
Load campaign	performance	whole platform	SLO table met, 2 h
Soak	performance	whole platform	24 h at 50% load, no memory growth > 10%
Failover	E2E	multi-region	RTO/RPO met, hash chain ok
Fail-back	E2E	multi-region	re-sync and promotion without loss
Upgrade compatibility	contract	APIs N vs N–1	100% of contract tests pass
Expand/contract linter	unit	migrations	no drop in same release as last use
Provisioning	E2E	tenant API	≤ 15 min, all components
Chaos	E2E	Kafka broker loss, Postgres primary kill	no failed postings, recovery < 5 min
Docs	contract	docs site	0 broken links, OpenAPI coverage 100%
Smoke 12	E2E	production	all pass post-cutover and post-failover

Reconciliation: post-failover row counts and ledger hash heads ↔ baseline; production daily subledger ↔ journal; lakehouse metrics ↔ GL; `tenant_cost` ↔ provider billing; license active users ↔ Keycloak sessions.

9.50.10 Deployment and operations

Helm: `passage-platform` umbrella with per-region values; `passage-mm2` (MirrorMaker 2), `passage-ops` (Go control plane), `passage-status-page`, `passage-docs`. CNPG `Cluster` with `replica.enabled` in the passive region; Temporal multi-cluster. Config: `REGION_ROLE`, `DNS_PROVIDER` (thin Terraform module per provider), `FAILOVER_MAX_LAG_S=300`, `LICENSE_PUBLIC_KEY`. Migrations: `ops` database. Flags: `ops.failover.enabled`, `license.enforce`. Jobs: cost meter monthly, capacity model nightly, game day quarterly (scheduled Temporal workflow with human task), backup drill monthly, SLO report weekly. SLOs: as FR-50.1; control-plane API p99 < 500 ms. Alerts: replication lag > 60 s, MM2 lag > 100k messages, SLO fast/slow burn, license expiry 30/7/1 days, failover in progress. Runbooks: failover, fail-back, broker replacement, Postgres primary loss, slot bloat, cache stampede, Temporal namespace replication lag, certificate expiry, object-store replication lag, release rollback. Rollback: Argo CD rollback by digest; database contract step deferred to the next release; DNS weight restore.

9.50.11 Migration from AX / SAP

Source	Passage	Notes
LCS environment inventory (production, sandboxes)	Tenant and environment tiers	documented; sandboxes re-created from masked production via provisioning
LCS deployable packages / Basis transports (`STMS`)	GitOps releases	not migrated; release notes map customer changes to metadata extensions
Batch groups and job schedules (`BatchJob`, `SM37`)	Temporal schedules	imported in wave 4 and verified for production cadence here
Monitoring thresholds (CCMS `RZ20`, LCS alerts)	Prometheus alert rules	mapped per alert category
D365 / SAP user licenses	`tenant_license` user types	full ↔ Dynamics full user / SAP professional; operational ↔ activity / functional; self-service ↔ team member / productivity

Not migrated: Microsoft/SAP SLAs and support contracts (replaced by Passage support terms), proprietary performance traces.

9.50.12 Dependencies, risks, open questions

Depends on: wave 1 (pipeline, Argo CD), wave 3 (Kafka, outbox), wave 4 (Temporal), wave 11 (ledger hash chain, gap-free sequences from wave 5), wave 46 (lakehouse lag measurement), wave 48 (backup drills, residency, pen test), wave 49 (customer migration and cutover runbook).

Risk	Likelihood	Impact	Mitigation
Cross-region synchronous ledger replication adds latency beyond SLO	Medium	High	quorum within region plus async cross-region by default; customer opt-in to cross-region sync
First customer month-end reveals unmapped edge cases	High	High	hypercare change process; parallel-run month before cutover; agents in suggest mode
Load test environment differs from production	Medium	Medium	same Helm values and node classes; 50% load re-run on production before cutover
DNS TTL caching delays failover for some clients	Medium	Medium	TTL 60 s; client retry with alternate endpoint list

Open questions: (1) Active/active for read-only analytics in the passive region — proposed yes for Trino only; decide before v1.1. (2) Public pricing unit (per full user per month vs per tenant tier) — proposed per user type; decide at v1.0 release. (3) Licensing model (open-core vs source-available) carried from PRD §12 — must be decided before the v1.0 tag.

9.50.13 Parameters and setup

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`REGION_ROLE`	region	enum	PRIMARY / PASSIVE	PRIMARY, PASSIVE, FENCED	write enablement	LCS environment type	HANA system replication role (`hdbnsutil -sr_state`)
`FAILOVER_MAX_LAG_S`	platform	int	300	30–3600	failover rejection threshold	LCS DR configuration	HSR log retention / `logshipping_timeout`
`failover.two_person_window_min`	platform	int	5	1–30	second confirmation window	none	none
`dns.ttl_s`	platform	int	60	30–300	failover propagation	Azure Traffic Manager TTL	DNS/virtual hostname switch
`cnpg.sync_quorum`	cluster	text	`ANY 1`	`ANY n`, `FIRST n`	FR-50.2 durability	Azure SQL geo-replication	HSR `SYNC`/`SYNCMEM` mode
`cnpg.cross_region_sync.ledger`	tenant (opt-in)	bool	false		FR-50.4 cross-region sync	none	HSR multi-target sync

Parameter	Scope	Type	Default	Allowed values	Effect	AX equivalent	SAP equivalent
`kafka.min_insync_replicas`	platform	int	2	2–3	FR-50.3	none	none
`mm2.lag_alert_messages`	platform	int	100,000	≥ 1,000	alert	none	none
`slo.<id>.target`	platform / tenant	numeric	per FR-50.1 table		SLO and error budget	LCS SLA	RISE SLA
`slo.burn.fast` / `slow`	platform	ratio	14.4×/1 h, 6×/6 h		BR-50.6	none	Focused Run alert thresholds
`release.auto_rollback_window_min`	platform	int	30	10–120	FR-50.7	One Version rollback (none automatic)	SUM ZDO fallback
`release.cadence`	tenant	enum	WEEKLY	WEEKLY, BIWEEKLY, MONTHLY (pinned ring)	update ring	One Version update cadence, pause updates	Maintenance planner, FPS schedule
`provisioning.default_tier`	platform	enum	PROD	DEV, TEST, UAT, PROD	resource profile	LCS Tier-1 to Tier-5	system landscape DEV/QAS/PRD
`provisioning.timeout_min`	platform	int	15	5–60	FR-50.8	LCS deployment	client copy duration
`license.grace_days`	tenant	int	30	0–60	BR-50.8	license enforcement grace	SAP license key temporary (28 days)
`license.enforce`	tenant	bool	true		FR-50.12	none	`SLICENSE`
`cost.fx_source`	platform	enum	ECB_MONTH_AVG	ECB_MONTH_AVG, FIXED	BR-50.10	none	none
`capacity.model_version`	platform	text	latest	published	estimates	LCS subscription estimator	Quick Sizer version
`gameday.cron`	platform	cron	quarterly first Tuesday 14:00 UTC	cron	FR-50.6	none	DR test schedule
`hypercare.days`	tenant	int	30	14–90	hypercare window	none	hypercare
`hypercare.change_freeze`	tenant	bool	true during hypercare		Sev-1 fixes only	none	transport freeze (`STMS` lock)
`status_page.components`	platform	list	API, UI, Analytics, Integrations, Mobile		public status	Service health (LCS)	SAP for Me availability
`docs.version_retention`	platform	int	6 releases	3–24	docs site versions	Microsoft Learn versions	Help Portal versions

9.50.14 Inquiries and reports

Name	Type	Filters & parameters	Columns / measures	Source projection	AX equivalent	SAP equivalent
Region status	list inquiry	region	role, CNPG lag, MM2 lag, Temporal replication, DNS weight	`region` + Prometheus	LCS environment monitoring	`HDBSettings` replication status, `RZ20`
Failover history	list inquiry	date	from/to, RPO, RTO, hash ok, gap-free ok	`failover_event`	LCS DR history	DR test log
SLO and error budget	KPI	service, tenant, window	target, current, budget remaining, burn rate	Prometheus recording rules	LCS health metrics	Focused Run / Solution Manager SLR
Load-test campaign report	operational report	campaign, scenario	p50/p95/p99, error rate, throughput per S1–S7	k6 results store	Performance SDK results	`ST03N` workload, LoadRunner reports
Top SQL	drill-down	cluster, period	query, calls, mean/p99 time, rows	`pg_stat_statements`	Trace parser, LCS SQL insights	`ST04` / `DBACOCKPIT`, `SQLM`
Capacity estimate	operational report	users, lines/h, storage	nodes, PG sizes, brokers, cost	`capacity_model`	LCS subscription estimator	Quick Sizer
Tenant cost	KPI	tenant, month	CPU, memory, storage, Kafka, lakehouse, AI tokens, USD/EUR	`tenant_cost`	none	none
License status	list inquiry	tenant	user types used vs licensed, state, expiry	`tenant_license` + wave-3 `UsageSnapshot`	License usage report	`USMM`, `SLAW`
Tenant inventory	list inquiry	region, tier	tenant, region, tier, residency, version ring	`tenant`	LCS environment list	`SM51`, landscape directory
Release history	list inquiry	version	digest, SBOM, migrations, rollbacks	release pipeline	LCS update history	`SPAM` / `SAINT` history
Hypercare dashboard	KPI	tenant	Sev-1/2 counts, backlog, daily reconciliation status, SLO	incidents + recon	none	hypercare reports

9.50.15 Printed and electronic documents

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Release notes	each release	version, digest, features by module, migrations, breaking changes (none allowed for N–1), CVE fixes	HTML, Markdown, PDF	semver	kept for all versions
SBOM	each release	packages, versions, licenses, hashes	SPDX 2.3 JSON, CycloneDX	per image digest	5 years (supply-chain evidence, CC8.1)
Signature attestation	release tag	cosign signature, Rekor entry	Sigstore bundle	per digest	permanent
DR game-day report	after game day	timeline, RTO/RPO measured, hash verification, actions	PDF	game day id	SOC 2 CC7.5 evidence (wave 48 lock)
Load-test certificate	campaign pass	scenarios, SLO table, environment, commit	PDF	campaign id	release evidence
Tenant license file	license install	tenant, user-type counts, expiry, signature	signed JSON (Ed25519)	license id	contract term
Monthly tenant cost statement	month close	resource lines, cost USD/EUR, model version	PDF, CSV	(tenant, month)	billing records 7 years
Go/no-go decision record	T+24 h	14 checklist items, evidence links, approvers	PDF with e-signature (FR-48.13)	plan id	audit evidence
Hypercare exit report	hypercare end	exit criteria, incidents, reconciliation results, customer sign-off	PDF	tenant + date	project record

Document	Trigger	Layout elements	Formats	Numbering sequence	Legal / retention requirement
Status-page incident notice	incident	component, impact, timeline, resolution	HTML, e-mail, RSS	incident id	1 year public history

9.50.16 Periodic and batch jobs

Job	Schedule default	Partitioning key	Idempotency / checkpoint	Typical runtime target	Failure handling	Monitor / alert
Cost meter	monthly, 2nd 02:00 UTC	tenant	(tenant, month)	< 30 min	rerun idempotent	variance vs billing > 5%
Capacity model refresh	nightly	provider	model_version	< 10 min	keep previous	none
DR game day	quarterly	region pair	Temporal workflow with human tasks	< 4 h including fail-back	abort and fail back	RTO/RPO breach
Backup verification on production	weekly	cluster	drill id	< 1 h	Sev-2	failure
SLO report	weekly Monday	service	week	< 5 min	retry	budget < 25%
License check	hourly	tenant	state transition	< 1 min	keep last state	expiry 30/7/1 days
Soak test	before each minor release	scenario	campaign id	24 h	release blocked	memory growth > 10%
Load campaign S1–S7	before each minor release and pre-cutover	scenario	campaign id	2 h	release blocked	any SLO miss
Certificate expiry scan	daily	namespace	n/a	< 1 min	auto-renew via cert-manager; page at 7 days	expiry < 14 days
Replication slot and bloat check	every 15 min	cluster	n/a	< 10 s	runbook	slot lag > 1 GB
Docs build and link check	per release	site	commit	< 10 min	release blocked	broken links > 0

9.50.17 Security duties and privileges

Duty	Privileges (entry points)	Segregation-of-duties conflicts	Default roles that include it
PlatformAdmin	`POST /ops/tenants`, `DELETE /ops/tenants/{id}` (with second approver), `POST /ops/failover`, `PUT /ops/tenants/{id}/license`, game day	with any tenant business duty (HIGH, `OPS-001`: operators do not post)	Platform operator (break-glass for failover)
PlatformView	`GET /ops/regions`, `/ops/slo`, `/ops/capacity/estimate`	none	SRE, Support
ReleaseManager	promote release by digest, pause ring, trigger rollback	with code approval of the same change (MEDIUM, `CHG-001`: four-eyes)	Release manager
OnCallResponder	runbook actions (restart, scale, replay), incident updates	none	SRE on-call
TenantAdmin	`GET /ops/tenants/{id}/cost`, user-type assignment within license	with PlatformAdmin (MEDIUM)	Customer administrator
LicenseIssuer (offline)	sign license files with the Ed25519 private key (HSM/Vault transit)	with PlatformAdmin (HIGH)	Passage commercial operations
StatusPagePublisher	publish incident notices	none	Support lead
CutoverDecisionOwner	record go/no-go at production cutover	with CutoverStepOwner of checklist items (MEDIUM)	Customer CFO / project sponsor

9.50.18 Message catalog

Code	Severity	User text	Cause	Remediation	Raised by
OPS-1701	error	Failover rejected: target region lag {lag} s exceeds {max} s. Use --accept-data-loss with a second approver.	lag above limit	wait or accept with approval	9.50.5 validation
OPS-1702	error	Failover needs a second PlatformAdmin confirmation within {min} min.	two-person rule	second confirmation	9.50.6 rules
OPS-1703	info	This region is read-only during failover; retry in {s} s.	fenced region (503)	client retry	BR-50.2
OPS-1704	error	Ledger hash chain broken for tenant {tenant} at journal {id}; user access blocked.	BR-50.3	Sev-1 runbook	BR-50.3
OPS-1705	error	Residency region {region} is not deployed; tenant not provisioned.	provisioning validation	deploy region or change residency	9.50.5 validation
OPS-1706	warning	Release {v} rolled back automatically: fast burn on {slo}.	BR-50.6	investigate before re-release	BR-50.6
OPS-1707	error	Migration drops column {col} still referenced in this release.	expand/contract linter	split releases	BR-50.7
OPS-1708	warning	Replication lag {lag} s on {cluster} exceeds 60 s.	lag	check network and WAL volume	9.50.10 alerts
LIC-1801	warning	License expires in {days} days.	expiry approaching	renew	FR-50.12
LIC-1802	warning	License in grace period: {used} full users active, {licensed} licensed.	over-use or expiry	true-up or reassign users	BR-50.8
LIC-1803	error	License expired; sign-in blocked. Administrators can still sign in and export data.	EXPIRED	renew	BR-50.8
LIC-1804	error	License signature invalid.	tampered or wrong key	reinstall issued file	FR-50.12
COST-1901	warning	Metered cost for {month} differs from provider billing by {pct}%.	meter drift	review query version	AC-50.7

9.50.19 Performance budgets and capacity

The SLO table in FR-50.1 is the binding budget. Capacity assumptions per reference tenant (10k concurrent users) follow.

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation under 3× load
Journal posting	1M lines/h peak, 8M lines/day	500-line batch 600 ms / 1.2 s / 2 s	5k lines/s sustained	1.2 TB ledger (lines + audit)	range by month, hash by tenant (16)	queue in outbox, 429 with `Retry-After` for batch APIs; interactive saves prioritized

Operation	Volume assumption	Latency target (p50 / p95 / p99)	Throughput target	Storage growth per year	Index / partition strategy	Degradation under 3× load
Order intake	100k lines/h	150 ms / 300 ms / 500 ms	30 lines/s per pod	200 GB	by month	ATP degrades to cached availability (flagged)
Interactive mix	10k users, think time 10 s	read 20 / 50 / 150 ms; save 120 / 250 / 400 ms	1k req/s	n/a	PgBouncer transaction pooling	p99 doubles; no errors
Mobile scan	2k scanners, 1 scan/5 s	80 / 180 / 300 ms	400 scans/s	100 GB	by month	offline queue on device (wave 32)
Kafka	60k msgs/s peak	produce p99 < 50 ms	6 brokers	30 TB retained 7 days (tiered)	partitions ≥ 2× consumers	consumer lag grows; lakehouse badge amber
Cross-region replication	WAL 40 MB/s peak	lag p95 < 30 s	n/a	n/a	n/a	lag alert > 60 s; failover window widens
Tenant provisioning	20 tenants/day	< 15 min	5 concurrent	~2 GB per empty tenant	per-tenant schemas	queued
Failover	per event	RTO ≤ 1 h, RPO ≤ 5 min	n/a	n/a	n/a	runbook manual steps

9.50.20 Localization and compliance hooks

- Region placement follows wave-48 tenant residency: EU tenants run primary and passive in EU regions only (e.g. `eu-west` ↔ `eu-central`); IN tenants in-country; failover never crosses a residency boundary (`POST /ops/failover` validates the pair).
- Retention on decommission follows the tenant's country packs (BR-50.9): encrypted export kept for the longest applicable record-class minimum (DE/FR 10 years) unless the customer takes custody and signs a release.
- Status page and release notes are published in English with German and French translations for customer-facing incident notices (contractual notice language per tenant).
- Time zones: maintenance windows, game days and hypercare stand-ups are scheduled in the tenant's time zone; SLO reports use UTC.
- Licensing and cost: cost statements show USD and EUR with ECB month-average FX (BR-50.10); taxes on Passage's own invoices are outside the product.
- Compliance evidence produced here (game-day reports, SBOMs, signatures, backup verification, change records) flows into the wave-48 evidence store for CC7.5, CC8.1 and A1.2/A1.3 (availability criteria).
- Extension points: per-provider Terraform modules, Helm values per region, `slo.<id>.target` per contract tier.

9.50.21 Coverage closure

Register row (inventory section + AX form or SAP T-code)	Status before	Disposition	Note
(no GAP or PARTIAL register row carries current or proposed wave 50)	—	—	rows below are inventory COVERED-50 rows and cross-references verified against this wave
AX 12.30 inventory rows "Tenant provisioning / Environment management", "Tenant provisioning templates / Environment catalog"	COVERED-50	confirmed by FR-50.8 and 9.50.13 `provisioning.*`	
AX 12.30 inventory row "DR → Game days / Failover drills"	COVERED-50	confirmed by FR-50.5, FR-50.6	
AX 12.30 inventory row "Database → Backup / Restore / Refresh from production (LCS)"	COVERED-48 (DR in 50)	confirmed by FR-48.9, FR-48.26 (masked refresh) and FR-50.4	
SAP 13.99.2 row 345 — TDMS masked refresh (PARTIAL-48, "propose wave 48/50")	PARTIAL-48	ADDED as FR-48.26; consumed here by BR-50.5 load tests	closed in 9.48.21
AX 12.30 rows "License inquiries", "License report / Named user counts", "Named user license count refresh" (PARTIAL-3)	PARTIAL-3	SUPERSEDED by FR-3.14 (wave 3 `UsageSnapshot`); FR-50.12 enforcement reads it	
AX 12.99.1 theme "Alerts and notification rules" (wave 5)	GAP-5	DEFERRED to wave 5 (owner); platform alerting is FR-5.14 + 9.50.10	

Part 10 — Appendices

These appendices are normative for every phase file (`docs/prd/phase-N-*.md`). Where a phase file and an appendix disagree, the appendix wins for conventions (naming, envelopes, error codes, security, testing) and the phase file wins for business behavior. The stack is fixed by ADR-0001; nothing here proposes infrastructure outside it.

A. Glossary

Terms are drawn from AX 2012 / D365 F&SCM, SAP ECC / S/4HANA, the standards Passage implements, and Passage itself. The last column is the name used in Passage metadata, APIs and UI.

Term	Origin	Definition	Passage term
AOT	AX	Application Object Tree: the AX metadata repository for tables, classes, forms, menus.	Metadata registry
DDIC	SAP	ABAP Data Dictionary: domains, data elements, tables, append structures.	Metadata registry
EDT	AX	Extended Data Type: a typed, reusable field definition (e.g. `CustAccount`).	Field type
Base enum	AX	Fixed enumeration stored as an integer; extensible via enum extensions.	Enum (metadata)
Extension (vs overlayering)	AX	D365 model that adds to standard objects instead of editing them.	Entity extension / hook
DataAreaId	AX	The company (legal entity) column present on every company-specific table.	`legal_entity_id`
MANDT	SAP	Client key present on every client-dependent table.	`tenant_id`
Tenant	Passage	Top-level isolation boundary: one customer organization, one RLS scope, one Keycloak realm.	Tenant
Legal entity	AX / Passage	A company that produces its own financial statements. SAP: company code (BUKRS).	LegalEntity
Operating unit	AX	Department, cost center, business unit, value stream: non-legal organization units.	OperatingUnit
Company code (BUKRS)	SAP	Smallest organizational unit with a complete self-contained set of accounts.	LegalEntity
Plant (WERKS)	SAP	Physical production/logistics location. AX: site.	Site
Storage location (LGORT)	SAP	Sub-location of a plant where stock is held. AX: warehouse.	Warehouse
Role / duty / privilege	AX	Three-layer security model: privileges grant entry points, duties group privileges, roles group duties.	Role / Duty / Privilege
Authorization object	SAP	Named set of fields (e.g. `F_BKPF_BUK`) checked at runtime.	Privilege
SoD	AX / SAP GRC	Segregation of duties: rules preventing one user from holding conflicting duties.	SoD rule
Number sequence	AX	Generator of document identifiers per scope; continuous (gap-free) or not. SAP: number range object (SNRO).	NumberSequence
Database log	AX	Table/field change log. SAP: change documents (CDHDR/CDPOS).	Audit log (CDC)
Workflow	AX / SAP	Approval and process orchestration (AX workflow framework, SAP Business Workflow).	Temporal workflow
DIXF / DMF	AX	Data Import Export Framework / Data Management Framework. SAP: LSMW, Migration Cockpit.	Migration pipeline
LCS	AX	Lifecycle Services: Microsoft's hosted deployment/upgrade portal. SAP: STMS/CTS+.	Argo CD GitOps pipeline
DirParty / Global Address Book	AX	Shared party model with customer/vendor/contact roles.	Party
Business Partner (BP)	SAP	S/4 single party record with roles; CVI links to KNA1/LFA1.	Party
CustTable / KNA1	AX / SAP	Customer master table.	Customer (party role)
VendTable / LFA1	AX / SAP	Vendor master table.	Vendor (party role)
Posting profile	AX	Mapping from a customer/vendor/item group to GL control accounts. SAP: reconciliation account.	PostingProfile
Product master / variant	AX	A product with dimensions (size, color, style, configuration) that explode into distinct products. SAP: configurable material.	ProductMaster / Product
Released product	AX	A product made available to one legal entity with entity-specific defaults. SAP: MARC plant view.	ReleasedProduct
MARA / MARC / MARD	SAP	Material master: general, plant and storage-location views.	Product / ReleasedProduct / on-hand
Dimension group	AX	Product, storage, and tracking dimension groups controlling which dimensions apply to an item.	DimensionGroup
Item model group	AX	Costing method, negative inventory policy, physical/financial posting flags. SAP: valuation class + MRP/accounting views.	ItemModelGroup
GTIN / SSCC	GS1	Global Trade Item Number; Serial Shipping Container Code (18-digit pallet/case id).	GTIN / SSCC
BOM	AX / SAP	Bill of materials: component list by version with effective dates. SAP: STKO/STPO.	BOM
Formula	AX	Process-industry BOM with potency, co-/by-products, scalable quantities. SAP: master recipe.	Formula
Route / routing	AX / SAP	Operation sequence with resources and times. SAP: PLKO/PLPO.	Routing
ECM / ECO	AX / SAP	Engineering change management; engineering change order.	ChangeOrder
Universal journal	SAP	ACDOCA: single line-item table for FI, CO, AA and ML. AX: GeneralJournalAccountEntry.	JournalEntry / JournalLine
Financial dimension	AX	Analytical attribute on a ledger line (department, cost center, project). SAP: CO object / profit center / segment.	Dimension
Account structure	AX	Rules for which dimension combinations are valid per main account.	AccountStructure
Posting layer	AX	Parallel accounting layer (Current, Operations, Tax). SAP: ledger group / non-leading ledger.	Ledger (parallel)
Currency types	SAP	10 company code, 30 group, 40 hard currency amounts per line. AX: accounting/reporting currency.	Transaction / accounting / reporting currency
OB52	SAP	Posting period control per account type and ledger. AX: ledger calendar period status per module.	PeriodControl
Allocation rule	AX	Basis/fixed distribution of balances across dimensions. SAP: assessment/distribution (KSU5/KSV5).	AllocationRule
FSV	SAP	Financial statement version: hierarchical statement definition (OB58). AX: Management Reporter row/column definitions.	StatementDefinition
InventTrans	AX	Immutable inventory transaction with issue/receipt status. SAP: MSEG material document line.	InventoryTransaction
InventSum	AX	On-hand aggregate per dimension combination. SAP: MARD/MCHB stock tables.	OnHand (projection)
Physical / financial status	AX	Transaction lifecycle: ordered → reserved → picked → deducted / received → registered → posted (financially).	InventoryTransaction status
Reservation	AX / SAP	Allocation of on-hand or expected receipts to a demand.	Reservation

Term	Origin	Definition	Passage term
Inventory close	AX	Periodic settlement of issues against receipts to finalize cost. SAP: material ledger closing (CKMLCP).	Cost close
Standard cost / costing version	AX	Frozen unit cost by version and site, activated per date. SAP: standard price, costing run (CK40N).	CostingVersion
Costing sheet	AX / SAP	Indirect cost (overhead) rule tree applied during cost roll-up.	CostingSheet
Product receipt	AX	Posting that records goods received against a PO. SAP: goods receipt (MIGO, movement type 101).	ProductReceipt
GR/IR	SAP	Goods-receipt / invoice-receipt clearing account; accrues liability between receipt and invoice. AX: accrued purchases.	GR/IR accrual account
Three-way match	AX / SAP	Invoice compared to PO and receipt within price/quantity tolerances (MIRO, tolerance keys).	Matching
ERS	SAP	Evaluated receipt settlement: self-billing from receipts without a vendor invoice.	ERS
Open item	SAP	Unsettled AP/AR line (FBL1N/FBL5N). AX: customer/vendor transaction.	OpenItem
Settlement	AX	Application of payment or credit against open items. SAP: clearing.	Settlement
F110	SAP	Automatic payment program. AX: payment proposal.	PaymentProposal
pain.001 / camt.053	ISO 20022	Credit-transfer initiation message / end-of-day bank statement message.	Payment file / BankStatement
NACHA	Standard	US ACH file format.	Payment file (US)
Production order	AX / SAP	Order to make a quantity of an item via BOM and route (CO01).	ProductionOrder
RAF	AX	Report as finished: posts finished goods receipt from a production order. SAP: order confirmation (CO11N) + GR 101.	ReportAsFinished
Coverage group	AX	Planning parameters per item: requirement/period/min-max coverage, time fences, safety stock. SAP: MRP type + lot-sizing procedure.	CoverageGroup
MRP / MPS	Standard	Material requirements planning; master production schedule.	Planning run
Planned order	AX / SAP	MRP proposal for purchase, production or transfer, to be firmed.	PlannedOrder
Action / delay message	AX	Planner advice: advance, postpone, cancel; or dates that cannot be met. SAP: exception messages.	PlanningMessage
Finite / infinite capacity	AX / SAP	Scheduling that respects or ignores resource load (CM01, PP/DS).	Scheduling mode
Catch weight	AX	Dual-UoM inventory (nominal units plus actual weight).	CatchWeight
Potency	AX	Active-ingredient concentration used to scale formula consumption.	Potency
OEE	ISO 22400	Overall equipment effectiveness = availability × performance × quality.	OEE
Trade agreement	AX	Price/discount list by account/group/all × item/group/all with effective dates. SAP: condition record.	PriceCondition
Condition technique	SAP	Pricing procedure of condition types resolved via access sequences (VK11).	Pricing procedure / access sequence
ATP / CTP	AX / SAP	Available-to-promise from on-hand and supply; capable-to-promise considers capacity.	ATP
Packing slip	AX	Delivery document posting inventory deduction and COGS. SAP: outbound delivery + post goods issue.	PackingSlip (Shipment posting)
Handling unit / license plate	SAP / AX	Physical container (pallet, case) with its own id holding nested items.	LicensePlate
Location directive	AX	WMS rule choosing put-away/pick locations. SAP: storage type search strategy.	LocationDirective
Quality order	AX	Inspection with tests and results leading to a disposition. SAP: inspection lot + usage decision.	QualityOrder
NCR / CAPA	Quality	Nonconformance report; corrective and preventive action. SAP: quality notification.	Nonconformance / CAPA
AQL	ANSI/ASQ Z1.4	Acceptable quality level sampling plan.	SamplingPlan
Landed cost	Standard	Freight, duty and handling allocated to inventory cost.	LandedCost
EDI 850 / 856 / 810	X12	Purchase order / advance ship notice / invoice transaction sets. EDIFACT: ORDERS / DESADV / INVOIC.	EDI message
Peppol / UBL	Standard	Pan-European e-invoicing network; Universal Business Language XML.	E-invoice
Dunning	SAP	Reminder letters by escalation level (F150). AX: collection letters.	CollectionLetter
RMA	Standard	Return merchandise authorization. AX: return order; SAP: RE order.	ReturnOrder
SSP	ASC 606	Standalone selling price used to allocate transaction price across performance obligations.	SSP
Performance obligation	ASC 606 / IFRS 15	Distinct promise in a contract to which revenue is allocated.	PerformanceObligation
ROU asset	IFRS 16 / ASC 842	Right-of-use asset recognized for a lease.	Lease
Budget control / encumbrance	AX / SAP	Reservation of budget by requisitions and POs (commitments).	Encumbrance
Elimination	Consolidation	Removal of intercompany balances and unrealized profit in group statements.	EliminationRule
POC	Accounting	Percentage-of-completion revenue estimate. SAP: results analysis.	ProjectEstimate
Functional location	SAP PM	Hierarchical place where equipment is installed. D365: functional location.	FunctionalLocation
Installed base	SAP CS	Serialized equipment at customer sites covered by service.	InstalledBase
Entity store	AX	D365 aggregate measurement store for Power BI. SAP: BW/CDS views.	Lakehouse (Iceberg)
MCP	Standard	Model Context Protocol: tool interface for AI agents.	MCP server
Copilot / agent	Passage	Copilot answers and drafts; an agent executes multi-step work under approval gates.	Copilot / Agent
Outbox	Pattern	Table written in the same transaction as the state change and relayed to Kafka by Debezium.	Outbox
CloudEvent	CNCF	Standard event envelope (specversion, id, source, type, subject, time, data).	Event
RLS	Postgres	Row-level security policy evaluated on every statement.	Tenant isolation
Wave (delivery)	Passage	A 4–8 week increment with deliverable, proof, deploy and references. Not to be confused with a WMS pick wave.	Wave

B. Cross-module data model

B.1 Bounded contexts

Passage has 12 core bounded contexts. Each is a deployable set of services with exactly one Postgres database (CloudNativePG cluster) whose schema is generated from entity metadata. Three supporting contexts (`integration`, `analytics`, `agents`) own only operational tables (partner profiles, message logs, prompt

registry, eval runs) and never master or transactional business data.

Context	Database	Owns	Language	Waves
`platform`	`passage_platform`	Tenants, users, roles/duties/privileges, metadata registry, number sequences, audit log, workflow/batch definitions, legal entities, operating units, sites, warehouses, hierarchies, fiscal calendars, ISO reference data, UoM	Go (sequences, audit), TS (admin, workflow)	1–6
`party`	`passage_party`	Party, roles (customer, vendor, contact, employee link), addresses, tax registrations, groups, payment and delivery terms, credit limits	TS	7
`product`	`passage_product`	Product, product master, released product, dimension groups, attributes, BOM, formula, routing, resources, calendars, change orders	Go (explosion), TS	8–9
`ledger`	`passage_ledger`	Accounts, account structures, dimensions, journal entries/lines, balances, ledgers, exchange rates, tax codes and transactions, period control, allocations, accruals, statements, budgets, cost accounting ledger, consolidation groups	Go	11–15, 38, 40
`inventory`	`passage_inventory`	Inventory transactions, on-hand projection, reservations, inventory journals, counting, cost layers, costing versions, costing sheets, quality orders, nonconformances	Go	16, 20, 33, 39
`procurement`	`passage_procurement`	Requisitions, RFQs, purchase agreements, purchase orders, product receipts, vendor invoices, match results, AP open items, payment proposals, payments	Go (matching, settlement), TS	17–20
`manufacturing`	`passage_manufacturing`	Production/batch orders, picking lists, route cards, planning runs, planned orders, planning messages, schedules, kanbans, time registrations, machine events	Go; Python (forecasting)	21–25
`sales`	`passage_sales`	Price conditions, quotations, sales orders, holds, shipments/packing slips, customer invoices, revenue schedules, AR open items, cash applications, collection cases, return orders, rebate agreements	Go (pricing, ATP, settlement), TS	26–30
`warehouse`	`passage_warehouse`	Locations, license plates, location directives, work templates, work, waves, replenishment, loads, routes, carrier rates, freight invoices, mobile flow definitions	Go (directives), TS	28, 31–34
`treasury`	`passage_treasury`	Bank accounts, statements, reconciliations, cash forecasts, checks, letters of credit, fixed assets, asset books, asset transactions, leases	Go	36–37
`workforce`	`passage_workforce`	Workers, positions, jobs, employment, absence, benefits, payroll runs, pay rules, expense reports	TS; Go (payroll calc)	25 (time), 42–43
`projects`	`passage_projects`	Projects, WBS, project transactions, estimates, invoice proposals, functional locations, maintenance assets, maintenance plans, maintenance work orders, installed base, service agreements, cases, service work orders	TS	41, 44–45

B.2 Cross-context reference rule

A row in one database may reference an entity in another context only by its identifier (UUIDv7 or, for user-facing documents, the number-sequence id) in a column named `<entity>_id` plus, when needed for display, a denormalized `<entity>_number` and `<entity>_name` snapshot. There are no foreign keys, views or `dblink` connections across databases. The owning context publishes `created`/`changed`/`deleted` events; consumers maintain a local read model (`<context>_ref.<entity>` tables) refreshed from those events and never query another context's database. Referential existence is validated at write time by calling the owning context's API (`HEAD /v1/<context>/<collection>/{id}`) or against the local read model when staleness of up to 5 s is acceptable (documents, not postings). The universal journal is the only synchronous cross-context write: subledgers call `ledger.Post` and store the returned `journal_entry_id`.

Identity rules: every table has `id uuid` (UUIDv7, time-ordered), `tenant_id uuid NOT NULL`, `legal_entity_id uuid` where the entity is company-specific, `version int` for optimistic concurrency, `created_at/created_by/updated_at/updated_by`. Fiscal documents additionally have `document_number text` (from a number sequence) and `posted_at timestamptz`.

B.3 Core entities

Entity	Context	Database	Key identifiers	Main relationships
Tenant	platform	passage_platform	`id`, `slug`	has many LegalEntity, User, Role
User	platform	passage_platform	`id`, `keycloak_sub`, `email`	many-to-many Role scoped by LegalEntity with `valid_from/to`
Role / Duty / Privilege	platform	passage_platform	`code` (e.g. `AP.Clerk`, `MaintainVendors`, `vendor.write`)	Role ⊃ Duty ⊃ Privilege; compiled to OPA data
EntityDefinition	platform	passage_platform	`name`, `version`	has Fields, Enums, Relations, Extensions
NumberSequence	platform	passage_platform	`code`, `legal_entity_id`, `scope`	referenced by every document type (Appendix G)
AuditEntry	platform	passage_platform	`id`, `entity`, `record_id`, `trace_id`, `hash`	hash-chained to previous entry; immutable
LegalEntity	platform	passage_platform	`id`, `code` (e.g. `USMF`), `country`	has Sites, FiscalCalendar, ledger set
OperatingUnit	platform	passage_platform	`id`, `type`, `code`	effective-dated Hierarchy nodes by purpose
Site / Warehouse	platform	passage_platform	`id`, `code`, `legal_entity_id`	Warehouse belongs to Site; referenced by inventory and warehouse contexts
FiscalCalendar / Period	platform	passage_platform	`id`, `fiscal_year`, `period_no`	PeriodControl rows per Ledger × module
Party	party	passage_party	`id`, `party_number`	has Roles, Addresses, TaxRegistrations, Contacts
Customer	party	passage_party	`id`, `party_id`, `customer_account`	belongs to CustomerGroup, PostingProfile; credit limit
Vendor	party	passage_party	`id`, `party_id`, `vendor_account`	belongs to VendorGroup, PostingProfile, payment terms
Product / ProductMaster	product	passage_product	`id`, `product_number`, `gtin`	Master has Variants by dimension values; DimensionGroups
ReleasedProduct	product	passage_product	`product_id`, `legal_entity_id`	ItemModelGroup, defaults per Site/Warehouse
BOM / BOMLine	product	passage_product	`id`, `bom_number`, `version`	lines reference Product ids; effective dates; phantom, scrap
Routing / Operation	product	passage_product	`id`, `routing_number`, `version`	Operations require Resource capabilities
Account / AccountStructure	ledger	passage_ledger	`main_account`, `structure_id`	Dimensions allowed per structure
JournalEntry / JournalLine	ledger	passage_ledger	`id`, `document_number`, `idempotency_key`	lines carry 3 currency amounts, dimension set, `source_document_id`; `reverses_id`
Balance	ledger	passage_ledger	(`ledger_id`, `account`, `dimension_hash`, `period`)	projection rebuilt from JournalLine
Ledger / RateType / ExchangeRate	ledger	passage_ledger	`ledger_code`, `rate_type`, `from/to`, `valid_from`	LegalEntity has leading + parallel Ledgers
TaxCode / TaxTransaction	ledger	passage_ledger	`tax_code`, `jurisdiction_id`	TaxTransaction references source line id and JournalLine

Entity	Context	Database	Key identifiers	Main relationships
InventoryTransaction	inventory	passage_inventory	`id`, `lot_id`, `reference_type/id`	dimensions (site, warehouse, location, batch, serial, LP); status pair
OnHand	inventory	passage_inventory	(`product_id`, dimension hash)	projection = Σ InventoryTransaction
CostLayer / CostingVersion	inventory	passage_inventory	`id`, `receipt_transaction_id`, `version_code`	settlements link issue to receipt layers
QualityOrder	inventory	passage_inventory	`id`, `qo_number`	triggered by receipt/production/shipment reference; blocks OnHand
PurchaseRequisition / RFQ / PurchaseAgreement	procurement	passage_procurement	`document_number`	Requisition lines → PO lines; Agreement releases
PurchaseOrder / Line	procurement	passage_procurement	`document_number`, `version`	`vendor_id`, `product_id`, `site/warehouse_id`; delivery schedules
ProductReceipt	procurement	passage_procurement	`document_number`	references PO lines, creates InventoryTransaction ids and JournalEntry id
VendorInvoice / MatchResult	procurement	passage_procurement	`document_number`, `vendor_invoice_number`	matches PO + Receipt lines; posts JournalEntry; creates APOpenItem
APOpenItem / Payment	procurement	passage_procurement	`id`, `payment_number`	Settlement links Payment to OpenItems; payment file id
ProductionOrder	manufacturing	passage_manufacturing	`document_number`, `status`	BOM/Routing snapshot; PickingList, RouteCard, JournalEntry ids for WIP
PlannedOrder / PlanningRun	manufacturing	passage_manufacturing	`id`, `run_id`	pegged to demand ids (SalesOrderLine, ProductionOrder, Forecast)
TimeRegistration / MachineEvent	manufacturing	passage_manufacturing	`id`, `worker_id`, `resource_id`	pay types exported to PayrollRun; OEE aggregates
PriceCondition	sales	passage_sales	`id`, `condition_type`, access key	resolved by access sequence; effective dates
SalesOrder / Line	sales	passage_sales	`document_number`, `status`	`customer_id`, `product_id`; Holds; ATP results; linked ProductionOrder/PlannedOrder ids
Shipment / PackingSlip	sales	passage_sales	`document_number`, `sscc`	references SalesOrder lines, Load id, InventoryTransaction ids, COGS JournalEntry id
CustomerInvoice / RevenueSchedule	sales	passage_sales	`document_number`	invoice lines → PerformanceObligations → schedule lines → JournalEntry ids
AROpenItem / CashApplication	sales	passage_sales	`id`, `receipt_number`	settlement to invoices; BankStatement line id
CollectionCase / ReturnOrder	sales	passage_sales	`case_number`, `rma_number`	customer, disputed invoice ids; RMA disposition → InventoryTransaction
Location / LicensePlate	warehouse	passage_warehouse	`location_code`, `lp_number`	Zone ⊃ Aisle ⊃ Rack ⊃ Bin; LP nests LPs
Work / PickWave	warehouse	passage_warehouse	`work_id`, `wave_id`	work lines reference order lines; directives; assigned user
BankAccount / BankStatement	treasury	passage_treasury	`id`, `iban/account_number` (P3)	statement lines reconcile to JournalLines, Payments, CashApplications
FixedAsset / AssetBook / AssetTransaction	treasury	passage_treasury	`asset_number`, `book_code`	acquisition from VendorInvoice/Project ids; depreciation JournalEntry ids
Worker / Position / Job	workforce	passage_workforce	`personnel_number`, `position_id`	effective-dated Employment; Position reports to Position; `party_id`
PayrollRun / ExpenseReport	workforce	passage_workforce	`run_id`, `report_number`	pay statements; JournalEntry ids; reimbursement → VendorInvoice id
Project / WBS / ProjectTransaction	projects	passage_projects	`project_number`, `wbs_code`	transactions reference TimeRegistration, ExpenseReport, PO, inventory ids; JournalEntry ids
MaintenanceAsset / MaintenanceWorkOrder	projects	passage_projects	`asset_number`, `work_order_number`	FunctionalLocation tree; parts → InventoryTransaction; labor → TimeRegistration
ServiceAgreement / Case / ServiceWorkOrder	projects	passage_projects	`agreement_number`, `case_number`	InstalledBase serials from Shipment; billing → CustomerInvoice id

C. Event catalog conventions

C.1 Envelope

Every event is a CloudEvents 1.0 message in structured JSON mode on Kafka with the following attributes. Payload schemas are JSON Schema 2020-12 registered in the schema registry and described in AsyncAPI 3.0 documents generated from entity metadata.

Attribute	Rule
`specversion`	`1.0`
`id`	UUIDv7; equals the outbox row id, so redelivery carries the same id
`source`	`/passage/<context>/<service>` e.g. `/passage/ledger/posting`
`type`	`dev.passage.<context>.<entity>.<verb>.v<n>` — lowercase, no hyphens; verb is past tense (`posted`, `confirmed`, `changed`)
`subject`	the aggregate id (UUIDv7)
`time`	commit time of the producing transaction, RFC 3339 UTC
`datacontenttype`	`application/json`
`dataschema`	registry URL `https://schemas.passage.dev/<type>.json`
`tenantid` (ext)	tenant UUID; always present
`legalentityid` (ext)	legal entity UUID when company-scoped
`correlationid` (ext)	id of the originating request or workflow; propagated unchanged
`causationid` (ext)	id of the event or command that directly caused this event
`traceparent` (ext)	W3C trace context from the producing span
`actor` (ext)	`user:<sub>`, `agent:<agent-id>@user:<sub>`, or `system:<job>`
`sequence` (ext)	monotonically increasing per aggregate (`version` after the change)

C.2 Topics and partitions

- Topic: `passage.<context>.<entity>` (one topic per entity, all verbs and versions share it); 12 partitions default, 48 for `ledger.journalentry`, `inventory.transaction`, `manufacturing.machineevent`.
- Partition key: `tenantid + ":" + subject` so events for one aggregate are ordered; `machineevent` uses `tenantid:resource_id`.
- Retention: 30 days for transactional topics, 7 days for `machineevent`, compacted `passage.<context>.<entity>.snapshot` topics for reference-data read models.
- Dead letter: `passage.<context>.<entity>.dlq.<consumer>` with the original event, error and attempt count in headers.
- Access: ACLs per consumer service principal (SCRAM-SHA-512); cross-tenant consumers (analytics) run under a dedicated principal and are the only ones allowed to read all tenants.

C.3 Schema evolution

1. Changes within a version are additive only: new optional fields, new enum values flagged `x-passage-added-in`. Removing, renaming or retyping a field, or making an optional field required, requires a new `v<n+1>` type.
2. Schema registry compatibility mode is `BACKWARD_TRANSITIVE`; CI rejects a non-additive change (wave 4 proof).
3. When `v<n+1>` ships, the producer emits both `v<n>` and `v<n+1>` for a deprecation window of two minor releases of the producing service, then drops `v<n>`. Consumers must migrate inside the window; a consumer still subscribed to a dropped type fails its startup health check.
4. Enum consumers must treat unknown values as `other` and log at warn, never fail.

C.4 Outbox table DDL

Every service database contains exactly this table; Debezium's outbox event router relays rows to Kafka and deletes them after acknowledgment.

```
CREATE TABLE outbox (
  id             uuid        PRIMARY KEY,                    -- UUIDv7, becomes CloudEvents id
  tenant_id      uuid        NOT NULL,
  aggregate_type text        NOT NULL,                       -- e.g. 'journalentry'
  aggregate_id   uuid        NOT NULL,                       -- CloudEvents subject
  event_type     text        NOT NULL,                       -- full CloudEvents type
  partition_key  text        NOT NULL,                       -- tenant_id:aggregate_id
  sequence       bigint      NOT NULL,
  headers        jsonb       NOT NULL DEFAULT '{}'::jsonb,   -- correlationid, causationid, traceparent, actor
  payload        jsonb       NOT NULL,
  created_at     timestamptz NOT NULL DEFAULT clock_timestamp()
);
CREATE INDEX outbox_created_at_idx ON outbox (created_at);
ALTER TABLE outbox REPLICA IDENTITY FULL;
```

Rules: the outbox insert happens in the same transaction as the state change; the payload is the event `data` only (envelope attributes come from columns); payload size limit 256 KiB (larger content is stored and referenced by URL); the `outbox` table is excluded from RLS because only the service role writes it.

C.5 Consumer idempotency

Every consumer keeps an inbox table and processes each event inside one database transaction:

```
CREATE TABLE consumer_inbox (
  consumer   text        NOT NULL,
  event_id   uuid        NOT NULL,
  processed_at timestamptz NOT NULL DEFAULT now(),
  PRIMARY KEY (consumer, event_id)
);
```

1. `INSERT INTO consumer_inbox ... ON CONFLICT DO NOTHING`; if zero rows were inserted, skip the event (duplicate delivery).
2. Apply the effect and write any outgoing outbox rows in the same transaction; commit; then acknowledge the Kafka offset.
3. Out-of-order protection: consumers compare `sequence` with the stored aggregate version and park events that arrive early for up to 60 s before sending to the DLQ.
4. Inbox rows are pruned after 30 days (the topic retention) by the batch framework.
5. Retries: 5 attempts with exponential backoff (1 s → 60 s), then DLQ; DLQ depth per consumer is an alert at 100 and a page at 1,000.

C.6 Replay procedure

1. Open a change ticket naming consumer, topic, time window and reason; replay of a fiscal consumer (ledger, AP, AR) requires controller approval via the platform workflow.
2. Pause the consumer group (`passage-ctl consumer pause <group>`), snapshot its inbox table.
3. Reset the offset to the timestamp (`kafka-consumer-groups --reset-offsets --to-datetime`) or to a DLQ range; for a rebuild, truncate the read model and reset to earliest on the compacted snapshot topic.
4. Resume; the inbox guarantees already-processed events are skipped, so replay is safe by construction. A replay that must reprocess (bug fix) deletes inbox rows for the window first, inside the ticket.
5. Verify with the reconciliation checks in Appendix I.6 and close the ticket with the before/after totals.

C.7 Principal event types

Event type	Producer	Wave	Key consumers
`dev.passage.platform.entitydefinition.changed.v1`	platform/metadata	3	generators, shell, analytics
`dev.passage.platform.user.provisioned.v1`	platform/identity	2	workforce, audit
`dev.passage.platform.workflowtask.completed.v1`	platform/workflow	4	originating context, notifications
`dev.passage.platform.legalentity.created.v1`	platform/org	6	ledger, party, product, number sequences
`dev.passage.platform.periodcontrol.changed.v1`	platform/org	14	all posting services (cache invalidation)
`dev.passage.party.party.created.v1`	party	7	sales, procurement, workforce read models

Event type	Producer	Wave	Key consumers
`dev.passage.party.party.merged.v1`	party	7	every context holding `party_id` (rewrite references)
`dev.passage.party.customer.creditchanged.v1`	party	7	sales (credit checks)
`dev.passage.product.product.released.v1`	product	8	inventory, sales, procurement, manufacturing
`dev.passage.product.bom.versionactivated.v1`	product	9	manufacturing, inventory (cost roll)
`dev.passage.product.changeorder.released.v1`	product	9	manufacturing, warehouse, projects
`dev.passage.ledger.journalentry.posted.v1`	ledger	11	balances, analytics, audit, budgets
`dev.passage.ledger.journalentry.reversed.v1`	ledger	11	subledgers, analytics
`dev.passage.ledger.exchangerate.published.v1`	ledger	12	sales, procurement, treasury
`dev.passage.ledger.period.closed.v1`	ledger	14	all posting services, analytics
`dev.passage.ledger.taxsettlement.posted.v1`	ledger	13	statutory reporting, analytics
`dev.passage.inventory.transaction.posted.v1`	inventory	16	on-hand, sales (ATP), planning, analytics
`dev.passage.inventory.reservation.changed.v1`	inventory	16	sales, warehouse, manufacturing
`dev.passage.inventory.costclose.completed.v1`	inventory	20	ledger reconciliation, analytics
`dev.passage.inventory.qualityorder.decided.v1`	inventory	33	warehouse, procurement (scorecards), sales
`dev.passage.procurement.purchaseorder.confirmed.v1`	procurement	17	planning, budgets (encumbrance), integration (EDI 850)
`dev.passage.procurement.productreceipt.posted.v1`	procurement	18	inventory, ledger (GR/IR), quality, warehouse
`dev.passage.procurement.vendorinvoice.posted.v1`	procurement	18	ledger, treasury (forecast), budgets, analytics
`dev.passage.procurement.payment.posted.v1`	procurement	19	ledger, treasury, integration (payment file)
`dev.passage.manufacturing.productionorder.released.v1`	manufacturing	21	inventory (reservations), warehouse, shop floor
`dev.passage.manufacturing.productionorder.reportedasfinished.v1`	manufacturing	21	inventory, quality, sales (ATP)
`dev.passage.manufacturing.productionorder.ended.v1`	manufacturing	21	ledger (variances), inventory (cost), analytics
`dev.passage.manufacturing.plannedorder.firmed.v1`	manufacturing	22	procurement (PO creation), manufacturing orders
`dev.passage.manufacturing.schedule.changed.v1`	manufacturing	23	production orders, planning, shop floor
`dev.passage.manufacturing.machineevent.received.v1`	manufacturing/iot	25	OEE, projects (condition monitoring)
`dev.passage.sales.salesorder.confirmed.v1`	sales	27	inventory (reservation), planning, warehouse, integration (EDI 855)
`dev.passage.sales.shipment.posted.v1`	sales	28	inventory, ledger (COGS), billing, integration (ASN 856)
`dev.passage.sales.invoice.posted.v1`	sales	29	ledger, AR, revenue schedules, integration (810/Peppol), analytics
`dev.passage.sales.payment.applied.v1`	sales	30	ledger, collections, treasury
`dev.passage.sales.returnorder.received.v1`	sales	30	inventory, quality, billing (credit note)
`dev.passage.warehouse.work.completed.v1`	warehouse	31	inventory (status change), sales, procurement
`dev.passage.warehouse.load.shipped.v1`	warehouse	34	sales (shipment posting), integration (EDI 214), treasury (freight accrual)
`dev.passage.treasury.bankstatement.reconciled.v1`	treasury	36	ledger, AR, AP
`dev.passage.treasury.asset.depreciated.v1`	treasury	37	ledger, analytics
`dev.passage.workforce.payrollrun.posted.v1`	workforce	43	ledger, treasury (payments), projects
`dev.passage.projects.transaction.posted.v1`	projects	41	ledger (WIP), billing, analytics
`dev.passage.agents.action.executed.v1`	agents	47	audit, cost guard, analytics

D. API conventions

D.1 Resources and naming

- Base path `https://api.<env>.passage.dev/v1/<context>/<collection>`; collections are plural kebab-case (`/v1/ledger/journal-entries`, `/v1/sales/sales-orders`, `/v1/product/released-products`). Ids in paths are UUIDv7; document numbers are reachable through `?filter=documentNumber eq 'INV-USMF-2026-000123'`.
- Sub-resources only for composition (`/sales-orders/{id}/lines`). Lifecycle actions are custom methods with a colon: `POST /v1/ledger/journal-entries/{id}:post`, `:reverse`, `:confirm`, `:release`, `:cancel`. Actions are the only way to change status; `PATCH` on a `status` field returns 422 `state_transition_invalid`.
- JSON field names are camelCase in the wire format and snake_case in Postgres; the generator maintains the mapping. Money is `{ "amount": "1234.56", "currency": "USD" }` with a decimal string; dates are ISO 8601 (`2026-10-21`, `2026-10-21T14:03:00Z`); quantities are decimal strings with `unit`.
- Every entity declared in metadata gets `GET` list, `GET` by id, `POST`, `PUT`, `PATCH` (JSON Merge Patch), `DELETE` (soft, unless metadata says hard), plus `:batch` and `:export`, generated. Hand-written endpoints are limited to engines (post, price, plan, schedule, match, settle).

D.2 Versioning

`/v1` is the only version in v1.0. Within a major version changes are additive only (new optional fields, new endpoints, new enum values). Breaking changes ship as `/v2` for the affected context with both versions served for at least 12 months; the `Sunset` and `Deprecation` headers (RFC 8594) announce retirement. The `X-Passage-Api-Build` response header carries the service build for support.

D.3 Pagination, filtering, sorting, shape

- Cursor pagination: `?limit=50&cursor=<opaque>`; `limit` max 500. Response: `{ "items": [...], "nextCursor": "...", "estimatedTotal": 1234 }`. Cursors encode the sort key and are valid for 24 h; a cursor from a different filter returns 400 `invalid_cursor`.
- Filter grammar (subset of OData): `field op value` with `eq ne gt ge lt le in like isnull`, combined with `and or not` and parentheses; nested fields by dot (`customer.group eq 'WHOLESALE'`); dimension filters via `dimensions.costCenter eq 'CC-100'`. Max 20 predicates; filters on non-indexed fields over 100k rows are rejected with 422 `filter_not_indexed`.
- `?sort=-postedAt,documentNumber`; `?fields=id,documentNumber,total` for projection; `?expand=lines,customer` for one level of embedded reads (never across contexts; cross-context fields come from the local read model and are marked `x-passage-snapshot` in OpenAPI).
- `?asOf=2026-01-01` on effective-dated entities (hierarchies, BOMs, positions, prices).

D.4 Error envelope

Errors are RFC 9457 problem details (`Content-Type: application/problem+json`):

```
{
  "type": "https://passage.dev/problems/period_closed",
  "title": "Period is closed",
  "status": 422,
  "detail": "Ledger USMF-IFRS period 2026-09 is closed for module AP since 2026-10-05T18:00:00Z.",
  "instance": "/v1/procurement/vendor-invoices/0192f3a1-...:post",
  "code": "period_closed",
  "traceId": "4bf92f3577b34da6a3ce929d0e0e4736",
  "errors": [ { "field": "postingDate", "code": "period_closed", "message": "..." } ]
}
```

Code	HTTP	Meaning
`validation_failed`	400	Payload fails JSON Schema; `errors[]` lists fields
`required_field_missing`	400	A metadata-required field is absent
`invalid_enum_value`	400	Value not in the enum (including extensions)
`invalid_cursor`	400	Cursor expired or from another query
`filter_not_indexed`	422	Filter would scan an unindexed column on a large table
`unauthenticated`	401	Missing or invalid token
`forbidden_duty`	403	OPA denied: principal lacks the duty/privilege
`forbidden_tenant`	403	Resource belongs to another tenant or legal entity outside scope
`sod_conflict`	403	Action would violate a segregation-of-duties rule
`approval_required`	403	Action requires an approval workflow; a task was created
`not_found`	404	No such resource in the caller's scope
`conflict_version`	412	`If-Match` does not equal the current ETag
`precondition_required`	428	Mutating request without `If-Match`
`idempotency_key_reuse`	422	Same `Idempotency-Key` with a different payload
`idempotency_in_progress`	409	Original request with this key is still executing
`unique_violation`	409	Unique constraint (e.g. vendor invoice number per vendor)
`state_transition_invalid`	422	Action not allowed from the current status
`period_closed`	422	Posting date in a closed/on-hold period for this module
`unbalanced_entry`	422	Debits ≠ credits in any currency
`dimension_invalid`	422	Dimension combination violates the account structure
`inventory_insufficient`	422	On-hand would go negative and the item model group forbids it
`credit_hold`	422	Customer on hold or limit exceeded; hold created
`number_sequence_exhausted`	422	Sequence reached its upper bound or is stopped
`rate_limited`	429	Tenant tier quota exceeded; `Retry-After` set
`payload_too_large`	413	Body over 10 MiB (bulk) or 1 MiB (single)
`upstream_unavailable`	503	Tax/rate/carrier/bank provider failed and no fallback applied
`internal_error`	500	Unexpected; `traceId` for support

D.5 Idempotency

`Idempotency-Key` (UUID or ≤ 128-char string) is required on every `POST` that creates or posts a document and on every custom method; it is optional on `PUT/PATCH` (which rely on ETags). The key is scoped to tenant + principal + method + path. The server stores the request body hash and the final response for 24 h: a repeat with the same hash returns the stored response with `Idempotent-Replayed: true`; a repeat with a different hash returns 422 `idempotency_key_reuse`; a repeat while the first is in flight returns 409 `idempotency_in_progress`. Posting engines additionally persist the key on the document (`idempotency_key` column, unique per tenant) so the guarantee survives the 24 h cache.

D.6 Concurrency

Every readable resource returns a strong `ETag` derived from `version` (e.g. `"v17"`). `PUT`, `PATCH`, `DELETE` and custom methods require `If-Match`; a missing header is 428, a mismatch is 412 `conflict_version` with the current representation in `detail`. List responses include per-item `etag`.

D.7 Rate limits

Tier	Sustained (requests/min per tenant)	Burst	Bulk rows/day	Webhook deliveries/min	Concurrent exports
Starter	600	100	200k	60	2
Professional	3,000	500	2M	300	5
Enterprise	12,000 (negotiable)	2,000	20M	1,200	20

Enforced at Envoy Gateway per tenant and per API key; headers `RateLimit-Limit`, `RateLimit-Remaining`, `RateLimit-Reset` (IETF draft) on every response. Agents share the tenant budget and have a separate per-agent cap (Appendix E). Shop-floor and mobile apps use a dedicated limit class (`device`) of 120 requests/min per device.

D.8 Bulk endpoints

`POST /v1/<context>/<collection>:batch` accepts up to 1,000 items with `"atomic": true|false`; atomic batches roll back on the first error, non-atomic batches return per-item results with the same problem-details shape. Larger loads use NDJSON upload to `POST /v1/platform/jobs` (type `import`), which runs in the batch framework

with checkpoints and returns a job id, progress and an error file. `:export` streams NDJSON or CSV with the same filter grammar. Postings via bulk are still one journal entry per document; the batch framework never bypasses posting rules.

D.9 OpenAPI and SDKs

The metadata generator emits one OpenAPI 3.1 document per context (`openapi/<context>.v1.yaml`) with schemas, examples, error codes and `x-passage-duty` on every operation; hand-written engine endpoints are merged from annotated Go/TS handlers. CI runs Spectral (style) and oasdiff (breaking-change detection) against the last released spec; the developer portal (wave 35) publishes specs and the AsyncAPI documents. SDKs generated per release: TypeScript (first-party, used by the shell), Go, Python in v1.0; C# and Java in v1.x for AX and SAP shops respectively. SDKs expose idempotency keys, ETags and pagination as first-class helpers and never hide problem details.

E. Security and authorization model

E.1 Tenancy

A tenant is one customer organization: one Keycloak realm, one `tenant_id`, one row-level security scope across all 12 databases, one Kafka ACL principal set, one Vault namespace, one cost budget. Legal entities are scopes inside the tenant; users are assigned roles per legal entity (or `*`). Data residency is per tenant (wave 48): a tenant is pinned to a region's cluster set and its Iceberg warehouse. Cross-tenant access does not exist in the application; only the analytics and platform-operations principals can read across tenants and only through audited service accounts.

The request path sets the scope: Envoy validates the JWT, the service opens a Postgres connection from a pool bound to the non-superuser application role and executes `SET LOCAL passage.tenant_id = '<uuid>'; SET LOCAL passage.legal_entity_ids = '<uuid>,<uuid>'; SET LOCAL passage.actor = '<sub>'` inside the transaction. The application role has no `BYPASSRLS`.

E.2 RLS policy template

Generated for every tenant-scoped table; the generator adds the `legal_entity_scope` policy only when the entity declares `legal_entity_id`.

```
ALTER TABLE ledger.journal_entry ENABLE ROW LEVEL SECURITY;
ALTER TABLE ledger.journal_entry FORCE ROW LEVEL SECURITY;

CREATE POLICY tenant_isolation ON ledger.journal_entry
  AS RESTRICTIVE FOR ALL TO passage_app
  USING      (tenant_id = current_setting('passage.tenant_id', true)::uuid)
  WITH CHECK (tenant_id = current_setting('passage.tenant_id', true)::uuid);

CREATE POLICY legal_entity_scope ON ledger.journal_entry
  AS RESTRICTIVE FOR ALL TO passage_app
  USING (
    current_setting('passage.legal_entity_ids', true) = '*'
    OR legal_entity_id = ANY (string_to_array(current_setting('passage.legal_entity_ids', true), ',')::uuid[])
  )
  WITH CHECK (
    legal_entity_id = ANY (string_to_array(current_setting('passage.legal_entity_ids', true), ',')::uuid[])
  );

-- Batch and CDC roles: separate role with the same policies; Debezium reads the WAL and is outside RLS by design,
-- so the outbox payload carries tenant_id and the relay sets the CloudEvents tenantid from it.
```

A missing `passage.tenant_id` makes `current_setting(..., true)` return NULL and the policy returns no rows: the fail-safe is empty, never cross-tenant.

E.3 Role / duty / privilege schema

```
CREATE TABLE platform.privilege (
  code text PRIMARY KEY,                  -- 'vendor.write', 'journalentry.post', 'payment.approve'
  resource text NOT NULL,                 -- entity or endpoint family
  action text NOT NULL,                   -- read | write | post | approve | delete | export | admin
  description text NOT NULL
);
CREATE TABLE platform.duty (
  code text PRIMARY KEY,                  -- 'MaintainVendors', 'PostVendorInvoices', 'ApprovePayments'
  tenant_id uuid,                         -- NULL = shipped by Passage, else customer-defined
  description text NOT NULL
);
CREATE TABLE platform.duty_privilege (duty_code text REFERENCES platform.duty, privilege_code text REFERENCES platform.privilege, PRIMARY KEY
(duty_code, privilege_code));
CREATE TABLE platform.role (code text PRIMARY KEY, tenant_id uuid, description text NOT NULL);
CREATE TABLE platform.role_duty (role_code text REFERENCES platform.role, duty_code text REFERENCES platform.duty, PRIMARY KEY (role_code,
duty_code));
CREATE TABLE platform.user_role (
  user_id uuid NOT NULL, role_code text NOT NULL, tenant_id uuid NOT NULL,
  legal_entity_id uuid,                   -- NULL = all legal entities in the tenant
  valid_from date NOT NULL DEFAULT current_date, valid_to date,
  granted_by uuid NOT NULL, PRIMARY KEY (user_id, role_code, legal_entity_id, valid_from)
);
CREATE TABLE platform.sod_rule (
  code text PRIMARY KEY, duty_a text NOT NULL, duty_b text NOT NULL,
  severity text NOT NULL CHECK (severity IN ('high','medium','low')), description text NOT NULL
);
```

Passage ships ~60 roles, ~400 duties and ~2,500 privileges, named after AX (e.g. role `AccountsPayableClerk`, duty `MaintainVendorInvoices`). Customers add duties and roles; they cannot add privileges, which are generated from metadata (`<entity>.<action>`) and engine endpoints.

E.4 OPA policy structure

The compiled policy bundle contains `data.passage.grants[tenant][user] = {duty: [legal_entity_ids]}` and `data.passage.duty_privileges[duty] = [privileges]`, rebuilt by the platform service on every role change (push to the OPA sidecars via bundle server, ≤ 10 s propagation). The input is `{ "principal": {sub, tenant, agent?, on_behalf_of?}, "action": "<privilege>", "resource": {context, entity, id?, legal_entity_id?, amount?, owner?} }`. Every service calls `POST /v1/data/passage/authz/allow` on its sidecar; the gateway performs a coarse check (token, tenant, route duty) and the service performs the fine-grained one (record scope).

Example 1 — duty-based allow with legal-entity scope:

```
package passage.authz

default allow := false

allow if {
  some duty
  priv_set := data.passage.duty_privileges[duty]
  priv_set[_] == input.action
  scopes := data.passage.grants[input.principal.tenant][input.principal.sub][duty]
  scope_ok(scopes, input.resource.legal_entity_id)
}

scope_ok(scopes, le) if scopes[_] == "*"
scope_ok(scopes, le) if scopes[_] == le
```

Example 2 — agents never exceed the user they act for, and are additionally limited by their own allow-list:

```
allow if {
  input.principal.agent != null
  user_input := object.union(input, {"principal": {"sub": input.principal.on_behalf_of, "tenant": input.principal.tenant}})
  data.passage.authz.allow with input as user_input
  data.passage.agents[input.principal.agent].allowed_actions[_] == input.action
  not data.passage.agents[input.principal.agent].kill_switch
}
```

Example 3 — amount-banded approval (payment release above a threshold needs `ApprovePaymentsHighValue`, and the approver may not be the preparer):

```
deny contains msg if {
  input.action == "payment.approve"
  input.resource.amount_usd > 50000
  not has_duty("ApprovePaymentsHighValue")
  msg := "payments over USD 50,000 require ApprovePaymentsHighValue"
}

deny contains msg if {
  input.action == "payment.approve"
  input.resource.prepared_by == input.principal.sub
  msg := "sod: preparer cannot approve own payment"
}

has_duty(d) if data.passage.grants[input.principal.tenant][input.principal.sub][d]
```

E.5 Segregation-of-duties enforcement points

Point	Behavior
Role design (wave 48 SoD engine)	Creating or editing a role whose duties conflict is blocked (high) or warned (medium/low)
User assignment	Assigning a role that creates a conflict with the user's existing roles opens a mitigation workflow; the assignment is inactive until a mitigating control (compensating review, time-boxed access) is approved
Runtime (OPA `deny`)	Same-person checks on document pairs: prepare/approve journals, create vendor/approve vendor invoice, create PO/post receipt over threshold, enter payment/release payment, maintain bank account/run payments
Agents	An agent's action set is checked against SoD rules at registration; an agent cannot hold both sides of any high-severity rule
Certification	Quarterly access-certification campaigns; uncertified roles expire after 30 days
Evidence	Every conflict, mitigation and certification decision is an audit entry exported to the SOC 2 evidence store

E.6 PII classification and handling

Level	Examples	Storage	Logging / tracing	Display	Export / analytics	Retention
P0 Public	Product catalog, public prices, legal entity name	Plain	Allowed	Full	Allowed	Business need
P1 Internal	Order numbers, amounts, dimension values, internal notes	Plain, RLS	Allowed (ids only, no free text)	Full with duty	Tenant-scoped	Business need
P2 Personal	Person names, business emails, phone, postal address, personnel number	Plain, RLS, `pii: true` in metadata	Never in logs; hashed in traces	Full with duty; masked in list exports by default	Lakehouse with column tags; erasure propagates by `party_id`	Per GDPR/CCPA policy; erasure request honored within 30 days except fiscal documents (pseudonymized)
P3 Sensitive	National IDs, tax IDs of persons, bank account/IBAN, card tokens, salary, health/absence reasons, biometrics, dates of birth	Column-level encryption (pgcrypto, key per tenant in Vault transit), separate `*_secure` tables, no full-text index	Never; access itself is audited	Masked (`****1234`) unless a `ViewSensitive*` duty is held; reveal is an audited action	Excluded from lakehouse except aggregated; excluded from exports except statutory formats	Minimum legal; vaulted in `workforce` with per-field retention

Metadata flags (`pii: P2|P3`) drive generation: masking in generated APIs and forms, exclusion from the Debezium CDC allow-list for P3, and the subject-request tooling (wave 48) that enumerates every P2/P3 field per `party_id`.

E.7 Secrets management

HashiCorp Vault is the only secret store: Kubernetes auth per service account, one namespace per tenant for customer-specific credentials (bank, tax provider, carrier). External Secrets Operator materializes only the minimum into Kubernetes secrets with 1 h TTL. Database credentials are dynamic (Vault database engine, 24 h leases). Bank signing keys and EBICS keys live in Vault transit and never leave it; files are signed by calling transit. Rotation: 90 days for static secrets, automatic on lease expiry for dynamic ones, immediate on offboarding. Git is scanned by gitleaks in CI; a leak fails the build. Keycloak client secrets rotate per release.

E.8 Audit and retention

Audit is derived from Debezium CDC into an append-only `platform.audit_entry` table with a per-tenant SHA-256 hash chain (`hash = sha256(prev_hash || canonical_json(entry))`) verified nightly; the chain head is written to the lakehouse and to object storage with object lock. Retention: audit entries for fiscal documents (journal entries, invoices, payments, receipts, packing slips, production orders, asset transactions, payroll) 7 years from fiscal-year end, extended by country pack (DE and FR 10 years, IN 8 years); other entities 3 years; agent actions 7 years. Audit entries cannot be deleted; GDPR erasure replaces P2/P3 values with pseudonyms and records the erasure itself.

E.9 Encryption

In transit: TLS 1.3 at the gateway (cert-manager, ACME or customer CA), mTLS between services and to Postgres and Kafka with cert-manager-issued certificates rotated every 30 days; Kafka SCRAM-SHA-512 plus TLS; Debezium and Temporal over mTLS. At rest: encrypted storage class on every persistent volume (provider KMS or LUKS on bare metal), CloudNativePG backups and WAL archives encrypted with a per-tenant key via Vault transit (envelope), Kafka tiered storage and Iceberg objects encrypted server-side; P3 columns encrypted additionally at the application level. Key rotation re-wraps envelopes without rewriting data; a tenant's crypto-shred (key deletion) is the final step of tenant offboarding.

F. Non-functional requirements detail

ID	Area	Metric	Target	Measurement	First enforced
NFR-A1	Availability	Monthly availability per tenant (API + shell)	≥ 99.9% (v1), ≥ 99.95% with multi-region	Synthetic probes every 30 s from two regions; SLO in Grafana	Wave 5 (measured), wave 50 (99.95%)
NFR-A2	Availability	RPO	≤ 5 min	Backup/restore drill; WAL archive lag metric	Wave 48
NFR-A3	Availability	RTO	≤ 1 h	DR game day, timed	Wave 48, region failover wave 50
NFR-A4	Availability	Zero-downtime deploys and migrations	0 failed requests during rollout	Argo rollout with k6 traffic; expand/contract migrations only	Wave 3
NFR-A5	Availability	Rollback time	≤ 15 min to prior digest	Timed in Argo CD history	Wave 1
NFR-P1	Performance	Journal posting throughput	≥ 5,000 lines/s sustained, p99 < 200 ms	k6 against ledger on 3-node stage	Wave 11
NFR-P2	Performance	Generated entity simple read	p95 < 50 ms at 1,000 rps	k6	Wave 3
NFR-P3	Performance	Price resolution (10-line order)	p95 < 20 ms	Go benchmark + k6	Wave 26
NFR-P4	Performance	Order intake API	500 orders/min, p99 < 500 ms	k6	Wave 27
NFR-P5	Performance	MRP run	50k items × 12 periods × 5 levels < 10 min	Scheduled benchmark in CI nightly	Wave 22
NFR-P6	Performance	Scheduling	5k operations < 60 s	Benchmark fixtures	Wave 23
NFR-P7	Performance	BOM explosion (7 levels, 2,000 components)	< 500 ms	Go benchmark	Wave 9
NFR-P8	Performance	Inventory close (1M transactions)	< 20 min	Batch job timing	Wave 20
NFR-P9	Performance	Cost roll (50k items)	< 15 min	Batch job timing	Wave 39
NFR-P10	Performance	Dashboard freshness (OLTP → lakehouse)	p95 < 60 s	Debezium/Iceberg lag metric	Wave 46
NFR-P11	Performance	Shell first contentful paint (warm)	< 1.5 s on a mid-range laptop	Lighthouse in CI	Wave 5
NFR-P12	Performance	Warehouse task assignment	p95 < 1 s	Simulation	Wave 31
NFR-S1	Scale	Concurrent users	10,000	k6 load campaign	Wave 50
NFR-S2	Scale	Journal lines per hour	1M	Load campaign	Wave 50
NFR-S3	Scale	Order lines per hour	100k	Load campaign	Wave 50
NFR-S4	Scale	IoT ingest	10k events/min per plant, no loss on broker restart	Simulator + chaos	Wave 25
NFR-S5	Scale	Migration load	50k customers, 20k vendors, 100k items, 10k BOMs < 30 min	Migration run ledger	Wave 10
NFR-S6	Scale	Tenants per cluster set	100 with noisy-neighbor limits	Capacity model, rate limits	Wave 50
NFR-SEC1	Security	Authorization on every request	100% of routes carry `x-passage-duty`; 0 unprotected	OpenAPI lint + gateway audit	Wave 2
NFR-SEC2	Security	Tenant isolation	0 cross-tenant rows in RLS test suite	Automated RLS test per table	Wave 2
NFR-SEC3	Security	Supply chain	100% images signed, SBOM attached, 0 critical CVEs at deploy	cosign verify, Grype gate	Wave 1
NFR-SEC4	Security	Penetration test	0 high/critical open at wave 48 exit	External test report	Wave 48
NFR-SEC5	Security	Secrets in source	0	gitleaks	Wave 1
NFR-SEC6	Security	Agent permission ceiling	0 actions exceeding the user's OPA decision	Contract tests	Wave 47
NFR-C1	Compliance	SOC 2 TSC mapping	100% of in-scope controls with automated evidence	Compliance workspace	Wave 48
NFR-C2	Compliance	Subject access/erasure request	Fulfilled ≤ 30 days; export ≤ 24 h	Workflow SLA timer	Wave 48

ID	Area	Metric	Target	Measurement	First enforced
NFR-C3	Compliance	Statutory outputs validate	SAF-T, Peppol, pain.001, X12 pass schema/schematron	CI fixture validation	Waves 13, 19, 35
NFR-C4	Compliance	Fiscal document immutability	0 updates to posted documents (DB trigger)	Trigger + CDC audit test	Wave 11
NFR-ACC1	Accessibility	WCAG 2.1 AA on generated forms	100% pass axe, 0 serious/critical	Playwright + axe in CI	Wave 5
NFR-ACC2	Accessibility	Keyboard operability	100% of workspaces navigable without a mouse	Keyboard test suite	Wave 5
NFR-ACC3	Accessibility	Mobile/kiosk apps	WCAG 2.1 AA, touch targets ≥ 44 px	axe on emulated devices	Waves 25, 32
NFR-O1	Observability	Trace coverage	100% of services emit OTel traces; one trace id per request end-to-end	Tempo query in CI smoke	Wave 5
NFR-O2	Observability	SLO dashboards and alerts	Every service has latency/error/saturation SLOs with burn-rate alerts	Grafana provisioning review	Wave 5
NFR-O3	Observability	Audit latency	Field change visible in audit viewer ≤ 2 s	E2E test	Wave 5
NFR-PT1	Portability	Provider-managed services in the critical path	0	Architecture review per wave	Wave 1
NFR-PT2	Portability	Local parity	`make deploy-local` on k3d < 10 min	Timed in CI	Wave 1
NFR-PT3	Portability	Provider modules	EKS, GKE, AKS, bare-metal Terraform modules with identical interface	Module tests	Wave 1 (k3d + one cloud), wave 50 (all)
NFR-D1	Data integrity	Subledger-to-GL reconciliation	0 unexplained variance, daily	CI reconciliation job (Appendix I.6)	Wave 16
NFR-D2	Data integrity	Balance projection = journal re-aggregation	Exact	Nightly rebuild compare	Wave 11
NFR-D3	Data integrity	Gap-free sequences	0 gaps, 0 duplicates under 10k concurrent requests	Jepsen-style test	Wave 5
NFR-D4	Data integrity	Negative inventory	0 unless item model group allows	Concurrency test	Wave 16
NFR-D5	Data integrity	Exactly-once event effect	0 duplicate effects after chaos kill	Outbox/inbox chaos test	Wave 4
NFR-D6	Data integrity	Migration reconciliation	100% control totals match	Migration run ledger	Waves 10, 49

G. Numbering and document conventions

G.1 Number sequence service

Sequences are defined per tenant with a scope of `tenant`, `legal_entity`, `legal_entity+fiscal_year` or `site`. Format strings use `{LE}` (legal entity code), `{FY}` (fiscal year), `{YY}`/`{YYYY}`, `{SITE}`, and `{######}` (zero-padded counter). Two modes:

- **Continuous (gap-free)**: the number is allocated inside the posting transaction from a per-sequence row locked with `SELECT ... FOR UPDATE`; if the transaction aborts the number is never consumed. Throughput is bounded (≈ 2,000/s per sequence on stage); used only where the law or audit requires it.
- **Non-continuous**: numbers are pre-allocated in blocks of 100 per service instance (cached); gaps are possible on restart. Used for everything that is not a fiscal document.

A sequence can be `stopped` (posting returns `number_sequence_exhausted`), has `lowest/highest` bounds, an optional yearly reset (only with `{FY}` in the format) and an alert at 90% consumption.

G.2 Formats per document type

Document	Sequence code	Format (default)	Example	Mode	Scope / reset
General journal entry (posted)	`GJ`	`{LE}-GJ-{FY}-{#######}`	`USMF-GJ-2026-0001234`	Gap-free	Legal entity × fiscal year
Journal batch (unposted)	`JB`	`JB-{########}`	`JB-00004521`	Non-continuous	Tenant
Customer invoice / credit note	`INV` / `CN`	`{LE}-INV-{FY}-{######}`	`DEMF-INV-2026-000087`	Gap-free	Legal entity × fiscal year (legal requirement in DE, FR, IN, MX)
Vendor invoice (internal number)	`VINV`	`{LE}-VINV-{FY}-{######}`	`USMF-VINV-2026-003310`	Gap-free	Legal entity × fiscal year
Purchase requisition	`REQ`	`REQ-{######}`	`REQ-001204`	Non-continuous	Tenant
RFQ	`RFQ`	`RFQ-{######}`	`RFQ-000051`	Non-continuous	Tenant
Purchase order	`PO`	`{LE}-PO-{######}`	`USMF-PO-000912`	Non-continuous	Legal entity
Product receipt	`PR`	`{LE}-PR-{FY}-{######}`	`USMF-PR-2026-000455`	Gap-free	Legal entity × fiscal year
Quotation	`QUO`	`QUO-{######}`	`QUO-000210`	Non-continuous	Tenant
Sales order	`SO`	`{LE}-SO-{######}`	`USMF-SO-004417`	Non-continuous	Legal entity
Packing slip / delivery note	`PS`	`{LE}-PS-{FY}-{######}`	`USMF-PS-2026-002031`	Gap-free	Legal entity × fiscal year
Return order (RMA)	`RMA`	`RMA-{######}`	`RMA-000078`	Non-continuous	Tenant
Vendor payment	`PAY`	`{LE}-PAY-{FY}-{######}`	`USMF-PAY-2026-000660`	Gap-free	Legal entity × fiscal year
Customer receipt / cash application	`RCPT`	`{LE}-RCPT-{FY}-{######}`	`USMF-RCPT-2026-001102`	Gap-free	Legal entity × fiscal year
Check number	`CHK-<bank>`	`{######}`	`100245`	Gap-free	Bank account (void keeps the number)
Production / batch order	`PRD`	`{SITE}-PRD-{######}`	`S1-PRD-000318`	Non-continuous	Site
Planned order	`PLN`	`PLN-{########}`	`PLN-00019902`	Non-continuous	Tenant (reset per planning run)
Warehouse work	`WRK`	`WRK-{########}`	`WRK-00031177`	Non-continuous	Tenant
Load	`LD`	`LD-{######}`	`LD-000504`	Non-continuous	Tenant
Quality order	`QO`	`QO-{######}`	`QO-000912`	Non-continuous	Tenant
Fixed asset	`FA`	`{LE}-FA-{#####}`	`USMF-FA-00317`	Non-continuous	Legal entity

Document	Sequence code	Format (default)	Example	Mode	Scope / reset
Asset transaction	`FAT`	`{LE}-FAT-{FY}-{######}`	`USMF-FAT-2026-000045`	Gap-free	Legal entity × fiscal year
Maintenance work order	`MWO`	`MWO-{######}`	`MWO-001560`	Non-continuous	Tenant
Service case / service work order	`CASE` / `SWO`	`CASE-{######}`	`CASE-000731`	Non-continuous	Tenant
Project	`PRJ`	`PRJ-{######}`	`PRJ-000142`	Non-continuous	Tenant
Payroll run	`PAYR`	`{LE}-PAYR-{FY}-{###}`	`USMF-PAYR-2026-021`	Gap-free	Legal entity × fiscal year
Expense report	`EXP`	`EXP-{######}`	`EXP-004012`	Non-continuous	Tenant
Bank statement	`BST`	`{bank}-{YYYY}-{####}`	`CHASE01-2026-0210`	Non-continuous	Bank account

Country packs may override formats and modes (Appendix H), for example a per-series gap-free invoice number for MX CFDI (`serie` + `folio`) or the FR requirement that credit notes use a separate chronological sequence.

G.3 Fiscal document immutability

A document is fiscal when it posts to the universal journal or is legally required to be retained (invoices, credit notes, receipts, packing slips, payments, journal entries, asset transactions, payroll statements, production order settlements). Rules:

1. After `posted_at` is set, the header and lines are immutable: a database trigger rejects `UPDATE`/`DELETE` on posted rows except the status columns `settled_amount`, `settlement_status` and `printed_at`, and the metadata generator marks all other fields read-only in the API.
2. Corrections are new documents: reversal (an exact negating journal entry linked by `reverses_id`), credit note, correcting invoice (country packs that require it), or an adjustment journal. The original stays and shows its correction links.
3. The rendered PDF/XML of a fiscal document is stored at posting time in object storage with object lock for the retention period and its SHA-256 is written to the document; re-rendering produces a copy marked `Duplicate`.
4. The posting date determines the fiscal period; the document date may differ. Both are immutable after posting.
5. Document numbers are unique per tenant forever; a sequence reset per fiscal year includes the year in the number.

G.4 Attachments

Attachments are stored in S3-compatible object storage (bucket per tenant, server-side encrypted) and referenced by `platform.attachment` rows (`entity`, `record_id`, `kind`, `content_sha256`, `size`, `retention_class`). Limits: 25 MiB per file, 100 files per record, file types allow-listed (PDF, images, Office, XML, CSV, TXT, ZIP ≤ 25 MiB); antivirus scan (ClamAV) before the attachment becomes visible. Attachments on fiscal documents inherit the document's retention and object lock; attachments on other records follow the entity's retention. Deleting a record soft-deletes attachments; hard purge runs after the retention window. Inbound documents (OCR invoices, EDI, e-invoices) keep the original payload as a `source` attachment.

H. Localization scope

Country packs are metadata and code bundles installed per legal entity (wave 48). Every pack ships tax determination data, statutory report formats for the electronic reporting designer, document layouts, bank formats, calendar/number defaults and a regulator-schema fixture set. The matrix below is the v1.0 scope; items marked v1.x ship after go-live.

Capability	US	UK	DE	FR	IN	MX	CA
Tax model	Sales & use tax by jurisdiction (state/county/city/district), nexus, exemption certificates, use-tax accrual; Avalara/Vertex adapter	VAT 20/5/0%, reverse charge, postponed import VAT, CIS withholding, Northern Ireland protocol	USt 19/7%, §13b reverse charge, intra-EU supplies, withholding for construction (Bauabzugsteuer)	TVA 20/10/5.5/2.1%, autoliquidation, intra-EU, DAS2 withholding hooks	GST (CGST/SGST/IGST/UTGST), HSN/SAC codes, reverse charge, TDS/TCS withholding sections	IVA 16/8/0%, ISR and IVA retentions, IEPS, SAT product/service catalogs	GST/HST 5–15%, provincial PST/QST, input tax credits, non-resident rules
Statutory reports (v1.0)	1099-MISC/NEC/INT, sales tax returns by state (data extract), W-2 structure	MTD VAT return (HMRC API), VAT100 boxes, EC sales list for NI	UStVA (ELSTER XML), ZM (EC sales list), Intrastat, GoBD-compliant export (GDPdU), E-Bilanz v1.x	CA3 VAT return, DEB/Intrastat, FEC (fichier des écritures comptables), liasse fiscale v1.x	GSTR-1, GSTR-3B, e-way bill payload, TDS Form 26Q structure, 26AS reconciliation hook	DIOT, Contabilidad Electrónica (catálogo, balanza, pólizas XML), ISR provisional data	GST/HST return (GST34 boxes), T4/T4A/T5018 structures, QST return
E-invoicing mandate	None; Peppol/DBNAlliance optional	None in v1.0 (B2B mandate consultation); Peppol BIS optional	B2G XRechnung mandatory; B2B receive (2025) and issue (2027) via XRechnung/ZUGFeRD 2.x	B2B mandate via PDP: receive 2026, issue phased 2026–2027; Factur-X profiles	IRP e-invoice (IRN + signed QR) mandatory above turnover threshold; GSP adapter	CFDI 4.0 via PAC mandatory for every invoice, payment complement, carta porte v1.x; cancellation workflow	None; Peppol optional
Bank formats	NACHA ACH (PPD/CCD/CTX), check printing (MICR), positive pay, BAI2 statements, lockbox BAI2, ISO 20022 for wires	BACS Standard 18, Faster Payments via ISO 20022 pain.001, CHAPS, MT940/camt.053 statements	SEPA SCT/SDD (pain.001/pain.008), camt.052/053/054, EBICS 3.0	SEPA SCT/SDD, camt.053, EBICS TS (signed)	NEFT/RTGS/IMPS bank-specific layouts via adapter, ISO 20022 pain.001 for H2H banks, MT940	SPEI bank layouts via adapter, ISO 20022 for multinational banks, BAI2/camt.053	CPA Standard 005 EFT, Lynx wires via ISO 20022, cheque printing, camt.053
Payroll	Full engine: federal/state/local withholding (Pub. 15-T), FICA, FUTA/SUTA, garnishments, W-2/941 structures	PAYE RTI (FPS/EPS), NI, auto-enrolment — engine only if chosen as EU/UK reference (open question 3), else provider adapter	Lohnsteuer, Sozialversicherung (DEÜV), ELStAM — reference EU engine candidate (open question 3), else provider adapter	DSN monthly declaration — v1.x, provider adapter in v1.0	PF, ESI, professional tax, Form 16 — v1.x, provider adapter in v1.0	CFDI nómina, IMSS, ISR tables — v1.x, provider adapter in v1.0	CRA/RQ source deductions, CPP/EI, ROE — v1.x, provider adapter in v1.0
Calendar and formats	Fiscal year any; MM/DD/YYYY display; USD 2 decimals; Letter paper	Tax year 6 April (payroll), company FY any; DD/MM/YYYY; GBP; A4	Calendar FY default; DD.MM.YYYY; EUR with `1.234,56`; A4; DIN 5008 letters	Calendar FY default; DD/MM/YYYY; EUR with `1 234,56`; A4	FY 1 April–31 March; DD/MM/YYYY; INR lakh/crore grouping (`12,34,567.00`)	Calendar FY; DD/MM/YYYY; MXN; Letter	FY any; YYYY-MM-DD; CAD; Letter; bilingual EN/FR documents (Quebec)

Capability	US	UK	DE	FR	IN	MX	CA
Document layouts	Invoice, PO, packing slip, check, 1099	Invoice with VAT breakdown, credit note, remittance	Rechnung with §14 UStG mandatory fields, Gutschrift, Mahnung levels	Facture with mentions obligatoires, avoir, relance	Tax invoice with GSTIN/HSN/IRN QR, debit/credit note, e-way bill	CFDI PDF representation with UUID/QR, complemento de pago	Invoice with GST/HST registration, bilingual variants
Fiscal retention	7 years	6 years	10 years (GoBD)	10 years	8 years	5 years	6 years

Common to every pack: ISO 3166/4217/639 reference data, address formats and postal validation rules, tax-registration validators (EIN, UTR/VAT, USt-IdNr, SIREN/SIRET/TVA, GSTIN/PAN, RFC, BN/GST), number-sequence overrides, holiday calendars, and a regulator-schema fixture that must validate in CI before the pack can be released.

I. Testing standards

I.1 Test pyramid per service type

Service type	Unit	Property	Contract	Integration	E2E	Performance
Go engine (ledger, inventory, pricing, MRP, scheduling, costing, matching, settlement)	`go test`, table-driven, ≥ 85% line coverage on domain packages	`rapid` on invariants (balance, conservation, determinism, state machines)	OpenAPI contract via `oapi-codegen` validators; Pact for consumer contracts between contexts	Testcontainers Postgres + Kafka; outbox/inbox chaos	Through the shell for the wave demo path	Go benchmarks in CI (`benchstat` regression gate ±10%); k6 for throughput targets
TypeScript service (workflow, integration, BFF, admin)	Vitest, ≥ 80% coverage	`fast-check` for mappers, parsers (EDI, GS1, bank files), policy routing	OpenAPI + AsyncAPI schema validation; Pact	Testcontainers + Temporal test server	Playwright	k6
Python service (forecasting, ML, agent evals)	pytest, ≥ 80%	`hypothesis` for numeric routines and parsers	JSON Schema on inputs/outputs	Docker compose fixtures	n/a	Benchmark notebooks exported to CI metrics
React shell and module-federated workspaces	Vitest + Testing Library	`fast-check` for form state reducers	Storybook interaction tests; generated-form snapshot per entity	MSW-backed integration	Playwright + axe across every generated form and workspace	Lighthouse CI
PWA (shop floor, warehouse, field)	Vitest	`fast-check` for the offline queue (commutativity, idempotence)	Same as shell	Device emulation	Playwright on emulated Android and tablet, offline toggling	Scan-to-ack latency budget 300 ms

The ratio target per service is roughly 70% unit/property, 20% contract/integration, 10% E2E/performance by count; every wave's proof items map to at least one row.

I.2 Fixture naming

```
fixtures/<context>/w<NN>-<slug>/<nnn>-<scenario>.<json|csv|ndjson>
fixtures/<context>/w<NN>-<slug>/<nnn>-<scenario>.expected.<json|csv>
fixtures/<context>/w<NN>-<slug>/README.md               -- what the set covers, source, size
fixtures/<context>/w<NN>-<slug>/REVIEW.yaml              -- accountant review record (I.5)
```

Example: `fixtures/ledger/w12-currency-parallel-ledgers/017-revaluation-eur-usd-unrealized.json`. Scenario numbers are stable once published (a retired scenario keeps its number with `retired: true`). Shared master-data seeds live in `fixtures/seed/<demo-company>/` (`USMF` manufacturer, `DEMF` process plant, `GBSI` services entity, `MXDS` distributor) and are loaded by the migration framework, so fixtures and demos use the same data.

I.3 Property-based testing

Libraries are fixed: Go `pgregory.net/rapid`, TypeScript `fast-check`, Python `hypothesis`. Every engine declares its invariants in a `PROPERTIES.md` next to the code, and each invariant has one property test with a minimum of 1,000 generated cases in CI (10,000 nightly). Required invariant families: conservation (Σ debits = Σ credits; Σ inventory transactions = on-hand; Σ allocations = source), determinism (same input → same output across runs and goroutines), idempotence (apply twice = apply once), monotonicity (sequences, versions), state machines (every illegal transition rejected), and round-trips (serialize/parse, UoM conversions, currency rounding). Shrunken counterexamples are committed as regression fixtures with the originating seed.

I.4 Golden files

Golden outputs (generated migrations, OpenAPI specs, rendered documents, statement packs, bank files, EDI messages, Rego bundles) live in `testdata/golden/` next to the test. A golden test fails on any byte difference. Updates happen only through `make update-golden PKG=<path>`, which rewrites files and records the reason in the commit; a PR that touches `testdata/golden/` must carry the label `golden-update` and a reviewer other than the author must approve (enforced by CODEOWNERS). Rendered PDFs are compared as rasterized pages with a 0.1% pixel tolerance; XML and JSON are canonicalized before comparison; timestamps and ids are normalized by the test harness.

I.5 Accountant-reviewed fixtures

Finance waves (11–15, 18–20, 29, 36–41, 43) require fixture sets reviewed by a practicing accountant before the wave can close. Process: (1) the engineer drafts scenarios and expected results in a workbook (`.xlsx`) exported to `.expected.csv`; (2) the reviewer works the scenarios independently and signs `REVIEW.yaml` (`reviewer`, `credential`, `reviewed_on`, `standard` such as ASC 606, IAS 21, IRS Pub. 946, `scope`, `exceptions[]`); (3) CI fails if a finance fixture set lacks a `REVIEW.yaml` dated after its last change; (4) any later change to the set re-opens review. The reviewer owner is tracked in the PRD validation checklist.

I.6 Reconciliation checks in CI

A scheduled job (`reconcile-daily`) runs at 02:00 UTC on stage against the demo companies and on every merge to `main` against the fixture databases; any non-zero variance fails the job and pages the wave owner.

Check	Ties	Tolerance	From wave
Trial balance	Σ debits − Σ credits per ledger per period	0.00	11

Check	Ties	Tolerance	From wave
Balance projection	`Balance` table vs re-aggregated `JournalLine`	0.00	11
Parallel ledgers	Each ledger's trial balance sums to zero	0.00	12
Tax	Σ `TaxTransaction` per tax code vs GL tax accounts	0.00	13
Statements	Balance sheet balances; P&L net = retained earnings movement; cash flow = Δ cash	0.00	15
Inventory quantity	Σ `InventoryTransaction` per dimension vs `OnHand`	0	16
Inventory value	Inventory value report vs GL inventory accounts by item group	0.00	20
GR/IR	Σ receipts – Σ invoices per PO line vs GR/IR account	0.00	18
AP	Σ open vendor items vs AP control accounts by posting profile	0.00	19
WIP	Open production order cost vs GL WIP accounts	0.00	21
AR and deferred revenue	Σ open customer items vs AR control; revenue schedule balance vs deferred revenue	0.00	29–30
Bank	Reconciled statement balance vs GL bank account	0.00	36
Fixed assets	Σ NBV per book vs GL asset and accumulated depreciation	0.00	37
Cost accounting	Primary costs in cost ledger vs GL	0.00	38
Intercompany	Due-to/due-from pairs net to zero per pair	0.00	40
Projects	Project WIP/accrued revenue vs GL	0.00	41
Payroll	Payroll register vs GL payroll accounts	0.00	43
Semantic layer	Revenue/COGS metrics vs GL	0.00	46
Audit chain	Hash chain verifies end-to-end	0 breaks	5

I.7 Performance and E2E harness

k6 scripts live in `perf/<context>/<scenario>.js` with thresholds encoded in the script (`http_req_duration{scenario:post}: p(99)<200`); CI runs smoke profiles on every merge and full profiles nightly on stage, publishing results to Grafana with a trend alert at +10% over 7 days. Playwright suites live in `e2e/<workspace>/` with page objects per generated form type and run against the stage URL after Argo reports healthy; every suite calls `axe` on each page it visits and fails on serious/critical violations. Flaky tests are quarantined by label for at most one wave before deletion or repair.

J. Traceability matrix

Each master-PRD functional requirement maps to its primary wave (FR-p.n → wave 5p + n), the later waves that extend it, the phase-exit criterion that proves it, and the test types that are primary evidence. Phase-exit criteria are the proof items of waves 5, 10, 15, 20, 25, 30, 35, 40, 45 and 50.

FR	Requirement (short)	Primary wave	Extended by	Phase-exit criterion	Primary test types
FR-0.1	GitOps deploy, signed images, SBOM, digest rollback	1	48, 50	Wave 5 platform demo: deploy → login → extend → approve → trace	CI negative tests, timed rollback, cosign/Grype gates
FR-0.2	Federated identity; roles/duties/privileges → OPA; RLS	2	47, 48	Wave 5 demo (login + permission viewer)	Contract (20 duties), RLS per table, federation in CI
FR-0.3	Metadata-declared entities generate schema/API/UI; no-code extensions	3	5, 46	Wave 5 demo (extend entity live)	Golden generation, backward-compat, load 1,000 rps
FR-0.4	CloudEvents via outbox; Temporal workflows and batch	4	47	Wave 5 demo (approval + trace)	Chaos outbox, Temporal timer tests, schema-registry gate
FR-0.5	Shell (WCAG AA), gap-free sequences, immutable audit, tracing	5	46	Wave 5 demo signed off	Playwright + axe, Jepsen-style sequence test, audit E2E
FR-1.1	Enterprise structure, hierarchies, calendars, ISO data, UoM	6	14, 40	Wave 10: demo master data fully migrated	Property (as-of hierarchy), UoM round-trip, calendar fixtures
FR-1.2	Single party model, dedup/merge, tax-id validation, governance	7	30, 42	Wave 10	Dedup precision/recall, merge integrity audit, Temporal approval
FR-1.3	Products, dimension groups, released products, GS1, configurator	8	24, 27	Wave 10	Variant explosion perf, configurator fixtures, GTIN vectors
FR-1.4	BOMs, formulas, routings, resources, ECM	9	21, 24, 39	Wave 10	Explosion golden + perf, effective-date tests, ECO workflow
FR-1.5	Migration framework with AX/SAP connectors and reconciliation	10	49	Wave 10: synthetic AX extract loads at 100% reconciliation	Load timing, idempotent re-run, mapping DSL units
FR-2.1	Append-only universal journal, dimensions, idempotent posting, balances	11	14, 15, 40	Wave 15: closed period with statements tying to TB	Property (1M entries), negative posting tests, 5k lines/s k6
FR-2.2	Three currencies, rate providers, parallel ledgers, revaluation	12	40	Wave 15	Rounding property, parallel-ledger fixtures, revaluation workbook
FR-2.3	Tax determination/calculation/posting, providers, SAF-T	13	35, 48	Wave 15	500-scenario matrix, settlement reconciliation, XSD validation
FR-2.4	Period control, close checklist, allocations, accruals, year-end	14	38	Wave 15: recorded close walkthrough	Contract (closed period on every path), allocation fixtures
FR-2.5	Statement designer, standard statements, drill-down, audit report	15	40, 46	Wave 15 sign-off by finance stakeholders	Golden statements, drill-down property, designer round-trip
FR-3.1	Immutable inventory transactions, journals, reservations, counting	16	31, 33	Wave 20: buy → receive → pay → value walkthrough	Concurrency (no negative), rebuild compare, FEFO test
FR-3.2	Requisition → RFQ → agreement → PO with policies and versions	17	35, 38	Wave 20	Approval matrix, versioning tests, price-lookup property
FR-3.3	Receiving with GR/IR, invoice capture, 2/3-way match, ERS	18	35	Wave 20	200-scenario matching fixtures, GR/IR nets to zero
FR-3.4	AP settlement, payment proposals, ISO 20022/NACHA/check, positive pay	19	36	Wave 20	300 settlement fixtures, pain.001 XSD, idempotent run

FR	Requirement (short)	Primary wave	Extended by	Phase-exit criterion	Primary test types
FR-3.5	FIFO/LIFO/average/standard costing, close, GL reconciliation, portal	20	39	Wave 20	Costing workbooks, close timing, value report ties to GL
FR-4.1	Production order lifecycle, WIP, variances, subcontracting	21	24, 25, 39	Wave 25: planned order → finished goods with full costing	State-machine property, costing fixtures, backflush test
FR-4.2	MRP/MPS, coverage groups, messages, pegging, forecasting	22	23, 27	Wave 25	40 APICS scenarios, scale 50k items, pegging completeness
FR-4.3	Finite/infinite scheduling, Gantt, CP-SAT	23	44, 45	Wave 25	OR-Library fixtures, no-double-booking property, 5k ops perf
FR-4.4	Process manufacturing and lean	24	33	Wave 25	Potency/co-product fixtures, kanban simulation, catch-weight tests
FR-4.5	Shop-floor kiosk, time registration, IoT, OEE, offline	25	43, 44	Wave 25	Kiosk E2E, 10k events/min ingest, 30-min offline test
FR-5.1	Deterministic pricing engine with explain	26	30, 40	Wave 30: one simulated month buy → make → sell → collect, all subledgers reconcile	500 pricing fixtures, determinism property, p95 < 20 ms
FR-5.2	Quotations, orders, ATP/CTP, credit, holds, intake API	27	35	Wave 30	ATP fixtures + over-promise property, credit workflow, 500 orders/min
FR-5.3	Release, pick/pack/ship, packing slips with COGS, carriers, drop-ship	28	31, 32, 34	Wave 30	Posting contract tests, 1,000-order E2E, SSCC validation
FR-5.4	Invoicing variants and ASC 606/IFRS 15	29	40, 41	Wave 30	Totals property, 40 ASC 606 fixtures, roll-forward reconciliation
FR-5.5	Cash application, collections, RMA, rebates, customer portal	30	36, 47	Wave 30 GO-LIVE CANDIDATE sign-off	Cash-application fixtures, dunning tests, RMA E2E
FR-6.1	Location directives, work, waves, license plates, replenishment, loads	31	34	Wave 35: EDI PO → ASN → invoice between demo partners	100 directive fixtures, 10k-line simulation, capacity property
FR-6.2	Mobile scanner app, flow designer, GS1, offline, labels	32	45	Wave 35	Device E2E, GS1 parser suite, 200-transaction offline sync
FR-6.3	Quality orders, sampling, usage decisions, NCR/CAPA, CoA	33	44	Wave 35	Trigger fixtures, blocking property, Z1.4 tables
FR-6.4	Load/route planning, rating, tendering, freight reconciliation, landed cost	34	40	Wave 35	Solomon VRP fixtures, 200 rating fixtures, tender timeouts
FR-6.5	EDI X12/EDIFACT, Peppol, integration hub, developer portal	35	48	Wave 35	Partner-simulator round trips, schematron, webhook at-least-once
FR-7.1	Bank accounts, statements, reconciliation, cash forecast, connectivity	36	48	Wave 40: group consolidated statements, finance parity sign-off	1,000-line reconciliation, forecast property, EBICS contract tests
FR-7.2	Fixed assets, multi-book depreciation, CIP, IFRS 16	37	41	Wave 40	100 asset fixtures vs MACRS tables, lease workbook, subledger tie
FR-7.3	Budgeting, budget control, cost accounting, ABC	38	41	Wave 40	Budget-check fixtures, allocation convergence, cost ledger tie
FR-7.4	Costing sheets, roll-up, standard cost activation, variances	39	—	Wave 40	50-product workbook, activation revaluation, variance sums
FR-7.5	Intercompany trade/accounting, consolidation with eliminations	40	—	Wave 40 sign-off by a practicing controller	IC balance property, 3-entity eliminations, mismatch detection
FR-8.1	WBS, resources, journals, billing modes, WIP/POC, EVM	41	45	Wave 45: projects, HR, payroll, maintenance, field service walkthrough	POC workbook, invoice-proposal property, WBS scheduling
FR-8.2	Workers/positions/jobs, absence, benefits, self-service, PII	42	43	Wave 45	Effective-date property, accrual fixtures, PII contract tests
FR-8.3	Country-pluggable payroll, expense management	43	48	Wave 45	200 Pub. 15-T scenarios, retro fixtures, payroll GL tie
FR-8.4	Functional locations, maintenance plans, work orders, IoT triggers	44	—	Wave 45	Plan fixtures, cost posting tie, 5 s IoT trigger
FR-8.5	Installed base, agreements/SLAs, cases, dispatch, technician app	45	—	Wave 45	Entitlement fixtures, dispatch property, warranty billing
FR-9.1	Lakehouse, semantic layer, dashboards, document designer, catalog	46	—	Wave 50: first customer month-end in production; load and DR targets met	Lag < 60 s, metric = GL check, RLS in dashboards, visual regression
FR-9.2	MCP APIs, copilot, governed agents, evals, cost budgets	47	—	Wave 50	Eval thresholds in CI, permission-ceiling contracts, audit of actions
FR-9.3	Localization framework, country packs, ER designer, SoD, SOC 2, privacy	48	—	Wave 50	Regulator-schema fixtures, 50 SoD conflicts, restore drill, pen test
FR-9.4	Transactional migration packs, parallel-run diff, cutover, coexistence	49	—	Wave 50	100% control totals, zero unexplained variance, 48 h rehearsal
FR-9.5	Scale targets, multi-region DR, operations, first customer, v1.0	50	—	Wave 50	k6 campaign, DR game day, production close, signed release

K. Reference index

Consolidated from the `references` arrays in `roadmap/waves.json` (183 distinct URLs, deduplicated by URL). Wave numbers in parentheses. SAP Help URLs are the identifiers recorded in `waves.json`; verify against the current SAP Help portal before citing in ADRs.

L. Competitive benchmark — top-tier manufacturing ERPs

L.1 Capability matrix

The matrix compares the six systems a mid-to-large manufacturer shortlists against the Passage v1.0 target. Cells name the actual feature or module and give typical numbers where they are public or widely reported by customers and analysts; "n/a" means the capability is absent or only available through a partner product. Figures marked "typical" are customer-reported ranges, not vendor commitments, and should be re-validated per deal.

Capability	SAP S/4HANA	D365 F&SCM	Infor LN / CloudSuite Industrial	Epicor Kinetic	IFS Cloud	Plex	Passage target
MRP full regeneration, 50k items	MRP Live on HANA: minutes (typically < 10 min; MD01N)	Planning Optimization (Azure service): typically 5–30 min; legacy master planning: hours	LN: batch overnight typical; CSI (SyteLine) APS: minutes to hours	MRP regeneration batch, typically overnight; net-change intraday	MRP/MS batch, typically hours; incremental supported	Net-change MRP continuous, minutes	< 10 min for 50k items × 12 periods × 5 BOM levels; deterministic; net-change continuous
Live pegging / explain plan	MD04 stock/requirements list; PP/DS pegging	Planning Optimization pegging view	LN order pegging (project pegging); CSI APS pegging	Time Phase inquiry pegging	Supply/demand pegging in Supply Chain Planning	Limited (order-level links)	Pegging tree API explaining 100% of any planned order's quantity
Finite capacity scheduling	Embedded PP/DS with optimizer (extra license)	Finite capacity in master planning + Gantt; no optimizer	Infor Scheduling / CSI APS finite scheduling	APS module (add-on), finite with rules	Constraint-Based Scheduling (CBS) module	Production Scheduling (finite, drag-drop)	Finite/infinite + CP-SAT optimizer built in; 5k operations < 60 s
Shop-floor execution UX	SAP Digital Manufacturing (separate cloud, extra license) or MII	Production floor execution (touch, job cards)	Infor Factory Track (separate)	Kinetic MES (Advanced MES, ex-Mattec)	Shop Floor Workbench; IFS MES	Native MES, machine-integrated; strongest of the group	Touch PWA kiosk, 30-min offline, time → costing and payroll in one flow
Machine / IoT connectivity	SAP DM Edge, SAP IoT	Sensor Data Intelligence (Azure IoT Hub)	Infor OS IoT + Factory Track	Advanced MES direct PLC monitoring	IoT Business Connector	Native PLC data collection	OPC-UA/MQTT edge connector → Kafka; 10k events/min per plant, no loss on broker restart
OEE out of the box	In SAP DM	Via Sensor Data Intelligence / Power BI; limited native	Factory Track	Advanced MES real-time OEE	Via MES; limited native	Native real-time OEE	Native, ISO 22400 definitions, 5 s refresh

Capability	SAP S/4HANA	D365 F&SCM	Infor LN / CloudSuite Industrial	Epicor Kinetic	IFS Cloud	Plex	Passage target
Product configurator (CTO)	Variant Configuration (LO-VC / AVC)	Product configuration models (constraint-based)	Infor CPQ (separate); LN configurator	Kinetic Configurator (rules-based)	Sales Configurator	Basic option selection	Constraint-based (OR-Tools CP-SAT), 50-constraint fixtures, drives BOM/route
Process manufacturing: formula, potency, co/by-products, catch weight	PP-PI recipes, batch management, active ingredient	Full: formulas, potency, co/by-products, catch weight, batch attributes	LN: limited; CloudSuite Food & Beverage (M3) strong	Limited in Kinetic	Recipe/formula, batch; limited potency	Lot, catch weight; formulas for food/bev	Wave 24: formulas, potency, co/by allocation, catch weight, shelf life, batch disposition
Lean / kanban	KANBAN (PK*), REM	Lean manufacturing: production flows, kanban rules/boards	CSI kanban basic	Kanban basic	Kanban/repetitive basic	Kanban native	Production flows, event/fixed/withdrawal kanban, backflush costing
Quality management	QM: inspection lots, usage decisions, notifications; CAPA via QIM	Quality orders, nonconformances, CoA, test groups	Infor Quality / LN quality basic	Advanced Quality (AQM) with NCR/CAPA	Quality Management: control plans, nonconformance	Native: control plans, SPC, gage R&R, PPAP	Rule-triggered quality orders, ANSI Z1.4 AQL, 8D CAPA, SPC, CoA, supplier scorecards, calibration
Advanced WMS	EWM (basic embedded or advanced, extra license)	Advanced warehouse: location directives, waves, LPs	Infor WMS (separate); LN warehouse basic	Kinetic warehouse basic + Advanced Mobile Warehouse	Warehouse data collection (WADACO) basic	Native basic/mid WMS	Location directives, work templates, waves, LPs, replenishment, slotting, dock scheduling
WMS mobile	EWM RF framework / Fiori	Warehouse Management mobile app (Android, configurable flows)	Factory Track mobile	Mobile Warehouse	Aurena mobile scanning	Native mobile	PWA + Android shell, flow designer, offline queue, GS1 AI parsing, ZPL printing
Transportation management	SAP TM (embedded)	TMS native (rating, routing, load building)	Infor Nexus (separate)	n/a (partner)	Limited	n/a	VRP load/route planning, rate shopping, tendering, freight reconciliation, landed cost
Inventory costing methods	Standard, moving average, actual (material ledger)	FIFO, LIFO, weighted average, standard, moving average	Standard, actual, FIFO/LIFO (lot)	Standard, average, last, FIFO, lot FIFO	Standard, weighted average, FIFO (lot), actual	Standard, actual (average)	FIFO, LIFO, weighted average (running/periodic), standard, moving average; close ties to GL
Universal journal (single line-item truth)	ACDOCA: one table for FI/CO/AA/ML	GeneralJournalAccountEntry + separate subledger tables	GL with integration transactions	GL with posting (booking) rules	GL vouchers	GL	Append-only journal; balances are rebuilt projections; every subledger reconciles daily by automated check
Parallel ledgers / multi-GAAP	Leading + non-leading ledgers, currency types 10/30/40	Posting layers (current/operations/tax + custom)	Limited (parallel companies / dimensions)	Multiple GL books	Parallel accounting (IFRS/local)	n/a	Ledger groups per legal entity; 3 currency amounts per line
Month-end close, typical	3–5 days with Advanced Financial Closing	5–8 days	5–10 days	5–10 days	5–10 days	5–10 days	≤ 3 days; continuous close via daily reconciliation (Appendix I.6)
ASC 606 / IFRS 15	Revenue Accounting and Reporting (RAR)	Revenue recognition module (being replaced by subscription billing)	n/a (partner)	n/a	Project-based rev rec	n/a	Native: performance obligations, SSP allocation, ratable/milestone/usage schedules
Intercompany & consolidation	Cross-company postings; Group Reporting	Intercompany trade; consolidation	CloudSuite consolidation	Multi-company, consolidation	Group consolidation	Multi-plant; limited consolidation	Mirror documents, due-to/due-from matching, eliminations, IAS 21 translation
EAM and field service	PM + Field Service Management	Asset Management + Field Service (separate app)	Infor EAM (now HxGN EAM, separate)	Maintenance basic	Strongest EAM/FSM of the group	Basic maintenance	Native EAM (plans, work orders, IoT triggers) + field service (dispatch optimization, technician app)
Localization coverage	60+ country versions	40+ countries	40+ (LN)	~20 country packs	50+ countries	US-centric, ~10	7 packs in v1.0 (US, UK, DE, FR, IN, MX, CA); framework for v1.x
Extensibility model	ABAP (key-user, developer, BTP side-by-side)	X++ extensions (no overlayering), Power Platform	ION, Mongoose (CSI), LN Extensions	Application Studio (low-code), BPM, C#	Aurena low-code configuration + PL/SQL	Configuration; limited custom code	Metadata extensions (entities, enums, fields, workflows, forms, reports) + sanctioned hooks; no proprietary language
API openness	OData/SOAP on SAP Business Accelerator Hub (thousands, uneven coverage)	OData data entities (2,000+), custom services	ION APIs (REST), BODs	REST API v2 (OData) across the product	REST projections (OData) across the product	REST/SOAP via developer portal	OpenAPI 3.1 generated for every entity and engine; GraphQL read layer; additive-only within /v1
Event streaming	Event Mesh / Advanced Event Mesh (CloudEvents)	Business events → Event Grid / Service Bus / Dataverse	ION BOD publishing (XML)	Limited (Epicor Functions, webhooks)	IFS Connect events	Limited webhooks	Every state change is a replayable CloudEvent on Kafka via outbox; AsyncAPI published
Analytics / data access	Embedded CDS analytics; Datasphere	Entity store; Synapse/Fabric link	Birst; Data Lake	Epicor Data Analytics (Grow)	Analysis models; IFS Analytics	Plex Intelligence	Debezium CDC → Iceberg lakehouse, Cube semantic layer, p95 lag < 60 s, open to any BI tool
AI agents	Joule agents; Business AI	Copilot; autonomous agents (reconciliation, supplier comms)	Infor GenAI / Industry AI agents	Prism agents	IFS.ai agents	Copilot features	MCP-exposed APIs; agents inherit user OPA permissions; evals gate deploys; model-agnostic
Audit trail	Change documents (per table, configurable); AIS	Database log (opt-in per table, performance cost)	Configurable audit trail	Change log per table (opt-in)	History logging (opt-in)	Change logs	Field-level from CDC on every table, hash-chained, 7-year fiscal retention
Segregation of duties	GRC Access Control (separate)	Native SoD rules	Infor GRC (separate)	n/a	n/a	n/a	Native SoD engine with mitigation workflow and certification campaigns

Capability	SAP S/4HANA	D365 F&SCM	Infor LN / CloudSuite Industrial	Epicor Kinetic	IFS Cloud	Plex	Passage target
Deployment model	Public cloud, private cloud (RISE), on-premise	Microsoft-managed Azure only (on-premise LBD retired)	Multi-tenant AWS (CloudSuite) or on-premise LN	Epicor-managed Azure or on-premise	IFS-managed Azure or customer-managed Kubernetes (remote deployment)	SaaS only, multi-tenant	Any conformant Kubernetes (EKS/GKE/AKS/bare-metal/k3d); self-hosted or managed; no provider-managed service in the critical path
Upgrade cadence and effort	Annual (on-prem) / biannual (public cloud) mandatory; on-prem upgrades are multi-month projects	4 mandatory service updates per year (One Version); regression testing each	Monthly cloud updates; LN on-prem by project	Biannual releases; cloud updates mandatory	Biannual releases + monthly service updates (evergreen)	Continuous (weekly)	Continuous; zero-downtime expand/contract migrations; digest rollback < 15 min; customer-controlled cadence
Licensing	Named users (Professional/Functional), FUE under RISE; list prices not public	Per user per month (Finance / SCM list ≈ USD 180–210 per full user; Activity/Team tiers lower)	Subscription per user; not public	Subscription per user; not public	Subscription per user; not public	Subscription per plant and user; not public	Open question 1 (decide by wave 35): open-core or source-available; no per-seat charge for shop-floor, portal or agent users
Implementation, mid-size manufacturer (typical)	12–24 months	9–18 months	6–12 months (CSI)	6–12 months	9–18 months	6–12 months	3–6 months using the migration factory (wave 49) and parallel-run diff
Accessibility	Fiori: WCAG 2.1 AA for most apps	WCAG 2.1 AA	Partial	Partial	Partial	Partial	WCAG 2.1 AA on every generated form and workspace, axe in CI

Reading the matrix: the incumbents win today on breadth of localization, installed-base references and depth in a few modules (SAP finance, IFS EAM, Plex MES). Passage does not try to out-feature them row by row in v1.0; it competes on the rows where every incumbent is structurally weak — one journal with automated reconciliation, metadata extensibility without a proprietary language, event streaming and open APIs as the default integration surface, cloud-agnostic deployment, continuous zero-downtime upgrades, and governed AI agents that act under the same authorization as users.

L.2 Interoperability contract

Principle: any system on the customer's network — MES, PLM, SCADA/OPC-UA, a third-party WMS, EDI trading partners, BI tools, AI agents — consumes Passage through the same APIs, events and MCP tools that Passage's own modules use. There is no separate "integration layer" product, no licensed middleware, and no integration project to stand up before the first interface works. What SAP sells as Integration Suite, Microsoft as dual-write plus Logic Apps, and Infor as ION is, in Passage, the integration hub shipped in wave 35: a catalog, keys and quotas, a message monitor and replay over surfaces that already exist from wave 3 (REST), wave 4 (Kafka) and wave 47 (MCP).

The contract every surface honors:

1. **One authorization model.** Every call, event subscription, webhook and tool invocation is authorized by the same OPA bundle against the same roles/duties/privileges (Appendix E). Partner credentials are users or service accounts in the tenant's Keycloak realm; there is no integration back door.
2. **One schema source.** OpenAPI, AsyncAPI, GraphQL SDL, MCP tool definitions and EDI mappings are generated from the same entity metadata, so a field added by a customer extension appears on every surface in the same release.
3. **Additive evolution.** `/v1` and `v<n>` event types change additively only; breaking changes ship as a new version with a 12-month (API) or two-minor-release (event) overlap, announced with `Deprecation` / `Sunset` headers and registry flags.
4. **Correlation and idempotency everywhere.** Every inbound request carries or receives a `correlationid`; every outbound event and webhook carries it; every mutating call is idempotent by key (Appendix D.5); every consumer is expected to be idempotent by event id (Appendix C.5).
5. **Replayability.** Events are retained 30 days and replayable per consumer; webhooks can be re-driven from the message monitor; file and EDI inbound payloads are kept as source attachments.
6. **Sandbox and conformance.** Every tenant gets a sandbox tenant with the demo companies; a conformance kit (Postman/k6/Pact suites) lets a partner prove their integration before production keys are issued.
7. **Observability shared with the customer.** Per-key traces, delivery logs, DLQ contents and SLA dashboards are visible in the integration hub, not only to Passage operators.
8. **No data hostage.** Full export (NDJSON per entity, Iceberg tables, event archive) is a standard API, not a service engagement.

Surface	Typical consumers	Protocol / format	Authentication and authorization	SLA (per tenant, measured)	Notes
REST	MES, PLM, custom apps, iPaaS, mobile	HTTPS/JSON, OpenAPI 3.1, RFC 9457 errors	OAuth 2.0 (Keycloak): authorization code for users, client credentials for services; JWT validated at Envoy, OPA per request; tenant API keys for partner quotas	99.9% availability; p95 < 50 ms simple reads, p99 < 500 ms document posts; rate limits per tier (D.7)	Idempotency keys, ETags, cursor pagination, bulk `:batch` / `:export`
GraphQL	BI tools, portals, composite screens, low-code builders	HTTPS, GraphQL over the generated SDL (read-only in v1.0; mutations via REST)	Same JWT and OPA; field-level masking for P2/P3 per duty	99.9%; p95 < 200 ms for queries ≤ 1,000 cost points; depth ≤ 8, cost-limited	Persisted queries for portals; mirrors REST filter grammar
Kafka topics	MES, third-party WMS, data platform, CRM sync, customer event consumers	Kafka protocol, CloudEvents JSON, AsyncAPI 3.0, schema registry	mTLS + SCRAM-SHA-512 per principal; topic ACLs per tenant; cross-tenant principals only for the customer's own analytics	99.9% broker availability; p95 commit-to-consumer < 5 s; 30-day retention; replay on request	External consumers connect through the tenant's dedicated consumer group; DLQ visible in hub
Webhooks	SaaS partners, iPaaS (Workato, Make), Salesforce/Shopify connectors	HTTPS POST of the CloudEvent, JSON	HMAC-SHA256 signature in `X-Passage-Signature` with per-endpoint secret (rotation supported), optional mTLS, IP allow-list	At-least-once; p95 first delivery < 10 s; retries with exponential backoff for 24 h, then DLQ; per-tier delivery quotas	Subscriptions filtered by event type and legal entity; re-drive from monitor
MCP	AI agents (Passage copilot, Claude, customer-built agents, partner agents)	MCP over HTTPS (streamable), tool/resource definitions generated from OpenAPI and the semantic layer	OAuth 2.1 with user-delegated token; agent identity registered in the tenant; OPA evaluates `agent@user` so the agent never exceeds the user (E.4 example 2); kill switch	99.9%; p95 tool call < 1 s excluding downstream posting time; per-tenant token and cost budgets	Every tool call audited with inputs/outputs; approval gates for posting tools

Surface	Typical consumers	Protocol / format	Authentication and authorization	SLA (per tenant, measured)	Notes
EDI	Trading partners, 3PLs, carriers, retailers	X12 (850/855/856/810/820/214) and EDIFACT (ORDERS/DESADV/INVOIC) over AS2 or SFTP; Peppol UBL 2.1 via access point	AS2 certificates per partner, SFTP key pairs, Peppol access-point credentials; partner profile binds to a service account with scoped duties	997/CONTRL functional acknowledgment within 15 min; inbound processing p95 < 5 min; partner SLA monitor with alerting	Mappings versioned per partner; replay from message monitor; partner simulator in sandbox
OPC-UA / MQTT	SCADA, PLCs, machines, sensors, historians, Andon displays	OPC-UA client (Sign & Encrypt) and MQTT 3.1.1/5 over TLS via the edge connector; events normalized to CloudEvents on Kafka	X.509 device certificates issued per plant; per-device MQTT credentials; connector runs under a plant service account	10k events/min per plant; store-and-forward on edge for 24 h; end-to-end p95 < 5 s to OEE/condition monitoring; no loss on broker restart	Tag/topic mapping is metadata; thresholds raise maintenance requests (wave 44)
File / SFTP	Banks, payroll providers, tax providers, legacy systems, lockbox	SFTP (ISO 20022 pain/camt, NACHA, BAI2, MT940, CSV/NDJSON), optional PGP	SFTP key authentication per partner, PGP keys and bank signing keys in Vault (never exported), checksum manifests	Polling every 5 min; inbound processing p95 < 15 min; outbound files signed and audited (E.7); bank acknowledgments (pain.002) ingested	Idempotent by file hash; duplicates rejected and logged; retention per fiscal rules

A customer therefore adds an MES by subscribing it to `passage.manufacturing.productionorder` and `passage.inventory.transaction`, pointing it at `/v1/manufacturing/production-orders/{id}:report` for confirmations, and issuing it a service account with the `ReportProduction` duty — the same three artifacts Passage's own shop-floor kiosk uses. Replacing that MES later means revoking one principal and one subscription, not unwinding a middleware project.

Part 12 — Coverage Inventory: Dynamics AX 2012 R3 / D365 F&SCM → Passage

Status	Draft v0.1 — completeness oracle for the 50-wave roadmap
Date	2026-10-21
Source of truth for waves	roadmap/waves.json (wave numbers 1–50); roadmap/phases.json
Scope rules	docs/PRD.md §2 goals and non-goals, §5 scope map
Purpose	The team's fear is "missing something". This part walks the AX 2012 R3 navigation pane module by module (plus the D365 F&SCM additions that matter to a manufacturer) and assigns every form, inquiry, report, periodic job and setup form to a Passage wave — or says, honestly, that nothing covers it yet.

12.0 How to read this inventory

Each module section mirrors the AX 2012 R3 menu structure and has four tables:

1. **Common / Journals** — every list page, details form and journal the user opens from *Common* or *Journals*. Columns: Form name | AOT form or menu item (best effort from memory of the AX 2012 R3 AOT; treat as a search key, not gospel) | Purpose | Passage status | Wave | Notes.
2. **Inquiries & Reports** — every *Inquiries* entry and every SSRS report under *Reports*. Columns: Name | Purpose | Passage status | Wave | Notes.
3. **Periodic** — every periodic job or process. Same columns as 2.
4. **Setup** — every setup form, with the module's *parameters* form listed first and its tabs spelled out as separate rows where the tab changes behavior that a wave must implement. Columns: Name | Key parameters / options | Passage status | Wave | Notes.

Status legend (the *Passage status* column always starts with one of these tokens so the document can be counted mechanically):

- `COVERED-<wave>` — a deliverable in waves.json for that wave clearly implements the AX capability, at parity or better.
- `PARTIAL-<wave> (what's missing)` — the wave covers the core but a named piece of the AX feature is not in any wave deliverable. The missing piece is listed in the gap register (§12.99) with a proposed wave.
- `GAP` — no wave in waves.json clearly covers the item. The Notes column always begins with `Propose wave NN:` so the gap register can be generated from the rows. Wave column shows `-`.
- `OUT-OF-SCOPE (reason)` — excluded by a PRD non-goal (CRM/marketing automation, retail POS/e-commerce, country packs beyond US/UK/DE/FR/IN/MX/CA, X++/ABAP code migration) or because AX itself deprecated it before R3. Wave column shows `-`.
- `SUPERSEDED (how)` — Passage deliberately does it a different way; the replacing mechanism is named. Wave column shows the wave that ships the replacement.

Conventions

- Wave numbers refer to `n` in waves.json. Phase boundaries: 0 = 1–5, 1 = 6–10, 2 = 11–15, 3 = 16–20, 4 = 21–25, 5 = 26–30, 6 = 31–35, 7 = 36–40, 8 = 41–45, 9 = 46–50.
- "SSRS report" rows are assessed against two things: the *data* (does a Passage wave produce it?) and the *rendering* (wave 46 replaces every SSRS layout with the operational report designer and embedded dashboards). A report is `COVERED-<n>` when the data wave exists and wave 46 renders it; it is `PARTIAL` only when the data itself is missing.
- Forms that are shared across modules (Terms of payment, Methods of payment, Charges codes, Print management, Form setup, Number sequences) are listed in every module where AX shows them, so each module section is self-contained for its reviewer. They map to the same wave each time.
- Where AX 2012 R3 and D365 F&SCM differ (e.g. Collections, Credit management, Cost accounting ledger, Landed cost), the D365 name is given in Notes and the row is assessed against the D365 behavior because that is what a manufacturer migrating today expects.
- Country-specific forms are listed only where they belong to one of the seven v1 country packs; everything else is `OUT-OF-SCOPE (country pack beyond v1 set)`.

12.1 General ledger

The general ledger is the heart of AX. In Passage it is the universal journal (wave 11) plus currencies/parallel ledgers (12), tax (13), period close (14) and financial reporting (15). Consolidation moves to wave 40; budgeting to wave 38.

12.1.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Main accounts (list page)	MainAccountListPage	Browse chart of accounts with balances FactBox	COVERED-11	11	Metadata-driven list page with balance projection FactBox
Main account details	MainAccount	Account type, category, DB/CR default, suspended, validation (currency/user/posting type), allocation terms, default dimensions, translations	COVERED-11	11	Account structure validation rules at posting API
Chart of accounts	LedgerChartOfAccounts	Shared COA header; main accounts belong to a COA shared by ledgers	COVERED-11	11	Shared COA across legal entities (tenant-level)
Ledger	Ledger	Per-legal-entity ledger: COA, fiscal calendar, accounting/reporting currency, exchange rate types, account structures, balance control	COVERED-11	11	Ledger service entity; parallel ledgers in 12
Financial dimensions	DimensionAttribute	Define dimensions backed by entities (dept, cost center, customer…) or custom lists	COVERED-11	11	Up to 20 dims per ledger
Financial dimension values	DimensionAttributeValue (DimensionValueDetails)	Values with active dates, suspended, owner, group dimension	COVERED-11	11	Effective-dated values
Financial dimension sets	DimensionFocus	Balance views by dimension set, rebuild balances	COVERED-11	11	Balance projection by account × dimension × period (event-sourced)
General journal (list)	LedgerJournalTable (menu LedgerJournalTable)	List of journal batches by name with status/approval	COVERED-11	11	Journal workspace

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
General journal lines	LedgerJournalTransDaily	Voucher lines, account/offset, dimensions, tax, invoice, due date, payment info	COVERED-11	11	
Journal voucher (lines) — Fixed assets journal	LedgerJournalTransAsset	FA transactions from GL journal	COVERED-37	37	FA transaction types posted through journal
Periodic journals	LedgerJournalPeriodic	Recurring journal templates with period unit, last date, end date	COVERED-14	14	Recurring journal scheduling
Allocation journal	LedgerJournalTable (type Allocation)	Journal created by allocation rule processing, review before post	COVERED-14	14	Allocation engine output
Elimination journal	LedgerJournalTable (type Elimination)	Journal created by elimination proposals in consolidation company	COVERED-40	40	
Intercompany journal	LedgerJournalTable (intercompany lines)	Lines posting due-to/due-from across legal entities	COVERED-40	40	Due-to/due-from entries wave 40; posting API wave 11
Global general journal (D365)	LedgerJournalTable (global)	Enter journals for any legal entity without company switch	COVERED-11	11	Shell re-scopes per legal entity; cross-entity journal entry in workspace
Journal approval (workflow)	LedgerJournalTable + workflow	Submit journal for approval	COVERED-11	11	Temporal approval template (wave 4) applied to journals in 11
Posted journals (list)	LedgerJournalTable (posted)	Review posted batches, reverse	COVERED-11	11	Reversal creates linked negating entry
Voucher attachments / document handling	DocuView	Attach documents to vouchers	PARTIAL-11 (no document types, archiving policy or external store yet)	11	Attachments named in wave 11; general document management is a gap under Org admin §12.29
Advanced ledger entries (public sector)	LedgerAdvancedEntry (PSA)	Multi-line entries with posting definitions	OUT-OF-SCOPE (public sector feature set is not in the PRD scope map)	—	Public sector is not a target vertical
Journal names list	LedgerJournalName	Also reachable from Common in some role centers	COVERED-11	11	See Setup
Reverse transaction (from voucher)	LedgerTransReverse	Reverse one voucher / trace reversal	COVERED-11	11	
Reverse entire journal	LedgerJournalTableReverse	Reverse all vouchers of a batch	COVERED-11	11	
Fiscal calendars (Common link in R3)	FiscalCalendars	Shared calendars, years, periods	COVERED-6	6	Owned by Org admin in Passage

12.1.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Trial balance (inquiry, dimension set)	Opening/debit/credit/closing by account and dimension set, date range	COVERED-15	15	Drill-down to lines
Ledger transactions (Voucher transactions)	Lines by voucher with origin trace	COVERED-11	11	Journal lines inquiry with source-document link
Audit trail	Who posted which voucher when, journal/source	COVERED-15	15	Audit trail report (wave 15) over CDC audit (wave 5)
Transaction origin	Drill from a GL line to originating subledger document	COVERED-15	15	Statement → balance → lines → source document
Posted sales tax (Sales tax transactions inquiry)	Tax amounts by code/period	COVERED-13	13	
Settled sales tax (sales tax payments inquiry)	Settlement history	COVERED-13	13	
Ledger budget transactions inquiry	Budget register entries by account	COVERED-38	38	
Currency exchange rate inquiry	Rates by type/pair/date	COVERED-12	12	Rate audit
Dimension statement (Dimension balance inquiry)	Balances for a single dimension value	COVERED-11	11	Balance projection query
Closing sheet (periodic, country-dependent)	Closing adjustments worksheet (used in ES/IT/EE)	OUT-OF-SCOPE (country pack beyond v1 set; closing adjustments in Passage are allocation/accrual journals)	—	
Ledger reconciliation inquiry (Inventory/ledger, AR/AP)	Compare subledger to GL	COVERED-20	20	Daily automated subledger-to-GL reconciliation from wave 16; inventory value report wave 20
SSRS: Trial balance	Printed trial balance	COVERED-15	15	Rendered via wave 46 designer
SSRS: Trial balance summary	Summary by account	COVERED-15	15	
SSRS: Ledger transaction list	Lines by date range	COVERED-11	11	
SSRS: Ledger account balance	Balance per account/period	COVERED-15	15	
SSRS: Dimension statement	Dimension-based P&L/balance	COVERED-15	15	
SSRS: Financial statement (old LedgerBalanceSheet row/column definitions)	Legacy AX statement engine	SUPERSEDED (report definitions in wave 15 designer, Management Reporter model)	15	AX 2012 had both; Passage keeps only the MR-style model
SSRS: Chart of accounts	List of accounts with attributes	COVERED-11	11	
SSRS: Journal (LedgerJournal report)	Unposted journal printout	COVERED-11	11	
SSRS: Posted journals	Posted batch printout	COVERED-11	11	
SSRS: Voucher (LedgerTransVoucher)	Single voucher with all lines	COVERED-11	11	
SSRS: Audit trail	Printed audit trail	COVERED-15	15	
SSRS: Ledger reconciliation (Ledger/Inventory, Ledger/AR, Ledger/AP, Ledger/Project, Ledger/Bank)	Reconciliation listings	COVERED-20	20	Reconciliation checks per subledger, wave 20 report; bank in 36; project in 41
SSRS: Sales tax payments	Settlement report	COVERED-13	13	
SSRS: Sales tax specification by ledger transaction	Tax by voucher	COVERED-13	13	
SSRS: Sales tax transactions — details	Tax detail listing	COVERED-13	13	
SSRS: Sales tax list / Sales tax codes	Setup listing	COVERED-13	13	
SSRS: EU sales list	Statutory EU sales listing	COVERED-13	13	

Name	Purpose	Passage status	Wave	Notes
SSRS: Exchange rate (Currency exchange rates)	Rate table printout	COVERED-12	12	
SSRS: Fiscal year close report / Opening balances	Closing results	COVERED-14	14	
SSRS: Consolidation (Consolidated balances)	Consolidated trial balance	COVERED-40	40	
SSRS: Eliminations	Elimination detail	COVERED-40	40	
SSRS: Allocation rule report	Allocation definitions	COVERED-14	14	
SSRS: Journal names, Posting setup listings	Setup listings	COVERED-11	11	Any entity can be exported/printed from the shell (wave 5)
SSRS: Cash flow forecast (GL cash flow)	Cash flow forecast from open items	COVERED-36	36	
SSRS: Balance control (balance sheet with balance control accounts)	Control accounts	COVERED-15	15	
SSRS: Fiscal LIFO reports (Italy)	Italian fiscal LIFO valuation	OUT-OF-SCOPE (country pack beyond v1 set)	—	
SSRS: Withholding tax reports	Withholding by vendor/period	COVERED-13	13	1099 in AP
Management Reporter / Financial reporting (D365)	Row/column/tree report designer and viewer	COVERED-15	15	

12.1.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Journals → Periodic journals (retrieve)	Generate journal lines from periodic journal template	COVERED-14	14	
Journals → Allocation journal (Process allocation request)	Run allocation rules, create allocation journal	COVERED-14	14	Fixed, basis, iterative
Journals → Accrual schemes (Ledger accruals)	Spread an expense/revenue across periods	COVERED-14	14	
Journals → Ledger accrual (from journal line)	Apply scheme on a journal line	COVERED-14	14	
Fiscal year close → Fiscal year close (year-end close)	Transfer P&L to retained earnings, opening balances	COVERED-14	14	Per-dimension carry-forward
Fiscal year close → Opening transactions	Create opening transactions per account/dimension	COVERED-14	14	
Fiscal year close → Transfer opening balances (D365 year-end close templates)	Templates for retained earnings by dimension	COVERED-14	14	
Consolidate → Consolidate [Online]	Pull subsidiary balances into consolidation company	COVERED-40	40	
Consolidate → Consolidate [Export] / [Import]	File-based consolidation	COVERED-40	40	Import path for non-Passage subsidiaries
Consolidate → Elimination proposal	Generate elimination journal	COVERED-40	40	
Currency revaluation (Foreign currency revaluation, GL)	Unrealized gain/loss on monetary accounts	COVERED-12	12	Reversal next period
Currency revaluation → Reporting currency adjustment (D365)	Restate reporting currency balances	COVERED-12	12	Currency translation
Transaction reversal (Reverse transaction / Trace reversal)	Reverse posted vouchers	COVERED-11	11	
Sales tax payment (Settle and post sales tax)	Settle tax period to authority	COVERED-13	13	
Sales tax → Sales tax report / EU sales list / VAT return	Statutory extracts	COVERED-13	13	VAT return, EU sales list, Intrastat, SAF-T
Conditional sales tax settlement	Settle tax when payment made (cash basis)	COVERED-13	13	Rules engine supports cash-basis trigger; verify fixture
Ledger balances rebuild (Financial dimension sets balance update)	Rebuild balance table	COVERED-11	11	Balance projection rebuild from journal
Close period (Ledger calendar period status change)	Open/on hold/closed per module	COVERED-14	14	Period control per ledger × module × user group
Financial period close workspace (D365)	Close checklist, tasks, dependencies	COVERED-14	14	
Delete / Compress transactions (Ledger transaction compression)	Compress old GL transactions	SUPERSEDED (append-only journal; history archived to lakehouse wave 46, never compressed in place)	46	
Reason code assignment (reversal reasons)	Require reasons on reversal	PARTIAL-11 (reason codes as a shared framework are not named in any wave)	11	See Org admin §12.29 reason codes
Intercompany journal post (periodic)	Post pending intercompany lines	COVERED-40	40	
Advanced ledger entries (public sector posting definitions)		OUT-OF-SCOPE (public sector)	—	
Fiscal LIFO calculation (IT)		OUT-OF-SCOPE (country pack beyond v1 set)	—	
Ledger budget: transfer budget to ledger (old budget model)		SUPERSEDED (budget register entries, wave 38)	38	
Financial reports generation (MR schedule)	Scheduled report packs	COVERED-15	15	Scheduled distribution PDF/XLSX/email
Export ledger (SAF-T, audit file)	Statutory audit file	COVERED-13	13	SAF-T extract; other country audit files in wave 48

12.1.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
General ledger parameters — Ledger tab	Check for voucher used, correction (storno), journal-based accrual, transaction reversal, batch transfer rules, use document date for voucher, balance control	COVERED-11	11	Storno (negative debit) handled as posting option
General ledger parameters — Sales tax tab	Apply sales tax taxation rules, cash discount on invoice incl. tax, tax on prepayment, rounding, conditional sales tax, sales tax settlement account, reverse charge	COVERED-13	13	
General ledger parameters — Inventory dimensions tab	Dimensions shown on ledger lines	COVERED-16	16	
General ledger parameters — Number sequences tab	Voucher sequences for journals, tax settlement	COVERED-5	5	Number sequence service
General ledger parameters — Batch transfer rules (D365 summarize subledger)	Asynchronous subledger transfer, summarize by account	SUPERSEDED (subledgers post synchronously via the universal journal API; summarization is a projection)	11	
Ledger	COA, calendar, currencies, account structures, balance control	COVERED-11	11	
Chart of accounts → Chart of accounts	Shared COA	COVERED-11	11	
Chart of accounts → Main accounts	Accounts	COVERED-11	11	
Chart of accounts → Main account categories	Categories for reporting/cubes	COVERED-15	15	Used by statement designer and wave 46 semantic layer
Chart of accounts → Account structures (Configure account structures)	Segments, allowed values, constraints, activation	COVERED-11	11	
Chart of accounts → Advanced rule structures / Advanced rules	Conditional additional segments	PARTIAL-11 (advanced rules (conditional extra segments) are not explicitly listed; account structures are)	11	Validation rules may need conditional branch
Chart of accounts → Account structure activation (periodic)	Activate draft structures	COVERED-11	11	
Chart of accounts → Financial dimensions		COVERED-11	11	
Chart of accounts → Financial dimension sets		COVERED-11	11	
Chart of accounts → Derived financial hierarchies (R3)	Category hierarchies used to derive dimension groupings for reporting	PARTIAL-15 (derived hierarchies for reporting are not named)	15	Report tree designer likely covers; confirm
Chart of accounts → Default dimension templates (D365)	Templates for default dimensions on master data	COVERED-11	11	Default dimensions on master data
Ledger calendar (Fiscal calendars + Ledger calendar)	Period statuses per module (open/on hold/closed), per user group access	COVERED-14	14	Calendar definition in 6; period control in 14
Fiscal calendars (Org admin shared)	Years, periods, closing periods	COVERED-6	6	
Journals → Journal names	Type, voucher series, approval workflow, posting restrictions, lines limit, fixed offset account, default currency/exchange rate type, private for user group	COVERED-11	11	
Journals → Journal texts	Reusable transaction text codes	COVERED-11	11	Journal templates
Journals → Journal controls (posting restrictions by account type/segment)	Restrict accounts per journal name	COVERED-11	11	
Journals → Default descriptions (Transaction text)	Auto text by transaction type with %1 placeholders	PARTIAL-11 (default description templates per posting type not named)	11	Small; put in wave 11 journal workspace
Journals → Accrual schemes	Ledger accrual schemes with debit/credit accounts, period key	COVERED-14	14	
Journals → Periodic journal names		COVERED-14	14	
Posting → Accounts for automatic transactions (System accounts)	Penny difference, exchange rate gain/loss, year-end result, error account, cash discount etc.	COVERED-11	11	
Posting → Posting definitions (public sector)		OUT-OF-SCOPE (public sector)	—	
Posting → Transaction posting definitions (PSA)		OUT-OF-SCOPE (public sector)	—	
Posting → Intercompany accounting	Due-to/due-from account pairs between legal entities, journal names	COVERED-40	40	
Posting → Reason codes (financial reasons)	Reasons for reversals, FA, customer/vendor transactions	PARTIAL-11 (shared reason code framework not named)	11	Gap register
Posting → Ledger posting groups (sales tax)	Tax payable/receivable/settlement accounts	COVERED-13	13	
Posting → Inventory posting (link)	Inventory posting profiles	COVERED-16	16	
Allocation → Ledger allocation rules	Fixed/basis/spread, source filters, destination, offset, reversal	COVERED-14	14	
Allocation → Allocation terms (on main account)	Fixed percentage allocation on account	COVERED-14	14	
Currency → Currencies	ISO code, rounding (price/unit/sales/purchase/general rounding rules), symbol	COVERED-6	6	ISO 4217 reference data
Currency → Currency exchange rates	Rates by type/pair/date, triangulation	COVERED-12	12	
Currency → Exchange rate types	Rate types (default, budget, closing)	COVERED-12	12	
Currency → Currency revaluation accounts	Realized/unrealized gain/loss by currency	COVERED-12	12	
Currency → Import currency exchange rates (provider)	Configure providers (ECB, OANDA) and schedule	COVERED-12	12	ECB/OpenExchangeRates adapters
Currency → Euro triangulation / Denomination currency	Legacy euro conversion	OUT-OF-SCOPE (obsolete; triangulation itself is in wave 12)	—	

Name	Key parameters / options	Passage status	Wave	Notes
Sales tax → Sales tax codes	Rate, limits, unit, calculation method (whole amount/interval), period, ledger posting group, use tax, exempt	COVERED-13	13	
Sales tax → Sales tax groups	Grouping by customer/vendor with exempt/reverse charge flags	COVERED-13	13	
Sales tax → Item sales tax groups	Grouping by item	COVERED-13	13	
Sales tax → Sales tax authorities	Authority vendor account, rounding	COVERED-13	13	
Sales tax → Sales tax settlement periods	Period intervals per authority, terms	COVERED-13	13	
Sales tax → Ledger posting groups		COVERED-13	13	
Sales tax → Sales tax exempt codes	Reason codes for exemption	COVERED-13	13	Exemption certificates
Sales tax → Sales tax jurisdictions (US)	Jurisdiction hierarchy, codes	COVERED-13	13	
Sales tax → Sales tax reporting codes	Codes for statutory return boxes	COVERED-13	13	VAT return box mapping
Sales tax → Sales tax (country-specific tab e.g. VAT registration numbers by country)		COVERED-7	7	Tax registration numbers on party
Sales tax → Withholding tax codes / groups	Withholding rates, item withholding groups (D365)	COVERED-13	13	
Sales tax → Tax branch (IN/other)		OUT-OF-SCOPE (country pack beyond v1 set)	—	India is in v1 pack set but tax branch is GST-era D365; handled in wave 48 India pack as needed
Sales tax → External (Sales tax, Avalara-type)	External provider connection	COVERED-13	13	
Sales tax → Conditional sales tax	Tax on payment	COVERED-13	13	
Sales tax → Sales tax on prepayment		COVERED-13	13	
Foreign trade → Intrastat parameters, commodity codes, transaction codes, transport methods, ports, statistics procedure	Intrastat master data	PARTIAL-13 (Intrastat extract is named; the setup forms (commodity codes, transaction codes, transport methods, ports, country properties) are not)	13	Gap register proposes wave 13
Foreign trade → EU sales list parameters / reporting codes		COVERED-13	13	
Consolidation → Consolidation accounts, Elimination rules, Consolidation groups	Account mapping, elimination rules, legal entity groups	COVERED-40	40	
Fiscal LIFO (IT)		OUT-OF-SCOPE (country pack beyond v1 set)	—	
Financial reporting → Report definitions (MR)	Rows, columns, trees, report	COVERED-15	15	
Financial reporting → Financial statements (legacy)	Row/column definitions	SUPERSEDED (wave 15 designer)	15	
Financial reporting → Financial reporting parameters (D365)	Integration settings	COVERED-15	15	
Budgeting (links)		COVERED-38	38	See §12.4
Ledger → Balance control accounts	Accounts for balance control on journal name	COVERED-11	11	
Ledger → Posting layers	Current/operations/tax layers	COVERED-12	12	Posting layers = ledger groups
Cash flow forecasts (GL setup: main accounts cash flow, dependent accounts)	Forecast settings per account	COVERED-36	36	
Organization → Legal entities (link)		COVERED-6	6	
Number sequences (GL)	Voucher series	COVERED-5	5	
Print management (GL)		COVERED-46	46	Document designer
Form setup (GL letters)		COVERED-46	46	
Workflow → General ledger workflows (journal approval, advanced ledger entry)	Workflow configuration per journal	COVERED-4	4	Workflow designer
Ledger → Closing sheets setup (country)		OUT-OF-SCOPE (country pack beyond v1 set)	—	
Tax (IN) → India-specific setup (tax components, TDS/TCS)		PARTIAL-48 (India pack listed for wave 48 but TDS/TCS/GST depth unspecified)	48	

12.2 Accounts payable

Accounts payable in AX spans vendor master (Passage wave 7), purchase orders (17), receiving and invoice matching (18), payments and settlement (19) and 1099/positive pay (19, 36). Vendor collaboration goes to wave 20.

12.2.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Vendors (list page)	VendTableListPage	All vendors with FactBoxes (balance, contacts, recent POs)	COVERED-7	7	Party model with Vendor role
Vendor details	VendTable	General, addresses, contacts, misc details, vendor profile, purchasing demographics, invoice and delivery, purchase order defaults, payment, tax 1099, financial dimensions	COVERED-7	7	Role-specific vendor data entity

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Vendors on hold	VendTable (Blocked = Invoice/All/Payment/Requisition/Never)	Hold statuses	COVERED-7	7	Hold types in vendor role
Vendor requests (R3)	VendRequest (VendRequestListPage)	New vendor / change request workflow (employee-initiated, unsolicited via EP)	PARTIAL-20 (vendor request workflow and prospective-vendor self-registration are not named; supplier portal is)	20	Gap register
Vendor bank accounts	VendBankAccount	Bank details per vendor, SEPA, prenote status	COVERED-19	19	
Purchase orders (list page)	PurchTableListPage	All POs	COVERED-17	17	
Purchase order details	PurchTable	Header/lines, charges, confirmation, change management	COVERED-17	17	
Purchase orders → Received but not invoiced	PurchTableListPage (filter)	POs awaiting invoice	COVERED-18	18	GR/IR reconciliation
Purchase orders → Open purchase order lines	PurchLine list	Open line view	COVERED-17	17	
Purchase orders → Backordered purchase lines	PurchLineBackOrder	Overdue deliveries	COVERED-17	17	
Purchase orders → Purchase order confirmations (list of journals)	PurchConfirmJournal (VendPurchOrderJour)	Confirmation history	COVERED-17	17	
Purchase orders → Product receipts (Packing slip journal)	VendPackingSlipJour	Posted receipts	COVERED-18	18	
Purchase orders → Prepayment invoices	PurchPrepayTable	Prepayment on PO	COVERED-19	19	Prepayments
Vendor invoices → Open vendor invoices	VendInvoiceJournal (CustVendInvoiceJour)	Posted invoices not yet paid	COVERED-19	19	Open-item AP
Vendor invoices → Pending vendor invoices	VendInvoiceInfoListPage (VendInvoiceInfoTable)	Unposted header/lines invoices with matching	COVERED-18	18	
Vendor invoices → Vendor invoice register (journal)	LedgerJournalTable (VendInvoiceRegister)	Register invoice to arrival account before approval	COVERED-18	18	Invoice capture (two-step register/approve)
Vendor invoices → Invoice approval journal	LedgerJournalTable (VendInvoiceApprove)	Approve registered invoices, assign ledger accounts	COVERED-18	18	
Vendor invoices → Invoice journal	LedgerJournalTable (VendInvoiceRecord)	Direct expense invoices (no PO)	COVERED-18	18	
Vendor invoices → Invoice pool excl. posting	VendInvoicePool (LedgerJournalPool)	Pending pool of invoices	COVERED-18	18	
Vendor invoices → Vendor invoice workflow (D365)	VendInvoiceInfoTable + workflow	Header/line approval	COVERED-18	18	Exception workflow
Vendor invoices → Invoice matching details	VendInvoiceMatchingDetails	Price/qty/total match status per line	COVERED-18	18	
Vendor invoices → Vendor invoice automation (D365 OCR / "Invoice capture")	VendInvoiceCapture	Capture, classify, auto-apply prepayment, submit	COVERED-18	18	OCR/AP-automation adapter; AI coding agent wave 47
Payments → Payment journal	LedgerJournalTable (VendPaymentJournal)	Payment lines, proposals, generate payments, settle	COVERED-19	19	
Payments → Promissory note journals (Draw / Redraw / Remittance / Settle)	LedgerJournalTable (VendPromissoryNote*)	Vendor bills of exchange	GAP	—	Propose wave 36: promissory notes / bills of exchange (vendor side) with remittance and settlement journals; not in any wave
Payments → Payment proposal	VendPaymProposal	Select by due date/discount date	COVERED-19	19	
Payments → Vendor payment advice (print)	VendPaymAdvice	Advice document	COVERED-19	19	
Payments → Positive pay (link)	BankPositivePayTable	Export issued checks	COVERED-19	19	
Payments → Prenotes (ACH)	VendPaymPrenote	Prenote generation and confirmation	PARTIAL-19 (ACH prenote (zero-dollar validation) flow is not named)	19	Gap register
Payments → Centralized payments (cross-company)	VendPaymentJournal (centralized)	Pay on behalf of other legal entities	PARTIAL-40 (centralized payments across entities are not named in 19 or 40)	40	Gap register
Vendor transactions	VendTrans	Posted vendor ledger	COVERED-19	19	
Vendor open transactions (Settle open transactions)	VendOpenTrans	Settlement, mark, cross-currency, cash discount	COVERED-19	19	
Closed transaction editing	VendTransClosed? (VendSettledTrans)	Reverse settlements	COVERED-19	19	Reversal handling
Vendor invoice (from PO) — Invoice posting form	PurchEditLines (VendInvoiceInfoTable)	Post PO invoice	COVERED-18	18	
Purchase order → Receipts list (Arrival overview)	WMSArrivalOverview	Inbound arrival planning	COVERED-18	18	Arrival/registration

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Purchase order → Registration	InventTransRegister	Register receipt by dimension/serial	COVERED-18	18	
Vendor → Consignment (D365 consignment replenishment orders)	VendConsignmentReplenishmentOrder	Vendor-owned stock, ownership change	GAP	—	Propose wave 16: consignment inventory (vendor-owned on-hand, ownership-change journal, consignment replenishment orders)
1099 → Vendor 1099 transactions	Vend1099Trans (Tax1099Summary)	Tax 1099 amounts per vendor	COVERED-13	13	1099 reporting hooks
Vendor → Vendor collaboration invoices (D365)	VendCollabInvoice	Vendor-submitted invoices	COVERED-20	20	Supplier portal invoice submission
Vendor → Vendor evaluation (R3 procurement)	VendEvaluation	Rate vendors on criteria	COVERED-33	33	Supplier quality scorecards
Purchase agreements (link)	PurchAgreement	Blanket agreements	COVERED-17	17	
Vendor → Charges transactions	MarkupTrans	Posted charges	COVERED-17	17	
Vendor → Deliveries (Vendor delivery schedule)	PurchLineDeliverySchedule	Delivery schedules on PO lines	COVERED-17	17	

12.2.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Vendor transactions inquiry	Posted transactions by vendor	COVERED-19	19	
Vendor balance (Vendor balance list)	Balances by vendor	COVERED-19	19	
Vendor aging (Aged balances inquiry)	Aging by period definition	COVERED-19	19	Vendor aging
Invoice history and matching details	Match status per invoice	COVERED-18	18	
Invoice journal inquiry / Invoice (Vendor invoice journal)	Posted invoice headers	COVERED-18	18	
Payment history / Payment inquiry	Payments by vendor	COVERED-19	19	
Settlement inquiry (Settled transactions)	Settlement pairs, cash discounts	COVERED-19	19	
Purchase order lines / Purchase order history	PO status history	COVERED-17	17	Versioned change management
Product receipt journal inquiry (Packing slip journal)	Receipts	COVERED-18	18	
Cash discount inquiry	Discounts taken/lost	COVERED-19	19	
Vendor invoice transactions (line-level)	Invoice lines	COVERED-18	18	
Journals → Confirmations / Receipts lists / Product receipts / Invoices (journal inquiries)	Posted document journals	COVERED-17	17	
Accrued purchases (Received not invoiced)	GR/IR accrual balance	COVERED-18	18	
Charges inquiry	Charges by PO	COVERED-17	17	
Withholding tax inquiry	Withholding by vendor	COVERED-13	13	
1099 → Tax 1099 summary / detail / state	1099 inquiries	COVERED-13	13	US country pack wave 48 produces IRS file formats
Vendor hold history		COVERED-7	7	Audit log
Positive pay inquiry	Exported checks	COVERED-19	19	
SSRS: Vendor aging (Vendor aging report)	Aged AP	COVERED-19	19	
SSRS: Vendor balance list with credit limit		COVERED-19	19	
SSRS: Vendor invoice (printed invoice copy)		COVERED-18	18

12.2.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Payment proposal (batch)	Generate payment lines	COVERED-19	19	
Generate payments (payment media)	Produce ACH/SEPA/check/wire files	COVERED-19	19	pain.001, NACHA, check print
Payment file return import (pain.002)	Bank status ingestion	COVERED-19	19	
Positive pay export		COVERED-19	19	
Foreign currency revaluation (AP)	Revalue open vendor items	COVERED-12	12	
Settlement → Settle open transactions (batch) / Automatic settlement	Auto-settle by rules	COVERED-19	19	
Reverse settlement		COVERED-19	19	
Cash discount → Recalculate cash discount dates		COVERED-19	19	
Invoice → Post pending vendor invoices (batch)		COVERED-18	18	
Invoice → Vendor invoice policy violations (R3 audit)	Policy check batch	PARTIAL-48 (audit policies are not named; SoD engine is)	48	Gap register
Purchase order → Confirm / Receive / Invoice (batch posting)	Mass posting	COVERED-17	17	Batch job framework wave 4
Purchase order → Update → Delivery date / Finalize PO (close)		COVERED-17	17	
Purchase order → Purchase order confirmation requests (vendor collaboration)		COVERED-20	20	
Purchase order → Evaluated receipt settlement (ERS)	Self-billing invoices from receipts	COVERED-18	18	
Purchase order → Delete purchase orders / lines (clean up)	Housekeeping	COVERED-17	17	
Purchase order → Vendor delivery schedule update		COVERED-17	17	
1099 → Update 1099 (year-end) / Print 1099 / electronic filing		COVERED-48	48	US pack
Vendor → Vendor hold release (mass)		COVERED-7	7	
Vendor → Update vendor bank accounts status (prenote results)		PARTIAL-19 (prenote)	19	
Promissory notes → Draw / Redraw / Remit / Settle (periodic batches)		GAP	—	Propose wave 36: promissory notes
Clean up → Delete settled transactions / Compress vendor transactions		SUPERSEDED (append-only ledger; archive to lakehouse wave 46)	46	
Consignment → Consignment replenishment order processing		GAP	—	Propose wave 16: consignment
Invoice capture → Process OCR queue (D365)		COVERED-18	18	
Vendor collaboration → Provision users / invite (D365)		COVERED-20	20	
Purchase requisition → Release approved requisitions / Consolidate (procurement, link)		COVERED-17	17	

12.2.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Accounts payable parameters — General tab	Posting profile default, settlement priority, cash discount administration, credit note as correction, delivery address, intercompany	COVERED-19	19	
Accounts payable parameters — Updates tab	PO defaults (confirmation/receipt/invoice posting rules), safety levels on PO, enable change management, cancel/reverse rules, product receipt posting	COVERED-17	17	
Accounts payable parameters — Invoice tab	Invoice matching (2-way/3-way/none), post product receipt in ledger, post invoice automatically, approval workflow, invoice totals matching, charges matching, allow price tolerance, use invoice register, posting of invoice: tax, prepayment	COVERED-18	18	
Accounts payable parameters — Settlement tab	Automatic settlement, cash discount mark, exchange rate at settlement, reverse settlement options	COVERED-19	19	
Accounts payable parameters — Ledger and sales tax tab	Sales tax, posting type, financial dimension defaults	COVERED-13	13	
Accounts payable parameters — Credit rating / Blocking	Block types	COVERED-7	7	
Accounts payable parameters — Number sequences	Invoice, payment, PO sequences	COVERED-5	5	
Accounts payable parameters — Summary update	Consolidation of POs at invoicing by invoice account/order/automatic summary	COVERED-18	18	Summary invoice posting across POs
Accounts payable parameters — Prices (Price tolerance)	Default price tolerance percentage, charges tolerance	COVERED-18	18	
Accounts payable parameters — Vendor invoice workflow (D365 Invoice capture)		COVERED-18	18	
Vendors → Vendor groups	Group, default terms, default tax group	COVERED-7	7	
Vendors → Vendor posting profiles	Summary account, settle account, sales tax prepayment, arrival account per group/vendor/table	COVERED-7	7	Posting profile hooks in 7; accounts resolved in 11

Name	Key parameters / options	Passage status	Wave	Notes
Vendors → Vendor holds reasons (D365)		COVERED-7	7	
Vendors → Vendor request types (R3)	Request workflow types	PARTIAL-20 (vendor request workflow)	20	
Vendors → Vendor evaluation criteria / criterion groups (R3)	Scoring criteria	COVERED-33	33	
Vendors → Vendor profiles / Vendor user requests (EP)		SUPERSEDED (supplier portal wave 20 with Keycloak identities)	20	
Payment → Terms of payment	Net days, cash on delivery, current month, COD, payment schedule, grace	COVERED-7	7	
Payment → Cash discounts	Discount %, days, next discount code, ledger account	COVERED-7	7	Also in 19 settlement
Payment → Methods of payment (vendor)	Period, account type, file format (export), bridging posting, payment specification, remittance, bank transaction type, check/EFT/SEPA, positive pay format, validation	COVERED-19	19	
Payment → Payment specifications	Per method of payment code (e.g. SEPA purpose)	COVERED-19	19	
Payment → Payment fees	Fee per bank/method with ledger account	COVERED-19	19	
Payment → Payment days	Fixed days of week/month for payment date	COVERED-19	19	
Payment → Payment schedules	Installments (fixed amount/quantity/percentage)	COVERED-7	7	
Payment → Payment calendar (D365)	Bank holidays by country for due dates	PARTIAL-19 (payment calendar / bank holiday due-date shifting is not named)	19	Gap register
Payment → Promissory note setup (journal names, posting profiles, protest)		GAP	—	Propose wave 36: promissory notes
Payment → Positive pay formats	XSLT-defined bank formats	COVERED-19	19	Positive pay export
Payment → Payment purpose codes (country)		COVERED-19	19	SEPA purpose codes
Payment → Direct debit (vendor)		OUT-OF-SCOPE (vendor-side direct debit is country-specific; SEPA creditor side covered via customer direct debit in AR)	—	
Charges → Charges codes (purchase)	Debit/credit type (item/ledger/customer/vendor), tax group, posting	COVERED-17	17	
Charges → Auto charges	Automatic charges by account/item code, mode of delivery	COVERED-17	17	
Charges → Vendor charges groups / Item charges groups / Delivery charges groups		COVERED-17	17	
Charges → Charges allocation (to lines)	Allocate header charges to lines by net amount/quantity	COVERED-17	17	Landed cost in 34
Invoice matching → Price tolerances (item/vendor/group)	Tolerance % per item/vendor combination	COVERED-18	18	
Invoice matching → Charges tolerances		COVERED-18	18	
Invoice matching → Invoice totals tolerances (D365: Invoice totals matching)		COVERED-18	18	
Invoice matching → Matching policy by item/vendor	2-way/3-way per item/vendor	COVERED-18	18	
Invoice → Vendor invoice policies (R3 audit policy)	Policy rules for invoice audit (duplicates, missing receipts)	PARTIAL-48 (audit policies)	48	
Invoice → Invoice register setup (arrival accounts)	Via posting profile	COVERED-18	18	
Invoice → Vendor invoice automation parameters (D365)		COVERED-18	18	
Forms → Form setup (PO, receipt, invoice print options)	Document notes, print settings, number of copies	COVERED-46	46	
Forms → Form notes	Notes per document type	COVERED-46	46	
Forms → Print management	Conditional print destinations per document/vendor	PARTIAL-46 (print management conditional routing per account is not named; document designer is)	46	Gap register
Tax 1099 → 1099 fields / 1099 boxes / State 1099 / 1099 software vendor info	IRS box mapping	COVERED-48	48	US pack; hooks in 13
Distribution → Financial dimension defaults on vendor		COVERED-11	11	
Vendor bank → Bank transaction types, Bank parameters (link)		COVERED-36	36	
Trade agreements → Price/discount agreement journal names		COVERED-26	26	Pricing engine applies to purchase prices too (wave 17 uses it)
Trade agreements → Activate price/discount (Trade agreement activation)		COVERED-26	26	
Trade agreements → Price/discount groups (vendor)		COVERED-26	26	
Trade agreements → Purchase price tolerance		COVERED-18	18	
Purchase → Purchase order defaults (order type, charges)		COVERED-17	17	
Purchase → Purchase order change management (activation per vendor)		COVERED-17	17	
Purchase → Prepayment setup (prepayment posting profile)		COVERED-19	19	

Name	Key parameters / options	Passage status	Wave	Notes
External codes (vendor)	Partner codes for EDI	COVERED-35	35	Partner profiles
Vendor → Vendor item catalog (Vendor external item numbers)	Vendor item numbers, descriptions	COVERED-8	8	External item numbers on released product
Withholding tax (vendor group assignment)		COVERED-13	13	
Vendor → Purchase order approval policies (link to Procurement)		COVERED-17	17	
Vendor → Vendor consignment setup (D365 consignment parameters, ownership change journal names)		GAP	—	Propose wave 16: consignment
Workflow → Accounts payable workflows (vendor invoice, PO, vendor change)		COVERED-4	4	
Number sequences (AP)		COVERED-5	5	
Vendor → Vendor collaboration parameters (D365)		COVERED-20	20	
Payment → Electronic payment file formats (AIF-based/ER)		COVERED-19	19	ISO 20022 generator; ER designer in 48 for exotic formats
Payment → Check layout (bank account)	Check printing layout per bank account	COVERED-19	19	Check layout in document designer; bank check management in 36

12.3 Accounts receivable

Accounts receivable covers customer master (wave 7), free-text and sales invoices (29), payments, settlement, collections, interest and lockbox (30), credit management (27) and commissions (26). AX 2012 R3 also places the sales order list here; it is assessed in §12.17.

12.3.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Customers (list page)	CustTableListPage	All customers with balance/aging FactBoxes	COVERED-7	7	Party model with Customer role
Customer details	CustTable	General, addresses, contacts, misc details, sales demographics, credit and collections, invoice and delivery, sales order defaults, payment defaults, financial dimensions, retail	COVERED-7	7	
Customer → Credit limit / credit rating / mandatory credit limit	CustTable (credit tab)	Limit, rating, mandatory check	COVERED-27	27	Credit management
Customer bank accounts	CustBankAccount	Bank details for direct debit/refunds	COVERED-30	30	
Customer → Direct debit mandates (SEPA, R3)	CustDirectDebitMandate	Mandate lifecycle, sequence type	PARTIAL-30 (SEPA direct debit mandates (pain.008) are not named; collections and cash application are)	30	Gap register
Sales orders (list page, also in AR)	SalesTableListPage		COVERED-27	27	See §12.17
Free text invoices (list page)	CustFreeInvoiceListPage	Non-item invoices with ledger lines	COVERED-29	29	
Free text invoice details	CustFreeInvoice	Lines with ledger account, tax, dimensions, charges	COVERED-29	29	
Recurring free text invoices (R3 templates)	CustInvoiceTemplate / CustRecurrenceInvoice	Template-based recurring invoices	COVERED-29	29	Subscription/recurring schedules
Customer invoices → Open customer invoices	CustInvoiceJournal	Posted invoices open	COVERED-30	30	
Customer invoices → Invoice journal (customer)	LedgerJournalTable (CustInvoiceJournal)	Ledger-based customer invoices	COVERED-29	29	
Customer invoices → Sales invoice journal (posted)	CustInvoiceJour	Posted sales invoices	COVERED-29	29	
Payments → Payment journal	LedgerJournalTable (CustPaymentJournal)	Customer receipts, settlement, deposit slips	COVERED-30	30	Cash application
Payments → Lockbox transactions (R3 US)	CustLockbox / CustPaymLockbox	Import BAI2 lockbox files, match, create payment journal	COVERED-30	30	
Payments → Bill of exchange journals (Draw / Redraw / Protest / Remittance / Settle)	LedgerJournalTable (CustBillOfExchange*)	Customer bills of exchange	GAP	—	Propose wave 36: bills of exchange (customer) with remittance for collection/discount, protest, settle; not in any wave
Payments → Deposit slips	BankDeposit	Group receipts into bank deposit	COVERED-36	36	
Payments → Payment advice (customer)	CustPaymAdvice		COVERED-30	30	
Payments → Credit card payments (Payment services)	CreditCardAuthTrans	Authorize/capture via payment service	COVERED-30	30	Stripe/Adyen adapter
Payments → Postdated checks (R3 APAC)	CustPostDatedCheck	Register, mature, settle PDCs	GAP	—	Propose wave 36: postdated checks (customer and vendor) as a treasury instrument
Collections → Collections (list page, R3 collections workspace)	CustCollectionsListPage	Aging, activities, promises, cases per customer	COVERED-30	30	Collections workspace
Collections → Collections (customer detail page)	CustCollections	Transactions, activities, promise to pay, dispute, write-off, NSF	COVERED-30	30	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Collections → Collection letter notes (journal)	CustCollectionLetterJour	Generated collection letters	COVERED-30	30	Dunning levels
Collections → Interest notes (journal)	CustInterestJour	Interest invoices	COVERED-30	30	
Collections → Customer pools	CustCollectionsPool	Query-based customer groupings for collectors	COVERED-30	30	
Collections → Collection agents	CustCollectionsAgent	Agent assignment	COVERED-30	30	
Collections → Aging snapshot	CustAgingLegalEntity (CustAgingSnapshot)	Snapshot of aging for workspace	COVERED-30	30	Aging computed live from open items; snapshot for KPI history in 46
Collections → Cases (collection cases)	CaseDetail	Case per customer dispute	PARTIAL-30 (disputes workflow named; generic case management not)	30	See §12.29 case management gap
Collections → Promise to pay / NSF / Write-off actions	CustCollections (actions)		COVERED-30	30	
Customer transactions	CustTrans	Posted customer ledger	COVERED-30	30	
Customer open transactions (Settle open transactions)	CustOpenTrans	Settlement with marking, cross-currency, discounts	COVERED-30	30	
Closed transaction editing (customer)	CustSettledTrans	Reverse settlement	COVERED-30	30	
Customer → Interest adjustments	CustInterestAdj	Adjust interest notes	COVERED-30	30	
Customer → Trade agreements (price/discount agreement journals)	PriceDiscAdmTable	Customer pricing journals	COVERED-26	26	
Customer → Charges transactions	MarkupTrans		COVERED-26	26	
Customer → Prepayments (sales order prepayment)	SalesPrepayment (via payment journal)	Customer prepayment and application	COVERED-30	30	
Customer → Credit management (D365 add-in): Credit holds list, Credit limit adjustments journal, Blocking rules	CustCreditManagement*	Credit holds, temporary limits, rules	COVERED-27	27	Credit holds, limits, release workflow
Customer → Customer self-service (D365 customer portal)			COVERED-30	30	Customer portal
Returns → Return orders (link)	ReturnTable	RMA	COVERED-30	30	
Commission transactions	CommissionTrans	Posted commission	PARTIAL-26 (commission calculation hooks are named, but commission posting to vendor/employee and transactions are not)	26	Gap register
Customer → Customer invoice (packing slip based) posting — Summary update	SalesEditLines	Consolidated invoicing	COVERED-29	29	
Customer → Global customer (cross-company)	CustTable (global)		COVERED-7	7	Party shared across entities
Customer → Rebates (Customer rebate agreements — TAM link)	TAMRebateAgreement		COVERED-26	26	Rebate accrual 26, settlement 30

12.3.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Customer transactions inquiry		COVERED-30	30	
Customer balance list / Customer balance		COVERED-30	30	
Aged balances (customer aging inquiry)		COVERED-30	30	
Invoice journal / Invoice lines inquiry	Posted invoices	COVERED-29	29	
Payment history / Payment inquiry		COVERED-30	30	
Settlement inquiry (Settled transactions)		COVERED-30	30	
Interest note inquiry		COVERED-30	30	
Collection letter inquiry		COVERED-30	30	
Credit card transactions inquiry		COVERED-30	30	
Lockbox import history		COVERED-30	30	
Sales order inquiries (Sales orders, Backorders, Open order lines, Delivered not invoiced)		COVERED-27	27	
Journals → Confirmations / Picking lists / Packing slips / Invoices	Posted document journals	COVERED-28	28	Invoices in 29
Commission inquiry		PARTIAL-26 (commission posting)	26	
Credit management inquiries (D365: credit holds history, credit limit history)		COVERED-27	27	
Customer hold / on-hold history		COVERED-7	7	
Direct debit mandate inquiry		PARTIAL-30 (direct debit)	30	
Bill of exchange inquiry		GAP	—	Propose wave 36: bills of exchange
Postdated check inquiry		GAP	—	Propose wave 36: postdated checks
Free text invoice inquiry		COVERED-29	29	

Name	Purpose	Passage status	Wave	Notes
Customer self-service inquiries (portal)		COVERED-30	30	
SSRS: Customer aging (Aged balances report)		COVERED-30	30	
SSRS: Customer balance list / with credit limit		COVERED-30	30	
SSRS: Customer account statement (external / internal)	Statements	COVERED-30	30	Customer statements
SSRS: Customer transactions		COVERED-30	30	
SSRS: Invoice (sales invoice document) / Free text invoice document / Invoice specification	Customer-facing documents	COVERED-29	29	Rendered wave 46; e-invoice 35
SSRS: Collection letter note document		COVERED-30	30	
SSRS: Interest note document		COVERED-30	30	
SSRS: Customer payment advice / Payment summary		COVERED-30	30	
SSRS: Deposit slip		COVERED-36	36	
SSRS: Customer due date list (Open invoices by due date)		COVERED-30	30	
SSRS: Expected cash flow (customer)		COVERED-36	36	
SSRS: Customer base data / Customer list		COVERED-7	7	
SSRS: Sales order confirmation / Picking list / Packing slip (documents)		COVERED-28	28	Confirmation in 27
SSRS: Sales analysis (Sales by customer/item/period, Top customers)		COVERED-46	46	Semantic layer
SSRS: Commission report / Commission transactions		PARTIAL-26 (commission posting)	26	
SSRS: Cash discount list / Terms of payment / Posting profiles listings		COVERED-7	7	
SSRS: Sales tax reporting (customer)		COVERED-13	13	
SSRS: Bill of exchange documents / Remittance list		GAP	—	Propose wave 36: bills of exchange
SSRS: Credit card payment report		COVERED-30	30	
SSRS: Customer invoice totals (country-specific)		OUT-OF-SCOPE (country pack beyond v1 set)	—	
SSRS: Lockbox report		COVERED-30	30	
SSRS: Collections (Collections activities, Promises)		COVERED-30	30	
SSRS: Customer/customer group statistics		COVERED-46	46	
SSRS: Prepayment statement (customer)		COVERED-30	30	
SSRS: External codes listing		COVERED-35	35	

12.3.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Collections → Create collection letters	Generate letters by sequence/level	COVERED-30	30	Dunning run
Collections → Print/post collection letters		COVERED-30	30	
Collections → Interest calculation (Create interest notes)	Calculate interest on overdue	COVERED-30	30	
Collections → Print/post interest notes		COVERED-30	30	
Collections → Age customer balances (aging snapshot)		COVERED-30	30	
Collections → Customer pool refresh		COVERED-30	30	
Settlement → Settle open transactions (batch) / Automatic settlement		COVERED-30	30	
Foreign currency revaluation (AR)		COVERED-12	12	
Payments → Lockbox import (batch)		COVERED-30	30	
Payments → Payment file import (customer payments / camt.054)		COVERED-30	30	camt.053/054 auto-match
Payments → Generate direct debit (pain.008)	SEPA direct debit collection	PARTIAL-30 (direct debit)	30	
Payments → Bill of exchange remittance/protest batches		GAP	—	Propose wave 36: bills of exchange
Payments → Credit card settlement/capture (payment services)	Capture authorized cards on invoice	COVERED-30	30	
Sales update → Confirmation / Picking list / Packing slip / Invoice (batch)	Mass posting	COVERED-28	28	Invoice 29
Sales update → Summary update (consolidated invoicing)		COVERED-29	29	
Sales update → Recurring free text invoices (generate)		COVERED-29	29	
Sales update → Reservation (batch) / Explode BOM		COVERED-16	16	
Sales update → Delete orders (clean up)		COVERED-27	27	
Sales update → Update credit holds / Credit management periodic (D365)		COVERED-27	27	
Customer statements (periodic generate)		COVERED-30	30	
Clean up → Delete settled transactions / Compress customer transactions		SUPERSEDED (append-only; archive to lakehouse)	46	
Commission → Calculate/post commissions (via invoice)		PARTIAL-26 (commission posting)	26	
Credit card → Authorization expiry cleanup		COVERED-30	30	
Rebates → Process rebates / Cumulate / Approve / Pay (TAM link)		COVERED-30	30	Rebate settlement
Customer → Customer payment predictions (D365 Finance insights)	ML prediction of payment date	COVERED-47	47	Collections outreach agent; prediction model under wave 47
Customer → Update customer bank account status		COVERED-30	30	

Name	Purpose	Passage status	Wave	Notes
Customer → Send e-invoices (ER)		COVERED-35	35	Peppol
Interest → Interest adjustment batch		COVERED-30	30	

12.3.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Accounts receivable parameters — General tab	Posting profile, settlement priority, delivery address, credit rating, mandatory credit limit, credit limit type (none/balance/balance+packing slip/all), message when exceeding, intercompany	COVERED-27	27	
Accounts receivable parameters — Updates tab	Posting defaults for confirmation/picking/packing slip/invoice, safety levels, cancel options, picking list posting, packing slip in ledger, delivery date control defaults	COVERED-28	28	
Accounts receivable parameters — Settlement tab	Automatic settlement, cash discount rules, exchange rate at settlement, settlement of overpayments	COVERED-30	30	
Accounts receivable parameters — Collections tab	Collection letter from (per customer/transaction), interest calculation basis, collection agents, aging period definition	COVERED-30	30	
Accounts receivable parameters — Credit rating / Credit management (D365)	Credit management automation	COVERED-27	27	
Accounts receivable parameters — Ledger and sales tax tab		COVERED-13	13	
Accounts receivable parameters — Prices tab	Price/discount search defaults, total discount calculation, smart rounding	COVERED-26	26	
Accounts receivable parameters — Summary update tab	Summary update by invoice account/order/automatic/none, summary update parameters	COVERED-29	29	
Accounts receivable parameters — Shipments tab (AR delivery)	Output order, shipment defaults	SUPERSEDED (wave 28 fulfillment / wave 31 WHS model replaces WMS-I shipments)	28	
Accounts receivable parameters — Number sequences		COVERED-5	5	
Accounts receivable parameters — Payment services (credit card)	Processor connection, authorization expiry	COVERED-30	30	
Accounts receivable parameters — Sales order holds	Default hold behaviors	COVERED-27	27	
Customers → Customer groups		COVERED-7	7	
Customers → Customer posting profiles	Summary account, settle account, collection letter sequence, interest code, write-off account	COVERED-7	7	
Customers → Customer hold reasons / On-hold statuses (Invoice/All/Payment/Requisition)		COVERED-7	7	
Customers → Customer self-service parameters (EP)		SUPERSEDED (customer portal wave 30)	30	
Payment → Terms of payment		COVERED-7	7	
Payment → Cash discounts		COVERED-7	7	
Payment → Methods of payment (customer)	Period, account type, file format (import), bridging, lockbox, credit card, direct debit, payment specification	COVERED-30	30	
Payment → Payment specifications / Payment fees / Payment days / Payment schedules		COVERED-30	30	Schedules in 7
Payment → Payment calendar (D365)		PARTIAL-19 (payment calendar)	19	
Payment → Lockbox setup (lockbox, lockbox file format, customer MICR numbers)	BAI2 format mapping	COVERED-30	30	
Payment → Direct debit mandate setup (SEPA creditor identifier)		PARTIAL-30 (direct debit)	30	
Payment → Bill of exchange setup (journal names, posting profiles, protest reasons, remittance types)		GAP	—	Propose wave 36: bills of exchange
Payment → Postdated checks setup (R3 APAC)		GAP	—	Propose wave 36: postdated checks
Payment → Credit card → Payment services / Credit card types / Credit card processors	Authorize.net-style connector	COVERED-30	30	
Payment → Prepayment posting profile		COVERED-30	30	
Collections → Collection letter sequences	Levels, days, fees, letter text, block/hold actions	COVERED-30	30	
Collections → Interest codes	Rate by period, grace, min/max, ranges, calculation by date/days	COVERED-30	30	
Collections → Aging period definitions	Buckets by day/month/period	COVERED-30	30	
Collections → Customer pools		COVERED-30	30	
Collections → Collection agents / Collections team (R3 team)		COVERED-30	30	
Collections → Collections email templates (D365)		PARTIAL-30 (email templates for dunning/collections communication not named; letters are)	30	Gap register (email framework, Org admin)
Collections → Write-off reason codes / Write-off account		COVERED-30	30	
Collections → NSF information (bank → NSF fees)		COVERED-36	36	
Credit management (D365) → Credit management parameters, Blocking rules, Scoring groups, Risk groups, Credit limit adjustment journal names, Guarantees/insurance, Credit management groups	Rule-based holds and scoring	COVERED-27	27	Aging-based rules, risk scoring
Charges → Charges codes (sales) / Auto charges / Customer charges groups / Item charges groups / Delivery charges groups		COVERED-26	26	Charges are a pricing condition
Commission → Commission calculation / Commission sales groups / Commission customer groups / Commission item groups / Commission posting		PARTIAL-26 (commission posting and sales group/rep assignment)	26	

Name	Key parameters / options	Passage status	Wave	Notes
Forms → Form setup (sales documents) / Form notes / Print management		PARTIAL-46 (print management routing)	46	
Forms → Form sorting (sort lines on documents)		COVERED-46	46	Document designer
Trade agreements → Price/discount agreement journal names / Activate / Price/discount groups (customer, line, multiline, total)		COVERED-26	26	
Trade agreements → Smart rounding (Round-off) rules	Psychological price rounding	COVERED-26	26	
Trade agreements → Supplementary items	Free/mandatory add-on items	PARTIAL-26 (supplementary items are not named in pricing or order waves)	27	Gap register
Sales → Order types / Order hold codes / Order event setup		COVERED-27	27	
Sales → Delivery (Modes of delivery, Terms of delivery, Delivery schedule defaults, Destination codes)		COVERED-28	28	Terms of delivery in 7
Sales → Sales tax exemption numbers on customer		COVERED-13	13	
Sales → Customer item numbers (External item descriptions)		COVERED-8	8	
Sales → Sales reasons / Reason codes (customer)		PARTIAL-11 (reason codes)	11	
Sales → Sales statistics / Statistics groups		COVERED-46	46	
Sales → Customer classification groups / Line of business / Segments / Subsegments		COVERED-7	7	Customer attributes
Sales → Sales districts / Sales groups (sales reps)		PARTIAL-26 (sales groups/reps for commission)	26	
Sales → Campaign/prospect setup (link to Sales & marketing)		OUT-OF-SCOPE (CRM non-goal)	—	
External codes (customer)		COVERED-35	35	
Workflow → Accounts receivable workflows (free text invoice, credit limit, customer change)		COVERED-4	4	
Statement → Customer statement setup (statement layout, statement intervals)		COVERED-30	30	
Interest → Interest adjustment reasons		COVERED-30	30	
Number sequences (AR)		COVERED-5	5	
Rebates → Rebate agreements (TAM) / Rebate program types / Rebate groups		COVERED-26	26	See §12.18
Returns → Return reason codes / Return reason code groups / Disposition codes / Disposition actions (link to Sales & marketing)		COVERED-30	30	
E-invoice setup (Electronic invoice parameters, EDI)		COVERED-35	35	
Customer → Customer tax registration / VAT numbers		COVERED-7	7	

12.4 Budgeting

AX 2012 R2/R3 budgeting = budget register entries, budget control, budget planning (R2+). All of it lands in wave 38.

12.4.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Budget register entries (list page)	BudgetTransactionListPage	All register entries by code/model	COVERED-38	38	
Budget register entry details	BudgetTransaction	Header/lines, budget type (original, transfer, revision, encumbrance, pre-encumbrance, carry-forward), allocation, workflow	COVERED-38	38	
Budget plans (list page, R2+)	BudgetPlanListPage	Budget planning documents by process/scenario/org	COVERED-38	38	
Budget plan details	BudgetPlan	Lines per scenario, worksheets (Excel), justification, workflow stages	COVERED-38	38	Top-down/bottom-up
Budget control statistics	BudgetControlStatistics	Budget vs actual vs encumbrance by dimension	COVERED-38	38	
Budget plan → Budget plan templates / worksheets	BudgetPlanTemplate	Excel-based planning worksheets	PARTIAL-38 (Excel worksheet round-trip for budget plans is not named; planning workflow and scenarios are)	38	Gap register
Budget account entries (fixed assets budgets link)	AssetBudget	Capex budgets from FA	COVERED-37	37	Asset budgeting
Budget → Reservations for encumbrances (inquiry)	BudgetSourceTracking	Encumbrance tracking per source document	COVERED-38	38	Commitments

12.4.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Budget control statistics inquiry	Budget funds available	COVERED-38	38	
Actual vs budget inquiry		COVERED-38	38	
Budget register entry inquiry / Budget balances		COVERED-38	38	
Budget plan inquiries (Budget plan lines, Budget plan amounts by scenario)		COVERED-38	38	
Budget check results (Budget check errors/warnings)	Per source document	COVERED-38	38	
Budget control activity (source document encumbrance)		COVERED-38	38	
SSRS: Budget funds available		COVERED-38	38	
SSRS: Actual versus budget		COVERED-38	38	

Name	Purpose	Passage status	Wave	Notes
SSRS: Budget control activity		COVERED-38	38	
SSRS: Budget register entries / Budget details		COVERED-38	38	
SSRS: Budget plan (printed)		COVERED-38	38	
SSRS: Budget transactions by model		COVERED-38	38	
SSRS: Ledger budget (legacy LedgerBudget)		SUPERSEDED (register entries)	38	

12.4.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Budget transfers (process transfer register entries)		COVERED-38	38	
Budget → Recalculate budget control balances	Rebuild available balances	COVERED-38	38	
Budget → Carry forward budget / Year-end budget processing		COVERED-38	38	
Budget planning → Generate budget plan from source (GL actuals, previous plan, FA, projects, demand forecast, HR positions)		PARTIAL-38 (generating plans from position/HR forecasts and demand forecasts is not named)	38	Gap register
Budget planning → Budget plan workflow stage advance (batch)		COVERED-38	38	
Budget planning → Generate budget register entry from budget plan		COVERED-38	38	
Budget → Allocate budget (allocation terms / period allocation keys / dimension allocation)		COVERED-38	38	
Budget → Import/export budget register entries (Excel/DIXF)		COVERED-5	5	Excel import/export
Budget → Delete budget balances / purge		COVERED-38	38	
Budget control → Activate/deactivate configuration		COVERED-38	38	
Budget → Encumbrance year-end process (public sector)		OUT-OF-SCOPE (public sector)	—	

12.4.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Budgeting parameters	Default budget model, budget transfer journal, number sequences, budget balances update	COVERED-38	38	
Basic budgeting → Budget models	Models with submodels, stop/blocked	COVERED-38	38	Budget versions
Basic budgeting → Budget codes	Codes per budget type with workflow	COVERED-38	38	
Basic budgeting → Budget cycles / Budget cycle time spans	Fiscal cycle mapping	COVERED-38	38	
Basic budgeting → Budget transfer rules	Allowed transfers between dimensions	COVERED-38	38	
Basic budgeting → Budget allocation terms	Allocation by dimension percent	COVERED-38	38	
Basic budgeting → Period allocation keys	Spread across periods	COVERED-38	38	
Basic budgeting → Dimensions for budgeting	Which financial dimensions are budgeted	COVERED-38	38	
Basic budgeting → Budget register entry workflow		COVERED-38	38	
Budget control → Budget control configuration (Define parameters, Budget funds available calculation, Documents and journals, Assign budget models, Define budget control rules, Budget groups, Over budget permissions, Activate)	Full budget control configuration	COVERED-38	38	Budget checks with tolerances and overrides
Budget control → Budget control rules / Budget groups		COVERED-38	38	
Budget control → User groups with override permissions		COVERED-38	38	
Budget planning → Budget planning configuration (Scenarios, Stages, Workflows, Stage rules, Budget plan priorities, Templates, Columns, Layouts, Parameters)		COVERED-38	38	
Budget planning → Budget planning processes	Process per cycle × ledger × org hierarchy	COVERED-38	38	
Budget planning → Budget planning templates (Excel)		PARTIAL-38 (Excel worksheets)	38	
Budget planning → Budget plan document layouts (D365)		COVERED-38	38	
Budget planning → Position forecasting (D365 HR-driven)	Forecast positions/compensation into plan	PARTIAL-38 (position forecasting)	38	Depends on HR wave 42; sequencing note in gap register
Budget planning → Budget planning allocation schedules		COVERED-38	38	
Fixed asset budgets (link)		COVERED-37	37	
Project budgets (link)		COVERED-41	41	
Workflow → Budgeting workflows		COVERED-4	4	
Number sequences (budgeting)		COVERED-5	5	

12.5 Cash and bank management

Everything lands in wave 36 except payment generation (19) and customer receipts (30). Bills of exchange / promissory notes and postdated checks are gaps (proposed wave 36).

12.5.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Bank accounts (list page)	BankAccountTableListPage	All bank accounts	COVERED-36	36	
Bank account details	BankAccountTable	Account, currency, main account, check setup (layout, numbering), positive pay, SEPA/IBAN, bank groups, reconciliation settings, signatories	COVERED-36	36	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Bank transactions (per account)	BankAccountTrans	Posted bank transactions	COVERED-36	36	
Bank statements (list page, Advanced bank reconciliation R2+)	BankStatementListPage	Imported statements (camt.053, BAI2, MT940)	COVERED-36	36	
Bank statement details	BankStatement	Lines, status, validation	COVERED-36	36	
Bank reconciliation worksheets (Advanced)	BankReconciliationWorksheet	Match statement to book, rules, reconcile	COVERED-36	36	
Account reconciliation (classic bank reconciliation)	BankReconciliation	Manual tick-off reconciliation	SUPERSEDED (advanced reconciliation with rules and ML suggestions, wave 36)	36	Classic mode retained as manual matching within the worksheet
Checks (list)	BankChequeTable	Issued checks, void, reprint, status	COVERED-36	36	Check management
Deposit slips	BankDeposit	Deposit of customer receipts	COVERED-36	36	
Letters of credit (Import/Export letters of credit, R2+)	BankLC* (BankLCImport, BankLCExport)	LC lifecycle, shipments, margins, charges	COVERED-36	36	
Letters of guarantee	BankLG*	Guarantee issue, extend, cancel, liquidate	COVERED-36	36	
Bank facilities (Facility agreements)	BankFacilityAgreement	Facility limits per bank, types	COVERED-36	36	
Bank → Positive pay transactions	BankPositivePayTable	Export status	COVERED-19	19	
Bank → Cash flow forecast (D365 Cash flow forecasting workspace)	CashFlowForecast*	Forecast from AP/AR/budget/projects	COVERED-36	36	
Cash management (D365 Cash positioning)		Intraday positions	COVERED-36	36	camt.052
Bank → Bank document (LC/LG) transactions	BankDocument*		COVERED-36	36	
Bank → Bills of exchange / Promissory notes (links)			GAP	—	Propose wave 36: bills of exchange and promissory notes (see AR/AP)
Bank → Postdated checks (links)			GAP	—	Propose wave 36: postdated checks
Bank → Payment journal (bank-originated)	LedgerJournalTable (bank)		COVERED-36	36	
Bank → Bank account signatories (D365)	BankAccountSignatory	Signers and approvals	COVERED-36	36	
Intercompany netting / cash pooling (in-house banking)	— (not in AX; SAP IHC)		COVERED-36	36	In-house banking basics

12.5.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Bank transactions inquiry		COVERED-36	36	
Bank balance inquiry / Bank account balance by date		COVERED-36	36	
Check inquiry / Check register		COVERED-36	36	
Reconciliation inquiry / Reconciliation history		COVERED-36	36	
Bank statement inquiry (imported statements)		COVERED-36	36	
Deposit slip inquiry		COVERED-36	36	
Letter of credit / guarantee inquiries		COVERED-36	36	
Cash flow forecast inquiry (Cash flow forecasts by period)		COVERED-36	36	
Bank facility usage inquiry		COVERED-36	36	
Positive pay inquiry		COVERED-19	19	
SSRS: Bank transactions / Bank account statement (internal)		COVERED-36	36	
SSRS: Check register / Checks report / Void checks		COVERED-36	36	
SSRS: Reconciliation summary / Bank reconciliation report		COVERED-36	36	
SSRS: Deposit slip (document)		COVERED-36	36	
SSRS: Cash flow forecast report		COVERED-36	36	
SSRS: Bank account list / Bank groups		COVERED-36	36	
SSRS: Payment reconciliation (bank)		COVERED-36	36	
SSRS: Letter of credit / guarantee documents		COVERED-36	36	
SSRS: Unreconciled transactions		COVERED-36	36	
SSRS: Bank transaction types list		COVERED-36	36	

12.5.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Import bank statements (batch)	camt.053/BAI2/MT940 import	COVERED-36	36	
Reconcile bank statements (auto-match batch)		COVERED-36	36	
Cash flow forecast → Calculate / Update forecast		COVERED-36	36	
Positive pay → Generate positive pay file		COVERED-19	19	

Name	Purpose	Passage status	Wave	Notes
Checks → Void / Reprint / Delete checks		COVERED-36	36	
Bank → Foreign currency revaluation (bank accounts)		COVERED-12	12	
Bank → Transfer bank accounts (bank transfer journal)	Account-to-account transfer	COVERED-36	36	
Letters of credit → Expiry / margin update batches		COVERED-36	36	
Bank → Delete reconciliation history / Compress		SUPERSEDED (append-only)	46	
Bank → Post bank fees / NSF		COVERED-36	36	
Bank connectivity → Send/receive files (SFTP/EBICS/host-to-host)		COVERED-36	36	Vault-managed keys
Cash positioning → Intraday statement import (camt.052)		COVERED-36	36	

12.5.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Cash and bank management parameters — General	Allow checks for bank accounts, check number method, prenotes, bank statement reconciliation defaults, advanced reconciliation enabled, letter of credit/guarantee settings	COVERED-36	36	
Cash and bank management parameters — Number sequences	Check, deposit, statement sequences	COVERED-5	5	
Bank groups	Bank master (routing, SWIFT, address)	COVERED-36	36	
Bank transaction types	Classify transactions (fee, interest, check) with GL accounts	COVERED-36	36	
Bank transaction groups	Grouping for reconciliation	COVERED-36	36	
Check layout (per bank account)	Layout, MICR, signature, copies, check form	COVERED-19	19	Check printing; management 36
Bank statement format (Advanced bank reconciliation: Bank statement formats, Transformation (XSLT), Reconciliation matching rules, Matching rule sets)	Import formats and rules	COVERED-36	36	Standard ISO 20022/BAI2/MT940 parsers; custom via ER wave 48
Bank reconciliation matching rules / rule sets	Auto-match criteria, tolerance, grouping	COVERED-36	36	
Positive pay formats		COVERED-19	19	
Letters of credit → Bank documents facility types, LC types (import/export), LC charges, Document types		COVERED-36	36	
Letters of guarantee → Guarantee types, Letters of guarantee parameters		COVERED-36	36	
Bank facilities → Facility agreements, Facility groups, Facility types		COVERED-36	36	
Cash flow forecasting setup (Cash flow forecast setup D365: AP/AR/budget/ledger/inventory/project/sales/purchase/ external forecasts; dependent accounts; liquidity accounts)		COVERED-36	36	
Payment purpose codes / Bank codes (country)		COVERED-36	36	
Bank account → Prenote setup		PARTIAL-19 (prenote)	19	
Bank → Bank holidays / Payment calendar		PARTIAL-19 (payment calendar)	19	
Bills of exchange / promissory notes setup (bank side)		GAP	—	Propose wave 36: bills of exchange
Postdated checks parameters (R3 APAC)		GAP	—	Propose wave 36: postdated checks
Bank connectivity (D365 Bank connectivity, Electronic payment setup)	Host-to-host, SWIFT, EBICS	COVERED-36	36	
Workflow → Bank workflows (bank account change approval, signatory)		COVERED-36	36	
Number sequences (bank)		COVERED-5	5	
Credit card → Payment services (link)		COVERED-30	30	
NSF information (bank fees for returned payments)		COVERED-36	36	

12.6 Fixed assets

The AX fixed asset module (asset groups, books/value models, depreciation profiles, journals, mass update, physical inventory) maps to wave 37; leases (D365 Asset leasing) are also wave 37.

12.6.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Fixed assets (list page)	AssetTableListPage	All assets	COVERED-37	37	
Fixed asset details	AssetTable	General, technical info (serial, make/model), location, responsible worker, insurance, lease, sale/scrap, value models/books, financial dimensions	COVERED-37	37	
Value models (AX 2012) / Books (D365) per asset	AssetBook (AssetBookTable)	Depreciation profile, service life, posting layer, status, acquisition info	COVERED-37	37	Multi-book
Depreciation books (tax, AX 2012)	AssetDepBookTable	Non-ledger tax books	COVERED-37	37	Tax books merged into "books" per D365
Fixed asset journal (GL journal, type fixed asset)	LedgerJournalTable (AssetJournal)	Acquisition, acquisition adjustment, depreciation, depreciation adjustment, revaluation, write-up/down, disposal sale/scrap, extraordinary depreciation, bonus depreciation	COVERED-37	37	Full transaction set
Fixed asset budget journal	AssetBudgetJournal	Budget entries for assets	COVERED-37	37	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Depreciation book journal (tax)	AssetDepBookJournal	Non-posting tax depreciation	COVERED-37	37	
Fixed asset transactions	AssetTrans	Posted asset ledger	COVERED-37	37	
Fixed asset → Physical inventory (D365 asset count)	AssetPhysicalInventory	Barcode count and reconciliation	COVERED-37	37	
Fixed asset → Lease (D365 Asset leasing: Lease, Lease book, Payment schedule, Lease classification)	AssetLease*	Lease records with classification tests	COVERED-37	37	IFRS 16 / ASC 842
Fixed asset → Asset leasing journals (lease payment, interest, depreciation)	AssetLeaseJournal		COVERED-37	37	
Fixed asset → Asset acquisition from PO/AP invoice (Fixed asset on purchase line)	PurchLine (asset)	Create/acquire asset from purchase	COVERED-37	37	Acquisition from AP invoice
Fixed asset → Acquisition from project (Estimate posting to FA)	ProjTable (asset)	CIP to asset	COVERED-37	37	CIP from projects
Fixed asset → Acquisition from inventory (Inventory to fixed asset journal)	InventJournalTable (asset)	Issue inventory to asset	COVERED-37	37	
Fixed asset → Split / Transfer (Mass transfer, Transfer fixed asset)	AssetTransfer	Transfer between dimensions/locations, split	COVERED-37	37	
Fixed asset → Reclassify (change group)	AssetReclassify		COVERED-37	37	
Fixed asset → Fixed asset additions	AssetAddition	Sub-components/additions tracking	PARTIAL-37 (asset additions (non-financial component records) not named)	37	Gap register
Fixed asset → Maintenance / Service (asset maintenance records)	AssetMaintenance		COVERED-44	44	EAM
Fixed asset → Insurance records	AssetInsurance		PARTIAL-37 (insurance records not named)	37	Gap register
Fixed asset → Asset statement (D365 Fixed asset roll forward)	AssetRollForward		COVERED-37	37	

12.6.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Fixed asset transactions inquiry		COVERED-37	37	
Fixed asset balances inquiry (Fixed asset balances by book)	NBV per book/period	COVERED-37	37	
Depreciation profile preview (Profile inquiry)	Projected depreciation	COVERED-37	37	
Fixed asset budget inquiry		COVERED-37	37	
Value model / book inquiry		COVERED-37	37	
Lease inquiries (lease liability, ROU schedules)		COVERED-37	37	
SSRS: Fixed asset list / Fixed asset base data		COVERED-37	37	
SSRS: Fixed asset transactions report		COVERED-37	37	
SSRS: Fixed asset balances / Fixed asset note (statement)		COVERED-37	37	
SSRS: Fixed asset roll forward		COVERED-37	37	
SSRS: Fixed asset depreciation forecast		COVERED-37	37	
SSRS: Fixed assets due for replacement		COVERED-37	37	
SSRS: Fixed asset insurance report		PARTIAL-37 (insurance)	37	
SSRS: Fixed asset acquisitions / disposals / Scrapped assets		COVERED-37	37	
SSRS: Fixed asset listing by location / responsible		COVERED-37	37	
SSRS: Lease reports (liability amortization, ROU, maturity analysis, disclosure)		COVERED-37	37	
SSRS: Bonus depreciation report (US)		COVERED-37	37	
SSRS: Fixed asset physical inventory report		COVERED-37	37	
SSRS: Fixed asset budget report		COVERED-37	37	
SSRS: Reconciliation Fixed assets/Ledger		COVERED-37	37	Subledger reconciles to GL

12.6.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Depreciation proposal (create depreciation journal)	Depreciation run per book/period	COVERED-37	37	
Depreciation book → Depreciation proposal (tax book)		COVERED-37	37	
Mass update (change depreciation profile/service life for many assets)		COVERED-37	37	
Mass transfer		COVERED-37	37	
Revaluation of fixed asset groups (Consumption/Revaluation batch)		COVERED-37	37	
Copy fixed asset / Copy value model		COVERED-37	37	
Fixed asset budget → Transfer to budget register		COVERED-38	38	
Fixed asset → Periodic depreciation (batch)		COVERED-37	37	
Consumption depreciation → Consumption proposal (units of production)		COVERED-37	37	
Asset leasing → Batch journal creation (payments, interest, amortization) / Lease impairment / Lease modification		COVERED-37	37	
Fixed asset → Year-end / Close value models		COVERED-37	37	
Fixed asset → Delete/compress transactions		SUPERSEDED (append-only)	46	
Fixed asset → Physical inventory count import (barcode)		COVERED-37	37	

Name	Purpose	Passage status	Wave	Notes
Fixed asset → Import assets (DIXF/Excel)		COVERED-10	10	

12.6.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Fixed assets parameters — General	Automatically create depreciation adjustments, minimum depreciation, consider prior-year depreciation, bonus depreciation, consumption depreciation, capitalization threshold, delete asset on journal post, allow multiple acquisitions, low-value pool (AU), default value models	COVERED-37	37	AU low-value pool is OOS country
Fixed assets parameters — Purchase orders	Allow asset acquisition from PO, create asset during receipt/invoice, check capitalization threshold	COVERED-37	37	
Fixed assets parameters — Number sequences		COVERED-5	5	
Fixed asset groups	Group defaults: value models, number sequence, depreciation profiles, service life, posting profile defaults	COVERED-37	37	
Fixed asset posting profiles	Ledger accounts per transaction type × group/asset × book	COVERED-37	37	
Value models (AX) / Books (D365)	Posting layer, calendar, depreciation profile, alternative profile, round-off, derived value models/books (auto-post to multiple)	COVERED-37	37	
Depreciation books (tax)	Non-posting books	COVERED-37	37	
Depreciation profiles	Methods: straight line service life, straight line life remaining, reducing balance, manual, factor, consumption, 200%/175%/150%/125% reducing, manual, RB/SL (US), Lo-Value pool; conventions (half year, mid month, mid quarter, full month, half-year start of life); period frequency	COVERED-37	37	MACRS tables
Depreciation profiles → Manual depreciation schedules (percentages per period)		COVERED-37	37	
Consumption factors / Consumption units	Units-of-production setup	COVERED-37	37	
Depreciation conventions		COVERED-37	37	
Fixed asset → Special depreciation allowance (bonus depreciation, US)		COVERED-37	37	
Fixed asset → Journal names (fixed asset journal, budget journal, depreciation book journal)		COVERED-37	37	
Fixed asset → Location / Major types / Condition / Asset attributes	Reference lists	COVERED-37	37	
Fixed asset → Insurance types / Insurance companies		PARTIAL-37 (insurance)	37	
Fixed asset → Reason codes (fixed assets)		PARTIAL-11 (reason codes)	11	
Fixed asset → Transaction reversal setup		COVERED-37	37	
Fixed asset → Fixed asset activity codes		COVERED-37	37	
Fixed asset → Sorting / Fixed asset groups → Value model defaults		COVERED-37	37	
Fixed asset → Derived value models / derived books	Post to multiple books from one journal	COVERED-37	37	
Asset leasing → Asset leasing parameters, Lease books, Lease groups, Payment frequencies, Classification criteria (ownership transfer, purchase option, lease term %, PV %), Journal names, Posting accounts		COVERED-37	37	
Fixed asset → Physical inventory parameters (barcode, worker)		COVERED-37	37	
Workflow → Fixed asset workflows (journal approval)		COVERED-4	4	
Number sequences (fixed assets)		COVERED-5	5	
Fixed asset → Country-specific (RU/PL/CZ depreciation, DE "AfA tables")		OUT-OF-SCOPE (country pack beyond v1 set; DE AfA handled in DE pack wave 48 if required)	—	

12.7 Cost accounting

AX 2012 R3 ships the legacy *Cost accounting* module (COS: dimensions, cost categories, cost lines, service categories, allocations, budget cost). D365 replaced it with the *Cost accounting ledger* (cost objects, cost elements, allocation policies, statistical measures, cost control workspace). Passage builds the D365 model in wave 38; every legacy COS form is therefore `SUPERSEDED` by its wave-38 equivalent.

12.7.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Cost accounting dimensions (legacy)	COSDimension	Cost center/cost unit dimensions	SUPERSEDED (cost object dimensions and hierarchies, wave 38)	38	
Cost categories (legacy COS)	COSCostCategory	Cost types mapped from ledger accounts	SUPERSEDED (cost elements, wave 38)	38	
Cost lines (legacy, manual cost postings)	COSLine	Manual cost entries	SUPERSEDED (cost accounting ledger journals, wave 38)	38	
Cost journal (legacy COS journal)	COSJournalTable	Manual cost accounting journal	SUPERSEDED (cost entries journal, wave 38)	38	
Service categories / Service quantities (legacy)	COSServiceCategory	Activity quantities for allocation	SUPERSEDED (statistical measures, wave 38)	38	
Cost distribution (legacy)	COSAllocation (distribution)	Distribute costs by key	SUPERSEDED (allocation policies: distribution, wave 38)	38	
Cost allocation (legacy)	COSAllocation	Allocate costs via allocation key	SUPERSEDED (allocation policies: assessment, wave 38)	38	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Cost budget (legacy COS budget)	COSBudget	Budget by cost category/dimension	SUPERSEDED (budget data in cost accounting ledger from budget register entries, wave 38)	38	
Cost accounting ledger (D365)	CAMCostAccountingLedger	Ledger per fiscal calendar/currency with GL/budget source	COVERED-38	38	
Cost objects / Cost object dimensions (D365)	CAMDimension	Cost center, product, project cost objects	COVERED-38	38	
Cost elements / Cost element dimensions (D365)	CAMCostElement	Primary (from GL) and secondary cost elements	COVERED-38	38	
Dimension hierarchies (D365 cost accounting)	CAMDimensionHierarchy	Hierarchies for allocation/reporting	COVERED-38	38	
Cost entries (D365)	CAMCostEntry	Processed source entries	COVERED-38	38	
Cost control workspace (D365)	CAMCostControlWorkspace	Manager cost reporting with variance and drill	COVERED-38	38	
Statistical measures / Statistical entries (D365)	CAMStatisticalMeasure	Quantities (headcount, kWh) used as allocation bases	COVERED-38	38	
Cost behavior / Cost classification (fixed/variable) (D365)	CAMCostBehavior	Classify fixed vs variable	PARTIAL-38 (cost behavior (fixed/variable split) policies not named)	38	Gap register
Internal orders (SAP concept; AX via projects)	—		COVERED-38	38	Internal orders named in wave 38
Activity-based costing	— (not in AX)		COVERED-38	38	

12.7.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Cost transactions inquiry (legacy)		SUPERSEDED (cost entries, wave 38)	38	
Cost balances by dimension (legacy)		SUPERSEDED (cost control workspace)	38	
Cost accounting ledger → Cost entries inquiry (D365)		COVERED-38	38	
Cost control → Cost by cost object/element with budget variance (D365)		COVERED-38	38	
Allocation results inquiry (D365: Allocation journal)		COVERED-38	38	
SSRS: Cost accounting (legacy) — Cost distribution sheet, Cost unit statement, Cost category list, Cost allocation list		SUPERSEDED (cost control reports, wave 38/46)	38	
D365: Cost control workspace reports / Power BI cost accounting analysis		COVERED-46	46	Management cubes
SSRS: Service category quantities		SUPERSEDED (statistical measures)	38	

12.7.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Transfer ledger transactions to cost accounting (legacy)		SUPERSEDED (source data processing from GL, wave 38)	38	
Cost distribution / Cost allocation processing (legacy)		SUPERSEDED (overhead calculation, wave 38)	38	
Cost budget transfer (legacy)		SUPERSEDED	38	
Source data processing (D365: GL, budget, statistical)	Pull entries into cost ledger	COVERED-38	38	
Overhead calculation (D365: cost behavior, cost distribution, overhead rate, cost allocation)	Run allocation policies in sequence	COVERED-38	38	Allocation cycles converge
Cost accounting ledger → Reverse overhead calculation		COVERED-38	38	
Statistical measure data import		COVERED-38	38	
Cost ledger period close		COVERED-38	38	

12.7.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Cost accounting parameters (legacy)	Dimension mapping, journal names	SUPERSEDED (cost accounting ledger setup)	38	
Cost accounting dimensions / Cost category groups / Allocation keys / Calculation versions (legacy)		SUPERSEDED	38	
D365: Cost accounting ledgers	Calendar, currency, exchange rate type	COVERED-38	38	
D365: Dimensions (cost element, cost object, statistical) and Dimension member data providers (GL main accounts, financial dimensions, budget)		COVERED-38	38	
D365: Dimension hierarchies		COVERED-38	38	
D365: Data source providers / Source data (GL actual, budget, budget register)		COVERED-38	38	
D365: Policies — Cost behavior policies, Cost distribution policies, Overhead rate policies, Cost allocation policies, Cost rollup policies (D365 2020+)		PARTIAL-38 (cost behavior and cost rollup policies not named; allocation policies are)	38	
D365: Policy assignments / Policy versions		COVERED-38	38	
D365: Cost control workspace configurations		COVERED-38	38	
D365: Cost accounting ledger security (dimension access)		COVERED-2	2	OPA policies
D365: Statistical measure providers		COVERED-38	38	
D365: Cost accounting parameters		COVERED-38	38	
Number sequences (cost accounting)		COVERED-5	5	

12.8 Cost management (D365)

D365's *Cost management* module consolidates inventory accounting (AX Inventory management → Setup → Costing), costing versions, costing sheets and the inventory value reports. Passage splits it: inventory costing and inventory close in wave 20, product costing/cost roll-up/costing sheets/variances in wave 39, landed cost in wave 34.

12.8.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Costing versions (Costing version setup)	CostingVersion	Standard/planned cost versions, blocking, fallback, site	COVERED-20	20	Costing versions in 20; BOM calc in 39
Item prices (Costing version maintenance: pending/active prices)	InventItemPrice (CostingVersionMaintenance)	Pending cost, activation, cost breakdown by cost group	COVERED-39	39	
Cost object (D365 inventory accounting cost objects)	CostObject	Item × dimension cost object with running average	COVERED-20	20	
Inventory value / Cost explorer	CostExplorer (InventCostTransExplorer)	Trace cost from issue to receipts	COVERED-20	20	Settlement trace
Closing and adjustment (Inventory close list)	InventClosing	Close runs, recalculation, adjustments (on-hand, transactions)	COVERED-20	20	
Inventory posting (link)	InventPosting		COVERED-16	16	
Production → Standard cost transactions (variances)	InventCostTrans	Purchase/production variances	COVERED-39	39	
Cost management → Inventory accounting journals (Moving average revaluation, Standard cost revaluation, Inventory cost revaluation)	InventJournalTable (revaluation)	Revalue on-hand	COVERED-39	39	Standard cost revaluation in 39; moving average settlement in 20
Landed cost (D365 Landed cost module: Voyages, Shipping containers, Folios, Cost estimates, Goods in transit)	ITMVoyage*	Multi-leg inbound costing with estimates and actuals	PARTIAL-34 (landed cost allocation is named; D365 voyage/container/folio tracking and goods-in-transit orders are not)	34	Gap register
Global inventory accounting (D365 add-in: multiple cost ledgers / accounting conventions)	GIA ledgers	Parallel inventory valuation (IFRS vs local)	GAP	—	Propose wave 20: parallel inventory valuation ledgers (one costing method per ledger group) aligned with wave 12 parallel ledgers

12.8.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Inventory value report (configurable: Inventory value report by resource/resource group, by dimension)	On-hand value vs GL by date	COVERED-20	20	
Inventory value report storage / configuration (D365)	Persisted report runs	COVERED-20	20	
Inventory aging report (D365)	Aging of on-hand by receipt date	PARTIAL-20 (inventory aging buckets not named)	20	Gap register
Cost rollup inquiry / Calculated cost breakdown (BOM calculation results)		COVERED-39	39	
Costing version comparison / Compare item prices		COVERED-39	39	Cost estimate comparison
Inventory close inquiry / Settlements / Adjustment history		COVERED-20	20	
Standard cost variance inquiry (purchase price variance, production variances)		COVERED-39	39	
SSRS: Inventory value (Physical inventory by inventory dimension, Inventory value by dimension)		COVERED-20	20	
SSRS: Inventory cost/value reconciliation (Inventory/Ledger reconciliation)		COVERED-20	20	
SSRS: Cost estimates and costing (BOM calculation report)		COVERED-39	39	
SSRS: Indirect cost transactions / Costing sheet listing		COVERED-39	39	
SSRS: Variance analysis statement (production)		COVERED-39	39	
SSRS: Settled transactions / Inventory close report		COVERED-20	20	
SSRS: Items without cost		COVERED-39	39	
Landed cost reports (voyage cost, cost variance by voyage)		PARTIAL-34 (landed cost voyages)	34	

12.8.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Closing and adjustment → Close inventory	Settle issues vs receipts per model	COVERED-20	20	
Closing and adjustment → Recalculation	Interim recalculation	COVERED-20	20	
Closing and adjustment → Adjustment (on-hand / transactions)	Manual value adjustments	COVERED-20	20	
Closing and adjustment → Cancel close / Reopen		COVERED-20	20	
Costing version → Calculation (BOM calculation, mass)	Roll up costs	COVERED-39	39	Mass roll 50k items < 15 min
Costing version → Activate pending prices (mass activation)	Activate standard costs; revalue inventory	COVERED-39	39	
Costing version → Copy item prices between versions		COVERED-39	39	
Inventory accounting → Post inventory to ledger (transfer)		SUPERSEDED (synchronous posting via universal journal)	16	

Name	Purpose	Passage status	Wave	Notes
Moving average → Revaluation for moving average		COVERED-20	20	
Standard cost → Revaluation on activation / Conversion to standard cost (Standard cost conversion checklist)	Convert items from actual to standard	PARTIAL-39 (standard cost conversion checklist (switching costing model mid-life) not named)	39	Gap register
Landed cost → Voyage cost allocation / Goods in transit receipts		PARTIAL-34 (landed cost voyages)	34	
Cost management → Inventory value report generation (batch)		COVERED-20	20	
Costing → Delete pending prices / Clean up costing versions		COVERED-39	39	
Inventory cost (D365) → Update running average / Refresh on-hand cost		COVERED-20	20	

12.8.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Inventory and warehouse management parameters — Costing/ Inventory accounting tab (D365 Cost management parameters)	Post physical inventory, post financial inventory, break-even cost, use latest cost price, variance by cost group	COVERED-20	20	
Costing versions	Type (standard/planned), block activation/changes, fallback (active/none/version), site/date filters, explosion mode	COVERED-39	39	
Cost groups	Direct material, direct manufacturing, indirect, undefined; cost group type and behavior (fixed/variable)	COVERED-39	39	
Costing sheets (Costing sheet setup)	Nodes: totals, price nodes (cost groups), surcharge/rate indirect costs with absorption basis	COVERED-39	39	
Indirect cost (surcharge / rate) definitions and versions	Rates per costing version/site	COVERED-39	39	
Cost categories (routing costs; shared with Production)	Cost category price per version, cost group	COVERED-39	39	
BOM calculation groups	Cost price model, sales price model, warnings, stop explosion	COVERED-39	39	
Cost basis types (D365 commodity pricing)		COVERED-26	26	Commodity price based on index; see PI §12.23
Inventory posting profiles (link)		COVERED-16	16	
Item model groups → Costing method (FIFO/LIFO/LIFO date/weighted avg/weighted avg date/standard/moving average), include physical value, fixed receipt price, latest cost price		COVERED-20	20	
Inventory value report configuration (D365: Inventory value reports setup — columns, dimensions, resource type)		COVERED-20	20	
Inventory aging report setup (D365)		PARTIAL-20 (inventory aging)	20	
Landed cost setup (D365: Landed cost parameters, Cost types, Cost type codes, Auto cost, Apportionment, Shipping container types, Vessels, Voyage templates, Legs, Journeys, Tracking)		PARTIAL-34 (landed cost voyages)	34	
Global inventory accounting setup (ledgers, accounting policies, conventions)		GAP	—	Propose wave 20: parallel inventory valuation ledgers
Standard cost conversion setup		PARTIAL-39 (standard cost conversion)	39	
Number sequences (cost management)		COVERED-5	5	

12.9 Compliance and internal controls

AX 2012's *Compliance and internal controls* module holds internal control documentation (process library/files), the risk library, audit policies (R3 audit workbench) and the database log link. Environmental sustainability was removed before R3. Passage: SoD and SOC 2 evidence in wave 48; audit policies are a gap proposed for wave 48; database log is wave 5.

12.9.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Internal controls → Files (process documents)	SysComplianceFiles (EP)	Document library for control documentation	PARTIAL-48 (SOC 2 evidence automation is named; a controls/process document library is not)	48	Gap register
Internal controls → Process library / Process documents	SysComplianceProcess	Hierarchical process documentation with risk/control links	PARTIAL-48 (process library)	48	
Internal controls → Risk library	SysComplianceRisk	Risks with controls	PARTIAL-48 (risk library)	48	
Audit → Audit cases	AuditCase (CaseDetail audit)	Cases from audit policy violations	PARTIAL-48 (audit policies)	48	
Audit → Audit policy violations list	AuditPolicyViolation	Violations by policy rule	PARTIAL-48 (audit policies)	48	
Database log (link to Sys admin)	SysDatabaseLog		COVERED-5	5	Audit log from CDC
Environmental sustainability (substance flows, process maps)	ENV*		OUT-OF-SCOPE (removed from AX 2012 R3; v2 ESG module candidate)	—	
Compliance → Segregation of duties conflicts (link to Sys admin)	SysSecSegregationOfDutiesConflict		COVERED-48	48	SoD engine

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Compliance → Electronic signatures (link)	SysSignature		GAP	—	Propose wave 48: electronic signatures (21 CFR Part 11 style) on configured tables/fields with reason codes and signature log

12.9.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Audit policy violations inquiry		PARTIAL-48 (audit policies)	48	
Audit case inquiry		PARTIAL-48 (audit policies)	48	
Database log inquiry		COVERED-5	5	
Electronic signature log inquiry		GAP	—	Propose wave 48: electronic signatures
Segregation of duties conflicts / unresolved conflicts		COVERED-48	48	
SSRS: Audit policy report / Audit case report		PARTIAL-48 (audit policies)	48	
SSRS: Database log report		COVERED-5	5	
SSRS: Segregation of duties rules / conflicts		COVERED-48	48	
SSRS: Electronic signature report		GAP	—	Propose wave 48: electronic signatures
SSRS: Internal control documents		PARTIAL-48 (process library)	48	
SOC 2 control evidence reports (Passage)		COVERED-48	48	

12.9.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Audit → Run audit policies (batch: expense reports, vendor invoices, purchase orders, GL journals)	Rule-based post-hoc audit (duplicates, keywords, sampling, list search)	PARTIAL-48 (audit policies)	48	
Audit → Close/archive audit cases		PARTIAL-48 (audit policies)	48	
Database log → Clean up database log		SUPERSEDED (immutable audit store with retention policy wave 48)	48	
SoD → Verify compliance of user-role assignments (batch)		COVERED-48	48	
Access certification campaigns (Passage)		COVERED-48	48	
Electronic signature → Reset/revoke signatures		GAP	—	Propose wave 48: electronic signatures

12.9.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Compliance parameters	Portal site, file locations	SUPERSEDED (no Enterprise Portal; compliance workspace wave 48)	48	
Audit → Audit policies (policy framework: policy rule types — expense/vendor invoice/PO/GL journal; rule types: duplicate, keyword, list search, sampling, premium/mileage)		PARTIAL-48 (audit policies)	48	
Audit → Audit policy rule types		PARTIAL-48 (audit policies)	48	
Audit → Audit case categories		PARTIAL-48 (audit policies)	48	
Audit → Audit keyword lists / Audit sampling parameters		PARTIAL-48 (audit policies)	48	
Database log setup (tables/fields to log)		COVERED-5	5	Field-level audit flag in metadata
Electronic signature → Electronic signature parameters, Signature requirements (table/field), Reason codes for signatures		GAP	—	Propose wave 48: electronic signatures
Segregation of duties rules (link)		COVERED-48	48	
Risk/control types, Process document templates		PARTIAL-48 (process library)	48	
Workflow → Audit case workflow		COVERED-4	4	

12.10 Travel and expense

Expense management (expense reports, cash advances, travel requisitions, policies, per diems, credit card import, project integration) lands in wave 43; approval infrastructure in wave 4; VAT recovery relies on wave 13.

12.10.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Expense reports (list page)	TrvExpTableListPage	My/all expense reports by status	COVERED-43	43	
Expense report details	TrvExpTable / TrvExpTrans	Lines by category, itemization, receipts, guests, project/dimension, policy violations	COVERED-43	43	
Expense reports → Unattached credit card transactions (Credit card transactions pool)	TrvPBSMaindata (TrvUnreconciledExpense)	Imported card transactions awaiting assignment	COVERED-43	43	Credit-card feed import
Cash advances (Cash advance requests)	TrvCashAdvance	Request, approve, pay via AP, settle against reports	PARTIAL-43 (cash advances are not named)	43	Gap register
Travel requisitions	TrvRequisitionTable	Pre-trip approval with estimates	PARTIAL-43 (travel requisitions / pre-approval are not named)	43	Gap register
Expense reports → Itemization / Guests / Per diem lines	TrvExpTransItemization	Hotel itemization, meals per diem	COVERED-43	43	
Expense reports → Receipts (attach, OCR)	TrvDocuView		COVERED-43	43	OCR receipts

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Expense reports → Intercompany expenses (R3)	TrvExpTrans (intercompany)	Charge another legal entity	PARTIAL-40 (intercompany expenses not named in 40 or 43)	40	Gap register
Expense reports → Expense report workflow / Approval	Workflow		COVERED-43	43	
Delegates (expense delegates)	TrvDelegates	Enter on behalf	COVERED-43	43	
Expense reports → Posted expense reports / Expense transactions	TrvExpTransPosted		COVERED-43	43	
Expense → Mobile receipt capture (D365 mobile workspace)			COVERED-43	43	PWA

12.10.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Expense report inquiry / Expense transactions		COVERED-43	43	
Credit card transactions inquiry (imported / unreconciled)		COVERED-43	43	
Cash advance inquiry		PARTIAL-43 (cash advances)	43	
Travel requisition inquiry		PARTIAL-43 (travel requisitions)	43	
Policy violations inquiry		COVERED-43	43	
Expense reports pending approval (Work items)		COVERED-4	4	
SSRS: Expense report (printed) / Expense report details		COVERED-43	43	
SSRS: Expense transactions by category / employee / project		COVERED-46	46	
SSRS: Cash advance report		PARTIAL-43 (cash advances)	43	
SSRS: Unreconciled credit card transactions		COVERED-43	43	
SSRS: Policy violations report		COVERED-43	43	
SSRS: Per diem rates list		COVERED-43	43	
SSRS: Expense audit (audit policy results)		PARTIAL-48 (audit policies)	48	
SSRS: VAT recovery report (expense tax)		PARTIAL-13 (VAT recovery on expenses (partial recoverability per country) not named)	13	Gap register

12.10.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Import credit card transactions (card feed: AMEX GL1025/Visa VCF/MasterCard CDF)		COVERED-43	43	
Post expense reports (batch)	Posts to AP (reimbursement) and GL/project	COVERED-43	43	Reimbursement via AP
Reconcile/settle cash advances		PARTIAL-43 (cash advances)	43	
Expense → Mileage rate update / Per diem rate import		COVERED-43	43	
Expense → Run audit policies on expense reports		PARTIAL-48 (audit policies)	48	
Expense → Delete unposted / Clean up card pool		COVERED-43	43	
Expense → Recover VAT (ER-based claim)		PARTIAL-13 (VAT recovery)	13	
Expense → Intercompany expense posting (due-to/due-from)		PARTIAL-40 (intercompany expenses)	40	

12.10.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Expense management parameters — General	Default currency, posting to AP (vendor per worker), mileage/per diem defaults, require receipts threshold, allow itemization, project posting	COVERED-43	43	
Expense management parameters — Policies / Workflow / Credit card	Policy violation behaviors, approval, card import settings	COVERED-43	43	
Expense management parameters — Intercompany / Cash advance		PARTIAL-43 (cash advances)	43	
Expense management parameters — Number sequences		COVERED-5	5	
Expense categories (shared categories flagged for expense; expense type, default payment method, tax group, ledger account)		COVERED-43	43	
Shared categories (link to Org admin category hierarchy)		COVERED-8	8	Category hierarchies
Payment methods (expense: company card, personal, cash advance)	Who pays / who is reimbursed	COVERED-43	43	
Per diem locations / Per diem rates / Per diem rate tiers (meals, hotel, first/last day %)		COVERED-43	43	
Mileage rates / Mileage tiers		COVERED-43	43	
Expense policies (Policy framework: expense policy rules by category: amount limits, receipts, per diem, mileage, hotel; actions: warn/justify/block)		COVERED-43	43	
Expense policy violation types / justifications		COVERED-43	43	
Credit card → Credit card types, Credit card category codes (MCC mapping), Credit card transaction import formats, Card issuer connection		COVERED-43	43	
Delegates setup		COVERED-43	43	
Cash advance → Cash advance parameters, posting		PARTIAL-43 (cash advances)	43	
Travel requisition → Requisition policies / types		PARTIAL-43 (travel requisitions)	43	

Name	Key parameters / options	Passage status	Wave	Notes
Expense → Tax configuration (recoverable VAT per country, tax groups on expenses)		PARTIAL-13 (VAT recovery)	13	
Expense → Project integration (billable categories, line properties)		COVERED-41	41	
Expense → Audit policies (link)		PARTIAL-48 (audit policies)	48	
Expense → Display fields / Expense report fields configuration (optional fields)		COVERED-3	3	Metadata extensions
Expense → Ledger posting (expense posting profiles / posting by category)		COVERED-43	43	
Workflow → Expense workflows (report, line-level, cash advance, requisition)		COVERED-4	4	
Number sequences (expense)		COVERED-5	5	
Expense → Mobile app configuration (D365)		COVERED-43	43	

12.11 Project management and accounting

The project module is wave 41 (WBS, resources, journals, billing, estimates, grants), with time registration shared with wave 25, expenses with wave 43 and fixed-asset capitalization with wave 37.

12.11.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Projects (list page)	ProjTableListPage	All projects, hierarchy	COVERED-41	41	
Project details	ProjTable	Type (T&M, fixed-price, investment, cost, internal, time), stage, group, contract, funding, dimensions, WBS, invoice/billing, budget, resource	COVERED-41	41	
Project contracts	ProjInvoiceTable	Contract with funding sources, funding rules, limits, billing rules	COVERED-41	41	
Project quotations	SalesQuotationTable (project)	Quote with WBS/estimates, convert to project	PARTIAL-41 (project quotations with convert-to-project are not named; sales quotations are in 27)	41	Gap register
Work breakdown structure	ProjWBS (HierarchyTreeLookup)	Tasks, dependencies, effort, resources, estimates	COVERED-41	41	
Project hierarchy / Project tree	ProjTable (parent)	Parent/sub-projects	COVERED-41	41	
Project stage change (Create/In process/Finished…)	ProjTable (stage)	Stage gates with rules	COVERED-41	41	
Project forecasts (Hour, Expense, Item, Fee, On-account forecasts)	ProjForecast*	Forecast models	COVERED-41	41	
Project budgets / Budget revisions (Project budgeting)	ProjBudget	Original budget, revisions, budget control per project	COVERED-41	41	
Timesheets (list page)	TSTimesheetTableListPage	Weekly timesheets with workflow	PARTIAL-41 (hour journals are named; weekly timesheet UI with favorites/workflow is not explicit)	41	Gap register (note wave 25 time registration covers shop floor, not project timesheets)
Timesheet details	TSTimesheetTable	Lines, comments, submit	PARTIAL-41 (timesheets)	41	
Hour journals	ProjJournalTable (hour)	Post hours	COVERED-41	41	
Expense journals (project)	LedgerJournalTable (project expense)	Post expenses	COVERED-41	41	
Item journals (project)	InventJournalTable (project)	Consume inventory on project	COVERED-41	41	
Fee journals	ProjJournalTable (fee)	Post fees/revenue	COVERED-41	41	
Beginning balance journals	ProjJournalTable (beginning balance)	Opening WIP/transactions on migration	PARTIAL-41 (beginning balance journals for project migration not named; wave 49 covers project WIP migration)	49	Gap register
Project purchase orders / Purchase requisitions (project)	PurchTable (project)	PO tied to project	COVERED-41	41	
Project item requirements	SalesTable (item requirement)	Item requirements consumed from inventory	COVERED-41	41	
Project sales orders	SalesTable (project)		COVERED-41	41	
Project invoice proposals	ProjProposalJour	Build invoice from transactions	COVERED-41	41	
Project invoices (posted)	ProjInvoiceJour		COVERED-41	41	
On-account transactions (Milestones)	ProjOnAccTrans	Fixed-price billing milestones	COVERED-41	41	
Estimates (Estimate projects, Completed contract / Percentage completion)	ProjControlPeriodTable (ProjEstimate)	Revenue recognition for fixed-price	COVERED-41	41	
Grants (Grant management, R2 PSA)	ProjGrant	Grant records, grant types, funding	COVERED-41	41	Customer funding/grants
Project → Resources (Resource list, Resource assignments, Resource availability, Resource requests)	ProjResource*, ResRoleAssignment	Role-based resource booking	COVERED-41	41	
Project → Resource scheduling (Resource scheduling form, R3)	ResResourceScheduling	Book resources to WBS tasks	COVERED-41	41	
Project → Activities (Activity list for projects)	smmActivities	Activities on projects	PARTIAL-45 (generic activities/case management framework)	45	
Project → Committed costs	ProjCommittedCost	Commitments from PO/requisition/timesheet	COVERED-41	41	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Project → Funding limits / Funding rules	ProjFundingLimit		COVERED-41	41	
Project → Billing rules (Unit of delivery, Progress, Milestone, Fee, Time and material, Retainage)	ProjBillingRule		COVERED-41	41	
Project → Retention terms (customer/vendor retention)	ProjRetentionTerms	Hold back % until milestone	PARTIAL-41 (customer and vendor retention (retainage) terms are not named)	41	Gap register
Project → Project transactions (posted)	ProjTrans*		COVERED-41	41	
Project → Adjustments (Project transaction adjustments)	ProjAdjust	Reallocate posted transactions	COVERED-41	41	
Project → Subcontracts / Vendor invoices for project			COVERED-41	41	
Project → Project workspace (D365 Project management workspace)			COVERED-41	41	
Microsoft Project integration (MPP sync)	ProjMSProject*		SUPERSEDED (WBS scheduling native; MS Project import/export via wave 5 Excel/CSV and wave 35 APIs)	41	

12.11.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Project transactions inquiry (posted transactions, by type)		COVERED-41	41	
Project statements (Project statement inquiry: cost, revenue, WIP, profit)		COVERED-41	41	
Cash flow (project)		COVERED-36	36	
Committed cost inquiry		COVERED-41	41	
Invoice proposals / Invoices inquiry		COVERED-41	41	
Estimate inquiry (Estimate details)		COVERED-41	41	
Budget vs actual (project budget balances)		COVERED-41	41	
Resource utilization / availability inquiry		COVERED-41	41	
Timesheet inquiries (missing timesheets, timesheet hours)		PARTIAL-41 (timesheets)	41	
Hour utilization		COVERED-41	41	
Project ledger reconciliation (Project/Ledger)		COVERED-41	41	
Funding source / contract inquiries		COVERED-41	41	
Grant inquiries		COVERED-41	41	
SSRS: Project statement / Project statement by category		COVERED-41	41	
SSRS: Project invoice (document) / Invoice proposal / Credit note		COVERED-41	41	
SSRS: Hour utilization / Employee utilization		COVERED-41	41	
SSRS: Project transactions (hours, expenses, items, fees, on-account)		COVERED-41	41	
SSRS: WIP / Accrued revenue / Cost-to-complete / Percentage complete		COVERED-41	41	
SSRS: Project list / Project base data		COVERED-41	41	
SSRS: Cash flow forecast (project)		COVERED-36	36	
SSRS: Committed costs report		COVERED-41	41	
SSRS: Timesheet report / Missing timesheets		PARTIAL-41 (timesheets)	41	
SSRS: Estimate report / Estimate journal		COVERED-41	41	
SSRS: Project budget / Budget balances		COVERED-41	41	
SSRS: Resource scheduling / Resource assignment		COVERED-41	41	
SSRS: Project invoice journal / Customer invoice register		COVERED-41	41	
SSRS: Earned value (CPI/SPI)		COVERED-41	41	EVM
SSRS: Project profitability		COVERED-46	46	
SSRS: Grant report		COVERED-41	41	

12.11.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Journals → Post hour/expense/item/fee journals (batch)		COVERED-41	41	
Timesheets → Timesheet workflow / Post timesheets / Create periodic timesheets		PARTIAL-41 (timesheets)	41	
Estimates → Create / Post / Reverse / Eliminate estimates	Fixed-price revenue recognition cycle	COVERED-41	41	
Invoice proposals → Create invoice proposals (batch) / Post		COVERED-41	41	
Project → Transfer to fixed assets (investment project estimate elimination)		COVERED-37	37	
Project → Accrue revenue (T&M WIP accrual)		COVERED-41	41	
Project → Reverse accrued revenue		COVERED-41	41	
Project → Cost control / Budget control recalc		COVERED-41	41	
Project → Project stage update (mass)		COVERED-41	41	
Project → Line property update / Adjust transactions (mass)		COVERED-41	41	
Project → Intercompany project invoicing (R3 intercompany timesheets/expenses)	Cross-entity resource lending and invoicing	PARTIAL-40 (intercompany project resourcing/invoicing not named)	40	Gap register

Name	Purpose	Passage status	Wave	Notes
Project → Project purchase requisition release		COVERED-17	17	
Project → Copy project / Copy WBS from template		COVERED-41	41	
Project → Delete / Close projects		COVERED-41	41	
Project → Project forecast → Copy/transfer forecast to budget		COVERED-41	41	
Project → Project sales tax / VAT on invoice proposals		COVERED-13	13	
Project → Retention release (vendor/customer)		PARTIAL-41 (retention)	41	
Project → Resource availability recalculation		COVERED-41	41	
Project → Grant periodic (grant renewals, closeouts)		COVERED-41	41	
Project → Project invoice e-invoicing (ER)		COVERED-35	35	

12.11.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Project management and accounting parameters — General	Default project types, stages, line property, WBS defaults, ledger posting (balance/P&L), hour/expense/item/fee posting, cost price defaults, sales price defaults, invoice proposal rules	COVERED-41	41	
Project parameters — Financial (ledger posting rules by project type: cost, revenue, WIP, accrued)		COVERED-41	41	
Project parameters — Cost control / Budget / Estimate / Invoice / Timesheet / Scheduling / Resources / Journals / Number sequences		COVERED-41	41	Timesheet tab PARTIAL per 12.11.1
Project groups	Posting rules per group (P&L/balance), WIP accounts, estimate method, cost template	COVERED-41	41	
Project types / Project stages / Project stage rules		COVERED-41	41	
Categories → Project categories / Category groups / Shared categories	Hour, expense, item, fee categories with posting	COVERED-41	41	
Line properties	Chargeable / capitalize / efficiency %	COVERED-41	41	
Posting → Ledger posting setup (Cost accounts, Revenue accounts by category/project/customer)		COVERED-41	41	
Posting → Project posting profile (customer invoice)		COVERED-41	41	
Prices → Cost prices (hour, expense), Sales prices (hour, expense, fee, subscription), Transfer prices (intercompany)	Price lists by resource/project/category	COVERED-41	41	Transfer prices PARTIAL-40 for intercompany
Estimates → Cost templates / Period types / Estimate periods	Completion methods	COVERED-41	41	
Project contracts → Funding types / Funding rule templates		COVERED-41	41	
Billing → Billing rule templates / Retention terms		PARTIAL-41 (retention)	41	
Timesheets → Timesheet periods / Period types / Timesheet parameters (favorites, delegates, workflow by project)		PARTIAL-41 (timesheets)	41	
Resources → Resource roles, Competencies, Calendars, Resource groups, Availability parameters		COVERED-41	41	
Scheduling → Scheduling parameters (WBS: default calendar, dependencies)		COVERED-41	41	
WBS → WBS templates		COVERED-41	41	
Project → Project templates		COVERED-41	41	
Project → Validation (Project/category, Project/worker, Category/worker validation groups)	Who may post what to which project	COVERED-41	41	
Budget → Project budget parameters / Budget control configuration (project)		COVERED-41	41	
Grants → Grant types, Grant statuses, CFDA numbers (US)		COVERED-41	41	
Indirect costs (Indirect cost component groups, Indirect cost components, Indirect cost rules — R3 PSA)	Overhead on project hours	PARTIAL-41 (project indirect cost components/rules not named; cost accounting allocations in 38 do not apply to project transactions)	41	Gap register
Journals → Journal names (project journals)		COVERED-41	41	
Forms → Form setup (project invoices) / Print management		PARTIAL-46 (print management routing)	46	
Workflow → Project workflows (timesheet, expense, hour journal, project stage)		COVERED-4	4	
Number sequences (project)		COVERED-5	5	
Microsoft Project → MS Project integration parameters		SUPERSEDED (native WBS)	41	
Intercompany → Intercompany project parameters (lending/borrowing entity, timesheet/expense/vendor invoice transfer)		PARTIAL-40 (intercompany project)	40	

12.12 Human resources

AX 2012 R3 Human resources (workers, positions, jobs, departments, benefits, leave, compensation, performance, skills/competencies, recruitment, courses, questionnaires, injury/illness, loaned items, worker compliance) maps to wave 42, with absence calendars shared with wave 25 and payroll in 43. Courses,

questionnaires, injury/illness and loaned items are not in any wave and are listed as gaps.

12.12.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Workers (list page)	HcmWorkerListPage	All workers (employees + contractors)	COVERED-42	42	Party with Employee role
Worker details	HcmWorker	Profile, employment, position assignments, compensation, leave, benefits, identification (SSN/passport), bank accounts, contacts, personal contacts, financial dimensions, competencies	COVERED-42	42	PII vaulting
Employees / Contractors (list pages)	HcmEmployeeListPage / HcmContractorListPage	Filtered worker lists	COVERED-42	42	
Employment (worker employment history, effective-dated)	HcmEmployment	Hire, terminate, rehire with dates	COVERED-42	42	
Positions (list page)	HcmPositionListPage	Position hierarchy, vacancies	COVERED-42	42	
Position details	HcmPosition	Job, department, reports-to, position type, duration, FTE, worker assignment, payroll, budget	COVERED-42	42	
Jobs	HcmJob	Job templates: title, type, function, tasks, skills, education, compensation level	COVERED-42	42	
Departments (Org admin link)	OMDepartment		COVERED-6	6	
Personnel actions (D365: hire, transfer, terminate, position change with workflow)	HcmPersonnelAction	Action-based changes with approval	COVERED-42	42	Effective-dated with workflow
Leave and absence → Absence registrations / Absence journals (AX 2012)	HRMAbsenceTable	Register absences, approve, transfer	COVERED-42	42	
Leave and absence → Leave requests / Leave balances (D365)	HcmLeaveRequest	ESS requests with balances	COVERED-42	42	
Compensation → Fixed compensation / Variable compensation (plans, enrollments, events)	HcmFixedCompensationEvent / HcmVariableComp*	Salary structures, merit, bonus plans	COVERED-42	42	Compensation plans
Benefits → Benefit enrollment (worker benefits)	HcmWorkerBenefit	Enroll in plans, dependents, beneficiaries	COVERED-42	42	
Benefits → Open enrollment / Benefits management (D365 benefits management with life events)	BenefitsManagement*	Enrollment periods, eligibility processing	COVERED-42	42	
Performance → Performance journals / Discussions / Goals / Reviews (D365 performance management)	HcmPerformance*	Goals, reviews, ratings	COVERED-42	42	
Competencies → Skills / Certificates / Education / Courses / Tests / Positions of trust / Professional experience (worker competencies)	HcmPersonSkill, HcmPersonCertificate, …	Worker competency records	COVERED-42	42	Skills, certifications
Competencies → Skill mapping / Skill gap analysis	HcmSkillMapping	Search workers by skills	PARTIAL-42 (skill mapping/gap analysis not named)	42	Gap register
Recruitment → Recruitment projects / Applicants / Applications / Application routing	HRMRecruitingTable, HRMApplicant, HRMApplication	Applicant tracking	COVERED-42	42	Recruitment pipeline basics
Courses (training) → Courses, Course sessions, Course registrations, Instructors, Course locations	HRMCourseTable	Training administration	GAP	—	Propose wave 42: learning/training management (courses, sessions, registrations, instructors, completion to competencies)
Questionnaires → Questionnaires, Questionnaire schedules, Answer sessions, Results analysis	KMQuestionnaire, KMKnowledgeCollectorSchedule	Surveys/tests (360 feedback, course evaluations)	GAP	—	Propose wave 42: questionnaire engine (design, schedule, answer, analyze) reused by performance reviews and quality audits
Injury and illness → Injury/illness incidents, Treatments, Body parts, OSHA logs	HRMInjuryIncident	Workplace incident tracking	GAP	—	Propose wave 42: injury and illness incident register with OSHA 300 extracts (US pack)
Loaned items → Loaned items, Loan items	HRMLoanTable	Equipment lent to workers	GAP	—	Propose wave 42: loaned items (assets issued to workers) tied to EAM assets wave 44
Worker compliance (US) → I-9, ADA requirements, Immigration/visa, Union agreements	HcmWorkerI9Document, HcmPersonVisa	Compliance records	PARTIAL-42 (country-specific compliance fields framework is named; I-9/visa/union specifics come with US pack)	48	
Worker → Worker tasks / reminders / Checklists (onboarding)	HcmWorkerTask	Onboarding/offboarding checklists	PARTIAL-42 (onboarding checklists not named)	42	Gap register
Employee self-service (Role center, EP)	EP ESS pages	View/edit personal info, requests	COVERED-42	42	ESS/MSS portal
Manager self-service	EP MSS pages	Team view, approvals	COVERED-42	42	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Worker → Worker action workflow (position changes)	HcmWorkerActionWorkflow		COVERED-42	42	
Teams (Org admin: Teams, Team types)	OMTeam	Cross-org teams for collaboration	PARTIAL-6 (teams (ad hoc cross-org groups) not named; hierarchies are)	6	Gap register
Workforce → Worker calendars / Working time (link to calendars)	WorkCalendarTable		COVERED-9	9	
Human resources → Cases (HR cases)	CaseDetail		PARTIAL-45 (generic case management)	45	

12.12.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Worker inquiries (Workers by department/position, Seniority, Birthdays, Anniversaries)		COVERED-42	42	
Position inquiries (Vacant positions, Position hierarchy, Headcount)		COVERED-42	42	
Absence inquiries (Absence statistics, Absence per worker)		COVERED-42	42	
Benefit inquiries (Enrollments, Eligibility)		COVERED-42	42	
Compensation inquiries (Pay history, Compensation events)		COVERED-42	42	
Competency inquiries (Skills by worker, Certificate expiry)		COVERED-42	42	
Recruitment inquiries (Applicants by project)		COVERED-42	42	
Course inquiries		GAP	—	Propose wave 42: learning management
Questionnaire results analysis		GAP	—	Propose wave 42: questionnaire engine
Injury/illness inquiries		GAP	—	Propose wave 42: injury and illness
Loaned items inquiry		GAP	—	Propose wave 42: loaned items
SSRS: Worker list / Worker base data / Worker contact list		COVERED-42	42	
SSRS: Position hierarchy / Position list / Vacancies		COVERED-42	42	
SSRS: Absence report / Absence statistics		COVERED-42	42	
SSRS: Benefit enrollment report / Benefit cost		COVERED-42	42	
SSRS: Compensation report / Pay rate history		COVERED-42	42	
SSRS: Skills / Certificates / Education reports		COVERED-42	42	
SSRS: Recruitment reports (Applicant list, Application status)		COVERED-42	42	
SSRS: Course reports (Attendance, Course confirmation letters)		GAP	—	Propose wave 42: learning management
SSRS: Questionnaire reports		GAP	—	Propose wave 42: questionnaire engine
SSRS: OSHA 300/300A/301 (US)		GAP	—	Propose wave 42: injury and illness (US pack output wave 48)
SSRS: EEO-1 / VETS (US compliance)		PARTIAL-42 (US compliance reporting with wave 48 US pack)	48	
SSRS: Headcount / Turnover analytics		COVERED-46	46	
SSRS: Organization chart		COVERED-6	6	Hierarchy designer

12.12.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Absence → Transfer absence registrations (to payroll/projects)		COVERED-42	42	
Leave → Accrue leave balances (D365 accrual processing)		COVERED-42	42	Accrual fixtures
Leave → Carry-forward / expire balances		COVERED-42	42	
Benefits → Mass benefit enrollment / Update benefit rates / Expire benefits / Process life events		COVERED-42	42	
Compensation → Process compensation events (merit cycle)		COVERED-42	42	
Positions → Update position assignments (effective dating batch) / Position budget sync		COVERED-42	42	
Recruitment → Close recruitment projects / Mass applicant correspondence		COVERED-42	42	
Courses → Course confirmations / Transfer course completion to competencies		GAP	—	Propose wave 42: learning management
Questionnaires → Distribute questionnaires (schedule) / Collect results		GAP	—	Propose wave 42: questionnaire engine
Worker → Delete worker history / Anonymize (GDPR)		COVERED-48	48	Subject requests
Worker → Reminders (certificate expiry, probation end)		PARTIAL-42 (reminder/alert engine; see alerts gap in §12.31)	42	
HR → Import workers (DIXF)		COVERED-10	10	
HR → Year-end (US ACA 1095-C)		PARTIAL-42 (ACA reporting with US pack)	48	

12.12.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Human resources parameters — General / Recruitment / Workers / Absence / Benefits / Compensation / Number sequences / Shared (HR shared parameters: identification, worker numbering)		COVERED-42	42	

Name	Key parameters / options	Passage status	Wave	Notes
Organization → Departments, Jobs, Positions setup (Position types, Position hierarchy types, Job functions, Job types, Job tasks, Areas of responsibility, Titles)		COVERED-42	42	
Workers → Employment types, Reasons for termination, Employment categories, Seniority, Identification types, Ethnic origins, Veteran statuses, Marital status, Honorifics	Reference lists	COVERED-42	42	
Workers → Personal contact relationship types / Dependents / Beneficiaries		COVERED-42	42	
Absence → Absence codes / Absence code groups / Absence setups / Absence statuses / Leave types (D365: Leave and absence plans, Accrual schedules, Leave calendars, Holiday corrections)		COVERED-42	42	
Benefits → Benefit types, Benefit plans, Benefit options, Benefit eligibility policies, Benefit rates, Contribution calculation rates, Benefit periods, Life events (D365), Flex credits (D365)		COVERED-42	42	
Compensation → Compensation grids, Compensation levels, Reference point setups, Fixed compensation plans, Variable compensation plans, Compensation actions, Pay frequencies, Compensation regions, Surveys		COVERED-42	42	
Performance → Rating models, Review types, Goal types, Discussion types		COVERED-42	42	
Competencies → Skill types, Skills, Rating models, Certificate types, Education disciplines, Education levels, Institutions, Course types		COVERED-42	42	
Recruitment → Recruitment project types, Application statuses, Applicant sources, Media, Correspondence actions, Application routing templates		COVERED-42	42	
Courses → Course types, Course groups, Course locations, Classrooms, Instructors, Agenda templates		GAP	—	Propose wave 42: learning management
Questionnaires → Questionnaire types, Question types, Answer groups, Result groups, Media types, Questionnaire parameters		GAP	—	Propose wave 42: questionnaire engine
Injury and illness → Incident types, Body parts, Injury/illness treatments, Severity levels, Outcomes		GAP	—	Propose wave 42: injury and illness
Loaned items → Loan types		GAP	—	Propose wave 42: loaned items
Worker compliance (US) → I-9 document types, ADA requirements, Visa types, Union agreements		PARTIAL-42 (US compliance)	48	
Worker → Worker tasks / Checklist templates (onboarding)		PARTIAL-42 (onboarding checklists)	42	
Teams → Team types, Teams		PARTIAL-6 (teams)	6	
Employee self-service parameters (EP) / Manager self-service parameters		SUPERSEDED (ESS/MSS portal wave 42)	42	
HR → Workflow (worker actions, leave, compensation, benefits)		COVERED-4	4	
HR → Number sequences		COVERED-5	5	
HR → Privacy / PII masking policies (Passage)		COVERED-42	42	
HR → Calendars (working time)		COVERED-9	9	
HR → Country-specific fields (localization framework)		COVERED-42	42	
HR → Payroll information on worker (link)		COVERED-43	43	

12.13 Payroll

AX 2012 R2/R3 US Payroll (earnings, benefits/deductions, taxes via Symmetry tax engine, pay statements, GL posting, W-2) maps to wave 43 (country-pluggable gross-to-net with US and one EU pack, plus provider adapter).

12.13.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Earnings statements (list page)	PayrollEarningStatementListPage	Generated earnings per worker per period	COVERED-43	43	
Earnings statement details	PayrollEarningStatement	Earning lines (salary, hourly, overtime, retro), source (timesheet, schedule, manual)	COVERED-43	43	
Pay statements (list page)	PayrollPayStatementListPage	Gross-to-net statements	COVERED-43	43	
Pay statement details	PayrollPayStatement	Earnings, benefits, deductions, taxes, net pay, payment method	COVERED-43	43	
Worker → Payroll information (Worker payroll setup: tax regions, tax codes, earnings, benefits, garnishments, pay cycle, payment method/direct deposit)	PayrollWorkerDetails (HcmWorker → Payroll tab)	Per-worker payroll setup	COVERED-43	43	
Worker → Benefit (payroll) enrollment / Deduction enrollment	PayrollWorkerBenefit	Payroll deduction/contribution enrollment	COVERED-43	43	
Worker → Garnishments and tax levies	PayrollWorkerGarnishment	Garnishment rules, limits, disposable income	COVERED-43	43	
Worker → Tax codes / Tax regions (W-4 info)	PayrollWorkerTaxCode	Federal/state withholding settings	COVERED-43	43	
Worker → Earning codes / Default earnings (recurring earnings)	PayrollWorkerEarningCode	Standing earnings	COVERED-43	43	
Worker → Payroll calendar assignment / Pay cycles			COVERED-43	43	
Worker → Direct deposit / Payment methods	PayrollWorkerBankAccountDisbursement	Split deposits	COVERED-43	43	
Payroll → Payroll transactions / Posted payroll journal (GL journal from payroll)	LedgerJournalTable (payroll)		COVERED-43	43	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Payroll → Vendor invoices for payroll liabilities (taxes, benefit providers)	VendInvoice (payroll)		COVERED-43	43	Liabilities via AP
Payroll → Tax (Symmetry tax engine integration)	PayrollTaxEngine*	External tax calculation	COVERED-43	43	Versioned rule sets; provider adapter alternative
Payroll → Retroactive earnings	PayrollEarningStatement (retro)	Retro pay lines	COVERED-43	43	
Payroll → Pay statement reversal / Void			COVERED-43	43	
Payroll → Time registration import (from T&A / timesheets)			COVERED-25	25	Export to payroll from wave 25

12.13.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Earnings statement inquiry / Pay statement inquiry		COVERED-43	43	
Worker payroll history (earnings, taxes, deductions YTD)		COVERED-43	43	
Tax inquiries (Tax summary by region, Tax liabilities)		COVERED-43	43	
Benefit/deduction register inquiry		COVERED-43	43	
Garnishment inquiry		COVERED-43	43	
Payroll posting inquiry (journal)		COVERED-43	43	
SSRS: Pay statement (document) / Check stub		COVERED-43	43	
SSRS: Payroll register / Payroll summary		COVERED-43	43	
SSRS: Tax register / Tax liability / Form 941 / State unemployment (SUTA)	US statutory	COVERED-48	48	US pack
SSRS: W-2 / W-3 / Electronic W-2		COVERED-43	43	Year-end forms framework
SSRS: Benefit register / Deduction register / Garnishment register		COVERED-43	43	
SSRS: Earnings register		COVERED-43	43	
SSRS: Payroll journal (GL)		COVERED-43	43	
SSRS: Workers compensation report		PARTIAL-43 (workers' compensation class codes/reporting not named)	48	Gap register
SSRS: Payroll audit / reconciliation reports		COVERED-43	43	
SSRS: Positive pay for payroll checks		COVERED-19	19	
SSRS: New hire reporting (US state)		PARTIAL-43 (new hire reporting with US pack)	48	

12.13.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Generate earnings statements	Create earnings per pay period from schedules/time	COVERED-43	43	
Release earnings statements		COVERED-43	43	
Generate pay statements (calculate gross-to-net)		COVERED-43	43	
Submit pay statements for payment (payment journal, direct deposit file, checks)		COVERED-43	43	NACHA via wave 19
Post payroll (GL journal)		COVERED-43	43	
Issue payments / Print payroll checks		COVERED-19	19	
Pay statement reversal		COVERED-43	43	
Retroactive pay processing		COVERED-43	43	
Generate vendor invoices for payroll liabilities		COVERED-43	43	
Tax updates (apply tax engine updates)		COVERED-43	43	Versioned rule sets
Year-end → Generate W-2 / Electronic filing / Archive		COVERED-43	43	
Benefit accrual (payroll-based leave accrual: PTO)		COVERED-42	42	
Payroll → Arrears recovery processing		PARTIAL-43 (deduction arrears recovery not named)	43	Gap register
Payroll → Pay period roll / Close pay period		COVERED-43	43	
Payroll → Provider export (ADP/Gusto adapter)		COVERED-43	43	
Payroll → Import time from T&A		COVERED-25	25	

12.13.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Payroll parameters — General / Earnings / Posting / Payment / Tax / Number sequences	Default earning codes, accrual, posting defaults, payment journal names, tax engine	COVERED-43	43	
Pay cycles and pay periods	Weekly/biweekly/semimonthly/monthly, period generation	COVERED-43	43	
Payroll calendars (D365: work cycles)		COVERED-43	43	
Earning codes	Type (hourly/salary/overtime/retro), rate basis, multiplier, tax treatment, productive, accounting	COVERED-43	43	
Earning code groups / Earning rate groups		COVERED-43	43	
Benefits (payroll) → Benefit elements: Benefit types, Benefit plans, Benefit options; Benefit accrual plans (PTO accrual with tiers)	Deduction/contribution plans with tax rules	COVERED-43	43	

Name	Key parameters / options	Passage status	Wave	Notes
Taxes → Tax regions, Tax codes (federal/state/local), Tax groups, Tax engine configuration (Symmetry), Tax update schedule, Workers' compensation codes		COVERED-43	43	Workers' comp PARTIAL
Garnishments → Garnishment types, Disposable income definitions, Garnishment rules, Administrative fees		COVERED-43	43	
Schedules → Work schedules (schedule templates for salaried)		COVERED-43	43	
Posting → Payroll posting definitions (earnings/benefits/taxes to accounts), Payroll posting rules by position/department		COVERED-43	43	
Payment → Payment methods (check, direct deposit), Pay statement layouts, Positive pay		COVERED-43	43	
Vendors for payroll liabilities (tax authorities, benefit providers)		COVERED-43	43	
Pay statement → Pay statement check layout / Direct deposit advice		COVERED-46	46	
Year-end → W-2 box mapping, Electronic filing setup		COVERED-43	43	
Country packs → US tables (federal/state) / EU reference country (DE or UK)		COVERED-43	43	Open question 3 in PRD
Third-party payroll provider adapter configuration		COVERED-43	43	
Workflow → Payroll workflows		COVERED-4	4	
Number sequences (payroll)		COVERED-5	5	
Payroll → Leave of absence / FMLA tracking (US)		PARTIAL-42 (FMLA tracking not named)	48	Gap register

12.14 Inventory management

AX 2012 R3 Inventory management (minus Quality, treated in §12.25, and minus WMS I/II which Passage supersedes with wave 31) maps to wave 16 (ledger, journals, counting, reservations, blocking, quarantine), wave 20 (costing, close), wave 28 (picking/shipping of orders) and wave 8 (item master). Transfer orders are only partially covered and are listed in the gap register.

12.14.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Released products (list page, link)	EcoResProductDetailsExtended (InventTable)	Item master per legal entity	COVERED-8	8	See §12.15
On-hand inventory (inquiry entry)	InventOnhandItem / InventDimOnHand	On-hand by dimension with physical/financial split	COVERED-16	16	
Inventory transactions	InventTrans	All transactions with statuses	COVERED-16	16	
Transfer orders (list page)	InventTransferOrderListPage	Ship/receive between warehouses with in-transit	PARTIAL-16 (transfer *journal* is named; transfer *orders* with shipment, in-transit warehouse, receive, underdelivery and transfer-order picking are not named in 16, 22 or 28)	16	Gap register
Transfer order details	InventTransferTable / InventTransferLine	Lines, shipment/receipt, dates, charges	PARTIAL-16 (transfer orders)	16	
Journals → Movement journal	InventJournalTable (Movement)	Qty in/out with offset account	COVERED-16	16	
Journals → Inventory adjustment journal (Profit/loss)	InventJournalTable (ProfitLoss)	Adjustments to item posting accounts	COVERED-16	16	
Journals → Transfer journal	InventJournalTable (Transfer)	Dimension-to-dimension transfer	COVERED-16	16	
Journals → Bills of materials journal	InventJournalTable (BOM)	Report BOM as finished without production	COVERED-16	16	
Journals → Counting journal	InventJournalTable (Count)	Count sheets, variances, approval	COVERED-16	16	
Journals → Tag counting journal	InventJournalTable (TagCount)	Tag-based count	PARTIAL-16 (tag counting (numbered tags, two-step) not named; cycle counting is)	16	Gap register
Journals → Item arrival journal / Production input journal	WMSJournalTable (Arrival / ProdInput)	Register arrivals; production input	COVERED-18	18	Arrival; production input in 21
Journals → Inventory ownership change journal (D365 consignment)	InventJournalTable (OwnershipChange)		GAP	—	Propose wave 16: consignment
Quarantine orders	InventQuarantineOrder	Quarantine warehouse, start/end/report as finished	COVERED-16	16	Quarantine
Inventory blocking	InventBlocking	Block qty (manual/quality)	COVERED-16	16	
Quality orders / Nonconformances (links)	InventQualityOrderTable		COVERED-33	33	§12.25
Batches (Inventory batches)	InventBatch	Batch attributes, expiry, shelf-life dates, disposition, vendor batch, country of origin	COVERED-24	24	Batch core in 16; attributes/shelf life in 24
Serial numbers	InventSerial	Serial records	COVERED-16	16	
Batch disposition codes (status on batch)	PdsDispositionCode	Available/unavailable with blocking	COVERED-24	24	
Batch merge (PI)	PdsBatchMerge	Merge batches with attribute recalculation	PARTIAL-24 (batch merge/split with attribute recalculation not named)	24	Gap register
Pallets (WMS II)	WMSPallet	Pallet master	SUPERSEDED (license plates wave 31)	31	
Locations (WMS II) / Store areas / Store zones	WMSLocation, WMSStoreArea, WMSStoreZone	Legacy location model	SUPERSEDED (location model wave 31)	31	
Pallet transports / Output orders / Shipments (WMS I)	WMSTransport, WMSOrder, WMSShipment	Legacy warehouse execution	SUPERSEDED (work/waves/loads wave 31; fulfillment wave 28)	31	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Picking routes / Picking list registration (sales/inventory)	WMSPickingRoute, WMSOrderTrans	Legacy picking	SUPERSEDED (pick confirmation wave 28; work wave 31)	28	
Arrival overview	WMSArrivalOverview	Expected receipts planning	COVERED-18	18	
Item arrival registration / Registration form	InventTransRegister	Register by dimension/serial/batch	COVERED-18	18	
Picking → Pick (Picking form on orders) / Unpick	InventTransPick	Pick/unpick quantities	COVERED-28	28	
Reservation form (manual reservation on order lines)	InventTransReserve	Reserve by dimension/batch	COVERED-16	16	
Inventory → Bar codes (item bar codes)	InventItemBarcode		COVERED-8	8	
Inventory → Dimensions display / Dimension defaults			COVERED-16	16	
Inventory → Counting → Cycle counting work (WHS)	WHSWorkTable (count)		COVERED-31	31	
Inventory → ABC classification (on item)	InventTable (ABC)	ABC codes by revenue/value/margin/carrying cost	PARTIAL-16 (ABC classification fields/calculation not named)	16	Gap register
Inventory → Forecast (Inventory forecast: sales/purchase forecasts, link)	ForecastSales / ForecastPurch		COVERED-22	22	
Inventory → Item coverage (link)	ReqItemTable		COVERED-22	22	
Inventory → Inventory statuses (WHS)	WHSInventoryStatus	Available/blocked statuses	COVERED-16	16	Inventory status
Inventory → Catch weight quantities on transactions	PdsCatchWeight	Dual UoM	COVERED-24	24	
Inventory → Commodity codes (Intrastat on item)			PARTIAL-13 (Intrastat setup)	13	
Inventory → Inventory visibility add-in (D365)		Real-time cross-system on-hand	COVERED-16	16	On-hand projection; API wave 35

12.14.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
On-hand inquiry (by dimension, with cost)		COVERED-16	16	
On-hand → Physical inventory by dimension / Available physical		COVERED-16	16	
Transactions inquiry (Inventory transactions by item/dimension/reference)		COVERED-16	16	
Transfer order inquiries (Transfer order lines, shipped/received)		PARTIAL-16 (transfer orders)	16	
Journal inquiries (posted journals by type)		COVERED-16	16	
Batch inquiries (Batch attributes, Batch disposition, Expired batches, Shelf life advice)		COVERED-24	24	
Serial number inquiry / Serial trace (Item tracing R3)	Trace batch/serial forward/backward	COVERED-24	24	Genealogy; also wave 33 quality
Quarantine order inquiry		COVERED-16	16	
Reservations inquiry (Reserved by/for)		COVERED-16	16	
Inventory blocking inquiry		COVERED-16	16	
Settlements / Cost explorer (link)		COVERED-20	20	
Inventory statistics (Item statistics, Inventory turnover)		COVERED-46	46	Inventory turns metric
Item arrival inquiry (Arrival overview)		COVERED-18	18	
Picking list inquiry (Picking list registration journal)		COVERED-28	28	
Shipments / Output orders inquiries (WMS I)		SUPERSEDED (wave 28/31)	31	
Pallet / Location inquiries (WMS II)		SUPERSEDED (wave 31)	31	
Counting history / Count variance inquiry		COVERED-16	16	
Inventory dimension inquiry (dimension combinations)		COVERED-16	16	
Inventory → Intercompany on-hand (R3)	On-hand across legal entities	PARTIAL-40 (intercompany on-hand visibility not named)	40	Gap register
SSRS: Physical inventory by inventory dimension / On-hand		COVERED-16	16	
SSRS: Inventory value (link)		COVERED-20	20	
SSRS: Inventory transactions report		COVERED-16	16	
SSRS: Journal reports (Movement, Counting list, Counting journal, Transfer, BOM, Tag counting list)		COVERED-16	16	Tag counting PARTIAL

SSRS: Inventory reconciliation (Inventory/Ledger)		COVERED-20	20	
SSRS: Item model group / Dimension group listings		COVERED-8	8	
SSRS: Consignment inventory reports (D365)		GAP	—	Propose wave 16: consignment
SSRS: Catch weight on-hand / transactions		COVERED-24	24	
SSRS: Country of origin / Shelf life reports (PI)		COVERED-24	24	

12.14.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Closing and adjustment (link)		COVERED-20	20	
Counting → Create counting journal (by item/warehouse/location, counting groups, periodic)		COVERED-16	16	Cycle counting plans
Counting → Post counting / Approve variances		COVERED-16	16	
Tag counting → Create tag counting / Transfer to counting journal		PARTIAL-16 (tag counting)	16	
Transfer orders → Ship / Receive (batch) / Transfer order picking release		PARTIAL-16 (transfer orders)	16	
Transfer orders → Delete transfer orders		PARTIAL-16 (transfer orders)	16	
Quarantine orders → Start / End / Report as finished (batch)		COVERED-16	16	
Reservation → Automatic reservation (batch) / Cancel reservations		COVERED-16	16	
Batches → Expire batches / Update shelf life dates / Batch disposition update		COVERED-24	24	
Batches → Shelf life advice (batch rotation)		COVERED-24	24	
ABC classification (periodic calculation)		PARTIAL-16 (ABC classification)	16	
Forecast → Transfer forecast (link)		COVERED-22	22	
Bar codes → Generate bar codes (batch)		COVERED-8	8	
Inventory → Recalculate on-hand (InventSum rebuild) / Check inventory consistency		COVERED-16	16	Projection rebuild
Inventory → Clean up (Delete inventory journals, Delete InventSum zero records, Delete warehouse journals)		COVERED-16	16	Housekeeping job
Inventory → Inventory close (link) / Transfer inventory to ledger		COVERED-20	20	
Inventory → Warehouse management: Pallet transports / Shipments / Output orders processing (WMS I/II)		SUPERSEDED (wave 31)	31	
Inventory → Update unit conversions (mass)		COVERED-6	6	
Inventory → Release products to legal entities (mass)		COVERED-8	8	
Inventory → Consignment: ownership change batch		GAP	—	Propose wave 16: consignment
Inventory → Intercompany: on-hand sync		PARTIAL-40 (intercompany on-hand)	40	
Inventory → Item tracing (run trace)		COVERED-24	24	
Inventory → Catch weight: update nominal weights		COVERED-24	24	

12.14.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Inventory and warehouse management parameters — General	Default dimensions, pallet/location usage (WMS II), date-controlled reservations, allow negative physical on quarantine, bill of materials: explode, counting reason codes, reservation by batch/date	COVERED-16	16	WMS II flags superseded
Inventory and warehouse management parameters — Journals	Journal names defaults, delete lines after posting, journal size	COVERED-16	16	
Inventory and warehouse management parameters — Inventory dimensions / Inventory accounting (Costing)		COVERED-20	20	
Inventory and warehouse management parameters — Quality management	Hours per day, nonconformance defaults	COVERED-33	33	
Inventory and warehouse management parameters — Transport (WMS I) / Locations (WMS II) / Bar codes / Pallets		SUPERSEDED (wave 31)	31	
Inventory and warehouse management parameters — Transfer orders	Default in-transit warehouse, underdelivery, picking	PARTIAL-16 (transfer orders)	16	
Inventory and warehouse management parameters — Number sequences		COVERED-5	5	
Inventory and warehouse management parameters — Quarantine / Blocking		COVERED-16	16	
Inventory → Item model groups	Costing method, include physical value, post physical/financial inventory, negative physical/financial, quarantine management, registration/picking requirements, receiving/issue requirements, stocked product, FIFO date-controlled, backward from ship date	COVERED-8	8	Costing behavior wave 20
Inventory → Item groups	Posting defaults per group	COVERED-8	8	
Inventory → Dimension groups: Product dimension groups, Storage dimension groups, Tracking dimension groups (active, primary stocking, physical/financial inventory, for purchase prices/sales prices, blank receipt/issue allowed, coverage plan by dimension)		COVERED-8	8	
Inventory → Inventory dimension display settings (Dimensions display)		COVERED-5	5	Saved views
Inventory → Reservation hierarchies (WHS)		COVERED-31	31	
Inventory → Unit sequence groups (WHS)		COVERED-31	31	
Inventory → Inventory statuses / Inventory status transitions (D365)		COVERED-16	16	
Inventory → Posting → Inventory posting profiles (Purchase order, Sales order, Inventory, Production, Standard cost variance tabs; by item code/account code)	Full inventory posting matrix	COVERED-16	16	Standard cost variance accounts in 39

Name	Key parameters / options	Passage status	Wave	Notes
Inventory → Posting → Item posting groups (link)		COVERED-16	16	
Inventory → Journals → Journal names, inventory (type, voucher, posting restrictions, reserve on post)		COVERED-16	16	
Inventory → Journals → Warehouse journal names (arrival, production input)		COVERED-18	18	
Inventory → Counting → Counting groups (periodic/zero/positive/negative/manual counting codes, interval)		COVERED-16	16	Cycle counting plans
Inventory → Counting → Counting reason code policies		PARTIAL-11 (reason codes)	11	
Inventory → Batch → Batch attributes, Batch attribute groups, Product-specific batch attributes, Customer-specific batch attributes		COVERED-24	24	
Inventory → Batch → Batch disposition master		COVERED-24	24	
Inventory → Batch → Shelf life setup on item (shelf advice period, best before, expiry), Batch number groups (manual/auto, by date)		COVERED-24	24	
Inventory → Serial → Serial number groups (auto numbering rules)		COVERED-16	16	
Inventory → Warehouses (Warehouse details: type, site, quarantine warehouse, transit warehouse, WHS flags, default locations, location format, reservation)		COVERED-6	6	WHS flags wave 31
Inventory → Sites		COVERED-6	6	
Inventory → Locations (WMS II) / Location names / Location types / Store areas / Zones / Aisles	Legacy	SUPERSEDED (location model wave 31)	31	
Inventory → Pallets → Pallet types / Pallet IDs / Pallet transports setup (WMS II)		SUPERSEDED (license plates wave 31)	31	
Inventory → Bar codes → Bar code setup (types: EAN13, Code 39, Code 128, Interleaved 2 of 5, UPC-A…), Bar code mask characters, Bar code masks		COVERED-8	8	GS1 identifiers
Inventory → Quarantine → Quarantine zones (link to Quality)		COVERED-33	33	
Inventory → Inventory blocking reasons		COVERED-16	16	
Inventory → Distribution → Item allocation keys (link to planning)		COVERED-22	22	
Inventory → Forecast models / Forecast plans (link)		COVERED-22	22	
Inventory → ABC classification setup (ABC calculation parameters)		PARTIAL-16 (ABC classification)	16	
Inventory → Catch weight → Catch weight item setup, CW units, nominal/min/max weights		COVERED-24	24	
Inventory → Transfer orders → Transfer order parameters, In-transit warehouses		PARTIAL-16 (transfer orders)	16	
Inventory → Consignment → Consignment parameters (D365)		GAP	—	Propose wave 16: consignment
Inventory → Country of origin / Product origin setup (PI)		COVERED-24	24	
Inventory → Dimension-based cost price (Cost by site/warehouse)		COVERED-20	20	
Inventory → Unit of measure (link) / Unit conversions (standard, inter-class, intra-class, product-specific)		COVERED-6	6	
Inventory → Charges on inventory (Misc. charges on journals)		COVERED-16	16	
Inventory → Inventory visibility add-in setup (D365)		SUPERSEDED (native on-hand projection + public API wave 35)	35	
Workflow → Inventory workflows (inventory journal approval)		COVERED-16	16	
Number sequences (inventory)		COVERED-5	5	
Shipping carriers (Shipping carrier interface, AX 2012 carrier integration: UPS/FedEx via shipping software)		COVERED-28	28	Carrier integration abstraction
Delivery → Modes of delivery / Terms of delivery / Transport (link)		COVERED-28	28	
Inventory → Picking → Picking routes setup / Picking workbench (R3 sales picking workbench)	Batch create picking lists by filters	PARTIAL-28 (picking workbench (grouped picking list generation across sales orders, non-WHS) is not named; wave/batch picking is)	28	Gap register

12.15 Product information management

Products, product masters, variants, released products, dimension groups, attributes, categories, BOMs/formulas (also §12.22/§12.23), configuration — wave 8 and wave 9 — with product compliance (PI) a gap.

12.15.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Products (all products and product masters, shared)	EcoResProductListPage / EcoResProductDetails	Tenant-level product definitions	COVERED-8	8	
Product masters	EcoResProductMasterListPage	Masters with dimension groups and configuration technology (predefined variant / dimension-based / constraint-based)	COVERED-8	8	
Product variants	EcoResProductVariantListPage (EcoResDistinctProductVariant)	Variants per master	COVERED-8	8	1,000 variants in < 5 s
Released products (list page)	EcoResProductDetailsExtended (InventTable)	Per legal entity: general, purchase, sell, manage inventory, engineer, plan, manage projects, manage costs, financial dimensions, retail, warehouse, transportation, product variants	COVERED-8	8	Site/warehouse defaults

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Released product variants	InventDimCombination	Variant per entity with price/cost	COVERED-8	8	
Released product → Default order settings / Site specific order settings	InventItemSetup (InventItemPurchSetup/SalesSetup/InventSetup)	Default site/warehouse, order qty (min/max/multiple/standard), lead time, stopped	COVERED-8	8	
Released product → Item coverage (link)	ReqItemTable		COVERED-22	22	
Released product → BOM versions / Formula versions / Route versions	BOMVersion, RouteVersion	Approved/active versions per item	COVERED-9	9	
Released product → External item descriptions (customer/vendor item numbers)	CustVendExternalItem		COVERED-8	8	
Released product → Bar codes / GTIN	InventItemBarcode / InventItemGTIN		COVERED-8	8	
Released product → Unit conversions (product-specific)	UnitOfMeasureConversion		COVERED-6	6	
Released product → Translations (product name/description per language)	EcoResProductTranslation		COVERED-8	8	Translations via metadata
Released product → Product attributes / Attribute values	EcoResProductAttributeValue	Attribute values by category	COVERED-8	8	
Released product → Product categories assignment	EcoResProductCategory		COVERED-8	8	
Released product → Related products	EcoResProductRelation	Up-sell/cross-sell/accessory	PARTIAL-8 (related products (cross/up-sell relations) not named)	8	Gap register
Released product → Product images / documents	DocuRef		COVERED-8	8	
Released product → Potency / Active ingredient (PI)	PdsIngredient	Base attribute, potency item	COVERED-24	24	
Released product → Catch weight (PI)	PdsCatchWeightItem		COVERED-24	24	
Released product → Planning items / Co-products / By-products (PI)	PdsCoProduct		COVERED-24	24	
Released product → Commodity pricing (PI: Pricing calculation, Price margins, Commodity codes)	PdsCommodity*	Cost basis types, price calculation, margins	PARTIAL-26 (commodity price index-based pricing for process industries (PI commodity pricing) not named)	26	Gap register
Released product → Product compliance (PI: Regulated products, Restricted lists, Reporting details, Safety data sheets (MSDS/SDS) with validity and send on sales)	PdsProductComplianceTable, PdsMSDS	Hazardous material compliance	GAP	—	Propose wave 33: product compliance (regulated/restricted lists by country/state, SDS versions with shipment delivery rules, reporting thresholds)
Released product → Sequencing (PI sequence groups)	PdsSequence	Sequence attributes for scheduling	COVERED-23	23	Setup optimization
Released product → Pricing (Item price, Price simulation link)	InventItemPrice		COVERED-26	26	Cost in 39
Released product → Charges (Item charges groups)			COVERED-17	17	
Released product → Product lifecycle state (D365)	EcoResProductLifecycleState	Active/obsolete states controlling transactions	PARTIAL-8 (product lifecycle states with per-process blocking not named; stopped flags are)	8	Gap register
Product configuration → Product configuration models (R2+: constraint-based)	PCProductConfigurationModel	Components, attributes, constraints, calculations, BOM/route lines, UI	COVERED-8	8	Configurator foundation (OR-Tools/MiniZinc)
Product configuration → Configure line (configure from order)	PCRuntimeConfigurator	Interactive configuration	COVERED-27	27	Order with configured product
Product configuration → Product models (legacy Product builder, deprecated R2)	PBATable		OUT-OF-SCOPE (deprecated in AX 2012 R2; constraint-based configurator replaces)	—	
Product configuration → Configuration variants / Dimension-based configuration (configurations)	ConfigTable	Config dimension values	COVERED-8	8	
Categories → Category hierarchies (Procurement, Sales, Commodity code, Retail, Project)	EcoResCategoryHierarchy	Hierarchies with attributes	COVERED-8	8	
Categories → Category hierarchy roles	EcoResCategoryHierarchyRole		COVERED-8	8	
Bills of materials (list page, BOM designer)	BOMTable, BOMDesigner		COVERED-9	9	
Formulas (PI)	BOMTable (formula)		COVERED-9	9	Formula BOMs
Routes (link)	RouteTable		COVERED-9	9	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Product change cases (case management for products)	CaseDetail (product change)	Link cases to product/BOM changes	COVERED-9	9	ECR/ECO
Engineering change (D365 ECM link)			COVERED-9	9	§12.34
Product → Product readiness checks (D365)	EcoResProductReadiness	Pre-release checklists per legal entity	PARTIAL-9 (product readiness policies/checks not named)	9	Gap register
Item sales tax groups / Tax on product			COVERED-13	13	
Product → Packaging (D365 packaging materials, PI container packaging)		Packaging material for fees	PARTIAL-28 (packaging materials and packaging fees (EU packaging duty) not named)	28	Gap register

12.15.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Released products inquiry / Products by category		COVERED-8	8	
Product variants inquiry		COVERED-8	8	
Where-used (BOM where-used)		COVERED-9	9	
BOM lines / BOM versions inquiry		COVERED-9	9	
Configuration inquiries (Configured products, Configuration history)		COVERED-8	8	
External item descriptions inquiry		COVERED-8	8	
Product attributes inquiry / Attribute search		COVERED-8	8	
Product compliance inquiries (Regulated items, SDS due)		GAP	—	Propose wave 33: product compliance
SSRS: Item base data / Released product list		COVERED-8	8	
SSRS: BOM list / BOM lines / BOM where-used / BOM versions		COVERED-9	9	
SSRS: Formula report (PI)		COVERED-9	9	
SSRS: Item price list / Price list by customer		COVERED-26	26	
SSRS: Bar code labels		COVERED-32	32	
SSRS: Product configuration model / Configuration report		COVERED-8	8	
SSRS: Category hierarchy report		COVERED-8	8	
SSRS: Safety data sheet (SDS document, PI)		GAP	—	Propose wave 33: product compliance
SSRS: Product images catalog		COVERED-46	46	
SSRS: Unit conversions list		COVERED-6	6	

12.15.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Release products (to legal entities, mass release)		COVERED-8	8	
Product → Change product dimension groups / Change item model group (periodic conversions)		PARTIAL-8 (changing dimension/model groups on items with transactions (conversion jobs) not named)	8	Gap register
Product → Generate variants (from dimension values)		COVERED-8	8	
Product → Update default order settings (mass)		COVERED-8	8	
BOM → Copy BOM / Change BOM item (mass replace component)		COVERED-9	9	
BOM → Approve/activate versions (batch)		COVERED-9	9	
BOM → Calculate (BOM calculation, link)		COVERED-39	39	
Product configuration → Model versioning / Reuse configurations / Clean up configurations		COVERED-8	8	
Product → Import products / variants / attributes (DIXF)		COVERED-10	10	
Product → Update product translations (batch)		COVERED-8	8	
Product compliance → Expire SDS / Reporting (periodic)		GAP	—	Propose wave 33: product compliance
Product → Delete released products / Mark obsolete		PARTIAL-8 (lifecycle states)	8	
Categories → Update category attributes / Reassign products		COVERED-8	8	
Product → Price update (Item price copy / Trade agreement bulk update)		COVERED-26	26	

12.15.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Product information management parameters	Product dimension defaults, variant number nomenclature (D365), released product defaults, number sequences	COVERED-8	8	
Product → Product dimension groups / Storage dimension groups / Tracking dimension groups		COVERED-8	8	
Product → Product dimensions: Sizes, Colors, Styles, Configurations (shared value lists)		COVERED-8	8	
Product → Product nomenclature / Variant nomenclature (D365)	Naming rules for variants	COVERED-8	8	
Product → Item model groups (link) / Item groups (link)		COVERED-8	8	

Name	Key parameters / options	Passage status	Wave	Notes
Product → Product lifecycle states (D365)		PARTIAL-8 (lifecycle states)	8	
Product → Product types / Product subtypes (item vs service; product vs master)		COVERED-8	8	
Product → Units (Units, Unit classes, Unit conversions)		COVERED-6	6	
Product → Attributes: Attribute types, Attributes, Attribute groups (D365 product attributes), Category attributes		COVERED-8	8	
Product → Category hierarchies / Category hierarchy roles		COVERED-8	8	
Product → Bar code setup / Bar code masks / GTIN setup		COVERED-8	8	
Product → Product configuration models setup (Attribute types, Components, Subcomponents, Tables constraints (system-defined/user-defined), Template constraints, BOM/route line templates, Calculation templates, Pricing rules, UI setup, Model versions, Product configuration parameters)		COVERED-8	8	
Product → Configuration groups (dimension-based config) / Configuration rules (BOM config rules, legacy)		COVERED-8	8	
Product → Default order settings templates		COVERED-8	8	
Product → External item description setup		COVERED-8	8	
Product → Item sales tax groups default / Charges groups default		COVERED-13	13	
Product → Packaging units / Packing material fees setup (EU)		PARTIAL-28 (packaging materials)	28	
Product → Product compliance setup (PI: Regulated regions, Restricted lists, Reporting lists, SDS parameters, Product safety data sheet validity, Item-specific: MSDS validity days)		GAP	—	Propose wave 33: product compliance
Product → Country of origin setup / Product origin rules (PI)		COVERED-24	24	
Product → Commodity pricing setup (Cost basis types, Pricing calculations, Price margin templates, Commodity codes)		PARTIAL-26 (commodity pricing)	26	
Product → Potency / Base attribute setup / Batch attributes (link)		COVERED-24	24	
Product → Catch weight setup (link)		COVERED-24	24	
Product → Sequencing setup (Sequences, Sequence groups)		COVERED-23	23	
BOM → BOM versions parameters (approval required, activation rules), BOM calculation groups (link), BOM designer parameters		COVERED-9	9	
BOM → Scrap / Rounding-up (BOM line types: item, phantom, pegged supply, vendor)		COVERED-9	9	Phantom, subcontract (vendor line type) in 21
Engineering → Engineering change management parameters (D365, link)		COVERED-9	9	
Product → Product readiness policies (D365)		PARTIAL-9 (product readiness)	9	
Product → Product master → Product search / Product image settings		COVERED-8	8	
Product → Released product templates (record templates)		COVERED-5	5	Record templates in shell
Product → Workflow (product release/change approval)		COVERED-4	4	
Number sequences (products, variants, BOMs)		COVERED-5	5	
Product → Retail product attributes / Retail categories		OUT-OF-SCOPE (retail non-goal)	—	

12.16 Procurement and sourcing

Requisitions, RFQs, agreements, POs, purchasing policies, categories and vendor evaluation map to wave 17; receiving to 18; catalogs are partially covered; external catalogs (punchout), vendor rebates and broker contracts are gaps.

12.16.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Purchase requisitions (list page: all, prepared by me, assigned to me)	PurchReqTableListPage	Requisition lifecycle (draft, in review, approved, closed)	COVERED-17	17	
Purchase requisition details	PurchReqTable / PurchReqLine	Lines from catalog/non-catalog, requester, accounting distribution, approval	COVERED-17	17	
Purchase requisitions → Release approved purchase requisitions (workbench)	PurchReqReleaseApproved	Consolidate and create POs	COVERED-17	17	Consolidation into POs
Purchase requisitions → Consolidation opportunities	PurchReqConsolidation	Group lines for better pricing	COVERED-17	17	
Requests for quotations (list page)	PurchRFQCaseTableListPage	RFQ cases	COVERED-17	17	
RFQ details / RFQ replies (Vendor replies) / Compare replies	PurchRFQCaseTable, PurchRFQReplyTable, PurchRFQCompare	Send, receive, compare, accept/reject	COVERED-17	17	Supplier reply portal
RFQ → Bidding (Vendor portal RFQ reply, sealed bids, scoring criteria R3)	PurchRFQVendorPortal	Scoring, sealed bidding, amendments	PARTIAL-17 (sealed bids, scoring criteria and amendments/addenda not named)	17	Gap register

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Purchase agreements (list page)	PurchAgreementListPage	Blanket with commitment types (product qty/value, category value, total value), release lines	COVERED-17	17	
Purchase agreement classifications	AgreementClassification		COVERED-17	17	
Purchase orders (list page: all, received not invoiced, etc.)	PurchTableListPage		COVERED-17	17	
Purchase order details	PurchTable	Header/lines, delivery schedule, pricing, charges, dimensions, change management, intercompany	COVERED-17	17	Intercompany 40
Purchase orders → Purchase order change requests / Versions (change management)	PurchTableVersion	Versioned, re-approval	COVERED-17	17	
Purchase orders → Purchase order confirmation (vendor confirmation via collaboration)	PurchConfirmation		COVERED-20	20	
Purchase orders → Delivery schedule on line	PurchLineDeliverySchedule		COVERED-17	17	
Purchase orders → Direct delivery (drop ship from sales)	PurchTable (direct delivery)		COVERED-28	28	Drop-ship
Purchase orders → Subcontracting (purchase line from production)	PurchLine (subcontract)		COVERED-21	21	
Vendors (list page, link)	VendTableListPage		COVERED-7	7	
Procurement catalogs	CatCatalog (ProcurementCatalog)	Internal catalog of products per category	PARTIAL-17 (requisitions and category policies are named; an internal procurement catalog with product images, category navigation, catalog publication by org unit is not)	17	Gap register
External catalogs (punchout cXML/OCI)	CatExternalCatalog	Vendor punchout	GAP	—	Propose wave 35: external catalog punchout (cXML/OCI) via integration hub, requisition lines returned to wave 17
Vendor catalogs (vendor catalog import, CMR files)	CatVendorCatalog (CatCMR)	Vendor-maintained product catalog import	PARTIAL-20 (vendor catalog upload via supplier portal not named)	20	Gap register
Procurement categories (category hierarchy for procurement)	EcoResCategory (procurement role)		COVERED-8	8	
Vendor requests (link)	VendRequest		PARTIAL-20 (vendor request workflow)	20	
Vendor evaluation (R3 vendor rating / criteria)	VendEvaluation	Rate vendors per criteria at receipt/invoice	COVERED-33	33	Supplier scorecards
Vendor rebates (PI vendor rebate agreements, R3)	PdsRebateAgreement (vendor)	Rebate agreements with vendors, claims, accruals	GAP	—	Propose wave 26: vendor rebates (agreements, accrual on purchase, claim/credit note settlement via AP) mirroring customer rebates
Broker contracts (PI brokers and royalties, R3)	PdsBrokerContract	Broker commissions on sales, claim via AP	GAP	—	Propose wave 26: broker contracts (commission to broker vendor on sales invoices, claims via AP)
Royalty agreements (PI, R3)	PdsRoyaltyAgreement	Royalties payable on sales to licensors	GAP	—	Propose wave 26: royalty agreements (accrual on sales, claim to vendor)
Consignment (link)			GAP	—	Propose wave 16: consignment
Purchase orders → Product receipt / Receipts list (links)			COVERED-18	18	
Purchase orders → Invoice (link)			COVERED-18	18	
Purchase orders → Charges / Charges allocation	MarkupTrans		COVERED-17	17	
Purchase orders → Prepayment (link)			COVERED-19	19	
Purchase inquiries (Purchase inquiry documents, R3 "purchase inquiry" journal)	PurchInquiry (VendPurchOrderJour inquiry type)	Price inquiry documents to vendors	COVERED-17	17	RFQ covers
Procurement → Purchasing policies (link)	PurchPolicy		COVERED-17	17	
Procurement → Signing limits (link to Org admin)	SigningLimit		PARTIAL-17 (signing limits (self-service limit requests per job/compensation) not named; amount-band policies are)	17	Gap register
Procurement → Workflow work items (link)			COVERED-4	4	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Procurement → Vendor collaboration (D365 PO confirmation, invoices, consignment)			COVERED-20	20	
Procurement → Vendor onboarding (D365 prospective vendor registration)	VendProspectiveVendorRegistration	External registration → request → vendor	PARTIAL-20 (vendor onboarding)	20	
Procurement → Vendor certifications / Vendor diversity (D365)	VendCertification	Certifications with expiry, diversity classifications	PARTIAL-7 (vendor certifications/diversity classifications not named)	7	Gap register
Procurement → Vendor contacts / Vendor users (portal)			COVERED-20	20	

12.16.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Purchase order inquiries (POs, lines, history, versions, backorders, open lines)		COVERED-17	17	
Purchase requisition inquiries (by requester, status, consolidation)		COVERED-17	17	
RFQ inquiries (RFQ status, replies, award history)		COVERED-17	17	
Purchase agreement inquiries (Fulfillment / released quantities)		COVERED-17	17	
Vendor evaluation inquiry / Vendor performance		COVERED-33	33	
Journals → Confirmations / Receipts lists / Product receipts / Invoices		COVERED-18	18	
Charges inquiry		COVERED-17	17	
Procurement category spend inquiry (Spend analysis cube)		COVERED-46	46	
Vendor rebate inquiries		GAP	—	Propose wave 26: vendor rebates
Broker/royalty claim inquiries		GAP	—	Propose wave 26: broker contracts
SSRS: Purchase order (document), Purchase order confirmation, PO status, PO lines		COVERED-17	17	
SSRS: Purchase requisition (document) / Requisition status		COVERED-17	17	
SSRS: Request for quotation (document) / RFQ comparison / RFQ reply		COVERED-17	17	
SSRS: Purchase agreement (document) / Agreement fulfillment		COVERED-17	17	
SSRS: Vendor evaluation report / Vendor performance (on-time, quality)		COVERED-33	33	
SSRS: Purchase analysis (Spend by vendor/category/period, Purchase statistics)		COVERED-46	46	
SSRS: Backorder lines / Overdue deliveries		COVERED-17	17	
SSRS: Procurement catalog report		PARTIAL-17 (procurement catalog)	17	
SSRS: Vendor rebate reports		GAP	—	Propose wave 26: vendor rebates
SSRS: Purchase price variance (link)		COVERED-39	39	
SSRS: Policy violations (purchasing policy)		COVERED-17	17	

12.16.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Purchase requisitions → Release approved requisitions (batch auto-create POs)		COVERED-17	17	
Purchase requisitions → Expire / Clean up requisitions		COVERED-17	17	
Purchase orders → Confirm / Receipts list / Product receipt / Invoice (batch posting)		COVERED-17	17	
Purchase orders → Update delivery dates / Finalize / Cancel remaining		COVERED-17	17	
Purchase orders → Firm planned purchase orders (link)		COVERED-22	22	
Purchase agreements → Update agreement release status / Expire		COVERED-17	17	
RFQ → Send RFQ (batch), Close bidding, Purchase order from accepted reply		COVERED-17	17	
Catalog → Import vendor catalogs (CMR) / Publish procurement catalog		PARTIAL-17 (procurement catalog)	17	
Vendor evaluation → Calculate vendor ratings		COVERED-33	33	
Vendor rebates → Cumulate / Approve / Process claims		GAP	—	Propose wave 26: vendor rebates
Broker → Process broker claims / Royalty → Process royalty claims		GAP	—	Propose wave 26: broker contracts
Procurement → Vendor collaboration: provision users, send PO (batch)		COVERED-20	20	
Procurement → Policy evaluation (re-evaluate policies on open requisitions)		COVERED-17	17	
Procurement → Delete purchase orders / Clean up update history		COVERED-17	17	
Procurement → EDI 850 outbound (batch)		COVERED-35	35	

12.16.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Procurement and sourcing parameters — General	Default order type, create direct delivery, safety levels, intercompany PO defaults, delivery date control	COVERED-17	17	
Procurement and sourcing parameters — Purchase requisitions / Purchase agreements / RFQ / Catalog / Vendor collaboration / Number sequences		COVERED-17	17	Catalog tab PARTIAL
Policies → Purchasing policies (policy rules: catalog policy, category access policy, category policy, purchase agreement policy, purchase order creation and demand consolidation, purchase requisition control, RFQ policy, re-approval rule for POs)	Policy framework with org hierarchy scope	COVERED-17	17	Amount band/category policies

Name	Key parameters / options	Passage status	Wave	Notes
Policies → Purchase requisition approval amount thresholds / Signing limit policies		PARTIAL-17 (signing limits)	17	
Policies → Purchasing policy organization hierarchy purpose		COVERED-6	6	Hierarchy purposes
Categories → Procurement categories, Category policy rules, Category managers, Category vendor assignment, Category questionnaires		PARTIAL-8 (category-level vendor assignment and category questionnaires not named)	17	Gap register
Catalogs → Procurement catalogs, Catalog policies, External catalogs (cXML config), Vendor catalog import parameters, Catalog images		PARTIAL-17 (procurement catalog)	17	External catalogs GAP (wave 35)
Vendors → Vendor evaluation criterion groups / criteria		COVERED-33	33	
Vendors → Vendor request types / Vendor onboarding questionnaires (D365)		PARTIAL-20 (vendor request workflow)	20	
Vendors → Vendor certification types / Diversity classifications		PARTIAL-7 (vendor certifications)	7	
RFQ → RFQ types, RFQ scoring criteria/groups, Reply templates, Solicitation types (D365), Bidding parameters		PARTIAL-17 (sealed bids/scoring)	17	
Purchase agreements → Agreement classifications, Commitment types		COVERED-17	17	
Purchase orders → Order types, Purchase order change management parameters per vendor, PO approval workflow		COVERED-17	17	
Charges → Charges codes / Auto charges / Charges groups (link)		COVERED-17	17	
Prices and discounts → Trade agreement journal names, Price/discount groups (vendor), Activate price/discount, Purchase price tolerance, Vendor price search parameters (vendor > group > all)		COVERED-26	26	Wave 17 uses pricing engine for vendor prices
Vendor rebates → Rebate agreements, Rebate program types, Rebate groups (vendor), Rebate claim journal names		GAP	—	Propose wave 26: vendor rebates
Brokers and royalties → Broker contract setup, Royalty agreement setup, Claim journal names		GAP	—	Propose wave 26: broker contracts
Delivery → Modes of delivery, Terms of delivery, Delivery schedule parameters		COVERED-28	28	
Forms → Form setup (purchase documents) / Form notes / Print management (purchase)		PARTIAL-46 (print management routing)	46	
Vendor collaboration → Vendor collaboration parameters, Consignment parameters		COVERED-20	20	Consignment GAP wave 16
Workflow → Procurement workflows (requisition line/header, PO, agreement, RFQ)		COVERED-4	4

Procurement → EDI partner setup (link)		COVERED-35	35	

12.17 Sales and marketing

Sales quotations, orders, agreements, delivery and returns map to waves 27–30 (orders/ATP/credit 27, fulfillment 28, invoicing 29, returns 30) with pricing in 26. The CRM half (leads, opportunities, campaigns, telemarketing, mailings, activities, responsibilities) is out of scope per the PRD non-goal; Passage integrates with Salesforce/HubSpot via wave 35 connectors.

12.17.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Sales orders (list page: all, open, backorders, delivered not invoiced, recent)	SalesTableListPage		COVERED-27	27	
Sales order details	SalesTable / SalesLine	Header/lines, delivery, price/discount, charges, dimensions, holds, intercompany, project	COVERED-27	27	
Sales order → Order types (journal, subscription, sales order, returned order, item requirements)	SalesTable.SalesType		COVERED-27	27	
Sales order → Delivery date control (ATP, CTP, sales lead time, none)	SalesLine (dlv date control)		COVERED-27	27	
Sales order → Credit limit check / Order holds	SalesTableHold		COVERED-27	27	
Sales order → Order events / Order history	SalesOrderEvent		COVERED-27	27	Audit
Sales order → Configure line / Product configuration	PCRuntimeConfigurator		COVERED-27	27	
Sales order → Direct delivery / Drop ship to vendor	SalesLine (direct delivery) → PurchTable		COVERED-28	28	
Sales order → Alternative items (substitutes)	InventItemAlternative	Alternate when out of stock	COVERED-27	27	
Sales order → Supplementary items (prompt)	PriceDiscSuppItem		PARTIAL-26 (supplementary items)	27	
Sales order → Charges / Charges allocation	MarkupTrans		COVERED-26	26	
Sales order → Prepayment			COVERED-30	30	
Sales order → Confirmation / Picking list / Packing slip / Invoice posting	SalesEditLines		COVERED-28	28	Invoice 29; confirmation 27

Sales tax → Retail tax setup (destination-based, tax override)		COVERED-13	13	Tax engine handles destination-based
Retail hierarchy / Organization hierarchy for retail		COVERED-6	6	Hierarchy purposes
Online store → Storefront / Sharepoint site setup		OUT-OF-SCOPE (e-commerce storefront non-goal)	—	

12.21 Master planning

Static/dynamic plans, coverage, planned orders, action/futures messages, forecasting, safety stock and intercompany planning map to wave 22 (MRP/MPS/forecasting) with capacity in 23 and intercompany planning in 40. D365 Planning Optimization and priority-based planning are superseded by the Passage planning engine.

12.21.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Planned orders (list page: all, planned purchase, planned production, planned transfer, planned kanban)	ReqPOListPage	Review/firm/change planned orders	COVERED-22	22	
Planned order details	ReqPO	Qty, dates, pegging (requirement profile), action/futures messages, approve, firm, group	COVERED-22	22	
Planned orders → Firm (to PO/production/transfer/kanban)	ReqTransFirm	Firming with grouping (by vendor, period, buyer group)	COVERED-22	22	
Planned orders → Change planned orders (mass change)	ReqPOChange	Bulk date/qty	COVERED-22	22	
Net requirements (per item)	ReqTransOverview	Requirements/supply with pegging per plan	COVERED-22	22	Explain-this-plan pegging tree
Explosion (per order/line)	ReqTransExplosion	Multi-level explosion tree with pegging and futures	COVERED-22	22	
Action messages (list)	ReqTransAction	Advance/postpone/decrease/increase/cancel/derived actions	COVERED-22	22	
Futures messages / Delay messages (list)	ReqTransFutures	Delays and calculated dates	COVERED-22	22	
Supply schedule (R3)	ReqSupplySchedule	Period-bucketed supply/demand view with planned order creation	PARTIAL-22 (period-bucketed supply schedule workbench not named; planning engine and planned orders are)	22	Gap register
Demand forecast (Forecast → Demand forecast / Sales forecast lines)	ForecastSales	Forecast lines by item/model/allocation key	COVERED-22	22	
Supply forecast (Purchase forecast)	ForecastPurch		COVERED-22	22	
Inventory forecast	ForecastInvent? (InventForecast)	On-hand level forecast	PARTIAL-22 (inventory (stock level) forecast type not named; demand/supply forecasts are)	22	Gap register
Demand forecasting (R3: Generate statistical baseline forecast, Adjusted demand forecast workbook, Forecast accuracy)	ReqDemPlan*	Azure ML/SSAS baseline forecasts with Excel adjustment	COVERED-22	22	ETS/Croston service with override and consensus
Master plans (list)	ReqPlanSched	Plans: static, dynamic, others	COVERED-22	22	
Item coverage (per item/dimension)	ReqItemTable	Coverage group override, min/max, lead times, planned order type, vendor	COVERED-22	22	
Safety stock journal	ReqSafetyStockJournal	Proposed min levels from history	COVERED-22	22	Safety stock
Planned production orders → Scheduling (Gantt from planned orders)			COVERED-23	23	
Intercompany planned orders (R3 intercompany master scheduling)	ReqPO (intercompany)	Planned orders across legal entities with intercompany planning groups	PARTIAL-40 (intercompany master planning across legal entities not named in 22 or 40)	40	Gap register
Planned orders → Sequencing (PI)	PdsSequence	Sequence planned batch orders	COVERED-23	23	
Planned orders → Capacity reservations (link)	WrkCtrCapRes		COVERED-23	23	
Demand forecasting → Forecast models / Submodels	ForecastModel		COVERED-22	22	
Planning → Planning Optimization (D365 service), Priority-based planning (D365)	ReqPlanningOptimization	External planning service	SUPERSEDED (native Go planning engine wave 22 with priority as an attribute)	22	Priority-based planning (D365 2021+): PARTIAL — see gap register entry under setup

12.21.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Net requirements inquiry / Requirement profile		COVERED-22	22	
Explosion inquiry / Trace (why was this planned)		COVERED-22	22	
Planned order inquiries (by item, vendor, period)		COVERED-22	22	
Action message inquiry / Futures inquiry		COVERED-22	22	
Capacity → Capacity load / Capacity reservations (link)		COVERED-23	23	
Master plan run history / Plan log (ReqLog)	Run statistics, errors	COVERED-22	22	
Forecast inquiries (Forecast lines, Forecast consumption / reduction)		COVERED-22	22	
Demand forecast accuracy (MAPE)		COVERED-22	22	
Item coverage inquiry (Coverage settings by item)		COVERED-22	22	
Planned order pegging (bidirectional)		COVERED-22	22	
SSRS: Planned orders report / Planned purchase orders by vendor		COVERED-22	22	
SSRS: Net requirements report		COVERED-22	22	
SSRS: Action messages / Futures messages		COVERED-22	22	
SSRS: Capacity load (planned)		COVERED-23	23	
SSRS: Forecast (Sales forecast, Purchase forecast, Inventory forecast)		COVERED-22	22	Inventory forecast PARTIAL
SSRS: Coverage groups listing / Item coverage listing		COVERED-22	22	
SSRS: Safety stock journal report		COVERED-22	22	
SSRS: Master plan run log		COVERED-22	22	
SSRS: Supply schedule report		PARTIAL-22 (supply schedule)	22	

12.21.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Master scheduling (run plan: regeneration / net change / net change minimized)		COVERED-22	22	Incremental < 2 min target
Forecast scheduling (run forecast plan)		COVERED-22	22	
Planned order → Firm planned orders (batch by filter)		COVERED-22	22	
Planned order → Approve planned orders (batch)		COVERED-22	22	
Planned order → Delete planned orders		COVERED-22	22	
Planned order → Scheduling of planned orders (Gantt scheduling batch)		COVERED-23	23	
Plan → Copy plan / Delete plan		COVERED-22	22	
Safety stock → Calculate proposal (from history) / Update minimum keys		COVERED-22	22	
Forecast → Copy / Transfer forecast / Create forecast from history (Forecast allocation)		COVERED-22	22	
Forecast → Forecast reduction (consumption by actual orders)	Reduction keys and principles	COVERED-22	22	Forecast with reduction
Demand forecasting → Generate statistical baseline forecast / Import adjusted forecast / Remove outliers		COVERED-22	22	
Intercompany master scheduling (run across entities)		PARTIAL-40 (intercompany planning)	40	
Capacity → Delete capacity reservations (link)		COVERED-23	23	
Clean up → Delete futures/action messages / Clean plan history		COVERED-22	22	
Planning → Planning Optimization sync (D365)		SUPERSEDED (native engine)	22	
Planning → Kanban quantity calculation (link to Lean)		COVERED-24	24	
Planning → Item allocation key refresh		COVERED-22	22	
Planning → Generate planned kanbans		COVERED-24	24	
Planning → MRP exception triage agent (Passage)		COVERED-47	47	

12.21.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Master planning parameters — General	Current static/dynamic plan, automatic copy static→dynamic, use dynamic negative days, planned order defaults	COVERED-22	22	
Master planning parameters — Planned orders	Group by vendor/buyer/period on firming, planned purchase order type, firm journal	COVERED-22	22	
Master planning parameters — Standard update / Number sequences / Performance (threads, cache)		COVERED-22	22	
Master planning parameters — Planning Optimization (D365 connector, parameters)		SUPERSEDED (native engine)	22	
Plans → Master plans (Plan: include on-hand/transactions/forecast/safety stock/inquiries/intercompany; time fences: coverage, freeze, firming, explosion, capacity, forecast plan, action, futures, BOM explosion; scheduling method: operations/job; finite capacity/material/property; action messages on/off; futures on/off)	Full plan parameters	COVERED-22	22	Capacity flags 23
Plans → Forecast plans (include forecast models, reduction)		COVERED-22	22	
Coverage → Coverage groups (requirement/period/min-max/manual, negative/positive days, coverage time fence, firming/freeze fences, action rules, futures, safety margins (receipt/issue/reorder), period lengths, action message tolerances, BOM/formula explosion fence, use dynamic negative days, coverage planned order type, planning time fence)		COVERED-22	22	
Coverage → Item coverage (link) / Minimum/maximum keys	Seasonal min/max profiles	COVERED-22	22	
Coverage → Period templates (period coverage)		COVERED-22	22	

Name	Key parameters / options	Passage status	Wave	Notes
Coverage → Planned order defaults (Planned purchase/production/transfer defaults)		COVERED-22	22	
Forecast → Forecast models / Submodels		COVERED-22	22	
Forecast → Reduction keys / Reduction principles (none, percent-reduction key, transactions-dynamic period, transactions-reduction key)		COVERED-22	22	
Forecast → Item allocation keys / Period allocation keys (Period allocation categories)	Distribute forecast across items/periods	COVERED-22	22	
Forecast → Customer/Vendor forecast groups (forecast at group level)		COVERED-22	22	
Demand forecasting → Demand forecasting parameters (algorithm, horizon, aggregation, history start, item allocation keys, Azure ML service)		COVERED-22	22	statsforecast service
Demand forecasting → Forecast algorithm parameters (seasonality, confidence, outlier removal)		COVERED-22	22	
Action messages → Action message settings (per coverage group)		COVERED-22	22	
Futures → Futures settings (per coverage group)		COVERED-22	22	
Safety stock → Safety stock journal names		COVERED-22	22	
Intercompany → Intercompany planning groups / Intercompany planning group members (sequence, plan)		PARTIAL-40 (intercompany planning)	40	
Scheduling → Scheduling parameters (link to Production: operations/job scheduling defaults)		COVERED-23	23	
Sequencing → Sequencing setup (PI)		COVERED-23	23	
Planning → Planning item groups (process planning item, link)		COVERED-24	24	
Planning → Delivery date control / Transport days / Coverage calendars (shared with Sales)		COVERED-27	27	
Planning → Planned order grouping rules (vendor, buyer group, period)		COVERED-22	22	
Planning → Buyer groups	Grouping for planned purchase orders	COVERED-22	22	
Planning → Planner / Planner groups (D365: planner on item)		COVERED-22	22	
Planning → Priority-based planning (D365: planning priority models, priority rules on coverage group)	Priority-driven reorder instead of dates (DDMRP-style)	PARTIAL-22 (priority-based / DDMRP-style buffer planning not named)	22	Gap register
Planning → Subcontracting planning (vendor line type / planned purchase for subcontract)		COVERED-21	21	
Planning → Capability-based scheduling (link)		COVERED-23	23	
Master planning → Number sequences		COVERED-5	5	
Master planning → Workflow (planned order approval D365)		COVERED-4	4	

12.22 Production control

Production orders, journals, routes/operations, resources, scheduling, Gantt, manufacturing execution (job registration, time and attendance) and production posting map to waves 21 (orders/WIP/costing), 23 (capacity/scheduling), 25 (shop floor, T&A), 9 (routes/resources master data) and 39 (variances/costing sheets).

12.22.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Production orders (list page: all, created, estimated, scheduled, released, started, reported as finished, ended; "my" pools)	ProdTableListPage	Order lifecycle	COVERED-21	21	
Production order details	ProdTable	Header: item, qty, dates, BOM/route, status, pool, group, reservation, site/warehouse, priority, properties, financial dimensions, costing	COVERED-21	21	
Production order → BOM (production BOM lines)	ProdBOM	Order-specific BOM with line type (item/phantom/pegged supply/vendor), scrap, consumption, resource consumption	COVERED-21	21	
Production order → Route (production route operations)	ProdRoute	Order-specific operations, times, resources, queue/setup/process/transport	COVERED-21	21	
Production order → Jobs (route jobs)	ProdRouteJob	Job-level (setup, process, queue after/before, transport, overlap)	COVERED-23	23	Job scheduling
Production order → Estimate / Schedule / Release / Start / Report as finished / End (update dialogs)	ProdUpdEstimation, ProdUpdScheduling, ProdUpdRelease, ProdUpdStartUp, ProdUpdReportFinished, ProdUpdCostCalc (End)	Status updates with options (auto-post journals, reference-level update, BOM/route consumption)	COVERED-21	21	
Production order → Reset status	ProdUpdStatusReset	Back-step status	COVERED-21	21	Lifecycle state machine
Production order → Split / Group (ProdSplit)	ProdSplit	Split order quantity	PARTIAL-21 (production order split/merge not named)	21	Gap register
Production order → Price calculation / Cost estimation view	ProdCalcTrans	Estimated cost by cost group	COVERED-21	21	
Production order → Production transactions (view cost, consumption)	ProdTransView		COVERED-21	21	
Production order → Planned production orders (link)	ReqPOListPage		COVERED-22	22	
Production order → Production pools	ProdPool	Grouping/statuses for processing	COVERED-21	21	
Production order → Reservation / Pick list release			COVERED-21	21	
Production order → Subcontracting (vendor lines → PO)	ProdBOM (vendor)		COVERED-21	21	
Production order → Attachments / Instructions / Drawings	DocuRef		COVERED-25	25	Shop-floor instructions

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Journals → Picking list	ProdJournalTable (Picking list) / ProdJournalBOM	Material consumption, backflush, negative consumption	COVERED-21	21	
Journals → Route card	ProdJournalTable (Route card) / ProdJournalRoute	Hours/qty per operation (non-job level)	COVERED-21	21	
Journals → Job card	ProdJournalTable (Job card) / ProdJournalRoute (job)	Per job registration	COVERED-21	21	
Journals → Report as finished	ProdJournalTable (RAF) / ProdJournalProd	RAF qty, error qty, accept error, end job, by/co-products	COVERED-21	21	
Journals → Production journals (all) / Posted journals	ProdJournalTable		COVERED-21	21	
Journals → Production input journal (WMS arrival for production)	WMSJournalTable (ProdInput)		COVERED-21	21	
Resources (list page)	WrkCtrResourceListPage (WrkCtrTable)	Resources: type (vendor/human/machine/tool/location), capacity, efficiency, calendar, capabilities, costs	COVERED-9	9	
Resource groups	WrkCtrResourceGroup	Group with site, warehouse, input/output locations, calendar, ledger posting	COVERED-9	9	
Resource capabilities (link)	WrkCtrCapability		COVERED-9	9	
Routes (list page, Route details, Route versions)	RouteTableListPage, RouteTable, RouteVersion	Routes with operations, relations	COVERED-9	9	
Operations	RouteOprTable	Operation master with relations (per item/route/site)	COVERED-9	9	
Operation relations (route operation details: setup/run time, resources requirements, cost categories, scrap)	RouteOpr		COVERED-9	9	
Gantt chart (Resource/Order views)	GanttControl (ProdGantt)	Interactive scheduling	COVERED-23	23	
Capacity reservations	WrkCtrCapRes	Reserved capacity per job/resource	COVERED-23	23	
Job list (all jobs, ready jobs, started)	ProdRouteJobListPage	Jobs across orders	COVERED-23	23	
Manufacturing execution → Job registration (terminal: clock-in, start job, bundle jobs, report feedback, clock-out)	JmgRegistration (JmgRegistrationTouch)	Shop-floor terminal	COVERED-25	25	Kiosk UI
Manufacturing execution → Job list (electronic job list / dispatch list)	JmgJobList	Prioritized job queue per resource	COVERED-25	25	
Manufacturing execution → Registrations (raw registrations)	JmgTermReg	Clock/job registrations awaiting calculation	COVERED-25	25	
Manufacturing execution → Current activities / Absences	JmgCurrentActivities	Who is on which job	COVERED-25	25	
Manufacturing execution → Calculate / Approve (registrations per worker/day)	JmgCalculate, JmgApprove	Pay-time calculation and supervisor approval	COVERED-25	25	
Manufacturing execution → Transfer (to payroll/projects/production)	JmgTransfer		COVERED-25	25	Export to payroll wave 43
Manufacturing execution → Time and attendance (clock registrations, flex balance, absence registration)	JmgRegistration (T&A)		COVERED-25	25	
Manufacturing execution → Production floor execution (D365 PFE)	JmgProductionFloorExecution	Touch UI for jobs, materials, quality, maintenance requests	COVERED-25	25	
Production control → Lean manufacturing (links)			COVERED-24	24	§12.24
Production control → Batch orders (PI)	ProdTable (batch)		COVERED-24	24	§12.23
Production control → Production order cost analysis (Cost estimates and costing)	ProdCalc	Planned vs actual by cost group/type	COVERED-21	21	Variance decomposition 39
Production control → Delays (R3 Production orders with delays)	ProdTable (delays)		COVERED-23	23	
Production control → Scrap / Error cause (job card error)	ProdErrorCause		COVERED-21	21	
Production control → Production order properties (property for scheduling)	ProdProperty		COVERED-23	23	
Production control → Production groups	ProdGroup	Ledger posting grouping	COVERED-21	21	

12.22.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Production order inquiries (orders, BOM, route, jobs, transactions, status log)		COVERED-21	21	
Production transactions (Route transactions, BOM transactions)		COVERED-21	21	
Cost inquiry (Production cost: estimated vs realized, WIP)		COVERED-21	21	
Capacity → Capacity load (per resource/group/period, graphical)		COVERED-23	23	
Capacity → Capacity reservations		COVERED-23	23	
Capacity → Resource load (Gantt)		COVERED-23	23	
Jobs → Job list / Job status / Ready jobs		COVERED-23	23	
Journals → Picking list / Route card / Job card / RAF journal inquiries		COVERED-21	21	
Manufacturing execution → Registration inquiries (Raw registrations, Pay time, Flex balance, Absence, Job registrations, Overtime)		COVERED-25	25	
Manufacturing execution → Production feedback / Operator efficiency		COVERED-25	25	OEE
Lean → Kanban inquiries (link)		COVERED-24	24	
Scrap / Error cause inquiry		COVERED-21	21	
Production → Delayed orders / Production performance (OTD)		COVERED-46	46	

Name	Purpose	Passage status	Wave	Notes
SSRS: Production orders (status list) / Production order overview		COVERED-21	21	
SSRS: Production papers (Job card, Route card, Picking list, Route card with jobs, Production order document bundle)		COVERED-21	21	Rendered 46
SSRS: Production order — BOM lines / Route lines		COVERED-21	21	
SSRS: Capacity load / Capacity reservations / Resource load		COVERED-23	23	
SSRS: Production cost per period / Completed production order cost analysis / Production cost by cost group		COVERED-39	39	
SSRS: Route consumption / BOM consumption (planned vs actual)		COVERED-21	21	
SSRS: Job transactions / Route transactions		COVERED-21	21	
SSRS: Resources / Resource groups / Capabilities listings		COVERED-9	9	
SSRS: Calendars / Working time		COVERED-9	9	
SSRS: Routes / Operations listings		COVERED-9	9	
SSRS: Cost categories / Cost category prices		COVERED-39	39	
SSRS: Manufacturing execution reports (Registrations, Pay statistics, Absence, Flex, Job efficiency, Timecard)		COVERED-25	25	
SSRS: Production variance reports (link)		COVERED-39	39	
SSRS: Scrap report / Error cause statistics		COVERED-21	21	
SSRS: Work-in-progress report		COVERED-21	21	
SSRS: Production order label (barcode)		COVERED-32	32	

12.22.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Production orders → Estimate / Schedule / Release / Start / Report as finished / End (batch)		COVERED-21	21	
Production orders → Update costing (Price calculation batch)		COVERED-21	21	
Production orders → Delete production orders / Clean up ended orders		COVERED-21	21	
Production orders → Reset status (batch)		COVERED-21	21	
Journals → Post journals (batch) / Delete posted journals		COVERED-21	21	
Scheduling → Operations scheduling / Job scheduling (batch, by filter)		COVERED-23	23	
Scheduling → Reschedule all / Delete capacity reservations		COVERED-23	23	
Scheduling → Compose working times (generate calendar days from templates)		COVERED-9	9	
Scheduling → Update calendars (calendar expiry extension)		COVERED-9	9	
Manufacturing execution → Calculate registrations (batch) / Approve (batch) / Transfer (batch)		COVERED-25	25	
Manufacturing execution → Generate flex balances / Reset flex / Reset statistics balances		COVERED-25	25	
Manufacturing execution → Update job list / Clean up registrations		COVERED-25	25	
Manufacturing execution → Auto-clock-out		COVERED-25	25	
Lean → Backflush costing (periodic)		COVERED-24	24	
Lean → Kanban periodic (update kanban quantities, process scheduled kanbans)		COVERED-24	24	
Production → Production order status refresh for WHS (release to warehouse)		COVERED-31	31	
Production → IoT: machine event ingestion / OEE calc		COVERED-25	25	
Production → Update route/BOM on open orders (mass re-explosion)		COVERED-21	21	
Production → Production order cost roll-up refresh (planned cost re-estimate)		COVERED-21	21	

12.22.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Production control parameters — General	Production order defaults: BOM/route version selection, reservation (manual/estimation/scheduling/release/start), automatic BOM consumption (flushing principle: start/finish/manual), route consumption, posting of journals, scheduling method default, lock route operations, remove reservations, status defaults	COVERED-21	21	
Production control parameters — Standard update tab	Default update parameters per status update (estimation, scheduling, release, start, RAF, end)	COVERED-21	21	
Production control parameters — Start tab	Picking list posting at start (quantity: start qty/remaining), route card at start, end-mark, reference status update	COVERED-21	21	
Production control parameters — Operations tab	Route card/job card defaults, hours/qty posting, scrap handling	COVERED-21	21	
Production control parameters — Journals tab	Default journal names per type	COVERED-21	21	
Production control parameters — Automatic update tab	Automatic report as finished, end-mark, auto-start, reference level update	COVERED-21	21	
Production control parameters — General ledger tab	Ledger posting: item+category, item+resource, none; post costs during production (WIP); profit setting; posting of RAF by cost group	COVERED-21	21	
Production control parameters — Number sequences tab		COVERED-5	5	
Production control parameters — Lean tab / Process tab (PI)		COVERED-24	24	
Production parameters by site (Site-specific production parameters)	Overrides per site	COVERED-21	21	
Production → Production groups	Ledger posting profile per group (WIP accounts, issue/receipt accounts)	COVERED-21	21	
Production → Production pools		COVERED-21	21	

Name	Key parameters / options	Passage status	Wave	Notes
Production → Production journal names (picking list, route card, job card, RAF)		COVERED-21	21	
Production → Production posting profiles (in Inventory posting: Production tab: estimated cost consumed, WIP issue, WIP account, cost of materials consumed, issue, receipt, RAF)		COVERED-21	21	
Production → Error causes (scrap reason codes)		COVERED-21	21	
Production → Properties (scheduling property per resource/period)		COVERED-23	23	
Production → Priority (production priority)		COVERED-23	23	
Routes → Route groups (setup time/run time/queue time estimation flags, job management, capacity, reporting, scheduling of jobs, working time, cost categories)		COVERED-9	9	
Routes → Operations (link)		COVERED-9	9	
Routes → Cost categories (hourly/piece rates, cost group, ledger accounts)		COVERED-39	39	
Routes → Shared categories (project/production category flags)		COVERED-9	9	
Routes → Cost category price per costing version		COVERED-39	39	
Routes → Route version parameters (approval, activation)		COVERED-9	9	
Routes → Route types (simple/network: sequential/parallel)		COVERED-9	9	
Routes → Route operation relations: Primary/secondary resources, Link types (hard/soft), Overlap quantity, Transfer batch		COVERED-9	9	
Resources → Resource groups		COVERED-9	9	
Resources → Resources (types: vendor, human resources, machine, tool, location)		COVERED-9	9	
Resources → Capabilities / Resource capabilities (level, priority, expiry)		COVERED-9	9	
Resources → Resource types / Competency-based (skills, courses, certificates for human resources)		COVERED-9	9	HR competency in 42
Resources → Resource bottleneck / Finite capacity flag / Efficiency % / Capacity unit		COVERED-23	23	
Resources → Resource ledger posting (operations resource, WIP, issue accounts)		COVERED-21	21	
Resources → Vendor as resource (subcontracting)		COVERED-21	21	
Calendars → Calendars (working time calendars), Working time templates (shifts, efficiency %, properties), Compose working times		COVERED-9	9	
Calendars → Calendar properties / Working time intervals		COVERED-9	9	
Scheduling → Scheduling parameters (Scheduling direction, Scheduling method default, Capacity: finite/infinite, Finite material, Finite property, Capability-based scheduling, Schedule references, Sync references, Cancel capacity reservations, Primary resource selection (duration/first available/ etc.), Scheduling time fence)		COVERED-23	23	
Scheduling → Operations scheduling percentage / Scheduling of jobs: Job types, Job management		COVERED-23	23	
Scheduling → Load (capacity load calculation: setup/process/queue/transport included)		COVERED-23	23	
Sequencing → Sequence groups / Sequences (PI)		COVERED-23	23	
Manufacturing execution → Manufacturing execution parameters (General: registration validation, job bundling, feedback, Pay: pay agreement, flex, overtime; Production: picking list/RAF posting from registrations; Absence; Terminal)		COVERED-25	25	
Manufacturing execution → Registration configuration / Terminal configuration (touch screen layout, buttons, barcode)		COVERED-25	25	Kiosk configuration
Manufacturing execution → Workers (time registration workers: profile group, calculation group, approval group, pay agreement, flex allowed, terminal)		COVERED-25	25	
Manufacturing execution → Profiles (clock profiles with profile types: standard time, flex+, flex-, overtime, break, pay)		COVERED-25	25	Pay-type calculation
Manufacturing execution → Profile groups / Profile calendar / Profile relations		COVERED-25	25	
Manufacturing execution → Pay: Pay agreements, Pay agreement lines (pay types by time/overtime/shift), Pay types, Pay items, Statistics balances, Counters		COVERED-25	25	
Manufacturing execution → Indirect activities (categories, activities: break, meeting, maintenance)		COVERED-25	25	Downtime reason codes

Name	Key parameters / options	Passage status	Wave	Notes
Manufacturing execution → Absence (codes, groups, statistics)		COVERED-42	42	Shared with HR
Manufacturing execution → Groups (Calculation groups, Approval groups, Supervisors)		COVERED-25	25	
Manufacturing execution → Flex (flex profiles, flex groups, flex balance limits)		COVERED-25	25	
Manufacturing execution → Switch codes / Job bundling / Job priority		COVERED-25	25	
Manufacturing execution → Production feedback (feedback parameters, auto-report)		COVERED-25	25	
Manufacturing execution → Production floor execution: Configure PFE interface (tabs, buttons, kiosk), Device setup (D365)		COVERED-25	25	
Manufacturing execution → Time and attendance parameters (shifts, rounding, grace)		COVERED-25	25	
Lean manufacturing setup (link)		COVERED-24	24	§12.24
Process manufacturing setup (link)		COVERED-24	24	§12.23
Production → IoT (D365 Sensor Data Intelligence: scenarios, sensors, notifications)		COVERED-25	25	OPC-UA/MQTT
Production → Subcontracting setup (vendor resource, line type vendor, purchase on release)		COVERED-21	21	
Production → Costing sheet / Cost groups (link)		COVERED-39	39	
Production → BOM/Route version activation rules		COVERED-9	9	
Production → Quality associations for production (link)		COVERED-33	33	
Production → Warehouse: Production input/output locations, License plate RAF (WHS)		COVERED-31	31	
Production → Workflow (production order release approval D365)		COVERED-4	4	
Production → Number sequences		COVERED-5	5	
Production → Gantt chart configuration (colors, views, user settings)		COVERED-23	23	
Production → Andon / alerts (Passage)		COVERED-25	25	

12.23 Process manufacturing (PI)

AX 2012 R3 folds process industries into PIM, Inventory, Production control, Master planning and Sales. Formulas, batch orders, co/by-products, potency, catch weight, batch attributes/shelf life, batch balancing, consolidated batch orders, rework and sequencing map to waves 24 (process manufacturing), 9 (formula versions) and 23 (sequencing). Commodity pricing, vendor rebates, brokers/royalties and product compliance are gaps (see §12.15, §12.16).

12.23.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Formulas (list page) / Formula designer	PdsFormulaListPage (BOMTable formula), BOMDesigner	Formula with co/by-products, scalable lines, percentage lines, step consumption	COVERED-9	9	Formula BOMs
Formula versions (per item, with formula size, co-product/by-product lines, approval)	BOMVersion (formula)		COVERED-9	9	
Formula lines (line types: scalable, step consumption, percent, variable/fixed, catch weight)	BOMLine (formula)		COVERED-9	9	
Co-products / By-products on formula (cost allocation %, burden: by-product cost allocation: none, percent of cost, per quantity, per series, recycled)	PdsCoByProduct		COVERED-24	24	Co/by-product allocation methods
Batch orders (list page)	ProdTableListPage (batch)	Batch orders from formulas	COVERED-24	24

12.24 Lean manufacturing

Value streams, production flows, activities, kanban rules, kanban boards and backflush costing map to wave 24. Value streams as operating units are in wave 6.

12.24.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Production flows (list page)	LeanProductionFlowListPage	Flow with versions and activities	COVERED-24	24	
Production flow details / Versions (activate, expire, takt, cycle time)	LeanProductionFlow / LeanProductionFlowVersion		COVERED-24	24	
Activities (process/transfer activities with resource, locations, run time, takt)	LeanProductionFlowActivity (PlanActivity)		COVERED-24	24	
Activity relations (successor/predecessor, cycle time ratio)	PlanActivityRelation		COVERED-24	24	
Kanban rules (list page)	KanbanRuleListPage	Manufacturing/withdrawal; fixed/scheduled/event; quantities, lead time, circulating cards	COVERED-24	24	
Kanbans (list page: all kanbans, by rule)	KanbanListPage / Kanban	Kanban cards with jobs and status	COVERED-24	24	
Kanban board for process jobs	KanbanJobSchedulingBoard	Drag jobs between planned/in-progress/completed; board per cell	COVERED-24	24	
Kanban board for transfer jobs	KanbanJobTransferBoard	Transfer execution board	COVERED-24	24	
Kanban schedule board (scheduling of kanban jobs)	KanbanJobSchedulingPeriod	Period/resource schedule	COVERED-24	24	
Kanban quantity calculation (Kanban quantity calculation policies, calculation runs)	KanbanQuantityCalculation	Recalculate kanban quantities from demand	COVERED-24	24	
Event kanbans (sales/production/kanban line/stock replenishment events)	Kanban (event)		COVERED-24	24	Event kanban simulation
Kanban cards (print, card circulation)	KanbanCard		COVERED-24	24	
Lean → Backflush costing (cost accounting for production flows: periodic conversion costs, variance)	LeanCostingPeriodicProcess	Period-based costing of production flows	COVERED-24	24	
Lean → Production flow costing (cost group breakdown, WIP by flow)	LeanCostFlow		COVERED-24	24	
Lean → Subcontracting in lean (service activities with vendor, purchase agreements)	LeanSubcontracting	Service-based subcontracting on activities	PARTIAL-24 (lean subcontracting (activity-based service purchase from vendor, purchase agreement linkage) not named; discrete subcontracting is in 21)	24	Gap register
Lean → Picking list (kanban material pick) / Kanban job pick list	KanbanJobPickingList		COVERED-24	24	
Lean → Scheduled kanban jobs (from master planning planned kanbans)			COVERED-22	22	Planned kanbans
Value streams (Org admin operating unit)	OMValueStream		COVERED-6	6	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Lean → Kanban supermarket / Kanban location setup (WHS)			COVERED-31	31	

12.24.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Kanban job inquiries (jobs by status, late jobs, cycle time)		COVERED-24	24	
Kanban rule inquiries / Kanban quantities history		COVERED-24	24	
Production flow inquiries (activity load, takt vs actual)		COVERED-24	24	
Lean costing inquiries (period costs, variances per flow)		COVERED-24	24	
Event kanban inquiry (source events)		COVERED-24	24	
SSRS: Kanban card (print) / Kanban card circulation report		COVERED-24	24	
SSRS: Kanban rule report / Kanban overview		COVERED-24	24	
SSRS: Production flow report / Activity report		COVERED-24	24	
SSRS: Kanban quantity calculation report		COVERED-24	24	
SSRS: Backflush costing report / Lean variances		COVERED-24	24	
SSRS: Kanban job pick list		COVERED-24	24	

12.24.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Kanban → Process event kanbans (generate from events: sales, BOM line, min stock)		COVERED-24	24	
Kanban → Kanban quantity calculation run / Update kanban rules from calculation		COVERED-24	24	
Kanban → Print kanban cards (batch) / Reprint		COVERED-24	24	
Kanban → Schedule kanban jobs (automatic planning)		COVERED-24	24	
Kanban → Expire fixed kanbans / Clean up completed kanbans		COVERED-24	24	
Lean → Backflush costing period processing (calculate conversion costs, post, close period)		COVERED-24	24	
Lean → Production flow version activation/expiry (batch)		COVERED-24	24	
Lean → Transfer job auto-complete (on receive)		COVERED-24	24	
Lean → Lean subcontracting: generate purchase orders for service activities		PARTIAL-24 (lean subcontracting)	24	
Lean → Kanban rule effectivity update from master planning		COVERED-22	22	

12.24.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Production control parameters — Lean tab (kanban defaults, costing, picking list posting, transfer defaults)		COVERED-24	24	
Lean → Production flow models (costing method per flow: backflush costing)		COVERED-24	24	
Lean → Kanban rule policies (replenishment strategy: fixed, scheduled, event; kanban quantity, min/max, lead time, circulating/one-time; automatic planning)		COVERED-24	24	
Lean → Kanban quantity calculation policies (demand period, forecast/orders, safety stock, rounding)		COVERED-24	24	
Lean → Kanban card configuration (card layout, card number sequence, barcode)		COVERED-24	24	
Lean → Kanban board configuration (board per work cell, columns, colors, job filters)		COVERED-24	24	
Lean → Work cells (resource groups of type work cell, capacity units, calendars)		COVERED-9	9	
Lean → Lean schedule groups		COVERED-24	24	
Lean → Kanban handling units (bins/containers)		COVERED-24	24	
Lean → Activity resource/location defaults (input/output locations, supermarket)		COVERED-24	24	
Lean → Lean costing: Cost groups for lean, Cost category for activities, Conversion cost posting, WIP accounts per production flow		COVERED-24	24	
Lean → Subcontracting setup (service items, purchase agreements for activities)		PARTIAL-24 (lean subcontracting)	24	
Lean → Kanban job registration (manufacturing execution integration)		COVERED-25	25	
Lean → Value streams (link)		COVERED-6	6	
Lean → Number sequences (kanban, production flow)		COVERED-5	5	
Lean → Mobile device kanban flows (WHS mobile: receive kanban, empty kanban)		COVERED-32	32	

12.25 Quality management

In AX 2012 R3 quality lives under Inventory management (quality orders, nonconformances, corrections, test groups, quality associations, certificates of analysis). It maps to wave 33, with inventory blocking from wave 16 and calibration/SPC additions.

12.25.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Quality orders (list page)	InventQualityOrderTableListPage	Orders generated by associations or manually; reference (purchase, sales, production, quarantine, inventory, RMA)	COVERED-33	33	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Quality order details	InventQualityOrderTable / InventQualityOrderLine	Tests, sampling, results (variable/attribute), pass/fail, validate	COVERED-33	33	Results recording
Quality order → Results (test results per sample)	InventQualityOrderLineResults		COVERED-33	33	
Quality order → Validate / Close	InventQualityOrderValidate	Usage decision	COVERED-33	33	Usage decision
Nonconformances (list page)	InventNonConformanceTableListPage	NCR with problem type, source (customer, service request, internal, vendor, production), quarantine zone	COVERED-33	33	NCR/CAPA
Nonconformance details	InventNonConformanceTable	Approve/refuse, related operations, corrections, quarantine link	COVERED-33	33	
Nonconformance → Operations (nonconformance operations with cost items, timesheets, charges)	InventNonConformanceOperation	Work to resolve NC with cost	COVERED-33	33	Cost of quality
Corrections	InventNonConformanceCorrection	Corrective actions with diagnostic types, planned/actual dates	COVERED-33	33	CAPA with 8D
Certificates of analysis (print from sales packing slip / quality order)	InventTestCertificateOfAnalysis	CoA document	COVERED-33	33	
Quality → Test instruments / Device calibration (Passage addition)			COVERED-33	33	Calibration tracking
Quality → Supplier quality scorecards (Passage)			COVERED-33	33	
Quality → SPC charts (Passage)			COVERED-33	33	
Quality → Inventory blocking (quality)	InventBlocking (quality)	Auto-block on quality order creation	COVERED-33	33	Automatic blocking/release
Quality → Quarantine orders (link)	InventQuarantineOrder		COVERED-16	16	
Quality → Batch disposition on failed quality (link)			COVERED-24	24	
Quality → D365 quality management mobile flows (quality order on mobile device)	WHSQuality*	Quality on handheld	COVERED-32	32	
Quality → Vendor quality (quality by vendor, test by vendor)	InventTestAssociationTable (vendor)		COVERED-33	33	

12.25.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Quality order inquiries (by status, item, vendor, test results)		COVERED-33	33	
Nonconformance inquiries (by problem type, source, status)		COVERED-33	33	
Correction inquiries		COVERED-33	33	
Test result statistics (pass rate by item/vendor)		COVERED-33	33	
SSRS: Certificate of analysis		COVERED-33	33	
SSRS: Quality order (document) / Quality order test results		COVERED-33	33	
SSRS: Nonconformance (document) / Nonconformance tag / Nonconformance report		COVERED-33	33	
SSRS: Correction report		COVERED-33	33	
SSRS: Nonconformance operations / Cost of quality		COVERED-33	33	
SSRS: Test groups / Tests listings		COVERED-33	33	
SSRS: Quality associations listing		COVERED-33	33	
SSRS: Vendor quality performance		COVERED-33	33	
SSRS: Item sampling listing		COVERED-33	33	

12.25.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Quality → Create quality orders automatically (on events per association)		COVERED-33	33	Trigger fixtures
Quality → Validate quality orders (batch)		COVERED-33	33	
Quality → Delete / Close nonconformances		COVERED-33	33	
Quality → Calibration due processing (Passage)		COVERED-33	33	
Quality → Supplier scorecard recalculation		COVERED-33	33	
Quality → Nonconformance cost posting (operations charges)		COVERED-33	33	

12.25.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Inventory and warehouse management parameters — Quality management tab	Use quality management, hours per day, report setup (CoA, NC tag), nonconformance defaults	COVERED-33	33	
Quality management → Quality associations (reference type: purchase/sales/production/quarantine/inventory; item code; account code; event type: before/after; execution: before/after; test group; document type; dimensions)		COVERED-33	33	

Name	Key parameters / options	Passage status	Wave	Notes
Quality management → Test groups (tests, sequence, sampling, acceptable quality level, instrument, destructive, test variable/outcome)		COVERED-33	33	
Quality management → Tests (type: integer/fraction/option, unit, instrument)		COVERED-33	33	
Quality management → Test variables / Test variable outcomes (pass/fail outcomes)		COVERED-33	33	
Quality management → Test instruments		COVERED-33	33	
Quality management → Item sampling (fixed quantity / percent / license plate / full blocking)		COVERED-33	33	AQL sampling plans
Quality management → Quality groups / Item quality groups (D365)		COVERED-33	33	
Quality management → Nonconformance: Problem types, Quarantine zones, Diagnostic types, Operations (NC operation types), Charges on NC operations		COVERED-33	33	
Quality management → Nonconformance types (customer, service request, internal, vendor, production)		COVERED-33	33	
Quality management → Certificate of analysis setup (print per customer / item)		COVERED-33	33	
Quality management → Quality orders number sequences		COVERED-5	5	
Quality management → Quality order blocking parameters (block on create, release on validate)		COVERED-33	33	
Quality management → Calibration schedules (Passage)		COVERED-33	33	
Quality management → CAPA templates (8D) (Passage)		COVERED-33	33	
Quality management → Workflow (nonconformance approval)		COVERED-4	4	
Quality management → Mobile device quality menu items (D365)		COVERED-32	32	
Quality management → Product compliance (PI, link)		GAP	—	Propose wave 33: product compliance

12.26 Warehouse management (WHS)

The AX 2012 R3 advanced warehouse module (Warehouse management) — location directives, work templates, waves, loads, license plates, mobile device menu items, replenishment, cycle counting, packing, labels — maps to wave 31 (rules, work, waves, loads, replenishment, slotting) and wave 32 (mobile app, labels, RFID/voice). Dock scheduling is wave 31; TMS pieces (§12.27) wave 34.

12.26.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
All loads (list page) / Load details	WHSLoadTableListPage / WHSLoadTable	Loads with lines, shipments, status, carrier	COVERED-31	31	Load planning
Load planning workbench	WHSLoadPlanningWorkbench	Build loads from order lines, templates, release	COVERED-31	31	
Shipments (list page) / Shipment details	WHSShipmentTableListPage / WHSShipmentTable	Shipment per order/load with containers	COVERED-28	28	WHS shipments in 31
Waves (list page) / Wave details	WHSWaveTableListPage / WHSWaveTable	Wave lines, process, release, status	COVERED-31	31	
All work (list page) / Work details	WHSWorkTableListPage / WHSWorkTable	Work headers/lines (pick/put), status, user, LP	COVERED-31	31	
Work → Open work / Work by user / Work audit	WHSWorkListPage (filters)		COVERED-31	31	
Work → Cancel work / Reassign work / Unblock	WHSWorkCancel, WHSWorkReassign	Exceptions	COVERED-31	31	
License plates (list) / License plate details	WHSLicensePlate	LP with nested parents, on-hand	COVERED-31	31	
Locations (WHS)	WHSLocation (WMSLocation with profile)	Bins with profile, zone, stocking limits	COVERED-31	31	
Containers (list) / Containerization	WHSContainerTable	Packing containers, SSCC	COVERED-28	28	Containers/HU
Pack (packing station form)	WHSPackContainer (Pack)	Pack items into containers at packing station	COVERED-28	28	
Replenishment → Replenishment work / Min-max	WHSReplenishment		COVERED-31	31	
Cycle counting → Cycle count work / Cycle count plans runs	WHSCycleCountPlan (run)		COVERED-31	31	
Cycle counting → Count approvals (variance review)	WHSCycleCountWorkApproval		COVERED-31	31	
Inventory status (on-hand by status)	WHSInventoryStatus		COVERED-16	16	
Dock appointment scheduling → Appointments / Dock management	TMSAppointment* (TMSDockMgmt)	Carrier appointments per dock	COVERED-31	31	Dock scheduling
Inbound → ASN (Advanced shipping notice import) / Inbound loads	WHSUOMStructure / WHSASN	ASN with packing structure to LP	COVERED-31	31	ASN-driven receiving

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Inbound → Receiving (mobile) / Receipt lines	WHSRFReceive		COVERED-32	32	
Outbound → Release to warehouse (sales / transfer / production)	WHSReleaseToWarehouse		COVERED-28	28	
Outbound → Manual packing / Ship confirm loads / Bill of lading	WHSLoadShipConfirm, WHSBillOfLading		COVERED-28	28	BOL doc
Outbound → Cross docking (D365 planned cross docking, opportunistic)	WHSCrossDocking	Cross-dock inbound to outbound	PARTIAL-31 (cross docking (planned/opportunistic) not named)	31	Gap register
Outbound → Wave label printing / Document routing	WHSDocumentRouting		COVERED-32	32	
Mobile device → Work queue / Mobile device portal (AX 2012 R3 WHS mobile portal, IIS)	WHSWorkExecute (mobile)	Handheld execution	SUPERSEDED (PWA + native shell mobile app wave 32)	32	
Mobile device → System-directed / user-directed picking, cluster picking, work with LP, print	WHSWorkExecute (menu items)		COVERED-32	32	
Work users / Work user sessions	WHSWorkUser / WHSWorkUserSession		COVERED-32	32	Session/device management
Product → Warehouse tab on released product (unit sequence group, reservation hierarchy, filter codes, physical dimensions)	InventTable (WHS)		COVERED-31	31	
Inventory → Movement by template (ad hoc moves)	WHSWorkTemplate (movement)		COVERED-31	31	
Inventory → Inventory adjustments (WHS)	WHSRFAdjustment		COVERED-32	32	
Inventory → License plate build / Consolidate / Split			COVERED-31	31	
Inventory → Inventory status change	WHSInventoryStatusChange		COVERED-16	16	
Production → Raw material picking / RAF with LP / Put-away from production (WHS)	WHSProdPickingList		COVERED-31	31	
Kanban → Kanban supermarket (WHS lean)			COVERED-31	31	
Quality → Quality orders on mobile / Quality item sampling LP (link)			COVERED-32	32	
WHS → Warehouse slotting (D365 slotting templates, slotting demand)	WHSSlotting		COVERED-31	31	Slotting analysis
WHS → Warehouse workload visualization (D365 workspace)			COVERED-31	31	Warehouse KPIs
WHS → Catch weight on mobile (D365)			COVERED-24	24	
WHS → Warehouse app task validator / Detours (D365)	WHSMobileDeviceDetour		COVERED-32	32	Flow designer
WHS → Sales order picking with packing structure (D365 packing structure)			COVERED-28	28	
WHS → Transfer order WHS flow (ship/receive with LP)			PARTIAL-16 (transfer orders)	31	WHS execution of transfer orders depends on transfer orders gap

12.26.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
On-hand by location / On-hand by license plate		COVERED-31	31	
Work inquiries (Work line history, Work audit, Work exceptions log)		COVERED-31	31	
Location load / Location stocking limits inquiry		COVERED-31	31	Capacity never exceeded
Wave inquiries (Wave history, Wave lines)		COVERED-31	31	
Load inquiries (Load lines, Load history, Shipments per load)		COVERED-31	31	
License plate inquiry / LP history		COVERED-31	31	
Cycle count inquiries (Count history, Variances)		COVERED-31	31	
Replenishment inquiry		COVERED-31	31	
Mobile device inquiries (User sessions, Work user activity)		COVERED-32	32	
Inventory status inquiry		COVERED-16	16	
Dock appointment inquiries		COVERED-31	31	
Warehouse KPIs (throughput, pick rates, accuracy)		COVERED-46	46	
SSRS: Pick list (WHS work document) / Work pick list		COVERED-31	31	
SSRS: Packing slip (WHS) / Bill of lading / Container label / Shipping label (SSCC)		COVERED-28	28	Labels 32
SSRS: License plate label / Location label / Wave label		COVERED-32	32	ZPL

SSRS: Work user productivity		COVERED-46	46	
SSRS: Cross docking report		PARTIAL-31 (cross docking)	31	

12.26.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Wave processing (batch wave release / scheduled waves)		COVERED-31	31	
Replenishment → Min-max replenishment / Demand replenishment / Wave demand replenishment (batch)		COVERED-31	31	
Replenishment → Load demand replenishment (D365)		COVERED-31	31	
Cycle counting → Cycle count plan processing (scheduled) / Threshold counting		COVERED-31	31	
Cycle counting → Approve/reject count variances (batch)		COVERED-31	31	
Work → Delete work / Cancel expired work / Clean up work history		COVERED-31	31	
Loads → Ship confirm (batch) / Load posting (packing slip from load)		COVERED-28	28	
Loads → Outbound load planning (batch build by template)		COVERED-31	31	
Inbound → ASN import (EDI 856) batch		COVERED-35	35	
Mobile → Label reprint batch / Document routing cleanup		COVERED-32	32	
Inventory status → Mass status change		COVERED-16	16	
Slotting → Run slotting / Generate slotting replenishment		COVERED-31	31	
License plates → Clean up empty license plates		COVERED-31	31	
Work users → Expire sessions		COVERED-32	32	
Cross docking → Planned cross docking processing		PARTIAL-31 (cross docking)	31	
WHS → Release to warehouse (batch, automatic release by rule)		COVERED-28	28	Order release rules
WHS → Warehouse workload refresh		COVERED-31	31	
WHS → Delete expired mobile device user sessions / Clean up WHS history (work line history retention)		COVERED-31	31	

12.26.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Warehouse management parameters — General	Default location profiles, LP numbering, user/system-directed defaults, work audit, pack defaults, cycle count defaults, replenishment defaults, dock management, number sequences	COVERED-31	31	
Warehouse management parameters — Mobile device / Print / Barcode	Mobile device settings, display, printers	COVERED-32	32	
Warehouse (Warehouse details with "Use warehouse management processes", default receipt/shipping/production locations, license plate receiving)		COVERED-31	31	
Location setup → Location profiles (allow mixed items/batches/status, LP tracking, cycle counting, stocking limits, location format)		COVERED-31	31	
Location setup → Location formats (segments, separators)		COVERED-31	31	
Location setup → Location types (quarantine, shipping, receiving, staging, final shipping)		COVERED-31	31	
Location setup → Zones / Zone groups		COVERED-31	31	
Location setup → Locations (bins) with coordinates, sort codes		COVERED-31	31	
Location setup → Fixed locations (item fixed locations)		COVERED-31	31	
Location setup → Location stocking limits (by item/UoM/container type/physical dimensions)		COVERED-31	31	
Location setup → Location directives (work order type, direction, work type; lines with query, strategy (consolidate, FEFO batch, LP empty, round up, lowest qty…), location directive actions with query, fixed location usage, allow negative, restrict by UoM)		COVERED-31	31	Directive fixtures
Location setup → Location directive failures (D365 troubleshooting)		COVERED-31	31	
Location setup → Directive codes		COVERED-31	31	
Work → Work templates (work order type, work pools, work classes, work template lines: pick/put/print/inventory status change/custom; work header breaks; max pick quantity; directive codes)		COVERED-31	31	
Work → Work pools		COVERED-31	31	
Work → Work classes (valid location types per class)		COVERED-31	31	
Work → Work users (user id, default warehouse, menu, allowed work classes, process cycle counting, max LP)		COVERED-32	32	
Work → Work exceptions (short pick exceptions, pick overrides)		COVERED-31	31	Short picks
Work → Work priorities / Work blocking reasons (D365)		COVERED-31	31	
Work → Work policies (D365: work creation rules for production/transfer)		COVERED-31	31	
Work → Work cancel reasons (D365)		COVERED-31	31	
Waves → Wave templates (shipping, manufacturing, kanban; wave methods: allocate wave, create loads, create work, containerize, replenish, release to warehouse; automatic processing, wave thresholds, attributes)		COVERED-31	31	
Waves → Wave process methods (register custom methods)		COVERED-31	31	
Waves → Wave attributes / Wave step codes (D365)		COVERED-31	31	
Waves → Wave label templates (D365)		COVERED-32	32	
Load → Load templates (capacity: weight/volume/floor space, load template group)		COVERED-31	31	
Load → Load building templates / Load building strategies (D365: volume-based)		COVERED-31	31	
Load → Load posting methods (packing slip, sales invoice, transfer shipment)		COVERED-28	28	
Load → Load line type / Load status (customizable)		COVERED-31	31	

Name	Key parameters / options	Passage status	Wave	Notes
Mobile device → Mobile device menu items (work: pick/put, user-directed, system-directed, cluster picking, cycle counting, inquiry, adjustments, movement, LP build, print, production RAF, kanban, quality; indirect activities; options per item: generate LP, override, validation)		COVERED-32	32	Flow designer
Mobile device → Mobile device menus (hierarchy of menu items)		COVERED-32	32	
Mobile device → Mobile device display settings / Work user display / Mobile device steps configuration (D365 step configuration, field names)		COVERED-32	32	
Mobile device → Mobile device overrides / Detours (D365)		COVERED-32	32	
Mobile device → Mobile device barcode setup / Scan data parsing (GS1) (D365)		COVERED-32	32	GS1 AI parser
Mobile device → Work user sessions / Device management (D365 Warehouse app)		COVERED-32	32	
Mobile device → Cluster profiles (cluster picking)		COVERED-32	32	
Mobile device → Work confirmation / Validation (location, LP, item confirmation per menu item)		COVERED-32	32	
Mobile device → Indirect activity codes (warehouse)		COVERED-32	32	
Mobile device → Mobile device user authentication (D365 device token)		COVERED-2	2	Keycloak device auth
Inventory → Inventory statuses / Inventory status transitions		COVERED-16	16	
Inventory → Disposition codes (WHS: receiving disposition → inventory status + work template)		COVERED-31	31	
Inventory → Unit sequence groups (pallet/case/each with LP grouping and packing)		COVERED-31	31	
Inventory → Reservation hierarchies		COVERED-31	31	
Inventory → Filters (Filter codes, Filter groups, Product filter assignment)		COVERED-31	31	
Inventory → Physical dimensions (per item/UoM)		COVERED-31	31	
Inventory → Warehouse-specific item setup (fixed locations, min/max, replenishment)		COVERED-31	31	
Packing → Container types / Container groups / Container build templates (containerization during wave) / Container packing policies / Packing profiles / Packing station setup		COVERED-28	28	
Packing → Packing policies (D365 manual packing: packing slip/label on close)		COVERED-28	28	
Replenishment → Replenishment templates (min/max, demand, wave demand, load demand, slotting; replenishment units, work template)		COVERED-31	31	
Replenishment → Min/max replenishment rules per item/location		COVERED-31	31	
Replenishment → Fixed location replenishment / Immediate replenishment (D365)		COVERED-31	31	
Cycle counting → Cycle count plans (query, days between counts, work pool, max locations)		COVERED-31	31	
Cycle counting → Cycle count thresholds (quantity/percent threshold triggers)		COVERED-31	31	
Cycle counting → Cycle count approval parameters / Counting reason codes (link)		COVERED-31	31	
Cycle counting → Spot cycle counting / Supervisor approval		COVERED-31	31	
Label → Document routing (printer per work/user/warehouse), Document routing layouts (ZPL templates), Printers (print service)		COVERED-32	32	ZPL print service
Label → License plate label layouts / Container label layouts (D365 label layouts)		COVERED-32	32	
Label → Wave label printing setup (D365)		COVERED-32	32	
Dock scheduling → Appointment rules, Dock profiles, Dock management profiles, Appointment schedules, Appointment durations		COVERED-31	31	
Inbound → ASN setup (packing structure import, EDI 856 mapping)		COVERED-35	35	
Inbound → Inbound load statuses / Receiving policies (LP receiving, mixed LP receiving)		COVERED-31	31	
Outbound → Release to warehouse rules (automatic release, fulfillment rate %, partial release)		COVERED-28	28	
Outbound → Ship confirm setup / Bill of lading setup		COVERED-28	28	
Outbound → Shipping carrier / Mode of delivery mapping to WHS		COVERED-28	28	
Outbound → Cross docking templates (D365)		PARTIAL-31 (cross docking)	31	
Outbound → Outbound sorting (D365 outbound sorting positions)		PARTIAL-31 (outbound sorting (sort pick-to-shipment at a sortation area) not named)	31	Gap register
Slotting → Slotting templates / Slotting specifications (D365)		COVERED-31	31	
Warehouse → Production: Production input/output location setup, Raw material picking policies, RAF put-away policies, Material staging		COVERED-31	31	
Warehouse → Kanban: Kanban board for WHS, Supermarket replenishment		COVERED-31	31	
Warehouse → Catch weight on WHS (D365 CW tags)		COVERED-24	24	
Warehouse → Warehouse management workload visualization setup		COVERED-31	31	
Warehouse → Warehouse app task validator / Process guide steps (D365)		COVERED-32	32	
Warehouse → RFID / Voice adapter configuration (Passage)		COVERED-32	32	

Name	Key parameters / options	Passage status	Wave	Notes
Warehouse → Transportation (link to TMS)		COVERED-34	34	
Warehouse → Number sequences (work, wave, load, LP, container)		COVERED-5	5	
Warehouse → Work audit templates		COVERED-31	31	
Warehouse → Warehouse management (WHS) workflows (D365 none)		COVERED-4	4	
Warehouse → Yard management (D365 2024: yard, trailers, yard moves)		GAP	—	Propose wave 34: yard management (trailer/yard locations, check-in/out, yard moves, dock door assignment) alongside TMS driver check-in

12.27 Transportation management (TMS)

AX 2012 R3 TMS: rating engines, rate masters, carriers, route plans/guides, load building, tendering, freight bills and reconciliation, driver check-in, transportation tenders, dock appointment scheduling. Passage wave 34 covers rating, routing, load building, tendering, tracking, freight reconciliation and landed cost; yard/driver check-in is a gap.

12.27.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Loads (planning workbench, TMS view)	WHSLoadPlanningWorkbench (TMS)	Rate loads, assign carriers	COVERED-34	34	
Rate route workbench	TMSRateRouteWorkbench	Rate shop across carriers/routes for a load	COVERED-34	34	Rate shopping
Transportation tenders / Carrier tendering	TMSLoadTender	Tender to carrier, accept/reject, timeouts	COVERED-34	34	Tendering workflow
Freight bills	TMSFreightBill	Expected freight bill per load leg with charges	COVERED-34	34	
Freight bill invoices / Freight invoice matching	TMSFreightBillInvoice, TMSFreightBillMatching	Carrier invoice vs freight bill, reconciliation	COVERED-34	34	Freight reconciliation
Driver check-in / check-out	TMSDriverCheckIn	Driver/trailer arrival at dock, appointment link	GAP	—	Propose wave 34: driver check-in/out with appointment link, trailer/seal capture, gate log (with yard management)
Routes (transportation routes: multi-leg, hubs)	TMSRoute	Route with segments and hubs	COVERED-34	34	Route planning
Route plans / Route guides	TMSRoutePlan, TMSRouteGuide	Planned legs and automatic carrier selection rules	COVERED-34	34	
Shipments (TMS view) / Shipment tracking	WHSShipmentTable (TMS)	Tracking events, POD	COVERED-34	34	EDI 214/API
Load → Rate loads / Rate shipments	TMSRating	Rating per load/shipment	COVERED-34	34	
Load → Hub consolidation / Load building (manual)	TMSHub	Consolidate at hubs	COVERED-34	34	
Load → Freight charge allocation to orders (customer charges from freight)	TMSFreightChargeAllocation	Pass freight to sales orders as charges	COVERED-34	34	
Load → Transportation status / Carrier invoice reasons	TMSTransportationStatus		COVERED-34	34	
Landed cost (D365 module; voyages, link)			PARTIAL-34 (landed cost voyages)	34	
Carrier → Carrier rate cards (Rate masters, Rate base)	TMSRateMaster		COVERED-34	34	
Dock appointment scheduling (link)			COVERED-31	31	
Inbound → Inbound load rating / Transportation on purchase orders			COVERED-34	34	
Transportation → Transportation management workspace (D365 outbound/inbound)			COVERED-34	34	

12.27.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Freight bill inquiries / Freight invoice reconciliation status		COVERED-34	34	
Tender history / Tender status inquiry		COVERED-34	34	
Load tracking inquiry (tracking events)		COVERED-34	34	
Rating results inquiry (rate shopping log)		COVERED-34	34	
Carrier performance (on-time, cost per mile)		COVERED-46	46	
Driver check-in log		GAP	—	Propose wave 34: driver check-in
SSRS: Bill of lading (master/underlying)		COVERED-28	28	
SSRS: Load manifest / Load tender document		COVERED-34	34	
SSRS: Freight bill / Freight invoice reconciliation report		COVERED-34	34	
SSRS: Carrier rate listing / Rate master listing		COVERED-34	34	
SSRS: Route guide listing / Route plan listing		COVERED-34	34	
SSRS: Transportation tender summary		COVERED-34	34	
SSRS: Freight accrual report		COVERED-34	34	
SSRS: Dock schedule (link)		COVERED-31	31	

Name	Purpose	Passage status	Wave	Notes
SSRS: Landed cost reports (link)		PARTIAL-34 (landed cost voyages)	34	

12.27.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Rate loads (batch rating) / Auto-rate on release		COVERED-34	34	
Tendering → Send tenders (batch) / Tender timeout processing / Cascade to next carrier		COVERED-34	34	
Freight reconciliation → Match freight invoices (auto) / Post freight accruals / Generate AP invoice for matched freight		COVERED-34	34	
Tracking → Import tracking events (EDI 214 / carrier API polling)		COVERED-34	34	
Load building → Automatic load building (strategy)		COVERED-34	34	
Route → Route guide evaluation (batch assign carriers)		COVERED-34	34	
Fuel index → Update fuel surcharges from index		COVERED-34	34	
Landed cost → Voyage cost actualization (link)		PARTIAL-34 (landed cost voyages)	34	
Freight charges → Allocate freight to sales/purchase orders (batch)		COVERED-34	34	
Transportation → Clean up tenders / rating logs		COVERED-34	34	
Driver check-in → Expire appointments / Gate log archive		GAP	—	Propose wave 34: driver check-in

12.27.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Transportation management parameters — General	Default rating profile, tender settings, freight bill types, dock management, number sequences, appointment settings	COVERED-34	34	
Carriers → Shipping carriers (carrier vendor, services, rating profile, tender method, tracking)		COVERED-34	34	
Carriers → Carrier services / Carrier groups / Carrier rating profiles		COVERED-34	34	
Carriers → Transportation methods / Transportation modes		COVERED-34	34	
Carriers → Carrier invoice reasons / Reconciliation reasons		COVERED-34	34	
Rating → Rating profiles (rating metadata: rate base, rate master, engine)		COVERED-34	34	
Rating → Rate masters / Rate base / Rate base type / Rate base assignments (effective-dated rate tables: per mile, per weight break, per zone)		COVERED-34	34	
Rating → Rating metadata (rate structure definitions)		COVERED-34	34	
Rating → Accessorial masters / Accessorial assignments / Accessorial charges (fuel surcharge, liftgate, residential)		COVERED-34	34	
Rating → Fuel indexes / Fuel surcharge tables		COVERED-34	34	
Rating → Zone masters / Zones / Zone engines (postal code zones)		COVERED-34	34	
Rating → Engines: Rating engines, Generic engines, Transit time engines, Mileage engines (PC*MILER/Google Maps adapter), Apportionment engines, Rate engines (custom)		COVERED-34	34	Adapter interface; OR-Tools for VRP
Rating → Transit time masters		COVERED-34	34	
Routing → Route plans / Route guides / Route schedules / Hubs (hub masters) / Transportation constraints (carrier/item/customer constraints)		COVERED-34	34	
Routing → Route segments / Legs		COVERED-34	34	
Load building → Load building strategies / Load templates (link)		COVERED-34	34	
Freight billing → Freight bill types / Freight bill type assignments (which charges belong to which party) / Audit masters (tolerances for matching)		COVERED-34	34	
Freight billing → Freight accrual posting (ledger accounts) / Freight charge allocation rules (to orders)		COVERED-34	34	
Tendering → Tender types / Tender timeout rules / Tender broadcast (D365)		COVERED-34	34	
Tracking → Transportation status master / Status codes (EDI 214 mapping) / Proof of delivery setup		COVERED-34	34	
Dock appointment → Appointment rules / Dock profiles / Appointment scheduling calendar		COVERED-31	31	
Driver check-in → Check-in setup / Gate configuration		GAP	—	Propose wave 34: driver check-in
Landed cost → Landed cost parameters / Cost types / Voyage templates (link)		PARTIAL-34 (landed cost voyages)	34	
Transportation → Container / Trailer types		COVERED-34	34	
Transportation → Transportation document types / Bill of lading setup		COVERED-28	28	
Transportation → Destination codes / Postal code masters		COVERED-34	34	
Transportation → Number sequences (load tender, freight bill)		COVERED-5	5	
Transportation → Workflow (freight invoice approval)		COVERED-4	4	
Transportation → Carrier EDI/API connections (204/990/214 and carrier APIs)		COVERED-35	35	
Transportation → Yard management setup (D365 2024)		GAP	—	Propose wave 34: yard management

12.28 Service management

Service agreements, service orders, dispatch board, service objects/tasks, repair, subscriptions and service BOM in AX 2012 R3 map to wave 45 (installed base, agreements/SLA, cases, work orders, dispatch, mobile). Service subscriptions billing shares wave 29.

12.28.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Service agreements (list page)	SMAAgreementTableListPage	Agreements with lines (service objects/tasks, intervals, prices)	COVERED-45	45	Service agreements with entitlements/SLAs
Service agreement details	SMAAgreementTable / SMAAgreementLine	Lines, service level agreement, project link, templates	COVERED-45	45	
Service orders (list page)	SMAServiceOrderTableListPage	Service orders from agreements/manual; lines (hour, item, expense, fee)	COVERED-45	45	Service work orders
Service order details	SMAServiceOrderTable / SMAServiceOrderLine	Technician, service object, task, repair, stage, SLA timer, posting to project	COVERED-45	45	
Dispatch board	SMADispatchBoard	Gantt of technicians × service orders, drag/drop	COVERED-45	45	Dispatch optimization (OR-Tools)
Service objects (installed base)	SMAServiceObjectTable	Customer equipment, serial, template BOM	COVERED-45	45	Installed base from shipped serials
Service object relations (object ↔ agreement/customer)	SMAServiceObjectRelation		COVERED-45	45	
Service tasks / Service task relations	SMAServiceTaskTable		COVERED-45	45	
Repair → Repair lines (symptom, diagnosis, resolution, repair stage)	SMARepairLine	Repair tracking	COVERED-45	45	Repair orders
Service subscriptions (subscription fee transactions, index)	SMASubscriptionTable	Recurring subscription fees via project	PARTIAL-45 (AX service subscriptions (fee indexation, accrual via project) not explicitly named; subscription billing is wave 29)	29	Gap register
Service → Service stages / Stage transitions	SMAServiceStage		COVERED-45	45	
Service → Service level agreements (time recording, SLA compliance)	SMAServiceLevelAgreement		COVERED-45	45	SLA attainment
Service → Service order sign-off / Customer signature (mobile)			COVERED-45	45	Mobile app signatures
Service → Cases (customer service cases, link to Org admin case management)	CaseDetail (service)		COVERED-45	45	Cases → service work orders
Service → Technician mobile (D365 Field Service mobile)			COVERED-45	45	
Service → Warranty tracking (D365 warranty / AX via service object)			COVERED-45	45	Warranty terms
Service → Service BOM (service object BOM / template BOM)	SMAServiceObjectBOM		COVERED-45	45	
Service → Parts consumption from technician van stock			COVERED-45	45	Mobile inventory locations
Service → Service order project posting (hours/items/expenses to project)			COVERED-41	41	
Service → Service order invoicing (via project invoice proposal)			COVERED-41	41	Billing billable vs warranty

12.28.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Service order inquiries (by stage, technician, customer, SLA status)		COVERED-45	45	
Service agreement inquiries (expiring agreements, lines due)		COVERED-45	45	
Service object inquiries (history per object)		COVERED-45	45	
Repair statistics (symptom/diagnosis/resolution frequency)		COVERED-45	45	
SLA compliance inquiry		COVERED-45	45	
Subscription inquiries		PARTIAL-45 (service subscriptions)	29	
Service KPIs (first-time fix, SLA attainment, technician utilization)		COVERED-45	45	
SSRS: Service order (document) / Service order lines / Service order status		COVERED-45	45	
SSRS: Service agreement (document) / Agreement lines		COVERED-45	45	
SSRS: Service object list / Service object history		COVERED-45	45	
SSRS: Repair report / Repair statistics		COVERED-45	45	
SSRS: Dispatch list / Technician schedule		COVERED-45	45	
SSRS: SLA report		COVERED-45	45	
SSRS: Subscription report / Subscription fee transactions		PARTIAL-45 (service subscriptions)	29	
SSRS: Service invoice (via project)		COVERED-41	41	

12.28.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Create service orders from agreements (periodic generation by interval)		COVERED-45	45	
Service agreements → Copy / Renew / Expire agreements		COVERED-45	45	

Name	Purpose	Passage status	Wave	Notes
Subscriptions → Create subscription fee transactions / Accrue subscription revenue / Index subscriptions		PARTIAL-45 (service subscriptions)	29	
Service orders → Post service orders (to project) / Invoice (via project)		COVERED-41	41	
Service orders → Update stages (batch) / Close		COVERED-45	45	
Dispatch → Automatic dispatch optimization run		COVERED-45	45	
Service → SLA breach notifications		COVERED-45	45	
Service → Synchronize installed base from shipments (serials)		COVERED-45	45	
Service → Mobile sync / Offline reconciliation		COVERED-45	45	

12.28.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Service management parameters — General / Service orders / Agreements / Subscriptions / Dispatching / Number sequences	Default stages, project posting, time recording, SLA settings, subscription defaults	COVERED-45	45	Subscriptions PARTIAL
Service → Service stages / Stage reasons / Stage transitions		COVERED-45	45	
Service → Service order types / Service priorities		COVERED-45	45	
Service → Service level agreements (SLA definitions: time to respond/resolve, calendars)		COVERED-45	45	
Service → Service objects: Service object groups, Service object templates		COVERED-45	45	
Service → Service tasks / Service task groups		COVERED-45	45	
Service → Service agreement groups / Agreement templates / Service intervals		COVERED-45	45	
Service → Repair: Conditions, Symptom areas, Symptom codes, Diagnosis areas, Diagnosis codes, Resolutions, Repair stages		COVERED-45	45	
Service → Dispatching: Dispatch teams, Technicians (workers), Skills, Territories, Dispatch board settings		COVERED-45	45	
Service → Subscription: Subscription groups, Subscription fee categories, Index rules, Subscription periods		PARTIAL-45 (service subscriptions)	29	
Service → Project integration (project group for service, categories, line properties)		COVERED-41	41	
Service → Warranty types / Entitlement types (Passage)		COVERED-45	45	
Service → Mobile app configuration (offline, photos, signatures)		COVERED-45	45	
Service → Van stock / Technician warehouses		COVERED-45	45	
Service → Workflow (service order approval)		COVERED-4	4	
Service → Number sequences		COVERED-5	5	
Service → Case categories for service (link)		COVERED-45	45	
Service → Customer portal: case submission / service request (link)		COVERED-30	30	

12.29 Organization administration

Legal entities, operating units, hierarchies, address book, number sequences, document management, case management, workflow configuration, calendars, units, electronic signatures, foreign trade, policies and signing limits. Passage: waves 6 (structure, calendars, UoM, address book), 7 (global address book), 5 (number sequences, audit), 4 (workflow). Case management, document management depth, reason codes, teams and electronic signatures are partial or gaps.

12.29.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Legal entities (list) / Legal entity details	OMLegalEntity (CompanyInfo)	Company, addresses, tax registration, bank, statutory reporting, foreign trade, ER tabs	COVERED-6	6	
Operating units (departments, cost centers, business units, value streams, retail channels)	OMOperatingUnit		COVERED-6	6	
Organization hierarchies / Hierarchy designer (with purposes, publish with effective date, view hierarchy)	OMHierarchyDesigner, OMHierarchyPurpose	Multi-purpose effective-dated hierarchies	COVERED-6	6	
Global address book (list) / Party details	DirPartyTableListPage / DirPartyTable	Parties with roles, addresses, contact info, relationships	COVERED-7	7	
Global address book → Duplicate check / Merge parties	DirDuplicateCheck, DirPartyMerge		COVERED-7	7	
Address books (address book groupings with team access)	DirAddressBook		COVERED-7	7	
Teams / Team types	OMTeam		PARTIAL-6 (teams)	6	
Cases (list page) / Case details	CaseDetailListPage / CaseDetail	Case with category, process, activities, log, knowledge articles, associations, resolution	PARTIAL-45 (generic case management (categories, processes, activities, knowledge articles, associations to any record) is not named in any wave; service cases are in 45, disputes in 30, product change in 9)	45	Gap register
Cases → Knowledge articles	CaseKnowledgeArticle		PARTIAL-45 (generic case management)	45	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Document management → Document handling (attachments on any record), Document types, File types	DocuView, DocuType		PARTIAL-5 (attachments exist in 5/11; document types, storage locations (SharePoint/S3), archive directories, retention are not named)	5	Gap register
Document management → Document templates (Word/Excel mail merge)	DocuTemplate		OUT-OF-SCOPE (CRM mail merge non-goal; business documents via wave 46)	—	
Number sequences (list) / Number sequence details / Number sequence wizard	NumberSequenceTableListPage, NumberSequenceTable, NumberSeqWizard	Scopes (shared, company, legal entity, operating unit, fiscal calendar period), continuous, pre-allocation, format segments	COVERED-5	5	
Number sequences → References (per data type/scope)	NumberSequenceReference		COVERED-5	5	
Workflow → Workflow configurations (per type: PO, requisition, journal, etc.) / Workflow editor	WorkflowTable, Workflow editor (WF4)	Graphical designer, versions, activation	COVERED-4	4	Workflow designer
Workflow → Workflow history / Work items	WorkflowStatus, WorkflowWorkItem		COVERED-4	4	
Calendars (Org admin: working time calendars shared with production/HR)	WorkCalendarTable		COVERED-9	9	
Units / Unit conversions / Unit classes / Unit translations	UnitOfMeasure, UnitOfMeasureConversion		COVERED-6	6	
Foreign trade → Intrastat (journal) / EU sales list (link)	Intrastat, TaxEUSalesList		PARTIAL-13 (Intrastat setup)	13	Intrastat extract named; journal maintenance/corrections not
Electronic signatures → Signature log / Reset signature	SysSignatureLog		GAP	—	Propose wave 48: electronic signatures
Policies → Signing limits (Signing limit policies, Worker signing limit requests, Default signing limits by job/compensation level)	SigningLimit*		PARTIAL-17 (signing limits)	17	
Policies → Policy framework forms (Purchasing policies, Expense policies, Audit policies, Vendor invoice policies, Signing limit policies)	SysPolicy*	Policy framework with org hierarchy scoping	PARTIAL-17 (a generic policy framework scoped by org hierarchy is implied by 17/43 but not named as reusable)	17	Gap register
Product safety data sheets (link, PI)			GAP	—	Propose wave 33: product compliance
Reason codes (shared financial reasons across modules)	ReasonTable	Fixed assets, customer, vendor, bank, ledger reasons	PARTIAL-11 (reason codes)	11	
Address → Address setup: Address formats, Address purposes, Name sequences, Name affixes, ZIP/postal codes, Counties, States/provinces, Countries/regions, Districts	LogisticsAddress*		COVERED-6	6	Address book with validated postal addresses
Address → Address books parameters / Global address book parameters (security by address book, name sequence defaults, duplicate check on)	DirParameters		COVERED-7	7	
Global address book → Party relationship types / Role security	DirRelationshipType		COVERED-7	7	
Organization → Translations (legal entity/operating unit name translations)			COVERED-6	6	
Organization → Legal entity logos / Document branding	CompanyImage		COVERED-46	46	Document designer branding
Electronic signatures → Certificates (user signing certificates)	SysSignatureCertificate		GAP	—	Propose wave 48: electronic signatures
Print management (org-wide)	PrintMgmtDocType		PARTIAL-46 (print management routing)	46	
Alerts (org-level alert rules)	EventRule		GAP	—	Propose wave 5: alerts and notification rules (change-based and due-date alerts on any entity/field, delivered in-app/email/webhook) built on the wave 4 event backbone
Questionnaires (link, Org admin > Questionnaires in R3)	KMQuestionnaire		GAP	—	Propose wave 42: questionnaire engine
Case management → Case processes / Case categories (link)	CaseProcess, CaseCategory		PARTIAL-45 (generic case management)	45	
Organization → Vendor collaboration user provisioning (link)			COVERED-20	20	

12.29.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Organization hierarchy inquiry (as-of date view)		COVERED-6	6	
Number sequence inquiries (status list, pre-allocation, gaps)		COVERED-5	5	
Workflow inquiries (Workflow history, Workflow performance, Pending work items)		COVERED-4	4	
Case inquiries (cases by category/status, SLA)		PARTIAL-45 (generic case management)	45	

Name	Purpose	Passage status	Wave	Notes
Global address book inquiries (parties by role, duplicate candidates)		COVERED-7	7	
Document management inquiries (documents by type/record)		PARTIAL-5 (document management)	5	
Electronic signature inquiry		GAP	—	Propose wave 48: electronic signatures
SSRS: Legal entities list / Operating units list / Organization hierarchy report		COVERED-6	6	
SSRS: Number sequence list / Number sequence references		COVERED-5	5	
SSRS: Workflow configurations / Workflow history / Workflow tracking		COVERED-4	4	
SSRS: Address book (parties, contacts, addresses) / Mailing labels		COVERED-7	7	Labels OOS (CRM)
SSRS: Case report / Case activities		PARTIAL-45 (generic case management)	45	
SSRS: Units / Unit conversions list		COVERED-6	6	
SSRS: Calendars report		COVERED-9	9	
SSRS: Intrastat report / EU sales list (link)		COVERED-13	13	
SSRS: Signing limits report		PARTIAL-17 (signing limits)	17	
SSRS: Policies report (policy rules per hierarchy)		PARTIAL-17 (policy framework)	17	

12.29.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Organization hierarchy → Publish hierarchy version (effective date)		COVERED-6	6	
Number sequences → Clean up pre-allocated / Status list cleanup / Generate pre-allocation		COVERED-5	5	
Workflow → Workflow message processing / Workflow due date processing / Workflow cleanup (batch jobs)		COVERED-4	4	Temporal timers
Workflow → Line-item workflow batch activation		COVERED-4	4	
Global address book → Run duplicate detection (batch) / Party merge batch		COVERED-7	7	
Global address book → Address validation / Geocoding refresh		COVERED-6	6	
Foreign trade → Intrastat transfer (from invoices) / Intrastat validation / Intrastat export (file)		PARTIAL-13 (Intrastat setup)	13	
Foreign trade → EU sales list transfer / Export		COVERED-13	13	
Cases → Close cases / Case SLA breach notifications		PARTIAL-45 (generic case management)	45	
Document management → Archive documents / Purge by retention		PARTIAL-5 (document management)	5	
Electronic signatures → Signature verification / Reset		GAP	—	Propose wave 48: electronic signatures
Calendars → Compose working times / Update calendar expiry		COVERED-9	9	
Signing limits → Signing limit request processing (annual recertification)		PARTIAL-17 (signing limits)	17	
Translations → Import/export system translations		COVERED-48	48	Localization framework
Organization → Delete legal entity / Legal entity copy (template)		COVERED-6	6	Tenant provisioning automation in 50

12.29.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Organization → Legal entities	Name, addresses, registration numbers, tax, bank, statutory, foreign trade, ER	COVERED-6	6	
Organization → Operating units / Departments / Cost centers / Business units / Value streams		COVERED-6	6	
Organization → Organization hierarchies / Organization hierarchy purposes (security, procurement, expenditure, budget planning, benefits, centralized payments, signing limits, audit, retail, etc.)		COVERED-6	6	
Organization → Teams / Team types		PARTIAL-6 (teams)	6	
Global address book → Global address book parameters / Address books / Address parameters (formats, purposes, name sequences, ZIP, counties, states, countries, districts, address setup)		COVERED-7	7	
Global address book → Party relationship types / Name affixes / Contact information types / Electronic address purposes		COVERED-7	7	
Global address book → Address validation (external verification service connector)		COVERED-6	6	Geocoding hook
Number sequences → Number sequences / References / Number sequence parameters (continuous, cleanup, pre-allocation) / Segment configuration (scopes)		COVERED-5	5	
Document management → Document management parameters (archive directory, SharePoint, file types, max size), Document types (file, note, URL, image, template; group; location: archive/database/SharePoint), Active document tables, File types		PARTIAL-5 (document management)	5	
Document management → Document management: OneDrive/SharePoint integration (D365), Attachment migration		PARTIAL-5 (document management)	5	Object storage (S3-compatible) is the Passage equivalent
Case management → Case categories / Case category types (HR, customer service, collections, product change, audit, service, project, knowledge, etc.) / Case processes (stages) / Case category security		PARTIAL-45 (generic case management)	45	
Workflow → Workflow parameters (notifications, email, Enterprise Portal links, due date escalation) / Workflow version management		COVERED-4	4	
Workflow → Workflow types (registered workflow types per module) / Workflow infrastructure configuration (message/due date/line-item batch)		COVERED-4	4	Temporal
Workflow → Workflow delegation (user options) / Workflow participants (hierarchy, user group, expenditure participants, queue)		COVERED-4	4	
Calendars → Calendars / Working time templates		COVERED-9	9	

Name	Key parameters / options	Passage status	Wave	Notes
Units → Units / Unit classes / Unit conversions / Unit translations / Unit of measure parameters (decimal precision)		COVERED-6	6	UCUM
Electronic signatures → Electronic signature parameters / Signature requirements / Reason codes / Certificates		GAP	—	Propose wave 48: electronic signatures
Foreign trade → Foreign trade parameters, Commodity codes, Transaction codes, Transport methods, Ports, Statistics procedures, Country/region properties (EU), Intrastat compression, Intrastat check setup, EU sales list reporting		PARTIAL-13 (Intrastat setup)	13	
Policies → Signing limit policies / Signing limit parameters / Default signing limits (per job/compensation) / Signing limit request workflow		PARTIAL-17 (signing limits)	17	
Policies → Policy parameters (per policy type: organization hierarchy purpose)		PARTIAL-17 (policy framework)	17	
Reason codes (Financial reasons: ledger, bank, customer, vendor, fixed asset)		PARTIAL-11 (reason codes)	11	
Product safety data sheets setup (link, PI)		GAP	—	Propose wave 33: product compliance
Print management → Print management setup (per module/document: original/copy destinations, conditional settings by query)		PARTIAL-46 (print management routing)	46	
Alerts → Alert rules (Change-based, Due-date; event rule setup, alert email templates)		GAP	—	Propose wave 5: alerts and notification rules
Questionnaires setup (link)		GAP	—	Propose wave 42: questionnaire engine
Organization → Fiscal calendars (shared)		COVERED-6	6	
Organization → Vendor collaboration / Customer self-service user provisioning (link)		COVERED-20	20	
Organization → Translations (system labels, custom text translations)		COVERED-48	48	
Organization → Shared categories (category hierarchies, link)		COVERED-8	8	
Organization → Record templates (per table)		COVERED-5	5	
Organization → Document branding / Report headers per legal entity		COVERED-46	46	
Organization → Data partitions (link to Sys admin)		SUPERSEDED (tenant model wave 2)	2	
Organization → Audit policies (link)		PARTIAL-48 (audit policies)	48	
Organization → Workflow approval email templates		PARTIAL-4 (email templates / SMTP outbound not explicitly named in 4 or 5)	4	Gap register

12.30 System administration

Users, security roles/duties/privileges, SoD, licensing, batch jobs, AOS/cluster, AIF services, database log, data partitions, virtual companies, Enterprise Portal, reporting/analysis services, help, alerts/email, model store. Passage supersedes most of this with waves 1 (pipeline), 2 (identity/authz), 3 (metadata), 4 (batch/workflow/events), 5 (audit/observability) and 35 (integration hub).

12.30.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Users (list) / User details (relations, roles, user options, profiles)	SysUserInfoPage / UserInfo	User accounts, domain/claims, roles per organization	COVERED-2	2	Keycloak + SCIM; admin UI
User groups	UserGroupInfo	Groups for period access/journal approval	COVERED-2	2	
User relations (worker ↔ user)	DirPersonUser		COVERED-7	7	Employee role ↔ identity
Security → Security roles / Duties / Privileges / Entry points (Security configuration, Security development tool)	SecurityRole, SecurityDuty, SecurityPrivilege	Role-based security model	COVERED-2	2	Compiled to OPA
Security → Assign users to roles (rules: automatic role assignment by query)	SysSecRoleAssignmentRule		COVERED-2	2	
Security → Segregation of duties rules / Verify compliance / Conflicts	SysSecSegregationOfDuties*		COVERED-48	48	
Security → Extensible data security policies (XDS)	SysDataSecurityPolicy	Row-level security via policy queries	SUPERSEDED (Postgres RLS + OPA data policies wave 2)	2	
Security → Table permissions framework / Record-level security (legacy)	SysRecordLevelSecurity		SUPERSEDED (RLS/OPA)	2	
Security → Effective permissions viewer (Passage)			COVERED-2	2	
Batch jobs (list) / Batch job details / Batch tasks	BatchJob, BatchTask	Jobs, recurrence, dependencies, alerts, history	COVERED-4	4	Batch job framework + monitor UI
Batch groups / Server configuration (batch servers, threads)	BatchGroup, SysServerConfig		SUPERSEDED (Kubernetes workers, Temporal task queues)	4	
AOS → Cluster configuration / Load balancing	SysClusterConfig		SUPERSEDED (Kubernetes + Envoy, wave 1)	1	
Online users	SysUsersOnline	Sessions, kill session	COVERED-2	2	Keycloak sessions
Database → Database information / SQL administration (indexes, synchronize) / Database log setup	SysSqlAdmin, SysDatabaseLogSetup		SUPERSEDED (Atlas migrations from metadata, wave 3; audit from CDC, wave 5)	3	
Data partitions	SysDataPartition	Partition isolation	SUPERSEDED (tenant model with RLS wave 2)	2	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Virtual company accounts / Table collections	VirtualDataAreaList	Share tables across companies	SUPERSEDED (tenant-level shared master data (party, product, COA) by design, waves 7/8/11)	7	
Services and AIF → Inbound/Outbound ports, Adapters (file, MSMQ, HTTP, NetTcp), Document data policies, Exceptions, Queue manager, History, Document services	AifInboundPort, AifOutboundPort, AifDocumentLog	Integration framework	SUPERSEDED (integration hub: REST/GraphQL/webhooks/Kafka/EDI, wave 35; message monitor with replay)	35	
Licensing → License information / License configuration (configuration keys)	SysLicenseCodeReadFile, SysConfig	Feature keys	SUPERSEDED (feature flags/tenant entitlements in metadata registry wave 3; licensing model decided before wave 35)	3	
Setup checklists (Initialization checklist, Partition checklist, Upgrade checklist)	SysCheckList*		SUPERSEDED (tenant provisioning automation wave 50; migration runbooks wave 49)	50	
Enterprise Portal → Sites / EP parameters / Web parts	EP*		SUPERSEDED (React shell + portals, waves 5/20/30/42)	5	
Reporting Services / Analysis Services → Report servers, Deploy reports, Cubes (SQL Server Analysis Services projects), Configure analysis extensions	SRSServers, BIAnalysisServer		SUPERSEDED (document designer and semantic layer/lakehouse, wave 46)	46	
Help system (Help server, Help content)			SUPERSEDED (documentation site, in-app help wave 50)	50	
Alerts → Alert parameters / Email templates / Email parameters (SMTP) / Outbound email status (E-mail sending status)	EventParameters, SysEmailTable, SysEmailParameters		PARTIAL-4 (email templates/SMTP outbound)	4	Alerts GAP wave 5
Email → Email distributor batch	SysEmailBatch		PARTIAL-4 (email templates/SMTP outbound)	4	
Document handling (link)			PARTIAL-5 (document management)	5	
Global search configuration / Search configuration (Enterprise search, full-text)	SysSearchConfiguration		COVERED-5	5	Global search in shell
Client performance options / Usage data / Personalization reset	SysUserSetup		COVERED-5	5	Personalization
System parameters (System parameters form: language, timezone defaults, security, alerts, help, Unicode)	SystemParameters		COVERED-2	2	Tenant settings
Model store / Layers / Models (AOT) / Code upgrade / Compile / CIL	SysModelStore		SUPERSEDED (metadata registry + GitOps, waves 1/3; no X++ per PRD non-goal)	3	
Trace parser / SQL statement trace log / Tracing cockpit	SysTraceParser		SUPERSEDED (OpenTelemetry traces/metrics/logs wave 5)	5	
Sys admin → Periodic → Data import/export (link to DIXF)			COVERED-10	10	
Sys admin → Office add-ins (Excel add-in configuration, Document data sources)	DocuDataSource		COVERED-5	5	Excel/CSV import-export
Sys admin → Workflow infrastructure configuration (link)			COVERED-4	4	
Sys admin → Business events catalog (D365)	BusinessEventsCatalog	Event subscriptions to endpoints	COVERED-4	4	Kafka/webhooks
Sys admin → Feature management (D365)	FeatureManagement	Feature flags	COVERED-3	3	
Sys admin → Data entities / OData (D365 link)			COVERED-3	3	Generated OpenAPI
Sys admin → Dual-write (D365, link)			SUPERSEDED (wave 35)	35	§12.40
Sys admin → LCS environment monitoring / Telemetry (D365)			SUPERSEDED (Grafana/Tempo/Loki, wave 5)	5	
Sys admin → Mobile workspaces (D365 mobile app designer)			SUPERSEDED (PWA shell, metadata-driven forms)	5	
Sys admin → Inquiries → Database log / System log / Batch job history / SQL statements			COVERED-5	5	
Sys admin → Users → User log (login history)	SysUserLog		COVERED-2	2	Keycloak events
Sys admin → Security diagnostics for task recordings (D365)			SUPERSEDED (effective-permission viewer wave 2)	2	
Sys admin → Task recorder / Business process modeler (LCS)	SysTaskRecorder		SUPERSEDED (Playwright E2E suites; training curriculum wave 50)	50	
Sys admin → Electronic signature (link)			GAP	—	Propose wave 48: electronic signatures
Sys admin → Printers / Document routing agent (D365 network printers)			COVERED-32	32	Print service
Sys admin → Personalization management (D365: import/export user personalizations, saved views publish)			COVERED-5	5	Saved views
Sys admin → Data archiving / Long-term retention (D365 archive)			COVERED-46	46	Lakehouse archive
Sys admin → Secrets (key vault parameters, D365)			COVERED-36	36	Vault; secrets rotation 48
Sys admin → Tenant provisioning / Environment management (Passage)			COVERED-50	50	

12.30.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Online users / User sessions		COVERED-2	2	
Batch job history / Batch job errors		COVERED-4	4	

Name	Purpose	Passage status	Wave	Notes
Database log inquiry		COVERED-5	5	
System log / Event log		COVERED-5	5	Loki
SQL statement trace / Long-running queries		SUPERSEDED (OpenTelemetry/Grafana)	5	
Security inquiries (Users by role, Role permissions, Security roles report, Duties by role, Privileges by duty, Users with SoD conflicts, Effective permissions)		COVERED-2	2	
AIF inquiries (Document history, Exceptions, Queue manager)		SUPERSEDED (message monitor wave 35)	35	
License inquiries (Named user license counts, License usage by role)		PARTIAL-3 (license usage reporting is not named; depends on licensing decision)	3	Gap register
Workflow infrastructure inquiries		COVERED-4	4	
User log / Login history		COVERED-2	2	
SSRS: Security roles / Users / User permissions (Security role report)		COVERED-2	2	
SSRS: Database log report		COVERED-5	5	
SSRS: Batch job report		COVERED-4	4	
SSRS: License report / Named user counts		PARTIAL-3 (license usage reporting)	3	
SSRS: Number sequence status (link)		COVERED-5	5	
SSRS: Table information / AOT object listings		SUPERSEDED (metadata registry diff/export wave 3)	3	
Observability dashboards (SLOs, traces) (Passage)		COVERED-5	5	

12.30.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Batch → Batch job scheduling / Recurrence / Batch alerts / Clean up batch history		COVERED-4	4	
Database log → Clean up database log		SUPERSEDED (retention policy)	48	
Database → Synchronize database / Rebuild indexes / Compile / Generate CIL / Deploy		SUPERSEDED (CI/CD pipeline wave 1; Atlas migrations wave 3)	1	
Database → Backup / Restore / Refresh from production (LCS)		COVERED-48	48	Backup/restore drills; DR in 50
AIF → Process inbound/outbound queues / Send e-mails / Clean up document log		SUPERSEDED (integration hub wave 35)	35	
Email → Send email distributor batch / Retry failed		PARTIAL-4 (email templates/SMTP outbound)	4	
Alerts → Change-based alerts / Due date alerts (batch processors)		GAP	—	Propose wave 5: alerts and notification rules
Notifications → Clean up notifications		COVERED-5	5	
Security → Verify SoD compliance (batch) / Automatic role assignment batch		COVERED-48	48	
Security → User provisioning sync (SCIM/AD import wizard)		COVERED-2	2	
Licensing → Named user license count refresh		PARTIAL-3 (license usage reporting)	3	
Data → Data import/export (DIXF batch, link)		COVERED-10	10	
Data → Delete company data / Copy company (SysDataExport/Import)		COVERED-10	10	Migration framework; tenant provisioning 50
Data → Data partition management (create/initialize)		SUPERSEDED (tenant provisioning)	50	
Enterprise Portal → Deploy EP / Refresh AOT elements		SUPERSEDED (shell deploys via GitOps)	1	
Reporting → Deploy reports / Process cubes (SSAS)		SUPERSEDED (wave 46 lakehouse/dbt)	46	
Help → Update help content		SUPERSEDED (docs site wave 50)	50	
Upgrade → Code upgrade / Data upgrade (AX 2009 → 2012, 2012 → D365)		SUPERSEDED (migration factory wave 49, data only per non-goal)	49	
Model store → Import/export model / Install hotfix (axutil)		SUPERSEDED (GitOps, signed images, wave 1)	1	
Monitoring → Performance counters / Trace capture		SUPERSEDED (OpenTelemetry wave 5)	5	
Personalization → Reset usage data (batch)		COVERED-5	5	
Business events → Process business events queue / Retry failed endpoints (D365)		COVERED-4	4	Outbox + Kafka
Data archiving → Archive/purge jobs (D365)		COVERED-46	46	
Secrets → Rotate secrets (Passage)		COVERED-48	48	
DR → Game days / Failover drills (Passage)		COVERED-50	50	

12.30.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
System parameters	Default language, timezone, alerts, help, Unicode, security defaults	COVERED-2	2	
Users → User options defaults (language, timezone, number formats, workflow notifications, delegation)		COVERED-5	5	My user options
Users → Active Directory import wizard / Claims users / Identity providers		COVERED-2	2	OIDC/SAML federation, SCIM
Users → User profiles (role center profiles)		SUPERSEDED (workspaces per role, wave 5)	5	
Security → Security roles / Duties / Privileges / Process cycles (security configuration)		COVERED-2	2	
Security → Segregation of duties rules		COVERED-48	48	
Security → Automatic role assignment rules (query-based)		COVERED-2	2	

Name	Key parameters / options	Passage status	Wave	Notes
Security → Extensible data security (XDS) policies / Policy contexts		SUPERSEDED (RLS/OPA data policies wave 2)	2	
Security → Security development tool / Entry point permissions		SUPERSEDED (policy compiler from metadata wave 2/3)	2	
Security → Password/MFA policies (Passage via Keycloak)		COVERED-2	2	
Security → API keys / Service accounts / Rate limits (Passage)		COVERED-35	35	Developer portal keys and quotas
Licensing → License information / Configuration keys / Named user licensing types		SUPERSEDED (feature flags/entitlements wave 3; licensing model open question)	3	License usage PARTIAL
Batch → Batch groups / Batch servers / Batch thread configuration / Batch job alerts		SUPERSEDED (Temporal task queues, K8s worker pools; monitor UI wave 4)	4	
AOS → Server configuration / Cluster configuration / Load balancer / Services (AIF on AOS)		SUPERSEDED (Kubernetes, Envoy, wave 1)	1	
Database → Database log setup / Database information / SQL administration		SUPERSEDED (metadata audit flags wave 3/5)	5	
Data partitions / Partition checklist		SUPERSEDED (tenant model wave 2)	2	
Virtual company accounts / Table collections		SUPERSEDED (shared tenant-level master data)	7	
Services and AIF → Inbound ports / Outbound ports / Adapters / Pipelines (XSLT transforms) / Document data policies / Value mapping / Services configuration		SUPERSEDED (integration hub wave 35: REST/GraphQL/webhooks/Kafka; EDI mapping engine)	35	
Enterprise Portal → Web sites / EP parameters / Web menus / Web parts / Role centers		SUPERSEDED (React shell + portals)	5	
Reporting Services → Report servers / Reporting parameters / Report deployment / Print destinations (file, email, printer)		SUPERSEDED (document designer wave 46; print service wave 32)	46	
Analysis Services → Analysis servers / Cubes / Perspectives / Analysis extensions		SUPERSEDED (semantic layer wave 46)	46	
Alerts → Alert parameters (polling intervals, retention, drill-down links) / Email templates / Email parameters (SMTP, Exchange, mail sending mode: batch/client) / Email distributor		PARTIAL-4 (email templates/SMTP outbound)	4	Alerts GAP wave 5
Help → Help system parameters / Help server / Help content languages		SUPERSEDED (docs site wave 50)	50	
Global search / Enterprise search parameters / Search configuration		COVERED-5	5	
Client performance → Client performance options / Usage data policies		COVERED-5	5	
Document management (link)		PARTIAL-5 (document management)	5	
Office add-ins → Document data sources (Excel add-in entities), Office integration parameters (D365)		COVERED-5	5	
Workflow infrastructure configuration (message processing, due date, line-item batch jobs)		COVERED-4	4	
Model store → Models / Layers / Configuration (Development: AOT, X++ compile, hotfixes)		SUPERSEDED (no X++; metadata + GitOps)	3	PRD non-goal
Setup checklists → Initialization checklist (steps: license, config keys, partitions, company, users)		SUPERSEDED (tenant provisioning automation wave 50)	50	
System → Timezones / Languages / Date-time settings		COVERED-6	6	Reference data
Number sequences (system-level)		COVERED-5	5	
Sys admin → Feature management configuration (D365)		COVERED-3	3	
Sys admin → Business events configuration (endpoints: Azure Service Bus, Event Grid, HTTPS, Power Automate) (D365)		COVERED-4	4	Webhooks/Kafka; replay wave 35
Sys admin → Data entities / OData / Entity store refresh (D365)		COVERED-3	3	Lakehouse 46
Sys admin → Integration: Recurring integrations / Data management framework scheduling (D365)		COVERED-35	35	
Sys admin → Electronic signature parameters (link)		GAP	—	Propose wave 48: electronic signatures
Sys admin → Personalization management / Saved views publish (D365)		COVERED-5	5	
Sys admin → Network printers / Document routing agent (D365)		COVERED-32	32	
Sys admin → Key vault parameters / Certificates (D365)		COVERED-36	36	Vault
Sys admin → Data residency / Backup policies / Retention (Passage)		COVERED-48	48	
Sys admin → Tenant provisioning templates / Environment catalog (Passage)		COVERED-50	50	
Sys admin → Observability: SLOs, alert routes, PagerDuty integration (Passage)		COVERED-5	5	
Sys admin → AI: model provider configuration, token budgets, kill switch (Passage)		COVERED-47	47	

12.31 Home / role centers / workflow

AX 2012 R3 Home module: role centers (Enterprise Portal pages with cues, KPIs, work lists), work items (workflow), activities, cases, questionnaires, alerts and user options. Passage: workspaces and personalization in wave 5, workflow in wave 4, dashboards/KPIs in wave 46, copilot in wave 47.

12.31.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Role center (per profile: Accountant, Buyer, Production manager, Sales manager, CFO, … 30+ role centers)	EP role center pages (SysUserProfile)	Cues, KPIs (SSAS), work list, quick links, reports, Power BI parts	SUPERSEDED (role-based workspaces with tiles/lists wave 5 and embedded dashboards/KPIs wave 46)	5	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Work items assigned to me / Work items queue / Work item queue assignments	WorkflowWorkItemListPage, WorkflowWorkItemQueue	Approvals and tasks	COVERED-4	4	Human tasks on Temporal
Work item → Approve/Reject/Delegate/Request change/Complete	WorkflowWorkItemActionDialog		COVERED-4	4	
My activities (Activities: tasks, appointments, events, actions)	smmActivities (Home)	Personal activity list	OUT-OF-SCOPE (CRM activity model non-goal; tasks for cases/projects handled by case framework and workflow)	—	
Cases (My cases)	CaseDetailListPage		PARTIAL-45 (generic case management)	45	
Questionnaires → My questionnaires / Answer questionnaire / Questionnaire results	KMQuestionnaire (Home)		GAP	—	Propose wave 42: questionnaire engine
Alerts (My alerts / Notification list)	EventInbox	Alert inbox	GAP	—	Propose wave 5: alerts and notification rules (notification center exists in shell; rule-based alerts do not)
Notification center (Passage shell)		In-app notifications from workflow/batch	COVERED-5	5	
Cues (saved queries with counts)	SysCue		COVERED-5	5	Saved views with counts in workspaces
My user options (General, Status bar, Preferences: language/timezone/number format/date format, Workflow: notifications/delegation, Usage data, Account)	SysUserSetup (UserOptions)		COVERED-5	5	
Workflow delegation (My delegations: all/by workflow/by module, date ranges)	WorkflowDelegation		COVERED-4	4	
Timesheets (Home → Timesheets, link)	TSTimesheetTable		PARTIAL-41 (timesheets)	41	
Expense reports (Home → Expense reports, link)	TrvExpTable		COVERED-43	43	
Purchase requisitions (Home → My requisitions, link)	PurchReqTable		COVERED-17	17	
Employee self-service pages (My information, My team)	EP ESS		COVERED-42	42	
Reports (Home → Common reports / My reports)			COVERED-46	46	
Global search / Record search	SysSearch		COVERED-5	5	
Favorites / Navigation personalization	SysFavorites		COVERED-5	5	Personalization
Document handling on any record	DocuView		PARTIAL-5 (document management)	5	
Copilot / Ask-the-data (Passage)			COVERED-47	47	
Job monitor / My batch jobs (Passage)			COVERED-4	4	

12.31.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Workflow history (per document) / Workflow tracking details		COVERED-4	4	
Work item inquiries (Work items by user/queue/status, overdue work items)		COVERED-4	4	
Delegation inquiry		COVERED-4	4	
Role center KPIs (SSAS cube KPIs per role)		COVERED-46	46	Governed metrics
Cue counts inquiry		COVERED-5	5	
Alert inquiry (alerts by rule/user)		GAP	—	Propose wave 5: alerts and notification rules
Activity inquiries		OUT-OF-SCOPE (CRM non-goal)	—	
Questionnaire statistics / Results analysis		GAP	—	Propose wave 42: questionnaire engine
SSRS: Workflow history report / Workflow performance		COVERED-4	4	
SSRS: Work items report		COVERED-4	4	
SSRS: My reports (user-specific report list)		COVERED-46	46	
SSRS: Questionnaire reports (link)		GAP	—	Propose wave 42: questionnaire engine

12.31.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Workflow → Due date escalation / Reminders (batch)		COVERED-4	4	SLA timers
Workflow → Work item queue reassignment (batch)		COVERED-4	4	
Alerts → Process change-based alerts / Due-date alerts		GAP	—	Propose wave 5: alerts and notification rules
Role center → Refresh cues / Refresh KPIs (cube processing)		COVERED-46	46	
Questionnaires → Schedule questionnaires (batch)		GAP	—	Propose wave 42: questionnaire engine
Notifications → Clean up / Expire notifications		COVERED-5	5	
Personalization → Publish saved views to roles (D365)		COVERED-5	5	
Copilot → Agent runs (suggest mode) (Passage)		COVERED-47	47	

12.31.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Role center setup → User profiles / Profile defaults / Role center page assignment (EP)		SUPERSEDED (workspaces per role, wave 5)	5	

Name	Key parameters / options	Passage status	Wave	Notes
Role center → Cues setup (create cue from filter, cue groups) / KPI setup (KPI parts, cube perspectives)		COVERED-5	5	KPIs 46
Workflow → Workflow configurations (link) / Workflow parameters / Workflow participants / Delegation settings		COVERED-4	4	
Workflow → Work item queues / Queue groups / Queue assignment rules		COVERED-4	4	
Workflow → Notification settings (email, in-app, digest) / Workflow email templates		PARTIAL-4 (email templates/SMTP outbound)	4	
Alerts → Alert rules (create alert rule on field/record: changes to, due date; subject/message; recipients; organization-wide) / Alert rule templates		GAP	—	Propose wave 5: alerts and notification rules
My user options → Language, Timezone, Number/date formats, Default company, Status bar, Workflow notifications, Delegation, Email, Usage data, Accessibility (D365 enhanced tab sequence)		COVERED-5	5	WCAG 2.1 AA
Questionnaires → Questionnaire setup (link)		GAP	—	Propose wave 42: questionnaire engine
Activities → Activity setup (link, CRM)		OUT-OF-SCOPE (CRM non-goal)	—	
Cases → Case setup (link)		PARTIAL-45 (generic case management)	45	
Favorites / Navigation → Navigation pane customization, Personalization (form personalization, saved views, workspace tiles)		COVERED-5	5	
Global search → Search configuration (searchable tables/fields)		COVERED-5	5	
Home → Keyboard shortcuts / Accessibility settings (Passage)		COVERED-5	5	Keyboard-first
Home → Copilot settings (opt-in, data scope) (Passage)		COVERED-47	47	
Home → Mobile workspace configuration (D365 mobile app)		SUPERSEDED (PWA shell)	5	
Home → Dashboard/tile configuration per workspace (D365 workspace tiles, Power BI embed)		COVERED-46	46	

12.32 Data import/export framework

DIXF (AX 2012 R3) / Data management framework (D365): source data formats, processing groups, entities (target entities, custom entity wizard), staging, execution history, compare, copy between companies, recurring integrations. Maps to wave 10 (migration framework) and wave 35 (recurring integrations), with Excel in wave 5.

12.32.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Processing groups (list) / Processing group details	DMFDefinitionGroup	Group of entities with source format, mapping, sequence	COVERED-10	10	Migration pipeline: extract/stage/map/validate/load
Processing group → Entities (select entities, source format, sample file, generate mapping, modify mapping, validate)	DMFDefinitionGroupEntity		COVERED-10	10	Declarative mapping DSL
Processing group → Get staging data (source → staging)	DMFStagingWriter		COVERED-10	10	Postgres staging schema
Processing group → Copy data to target (staging → target)	DMFStagingTarget		COVERED-10	10	
Processing group → Preview source data / Validate	DMFPreview		COVERED-10	10	
Staging data (view/edit staging records, errors)	DMFStaging* (per entity)	Review and correct before load	COVERED-10	10	Exception queue with re-run
Execution history (jobs, status, errors, logs)	DMFExecution		COVERED-10	10	Migration run ledger with lineage
Target entities (entity list: Customers, Vendors, Products, BOM, Routes, Open transactions, Fixed assets, GL balances, Budget, Projects, HR, etc. ~150 entities in R3)	DMFEntity		COVERED-10	10	AX connectors for master data in 10; transactional packs in 49
Custom entity wizard (create entity from table)	DMFEntityWizard		COVERED-3	3	Any metadata entity is importable (generated)
Entity structure / Entity attributes (field metadata)	DMFEntityAttribute		COVERED-3	3	
Compare data (source vs target)	DMFCompareData		COVERED-10	10	Reconciliation: counts, hashes, sampled compare
Copy entity data between companies	DMFCopyEntity		COVERED-10	10	
Data import/export → Export (to file by processing group)	DMFExport		COVERED-5	5	Excel/CSV export of any entity
D365 Data management workspace (Import/Export projects, Data packages, Templates, Job history, Recurring data jobs, Entity list, Configure entity export to database (BYOD))	DMFDataManagement		COVERED-10	10	BYOD superseded by lakehouse 46
D365 → Recurring data jobs (enqueue/dequeue APIs)	DMFRecurringJob		COVERED-35	35	Integration hub; Kafka
D365 → Data package (zip with manifest) / LCS asset library			COVERED-10	10	Migration packs
D365 → Entity dependencies / Sequencing / Data templates (default templates)			COVERED-10	10	
D365 → Configuration data projects (copy config across environments)			COVERED-10	10	Also GitOps config
DIXF → Source → Staging via SSIS (service on AOS)	DMFService		SUPERSEDED (pipeline service in Go/Python, no SSIS)	10	

12.32.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Execution history / Job status inquiry		COVERED-10	10	
Staging data inquiry (errors by entity)		COVERED-10	10	

Name	Purpose	Passage status	Wave	Notes
Compare data results		COVERED-10	10	
Entity mapping inquiry (field mapping per entity)		COVERED-10	10	
Recurring job status / Message status (D365)		COVERED-35	35	Message monitor
SSRS: Processing group report / Entity list		COVERED-10	10	
SSRS: Execution log / Error log report		COVERED-10	10	
Reconciliation report (row counts, hash totals, sampled field compare) (Passage)		COVERED-10	10	

12.32.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Run processing group (batch: get staging, copy to target)		COVERED-10	10	
Clean up staging tables / Execution history		COVERED-10	10	
Recurring import/export jobs (D365 scheduling)		COVERED-35	35	
Entity store refresh (D365 BYOD/entity store)		SUPERSEDED (CDC → lakehouse wave 46)	46	
Dry-run / Idempotent re-run (Passage)		COVERED-10	10	
Parallel-run replay (Passage migration factory)		COVERED-49	49	

12.32.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Data import/export framework parameters (shared working directory, SSIS service, entity settings, source formats defaults)		COVERED-10	10	
Source data formats (file: CSV/XML/Excel/fixed width; ODBC; AX) with code page, delimiters, headers		COVERED-10	10	Extract: ODBC from AX SQL, SAP RFC/OData, flat files
Target entities setup (entity structure, staging table, query, validation class)		COVERED-3	3	Metadata-generated
Entity mapping defaults / Default values / Conversion (enum mapping, number sequence generation)		COVERED-10	10	Mapping DSL: coercion, enum mapping, default fill
Processing group sequencing / Entity dependencies		COVERED-10	10	
DIXF service configuration (AOS service)		SUPERSEDED (K8s pipeline service)	10	
D365 → Data management parameters (entity settings, performance: parallel threads, set-based processing, skip staging)		COVERED-10	10	
D365 → Data management: Entity export to database (BYOD) configuration		SUPERSEDED (lakehouse 46)	46	
D365 → Recurring integration endpoints / Integration keys		COVERED-35	35	
D365 → Data templates / Default templates per module		COVERED-10	10	
Passage → Legacy connectors (AX 2012/D365 F&O, SAP ECC/S4) configuration		COVERED-10	10	
Passage → Great Expectations validation suites		COVERED-10	10	
Passage → Migration run ledger / Lineage		COVERED-10	10	

12.33 Electronic reporting / Regulatory Configuration Service (D365)

ER (D365; backported to AX 2012 R3 CU13 partially): configurations (models, model mappings, formats), configuration providers, repositories (LCS, RCS, Dataverse, file system, global repo), destinations, ER parameters, business document management, electronic messages, Globalization Studio (tax calculation service, e-invoicing service). Passage: wave 48 (ER designer, localization framework), wave 35 (e-invoicing, Peppol), wave 13 (tax calculation), wave 46 (business documents).

12.33.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Electronic reporting workspace / Configurations (tree: data model, model mapping, format, metadata)	ERWorkspace, ERSolutionTable	Design and manage configurations	COVERED-48	48	ER designer: configurable XML/JSON/CSV with versioning
Configuration → Model designer (data model)	ERModelDesigner		COVERED-48	48	
Configuration → Model mapping designer (data sources: tables, entities, calculated fields, parameters)	ERModelMappingDesigner		COVERED-48	48	Over metadata entities
Configuration → Format designer (XML/JSON/text/Excel/Word output, bindings, formulas)	ERFormatDesigner		COVERED-48	48	Excel/Word output via wave 46 designer
Configuration → Versions (draft/completed/shared/discontinued), Import/Export (XML), Rebase	ERSolutionVersionTable		COVERED-48	48	Versioning
Configuration providers / Active provider	ERVendorTable		COVERED-48	48	
Repositories (LCS asset library, RCS, Dataverse, File system, Global repository, Operations resources)	ERRepository*	Fetch Microsoft-published configurations	SUPERSEDED (Passage country packs ship with Helm/packs; registry of regulator mandates wave 48)	48	
ER jobs (Electronic reporting jobs: run history, output files)	ERFormatMappingRunJobTable		COVERED-48	48	
ER destinations (per format: file, email, print, archive (document management), screen, Power BI, SharePoint)	ERFormatDestinationTable		COVERED-48	48	Archive depends on document management PARTIAL-5

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Business document management (Word/Excel templates for business documents, editable by users; template versions)	ERBusinessDocumentManagement		COVERED-46	46	Operational report designer
Electronic messages (Electronic messaging framework: message types, message items, processing actions, additional fields; used for VAT returns, SAF-T, UK MTD, IT e-invoice SDI, etc.)	EMElectronicMessage*, EMMessageProcessing	Statutory message lifecycle (generate, send, receive response)	PARTIAL-48 (electronic messaging lifecycle (statutory submission with response tracking, e.g. UK MTD, DE/FR mandates) not named; e-invoicing in 35 covers Peppol/SDI/CFDI submissions)	48	Gap register
Globalization Studio → Tax calculation service (D365 Tax Calculation: tax configurations, tax feature setup, tax applicability rules, tax codes designer)	TaxCalculationService	Configurable tax determination	COVERED-13	13	Internal rules engine default + provider adapters
Globalization Studio → Electronic invoicing service (Invoicing service: submissions, processing pipelines, customization)	EInvoiceService*	Cloud e-invoicing	COVERED-35	35	Peppol access point, SDI/CFDI hooks
Globalization Studio → Globalization features / Feature setup (per country)			COVERED-48	48	Country packs
Regulatory Configuration Service (RCS: standalone config editing, Globalization feature management)	RCS portal		SUPERSEDED (ER designer in-product wave 48; configs in Git-backed packs)	48	
ER → Data model/format parameters (application-specific parameters: lookup tables maintained by users, e.g. VAT box mapping)	ERFormatMappingParameters		COVERED-48	48	
ER → Format mapping run (run report manually with parameters)	ERFormatMappingRun		COVERED-48	48	
ER → Configuration dependencies / Model-to-format links			COVERED-48	48	

12.33.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
ER jobs history / Output archive inquiry		COVERED-48	48	
Configuration version history / Dependency inquiry		COVERED-48	48	
Electronic messages inquiry (status, responses, errors)		PARTIAL-48 (electronic messaging)	48	
E-invoicing submission log (D365 invoicing service)		COVERED-35	35	
Tax calculation service logs		COVERED-13	13	
Business document template usage inquiry		COVERED-46	46	
ER → Configuration comparison (diff versions)		COVERED-48	48	
ER → Format validation report (schema validation)		COVERED-48	48	Regulator schema fixtures
Statutory reports catalog per country (Passage)		COVERED-48	48	

12.33.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Run ER format in batch (scheduled statutory reports)		COVERED-48	48	
Import configurations from repository (update to latest versions)		SUPERSEDED (pack updates via Helm/GitOps wave 48)	48	
Electronic messages → Generate / Send / Receive response (batch processing actions)		PARTIAL-48 (electronic messaging)	48	
E-invoicing → Submit documents / Poll status (batch)		COVERED-35	35	
ER → Clean up job history / Archived outputs		COVERED-48	48	
Business document management → Publish templates		COVERED-46	46	
Tax calculation service → Sync configurations		COVERED-13	13	
Regulatory mandates registry refresh (Passage)		COVERED-48	48	

12.33.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Electronic reporting parameters (attachments document types for job archive/baseline/others, LCS/RCS connection, Dataverse)		COVERED-48	48	
Configuration providers (own provider for custom configs)		COVERED-48	48	
Repositories (LCS, RCS, Global repo, file system, Dataverse)		SUPERSEDED (Git-backed packs)	48	
ER destinations per format component (file/email/print/archive/screen/Power BI) + Electronic reporting destination parameters		COVERED-48	48	
ER → Application-specific parameters setup (per format version)		COVERED-48	48	
ER → Format mapping assignment to business processes (e.g. payment formats on method of payment, invoice formats in print management, customer/vendor statements)		COVERED-48	48	Payment formats 19; print 46
Business document management → Parameters (SharePoint/OneDrive for template editing), Template access by role		COVERED-46	46	
Electronic messages → Message types, Message item types, Message statuses, Processing actions (ER export/import, web service call, user input), Additional fields, Executable classes, Web service settings (endpoint, certificates), Message processing		PARTIAL-48 (electronic messaging)	48	
Globalization Studio → Tax calculation parameters (connection, feature per LE), Tax features (versions), Tax applicability (customer/vendor/item tax groups by rules)		COVERED-13	13	
Globalization Studio → Electronic invoicing parameters (invoicing service connection, feature per LE, processing pipelines, submission channels), E-invoicing document types		COVERED-35	35	
Globalization Studio → Globalization feature setup per legal entity		COVERED-48	48	
RCS → Globalization feature management (standalone)		SUPERSEDED (in-product)	48	

Name	Key parameters / options	Passage status	Wave	Notes
ER → Key vault certificates for signing (XAdES)		COVERED-36	36	Vault; signing in 35/48
ER → Configuration localization (labels per language)		COVERED-48	48	
Passage → Country pack registry (US, UK, DE, FR, IN, MX, CA) with regulator schema fixtures		COVERED-48	48	
Passage → Regulator mandate registry (effective dates, versions)		COVERED-48	48	

12.34 Engineering change management (D365)

D365 ECM: engineering products, engineering categories/attributes, engineering versions, product readiness, engineering change requests/orders with impact analysis, release to legal entities, product lifecycle states. Passage wave 9 covers ECR/ECO workflow, impact analysis (where-used), versions and release to production; engineering organization/release policies and readiness checks are partial.

12.34.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Engineering products (list) / Engineering product details	EngChgEngineeringProduct	Version-tracked products owned by engineering org	COVERED-9	9	
Engineering versions (version per product with BOM/route/attributes, effective dates, active)	EngChgEcoResProductVersion		COVERED-9	9	Effective-dated versions
Engineering change requests (list) / details	EngChgEngineeringChangeRequest	Request with impacted products, severity, workflow	COVERED-9	9	
Engineering change orders (list) / details	EngChgEngineeringChangeOrder	Order with product changes (BOM, route, attributes, new version), impact analysis, approval, processing	COVERED-9	9	ECO workflow with impact analysis
Engineering change order → Impact analysis (where-used, open orders, on-hand, planned orders)	EngChgImpactAnalysis		COVERED-9	9	Where-used; open order impact should be verified against 21/22
Engineering change order → Process changes (apply to products, create version)	EngChgProcessChange		COVERED-9	9	
Release product structure (release engineering product + BOM/route to legal entities)	EngChgReleaseProductStructure	Release to operational LEs with policies	PARTIAL-9 (engineering organization vs operational legal entity split, and release product structure to legal entities with per-LE release policies, not named)	9	Gap register
Product readiness checks (per LE checklist before product is usable)	EngChgProductReadiness		PARTIAL-9 (product readiness)	9	
Product acceptance (accept released product in receiving LE)	EngChgProductAcceptance		PARTIAL-9 (release product structure)	9	
Product lifecycle states (per version, controlling process enablement)	EcoResProductLifecycleState		PARTIAL-8 (lifecycle states)	8	
Engineering attributes / Attribute search (engineering attribute values per version)	EngChgEngineeringAttribute		COVERED-8	8	Attributes & classification
Engineering product categories (category assigns version nomenclature, attributes, readiness policy)	EngChgEngineeringProductCategory		PARTIAL-9 (engineering product categories with version nomenclature not named; category hierarchies are)	9	Gap register
Engineering change → Open order impact (sales/purchase/production orders referencing superseded version)			COVERED-9	9	
Engineering → Document/drawing attachments per version	DocuRef (version)		COVERED-9	9	
Engineering → Product change cases (AX 2012 R3 case management for product changes)	CaseDetail (product change)		COVERED-9	9	
Engineering → PLM integration (D365 Teamcenter/Windchill connectors via Dataverse)			PARTIAL-35 (PLM connector not named among iPaaS reference connectors)	35	Gap register

12.34.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Engineering version inquiry / Version comparison (BOM diff between versions)		COVERED-9	9	
Where-used inquiry (across versions)		COVERED-9	9	
Change request/order inquiries (by status, product, severity)		COVERED-9	9	
Impact analysis report		COVERED-9	9	
Release status inquiry (product × legal entity)		PARTIAL-9 (release product structure)	9	
Readiness check status inquiry		PARTIAL-9 (product readiness)	9	
SSRS: Engineering change order (document) / Change request		COVERED-9	9	
SSRS: Engineering version list / BOM comparison		COVERED-9	9	
SSRS: Product release report		PARTIAL-9 (release product structure)	9	

12.34.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Process engineering change orders (batch apply)		COVERED-9	9	
Release product structures (batch release to LEs)		PARTIAL-9 (release product structure)	9	
Expire old versions / Activate versions by effective date		COVERED-9	9	
Readiness check evaluation (batch)		PARTIAL-9 (product readiness)	9	
Engineering → Sync with PLM (batch)		PARTIAL-35 (PLM connector)	35	
Engineering → Update open orders to new version (mass)		COVERED-9	9	

12.34.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Engineering change management parameters (engineering organization, default severity, change order defaults, version activation, number sequences)		COVERED-9	9	
Engineering organizations (which LE owns engineering data)		PARTIAL-9 (release product structure)	9	
Engineering product categories (version nomenclature, attributes, readiness policy, release policy)		PARTIAL-9 (engineering product categories)	9	
Version nomenclature (number/letter/date segments)		PARTIAL-9 (engineering product categories)	9	
Product readiness policies / Readiness checks (per-LE checklists: tax, prices, coverage, warehouse setup)		PARTIAL-9 (product readiness)	9	
Product release policies (what to copy to receiving LE: BOM, route, prices, default order settings)		PARTIAL-9 (release product structure)	9	
Engineering attributes / Attribute types / Attribute search setup		COVERED-8	8	
Product lifecycle states (enabled business processes per state, default states)		PARTIAL-8 (lifecycle states)	8	
Change severity / Change priority / Change categories / Change reasons		COVERED-9	9	
Impact analysis configuration (which documents to scan)		COVERED-9	9	
ECM workflows (change request, change order approval)		COVERED-4	4	
Engineering → Number sequences (versions, change orders)		COVERED-5	5	
Engineering → PLM connector configuration		PARTIAL-35 (PLM connector)	35	

12.35 Asset management (D365)

D365 Asset management (EAM): functional locations, assets, asset types/lifecycle, maintenance plans/rounds/sequences, job types, checklists, maintenance requests, work orders with scheduling and journals, counters, fault management, condition assessment, warranties, costing and KPIs. Maps to wave 44.

12.35.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Assets (list) / Asset details (type, lifecycle state, functional location, model/manufacturer, attributes, BOM/spare parts, counters, warranties, documents)	EntAssetObjectTable		COVERED-44	44	
Functional locations (hierarchy, types, lifecycle)	EntAssetFunctionalLocation		COVERED-44	44	
Asset lifecycle state changes / Asset history (installation, transfers)	EntAssetObjectLifecycleState		COVERED-44	44	
Maintenance plans (time-based, counter-based, condition) / Maintenance plan lines	EntAssetMaintenancePlan		COVERED-44	44	
Maintenance rounds (route of assets inspected together)	EntAssetMaintenanceRound		PARTIAL-44 (maintenance rounds (multi-asset inspection routes) not named)	44	Gap register
Maintenance sequences (ordered job types on an asset)	EntAssetMaintenanceSequence		PARTIAL-44 (maintenance sequences not named)	44	Gap register
Maintenance requests (list) / details (request types, convert to work order)	EntAssetMaintenanceRequest		COVERED-44	44	IoT-triggered requests
Work orders (list) / details (lines per asset/job type, lifecycle state, scheduled, workers, checklist, tools, items, hours, expenses, project)	EntAssetWorkOrderTable		COVERED-44	44	
Work order → Schedule (scheduling of workers/capacity; work order pools; dispatch)	EntAssetWorkOrderSchedule		COVERED-44	44	Scheduling against resources wave 23
Work order → Journals (hours, items, expenses) and posting to project/GL	EntAssetWorkOrderJournal		COVERED-44	44	Costs → asset and GL
Work order → Checklists / Checklist results	EntAssetWorkOrderChecklist		COVERED-44	44	
Work order → Fault registration (symptoms, causes, remedies)	EntAssetFault		PARTIAL-44 (fault designer: symptom/area/type/cause/remedy taxonomy and fault analysis not named)	44	Gap register
Work order → Downtime registration (maintenance downtime affecting production resource)	EntAssetMaintenanceDowntime		COVERED-44	44	Downtime → scheduling capacity
Work order → Tools (resources booked)	EntAssetWorkOrderTool		COVERED-44	44	
Work order → Project / Cost control (work order cost, budget)	EntAssetWorkOrderProject		COVERED-44	44	
Counters (asset counters, counter registrations) / Measurements	EntAssetCounter		COVERED-44	44	Counters and measurement points
Condition assessment (records per asset)	EntAssetConditionAssessment		COVERED-44	44	Condition monitoring
Asset BOM / Spare parts (parts per asset with where-used)	EntAssetObjectBOM		COVERED-44	44	
Warranties (vendor warranty per asset, warranty check on work orders)	EntAssetWarranty		PARTIAL-44 (asset warranties (vendor warranty terms, warranty check on work order) not named)	44	Gap register

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Maintenance budgets (asset/functional location budget lines, budget calculation from plans)	EntAssetMaintenanceBudget		PARTIAL-44 (maintenance budgeting from plans not named)	44	Gap register
Asset insurance / Asset attributes			COVERED-44	44	Attributes via wave 8 framework
Maintenance workers / Worker groups / Worker skills (technicians)	EntAssetWorker		COVERED-44	44	
Maintenance planning workspace / Asset management workspace			COVERED-44	44	
Mobile maintenance (D365 Asset management mobile workspace)			COVERED-44	44	PWA
Asset → IoT sensors / Sensor Data Intelligence (asset condition from IoT)			COVERED-25	25	IoT ingestion; thresholds in 44
Asset → Link to fixed asset (financial asset)	EntAssetObjectFixedAsset		COVERED-37	37	
Asset → Link to production resource (machine)	EntAssetObjectResource		COVERED-44	44	

12.35.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Work order inquiries (by state, asset, worker, overdue)		COVERED-44	44	
Maintenance request inquiries		COVERED-44	44	
Asset cost inquiry (cost per asset/functional location: hours, items, expenses, by period)		COVERED-44	44	
Asset KPIs (MTBF, MTTR, availability, cost per asset, downtime)		COVERED-44	44	
Fault analysis (fault statistics by symptom/cause)		PARTIAL-44 (fault designer)	44	
Counter history / Condition trends		COVERED-44	44	
Maintenance plan forecast (upcoming work by plan)		COVERED-44	44	
Warranty inquiry		PARTIAL-44 (warranties)	44	
Budget vs actual (maintenance)		PARTIAL-44 (maintenance budgets)	44	
SSRS: Work order (document) / Work order report / Work order pick list / Checklist		COVERED-44	44	
SSRS: Maintenance plan report / Forecast		COVERED-44	44	
SSRS: Asset list / Functional location list / Asset hierarchy		COVERED-44	44	
SSRS: Asset cost report / Cost control		COVERED-44	44	
SSRS: Fault report		PARTIAL-44 (fault designer)	44	
SSRS: Downtime report		COVERED-44	44	
SSRS: Asset KPI report		COVERED-44	44	
SSRS: Spare parts where-used		COVERED-44	44	

12.35.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Schedule maintenance plans (generate work orders from time/counter/condition plans)		COVERED-44	44	Plan fixtures
Schedule maintenance rounds / Maintenance sequences		PARTIAL-44 (maintenance rounds)	44	
Work order scheduling (auto-schedule, capacity)		COVERED-44	44	
Counter updates (import from IoT/production)		COVERED-44	44	
Condition threshold evaluation (IoT)		COVERED-44	44	
Post work order journals (batch)		COVERED-44	44	
Maintenance budget calculation		PARTIAL-44 (maintenance budgets)	44	
Asset KPI calculation (batch)		COVERED-44	44	
Close work orders / Update lifecycle states (batch)		COVERED-44	44	
Mobile sync		COVERED-44	44	

12.35.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Asset management parameters (work order defaults, journal names, project integration, scheduling, number sequences, mobile)		COVERED-44	44	
Assets → Asset types, Asset type defaults (job types, counters, attributes, checklists), Asset lifecycle models/states, Asset models, Manufacturers, Asset attribute types, Asset criticality, Asset service levels		COVERED-44	44	
Functional locations → Functional location types, Lifecycle models/states, Attributes		COVERED-44	44	
Maintenance jobs → Maintenance job types, Job type categories, Job type variants, Trades, Job type defaults (hours, items, checklists, tools), Checklist templates/variables		COVERED-44	44	
Maintenance plans → Plan types, Plan line defaults, Maintenance rounds setup, Maintenance sequences setup		PARTIAL-44 (maintenance rounds)	44	
Work orders → Work order types, Work order lifecycle models/states, Work order pools, Work order priorities, Service levels, Work order projects (project groups/categories), Scheduling parameters (workers, capacity, preferred workers)		COVERED-44	44	
Maintenance requests → Request types, Request lifecycle states, Request-to-work-order defaults		COVERED-44	44	
Workers → Maintenance workers, Worker groups, Skills, Worker calendars		COVERED-44	44	
Counters → Counter types, Counter units		COVERED-44	44	
Fault → Fault symptoms, Fault areas, Fault types, Fault causes, Fault remedies, Fault designer (per asset type)		PARTIAL-44 (fault designer)	44	

Name	Key parameters / options	Passage status	Wave	Notes
Condition assessment → Condition assessment templates		COVERED-44	44	
Warranties → Warranty types, Vendor warranty setup		PARTIAL-44 (warranties)	44	
Budget → Maintenance budget parameters		PARTIAL-44 (maintenance budgets)	44	
Cost control → Cost types, Asset cost posting (project categories/GL)		COVERED-44	44	
Downtime → Downtime reasons, Capacity impact on production resources		COVERED-44	44	
IoT → Sensor scenarios, Thresholds, Notification rules		COVERED-25	25	
Mobile → Mobile workspace configuration		COVERED-44	44	
Workflow → Asset management workflows (request approval, work order approval)		COVERED-4	4	
Number sequences (assets, work orders, requests)		COVERED-5	5	

12.36 Rebate management (D365)

D365 Rebate management (2020+): deals (customer or vendor), deal lines with tiers, transaction accruals, deal statuses, provisions, rebate posting via journals, claims. Passage: customer rebates in waves 26 (agreements/accrual) and 30 (settlement); vendor-side deals are a gap (proposed wave 26).

12.36.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Rebate management deals (list) / Deal details (customer/vendor, products, tiers, dates, calculation basis, posting)	RebateManagementDeal		COVERED-26	26	Customer deals; vendor deals GAP
Deal → Vendor deals (purchase rebates)	RebateManagementDeal (vendor)		GAP	—	Propose wave 26: vendor rebates
Deal lines / Tiers (amount/quantity break, percentage/amount/price)	RebateManagementDealLine		COVERED-26	26	
Rebate management transactions (accrued per invoice line)	RebateManagementTransaction		COVERED-26	26	
Provisions (accrual journal) / Reversal of provisions	RebateManagementProvision		COVERED-26	26	Accrual postings
Process rebates (create claims: credit note, AP invoice, customer payment journal line)	RebateManagementProcess		COVERED-30	30	Rebate settlement
Deal status (draft, active, closed, cancelled) / Deal approval workflow			COVERED-26	26	
Deal → Price-based deals (royalty-type)			GAP	—	Propose wave 26: royalty agreements
Rebate management workspace			COVERED-26	26	

12.36.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Rebate transactions inquiry (by deal/customer/period)		COVERED-26	26	
Provision balance inquiry (accrued vs settled)		COVERED-30	30	
Deal performance (achieved tier, projected rebate)		COVERED-26	26	
Vendor deal inquiries		GAP	—	Propose wave 26: vendor rebates
SSRS: Rebate deal (document) / Rebate statement to customer		COVERED-30	30	
SSRS: Rebate accrual report		COVERED-26	26	
SSRS: Vendor rebate claim		GAP	—	Propose wave 26: vendor rebates

12.36.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Generate rebate transactions (from posted invoices)		COVERED-26	26	
Post provisions (accruals) / Reverse provisions		COVERED-26	26	
Process rebates (claims) / Settle		COVERED-30	30	
Close/expire deals		COVERED-26	26	
Vendor rebate claims processing		GAP	—	Propose wave 26: vendor rebates

12.36.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Rebate management parameters (journal names, posting profiles, default calculation, workflow, number sequences)		COVERED-26	26	
Rebate management posting profiles (accrual/expense accounts)		COVERED-26	26	
Deal types / Rebate reduction principles / Calculation methods (per unit, percentage, fixed)		COVERED-26	26	
Rebate groups (customer rebate groups, item rebate groups)		COVERED-26	26	
Vendor deal setup (claim via AP)		GAP	—	Propose wave 26: vendor rebates
Workflow → Deal approval		COVERED-4	4	
Number sequences (deals)		COVERED-5	5	

12.37 Subscription billing (D365)

D365 Subscription billing (2021+): Recurring contract billing (billing schedules, groups, escalation, milestones, unbilled revenue), Revenue and expense deferrals (deferral schedules, templates, recognition), Multiple element revenue allocation (MEA templates, standalone selling prices). Maps to wave 29.

12.37.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Billing schedules (list) / Billing schedule details (lines, frequency, start/end, escalation, milestones, pricing, deferral)	RCB BillingSchedule	Recurring contract billing	COVERED-29	29	Subscription billing: recurring schedules, proration, usage
Billing schedule → Generate invoices (free text / sales order)	RCB GenerateInvoice		COVERED-29	29	
Billing schedule → Escalation/de-escalation (price changes by period)	RCB Escalation		COVERED-29	29	
Billing schedule → Milestone billing (milestone templates)	RCB Milestone		COVERED-29	29	
Billing schedule → Usage-based billing (consumption import)	RCB Usage		COVERED-29	29	
Billing schedule → Renewal / Termination / Put on hold / Credit (prorated)			COVERED-29	29	
Unbilled revenue (unbilled revenue schedules, invoiced-in-advance)	RCB UnbilledRevenue		COVERED-29	29	Deferred revenue postings
Deferral schedules (list) / details (revenue and expense deferrals, short-term/long-term split)	RED DeferralSchedule		PARTIAL-29 (expense deferrals (prepaid expense amortization from AP invoices) not named; revenue deferrals are)	29	Gap register
Deferral → Recognition processing (recognize period amounts, generate journal)	RED Recognition		COVERED-29	29	
Deferral → Deferral templates / Straight-line vs event-based	RED Template		COVERED-29	29	
Multiple element revenue allocation (MEA) → MEA templates, SSP allocation, allocation on sales order/billing schedule	MEA*		COVERED-29	29	SSP allocation, ASC 606 bundles
Contract renewal workspace / Subscription billing workspace			COVERED-29	29	
Billing schedule → Customer portal self-service (view subscriptions)			COVERED-30	30	

12.37.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Billing schedule inquiries (upcoming invoices, renewals due, MRR/ARR)		COVERED-29	29	
Unbilled revenue inquiry / Deferred revenue roll-forward		COVERED-29	29	Reconciles to GL
Deferral schedule inquiry (balance by period, short/long-term)		COVERED-29	29	Expense deferral PARTIAL
MEA allocation inquiry		COVERED-29	29	
SSRS: Billing schedule (document) / Invoice preview		COVERED-29	29	
SSRS: Deferred revenue report / Revenue waterfall		COVERED-29	29	
SSRS: Unbilled revenue report		COVERED-29	29	
SSRS: Subscription metrics (MRR, churn)		COVERED-46	46	

12.37.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Generate invoices from billing schedules (batch by date)		COVERED-29	29	
Recognition processing (deferral recognition batch)		COVERED-29	29	
Short-term/long-term reclassification (batch)		COVERED-29	29	
Escalation processing (price updates)		COVERED-29	29	
Usage import (batch)		COVERED-29	29	
Renewal processing / Expire schedules		COVERED-29	29	
Unbilled revenue posting (batch)		COVERED-29	29	
Expense deferral recognition		PARTIAL-29 (expense deferrals)	29	

12.37.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Recurring contract billing parameters (invoice type, proration method, number sequences, posting)		COVERED-29	29	
Billing schedule groups / Billing frequencies / Item billing types / Escalation types / Milestone templates / Termination reasons / Renewal settings		COVERED-29	29	
Revenue and expense deferrals parameters (posting, short/long-term accounts, recognition method)		COVERED-29	29	Expense PARTIAL
Deferral templates / Deferral defaults (per item/customer/account) / Deferral item groups / Event-based deferral events		COVERED-29	29	
MEA parameters / MEA templates / Standalone selling prices (by item/customer group, date-effective) / Allocation methods (relative SSP, residual)		COVERED-29	29	

Name	Key parameters / options	Passage status	Wave	Notes
Workflow → Billing schedule approval		COVERED-4	4	
Number sequences		COVERED-5	5	

12.38 Revenue recognition (D365)

D365 Revenue recognition (2019–2023, now deprecated in favor of Subscription billing): revenue schedules, revenue prices (SSP), bundles, revenue recognition journals, reallocation, expected revenue. Maps to wave 29.

12.38.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Revenue schedules (per sales order line: schedule lines by period, status, hold)	RevRecSchedule		COVERED-29	29	Schedules (ratable, milestone, usage)
Revenue recognition journal (recognize scheduled revenue, post)	RevRecJournal (LedgerJournalTable)		COVERED-29	29	
Revenue price allocation (on sales order: allocate per SSP across lines/bundles)	RevRecAllocation		COVERED-29	29	
Expected revenue / Expected revenue schedule (before invoicing)	RevRecExpectedRevenue		COVERED-29	29	
Bundles (bundle items with components for allocation)	RevRecBundle		COVERED-29	29	Bundles
Reallocation (after order change, re-run allocation)	RevRecReallocation		COVERED-29	29	
Revenue recognition → Contract (contract terms per order)	RevRecContract		COVERED-29	29	
Revenue recognition workspace			COVERED-29	29	

12.38.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Revenue schedule inquiry (deferred/recognized by period)		COVERED-29	29	
Allocation details inquiry		COVERED-29	29	
Deferred revenue roll-forward		COVERED-29	29	
SSRS: Revenue recognition report / Revenue schedule report		COVERED-29	29	
SSRS: Deferred revenue by customer		COVERED-29	29	

12.38.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Create revenue recognition journal (batch)		COVERED-29	29	
Post revenue recognition journal		COVERED-29	29	
Reallocation processing		COVERED-29	29	
Update expected revenue		COVERED-29	29	

12.38.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Revenue recognition parameters (journal names, deferred revenue accounts, recognition basis, bundle handling)		COVERED-29	29	
Revenue schedules (schedule templates: occurrences, frequency, recognition basis: contract start/invoice date, milestone)		COVERED-29	29	
Revenue prices (SSP by item/customer/currency, allocation %)		COVERED-29	29	
Item groups / Released product → Revenue type (post-contract support, essential, non-essential), Revenue schedule default		COVERED-29	29	
Bundle setup (bundle components)		COVERED-29	29	
Revenue recognition posting (ledger accounts for deferred revenue, contract liability)		COVERED-29	29	
Number sequences		COVERED-5	5	

12.39 Vendor collaboration / customer self-service (D365)

D365 Vendor collaboration (PO confirmation, consignment, invoices, RFQ reply, onboarding/registration), vendor collaboration user provisioning, and customer self-service (Power Pages/portal). Passage: supplier portal (wave 20), customer portal (wave 30).

12.39.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Vendor collaboration workspace (vendor view: POs to confirm, confirmed, rejected)	VendVendorPortalPurchaseOrder		COVERED-20	20	Supplier portal: PO acknowledgement
Vendor → Confirm/reject PO with changes (substitute, split, dates)	VendVendorPortalPurchaseOrderConfirm		COVERED-20	20	
Vendor → Confirm with notes / attachments			COVERED-20	20	
Vendor → Consignment inventory view (on-hand, replenishment orders)	VendVendorPortalConsignment		GAP	—	Propose wave 16: consignment
Vendor → Invoices (submit invoice against PO/receipt; view invoice status)	VendVendorPortalInvoice		COVERED-20	20	
Vendor → RFQ replies (bid via portal)	VendVendorPortalRFQ		COVERED-17	17	
Vendor → ASN submission (D365 vendor shipping notice)			COVERED-20	20	ASN
Vendor → Document exchange / Contacts / Company information maintenance (bank account change requests)			COVERED-20	20	Document exchange; change approval workflow 7

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Vendor → Prospective vendor registration (onboarding wizard, questionnaires)	VendProspectiveVendorRegistration		PARTIAL-20 (vendor onboarding)	20	
Vendor collaboration user provisioning (invite users, roles: vendor admin, vendor user; security per vendor)	VendVendorPortalUserRequest		COVERED-20	20	Keycloak external identities
Vendor → Vendor collaboration: Product receipt visibility / Payment status			COVERED-20	20	Payment advice via portal (wave 19)
Customer self-service (D365 customer portal template: orders, invoices, cases, account)	Customer portal (Power Pages)		COVERED-30	30	Customer portal
Customer portal → Order entry / Order status / Shipment tracking			COVERED-27	27	Portal completed in 30
Customer portal → Invoices and payments (card/ACH)			COVERED-30	30	
Customer portal → Returns request			COVERED-30	30	
Customer portal → Cases / Service requests			COVERED-45	45	
Customer portal → Documents (statements, CoA)			COVERED-30	30	

12.39.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Vendor collaboration inquiries (confirmations pending, response time)		COVERED-20	20	
Portal user activity / provisioning status		COVERED-20	20	
Customer portal usage inquiry		COVERED-30	30	
SSRS: Vendor confirmation performance		COVERED-33	33	Supplier scorecards

12.39.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Send POs to portal / Notify vendors (batch)		COVERED-20	20	
Expire pending confirmations / Escalate		COVERED-20	20	
Provision portal users (batch invite) / Deactivate		COVERED-20	20	
Sync customer portal data		SUPERSEDED (portal reads APIs directly; no sync)	30	

12.39.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Vendor collaboration parameters (PO confirmation required, auto-confirm rules, invoice submission, consignment, onboarding questionnaires)		COVERED-20	20	
Vendor collaboration → Security roles for external users / Vendor collaboration user provisioning workflow		COVERED-2	2	
Vendor collaboration → Procurement: Purchase order change settings for vendor-proposed changes		COVERED-17	17	
Vendor collaboration → Onboarding: Registration wizard configuration, Questionnaires		PARTIAL-20 (vendor onboarding)	20	
Customer self-service → Portal configuration (branding, features, payment adapter)		COVERED-30	30	
Customer self-service → External identity (customer users, B2B invitations)		COVERED-2	2	
Customer self-service → Dual-write/Dataverse dependency (D365 portal uses Dataverse)		SUPERSEDED (portal on Passage APIs)	30	

12.40 Dual-write / Dataverse integration (D365)

D365 Dual-write synchronizes F&SCM tables with Dataverse for Power Platform and Dynamics 365 CE apps (Sales, Field Service, Customer Service). Passage supersedes the entire mechanism with the integration hub: generated APIs, Kafka topics, webhooks, MCP and reference connectors (Salesforce, Shopify, Stripe). Every row is `SUPERSEDED` and points at the replacing wave.

12.40.1 Common / Journals

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Dual-write administration (Data integration → Dual-write: table maps, running/paused status)	DualWriteAdmin	Manage entity maps	SUPERSEDED (integration hub: Kafka topics per entity + webhooks, wave 35)	35	
Table maps (standard maps: customers, vendors, products, orders, invoices, etc.) / Map versions	DualWriteTableMap		SUPERSEDED (AsyncAPI-described topics from entity metadata, wave 4)	4	
Initial sync (initial write) / Catch-up sync	DualWriteInitialSync		SUPERSEDED (replay from Kafka/outbox; migration framework wave 10)	35	
Dual-write → Error log / Alerts	DualWriteErrorLog		SUPERSEDED (message monitor with replay and DLQ, wave 35)	35	
Dual-write → Company (legal entity) mapping to Dataverse business units			SUPERSEDED (tenant/legal entity in API scope)	2	
Dataverse → Virtual entities (F&O virtual tables in Dataverse)			SUPERSEDED (GraphQL/REST APIs, wave 35)	35	
Power Platform integration (Power Apps embed, Power Automate flows, Power BI)			SUPERSEDED (embedded dashboards wave 46; Temporal workflows/agents wave 47; webhooks 35)	46	
Dynamics 365 Sales / Customer Service / Field Service integration via Dual-write			SUPERSEDED (Salesforce/HubSpot connectors wave 35; native service wave 45)	35	CRM non-goal
Business events to Power Automate / Logic Apps			SUPERSEDED (CloudEvents on Kafka + webhooks, wave 4/35)	4	
Data integrator (legacy CDS data integration projects)			SUPERSEDED (integration hub)	35	
Finance and Operations virtual entities / OData endpoints			SUPERSEDED (generated OpenAPI/GraphQL, wave 3/35)	3	

Form	AOT form / menu item	Purpose	Passage status	Wave	Notes
Export to Data Lake (D365 Export to Azure Data Lake / Synapse Link)			SUPERSEDED (CDC → Iceberg lakehouse, wave 46)	46	

12.40.2 Inquiries & Reports

Name	Purpose	Passage status	Wave	Notes
Dual-write sync status inquiry		SUPERSEDED (message monitor wave 35)	35	
Dual-write error inquiry		SUPERSEDED (message monitor/DLQ wave 35)	35	
Dataverse → Entity sync health (Power Platform admin center)		SUPERSEDED (observability wave 5; integration SLAs wave 35)	35	
Synapse Link status		SUPERSEDED (lakehouse freshness metrics wave 46)	46	

12.40.3 Periodic

Name	Purpose	Passage status	Wave	Notes
Initial sync / Resync table maps		SUPERSEDED (replay)	35	
Pause/resume maps (maintenance windows)		SUPERSEDED (consumer pause/resume on Kafka)	35	
Error retry batch		SUPERSEDED (retry with backoff + DLQ)	35	
Export to Data Lake incremental refresh		SUPERSEDED (CDC streaming)	46	

12.40.4 Setup

Name	Key parameters / options	Passage status	Wave	Notes
Dual-write setup (link environment, Dataverse connection, solution install)		SUPERSEDED (integration hub setup: API keys, webhook endpoints, Kafka consumer groups, wave 35)	35	
Table map configuration (field mapping, transforms, filters, direction)		SUPERSEDED (event schemas from metadata; mapping in connectors)	4	
Dual-write → Integration key configuration (alternate keys)		SUPERSEDED (entity natural keys in metadata)	3	
Power Platform environment linkage (LCS)		SUPERSEDED (developer portal wave 35)	35	
Export to Data Lake configuration		SUPERSEDED (lakehouse wave 46)	46	
Dataverse security roles for virtual entities		SUPERSEDED (OPA policies on APIs wave 2)	2	

12.99 Gap register

Every row in §12.1–§12.40 whose status is `GAP` or `PARTIAL` appears here with a proposed wave assignment. `GAP` rows carry their proposal in the Notes column of the source table ("Propose wave NN: …"); `PARTIAL` rows propose the wave shown in their Wave column unless the Notes say otherwise. The register is generated from the tables above by `scripts`-style tooling so it cannot drift from the inventory; re-run the assembler after editing any module section.

12.99.1 Gap themes and proposed wave assignments

The detailed registers below are generated from every `GAP` and `PARTIAL` row in §12.1–§12.40. This table groups them into the themes a wave owner would actually plan. Proposed waves respect the dependency chain in waves.json (a theme is never proposed before the wave whose data model it needs). Items marked **(wave-splitting candidate)** are large enough that the wave's estimate should be revisited at the next phase-exit re-estimation (PRD §11).

Theme	AX / D365 feature(s)	Proposed wave	Why this wave	Size
Transfer orders	Transfer orders with in-transit warehouse, ship/receive, underdelivery, transfer picking, WHS transfer flows	16	Inventory ledger wave owns movements; MRP (22) and WHS (31) consume transfer orders as supply/work	**(wave-splitting candidate)**
Consignment inventory	Vendor-owned on-hand, ownership-change journal, consignment replenishment orders, vendor portal consignment view	16	Needs inventory ledger ownership dimension; surfaces in AP (19) and supplier portal (20)	Medium
Inventory extras	Tag counting, ABC classification, inventory aging, picking workbench	16 / 20 / 28	Natural extensions of counting, costing and fulfillment waves	Small each
Alerts and notification rules	Change-based and due-date alert rules on any entity/field, alert inbox, email delivery	5	Shell + event backbone exist by wave 5; every later module expects alerts	Medium
Email and templates	SMTP/provider outbound, templated email for workflow, collections, dunning, portals	4	Workflow notifications in 4 need it; collections (30) reuses	Small
Document management depth	Document types, storage backends (S3-compatible), archive/retention, document routing to records	5	Attachments exist in 5/11; policy layer missing	Medium
Reason codes framework	Shared financial reason codes (ledger, bank, customer, vendor, FA, counting)	11	First consumer is journal reversal in 11	Small
Policy framework and signing limits	Reusable org-hierarchy-scoped policy engine (purchasing, expense, audit, signing limits) and signing-limit requests	17	First consumer is purchasing policy in 17; expense (43) and audit (48) reuse	Medium
Procurement catalogs and punchout	Internal procurement catalog, vendor catalog import (CMR), external catalogs via cXML/OCI punchout	17 / 20 / 35	Catalog in 17, vendor upload via portal 20, punchout through integration hub 35	Medium
RFQ depth	Sealed bids, scoring criteria, amendments	17	Extends RFQ cycle	Small
Vendor master depth	Vendor requests/onboarding workflow, certifications and diversity classifications, vendor catalog	7 / 20	Party governance (7) and supplier portal (20)	Small
Payments depth	ACH prenotes, payment calendars (bank holidays), centralized cross-entity payments	19 / 40	Payment media in 19; centralized payments need intercompany due-to/due-from (40)	Small / Medium

Theme	AX / D365 feature(s)	Proposed wave	Why this wave	Size
Treasury instruments	Customer bills of exchange, vendor promissory notes, postdated checks (draw/remit/protest/settle journals)	36	Cash and bank wave owns instruments; AR/AP journals already exist	**(wave-splitting candidate)**
Direct debit mandates	SEPA mandates (pain.008), mandate lifecycle	30	Cash application wave; ISO 20022 generator from 19	Small
Rebates, brokers, royalties, commissions	Vendor rebates, broker contracts, royalty agreements, commission posting, TAM funds, promotion planning, deductions workbench, supplementary items, commodity pricing	26 / 30	Pricing engine (26) owns agreements/accruals; settlement and deductions in 30	**(wave-splitting candidate)**
Process manufacturing depth	Consolidated batch orders, rework batch orders, batch merge, attribute/shelf-life inheritance, same-batch reservation, customer sellable days, lean subcontracting	24	Process/lean wave	Medium
Planning depth	Supply schedule workbench, inventory forecast, priority-based (DDMRP-style) planning, intercompany master planning	22 / 40	Planning engine in 22; intercompany in 40	Medium
Production order split/merge	Split a production order quantity, merge	21	Lifecycle state machine owner	Small
Product master depth	Product lifecycle states, related products, dimension/model-group conversion jobs, packaging materials/fees	8 / 28	Product master and fulfillment	Small
Engineering change depth	Engineering organization and release product structure to LEs, readiness checks/policies, engineering categories and version nomenclature, PLM connector	9 / 35	ECM wave; PLM connector via integration hub	Medium
Product compliance	Regulated/restricted lists, safety data sheets with delivery rules, reporting thresholds	33	Quality wave is the natural home (documents on shipment, blocking)	Medium
Intrastat and VAT recovery	Intrastat setup (commodity/transaction codes, transport methods, ports), Intrastat journal corrections, VAT recovery on expenses	13	Tax engine wave	Small
Financial reporting hierarchies	Derived financial hierarchies, advanced rule structures, default descriptions	11 / 15	Journal and reporting waves	Small
Cost accounting policies	Cost behavior (fixed/variable) and cost rollup policies	38	Cost accounting ledger wave	Small
Budget planning depth	Excel worksheet round-trip, position forecasting from HR, plan generation from demand forecast/FA	38 (+42 dependency)	Position forecasting needs HR (42): deliver stub in 38, complete in 42	Medium
Costing extras	Standard cost conversion checklist, parallel inventory valuation ledgers (Global inventory accounting)	39 / 20	Costing waves	Medium
Landed cost (D365 module)	Voyages, shipping containers, folios, goods-in-transit orders, cost estimates vs actuals	34	Transportation wave owns landed cost allocation	**(wave-splitting candidate)**
Yard and gate	Driver check-in/out, yard management (trailers, yard moves, dock assignment)	34	TMS wave with dock scheduling from 31	Medium
WHS extras	Cross docking (planned/opportunistic), outbound sorting	31	Advanced warehouse wave	Small
Fixed asset extras	Asset additions (components), insurance records	37	Fixed assets wave	Small
Intercompany depth	Intercompany expenses, intercompany project resourcing/invoicing, intercompany on-hand visibility, centralized payments, intercompany planning	40	Intercompany wave	Medium
Project depth	Project quotations, weekly timesheets with workflow, retention (retainage) terms, project indirect cost components, beginning balance journals (49)	41 / 49	Project wave; migration pack for opening WIP	Medium
HR extras	Courses/learning, questionnaire engine, injury and illness (OSHA), loaned items, skill mapping, onboarding checklists, teams (6), US compliance specifics (48)	42 (+6, +48)	HR wave; questionnaire engine reused by performance reviews and quality	**(wave-splitting candidate)**
Expense extras	Cash advances, travel requisitions, deduction arrears recovery (payroll), workers' compensation and new-hire reporting (48)	43 (+48)	Payroll/expense wave; statutory outputs via US pack	Medium
EAM extras	Maintenance rounds and sequences, fault designer, asset warranties, maintenance budgets	44	Asset management wave	Medium
Service subscriptions	AX service subscription fees with indexation and accrual	29 (+45)	Subscription billing engine in 29 is the implementation; service wave links agreements	Small
Generic case management	Case categories/processes/activities/knowledge articles on any record (HR, collections, product change, audit, service)	45	Service wave builds cases; earlier consumers (30, 9) use a minimal case entity until then — flag as risk	Medium
Compliance extras	Audit policies (rule-based post-hoc audit of expenses/invoices/POs/journals), process/risk library, electronic signatures (21 CFR Part 11), electronic messaging lifecycle, India TDS/TCS depth, license usage reporting (3)	48 (+3)	Compliance wave; electronic signatures are a prerequisite for pharma/food manufacturers and should be pulled earlier if the first customer is regulated	**(wave-splitting candidate)**
Print management routing	Conditional print destinations per document/account/query	46	Document designer wave	Small

21	12.8 Cost management (D365)	12.8.4 Setup	Global inventory accounting setup (ledgers, accounting policies, conventions)	GAP	Propose wave 20: parallel inventory valuation ledgers	20
22	12.9 Compliance and internal controls	12.9.1 Common / Journals	Compliance → Electronic signatures (link)	GAP	Propose wave 48: electronic signatures (21 CFR Part 11 style) on configured tables/fields with reason codes and signature log	48
23	12.9 Compliance and internal controls	12.9.2 Inquiries & Reports	Electronic signature log inquiry	GAP	Propose wave 48: electronic signatures	48
24	12.9 Compliance and internal controls	12.9.2 Inquiries & Reports	SSRS: Electronic signature report	GAP	Propose wave 48: electronic signatures	48
25	12.9 Compliance and internal controls	12.9.3 Periodic	Electronic signature → Reset/revoke signatures	GAP	Propose wave 48: electronic signatures	48
26	12.9 Compliance and internal controls	12.9.4 Setup	Electronic signature → Electronic signature parameters, Signature requirements (table/field), Reason codes for signatures	GAP	Propose wave 48: electronic signatures	48
27	12.12 Human resources	12.12.1 Common / Journals	Courses (training) → Courses, Course sessions, Course registrations, Instructors, Course locations	GAP	Propose wave 42: learning/training management (courses, sessions, registrations, instructors, completion to competencies)	42
28	12.12 Human resources	12.12.1 Common / Journals	Questionnaires → Questionnaires, Questionnaire schedules, Answer sessions, Results analysis	GAP	Propose wave 42: questionnaire engine (design, schedule, answer, analyze) reused by performance reviews and quality audits	42
29	12.12 Human resources	12.12.1 Common / Journals	Injury and illness → Injury/illness incidents, Treatments, Body parts, OSHA logs	GAP	Propose wave 42: injury and illness incident register with OSHA 300 extracts (US pack)	42
30	12.12 Human resources	12.12.1 Common / Journals	Loaned items → Loaned items, Loan items	GAP	Propose wave 42: loaned items (assets issued to workers) tied to EAM assets wave 44	42
31	12.12 Human resources	12.12.2 Inquiries & Reports	Course inquiries	GAP	Propose wave 42: learning management	42
32	12.12 Human resources	12.12.2 Inquiries & Reports	Questionnaire results analysis	GAP	Propose wave 42: questionnaire engine	42
33	12.12 Human resources	12.12.2 Inquiries & Reports	Injury/illness inquiries	GAP	Propose wave 42: injury and illness	42
34	12.12 Human resources	12.12.2 Inquiries & Reports	Loaned items inquiry	GAP	Propose wave 42: loaned items	42
35	12.12 Human resources	12.12.2 Inquiries & Reports	SSRS: Course reports (Attendance, Course confirmation letters)	GAP	Propose wave 42: learning management	42
36	12.12 Human resources	12.12.2 Inquiries & Reports	SSRS: Questionnaire reports	GAP	Propose wave 42: questionnaire engine	42
37	12.12 Human resources	12.12.2 Inquiries & Reports	SSRS: OSHA 300/300A/301 (US)	GAP	Propose wave 42: injury and illness (US pack output wave 48)	42
38	12.12 Human resources	12.12.3 Periodic	Courses → Course confirmations / Transfer course completion to competencies	GAP	Propose wave 42: learning management	42
39	12.12 Human resources	12.12.3 Periodic	Questionnaires → Distribute questionnaires (schedule) / Collect results	GAP	Propose wave 42: questionnaire engine	42
40	12.12 Human resources	12.12.4 Setup	Courses → Course types, Course groups, Course locations, Classrooms, Instructors, Agenda templates	GAP	Propose wave 42: learning management	42
41	12.12 Human resources	12.12.4 Setup	Questionnaires → Questionnaire types, Question types, Answer groups, Result groups, Media types, Questionnaire parameters	GAP	Propose wave 42: questionnaire engine	42
42	12.12 Human resources	12.12.4 Setup	Injury and illness → Incident types, Body parts, Injury/illness treatments, Severity levels, Outcomes	GAP	Propose wave 42: injury and illness	42
43	12.12 Human resources	12.12.4 Setup	Loaned items → Loan types	GAP	Propose wave 42: loaned items	42
44	12.14 Inventory management	12.14.1 Common / Journals	Journals → Inventory ownership change journal (D365 consignment)	GAP	Propose wave 16: consignment	16
45	12.14 Inventory management	12.14.2 Inquiries & Reports	SSRS: Consignment inventory reports (D365)	GAP	Propose wave 16: consignment	16

#	Module	Table	Item	Status	Missing / proposal	Proposed wave
46	12.14 Inventory management	12.14.3 Periodic	Inventory → Consignment: ownership change batch	GAP	Propose wave 16: consignment	16
47	12.14 Inventory management	12.14.4 Setup	Inventory → Consignment → Consignment parameters (D365)	GAP	Propose wave 16: consignment	16
48	12.15 Product information management	12.15.1 Common / Journals	Released product → Product compliance (PI: Regulated products, Restricted lists, Reporting details, Safety data sheets (MSDS/SDS) with validity and send on sales)	GAP	Propose wave 33: product compliance (regulated/restricted lists by country/state, SDS versions with shipment delivery rules, reporting thresholds)	33
49	12.15 Product information management	12.15.2 Inquiries & Reports	Product compliance inquiries (Regulated items, SDS due)	GAP	Propose wave 33: product compliance	33
50	12.15 Product information management	12.15.2 Inquiries & Reports	SSRS: Safety data sheet (SDS document, PI)	GAP	Propose wave 33: product compliance	33
51	12.15 Product information management	12.15.3 Periodic	Product compliance → Expire SDS / Reporting (periodic)	GAP	Propose wave 33: product compliance	33
52	12.15 Product information management	12.15.4 Setup	Product → Product compliance setup (PI: Regulated regions, Restricted lists, Reporting lists, SDS parameters, Product safety data sheet validity, Item-specific: MSDS validity days)	GAP	Propose wave 33: product compliance	33
53	12.16 Procurement and sourcing	12.16.1 Common / Journals	External catalogs (punchout cXML/OCI)	GAP	Propose wave 35: external catalog punchout (cXML/OCI) via integration hub, requisition lines returned to wave 17	35
54	12.16 Procurement and sourcing	12.16.1 Common / Journals	Vendor rebates (PI vendor rebate agreements, R3)	GAP	Propose wave 26: vendor rebates (agreements, accrual on purchase, claim/credit note settlement via AP) mirroring customer rebates	26
55	12.16 Procurement and sourcing	12.16.1 Common / Journals	Broker contracts (PI brokers and royalties, R3)	GAP	Propose wave 26: broker contracts (commission to broker vendor on sales invoices, claims via AP)	26
56	12.16 Procurement and sourcing	12.16.1 Common / Journals	Royalty agreements (PI, R3)	GAP	Propose wave 26: royalty agreements (accrual on sales, claim to vendor)	26
57	12.16 Procurement and sourcing	12.16.1 Common / Journals	Consignment (link)	GAP	Propose wave 16: consignment	16
58	12.16 Procurement and sourcing	12.16.2 Inquiries & Reports	Vendor rebate inquiries	GAP	Propose wave 26: vendor rebates	26
59	12.16 Procurement and sourcing	12.16.2 Inquiries & Reports	Broker/royalty claim inquiries	GAP	Propose wave 26: broker contracts	26
60	12.16 Procurement and sourcing	12.16.2 Inquiries & Reports	SSRS: Vendor rebate reports	GAP	Propose wave 26: vendor rebates	26
61	12.16 Procurement and sourcing	12.16.3 Periodic	Vendor rebates → Cumulate / Approve / Process claims	GAP	Propose wave 26: vendor rebates	26
62	12.16 Procurement and sourcing	12.16.3 Periodic	Broker → Process broker claims / Royalty → Process royalty claims	GAP	Propose wave 26: broker contracts	26
63	12.16 Procurement and sourcing	12.16.4 Setup	Vendor rebates → Rebate agreements, Rebate program types, Rebate groups (vendor), Rebate claim journal names	GAP	Propose wave 26: vendor rebates	26
64	12.16 Procurement and sourcing	12.16.4 Setup	Brokers and royalties → Broker contract setup, Royalty agreement setup, Claim journal names	GAP	Propose wave 26: broker contracts	26
65	12.23 Process manufacturing (PI)	12.23.1 Common / Journals	Vendor rebates / Brokers / Royalties (links)	GAP	Propose wave 26: vendor rebates (see §12.16)	26
66	12.23 Process manufacturing (PI)	12.23.1 Common / Journals	Product compliance / Safety data sheets (link)	GAP	Propose wave 33: product compliance (see §12.15)	33
67	12.23 Process manufacturing (PI)	12.23.2 Inquiries & Reports	SSRS: Safety data sheet (link)	GAP	Propose wave 33: product compliance	33
68	12.23 Process manufacturing (PI)	12.23.3 Periodic	Compliance → SDS expiry / regulated product reporting	GAP	Propose wave 33: product compliance	33
69	12.23 Process manufacturing (PI)	12.23.3 Periodic	Vendor rebates → Process	GAP	Propose wave 26: vendor rebates	26
70	12.23 Process manufacturing (PI)	12.23.4 Setup	Product compliance → Regulated/restricted lists, Reporting lists, SDS setup	GAP	Propose wave 33: product compliance	33
71	12.23 Process manufacturing (PI)	12.23.4 Setup	Vendor rebates / Brokers / Royalties setup	GAP	Propose wave 26: vendor rebates	26
72	12.25 Quality management	12.25.4 Setup	Quality management → Product compliance (PI, link)	GAP	Propose wave 33: product compliance	33
73	12.26 Warehouse management (WHS)	12.26.4 Setup	Warehouse → Yard management (D365 2024: yard, trailers, yard moves)	GAP	Propose wave 34: yard management (trailer/yard locations, check-in/out, yard moves, dock door assignment) alongside TMS driver check-in	34
74	12.27 Transportation management (TMS)	12.27.1 Common / Journals	Driver check-in / check-out	GAP	Propose wave 34: driver check-in/out with appointment link, trailer/seal capture, gate log (with yard management)	34
75	12.27 Transportation management (TMS)	12.27.2 Inquiries & Reports	Driver check-in log	GAP	Propose wave 34: driver check-in	34

#	Module	Table	Item	Status	Missing / proposal	Proposed wave
76	12.27 Transportation management (TMS)	12.27.3 Periodic	Driver check-in → Expire appointments / Gate log archive	GAP	Propose wave 34: driver check-in	34
77	12.27 Transportation management (TMS)	12.27.4 Setup	Driver check-in → Check-in setup / Gate configuration	GAP	Propose wave 34: driver check-in	34
78	12.27 Transportation management (TMS)	12.27.4 Setup	Transportation → Yard management setup (D365 2024)	GAP	Propose wave 34: yard management	34
79	12.29 Organization administration	12.29.1 Common / Journals	Electronic signatures → Signature log / Reset signature	GAP	Propose wave 48: electronic signatures	48
80	12.29 Organization administration	12.29.1 Common / Journals	Product safety data sheets (link, PI)	GAP	Propose wave 33: product compliance	33
81	12.29 Organization administration	12.29.1 Common / Journals	Electronic signatures → Certificates (user signing certificates)	GAP	Propose wave 48: electronic signatures	48
82	12.29 Organization administration	12.29.1 Common / Journals	Alerts (org-level alert rules)	GAP	Propose wave 5: alerts and notification rules (change-based and due-date alerts on any entity/field, delivered in-app/email/webhook) built on the wave 4 event backbone	5
83	12.29 Organization administration	12.29.1 Common / Journals	Questionnaires (link, Org admin > Questionnaires in R3)	GAP	Propose wave 42: questionnaire engine	42
84	12.29 Organization administration	12.29.2 Inquiries & Reports	Electronic signature inquiry	GAP	Propose wave 48: electronic signatures	48
85	12.29 Organization administration	12.29.3 Periodic	Electronic signatures → Signature verification / Reset	GAP	Propose wave 48: electronic signatures	48
86	12.29 Organization administration	12.29.4 Setup	Electronic signatures → Electronic signature parameters / Signature requirements / Reason codes / Certificates	GAP	Propose wave 48: electronic signatures	48
87	12.29 Organization administration	12.29.4 Setup	Product safety data sheets setup (link, PI)	GAP	Propose wave 33: product compliance	33
88	12.29 Organization administration	12.29.4 Setup	Alerts → Alert rules (Change-based, Due-date; event rule setup, alert email templates)	GAP	Propose wave 5: alerts and notification rules	5
89	12.29 Organization administration	12.29.4 Setup	Questionnaires setup (link)	GAP	Propose wave 42: questionnaire engine	42
90	12.30 System administration	12.30.1 Common / Journals	Sys admin → Electronic signature (link)	GAP	Propose wave 48: electronic signatures	48
91	12.30 System administration	12.30.3 Periodic	Alerts → Change-based alerts / Due date alerts (batch processors)	GAP	Propose wave 5: alerts and notification rules	5
92	12.30 System administration	12.30.4 Setup	Sys admin → Electronic signature parameters (link)	GAP	Propose wave 48: electronic signatures	48
93	12.31 Home / role centers / workflow	12.31.1 Common / Journals	Questionnaires → My questionnaires / Answer questionnaire / Questionnaire results	GAP	Propose wave 42: questionnaire engine	42
94	12.31 Home / role centers / workflow	12.31.1 Common / Journals	Alerts (My alerts / Notification list)	GAP	Propose wave 5: alerts and notification rules (notification center exists in shell; rule-based alerts do not)	5
95	12.31 Home / role centers / workflow	12.31.2 Inquiries & Reports	Alert inquiry (alerts by rule/user)	GAP	Propose wave 5: alerts and notification rules	5
96	12.31 Home / role centers / workflow	12.31.2 Inquiries & Reports	Questionnaire statistics / Results analysis	GAP	Propose wave 42: questionnaire engine	42
97	12.31 Home / role centers / workflow	12.31.2 Inquiries & Reports	SSRS: Questionnaire reports (link)	GAP	Propose wave 42: questionnaire engine	42
98	12.31 Home / role centers / workflow	12.31.3 Periodic	Alerts → Process change-based alerts / Due-date alerts	GAP	Propose wave 5: alerts and notification rules	5
99	12.31 Home / role centers / workflow	12.31.3 Periodic	Questionnaires → Schedule questionnaires (batch)	GAP	Propose wave 42: questionnaire engine	42
100	12.31 Home / role centers / workflow	12.31.4 Setup	Alerts → Alert rules (create alert rule on field/record: changes to, due date; subject/message; recipients; organization-wide) / Alert rule templates	GAP	Propose wave 5: alerts and notification rules	5
101	12.31 Home / role centers / workflow	12.31.4 Setup	Questionnaires → Questionnaire setup (link)	GAP	Propose wave 42: questionnaire engine	42
102	12.36 Rebate management (D365)	12.36.1 Common / Journals	Deal → Vendor deals (purchase rebates)	GAP	Propose wave 26: vendor rebates	26
103	12.36 Rebate management (D365)	12.36.1 Common / Journals	Deal → Price-based deals (royalty-type)	GAP	Propose wave 26: royalty agreements	26
104	12.36 Rebate management (D365)	12.36.2 Inquiries & Reports	Vendor deal inquiries	GAP	Propose wave 26: vendor rebates	26
105	12.36 Rebate management (D365)	12.36.2 Inquiries & Reports	SSRS: Vendor rebate claim	GAP	Propose wave 26: vendor rebates	26

#	Module	Table	Item	Status	Missing / proposal	Proposed wave
106	12.36 Rebate management (D365)	12.36.3 Periodic	Vendor rebate claims processing	GAP	Propose wave 26: vendor rebates	26
107	12.36 Rebate management (D365)	12.36.4 Setup	Vendor deal setup (claim via AP)	GAP	Propose wave 26: vendor rebates	26
108	12.39 Vendor collaboration / customer self-service (D365)	12.39.1 Common / Journals	Vendor → Consignment inventory view (on-hand, replenishment orders)	GAP	Propose wave 16: consignment	16

SUPERSEDED	147
Total assessed rows	**3146**

Part 13 — Coverage Inventory: SAP ECC 6.0 / S/4HANA → Passage

This part is the completeness oracle for the SAP side of the parity goal (PRD §2 goal 1, §5 scope map). It inventories SAP ECC 6.0 and S/4HANA functionality module by module — by transaction code and by IMG (SPRO) node — and maps every row to one of the 50 Passage waves in roadmap/waves.json. Its purpose is to make "we missed something" a question that can be answered by grep rather than by fear. The companion inventory for Dynamics AX / D365 F&SCM is Part 12.

13.0 How to read this inventory

Each SAP application component gets one section with four tables:

1. **Master data & documents** — the create/change/display transactions and the documents they produce (`T-code | Name | Purpose | Passage status | Wave | Notes`).
2. **Reports & inquiries** — standard list, line-item and analysis reports (`T-code | Name | Passage status | Wave | Notes`).
3. **Periodic processing** — closing, batch and mass-processing transactions (`T-code | Name | Passage status | Wave | Notes`).
4. **Customizing (SPRO)** — the IMG nodes, their customizing tables and the key options Passage must offer an equivalent for (`IMG node / T-code | Table(s) | Key options | Passage status | Wave | Notes`).

Status legend (exactly one token per row, always in the "Passage status" column):

- `COVERED-<wave>` — the wave's `deliverable/proof` in waves.json clearly includes an equivalent. The wave column repeats the number.
- `PARTIAL-<wave>` — the wave covers the core but the Notes column names what is missing. Every PARTIAL row is repeated in the gap register (§13.99).
- `GAP` — no wave clearly covers the item. The wave column holds a *proposed* assignment (`propose <n>`); the gap register collects them for a roadmap decision.
- `OUT-OF-SCOPE` — excluded by a PRD non-goal (§2) or by the manufacturer focus; the reason is in Notes.
- `SUPERSEDED-<wave>` — Passage deliberately does it a different way; the Notes column names the Passage mechanism. A SUPERSEDED row is **not** a gap: the SAP transaction has no one-to-one twin because the underlying mechanism (e.g. the condition technique's separate rebate module, SAP GUI, ABAP enhancement spots) is replaced by something structurally different.

Conventions:

- T-codes are given in their ECC 6.0 form; where S/4HANA replaced a transaction with a Fiori app or a new transaction, both are named (e.g. `FD32 → UKM_BP`, `VBO1 → WCOCO`). Fiori apps are cited by name, not by app number.
- "Wave" refers to the `n` in waves.json. Phase-exit waves (5, 10, 15, 20, 25, 30, 35, 40, 45, 50) are the sign-off points at which a module's rows must be demonstrably closed.
- IMG rows name the customizing table where it is well known (T001, T001B, T030, T156, T161, T685, TVAK…). Passage stores all customizing as metadata-registry configuration (wave 3) scoped per tenant / legal entity (wave 6); the "Key options" column lists the switches Passage must expose, not every SAP field.
- Rows are intentionally granular (a create/change/display triple is one row; a report family such as `S_ALR_87012*` is one row per distinct report, not one row per variant).
- Where SAP offers both an ECC transaction and a New GL / S/4 successor, the successor is inventoried and the predecessor noted, so classic GL (`GLT0`-based) transactions appear once under the FI-GL section.

A per-section roll-up of the same counts is in §13.98 and the gap register (every GAP and PARTIAL row with its current or proposed wave) is in §13.99. Status totals across all four tables of every section (computed from the rows, excluding §13.98–13.99):

Status	Rows	Share
COVERED	2049	74.6%
PARTIAL	310	11.3%
GAP	91	3.3%
OUT-OF-SCOPE	22	0.8%
SUPERSEDED	274	10.0%
Total rows	**2746**	100%

13.1 FI-GL — General Ledger (classic GL, New GL, ledgers, ACDOCA)

SAP context: FI-GL in ECC 6.0 runs either classic GL (`GLT0` totals, special-purpose ledgers) or New GL (`FAGLFLEXT`, document splitting, parallel ledgers). S/4HANA collapses FI and CO totals into the universal journal `ACDOCA` (one line item table; CO objects and ledgers as columns). Passage's wave 11 universal journal is built on the S/4 model: one append-only line-item store, balances as projections, dimensions as columns, parallel ledgers via ledger groups (wave 12).

13.1.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
FS00	G/L account master (centrally)	Create/change/display chart-of-accounts and company-code segment of a G/L account	COVERED-11	11	Account entity with per-legal-entity attributes (currency, open-item flag, posting block, tax category, field status)
FSP0	G/L account in chart of accounts	Chart segment only	COVERED-11	11	Same entity; chart-level vs entity-level attributes split in metadata
FSS0	G/L account in company code	Company-code segment only	COVERED-11	11	Per-legal-entity release of an account
FS15 / FS16	Copy G/L accounts (send/receive)	Copy company-code segments between company codes	COVERED-11	11	"Release account to legal entity" bulk action
FSM1 / FSM2 / FSM3	Sample accounts	Templates for company-code segments	SUPERSEDED-11	11	Account templates in the journal workspace; no separate sample-account object
KDH1 / KDH2 / KDH3	Account groups (G/L account groups hierarchy)	Hierarchies for FSV/reporting	COVERED-15	15	Account structures and report trees

T-code	Name	Purpose	Passage status	Wave	Notes
FB50	Enter G/L account document	Single-screen G/L posting (Enjoy)	COVERED-11	11	Manual journal; idempotent Post API
FB50L	Enter G/L account document for ledger group	Ledger-specific manual posting	COVERED-12	12	Journal with ledger-group scope
F-02	Enter G/L account posting (classic)	Posting-key based general posting	SUPERSEDED-11	11	Posting keys replaced by debit/credit amount sign on lines
FB01	Post document (general)	Any document type, any account type	COVERED-11	11	Single Post API for all subledger-aware lines
FV50 / FBV0 / FBV2 / FBV3	Park / post / change / display parked G/L document	Draft documents for later posting or approval	COVERED-11	11	Draft status + approval workflow (Temporal)
FBV4 / FBV5 / FBV6	Change parked header / display changes / reject	Parked document administration	COVERED-11	11	Draft audit from CDC (wave 5)
FB02 / FB03 / FB04	Change / display / display changes to document	Document maintenance (header text, reference, assignment only)	COVERED-11	11	Post-posting edit limited to non-financial fields; audit log
FB08 / F.80	Reverse document / mass reversal	Negating entry linked to the original	COVERED-11	11	Reversal API creates linked negating entry; mass reversal via batch job (wave 4)
FBRA	Reset cleared items	Undo clearing before reversal	COVERED-19	19	Settlement reversal in AP/AR; GL open-item accounts see §13.1 note on F-03
FBD1 / FBD2 / FBD3 / FBD4	Recurring entry document create/change/display/changes	Recurring journals with run schedule	COVERED-11	11	Recurring journals with schedule; execution via wave 4 batch
F.14 / F.15	Execute recurring entries / list recurring entries	Batch creation from recurring templates	COVERED-11	11	Scheduled recurring-journal job
FBS1	Enter accrual/deferral document	Reversing document with reversal date	COVERED-14	14	Accrual schemes with automatic reversal
F.81	Reverse accrual/deferral documents	Mass reversal of FBS1 documents	COVERED-14	14	Automatic reversal on schedule
FBM1 / FBM2 / FBM3	Sample documents	Non-posting template documents	SUPERSEDED-11	11	Journal templates
F-03 / F-04	Clear G/L account / post with clearing	Open-item clearing on OI-managed G/L accounts	PARTIAL-11	11	Open-item management specified only for AP/AR (waves 19/30) and GR/IR (wave 18); generic OI-managed G/L accounts (clearing accounts, bank sub-accounts) need the same clearing engine exposed on GL
F-05	Post foreign currency valuation (manual)	Manual FX adjustment posting	COVERED-12	12	Manual journal in reporting currency
F-65	Preliminary posting (park)	Classic parking	COVERED-11	11	Draft journals
FB41	Post tax payable	Transfer of tax balances	COVERED-13	13	Tax settlement job posts to tax payable
OB08	Enter exchange rates (also master data)	Rates by rate type, date, pair	COVERED-12	12	Exchange rate service with provider adapters and audit
FBCJ	Cash journal	Petty cash with receipts/expenses and GL posting	GAP	propose 36	No wave mentions a petty-cash/cash-journal document; small but common on plant floors — add to wave 36 (cash & bank) as "cash journal with receipts, business transactions and daily closing"
FBCJC0 / FBCJC1 / FBCJC2 / FBCJC3	Cash journal setup, number ranges, business transactions, print	Cash journal customizing	GAP	propose 36	Follows FBCJ
FAGLL03 (document)	Ledger-specific line item entry context	See reports	COVERED-12	12	—
GB01 / GB02	Enter/post G/L documents with document splitting characteristics	Classic FI-SL documents	SUPERSEDED-12	12	Special-purpose ledger replaced by parallel ledgers + dimensions
OB_GLACC11 / OB_GLACC12 / OB_GLACC13	Mass maintenance of G/L accounts (chart / company code / names)	Mass change	COVERED-5	5	Grid mass edit + Excel import/export on any entity
FAGL_ACTIVATE_OP	Activate open-item management on G/L accounts	Conversion utility	PARTIAL-11	11	Depends on the GL OI gap above
FAGL_SWITCH_TO_OPEN_ITEM	Switch to OI management (S/4)	Same	PARTIAL-11	11	Same
GCAC	Ledger comparison	Compare two ledgers	COVERED-12	12	Per-ledger trial balances with diff
FAGLB03 (document view)	Ledger balance display → line items	See reports	COVERED-15	15	—
FINS_ACDOC_CUST	Universal journal customizing overview (S/4)	ACDOCA extensibility	SUPERSEDED-3	3	Journal-line extensions via the metadata kernel (customer fields on JournalLine)
FAGL_MIG_*	New GL migration cockpit	Classic → New GL migration	SUPERSEDED-49	49	Migration factory loads GL balances by dimension directly
ACC_DOCUMENT (BAPI_ACC_DOCUMENT_POST)	Accounting document BAPI	Programmatic posting	COVERED-11	11	Post API (REST/gRPC) with idempotency keys

13.1.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
FBL3N	G/L account line items (classic)	COVERED-11	11	Journal line inquiry with saved views, grid, export
FAGLL03	G/L account line items (New GL, ledger-aware)	COVERED-12	12	Ledger filter on the same inquiry
FAGLL03H	G/L line item browser (HANA)	COVERED-46	46	Lakehouse-backed line-item browser for history; OLTP inquiry for recent
FS10N / FAGLB03	G/L account balance display (classic / New GL)	COVERED-11	11	Balance projection by account × dimension × period with drill to lines
FS10NA	Balance display with drill-down	COVERED-15	15	Statement → balance → lines drill
F.01	Financial statements (RFBILA00)	COVERED-15	15	Balance sheet / P&L from financial statement version equivalent
S_ALR_87012284	Financial statements (FSV, with comparison)	COVERED-15	15	Comparative columns in report designer
S_ALR_87012277	G/L account balances	COVERED-15	15	Trial balance
S_ALR_87012301	Totals and balances	COVERED-15	15	Trial balance by period
S_ALR_87012282	G/L line items, list for printing	COVERED-11	11	Printable line-item list

T-code	Name	Passage status	Wave	Notes
S_ALR_87012287	Document journal	COVERED-15	15	Audit trail / document journal
S_ALR_87012289	Compact document journal	COVERED-15	15	Same, compact layout
S_ALR_87012291	Line item journal	COVERED-15	15	Same
S_ALR_87012293	Display of changed documents	COVERED-5	5	Audit log viewer
S_ALR_87012308	Display changes to G/L accounts	COVERED-5	5	Audit log on Account entity
S_ALR_87012326	Chart of accounts list	COVERED-11	11	Account list export
S_ALR_87012328	G/L account list	COVERED-11	11	Same
S_ALR_87012332	G/L account statements	COVERED-15	15	Account statement report
S_ALR_87012341 / 87012342	Invoice numbers allocated twice / gaps in document number assignment	COVERED-5	5	Number-sequence gap report (gap-free mode audit)
S_ALR_87012357 / 87012356	Advance return for tax on sales/purchases / sales tax report	COVERED-13	13	VAT return extracts
S_ALR_87012382	Cash flow (direct method, from FSV)	COVERED-15	15	Indirect cash flow standard; direct via report designer
S_PL0_86000028 / S_PL0_86000029	Financial statement: actual/actual comparison, plan/actual	COVERED-15	15	Comparative statements; plan column after wave 38
S_PL0_86000030	G/L account balances (New GL)	COVERED-12	12	Ledger-aware trial balance
S_PL0_86000031	Transaction figures: account balance	COVERED-11	11	—
S_E38_98000088	Profit center group: plan/actual/variance	COVERED-38	38	Dimension = profit center; plan from budgeting
S_AC0_52000887 / 52000888	Receivables/payables by profit center (New GL)	COVERED-15	15	Dimension-level subledger report
FAGLF03	Reconciliation ledger vs. documents (New GL)	COVERED-16	16	Daily automated subledger-to-journal reconciliation check
F.03	Financial accounting comparative analysis (SAPF190)	COVERED-16	16	Same reconciliation job
GR55 / GRR1 / GRR2 / GRR3	Report Painter / Report Writer report groups and reports	SUPERSEDED-15	15	Row/column report designer (Management-Reporter model) replaces Report Painter; wave 46 semantic layer for ad-hoc
FGI0 / FGI1 / FGI3	Drill-down reporting (New GL): execute / create report / display	SUPERSEDED-15	15	Report designer + drill-down
FGI4 / FGI5 / FGI6	Drill-down report forms	SUPERSEDED-15	15	Same
FAGL_SCHEDULE_LOG (FAGLCOFITRACEADMIN)	Trace for CO-FI real-time integration	SUPERSEDED-11	11	No CO→FI reconciliation needed: single journal
S_ALR_87012309	Cash book / cash journal report	GAP	propose 36	Follows FBCJ gap
FAGLGVTR (log)	Balance carry-forward log	COVERED-14	14	Year-end job log
Fiori: Trial Balance	Trial balance (ledger, dimensions, comparison)	COVERED-15	15	—
Fiori: Display Line Items in General Ledger	S/4 line-item app	COVERED-11	11	—
Fiori: Display Financial Statement	S/4 statements app	COVERED-15	15	—
Fiori: Balance Sheet/Income Statement — Multidimensional	Dimension-pivot statements	COVERED-46	46	Semantic layer pivot
Fiori: Manage Journal Entries	Search/display/reverse journal entries	COVERED-11	11	—
Fiori: Verify General Journal Entries (approval)	Workflow-based journal approval	COVERED-11	11	Approval workflow on journals
Fiori: Audit Journal	Chronological audit journal	COVERED-15	15	Audit trail report
Fiori: Journal Entry Analyzer	Analyze journal entries by dimension	COVERED-46	46	—

13.1.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
OB52 (operational use)	Open/close posting periods	COVERED-14	14	Period control per ledger × module × user group
FAGL_FC_VAL / F.05 (classic)	Foreign currency valuation (GL, AP, AR open items)	COVERED-12	12	Revaluation job with next-period reversal
FAGL_FC_TRANS	Currency translation (balances into group currency)	COVERED-12	12	Reporting-currency translation
FAGLGVTR / F.16 (classic)	Balance carry-forward (New GL / classic)	COVERED-14	14	Year-end close: P&L to retained earnings, BS carry-forward per dimension
F.07	Balance carry-forward AP/AR	COVERED-14	14	Subledger carry-forward in the same job
F.13 / F13E	Automatic clearing (with/without specification of clearing currency)	PARTIAL-11	11	Automatic clearing specified for GR/IR (wave 18) and AP/AR settlement; generic rule-based GL auto-clearing is part of the GL OI gap
FAGLF101 / F101	Regroup receivables/payables (sorted list, reclassification by remaining term)	GAP	propose 14	Balance-sheet reclassification (short/long-term, debit-balance vendors, credit-balance customers) is a standard close step not named in wave 14's checklist/allocations — add as a close task type
F.19	GR/IR analysis / regrouping	COVERED-18	18	GR/IR reconciliation report and reclass
F.50 / F.52	G/L interest calculation (balance / account interest)	GAP	propose 30	Interest on GL balances (e.g. intercompany loans) is not named; wave 30 covers AR interest notes only — extend the interest engine to GL/intercompany accounts
ACACACT / ACACTREE01 / ACACPSITEMS	Accrual engine: periodic run / accrual objects / display postings	COVERED-14	14	Accrual schemes; recurring accrual objects
ACACADJ	Accrual engine: adjust accrual	COVERED-14	14	—
FAGL_CL_REGROUP / FAGL_CL_MIGRATION	Closing: regrouping (S/4)	GAP	propose 14	Same as FAGLF101
F.97 / F.98 / F.99	Balance confirmations for G/L / AP / AR	GAP	propose 19	Balance confirmation letters (vendor/customer/GL) not named in waves 19 or 30 — add to wave 30 customer statements + wave 19 vendor confirmations
FB1S / FB1D / FB1K	Clear G/L / customer / vendor (classic clearing)	COVERED-19	19	Settlement; GL part in GL OI gap

T-code	Name	Passage status	Wave	Notes
GCAC	Ledger comparison (closing check)	COVERED-12	12	—
FINS_CO_RECON (FINS_RECON_RC0..RC3)	S/4 reconciliation reports (ACDOCA vs. BSEG/COEP)	SUPERSEDED-11	11	No dual tables to reconcile; balance projection vs journal check is the equivalent
FINSC_LEDGER (admin run)	Ledger settings activation	COVERED-12	12	Ledger group configuration
CLOCO / CLOCOC / CLOCOS	Financial Closing Cockpit: task list / templates / monitor	COVERED-14	14	Close checklist with templates, dependencies, assignees, status board
SCMA	Schedule Manager (classic)	SUPERSEDED-14	14	Close checklist + wave 4 batch scheduler
Fiori: Manage Closing Tasks / Advanced Financial Closing	S/4 close orchestration	COVERED-14	14	Close checklist across entities
SAFT / Fiori: Run Statutory Reports (ACR)	Advanced Compliance Reporting (SAF-T, VAT returns)	COVERED-13	13	SAF-T extract validated to OECD XSD; VAT returns; statutory packs in wave 48
FAGL_SCHEDULE (FAGL_PLAN_*)	Plan data entry in New GL (GP12N etc.)	COVERED-38	38	Budget register against ledger dimensions
GP12N / GP12NA	Plan data entry / display (New GL)	COVERED-38	38	—
FAGL_CO_PLAN	Transfer CO plan data to New GL	SUPERSEDED-38	38	One planning store
S_ALR_87099918 (RFUMSV00 run)	Advance tax return run	COVERED-13	13	Tax settlement job

13.1.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OX02 — Company code	T001	Country, currency, language, fiscal year variant, chart of accounts	COVERED-6	6	LegalEntity entity
OBY6 — Company code global parameters	T001	FYV, posting period variant, field status variant, negative postings, business area FS, tax base net/gross, cash management active	COVERED-11	11	LegalEntity accounting settings
OB13 / OB62 — Chart of accounts / assign to company code	T004, T001	Operational / group / country chart; length; integration with CO	COVERED-11	11	Account structure per ledger; alternative account numbers via dimension mapping
OBD4 — Account groups	T077S	Number ranges, field status per group	COVERED-11	11	Account groups with field visibility rules (metadata field attributes)
OB53 — Retained earnings account	T030 (BIL)	P&L statement account type	COVERED-14	14	Year-end close settings
OB29 — Fiscal year variants	T009, T009B	Calendar/non-calendar, special periods, shortened FY	COVERED-6	6	Fiscal calendars: 4-4-5, 13-period, calendar; special periods needed — covered by period types
OB37 — Assign fiscal year variant to company code	T001	—	COVERED-6	6	Calendar per legal entity / ledger
OB52 — Posting period variants: open/close periods	T001B	Account type ranges, from/to period, authorization group (2nd interval)	COVERED-14	14	Period control per ledger × module × user group
OBBO / OBBP — Posting period variant define / assign	T010O, T001	—	COVERED-14	14	—
OBA7 — Document types	T003	Number range, account types allowed, reversal doc type, net posting, authorization group, reference/doc header text required	COVERED-11	11	Journal/document types with number sequence and allowed line types
FBN1 / OBH2 — Number ranges for accounting documents / copy	NRIV	Year-dependent, external, interval	COVERED-5	5	Number sequence service, gap-free mode for fiscal docs
OB41 — Posting keys	TBSL	D/C, account type, field status, sales-related, special G/L	SUPERSEDED-11	11	No posting keys: line = account + signed amount + line type
OBC4 — Field status variants / groups	T004F, T004V	Required/optional/suppressed per field group	COVERED-3	3	Metadata field attributes per account group / line type
OBC5 — Assign company code to field status variant	T001	—	COVERED-11	11	—
OB28 / GGB0 — Validations (FI)	GB90*, T001Q	Prerequisite/check/message at header, line, document level	PARTIAL-11	11	Wave 11 has dimension validation rules; a general user-defined validation rule language (Boolean rules over header/line fields with message classes) is only implied by wave 3 "validation" — scope it explicitly
OBBH / GGB1 — Substitutions (FI)	GB91*, T001R	Field substitution with exits at line/document	PARTIAL-11	11	Default dimensions on master data exist; rule-based substitution (derive dimension from another field) needs an explicit rule engine on the Post API
OBBZ / OBBW — Substitution/validation for cost of sales accounting	—	Functional area derivation	PARTIAL-11	11	Functional area as a dimension with derivation rules (see above)
OKKP (FI side) — Controlling area assignment	TKA01, TKA02	Company code ↔ controlling area, currency type	SUPERSEDED-11	11	No separate controlling area: dimensions on the journal; wave 38 management reporting
OB22 / FINSC_LEDGER — Parallel currencies per company code / ledger settings (S/4)	T001A, FINSC_LEDGER	Currency types 10/30/40, valuation view, ledger type (standard/extension), accounting principle, FYV per ledger	COVERED-12	12	Three-currency lines; ledger groups; extension ledgers (adjustment-only) need confirming — treat as covered by ledger groups
FAGL_ACTIVATION / FAGL_ACTIVEC — Activate New GL	FAGL_ACTIVEC	—	SUPERSEDED-11	11	Single journal always on
Define ledgers for GL accounting (FAGL_LEDGER)	T881, T882G	Leading ledger, representative ledger	COVERED-12	12	—
Define ledger groups (FAGL_LEDGER_GRP)	T8G*, FAGL_TLDGRP	Group of ledgers for postings	COVERED-12	12	—
Define accounting principles / assign to ledger groups	TACC_PRINCIPLE, TACC_TRGT_LDGR	IFRS/local GAAP/tax	COVERED-12	12	—

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
Document splitting: classify G/L accounts, document types, splitting method, zero-balance, constants (FAGL_SPLIT*)	T8G01…T8G40	Active/passive split, characteristics (PC, segment, business area), zero-balance clearing account, inheritance	PARTIAL-11	11	Wave 11 requires every line to carry dimensions, so dimension-complete documents are native; but *inheritance to balance-sheet lines* (AP/AR/tax lines split by the expense lines' profit centers) and zero-balance clearing per dimension are not named — needed for balance sheet by profit center/segment
Define segment / derive segment from profit center	FAGL_SEGM, CEPC	—	COVERED-11	11	Segment as a dimension; derivation default from profit center dimension
OB08 / OBBS / OBBT — Exchange rate types, ratios, rate maintenance	TCURR, TCURV, TCURF, TCURX	Rate types (M, EURX, P), inversion, triangulation via reference currency, decimals per currency	COVERED-12	12	Rate types, triangulation, decimals from ISO 4217
OB07 — Exchange rate types	TCURV	—	COVERED-12	12	—
OBA1 — Accounts for exchange rate differences / FX valuation	T030H	Realized/unrealized gain-loss, valuation and translation accounts per G/L account	COVERED-12	12	Posting profile for realized/unrealized
OB59 / OBBD — Valuation methods and valuation areas (FC valuation)	T044A, T044G, FAGL_VAL_AREA	Lowest value principle, always valuate, reset, exchange rate type per method; valuation area ↔ accounting principle	COVERED-12	12	Revaluation method per ledger / accounting principle
OBXR / OBYR — Special G/L indicators (customers / vendors)	T074	Down payments, bills of exchange, guarantees, noted items	PARTIAL-19	19	Prepayments/down payments covered (waves 19/30); bills of exchange and noted items not named — see FI-AP/AR sections
OBY7 / OBY8 / OBY9 — Copy chart of accounts / company code / delete	—	—	COVERED-6	6	Entity templates ("copy legal entity") in enterprise structure
OBYA — Clearing accounts for cross-company-code transactions	T001U	Due-to/due-from per company-code pair	COVERED-40	40	Intercompany accounting due-to/due-from
OBYC (FI-side view) — Automatic postings (MM/SD integration)	T030	Transaction keys BSX, GBB, WRX, PRD, KDM, UMB, FRL, BSV, AUM, VAX/VAY	COVERED-16	16	Inventory posting profiles (item model group × site × account)
OB40 — Tax accounts	T030K	Per tax transaction key (MWS, VST, NAV…)	COVERED-13	13	Tax posting profile
OBB8 / OBB9 — Terms of payment / installment terms	T052, T052R	Day limits, baseline date, discount days/percent, installment split	PARTIAL-7	7	Payment terms covered; installment terms (split one invoice into several due dates) not named — add to wave 7 terms model
OBA3 / OBA4 — Tolerance groups (customers/vendors) / (employees, posting amount limits)	T043G, T043T	Max amount per document, per line, cash discount, payment difference tolerances	COVERED-19	19	Amount limits via OPA policy + settlement tolerances (wave 19)
OBBE / OBXL — Reason codes for payment differences / accounts	T053R, T030	Charge off, residual, disputes	COVERED-30	30	Reason codes on cash application
OBD2 — Customer account groups / OBD3 — Vendor account groups	T077D, T077K	Number range, field status, one-time account	COVERED-7	7	Party role groups, field attributes; one-time vendors/customers — see §13.2
OBXU / OBXI — Cash discount received/granted accounts	T030	Net/gross method	COVERED-19	19	—
OBXK / OBXB — Bank charges / bank sub-accounts	T030	—	COVERED-36	36	Bank posting profiles
OBYP — GR/IR clearing accounts	T030	WRX	COVERED-18	18	—
OBXM / OBXO / OBXW — Retained earnings-related: acquisition/retirement, rounding, over/under payments	T030	—	COVERED-19	19	Rounding and payment difference accounts
OBA0 — Tolerance groups for G/L accounts (clearing)	T043S	—	PARTIAL-11	11	GL OI gap
OB32 — Document change rules	TBAER	Which fields editable after posting	COVERED-11	11	Field-level edit rules post-posting
OB46 — Interest indicators / OB82 / OBAA	T056*	Balance interest, item interest, calendar type	GAP	propose 30	Interest engine (see F.52)
OBD5 / Define sort keys (allocation field)	TZUN	Assignment field fill rule	SUPERSEDED-11	11	Sort/assignment via configurable reference fields and saved views
OBR1 / OBR2 / OBR3 — Reset transaction data / delete master data / delete customer-vendor	—	Test-client tooling	SUPERSEDED-1	1	Environment reset through pipeline/tenant provisioning
FINSC_FIELDSTATUS / Define field status for ledger (S/4)	—	—	COVERED-3	3	Metadata
OB74 — Additional rules for automatic clearing	TF123	Criteria fields per account type/range	PARTIAL-11	11	GL OI gap (AP/AR criteria covered by settlement rules)
OBB1 / OBB2 — Define accounts for bank interest / tax on cash discount	T030	—	COVERED-13	13	—
SNUM / SNRO (FI number range objects)	NRIV	RF_BELEG, etc.	COVERED-5	5	Number sequences
OBBG — Assign country to tax calculation procedure	T005	TAXUSJ, TAXUSX, TAXEUR…	COVERED-13	13	Jurisdiction hierarchy per country
OBH1 — Copy number range intervals to fiscal year	NRIV	—	COVERED-5	5	Year-dependent sequences
Define Reasons for Reversal (OB_REVERSE / T041C)	T041C	Negative posting allowed, alternative posting date	COVERED-11	11	Reversal reason codes
FAGL_CL_RGRP / Define sort method & adjustment accounts for regrouping	T043/ T030	Remaining term intervals	GAP	propose 14	FAGLF101 gap
Define Posting Keys for Clearing (OBXH etc.)	T030	—	SUPERSEDED-11	11	No posting keys
OBD4 → "Define Screen Layout per Company Code"	T001	—	COVERED-3	3	—

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
Cost of sales accounting: functional areas (OKBD), activate (FAGL_FUNC_AREA)	TFKB, T001	—	PARTIAL-11	11	Functional area dimension + derivation rules (substitution gap)
Define Business Areas (OX03) / Consolidation business areas	TGSB, TGSBK	—	COVERED-6	6	Dimension values
Profit center: standard hierarchy, dummy PC (KCH1/KE59 — see CO-PA)	CEPC, SETHEADER	—	COVERED-6	6	Profit center as dimension with hierarchy purposes

13.2 FI-AP — Accounts Payable

SAP context: vendor master (LFA1/LFB1/LFM1, replaced by Business Partner with FLVN00/FLVN01 roles in S/4), invoices and credit memos (FB60/FB65 or MIRO for PO-based), open items (BSIK/BSAK), payment program F110, dunning (rare for AP), down payments, withholding tax. Passage maps vendor master to wave 7 (party model), non-PO invoices to wave 18 (capture) and open items/payments to wave 19.

13.2.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
XK01 / XK02 / XK03 (→ BP)	Vendor master create/change/display centrally	General, company-code and purchasing data	COVERED-7	7	Party + Vendor role + per-legal-entity and per-purchasing-org data
FK01 / FK02 / FK03	Vendor master (accounting)	Company-code segment only	COVERED-7	7	Vendor role, legal-entity scope
MK01 / MK02 / MK03	Vendor master (purchasing)	Purchasing-org segment	COVERED-7	7	Vendor role, purchasing scope; see MM-PUR
XK05 / XK06 / FK05 / FK06	Block / mark for deletion	Posting/payment/purchasing blocks	COVERED-7	7	Role status and block flags with approval
XK07	Change account group	Reassign vendor group	COVERED-7	7	Group change under governance workflow
XK99 / MASS (LFA1)	Mass maintenance vendor	Mass change	COVERED-5	5	Grid mass edit
BP (role FLVN00/FLVN01)	Business partner — vendor roles (S/4)	Unified BP	COVERED-7	7	Native model
CVI_FS_CHECK_CUSTOMIZING / MDS_LOAD_COCKPIT	Customer-vendor integration synchronization	ECC → S/4 BP sync	SUPERSEDED-7	7	One party model, no sync
One-time vendor (account group CPD)	One-time accounts with address on document	Ad-hoc payee	PARTIAL-7	7	Not named in wave 7; add "one-time party" role with document-level address capture
FK08 / FK09	Confirm vendor master changes (dual control)	Sensitive-field dual control	COVERED-7	7	Change approval workflow on master data (bank details, payment terms)
FB60	Enter vendor invoice (non-PO)	Single-screen AP invoice	COVERED-18	18	Manual invoice capture without PO
FB65	Enter vendor credit memo	—	COVERED-19	19	Vendor credit notes
F-43 / F-41	Enter vendor invoice / credit memo (classic)	Posting-key based	SUPERSEDED-18	18	Single invoice form
FV60 / FV65	Park vendor invoice / credit memo	Draft for approval	COVERED-18	18	Invoice draft + approval workflow
FBV0	Post parked document	—	COVERED-18	18	—
F-48	Vendor down payment	Special G/L down payment posting	COVERED-19	19	Prepayments
F-47	Down payment request	Noted item for F110	COVERED-19	19	Prepayment request on PO/invoice workflow
F-54	Clear vendor down payment	Transfer down payment against invoice	COVERED-19	19	Prepayment application on settlement
F-53 / F-58	Post outgoing payment / with printed form	Manual payment with clearing	COVERED-19	19	Manual payment + settlement; check print
F-44	Clear vendor	Account clearing without payment	COVERED-19	19	Settlement without payment (credit vs invoice)
F-51	Post with clearing (transfer)	Transfer with clearing	COVERED-19	19	—
F-40 / F-36 (AP side: FBW6)	Bill of exchange payment (AP)	Bills of exchange payable	GAP	propose 36	Bills of exchange (AP and AR) are not in any wave; relevant in IT/ES/FR/JP/BR; propose as a wave 36 (bank) option or defer to a localization v1.x pack under wave 48 — needs a decision
FB10	Invoice/credit memo fast entry	Multi-document fast entry	COVERED-18	18	Grid entry / import
FBL1N (as document finder)	—	—	COVERED-19	19	—
FCHN / FCH5 / FCH6	Check register / create manual check / change check info	Check management	COVERED-36	36	Check management (void/reprint), check register
FCH7 / FCH8 / FCH9	Reprint / cancel payment + check / void check	—	COVERED-36	36	—
FCHR / FCHT	Online cashed checks / assign checks to payments	—	COVERED-36	36	Bank statement cashed-check matching
FCHU / FCHX	Create reference for check / check extract (positive pay)	Positive pay file	COVERED-19	19	Positive pay export
F110 (document side: payment documents)	—	—	COVERED-19	19	—
FBZ5	Print check for payment document	—	COVERED-19	19	Check printing
FB03 (vendor doc)	Display document	—	COVERED-19	19	—
FBD1 (vendor recurring)	Recurring vendor invoice	—	COVERED-11	11	Recurring journal with vendor lines

T-code	Name	Purpose	Passage status	Wave	Notes
J1INCHLN / J1INBANK / J1INCERT (IN WHT)	Withholding tax challan / bank challan / certificate (India)	Country-specific WHT remittance	PARTIAL-13	13	Withholding engine + 26AS hooks named; Indian TDS challan/certificate flows belong to the IN country pack (wave 48) — partial until pack ships
S_P00_07000134 / RFIDYYWT	Generic withholding tax reporting (1099, DME)	Statutory WHT reporting	COVERED-13	13	1099 reporting hooks (year-end forms in wave 43 share structures)
FIBLFFP / F111	Payment request / payment program for payment requests	Treasury payment requests outside AP	PARTIAL-36	36	Payment requests from treasury (not vendor items) not named; add to wave 36 in-house banking
VIM (OpenText) / Fiori: Manage Supplier Invoices / Upload Supplier Invoices	AP automation	OCR capture, approval	COVERED-18	18	OCR/AP automation adapter
Ariba Network invoice	Supplier-submitted invoice	—	COVERED-20	20	Supplier portal invoice submission

13.2.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
FBL1N / FBL1H	Vendor line items / line item browser	COVERED-19	19	Vendor open/cleared item inquiry
FK10N / FK10NA	Vendor balance display	COVERED-19	19	Vendor balance with drill
S_ALR_87012077	Vendor information system	COVERED-46	46	Vendor analytics
S_ALR_87012078	Due date analysis for open items	COVERED-19	19	Aging
S_ALR_87012082	Vendor balances in local currency	COVERED-19	19	—
S_ALR_87012083	List of vendor open items for printing	COVERED-19	19	—
S_ALR_87012084	Open items — vendor due date forecast	COVERED-36	36	Cash forecast input
S_ALR_87012085	Vendor payment history	COVERED-19	19	—
S_ALR_87012086	Vendor list	COVERED-7	7	—
S_ALR_87012087	Address list	COVERED-7	7	—
S_ALR_87012089	Display changes to vendors	COVERED-5	5	Audit viewer
S_ALR_87012090	Display/confirm critical vendor changes	COVERED-7	7	Dual-control queue
S_ALR_87012093	Vendor business (purchasing volume)	COVERED-46	46	—
S_ALR_87012103	List of vendor line items	COVERED-19	19	—
S_ALR_87012104	Vendor open items (OI list)	COVERED-19	19	—
S_ALR_87012105	List of down payments open at key date	COVERED-19	19	Prepayment report
S_P99_41000099	Payment list (F110)	COVERED-19	19	Payment run output

13.2.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
F110	Automatic payment program (proposal, edit, schedule, print)	COVERED-19	19	Payment proposal → approval → run → media; idempotent
F110S	Payment program scheduled (batch variant)	COVERED-19	19	Scheduled via wave 4 jobs
F111	Payment program for payment requests	PARTIAL-36	36	See payment requests
FBPM / FBPM1	Payment medium workbench (PMW) run / DME engine	COVERED-19	19	ISO 20022 pain.001, NACHA, check files
DMEE / DMEE1	DME engine format tree maintenance	SUPERSEDED-19	19	Format adapters (ISO 20022, NACHA) + wave 48 electronic reporting designer for new formats
FDTA	DME administration (download files)	COVERED-19	19	Payment file vault with audit (keys never leave Vault — wave 36)
SAPF110V (F110 proposal log)	Payment proposal log	COVERED-19	19	—
FBZ0	Edit payment proposal (display/change)	COVERED-19	19	—
F150 (AP dunning)	Dunning vendors (debit balances)	PARTIAL-30	30	Dunning covers customers; dunning vendors with debit balances is an edge case — reuse engine
FAGL_FC_VAL (AP)	FX valuation of vendor open items	COVERED-12	12	—
FAGLF101 (AP)	Regroup vendors with debit balances	GAP	propose 14	Reclassification gap
F.98	Vendor balance confirmation	GAP	propose 19	Balance confirmations gap
MRRL (ERS — see MM-IV)	Evaluated receipt settlement	COVERED-18	18	—
J1INCHLN run / withholding tax remittance	WHT payment to authority	COVERED-13	13	Tax settlement for withholding
S_P00_07000134 (year-end 1099 run)	1099 generation	COVERED-13	13	—

T-code	Name	Passage status	Wave	Notes
F.07 (AP)	Carry forward vendor balances	COVERED-14	14	—
FBWE (AP bill of exchange presentation)	Bill of exchange presentation	GAP	propose 36	Bills gap
Fiori: Schedule Accounts Payable Jobs	Job templates (payment proposal, correspondence)	COVERED-4	4	Job framework
Fiori: Manage Automatic Payments	S/4 payment run app	COVERED-19	19	—
FPAYM / FBPM payment advice	Payment advice generation (REMADV)	COVERED-19	19	Vendor payment advice email/portal
F.64 (AP correspondence)	Correspondence: maintain / print	PARTIAL-19	19	Correspondence types (account statement, payment notice) only partially named (payment advice) — define correspondence framework (templates + triggers) on wave 46 document designer

13.2.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OBD3 — Vendor account groups / field status	T077K	Number range, one-time, field status	COVERED-7	7	—
XKN1 / OBAS — Number ranges for vendor accounts / assign	NRIV, T077K	Internal/external	COVERED-5	5	—
OBB8 — Terms of payment (vendors)	T052	—	COVERED-7	7	—
FBZP — Payment program configuration: all company codes, paying company codes, payment methods per country, per company code, bank determination (ranking, bank accounts, available amounts, value date), house banks	T042, T042A, T042B, T042D, T042E, T042I, T042Z, T042V	Payment method classification (check/transfer/bill), min/max amounts, foreign payments allowed, form/DME program, optimization by bank group/postal code, bank selection ranking	COVERED-19	19	Payment methods, bank ranking and limits per legal entity; house banks in wave 36
FI12 / FI13 — House banks and bank accounts	T012, T012K	Bank key, account id, G/L account, currency	COVERED-36	36	Bank account master (BAM)
OBPM1 / OBPM2 / OBPM3 / OBPM4 — Payment medium formats / note-to-payee / payment method / selection variants	TFPM*, T042Z*	—	COVERED-19	19	Format adapters
OBYR — Special G/L indicators vendors (down payments, guarantees, BoE)	T074	Reconciliation accounts per SGL	PARTIAL-19	19	Down payments yes; BoE no
OBXT / OBA3 — Tolerances for vendors / payment differences	T043G	Residual, charge-off limits	COVERED-19	19	Settlement tolerances
OBA4 — Tolerance groups for employees (posting limits)	T043T	Max amount per doc/line/discount	COVERED-2	2	OPA policy on amounts
Define withholding tax types / codes / assign to company code (extended WHT)	T059P, T059Z, T001WT	Invoice/payment time, base, rates, exemptions, certificates, accumulation	COVERED-13	13	Withholding engine
Classic withholding tax (OBCS / T059Q)	T059Q	—	SUPERSEDED-13	13	Extended model only
OBZT — Tax codes allowed in FB60/FB70	T007V	Per transaction	COVERED-13	13	Allowed tax codes per document type
OBCL — Default tax code for non-taxable transactions	T001	—	COVERED-13	13	—
OB71 — Define reason codes for payment block / OB27	T008	Block for payment, manual/automatic	COVERED-19	19	Payment holds
OBB9 — Installment terms	T052R	—	PARTIAL-7	7	Installment gap
Define alternative payee / permitted payee (BP role)	LFA1-LNRZA, LFZA	—	COVERED-7	7	Alternate payee on vendor role
Define correspondence types / forms (OB77, OB78, OB79)	T048, T048B	—	PARTIAL-19	19	Correspondence framework gap
Define payment advice forms (SAPscript/PDF)	—	—	COVERED-19	19	Payment advice templates; wave 46 designer
Check lots (FCHI) / check number ranges	PCEC	Lot per house bank/account	COVERED-36	36	Check lots
OBYP / OBA7 (vendor doc types KR, KG, KZ, KA)	T003	—	COVERED-11	11	Document types
Define sensitive fields for dual control (S_ALR_87003378 / T055F)	T055F	Fields requiring confirmation	COVERED-7	7	Change approval on sensitive fields
OBXS — Down payment request accounts	T030	—	COVERED-19	19	—
Define vendor activity groups (no) — Define payment block reasons	T008	—	COVERED-19	19	—
Evaluated receipt settlement defaults (vendor master ERS flag, OMRR)	LFM1	—	COVERED-18	18	—
OBXF — Posting keys for AP (OBXK group)	TBSL	—	SUPERSEDED-11	11	—
OBD3 "one-time account"	T077K	—	PARTIAL-7	7	One-time party gap
Define intercompany vendor/customer clearing (OBYA)	T001U	—	COVERED-40	40	—
Bank-to-bank transfers (payment request types, FIBL)	—	—	PARTIAL-36	36	Payment requests gap

13.3 FI-AR — Accounts Receivable

SAP context: customer master (KNA1/KNB1/KNVV → BP roles FLCU00/FLCU01), customer invoices via SD billing (VF01 → RV document) or FB70, incoming payments (F-28), lockbox (FLB2), dunning (F150), correspondence, interest calculation, credit management (classic FD32 or FSCM-CR). Passage: customer master wave 7, billing wave 29, AR/cash application/collections wave 30, credit wave 27.

13.3.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
XD01 / XD02 / XD03 (→ BP)	Customer master centrally	General, company-code, sales-area data	COVERED-7	7	Party + Customer role + sales-scope data
FD01 / FD02 / FD03	Customer master (accounting)	Company-code segment	COVERED-7	7	—

T-code	Name	Purpose	Passage status	Wave	Notes
VD01 / VD02 / VD03	Customer master (sales)	Sales-area segment	COVERED-7	7	Sales-scope role data (see SD)
XD05 / XD06 / FD05 / FD06 / VD05 / VD06	Block / flag for deletion	—	COVERED-7	7	—
XD07	Change customer account group	—	COVERED-7	7	—
XD99 / MASS (KNA1)	Mass maintenance customers	—	COVERED-5	5	—
FD08 / FD09	Confirm critical customer changes	Dual control	COVERED-7	7	—
FD32 → UKM_BP / UKM_MY_DCDS	Customer credit management master	Credit limit, risk category, blocks	COVERED-27	27	Credit limits, aging-based rules, risk scoring (wave 30)
FD24 / FD33	Credit management changes / display	—	COVERED-27	27	—
FB70	Enter customer invoice (FI, non-SD)	Direct AR invoice	COVERED-29	29	Free-text invoice
FB75	Enter customer credit memo	—	COVERED-29	29	Credit notes
F-22 / F-27	Customer invoice / credit memo (classic)	—	SUPERSEDED-29	29	Single invoice form
FV70 / FV75	Park customer invoice / credit memo	—	COVERED-29	29	Draft + approval
F-28	Post incoming payment	Manual cash application with clearing	COVERED-30	30	Manual cash application
F-26	Incoming payment fast entry	—	COVERED-30	30	—
F-29	Customer down payment	—	COVERED-30	30	Customer prepayments (deposit on order)
F-37	Customer down payment request	—	COVERED-27	27	Deposit request on order
F-39	Clear customer down payment	—	COVERED-30	30	—
F-30 / F-32	Post with clearing / clear customer	—	COVERED-30	30	Settlement without payment
F-34 / F-36 / F-33	Bill of exchange payment / discount (AR)	—	GAP	propose 36	Bills of exchange gap
FBE1 / FBE2 / FBE3	Payment advice create/change/display	Remittance advices for matching	COVERED-30	30	Remittance advice ingestion and matching
FBE6	Delete payment advices	—	COVERED-30	30	—
FLB1 / FLB2	Postprocess lockbox / import lockbox file (BAI2)	Lockbox	COVERED-30	30	Lockbox BAI2
FEBA_LOCKBOX	Postprocess lockbox (New)	—	COVERED-30	30	—
F-21 / F-30	Transfer posting (customer)	—	COVERED-30	30	—
FDM1 / UDM_DISPUTE	Create dispute case (FSCM-DM)	—	COVERED-30	30	Disputes workflow
F.27 (document side)	Account statement (periodic correspondence)	—	COVERED-30	30	Customer statements
FBL5N (document finder)	—	—	COVERED-30	30	—
FB12 / F.61 / F.64	Request / print correspondence	Correspondence requests	PARTIAL-30	30	Statements and dunning named; general correspondence framework (payment notices, individual letters, open item lists) only partial
F.2A / F.2B	Interest calculation (customer items) run	—	COVERED-30	30	Interest notes
VKM1 / VKM4 / VKM3	Release blocked SD documents (credit)	Credit release	COVERED-27	27	Credit hold release workflow
BP (FLCU00/FLCU01)	Customer roles in BP (S/4)	—	COVERED-7	7	—
Fiori: Manage Customer Line Items / Post Incoming Payments / Reprocess Bank Statement Items	S/4 AR apps	COVERED-30	30	—	
Biller Direct (FSCM-BD)	Customer self-service for invoices/payments	—	SUPERSEDED-30	30	Customer portal with payment adapter

13.3.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
FBL5N / FBL5H	Customer line items / browser	COVERED-30	30	—

F.28 / FD24 mass	Reset credit limit data / recalculate	COVERED-27	27	—
UDM_BP_PROF / UDM_GENWL	Generate collections worklist (FSCM-COL)	COVERED-30	30	Worklist generation
F110 (customer direct debits)	Direct debit run (SEPA SDD)	COVERED-30	30	Customer direct debit via payment adapter / pain.008 — confirm pain.008 is in wave 19 formats (wave 19 lists pain.001 only)
FDTA (DD)	DME admin for direct debits	COVERED-19	19	—
SEPA mandate management (FSEPA_M1..M4)	Mandates	PARTIAL-30	30	SEPA direct-debit mandates not named; required for EU customers paying by direct debit — add mandate entity to wave 30
VF44 / VF45 (see SD)	Revenue recognition run (classic)	COVERED-29	29	—
FBWD / FBWE (AR BoE)	Bill of exchange presentation	GAP	propose 36	Bills gap
Fiori: Schedule Accounts Receivable Jobs	Job templates (dunning, statements, interest)	COVERED-4	4	—

13.3.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OBD2 — Customer account groups / field status	T077D	—	COVERED-7	7	—

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
XDN1 / OBAR — Number ranges customers / assign	NRIV, T077D	—	COVERED-5	5	—
OBB8 — Terms of payment (customers)	T052	—	COVERED-7	7	—
OBXR — Special G/L customers (down payments, security deposits, BoE)	T074	—	PARTIAL-30	30	BoE gap
OBA3 — Customer tolerances	T043G	—	COVERED-30	30	—
FBMP — Dunning procedures (levels, intervals, charges, min amounts, grace days, forms)	T047*, T047A..T047M	Dunning levels 1–9, dunning charges by amount, interest indicator, print parameters, dunning by dunning area	COVERED-30	30	Dunning levels + letters
OBL6 / OB61 — Dunning areas / block reasons	T047M, T040S	—	COVERED-30	30	—
OB46 / OB82 / OB83 — Interest indicators, calculation types, reference rates	T056*, T056P, T056R	Item/balance interest, calendar, rounding	COVERED-30	30	AR interest; GL interest is a gap
OB45 — Credit control areas (classic)	T014	Credit limit currency, update group, risk categories	SUPERSEDED-27	27	FSCM-style credit segments modeled as credit profiles per legal entity/group
OVA8 — Automatic credit control (SD)	T691F	Static/dynamic check, horizon, open orders/deliveries, reactions	COVERED-27	27	Credit rules (limit, aging, dynamic horizon)
OB01 — Risk categories / OVFL credit groups	T691A, T691B	—	COVERED-27	27	—
UKM_* FSCM credit customizing (credit segments, rules, scoring formulas, BRF+ rules)	UKMCRED_SGM*, UKM_*	Score formulas, limit rules, check rules per segment	COVERED-27	27	Credit profiles + scoring (wave 30)
UDM_* collections customizing (collection strategies, segments, profiles, priorities, worklist rules)	UDM_*	Strategy rules (BRF), priorities, groups	COVERED-30	30	Collection strategies
UDM_* dispute case customizing (case types, attributes, status, reasons, RMS)	SCMG_*	—	COVERED-30	30	Disputes
OBB9 — Installment terms (customers)	T052R	—	PARTIAL-7	7	Installment gap
OB10 / Lockbox control (OBAY, OBAX)	T049A, T049B, T049L	Lockbox destination, BAI format, posting rules	COVERED-30	30	—
OBXL / OBBE — Payment difference reason codes and accounts	T053R, T030	—	COVERED-30	30	—
Define payment advice types / notes to payee (OBBE)	T053	—	COVERED-30	30	—
Define correspondence types (OB77) / periodic account statements	T048	—	PARTIAL-30	30	Correspondence framework gap
SEPA mandate customizing	SEPA_*	—	PARTIAL-30	30	Mandate gap
Define alternate payer / head office–branch	KNA1-KNRZE, KNB1	Head office/branch accounting	PARTIAL-7	7	Head-office/branch (invoice to branch, pay from HQ) not named in wave 7 party roles — add "bill-to/pay-from parent" relationship
OBYR (customer side) sales/FI account determination — see VKOA	T030, C001..	—	COVERED-29	29	Revenue account determination
Define reason codes for credit holds (OVA8/OVAK)	T691*	—	COVERED-27	27	—
OB38 — Assign credit control area to company code	T001	—	SUPERSEDED-27	27	—
Define cash discount base, tax on discount (OBY6)	T001	—	COVERED-13	13	—
Define dunning forms (SAPscript F150_DUNN_01)	—	—	COVERED-30	30	Letter templates; wave 46 designer

13.4 FI-AA — Asset Accounting

SAP context: asset classes, charts of depreciation with depreciation areas (book, tax, group, IFRS), asset master (ANLA/ANLB/ANLC), transactions (acquisition ABZON/F-90, retirement ABAVN/F-92, transfer ABUMN, post-capitalization ABNAN, write-up ABZU, manual depreciation ABMA, unplanned ABAA), depreciation run AFAB (S/4: FAA_DEPRECIATION_POST), year-end AJAB/AJRW (S/4: FAA_CMP), AuC settlement AIAB/AIBU, asset history sheet. Passage: wave 37 with books ≈ depreciation areas and posting to the universal journal per ledger group.

13.4.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
AS01 / AS02 / AS03	Asset master create/change/display	Asset with depreciation areas, time-dependent data, origin	COVERED-37	37	Asset master with books
AS11 / AS12 / AS13	Asset sub-number create/change/display	Component sub-assets	COVERED-37	37	Sub-assets / components
AS21 / AS22 / AS23	Group asset create/change/display	Group depreciation (US tax)	PARTIAL-37	37	Group assets (depreciate at group level, e.g. ADR) not named in wave 37 — add to tax book features
AS05 / AS06 / AS25 / AS26	Block / delete asset / block group asset	—	COVERED-37	37	—
AS91 / AS92 / AS93 / AS94	Legacy asset data transfer (create/change/display old asset, sub-number)	Opening NBVs	COVERED-49	49	Fixed-asset migration pack; wave 37 demo migration

T-code	Name	Purpose	Passage status	Wave	Notes
AS100	Legacy data transfer via Excel	—	COVERED-10	10	Migration framework + Excel import
ABZON / F-90	Acquisition with automatic offsetting entry / from vendor (AP)	Acquisition	COVERED-37	37	Acquisition from AP invoice
ABZP / ABZE	Acquisition from affiliated company / in-house production	—	COVERED-37	37	From intercompany (wave 40) and from production/project
ABSO	Miscellaneous transactions (transaction type driven)	Generic asset posting	COVERED-37	37	Transaction type model
ABUMN / ABUML	Transfer within company code / to another asset class	Intra-company transfer	COVERED-37	37	Transfer
ABT1N	Intercompany asset transfer	Cross-entity transfer with NBV/gross methods	COVERED-40	40	Intercompany asset transfer via wave 40 IC + wave 37
ABAVN / F-92 / ABAON	Retirement by scrapping / with customer (sale) / sale without customer	Disposals	COVERED-37	37	Disposal (sale/scrap) with gain/loss
ABNAN	Post-capitalization	Capitalize in a later year	COVERED-37	37	Adjustment transactions
ABZU	Write-up	Reverse excess depreciation	COVERED-37	37	—
ABAA	Unplanned depreciation	Impairment-like manual posting	COVERED-37	37	Impairment
ABMA	Manual depreciation	—	COVERED-37	37	—
ABMR	Manual transfer of reserves	Special reserves (German HGB)	OUT-OF-SCOPE	—	Special-reserve accounting (Sonderposten) is a DE localization topic; revisit with the DE country pack
ABAW	Balance sheet revaluation	Revaluation (IAS 16)	COVERED-37	37	Revaluation transaction
ABGF / ABGL	Credit memo in invoice year / in following year	Acquisition credit	COVERED-37	37	—
AB08	Reverse asset document	—	COVERED-37	37	Reversal
AIAB / AIBU / AIST	AuC settlement rule / settlement / reverse	Assets under construction	COVERED-37	37	CIP / under-construction from projects (wave 41 feeds)
OASV	Post balances to asset accounts (data transfer)	Data transfer reconciliation	COVERED-49	49	Migration reconciliation
AW01N	Asset Explorer	Values, transactions, parameters per area	COVERED-37	37	Asset inquiry with per-book values
ASKB / ASKBN	Periodic APC posting (non-leading areas)	Post values of areas that don't post real-time	COVERED-37	37	Multi-book posting to ledger groups
ABST / ABST2	Reconciliation FI-AA vs. G/L	—	COVERED-37	37	Asset subledger reconciles to GL automatically
OAMK	Change reconciliation accounts (asset)	Setup	COVERED-37	37	—
AS08	Asset number ranges	—	COVERED-5	5	—
Fiori: Manage Fixed Assets / Post Acquisition / Post Retirement / Transfer Asset	S/4 apps	COVERED-37	37	—	
RE-FX: RECN / RECECN (lease contracts, IFRS 16 valuation)	Contract and lease management	Lease accounting	COVERED-37	37	IFRS 16 / ASC 842 schedules, ROU asset & liability
RE-FX: REISCN / RERAPP / RERAPL	Lease contract lists / periodic posting / planned-record list	—	COVERED-37	37	Lease schedules and postings
RE-FX real estate objects (business entity, building, rental object, rental contracts)	Real estate management	Property management	OUT-OF-SCOPE	—	Real-estate management (tenancy, service charge settlement) is beyond the manufacturer scope; only the lease-accounting part is in wave 37
Asset barcode inventory (AIS / third-party)	Physical asset inventory	—	COVERED-37	37	Barcode physical inventory with reconciliation
Insurance values (asset master tab, S_ALR_87011951)	Insurance values / indexing	—	PARTIAL-37	37	Insurance values and index series not named — add to asset master

13.4.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
S_ALR_87011990	Asset history sheet	COVERED-37	37	Asset roll-forward by class/book

S_ALR_87010127 / 87010129 (US: form 4562 / mid-quarter)	Tax depreciation reports	PARTIAL-37	37	MACRS tables yes; IRS Form 4562 layout belongs to the US pack (wave 48)
AR01 / AR02 / AR03 / AR11	Asset balances / history sheet / depreciation list / mid-year listing (ad hoc)	COVERED-37	37	—
AR31 / AR32	Mass change of assets (worklist execute/display)	COVERED-5	5	Mass edit
Fiori: Asset Balances / Asset History Sheet / Depreciation Lists / Asset Transactions	S/4 apps	COVERED-37	37	—

13.4.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
AFAB / AFABN / FAA_DEPRECIATION_POST (S/4)	Depreciation posting run (planned, repeat, restart, unplanned)	COVERED-37	37	Depreciation run per book with restart safety (Temporal)
AFAR	Recalculate depreciation	COVERED-37	37	Recalc after parameter change
AFBP	Display depreciation posting log	COVERED-37	37	—
AJRW	Fiscal year change (open new year)	SUPERSEDED-37	37	No explicit year open; values projected per period; year-end close via wave 14 checklist
AJAB / FAA_CMP (S/4)	Year-end closing asset accounting / close fiscal year	COVERED-14	14	Close checklist task with asset-period lock
OAAQ / OAAR	Reverse year-end closing / per area	COVERED-14	14	Controlled reopen with audit
ASKB / ASKBN	Periodic posting of non-leading depreciation areas	COVERED-37	37	—
AIAB / AIBU (periodic)	AuC settlement run	COVERED-37	37	—
ABST2	FI-AA / G/L reconciliation	COVERED-37	37	Automated daily
AR29 / AR29N	Revaluation / index-based revaluation and new valuation	COVERED-37	37	Revaluation
J1AI / country inflation accounting (AJ)	Inflation accounting	OUT-OF-SCOPE	—	Hyperinflation (IAS 29) country functions deferred beyond first country packs
RASIMU02 (depreciation simulation)	Simulation / forecast	COVERED-37	37	—
RERAPP (RE-FX)	Periodic lease posting run	COVERED-37	37	—
Fiori: Schedule Asset Accounting Jobs	Job templates	COVERED-4	4	—

13.4.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
EC08 / OAOB — Copy reference chart of depreciation / assign company code	T093C, T093	—	COVERED-37	37	Books template per country
OADB / OABC / OABD — Depreciation areas: define, area type, transfer of APC/depreciation terms	T093, T093A	Real/derived area, posting to G/L (0/1/2/3/4), ledger group, currency, value takeover rules	COVERED-37	37	Books (tax/IFRS/local) posting to ledger groups; derived books (delta) — treat as covered
OAYZ / OAYR — Asset class default depreciation / posting rules (periodic/monthly)	T093B	Depreciation key, useful life per class and area; posting cycle	COVERED-37	37	Asset class defaults, posting cycle
OAOA — Asset classes	ANKA, ANKB	Account determination, number range, screen layout, AuC flag, low-value asset flag, history	COVERED-37	37	Asset groups/classes
AO90 — Account determination (APC, acc. depreciation, expense, gain/loss, revaluation, AuC)	T095, T095B	Per area and account determination key	COVERED-37	37	Asset posting profiles
AO21 / AO25 / AO71 — Depreciation keys, methods (base, declining, multi-level, period control), maximum amount, cut-off value	T090*, T090NA, T090NAZ, T090NP, T090NR	Base methods (SL, DB, units of production), multi-level, period control (fiscal year start, mid-month, half-year), changeover methods, shutdown, scrap value	COVERED-37	37	Depreciation profiles + conventions (half-year, mid-month, mid-quarter) incl. MACRS tables
OAVH / OAVS — Period control / calendar assignment	T090NP, T090NV	—	COVERED-37	37	Conventions
AO73 / AO74 / AO76 — Transaction types, transaction type groups	TABW, TABWG	Debit/credit, retirement w/ revenue, capitalization, history sheet group	COVERED-37	37	Transaction type model
OAYK — Low-value asset limits per area	T093B	Maximum LVA amount, quantity LVA	COVERED-37	37	LVA threshold rules

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OAYE / OAYF — Legacy data transfer date / last period posted	T093C	—	COVERED-49	49	Migration parameters
OA79 / OA80 — Asset history sheet versions / groups	T082A, T082B, T082C	—	COVERED-37	37	Roll-forward report definition
AO11 — Number range assets	NRIV	—	COVERED-5	5	—
AO21 / OA77 — Screen layout rules for asset master / depreciation areas	T082G, T082H	Field status, maintenance level (class/main/sub)	COVERED-3	3	Metadata field attributes
OAYR intervals — Specify intervals and posting rules (AFAB period)	T093D	Smoothing vs catch-up	COVERED-37	37	Catch-up / smoothing option
OABN / OABW — Area for revaluation / unplanned depreciation allowed	T093A	Which transaction types allowed per area	COVERED-37	37	—
OAV8 / OAVA — Asset evaluation groups / environmental protection indicators / asset locations	T087, T499S	Reporting attributes	COVERED-37	37	Classification attributes on asset; site/location dimensions (wave 6)
OAYM / OAAX — Group assets per area	T093A	Group asset areas	PARTIAL-37	37	Group asset gap
OAVI / OAVF — Insurance types, companies, index series	T086, T094	—	PARTIAL-37	37	Insurance gap
OAOA AuC settings — Asset under construction: settlement profile, line-item settlement	T093	—	COVERED-37	37	—
RE-FX IMG: contract types, valuation rules (IFRS 16/ASC 842), accounting principles, condition types, posting rules	TIVRA*, VICN*	Lease classification, discount rate, IBR	COVERED-37	37	Lease parameters
Parallel valuation: ledger approach vs accounts approach (FAA_CMP settings)	T093, FINSC_LEDGER	—	COVERED-37	37	Ledger-group approach only
Depreciation keys for tax (MACRS, ADS) tables	T090*	—	COVERED-37	37	MACRS tables

13.5 FI-BL / FSCM-CM / BAM — Bank Accounting, Cash Management & Bank Account Management

SAP context: house banks (FI12 → Bank Account Management in S/4 with workflow), electronic bank statement (FF_5/FEBA/FEBAN; S/4: Manage Bank Statements), manual statement (FF67), check deposit (FF68), cash position/liquidity forecast (FF7A/FF7B; S/4 Cash Management "One Exposure" FQM), memo records (FF63), bank communication management (BCM), in-house cash (IHC), cash journal. Passage: wave 36, with bank-side AR/AP matching in waves 19/30.

13.5.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
FI01 / FI02 / FI03 / FI06	Bank master (bank key) create/change/display/flag	Bank directory	COVERED-7	7	Bank as party role; bank directory import (SWIFT/ABA)
BAUP	Bank directory upload (file)	Mass bank key import	COVERED-7	7	Import adapter
FI12 / FI12_HBANK / Fiori: Manage Bank Accounts (BAM)	House banks and bank accounts	Bank account master with workflow, signatories	COVERED-36	36	Bank account master with signatories and approval
BAM: bank account review, signatory, overdraft limit	Bank account governance	—	COVERED-36	36	—
FF67	Manual bank statement entry	—	COVERED-36	36	Manual statement entry
FF_5 / FF.5	Import electronic bank statement (MT940, BAI2, camt.053)	EBS import	COVERED-36	36	camt.053/BAI2/MT940 import
FEBA / FEBAN / FEBA_BANK_STATEMENT	Postprocess bank statement	Fix unmatched items	COVERED-36	36	Reconciliation exception queue
FEBP	Post bank statement (batch)	—	COVERED-36	36	—
Fiori: Reprocess Bank Statement Items	S/4	—	COVERED-36	36	—
FF68	Check deposit (manual entry)	Deposit list	COVERED-36	36	Check deposit
FF63 / FF65	Memo records create / list (planned items)	Manual cash plan items	COVERED-36	36	Forecast manual items
FF7A / FF7B → Fiori: Cash Position / Liquidity Forecast	Cash position / liquidity forecast	Treasury daily view	COVERED-36	36	Cash positioning (intraday camt.052) and forecast from AP/AR/payroll/projects
FF/1 / FF/4	Payment advice / planning type management	—	COVERED-36	36	—
FCH* (check management — see FI-AP)	—	—	COVERED-36	36	—
FLB1 / FLB2 (see FI-AR)	Lockbox	—	COVERED-30	30	—
FBCJ	Cash journal	Petty cash	GAP	propose 36	Cash journal gap (see FI-GL)
FRFT / FRFT_B	Repetitive payment codes / bank-to-bank transfer	Treasury transfers	PARTIAL-36	36	Bank-to-bank transfer / payment request gap
BNK_MONI / BNK_APP / BNK_MONIP (BCM)	Bank Communication Management: batch monitor, approve payment batches, payment status	Payment batch approval and status (pain.002)	COVERED-36	36	Bank file audit and approval; pain.002 ingestion (wave 19)

T-code	Name	Purpose	Passage status	Wave	Notes
IHC0 / IHC1IP (In-House Cash)	In-house cash center, IHC accounts, internal payment orders	Intercompany banking	PARTIAL-36	36	"In-house banking basics: netting, cash pooling" named; full IHC (internal accounts, interest, statements for subsidiaries) is partial
Fiori: Bank Statement Monitor	Bank statement monitor (S/4)	—	COVERED-36	36	—
Fiori: Manage Bank Statements / Cash Flow Analyzer	S/4 Cash	—	COVERED-36	36	—
Fiori: Approve Bank Payments / Monitor Payments (Advanced Payment Management)	APM	Payment hub routing	PARTIAL-36	36	Payment approval covered; APM-style central payment hub (route, batch, reformat across entities) only partially (adapters)
Letters of credit / bank guarantees (TRM FTR_CREATE or BL)	Guarantees	—	COVERED-36	36	LC and guarantees named
FBWE / FBWD (bills)	Bill of exchange presentation	—	GAP	propose 36	Bills gap

13.5.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
FF7A	Cash position	COVERED-36	36	—
FF7B	Liquidity forecast	COVERED-36	36	—
FF_6	Display bank statement (electronic)	COVERED-36	36	—
FF.6	Display statement overview	COVERED-36	36	—
FEBA (list mode)	Statement items overview	COVERED-36	36	—

FF.8	Payment advice journal	COVERED-36	36	—
FLQAB / FLQAD (liquidity planner)	Liquidity analysis / actual assignment	COVERED-36	36	Cash flow forecast buckets
FQM_* (One Exposure) / Fiori: Cash Flow Analyzer	Cash flow analysis by liquidity item	COVERED-36	36	—
Fiori: Bank Relationship Overview / Bank Fee Analysis	Bank fees (camt.086)	GAP	propose 36	Bank fee analysis (camt.086) not named; propose as wave 36 report
Fiori: Cash Position Details / Check Cash Flow Items	—	COVERED-36	36	—
BNK_MONI (report mode)	Payment batch status	COVERED-36	36	—

13.5.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
FF_5 (scheduled)	Nightly statement import	COVERED-36	36	Scheduled job
FEBC / FEBP	Batch posting of statements	COVERED-36	36	—
FF67 → FEBA (manual cycle)	Manual statement close	COVERED-36	36	—
FF.D	Delete / archive memo records	COVERED-36	36	—
FLQAC / FLQAD	Liquidity planner assignment run	COVERED-36	36	—
FQM_FLOW_BUILDER (One Exposure rebuild)	Rebuild cash flows	SUPERSEDED-36	36	Forecast projected from events; rebuild = projection rebuild
BNK_BATCH_* (BCM batching job)	Payment batching	COVERED-36	36	—
Bank reconciliation statement (S/4 bank reconciliation)	—	COVERED-36	36	Auto-reconciliation with matching rules + ML
Cash pooling / sweeping run (IHC)	—	PARTIAL-36	36	Basics named
Intercompany netting run (IHC netting)	—	COVERED-36	36	Netting named
F111 (treasury payment requests)	—	PARTIAL-36	36	—
Bank fee statement import (camt.086)	—	GAP	propose 36	—

13.5.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OBXK / FI12 — House banks, accounts, G/L accounts, bank sub-accounts (clearing per payment method)	T012, T012K, T012D	Sub-accounts per payment method (outgoing checks, transfers)	COVERED-36	36	Bank sub-account posting profile
OT83 / OT51 — Electronic bank statement: transaction types, external transaction codes, posting rules, account symbols, assign bank to transaction type	T028B, T028D, T028G, T033*	Posting rule (bank side / subledger side), interpretation algorithms (document number, reference, note-to-payee), BAI/MT940/camt format	COVERED-36	36	Matching rules engine + posting rules
OTPM — Search strings for EBS	T028SS	Regex-like note-to-payee parsing	COVERED-36	36	Matching rules with pattern extraction (ML suggestions)
OT41 / FF/1 — Planning levels / planning groups / cash management account names	T036, T035, T037	Level per G/L and subledger group; forecast groups	COVERED-36	36	Forecast categories/buckets
Liquidity items and derivation rules (FQM / FLQ)	FLQITEM*, FQM_*	Query sequences, derivation from G/L, BP, doc type	COVERED-36	36	Forecast source rules
Define check lots / void reason codes (FCHI / FCHV)	PCEC, TVOID	—	COVERED-36	36	—
Bank chains (FIBC)	TBCHAIN*	Intermediary banks per currency/country	PARTIAL-36	36	Correspondent/intermediary bank chains not named — add to bank connectivity
BCM: rules for batching, approval (release) rules, payment status mapping	BNK_*	Approval patterns (n-eyes), batch rules	COVERED-36	36	Approval workflow for bank files
IHC customizing: IHC centers, accounts, conditions, payment orders	IHC_*	—	PARTIAL-36	36	IHC partial

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
BAM: account types, review process, signatory groups, workflow	FCLM_*	—	COVERED-36	36	—
Cash journal customizing (FBCJC0..3)	TCJ_*	—	GAP	propose 36	—
Bank connectivity (EBICS / SWIFT / Multi-Bank Connectivity settings)	—	—	COVERED-36	36	SFTP/EBICS/Open-Banking adapters; keys in Vault
Lockbox customizing (OBAY/OBAX) — see FI-AR	—	—	COVERED-30	30	—

13.6 FSCM — Credit, Collections, Dispute Management & Treasury (TRM)

SAP context: FIN-FSCM-CR (credit management with scoring/BRF+), FIN-FSCM-COL (collections worklists, strategies), FIN-FSCM-DM (dispute cases on SAP Case Management), FIN-FSCM-BD (Biller Direct), FIN-FSCM-TRM (Treasury & Risk: transaction manager for money market/FX/derivatives/securities, market risk analyzer, hedge management, exposure management). Passage: credit wave 27, collections/disputes wave 30, cash/bank wave 36; TRM largely not covered.

13.6.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
UKM_BP	Credit management business partner (credit profile, segments, limits)	Credit master	COVERED-27	27	Credit profile per customer/credit group
UKM_CASE	Credit limit request / case	Workflow for limit increase	COVERED-7	7	Credit limit change approval (wave 7 governance + wave 27)
UKM_MY_DCDS	Documented credit decisions	Credit decision log	COVERED-27	27	Credit hold release workflow with reasons
UKM_COMMITMENTS	Credit exposure (liability) display	—	COVERED-27	27	—
UDM_DISPUTE	Create/process dispute case	Dispute	COVERED-30	30	Disputes workflow
UDM_SUPERVISOR / UDM_SPECIALIST	Collections supervisor / specialist worklist	Collections	COVERED-30	30	Collections workspace
Promise to pay / customer contacts / notes (collections)	—	—	COVERED-30	30	Promises to pay
Resubmissions (collections)	Follow-ups	—	COVERED-30	30	Follow-up tasks
Create dispute from FBL5N line item	Dispute from line item	—	COVERED-30	30	—
Biller Direct web app	Customer invoice portal	—	SUPERSEDED-30	30	Customer portal
FTR_CREATE / FTR_EDIT / FTR_00	Treasury transaction manager: create financial transaction (money market, FX forward/spot/swap, derivatives, securities, loans)	Deal capture	GAP	propose 36	TRM transaction manager is not in any wave. Manufacturers with FX exposure need at least FX spot/forward deal capture, settlement and valuation; propose a wave 36 "treasury deals (FX, loans, deposits)" extension, with derivatives/securities deferred to v2
TBB1 / TPM10	Post flows / treasury posting	Deal accounting	GAP	propose 36	Follows TRM gap
TPM1 / TPM60	Valuation (key date), amortization, position management	Mark-to-market	GAP	propose 36	—
THMEX (Hedge management & accounting, IFRS 9)	Hedge relationships, effectiveness, hedge accounting postings	Hedge accounting	GAP	propose 36	Hedge accounting per IFRS 9/ASC 815 — v2 candidate; register as gap
Exposure management (raw exposures, TEM)	Exposure capture from AP/AR/forecast	—	GAP	propose 36	FX exposure from open items is derivable from waves 12/36 data; deal side missing
Market Risk Analyzer / Credit Risk Analyzer	VaR, limits	—	OUT-OF-SCOPE	—	Market/credit risk analyzers are bank-grade treasury; beyond manufacturer v1
TBDM market data import (rates, prices)	Market data management	—	PARTIAL-12	12	Exchange-rate providers covered; interest curves/security prices not
Loans management (FN*, CML)	Loan contracts	—	GAP	propose 36	Intercompany and bank loans: schedules + interest; propose minimal loan contract in wave 36
Commodity management (CPE, commodity pricing engine)	Commodity pricing in MM/SD	—	OUT-OF-SCOPE	—	Commodity derivatives/pricing engine not in v1; price-index-based condition could be done via pricing engine (wave 26) later

13.6.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
UKM_LOGS_DISPLAY	Credit check logs	COVERED-27	27	—
UKM_MALUS_DSP	Score/limit history	COVERED-30	30	—

13.8.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OKKN — Costing variants (costing type, valuation variant, date control, quantity structure control, transfer control)	TCK03, TCK05, TCK06, TCK07	Valuation strategy for materials (plan price 1/2/3, std, MAP, PO price), activities (plan/actual rate), subcontracting, external processing; BOM/routing selection id; transfer existing estimates	COVERED-39	39	Costing versions with fallback rules and explosion modes
OKK4 — Valuation variants	TCK05	Strategy sequences	COVERED-39	39	—
OKKM — Costing types	TCK03	Price update allowed (std/tax/commercial)	COVERED-39	39	—
OKTZ — Cost component structure (components, assignment of cost elements, primary cost split, rollup)	TCKH1..TCKH8	Fixed/variable split, roll-up flag, COGS/inventory relevant	COVERED-39	39	Cost component split / cost groups
OKYD — Cost component views / groups	TCKH*	—	COVERED-39	39	—
KZS2 / KZM2 / KZZ2 / KZB2 / KZE2 — Costing sheets: calculation bases, percentage overheads, quantity overheads, credits, dependencies	TKZS*, T685*	Base cost element groups, overhead keys/groups, dependency (plant, order type), credit cost element and cost center	COVERED-39	39	Costing sheet nodes: surcharge/rate with dependency keys
OKKI / OKOZ — Overhead keys / overhead groups	TKZU*	Per material	COVERED-39	39	—
OPJI / OPJF — Selection ID for BOM/routing in costing	TCK19	Alternatives selection	COVERED-39	39	—

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OKK3 — Date control, quantity structure control	TCK06	—	COVERED-39	39	—
Period lock for ML (OKP1)	—	—	COVERED-14	14	—
OMX1 / OMX2 / OMX3 — Activate material ledger per valuation area; ML types; assign currency types	T001K, TCKM*	Price determination 2/3; currencies (10/30)	SUPERSEDED-20	20	Costing method per item model group; multi-currency valuation covered by wave 12/20
CKMLCP settings: activate actual costing, revaluation of consumption, WIP at actual	TCKM*, MLAUF	—	COVERED-20	20	—
OKG1..OKG9 — Results analysis: RA keys, versions, methods (POC, revenue-based, cost-based), valuation methods, line IDs, assignment, update, posting rules	TKKA*	15 RA methods, WIP/reserves categories	COVERED-41	41	POC methods (project) + rev rec (wave 29)
OKGC / OKGD — WIP calculation: RA keys for production orders	TKKA*	WIP at target vs actual	COVERED-21	21	—
OKV1 / OKVG / OKVW — Variance keys, variance variants, target cost versions	TKV01, TKV02, TKV03	Variance categories (input price, input quantity, resource usage, remaining input, mixed price, output price, lot size, remaining); target cost version basis (current std, plan, alternative)	COVERED-39	39	Variance decomposition categories (purchase price, production lot size/quantity/price/substitution)
OKO7 — Settlement profiles / allocation structures for production orders	TKB1, T811*	Settlement to material (MAT), variance to PA (PSG)	COVERED-21	21	—
OPL8 (order-type parameters: costing variants plan/actual, RA key) — see PP	T399X	—	COVERED-21	21	—
KKF6N settings: REM profile cost collector	—	—	COVERED-24	24	—
Mixed costing: quantity structure types, procurement alternatives (OMXL)	CKMLMV*	—	PARTIAL-39	39	Mixed costing gap
Easy cost planning: costing models, characteristics	CKF*	—	PARTIAL-39	39	—
Sales order costing: requirements class settings (OVZG) valuation/costing	T459K	Valuated/non-valuated sales order stock, costing id, RA key	PARTIAL-27	27	Sales-order stock valuation (valuated MTO stock) belongs to wave 16/21 — not named; partial
Transfer prices / multiple valuation views (OKKP, OKEQ group)	TKA01	—	PARTIAL-40	40	See CO-OM
Cost of goods sold split by cost component (S/4 COGS splitting)	FINSC_COGS*	Split COGS posting into components	PARTIAL-39	39	COGS posting by cost component (material/labor/overhead accounts) not named in wave 28/39 — add posting profile option
Price-difference splitting (S/4)	—	Split PPV by cost component	PARTIAL-39	39	Same

13.9 CO-PA — Profitability Analysis (costing-based, account-based) and EC-PCA Profit Center Accounting

SAP context: CO-PA with operating concern (KEA0), characteristics/value fields, derivation (KEDR), valuation (KE4I), actual postings from SD billing/FI, assessments (KEU5), top-down distribution (KE28), planning (KEPM), reports (KE30). S/4HANA favours account-based ("margin analysis") in ACDOCA with attributed profitability segments. EC-PCA: profit centers (KE51), PC hierarchy, transfer prices, PCA reports (S_ALR_87013326). Passage: profitability = dimensions on the universal journal (wave 11) + semantic layer (wave 46); PCA = profit center dimension + hierarchy (wave 6); allocations wave 38.

13.9.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
KEA0 / KEA5 / KEA6	Maintain operating concern / characteristics / value fields	Define profitability dimensions	SUPERSEDED-11	11	Profitability characteristics are financial dimensions (up to 20) on every journal line; value fields = accounts (account-based model)
KEDR / KEDE	Derivation strategy / rules (derive characteristics)	Characteristic derivation	PARTIAL-11	11	Default dimensions on master data exist; rule-based derivation tables (lookup A×B→C with validity) = substitution gap (see FI-GL)
KE4I / KE4J / KE4IM	Assign SD condition types / MM conditions to value fields	Valuation mapping	SUPERSEDED-29	29	Pricing-condition amounts post to revenue/discount accounts with dimensions; no separate value field mapping
KE4U / KE40	Valuation strategies / costing key (COGS split from cost estimate)	Valuation with cost component split	COVERED-39	39	COGS by cost component (see CO-PC partial for posting)
KE21N / KE23N / KE24	Create line item / display line item / line item list	Manual PA postings & inquiry	COVERED-11	11	Journal with profitability dimensions
KE51 / KE52 / KE53 / KE54	Profit center create/change/display/delete	PC master	COVERED-6	6	Profit center as OperatingUnit type / dimension
KE55 / KE56	Profit center collective / mass assignment to company codes	—	COVERED-5	5	—
KCH1 / KCH2 / KCH3 / KCH5N / KCH6N	Profit center groups / standard hierarchy	—	COVERED-6	6	Hierarchy designer
KE59	Dummy profit center	Fallback PC	SUPERSEDED-11	11	Dimension required-ness rules; no dummy
1KE4 / 1KEK	PCA: transfer postings of receivables/payables	PCA periodic transfer	SUPERSEDED-11	11	Real-time: dimensions on every line (document splitting partial noted)
1KE1 / 1KEE	PC assignment monitor	Check master data assignment to PC	COVERED-6	6	Unassigned-dimension report
9KE0	PCA: manual (statistical) postings	Statistical PC postings	COVERED-11	11	Statistical/memo dimension journals (non-balancing) — treat covered via statistical ledger of wave 38
KEPM	CO-PA planning framework	Sales/profit planning	COVERED-38	38	Planning on dimensions (budget register)
7KE1 / 7KE3	PC planning: costs/revenues, balance sheet items	—	COVERED-38	38	—
KES1 / KES3	Characteristic values maintenance / hierarchies	—	COVERED-6	6	Dimension values & hierarchies

T-code	Name	Purpose	Passage status	Wave	Notes
KEQ3 / KEN1	Segment-level characteristics / number ranges (PA documents)	—	SUPERSEDED-11	11	—
KEDB / KEDU	Delete test data / rebuild summarization levels	—	SUPERSEDED-46	46	Projections/lakehouse
Fiori: Market Segments – Actuals / Product Profitability / Customer Profitability	S/4 margin analysis apps	—	COVERED-46	46	Governed metrics (revenue, margin) by dimension
Fiori: Manage Profit Centers / Manage Profit Center Groups	S/4	—	COVERED-6	6	—

13.9.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
KE30 / KE31 / KE32 / KE33	Execute / create / change / display profitability report (drill-down)	SUPERSEDED-46	46	Semantic-layer explorer and report designer replace KE3x drill-down reports
KE24 / KE25	Line item display actual / plan	COVERED-11	11	—
KE3I / KE35	Report transport / forms	SUPERSEDED-46	46	—
KE4L / KE41 (pricing reports)	—	COVERED-26	26	—
S_ALR_87013326	PCA: plan/actual comparison	COVERED-38	38	—
S_ALR_87013340 / 87013336 / 87013337	PC group: plan/actual; balance sheet by PC; receivables/payables by PC	COVERED-15	15	Dimension statements (document splitting partial noted)
KE5Z / KE5Y	PCA actual / plan line items	COVERED-11	11	—
S_ALR_87013342 / S_ALR_87009712	PC: return on investment / key figures	COVERED-46	46	—
2KEE / 2KET	PC totals records / balance carry-forward display	COVERED-14	14	—
KE3L	Report trees	SUPERSEDED-5	5	Workspace navigation
Fiori: Profit Center – Plan/Actual / Margin Analysis apps	—	COVERED-46	46	—

13.9.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
KEU1 / KEU2 / KEU3 / KEU5	CO-PA assessment cycles (cost centers → segments)	COVERED-38	38	Allocation to profitability dimensions
KE28	Top-down distribution (actual)	PARTIAL-38	38	Top-down distribution of aggregated values (e.g. freight by revenue share) to detailed segments not named — add as allocation type "top-down"
KE27	Periodic valuation (revaluate with actual costs from ML)	PARTIAL-20	20	Revaluation of COGS in profitability with actual cost — tied to ML revaluation of consumption partial
KE2B / KE2C	Subsequent posting of billing documents / FI docs to PA	SUPERSEDED-11	11	Real-time single journal
KE4ST / KE4SMM	Simulate/transfer order settlements to PA	SUPERSEDED-21	21	Settlement posts with dimensions
KEND / KEDR realignment run	Realignment (re-derive characteristics on history)	PARTIAL-11	11	Mass re-derivation of dimensions on posted lines is a controlled restatement; propose explicit "dimension realignment" tool (audit-logged) in wave 11/15
1KEK / 1KE8 / F.5D / F.5E	PCA periodic transfers (payables/receivables, assets, materials)	SUPERSEDED-11	11	—
2KES	PCA balance carry-forward	COVERED-14	14	—
4KE5 / 4KE1-4KE3	PCA distribution/assessment cycles	COVERED-38	38	—
KEPM batch / plan copy (KE1Z)	Plan copy/versions	COVERED-38	38	—
KEDV / KEDB	Summarization levels build (CO-PA)	SUPERSEDED-46	46	—

13.9.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
KEA0 — Operating concern: attributes (currency, fiscal year), data structure, environment	TKEB, CE1xxxx..CE4xxxx	Costing-based vs account-based; company-code currency	SUPERSEDED-11	11	Account-based margin analysis = universal journal dimensions
KEKK — Assign controlling area to operating concern	TKA01	—	SUPERSEDED-6	6	—
KEDR — Derivation rules (table lookup, derivation rule, move, clear, enhancement)	TKEDR*, K9R*	—	PARTIAL-11	11	Derivation gap
KE4I / KE4J / KE4IM / KE4W — Value field assignment, reset of value fields, quantity fields	TKEZU, TKEVA	—	SUPERSEDED-29	29	—
KE4U / KE40 / KE4H — Valuation strategy & costing keys, assignment	TKEVA*, TKEPS	Costing key by material type/plant/point of valuation	COVERED-39	39	COGS split
KEI1 / KEI2 — PA transfer structures (settlement/assessment to PA)	T811*, TKEPC	Cost element groups → value fields	SUPERSEDED-38	38	Allocations target dimensions directly
KEPM planning: planning levels, packages, methods, layouts	TKEPL*	—	SUPERSEDED-38	38	Budget planning
KE3 report customizing: forms, key figure schemes (KER1)	—	—	SUPERSEDED-46	46	—
0KE5 — PCA: controlling area settings (PCA active, dummy PC, elimination of internal business volume)	TKA01, TKA00	—	SUPERSEDED-6	6	—

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
0KEM / 0KEP — PCA substitution rules / derivation of PC from SD (sales org, material), MM	T8A*	—	PARTIAL-11	11	Derivation gap
3KEH / 3KEI — Additional balance sheet/P&L accounts in PCA (classic)	T8A3*	—	SUPERSEDED-11	11	—
8KEM / 8KEN — Transfer prices: pricing procedures, conditions, transfer price variants	T8PT*	PC valuation view	PARTIAL-40	40	Transfer pricing documentation hooks only; PC valuation view not covered
GB02 — Number ranges for PCA documents	NRIV	—	COVERED-5	5	—
S/4: Define attributed profitability segment settings	FINSC_*	Attribution for cost center/order postings	SUPERSEDED-11	11	—
KES3 — Characteristic hierarchies	—	—	COVERED-6	6	Dimension hierarchies

13.10 EC-CS / SEM-BCS / S/4HANA Group Reporting — Consolidation

SAP context: EC-CS (ECC), SEM-BCS (BW-based), S/4HANA Finance for Group Reporting (consolidation units, data monitor, consolidation monitor, reclassifications, IC elimination, consolidation of investments, currency translation, group reports via Fiori/SAC). Passage: wave 40 (group structures, ownership %, eliminations, translation, minority interest, consolidated statements via wave 15).

13.10.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
CX1N (EC-CS) / Fiori: Manage Consolidation Units	Consolidation units, groups, versions	Group structure	COVERED-40	40	Group structures, ownership %
CX1X / Fiori: Manage Group Structure	Consolidation group hierarchy, periods of inclusion/divestiture	—	COVERED-40	40	Ownership with effective dates
CX5S / Fiori: Define FS Items / FS item hierarchies	Financial statement items, breakdown categories, sub-items	Group chart of accounts	COVERED-40	40	Group account structure (wave 15 account structures)
CXCD / Fiori: Data Monitor	Data collection: flexible upload, read from universal journal, manual journal	Data collection	COVERED-40	40	Entity data from the journal; upload for non-Passage entities (wave 10 import)
CX20 / Fiori: Post Group Journal Entries	Manual consolidation entries (document types, posting levels 00/01/10/20/30)	Adjustments	COVERED-40	40	Group adjustment journals at posting levels (entity, group)
CXCE / Fiori: Consolidation Monitor	Run tasks: reclass, IC elim, CoI, translation, validation	Consolidation run	COVERED-40	40	—
Fiori: Manage Reclassifications / Define Reclassification Rules	Rule-based reclassifications	—	PARTIAL-40	40	Elimination rules named; general reclassification rules (e.g. move FS item based on sign) partial
Fiori: Consolidation of Investments (activity-based: first consolidation, subsequent, step acquisition, divestiture; equity method)	CoI	Goodwill, minority interest	PARTIAL-40	40	Minority interest named; purchase-method CoI with goodwill, step acquisitions, divestitures and equity-method accounting are not — partial
Fiori: Manage Investments / Equity data	Investment and equity holdings	—	PARTIAL-40	40	—
Fiori: Define Validation Rules / Run Validations	Data validation before consolidation	—	COVERED-40	40	Validation rules (wave 3 validation + reconciliation)
Fiori: Define Currency Translation Methods	Translation methods, rates per FS item type (closing, average, historical), CTA	—	COVERED-40	40	IAS 21 translation
Fiori: Intercompany Matching & Reconciliation (ICMR)	IC matching at document level, auto-match rules, communication	IC reconciliation	COVERED-40	40	IC matching and reconciliation workspace
Fiori: Manage Substitution/Validation Rules (Group Reporting)	—	—	COVERED-40	40	—
Fiori: Group Data Analysis / Consolidated Balance Sheet / P&L / Cash flow	Group reports with drill to entity	—	COVERED-40	40	Consolidated statements via wave 15 with drill
SEM-BCS: UCWB (workbench), UCMON (monitor)	BW-based consolidation	—	SUPERSEDED-40	40	Native consolidation on the journal/lakehouse
EC-CS: data entry layouts, report writer reports	—	—	SUPERSEDED-40	40	—
Disclosure management / XBRL (SAP DM, SAC)	Statutory filing packages	—	GAP	propose 48	XBRL/ESEF filing output not named; propose electronic reporting designer (wave 48) output type
Fiori: Manage Ledgers for Group Reporting (Y1/Y2), versions, extension versions	Consolidation ledgers/versions	—	COVERED-40	40	Consolidation versions (actual, budget, forecast)

13.10.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
Fiori: Group Data Analysis (with reporting rules, hierarchies)	Consolidated analysis	COVERED-40	40	—
Fiori: Consolidated Balance Sheet / Income Statement / Cash Flow / Changes in Equity	Group statements	COVERED-40	40	Changes in equity statement — add to wave 15 standard statements (minor)
Fiori: Data Analysis – Journal Entries (group)	Group line items	COVERED-40	40	—
Fiori: Group Journal Entry display / task logs	Audit of consolidation run	COVERED-40	40	—
Fiori: Intercompany Reconciliation reports / ICMR dashboards	—	COVERED-40	40	—
EC-CS report writer (database listing)	—	SUPERSEDED-15	15	Report designer
S_ALR_87012 consolidation reports (EC-CS)	—	SUPERSEDED-15	15	—

13.10.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
Data monitor tasks: release universal journal, data validation, currency translation, balance carry-forward	Entity-level close for consolidation	COVERED-40	40	—
Consolidation monitor tasks: IC elimination (AR/AP, revenue/expense, dividends), elimination of IC profit in inventory, CoI, group validation	Group-level tasks	PARTIAL-40	40	IC balances and inventory profit named; dividend elimination and CoI partial
Period lock / task lock (period control for consolidation)	—	COVERED-14	14	Period control per ledger incl. consolidation ledger
Balance carry-forward (group)	—	COVERED-14	14	—
Reclassification runs	—	PARTIAL-40	40	—
Matching run (ICMR) scheduled	—	COVERED-40	40	—

13.10.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
Global settings: consolidation chart of accounts, versions, ledgers, fiscal year variant	TF*, FINCS_*	—	COVERED-40	40	—
FS item attributes, breakdown categories, selections	FINCS_FSI*, TF*	Sub-assignments (partner unit, movement type/transaction type, functional area)	COVERED-40	40	Group dimensions incl. partner and movement type (movement types needed for cash flow/equity — confirm wave 40 includes "transaction/movement type")
Document types (posting levels, auto-reversal, deferred tax)	FINCS_DOCTYPE	—	COVERED-40	40	—
Reclassification methods / elimination methods (IC elimination of AR/AP, revenue/expense, dividends)	TF*	Two-sided elimination, differences to FS item, thresholds	PARTIAL-40	40	—
CoI methods (purchase, equity, proportional), activities	TF*	Goodwill treatment, minority	PARTIAL-40	40	—
Currency translation methods, exchange rate indicators, differences	TF*	—	COVERED-40	40	—
Validation rules / reporting rules	FINCS_*	—	COVERED-40	40	—
Data release/collection settings: mapping of operational CoA to group CoA, substitution	FINCS_MAP*	—	COVERED-40	40	Account mapping entity ↔ group
ICMR: matching methods, reconciliation cases, auto-adjustment rules, communication templates	ICA_*	—	COVERED-40	40	—
Group reporting data mapping for external (non-SAP) units (flexible upload formats)	—	—	COVERED-10	10	Import DSL

13.11 FM / PSM — Funds Management & Public Sector Management (budgeting)

SAP context: FM (budget control system BCS: FMBB budgeting workbench, FMAVCR availability control, funds centers FMSA/FMSB, commitment items FMCIA, funds FM5I, FMDERIVE account assignment derivation, earmarked funds FMX1/FMY1, FM reports FMRP), PSM (grants management GM, funded programs, PSCD). Manufacturers rarely activate FM; D365 F&O's budget control is the model Passage follows (wave 38). FM rows map to wave 38 where they are budget control; genuinely public-sector functions are OUT-OF-SCOPE.

13.11.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
FMSA / FMSB / FMSC	Funds center create/change/display	Budget responsibility unit	COVERED-38	38	Budget dimensions (cost center/department)
FMCIA / FMCIC	Commitment item create/display	Budget line category	COVERED-38	38	Budget account categories (main accounts/groups)
FM5I / FM5S	Fund create/display	Funding source	PARTIAL-38	38	"Fund" dimension (restricted/unrestricted funding) not named; grants/projects usually carry it — partial; usable via a financial dimension
FMMEASURE (funded program)	Funded program	—	PARTIAL-38	38	Same
FMBB	Budgeting workbench (BCS): enter, supplement, return, transfer, release, carry-over	Budget documents	COVERED-38	38	Budget register entries with types (original, transfer, supplement)
FMBBC / FMMPDA	Budget mass copy / plan to budget	—	COVERED-38	38	—
FMX1 / FMX2 / FMX3	Earmarked funds: funds reservation create/change/display	Pre-commitment reservation	PARTIAL-38	38	Pre-encumbrance from requisition is named; manual "funds reservation" without a requisition is not — add budget reservation document
FMY1 / FMZ1 / FMW1 / FMV1	Funds precommitment / commitment / forecast of revenue / funds blocking	—	PARTIAL-38	38	Same
FMAVCR01 / FMAVCR02	Availability control: display annual values / overall	Budget consumption	COVERED-38	38	Budget check and consumption inquiry
FMDERIVE	Derivation of FM account assignment	—	PARTIAL-11	11	Derivation gap
FMRP_RFFMEP1AX / FMRP_RFFMEP1GX	FM line items (actuals/commitments)	—	COVERED-38	38	—
GM: GMGRANT, grants budgeting	Grant master, grant budgeting	Grants management	OUT-OF-SCOPE	—	Public-sector/university grants; PRD scope is manufacturers (wave 41 has "customer funding/grants" for projects which covers project funding sources)

T-code	Name	Purpose	Passage status	Wave	Notes
PSCD / FI-CA (public sector collection)	Contract accounts	—	OUT-OF-SCOPE	—	Utilities/public-sector contract accounting
Fiori: Budget Control Overview / Manage Budget Documents	S/4 FM apps	—	COVERED-38	38	—

13.11.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
FMRP_RW_BUDGET / FMRP_RW_BUDCON	Budget overview / budget consumption	COVERED-38	38	—
FMRP_RFFMAV01X / FMAVCR01	Availability control overview	COVERED-38	38	—
FMEDDW	Budget entry documents, totals	COVERED-38	38	—
FM commitments/actuals reports (FMRP_*)	—	COVERED-38	38	—
GM reports (S_ALN_*)	Grants reports	OUT-OF-SCOPE	—	—

13.11.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
FMJ2 / FMJ_SPLIT	Commitment carry-forward (open PO/PR to next year)	COVERED-38	38	Encumbrance year-end handling
FMMC / FMMA	Budget carry-forward (residual)	COVERED-38	38	—
FMAVCREINIT	Reinitialize AVC ledger	SUPERSEDED-38	38	Projection rebuild
FMCG / FMCJ	Close/open budget period (BCS period control)	COVERED-14	14	Period control (budget module)
FMBB release run / mass release	—	COVERED-38	38	Budget workflow
FM reconstruction (FMN3N / FMN4N / FMN5N)	Reconstruct commitments/actuals	SUPERSEDED-38	38	—

13.11.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
FM area definition, assignment to company codes, fiscal year variant	FM01, T001	—	SUPERSEDED-6	6	Budget scope = legal entity + dimensions
Activate FM / BCS	FMAVC*	—	SUPERSEDED-38	38	Budget control activation per entity
Budget types, budget categories, versions (FMBB types)	FMBCS*	Payment/commitment budget	COVERED-38	38	Budget types
Availability control ledgers, tolerance profiles, activation per budget address, filter settings	FMAVC*, FMAVCT	Warning %, error %, derivation of control objects	COVERED-38	38	Budget check tolerances and overrides
Commitment item categories (expense/revenue/balance), financial transactions	FMCI*	—	COVERED-38	38	—
FMDERIVE strategy	FMDERIVE*	—	PARTIAL-11	11	—
Update profile (payment budget vs commitment budget, update dates)	—	—	SUPERSEDED-38	38	—
Earmarked funds document types, number ranges	FMEF*	—	PARTIAL-38	38	—
Grants management customizing	GM*	—	OUT-OF-SCOPE	—	—

13.12 MM-PUR — Purchasing

SAP context: purchase requisitions (ME51N), RFQ/quotations (ME41–ME49), purchase orders (ME21N), outline agreements — contracts (ME31K) and scheduling agreements (ME31L/ME38), info records (ME11), source lists (ME01), quota arrangements (MEQ1), release strategies (classification-based), purchasing conditions (MEK1), vendor evaluation (ME61), output (ME9F), stock transport orders, subcontracting, consignment, third-party. S/4: Fiori Manage Purchase Orders/Requisitions, central procurement, Ariba. Passage: wave 17 (requisitions, RFQ, agreements, POs, pricing, approvals), wave 7 (vendor), wave 20 (supplier portal), wave 33 (vendor evaluation), wave 16 (transfers), wave 40 (intercompany).

13.12.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
ME51N / ME52N / ME53N	Purchase requisition create/change/display	Internal demand	COVERED-17	17	Requisition with policy approvals
ME54N / ME55	Release PR individual / collective	Approval	COVERED-17	17	Approval workflow (Temporal)
ME56 / ME57	Assign source of supply / assign and process (convert to PO)	Sourcing	COVERED-17	17	Consolidation into POs; source determination from agreements/price lists
ME58 / ME59N	Create PO from assigned PRs / automatic PO creation	—	COVERED-17	17	Auto-PO from approved requisitions
ME5A / ME5J / ME5K	PR list display / by project / by account assignment	—	COVERED-17	17	Saved views
ME5F	Release reminder (PR)	—	COVERED-4	4	SLA timers/escalation
ME41 / ME42 / ME43	RFQ create/change/display	Sourcing event	COVERED-17	17	RFQ cycle
ME44 / ME45	Maintain RFQ supplement / release RFQ	—	COVERED-17	17	—
ME47 / ME48	Maintain / display quotation	Supplier reply	COVERED-17	17	Supplier reply portal (wave 20) + manual entry
ME49	Price comparison list	Compare quotes	COVERED-17	17	Compare & award
ME4L / ME4M / ME4N / ME4S	RFQ lists by vendor / material / number / collective number	—	COVERED-17	17	—
ME21N / ME22N / ME23N	Purchase order create/change/display	PO	COVERED-17	17	PO lifecycle with versions
ME21 / ME22 / ME23 (classic)	—	—	SUPERSEDED-17	17	Single PO form

T-code	Name	Purpose	Passage status	Wave	Notes
ME24 / ME25 / ME27	Maintain PO supplement / create PO with vendor unknown / stock transport order (classic)	—	COVERED-17	17	Vendor-unknown PO = requisition
ME28 / ME29N	Release PO collective / individual	Approval	COVERED-17	17	—
ME2O	Subcontracting stock per vendor (SC stock monitor)	Components at subcontractor	COVERED-21	21	Subcontracting with vendor PO linkage; vendor-held inventory location
ME2ON	SC stock monitoring (S/4)	—	COVERED-21	21	—
ME31K / ME32K / ME33K	Contract (quantity/value) create/change/display	Blanket agreement	COVERED-17	17	Purchase agreements with release tracking
ME34K / ME35K	Maintain contract supplement / release contract	—	COVERED-17	17	—
ME31L / ME32L / ME33L	Scheduling agreement create/change/display	SA with delivery schedules	COVERED-17	17	PO delivery schedules + agreements; JIT/forecast schedule lines (ME84/ME38) — see ME84 row
ME34L / ME35L	SA supplement / release	—	COVERED-17	17	—
ME38 / ME39	Maintain / display SA delivery schedule	Schedule lines	COVERED-17	17	Delivery schedules on agreement lines
ME84 / ME85 / ME86	Create SA releases (FRC/JIT) / renumber / display release documentation	Forecast / JIT delivery schedules to supplier (EDI DELFOR/DELJIT)	PARTIAL-17	17	Vendor-facing forecast/JIT release generation (cumulative quantities, release documentation) is a supplier-schedule capability not explicitly named in wave 17; EDI DELFOR/DELJIT in wave 35 lists 850/855/856/810/820/214 only — partial
ME9F / ME9K / ME9L / ME9E	Message output PO / contracts / SA / SA releases	Print/EDI	COVERED-17	17	Supplier output (PDF/email), EDI in wave 35
ME11 / ME12 / ME13 / ME14 / ME15	Purchasing info record create/change/display/changes/flag delete	Vendor–material price & lead time	COVERED-17	17	Trade agreements / vendor price lists per vendor×product×site with lead time; info-record "last PO" updates
ME1L / ME1M / ME1W / ME1P	Info records by vendor / material / material group / order price history	—	COVERED-17	17	—
ME01 / ME03 / ME04 / ME05 / ME06 / ME07	Source list maintain/display/changes/generate/analyze/reorganize	Allowed/fixed sources, MRP-relevant	COVERED-17	17	Approved vendor list per item/site with MRP relevance flag (wave 22 uses it — confirm "fixed source for planned purchase orders")
MEQ1 / MEQ3 / MEQ4 / MEQ6 / MEQ8	Quota arrangement maintain/display/changes/analyze	Split demand across sources	PARTIAL-22	22	Quota arrangements (percentage split across vendors/own production for MRP) not named in wave 17/22 — partial
MEK1 / MEK2 / MEK3 / MEK4	Create/change/display conditions (purchasing) / create with reference	Condition records (PB00, RA01, FRA1)	COVERED-17	17	Vendor pricing conditions (price, discounts, freight) via pricing engine shared with wave 26 — confirm purchasing uses the wave 26 engine (wave 17 says "trade agreements/price lists")
MEKA / MEKB / MEKC / MEKD / MEKE	Condition lists by vendor/material group/material/plant	—	COVERED-17	17	—
MEKP / MEKR / MEKH	Price change conditions mass / by vendor	—	COVERED-26	26	Mass price updates
ME61 / ME62 / ME63 / ME64 / ME65	Vendor evaluation maintain/display/calculate scores/evaluation comparison/ranking list	Vendor scorecards	COVERED-33	33	Supplier quality scorecards (quality, delivery, price, service criteria)
ME6A / ME6B / ME6C / ME6D / ME6E / ME6F / ME6G / ME6H	Vendor evaluation lists, changes, without weighting, log	—	COVERED-33	33	—
MK01 / XK01 (purchasing views)	Vendor purchasing data	—	COVERED-7	7	—
MKVZ / MKVG	Vendor list purchasing / vendor-material	—	COVERED-7	7	—
ME21N item category L (subcontracting)	Subcontract PO with components (BOM explosion)	—	COVERED-21	21	—
ME21N item category K (consignment)	Vendor consignment PO	—	PARTIAL-16	16	Consignment stock (vendor-owned at our site, settle on consumption MRKO) not named in waves 16/18 — partial; needs ownership attribute on inventory + settlement run
ME21N item category S (third-party)	Third-party / drop-ship PO from sales order	—	COVERED-28	28	Drop-ship / direct delivery
ME21N item category U (stock transfer) / UB STO / NB cross-company STO	Stock transport orders (intra/intercompany) with delivery	—	PARTIAL-16	16	Wave 16 "transfer journals" and wave 40 intercompany trade cover the postings; an explicit *transfer order document* with delivery, in-transit stock and receiving (plant-to-plant with shipping) is not named — partial; propose "transfer orders with in-transit status" in wave 16/28
ME21N pipeline (P)	Pipeline materials (utilities)	—	OUT-OF-SCOPE	—	Pipeline handling (no PO, settlement on withdrawal) — niche; can be modeled as consignment later
ME21N service item (D)	Services PO	—	PARTIAL-18	18	See MM-SRV
ME21N limit items / blanket PO (FO)	Framework orders with value limit	—	COVERED-17	17	Blanket agreements; limit PO as order type — confirm
ME2V / ME2W	Goods receipt forecast / vendor delivery forecast	—	COVERED-18	18	Expected receipts
MEMASSPO / MEMASSRQ / MEMASSIN / MEMASSSA	Mass change PO / PR / info record / SA	—	COVERED-5	5	Mass edit
ME80FN / ME80RN / ME80AN	General analyses: PO / RFQ / agreements	—	COVERED-17	17	—
ME91F / ME91A / ME91E	Reminders/expediters (urging) for PO / RFQ / SA	Expediting letters	COVERED-17	17	Expediting output and dunning of overdue confirmations — confirm in wave 17 ("confirmation" named)
ME92F / ME92K / ME92L	Monitor order acknowledgment	Confirmation tracking	COVERED-17	17	PO confirmation; supplier portal acknowledgement (wave 20)
ME97 / ME98	Archive PRs / POs	—	COVERED-48	48	Retention policies
ME2A	Monitor confirmations	—	COVERED-17	17	—
ME23N → "Purchase order history"	PO history (GR, IR, DP)	—	COVERED-18	18	PO line document flow

T-code	Name	Purpose	Passage status	Wave	Notes
Fiori: Manage Purchase Requisitions / Orders / Contracts / Scheduling Agreements / Supplier Quotations / Purchasing Info Records / Source Lists	S/4 apps	—	COVERED-17	17	—
Fiori: Create Purchase Requisition (self-service, catalog, free text)	Self-service requisitioning with catalogs (OCI punch-out)	—	PARTIAL-17	17	Requisition yes; catalog/punch-out (OCI/cXML) item selection not named — partial; propose wave 20 (supplier collaboration) or wave 35 (integration)
Fiori: Monitor Purchase Order Items / Purchase Order Items by Account Assignment	—	—	COVERED-17	17	—
Central procurement (hub-and-spoke, central PR/PO/contract)	Multi-system procurement	—	SUPERSEDED-17	17	Single multi-entity tenant; cross-entity contracts via wave 40
SAP Ariba Buying / Sourcing / Contracts / SLP (supplier lifecycle)	Cloud procurement suite	—	PARTIAL-20	20	Supplier portal (ack, ASN, invoice, docs) covers Ariba Network basics; strategic sourcing events (auctions, weighted RFP scoring), supplier onboarding/qualification questionnaires and contract authoring are not — partial; propose v1.x

13.12.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OX08 / OX01 / OX17 — Purchasing organizations; assign to company code / plant; reference purch. org	T024E, T024W, T024Z	Plant-specific, cross-plant, cross-company, reference purch org	COVERED-6	6	Procurement hierarchy purpose in enterprise structure
OME4 — Purchasing groups	T024	—	COVERED-6	6	Buyer groups
OMEC / OMEB / OMEE / OMED — Document types PO / RFQ / contract / SA; number ranges; allowed item categories; link PR↔PO	T161, T161A, T161P	Field selection, control indicators (GR/IR required), time-dependent conditions, release groups	COVERED-17	17	Order types with number sequences and allowed line types
OMH7 / OMH6 — Number ranges for purchasing documents	NRIV	—	COVERED-5	5	—
OMF4 — Screen layout at document level / field selection keys	T162, T162K	Required/optional per field selection key (e.g. ME21N, NBF, AKTH)	COVERED-3	3	Metadata field attributes by order type
OMET — Function authorizations for buyers (value limits, order types)	T160B	—	COVERED-2	2	OPA policy on amounts/order types
Item categories / account assignment categories (OME9)	T163, T163K, T163B	Account assignment (K, F, P, A, C, Q), GR/IR indicators, consumption posting	COVERED-17	17	Account assignment line types; project (wave 41), asset (wave 37)
OMGQ / OMGS / OMGSCK — Release procedure for POs (with classification) / PRs (with/without classification): release groups, codes, indicators, strategies, prerequisites, workflow	T16FG, T16FC, T16FS, T16FK, T16FW, T16FV	Classification characteristics (value, plant, group), release simulation, workflow assignment	SUPERSEDED-17	17	Policy-driven approval chains (amount bands, category, site) configured in the wave 4 workflow designer; no classification system needed
OMKK — Price variance tolerance limits for PO vs. PR / info record (PE, SE keys)	T169G	Percentage/absolute, warning/error	COVERED-17	17	Price tolerance on PO vs agreement
OMFI / OMFJ — Version management for PR / PO (reasons, fields)	T160VS, T160VSK	Version-relevant fields, reasons	COVERED-17	17	Versioned change management
M/03 … M/08 — Purchasing condition tables / access sequences / condition types / calculation schema (RM0000, RM1000), schema groups for vendor/purchasing org, schema determination	T681*, T682*, T685, T683	Condition types PB00/PBXX/RA00/FRA1/SKTO, header/item, group conditions, time-dependent	SUPERSEDED-26	26	Shared pricing engine (condition tables/access sequences) — wave 26 engine used by purchasing; wave 17 price lists
Price determination process / condition control at plant level	T001W	—	COVERED-17	17	—
Default values for buyers (user parameters EVO/EFB)	T160, TMGU	—	COVERED-5	5	User defaults / personalization
Texts for purchasing documents, text types, copying rules	T165*, TTXID	—	COVERED-17	17	Document text blocks (header/line notes)
Partner roles in purchasing (OA ordering address, PI invoicing party, GS goods supplier), partner schemas	TPAR, TPAER	—	COVERED-7	7	Party roles & document partners
Reasons for ordering, reasons for rejection (RFQ)	T161*	—	COVERED-17	17	Reason codes
Confirmation control (confirmation control keys, categories AB/LA)	T163D, T163G	Confirmation sequences, GR-relevant, MRP-relevant	COVERED-17	17	Confirmation + ASN (wave 20/28)
OMGN — Set up stock transport order (delivery type, checking rule per supplying plant)	T161V, T161W	STO with/without delivery, one-step/two-step	PARTIAL-16	16	Transfer order gap
Subcontracting settings (SC vendor stock types)	T156*	—	COVERED-21	21	—
Vendor evaluation — weighting keys, criteria, scoring methods, points scores	T147*, T147A..T147M	Main/sub criteria, automatic (price, GR deviation, quality, QM) vs manual	COVERED-33	33	Scorecard criteria
Source determination — source list requirement per plant, quota arrangement rules	T001W, TMQ1	—	PARTIAL-22	22	Quota partial
Message determination for purchasing (NACE EF/EV/EL/EA), condition tables, output types NEU, print programs, EDI partner profile	NAST, TNAPR, T685B	Medium (print, fax, EDI, email), timing	COVERED-17	17	Output rules + wave 35 EDI; see cross-application
Default document types in requisition creation from MRP (OPPI / OMD)	—	—	COVERED-22	22	Planned purchase order → requisition/PO conversion settings
Account assignment — automatic account determination (OBYC KBS)	T030	—	COVERED-16	16	—
OMEE — Contract document types, target value, release order documentation	T161	—	COVERED-17	17	—
Scheduling agreement — release creation profile, firm zone/trade-off zone, JIT indicator	T163M	—	PARTIAL-17	17	SA release partial
Taxes in purchasing (tax code default per vendor/plant, MEK1 NAVS)	T007A	—	COVERED-13	13	Tax determination on PO
Incoterms / terms of delivery (OVIM)	TINC	—	COVERED-7	7	Delivery terms
Purchasing value keys (reminder days, tolerances, order acknowledgment)	T405	Under/over-delivery tolerances, reminders 1/2/3	COVERED-17	17	Item defaults for expediting and delivery tolerances
Material groups (OMSF) — see MM master data	T023	—	COVERED-8	8	Product categories
Authorization groups / field selection per activity (classic)	—	—	COVERED-2	2	—
Flexible workflow for PR/PO/contract approval (S/4 SWDD_SCENARIO / Manage Workflows app)	SWF_*	Step conditions, agent rules	COVERED-4	4	Workflow designer
Ariba Network integration (cXML, Cloud Integration Gateway)	—	—	PARTIAL-35	35	cXML not listed among EDI formats (X12/EDIFACT/Peppol); partial

13.13 MM-IM — Inventory Management & Physical Inventory

SAP context: material documents (MKPF/MSEG; S/4 MATDOC), goods movements via MIGO (receipts, issues, transfers, reversals, 100+ movement types), reservations (MB21), stock overview (MMBE), stock types (unrestricted, quality, blocked, in transit, consignment, subcontractor, sales order stock, project stock), physical inventory (MI01–MI20, cycle counting MICN), period close (MMPV). Passage: wave 16 inventory ledger, wave 18 receiving, wave 21 production movements, wave 28 shipping movements, wave 31 warehouse detail.

13.13.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
MM01 / MM02 / MM03 (IM views: general plant, storage, accounting)	Material master — plant/storage/valuation views	Item per site/warehouse	COVERED-8	8	Released product per legal entity with site/warehouse defaults; item model group (costing, negative stock)
MIGO	Goods movement (GR for PO/order/other, GI, transfer posting, place in storage, remove from storage, return delivery, subsequent delivery/adjustment, cancel, display)	Universal movement UI	COVERED-16	16	Inventory journals (movement/transfer/adjustment) + receiving (wave 18) + production issues/receipts (wave 21)
MB1A / MB1B / MB1C (classic)	Goods issue / transfer posting / other receipt	—	SUPERSEDED-16	16	Journals by type
MB01 / MB0A / MB31 (classic)	GR for PO / GR for PO unknown / GR for production order	—	SUPERSEDED-18	18	Receiving (wave 18) / RAF (wave 21)
MB11 (classic)	Goods movement (general)	—	SUPERSEDED-16	16	—
MB02 / MB03	Change (texts) / display material document	—	COVERED-16	16	Inventory transaction inquiry
MBST / MBSU	Cancel material document / place in storage for mat doc	Reversal	COVERED-16	16	Reversal of inventory transaction with linked negating movement
MB21 / MB22 / MB23 / MB24 / MB25	Reservation create/change/display/list by material/by account assignment	Manual reservations	COVERED-16	16	Manual/auto reservations
MBVR	Manage reservations (delete/close)	—	COVERED-16	16	—
MB90	Output of material documents (GR slip, labels)	—	COVERED-32	32	Label printing (ZPL) via print service; GR slips via document designer (wave 46)
MMBE	Stock overview (by plant/SLoc/batch/special stock)	On-hand inquiry	COVERED-16	16	On-hand by dimension
MB52	List warehouse stocks on hand	—	COVERED-16	16	—
MB53 / MB54	Plant availability / consignment stock	—	PARTIAL-16	16	Vendor consignment gap
MB58	Consignment and returnable packaging stock at customer	Customer consignment	PARTIAL-27	27	Customer consignment (fill-up/issue/pick-up/return orders) not named in SD/inventory waves — partial; needs "stock at customer" ownership dimension
MBLB	Stocks at subcontractor	—	COVERED-21	21	—
MMSC	Collective entry of storage locations (extend material)	—	COVERED-8	8	Release to warehouse mass
MI01 / MI02 / MI03	Physical inventory document create/change/display	Count documents	COVERED-16	16	Count sheets
MI04 / MI05 / MI06	Enter count / change count / display count	—	COVERED-16	16	Count entry (mobile in wave 32)
MI07 / MI08 / MI10	Post differences / post with count / post document without reference	Variance posting	COVERED-16	16	Variance posting to GL
MI09	Enter count without reference document	—	COVERED-16	16	—
MI11	Recount	—	COVERED-16	16	—
MI20	Difference list	—	COVERED-16	16	—
MI21 / MI22 / MI23 / MI24	Print PI documents / display PI docs for material / display PI data for material / difference list	—	COVERED-16	16	—
MI31 / MI32 / MI33 / MI34 / MI35 / MI37 / MI38 / MI39 / MI40	Batch create PI documents (all stocks / special stocks / enter count via batch input / post differences via batch)	Mass PI	COVERED-16	16	Cycle counting plans + mass count generation
MICN	Create PI documents for cycle counting	ABC-based cycle counting	COVERED-16	16	Cycle counting plans (ABC classification MIBC)
MIBC	ABC analysis for cycle counting (set CC indicator)	—	COVERED-16	16	—
MIK1 / MIQ1 / MIM1	PI for vendor consignment / project stock / returnable transport packaging	Special stock PI	PARTIAL-16	16	Consignment/RTP gaps
MIE1 / MIW1 / MIV1	PI for sales order stock / customer consignment / returnable packaging at customer	—	PARTIAL-27	27	Sales-order stock & customer consignment partial
MIS1 / MIS2 (inventory sampling)	Inventory sampling (statistical)	—	GAP	propose 16	Statistical inventory sampling (count a sample, extrapolate) — rarely used but a recognized GAAP-compatible method; low priority
OMJJ (movement types) — see customizing	—	—	COVERED-16	16	—
Special stock: sales order stock (E), project stock (Q)	Stock segregated by SO/WBS	—	PARTIAL-16	16	Sales-order/project-specific stock (valuated/non-valuated) not explicitly named as an inventory dimension — partial; needed for MTO/ETO manufacturers (waves 21/27/41)
Stock in transit (MB5T; S/4 stock in transit for STO)	In-transit stock	—	PARTIAL-16	16	Transfer order gap
Returnable transport packaging (M, V)	RTP at vendor/customer	—	GAP	propose 28	Returnable packaging (pallets, crates) tracking at customers/vendors not named; propose wave 28 (packaging/HU) option
Goods receipt blocked stock (103/105)	GR to blocked, release	—	COVERED-18	18	Arrival/registration vs product receipt posting (two-step receiving)
Fiori: Post Goods Movement / Post Goods Receipt for PO / Transfer Stock – In Plant / Cross-Plant / Stock – Single Material / Multiple Materials / Manage Stock	S/4 apps	—	COVERED-16	16	—

T-code	Name	Purpose	Passage status	Wave	Notes
Fiori: Manage Physical Inventory Documents / Process Physical Inventory Count / Overview of Count Results	—	—	COVERED-16	16	—
Fiori: Manage Material Documents / Material Documents Overview	—	—	COVERED-16	16	—

13.13.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes

Subcontracting component provision (541) via ME2O	—	COVERED-21	21	—
Fiori: Schedule Physical Inventory Document creation	—	COVERED-4	4	—

13.13.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OX10 / OX09 — Plants / storage locations	T001W, T001L	Address, factory calendar, purchasing org assignment	COVERED-6	6	Sites, warehouses
OX18 / OX14 — Assign plant to company code / valuation area setting (plant vs company code)	T001K	Valuation level	COVERED-6	6	Valuation at site level (default) — confirm valuation level choice

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OMJJ — Movement types: copy, define, allowed fields, update control (quantity/value), reversal movement, reason codes, account grouping (GBB modifiers), screen layout, allowed transactions	T156, T156B, T156S, T156X, T156M, T156W, T158B	100+ movement types; auto-created vs custom	SUPERSEDED-16	16	Inventory transaction types are a fixed typed set (receipt, issue, transfer, adjustment, count, RAF, consumption …) with posting profiles per item model group; custom "movement types" become journal types with configurable posting profiles
OMBS — Reason for movement	T157D	Reason codes per movement type	COVERED-16	16	Reason codes on journals
OMBT — Number ranges for material documents / PI documents / reservations	NRIV	—	COVERED-5	5	—
OMJ1 — Allow negative stocks (per valuation area / storage location)	T001K, T001L	—	COVERED-16	16	Negative-inventory policy per item model group/warehouse
OMJX / OMJR — Field selection for MIGO / print control	T158, T159P	—	COVERED-3	3	Metadata
OMJ5 — Shelf life expiration date check (per plant / movement type)	T159L, T156	Minimum remaining shelf life check at GR	COVERED-24	24	Shelf life checks on receipt
OMC0 — Tolerance limits for GR (under/over delivery, B1/B2 keys)	T169G	B1/B2 keys	COVERED-18	18	Receipt tolerances
OMBW — Screen layout per movement type (field selection)	T156B	—	COVERED-3	3	—
OMCJ / OMCH — Default values for goods receipt (stock type default: quality/blocked), GR slip print	T158, T159	—	COVERED-18	18	Receive-to-quarantine by item/vendor (wave 33 QM triggers)
OMJD — Automatic storage location creation on movements	T001L	—	COVERED-16	16	—
Stock types / GR blocked stock settings	—	—	COVERED-16	16	Inventory status (available, quarantine, blocked, in-transit)
Batch / serial checks in IM (see batch section)	—	—	COVERED-16	16	—
OMWB / OBYC — Account determination (valuation grouping code, valuation class, account modifier, transaction key)	T030, T025, T001K, T030W	BSX inventory, GBB offsets (VBR consumption, AUF order, VAX/VAY COGS, ZOB other, INV PI differences), PRD price differences, WRX GR/IR, UMB revaluation, FRL external processing, BSV subcontracting, KDM FX	COVERED-16	16	Inventory posting profiles by item model group × site × transaction type
OMWD / OMWC / OMSK — Valuation grouping code / split valuation (valuation categories/types) / valuation classes & account category reference	T001K, T025, T025K, T149*	Split valuation by origin/batch (valuation type)	PARTIAL-20	20	Split valuation (different values per valuation type, e.g. new vs refurbished, domestic vs import) not named — partial; batch-level valuation needed for process industries
OMW0 / OMW1 — Price control (standard/moving average) per material type / valuation area	T134, T001K	V/S, price control mandatory	COVERED-20	20	Costing method on item model group
OMS2 — Material types (quantity/value update per valuation area)	T134, T134M	Quantity/value updating, allowed views, number range	COVERED-8	8	Product types (stocked/non-stocked/service) + item model group flags (physical/financial posting)
OMSL / OMSF — Material number format / material groups	TMCNM, T023	Length, leading zeros, lexicographic	COVERED-8	8	Product number sequences; categories
OMSR / OMS9 — Field selection material master (field references, screen sequences)	T130F, T133*	—	COVERED-3	3	Metadata
OMT3B / OMT3E — Material master screen sequence / data screens	T133K	—	SUPERSEDED-5	5	Metadata-driven forms
OMSY — Fiscal year/period per company code (material periods)	MARV	Current period, allow previous	COVERED-14	14	—
OMBG / OMJN — Physical inventory settings: default values, tolerances per user group (posting differences max), cycle counting indicators (OMCO) and intervals, inventory sampling	T159*, T043I, T159C	ABC thresholds, count intervals, float days	COVERED-16	16	Cycle counting plans; variance posting limits via OPA
OMJ2 / OMJ3 — Print settings for GR/GI slips, labels	T159*, T159P	—	COVERED-46	46	Document designer / label printing (wave 32)
OMCQ — System messages (warning/error) for inventory management	T100C	Make messages errors/warnings	SUPERSEDED-3	3	Validation rules with severity in metadata
OMJA — Movement type statistics relevance (LIS)	T156S	—	SUPERSEDED-46	46	Lakehouse
Special stock settings (consignment price determination, pipeline)	—	—	PARTIAL-16	16	Consignment gap
OMCT — batch level (see batch)	—	—	COVERED-8	8	—
OMCP — Dynamic availability check per movement type	T156, T441V	Check rule per movement	COVERED-16	16	ATP/availability policy on issues (no negative unless allowed)
Stock determination (OSPX / OSPW) strategies for issues (consignment vs own, SLoc priority)	—	—	PARTIAL-16	16	Picking policies FEFO/FIFO named; ownership-based stock determination partial (consignment)

13.14 MM-IV — Logistics Invoice Verification

SAP context: MIRO (PO-based, delivery-note based, GR-based IV, planned/unplanned delivery costs, subsequent debit/credit), parking (MIR7), blocked invoices (MRBR; price/quantity/date/stochastic blocks), tolerance keys (OMR6), GR/IR clearing maintenance (MR11), ERS (MRRL), consignment settlement (MRKO), invoicing plans (MRIS), revaluation (MRNB), duplicate invoice check, OBYC WRX/PRD/KDM. Passage: wave 18 (capture, 2/3-way match, tolerances, exceptions, GR/IR, ERS), wave 19 (AP open items), wave 34 (freight invoices/landed cost).

13.14.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
MIRO	Enter incoming invoice (invoice, credit memo, subsequent debit/credit; PO reference, delivery note, bill of lading, service entry sheet, vendor)	PO-based invoice	COVERED-18	18	Vendor invoice capture with PO/receipt reference; subsequent debit/credit = price adjustment invoice
MIR7 / MIR4	Park invoice / display invoice document	Draft	COVERED-18	18	Draft + approval
MIR6	Invoice overview (parked, held, blocked, posted)	Worklist	COVERED-18	18	AP invoice workspace
MR8M	Cancel invoice document	Reversal	COVERED-18	18	Reversal with inventory/GR-IR re-open
MRBR	Release blocked invoices (price/qty/date/manual block; automatic release)	Exception resolution	COVERED-18	18	Match exception workflow and release
MR11 / MR11SHOW	GR/IR clearing account maintenance (write off small balances) / display	GR/IR cleanup	COVERED-18	18	GR/IR reconciliation report + write-off
MRRL	Evaluated receipt settlement	Self-billing	COVERED-18	18	ERS
MRKO	Consignment and pipeline settlement	—	PARTIAL-16	16	Consignment gap
MRIS	Invoicing plan settlement (periodic/partial invoicing plans on PO)	Recurring PO invoicing (rent, leases)	PARTIAL-17	17	Invoicing plans on POs (periodic settlement without GR) not named — partial; relevant to leases/services; propose wave 17 PO line "invoicing plan"
MRNB	Revaluation (retroactive price change on invoiced items)	Retro-billing by vendor	PARTIAL-17	17	Retro re-pricing partial (MEI1 row)
MRDC	Automatic delivery cost settlement (freight, customs via planned delivery costs)	Planned delivery costs settlement	COVERED-34	34	Freight reconciliation + landed cost
MIRA	Enter invoice for background verification	Batch invoice entry	COVERED-18	18	Bulk capture/OCR queue
MR01 / MR02 / MR03 / MR41 (classic)	Classic invoice verification	—	SUPERSEDED-18	18	—
MR90	Output messages for invoices (ERS printouts)	—	COVERED-18	18	ERS self-billing document output
MIR5	Display list of invoice documents	—	COVERED-18	18	—
Invoice reduction (complaint document)	Invoice reduction with vendor complaint letter	—	COVERED-18	18	Short-pay / invoice reduction with dispute to vendor — treat covered under exception workflow
GR-based IV flag (PO item)	Match per GR document	—	COVERED-18	18	3-way at receipt-document level
Unplanned delivery costs	Distribute across items or post to separate account	—	COVERED-34	34	Landed cost allocation
Duplicate invoice check (vendor flag + OMRDC)	Prevent duplicates (ref no, date, amount)	—	COVERED-18	18	Duplicate detection rules
Withholding tax on MIRO	—	—	COVERED-13	13	—
Fiori: Create Supplier Invoice / Manage Supplier Invoices / Release Blocked Invoices / Clear GR/IR Clearing Account / Supplier Invoices List	S/4 apps	—	COVERED-18	18	—
Fiori: Upload Supplier Invoices / Supplier Invoice from OCR (Central Invoice Management, Business Network)	—	—	COVERED-18	18	OCR adapter; e-invoice (wave 35)

13.14.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
MIR5 / MIR6	Invoice document list / overview	COVERED-18	18	—
MB5S	GR/IR balances per PO	COVERED-18	18	—
MR11SHOW	GR/IR maintenance documents	COVERED-18	18	—
MRBR (list)	Blocked invoices list	COVERED-18	18	—
Invoice register (AP)	Invoice register	COVERED-18	18	—
ME2L (RECHNUNG)	Open invoice quantities by PO	COVERED-18	18	—
F.19	GR/IR analysis	COVERED-18	18	—
PURCHIS invoice values	Invoice value analysis	COVERED-46	46	—
Fiori: Invoice Cycle Time / Touchless invoice rate KPIs	—	COVERED-46	46	—

13.14.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
MRBR (automatic release in batch)	Release blocked invoices automatically when block reasons no longer apply	COVERED-18	18	Re-evaluate match status on new receipts
MRRL (scheduled)	ERS run	COVERED-18	18	—
MRKO (scheduled)	Consignment settlement	PARTIAL-16	16	—
MRIS (scheduled)	Invoicing plan run	PARTIAL-17	17	—
MRNB (scheduled)	Revaluation run	PARTIAL-17	17	—
MRDC (scheduled)	Delivery cost settlement	COVERED-34	34	—
MR11 (periodic)	GR/IR clearing	COVERED-18	18	—
F.19 (periodic regroup)	GR/IR balance sheet regrouping	COVERED-18	18	—
SARA MM_REBEL	Archive invoice documents	COVERED-48	48	—
Fiori: Schedule Supplier Invoice Jobs	—	COVERED-4	4	—

13.14.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OMR6 — Tolerance limits (keys AN, AP, BD, BR, BW, DQ, DW, KW, LA, LD, PP, PS, ST, VP) per company code	T169G	Absolute/percent upper/lower, check/no check; price variance (PP), quantity (DQ), date (ST), blanket PO (LA/LD), order price unit (PS), moving average (VP)	COVERED-18	18	Price/quantity/total/date tolerances per legal entity and vendor group
OMR4 / OMRJ — Document types for invoice verification (RE, KG) / number ranges	T003, T169F, NRIV	—	COVERED-11	11	—
OMRDC — Duplicate invoice check settings	T169P	Check company code, reference, date	COVERED-18	18	—
OMRM — Activate direct posting to G/L and material accounts in MIRO	T169P	—	COVERED-18	18	Non-PO lines on PO invoices
Item amount check (manual block by amount)	T169P	—	COVERED-18	18	Approval threshold
OMRX — Stochastic block (random sampling thresholds)	T169P	—	GAP	propose 18	Random audit sampling of invoices — simple to add to wave 18 exception rules; register as gap
OMRN — Maintain default values for tax codes (MIRO)	T169V	—	COVERED-13	13	—
Vendor-specific tolerances (tolerance groups for vendors: small differences, automatic acceptance)	T169*, T043*	—	COVERED-18	18	Vendor-group tolerances
OBYC — WRX, PRD, KDM, DIF for IV	T030	—	COVERED-18	18	—
ERS settings: vendor flag, document type, tax code default, message type ERS	LFM1, T169*	—	COVERED-18	18	—
Invoice reduction: document types, reason codes	T169*	—	COVERED-18	18	—
Define payment block reasons via IV	T008	—	COVERED-19	19	—
Invoicing plan types (periodic/partial)	T163*	—	PARTIAL-17	17	Invoicing plan gap
Delivery costs: condition types FRA1/FRB1/ZOTH, provision accounts (FR1/FR3 keys)	T030, T685	—	COVERED-34	34	Landed cost charge codes with accrual accounts
Flexible workflow for supplier invoice approval (S/4)	SWF_*	—	COVERED-4	4	—
Default values for IV (unplanned delivery costs distribution)	T169P	—	COVERED-34	34	—
GR/IR regrouping accounts	T030	—	COVERED-18	18	—

13.15 MM-SRV — External Services Management (incl. S/4 Lean Services)

SAP context: service master (AC03), model service specifications (ML10), standard service catalog (SSC), service POs (item category D with service lines and value limits), service entry sheets (ML81N) with acceptance → GR, service conditions (ML33/ML39), invoice via MIRO referencing SES. S/4 "lean services" simplifies: service items as product type Service, no SES (Fiori Manage Service Entry Sheets – Lean). Passage: non-stock service products (wave 8), PO (wave 17), service confirmation/receipt (wave 18) — **no explicit service entry sheet**, so mostly PARTIAL.

13.15.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
AC01 / AC02 / AC03 / AC04 / AC06	Service master create/change/display/list/changes	Service master (activity numbers, UoM, valuation class)	PARTIAL-8	8	Product of type "service" is covered; a dedicated service master with service categories, purchasing text, standard service catalog is partial — add "service product type" attributes to wave 8
ML10 / ML11 / ML12	Model service specifications create/change/display	Reusable service spec templates	GAP	propose 17	Service specification templates (hierarchical outlines of services with quantities) not named; propose "PO line templates" in wave 17
Standard service catalog (SSC)	Standard texts for services	—	GAP	propose 17	Same
ME21N (item cat D) with service lines, value limits, contract limits	Service PO with hierarchical service outline and limits	—	PARTIAL-17	17	Limit/blanket POs named; service outlines (hierarchy of service lines under one PO item) and contract-limit references are partial
ML81N / ML82 / ML83 / ML84 / ML85	Service entry sheet create-maintain / display / list / accept-revoke / collective release	Service performance confirmation → GR	PARTIAL-18	18	Receiving covers "product receipt"; a *service entry sheet* (lines of performed services with quantities/prices, acceptance workflow, partial entries, unplanned services within limits) is not named — partial; add "service receipt/entry sheet with acceptance" to wave 18
ML33 / ML34 / ML35 / ML36 / ML39 / ML40 / ML41 / ML45 / ML46 / ML47 / ML48	Service conditions: vendor-level / service-level / vendor+plant	Service pricing	PARTIAL-17	17	Vendor price lists for service products via pricing engine — partial until service products confirmed
MSRV1 … MSRV6	Service lists: by service / by PO / by SES / by vendor / by contract / entry sheets	—	PARTIAL-18	18	—
MIRO with SES reference	Invoice for services (SES-based)	—	PARTIAL-18	18	Match to service receipt
ML91 / ML92 / ML93	Service entry sheet archiving / lists	—	PARTIAL-18	18	—

T-code	Name	Purpose	Passage status	Wave	Notes
Fiori: Manage Service Entry Sheets – Lean Services / Create Service Entry Sheet	S/4 lean services	—	PARTIAL-18	18	Same
Fiori: Manage Purchase Orders (service items), Manage Supplier Quotations for services	—	—	PARTIAL-17	17	—
Supplier self-service SES (SAP Business Network / Fieldglass)	Supplier enters SES / timesheets	—	PARTIAL-20	20	Supplier portal: add service confirmation/timesheet entry (contingent labor) — partial
Fieldglass (contingent workforce, SOW)	External workforce management	—	OUT-OF-SCOPE	—	Contingent workforce VMS beyond v1; contractor records in HR (wave 42) + service POs suffice

13.15.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
MSRV1 … MSRV6	Service lists	PARTIAL-18	18	—
ME2S	Services per purchase order	PARTIAL-18	18	—
MSRV3 (entry sheets)	SES list	PARTIAL-18	18	—
ML83 / ML84	SES acceptance list	PARTIAL-18	18	—
PURCHIS services analysis	Service purchasing analysis	COVERED-46	46	—

13.15.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
ML85 (collective release of SES)	Mass acceptance	PARTIAL-18	18	—
MRRL for services	ERS for SES	PARTIAL-18	18	—
SES archiving (SARA MM_SRVMAS)	—	COVERED-48	48	—

13.15.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
Service master: number ranges, service categories, organizational status, field selection	ASMD	—	PARTIAL-8	8	—
Service specifications: screen layout, number ranges for SES, release procedure for SES (classification)	ESSR	—	PARTIAL-18	18	SES approval via workflow designer
Service conditions: calculation schema MS0000, condition types PRS	T685	—	PARTIAL-17	17	—
Default values for SES acceptance (immediate GR, account assignment)	—	—	PARTIAL-18	18	—
Source determination for services (contracts)	—	—	PARTIAL-17	17	—
Lean services: activate, product type service, service entry sheet (lean) settings	—	—	PARTIAL-18	18	—

13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)

SAP context: classic WM — warehouse number, storage types/sections/bins (LS01N), transfer requirements (LB01), transfer orders (LT01/LT03/LT06/LT10), confirmation (LT12), put-away/picking strategies, replenishment (LP21/LX16?), WM physical inventory (LI01N–LI21), RF (LM00–LM77), HU management (HU02), storage unit management. EWM (decentral or embedded in S/4) — warehouse product, storage types/bins, warehouse tasks/orders, waves, POSC/LOSC process steps, packing specifications, labor management, yard, slotting, MFS, RF framework (/SCWM/RFUI), warehouse monitor (/SCWM/MON). Passage: wave 31 (locations, LPs/HUs, directives, work templates, waves, replenishment, load planning, dock scheduling, slotting, KPIs), wave 32 (mobile/RF, voice, RFID, labels), wave 16 (counting), wave 28 (basic pick/pack/ship).

13.16.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
LS01N / LS02N / LS03N	Storage bin create/change/display	Bins with type, section, capacity, coordinates	COVERED-31	31	Location model: zones/aisles/racks/bins with capacity/profile
LS05 / LS10	Generate storage bins automatically / define bin structure	Mass bin creation	COVERED-31	31	Bin generator
LS06 / LS07 / LS08	Block/unblock bins (by bin / by storage type / list of blocked bins)	Bin blocking	COVERED-31	31	Location status
LS11 / LS12	Change several bins / block storage type	—	COVERED-31	31	—
LS24 / LS25 / LS26	Stock per material (bin stock) / per bin / stock overview (warehouse)	Bin-level inquiry	COVERED-31	31	On-hand by location/LP
LS22 / LS23 / LS27 / LS28	Change / display quants; quants by storage unit	Quant maintenance	COVERED-31	31	Inventory by location/LP/batch
LS32 / LS33	Change / display storage unit	SU (handling unit)	COVERED-31	31	License plates
LB01 / LB02 / LB03 / LB10 / LB11 / LB12 / LB13	Transfer requirement create/change/display/lists (by storage type, material, movement)	TR = open work demand	SUPERSEDED-31	31	Work demand generated directly from source documents (ASN, order release, replenishment)
LT01 / LT02 / LT03 / LT04 / LT05 / LT06 / LT07 / LT08 / LT09 / LT10	Transfer order: create (manual) / from TR / for delivery / from TR / for posting change / for material document / for mixed SU / by storage type / stock transfer	Work (tasks) creation	COVERED-31	31	Work templates generate tasks (put-away, pick, move, replenish)
LT11 / LT12 / LT13 / LT14 / LT15 / LT16	Confirm TO item / TO / SU / by picking list / cancel TO / cancel TO item	Work confirmation	COVERED-31	31	Work execution (confirm, exceptions, short picks)

T-code	Name	Purpose	Passage status	Wave	Notes
LT21 / LT22 / LT23 / LT24 / LT25 / LT26 / LT27 / LT28	Display TO / list by storage type / by number / by material / by SU / by bin / by delivery / archive	Work inquiry	COVERED-31	31	Work list pages
LT31 / LT32	Print TO / TO group	Pick lists	COVERED-32	32	Printing + mobile
LT41 / LT42 / LT43 / LT44 / LT45	Create / display / confirm TO group (wave) for delivery groups	Group picking (waves, 2-step picking)	COVERED-31	31	Wave templates; cluster/zone picking
LT0A / LT0B / LT0C / LT0D / LT0E / LT0F / LT0G / LT0H / LT0I / LT0J / LT0R / LT0S	TOs for: inbound delivery / outbound delivery / multiple deliveries / return to stock / stock pickup / 2-step picking	—	COVERED-31	31	—
LP10 / LP11 / LP12 / LP21 / LP22	Replenishment: fixed bins (planned) / for storage type / for production / replenishment of fixed bins / replenishment for storage types	Replenishment	COVERED-31	31	Replenishment (min/max, demand, wave)
LX LD10 / LD11 / LD12 / LD13	Picking for delivery monitor / collective TO creation for deliveries	—	COVERED-31	31	—
LQ01 / LQ02	Transfer posting in WM (stock category change: Q→unrestricted, blocked)	Status change	COVERED-31	31	Inventory status changes per location
LU01 / LU02 / LU03 / LU04	Posting change notices	—	SUPERSEDED-31	31	Status changes are direct
LI01N / LI02N / LI03N	WM physical inventory document create/change/display	Bin counts	COVERED-16	16	Cycle counting at location level (wave 31 adds bins)
LI04 / LI05 / LI06	Print / list PI documents	—	COVERED-16	16	—
LI11N / LI12N / LI13N / LI14	Enter count / change count / display / start recount	—	COVERED-32	32	Mobile count
LI20 / LI21	Clear differences WM / clear differences in IM	Variance posting (two-step: WM then IM)	SUPERSEDED-16	16	Single inventory ledger: one variance posting
LX15 / LX16 / LX17 / LX18	Continuous inventory / zero-stock check / annual inventory evaluation / stock placement counting	PI variants	COVERED-16	16	Cycle counting policies incl. zero-count trigger
LICC / LX26	Cycle counting per quant / continuous inventory	—	COVERED-16	16	—
HU02 / HU03 / HUMO	Create/change HU / display HU / HU monitor	Handling units (nested)	COVERED-28	28	Containers/HU with SSCC; nested LPs (wave 31)
HUPAST / HU04 / HUIBD	Pack in HU monitor; HU for inbound delivery	—	COVERED-31	31	—
VL01N/VL02N packing (see LE-SHP)	Packing in delivery	—	COVERED-28	28	—
LM00 → LM01 … LM77 (RF menus: putaway, picking, inquiry, counting, load/unload, pack)	RF transactions (ITSmobile)	RF execution	COVERED-32	32	Mobile app flows (receive, put-away, pick, pack, move, count, inquiry)
LRF1 / LRF2	RF monitor / RF queue assignment	RF supervision	COVERED-32	32	Device/session management; task queues (wave 31 priorities)
LRFMD	RF device master	—	COVERED-32	32	Device registry
LX01 … LX47 (lists — see reports)	—	—	COVERED-31	31	—
LXDCA / cross-docking (LXDCK)	Planned cross-docking	—	GAP	propose 31	Cross-docking (inbound → outbound without put-away, planned/opportunistic) not named in wave 31 — propose directive type "cross-dock"
Dynamic cycle counting / task interleaving	—	—	COVERED-31	31	Work assignment by priority; interleaving — confirm
EWM: /SCWM/MON	Warehouse management monitor (documents, stock, resources, exceptions)	Supervisor cockpit	COVERED-31	31	Warehouse workspace & KPIs
EWM: /SCWM/PRDI / /SCWM/PRDO	Maintain inbound / outbound delivery (warehouse request)	Delivery documents in EWM	SUPERSEDED-31	31	Single delivery/receipt documents (no ERP↔EWM replication)
EWM: /SCWM/TODLV_I / /SCWM/TODLV_O / /SCWM/TO_CONF	Create warehouse tasks for inbound/outbound delivery / confirm	—	COVERED-31	31	—
EWM: /SCWM/ADPROD / /SCWM/ADGI	Goods issue/receipt for production (staging)	Production staging	COVERED-31	31	Staging for production orders (wave 21 picking lists + wave 31 directives)
EWM: /SCWM/WAVE / /SCWM/WAVETMP	Wave management: create/release waves, wave templates	Wave picking	COVERED-31	31	Wave templates
EWM: /SCWM/PACK / /SCWM/PACKSPEC / /SCWM/PSSTAGE	Packing work center / packaging specifications	Packing specs (how to pack product into HU)	PARTIAL-31	31	HU/packing covered; *packaging specifications* (rules: product → packaging material, quantities per level) only implied — partial; propose wave 28/31 "packaging rules"
EWM: /SCWM/VASEXEC / VAS orders	Value-added services (kitting, labeling)	—	GAP	propose 31	VAS/kit-to-order in warehouse not named; propose wave 31 work type "VAS" and wave 24 kitting via lean BOM
EWM: /SCWM/RSRC / /SCWM/USER / /SCWM/QUEUE	Resources, users, queues	Resource management	COVERED-31	31	Users/resources/queues
EWM: /SCWM/LM (labor management: engineered labor standards, planned vs actual, performance docs)	Labor management	—	PARTIAL-31	31	Warehouse KPIs named; engineered labor standards, operator performance/incentive documents — partial
EWM: /SCWM/SLOT slotting & rearrangement	Slotting	—	COVERED-31	31	Slotting analysis
EWM: /SCWM/YM_* yard management (yard bins, vehicles, TUs, checkpoints)	Yard management	—	PARTIAL-31	31	Dock scheduling named; yard (trailer positions, moves, check-in/out) partial
EWM: /SCWM/TU, /SCWM/VEH	Transportation units / vehicles	—	PARTIAL-34	34	Load/TU in wave 34 — partial for yard link
EWM: /SCWM/PI_PROCESS / /SCWM/PI_CREATE / /SCWM/PI_COUNT / /SCWM/DIFF_ANALYZER	Physical inventory in EWM + difference analyzer	—	COVERED-16	16	—
EWM: /SCWM/QINSP Quality inspection engine (QIE)	Inspection in warehouse	—	COVERED-33	33	Quality orders at receipt

T-code	Name	Purpose	Passage status	Wave	Notes
EWM: /SCWM/RFUI	RF framework (menu, screens, logical transactions)	—	COVERED-32	32	Configurable flow designer
EWM: /SCWM/MFS* (Material Flow System: PLC interface, conveyors, ASRS)	Automation integration	—	GAP	propose 32	MFS/PLC integration (telegrams to conveyor/AS-RS) not named; wave 25 OPC-UA/MQTT edge is the natural base — propose wave 32 "automation adapter (ASRS/conveyor)"
EWM: /SCWM/DLVPPF / /SCWM/PPF	Post processing framework actions (print, msg)	—	COVERED-4	4	Event-triggered actions
EWM: Catch weight, serial numbers in WM, batch in WM	—	—	COVERED-24	24	Catch weight (wave 24), serial (wave 8)
EWM: Kit-to-stock / kit-to-order	—	—	GAP	propose 31	See VAS
EWM: Dangerous goods / HazMat checks in warehouse (EHS)	—	—	GAP	propose 34	Hazmat classification, storage compatibility, DG documents — not named; propose wave 34 (transport) + wave 8 attributes
Fiori: Warehouse KPIs, Warehouse Monitor apps, Outbound Delivery Order Overview, Process Warehouse Tasks	—	—	COVERED-31	31	—

13.16.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
LX01	List of empty storage bins	COVERED-31	31	—
LX02	Stock list (bin stock by material)	COVERED-31	31	—
LX03	Bin status report	COVERED-31	31	—
LX04	Capacity used (storage type)	COVERED-31	31	Capacity never exceeded (proof)
LX05	Block bins in bulk storage	COVERED-31	31	—
LX06 / LX07	Fire-containment sections / check storage (inconsistencies)	PARTIAL-31	31	Fire/hazard sections tie to hazmat gap
LX08 / LX09	Accident regulations / overview of all TRs	COVERED-31	31	—
LX10 / LX11 / LX12 / LX13	Stock movements per storage type / document overview / document overview (SU) / analysis of differences	COVERED-31	31	—
LX14 / LX15 / LX16 / LX17	Material situation (ABC/movement frequency) / selection of PI by date / zero-stock check / list of inventory differences	COVERED-31	31	ABC/velocity analysis for slotting
LX18 / LX19 / LX20 / LX21	Statistics of inventory differences / inventory data takeover / generate IM inventory from WM / pick list for several TOs	COVERED-31	31	—
LX22 / LX23 / LX24 / LX25 / LX26 / LX27 / LX29	Inventory status / stock comparison IM–WM / hazardous material / inventory status / cycle counting / stock below minimum / fixed bin supervision	COVERED-31	31	IM–WM comparison superseded (single ledger)
LX31 / LX32 / LX33 / LX34	Analysis of print control / archived TOs / archived TRs / posting change notices	COVERED-31	31	—
LX35 / LX36 / LX37 / LX38 / LX39	Archived PI docs / archived PI history / linked objects / check report Customizing strategy K / evaluation of 2-step picking	COVERED-31	31	—
LX40 / LX41 / LX42 / LX43 / LX44 / LX45 / LX46 / LX47	Material master data in WM / bin status (SU) / stock in storage units / check consistency / HU inquiry / RF monitor-related / TO analysis / analysis of delays in delivery	COVERED-31	31	—
LL01	Warehouse activity monitor (critical TOs, TRs, deliveries, negative stock, posting changes)	COVERED-31	31	Exceptions dashboard
LT22 … LT28	TO lists	COVERED-31	31	—
LS24 … LS26	Bin stock	COVERED-31	31	—
HUMO	HU monitor	COVERED-28	28	—
MCL1 / MCL5 / MCL9 / MCLD (WM LIS)	Warehouse controlling: stock placement/removal, flow of quantities, material movements	COVERED-46	46	—
EWM: /SCWM/MON node reports (stock, documents, resources, PI, labor)	—	COVERED-31	31	—
EWM: /SCWM/LM_ labor reports (planned vs actual)	—	PARTIAL-31	31	—
Fiori: Warehouse KPIs (dock-to-stock, order cycle time, pick accuracy)	—	COVERED-31	31	—

13.16.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
LP21 / LP22 (scheduled)	Replenishment runs	COVERED-31	31	—
LX16 (scheduled)	Zero-stock check	COVERED-16	16	—
LICC / LX26 (scheduled)	Cycle counting generation	COVERED-16	16	—
LT0S / LT0R	2-step picking: removal / allocation	COVERED-31	31	—

T-code	Name	Passage status	Wave	Notes
LT41/LT42 (TO groups, scheduled waves)	Wave release	COVERED-31	31	—
LX / LT15 cleanup / TO archiving (SARA LE_TRANSORD / RL_TA)	Archiving TOs	COVERED-48	48	—
LX14 (periodic ABC)	ABC analysis	COVERED-31	31	—
EWM: /SCWM/WAVE scheduled release, replenishment (/SCWM/REPL), slotting (/SCWM/SLOT), rearrangement (/SCWM/REAR), PI generation, archiving	—	COVERED-31	31	—
EWM: /SCWM/ERP_* delivery replication, queue monitor (SMQ1/SMQ2, qRFC)	ERP↔EWM integration	SUPERSEDED-31	31	Embedded single system; Kafka events instead of qRFC
EWM: Delta/initial stock load (/SCWM/ISU, /SCWM/ERP_STOCKCHECK)	Stock comparison ERP↔EWM	SUPERSEDED-16	16	Single ledger
Labor management period close (/SCWM/LM)	—	PARTIAL-31	31	—

13.16.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OMLW / Define warehouse number, assign to plant/storage location (OMLY)	T300, T320	Warehouse number ↔ plant/SLoc	COVERED-6	6	Warehouse entity (wave 6) with WMS-enabled flag (wave 31)
Define storage types (OMLX / T301), storage sections (T302), storage bin types (T303), storage unit types (T307), bin structure	T301, T302, T303, T307, T305	Put-away strategy (A/B/C/F/I/K/L/P/Q/R), removal strategy (A/F/L/M/P/S/H), mixed storage, capacity check method, SU management, addition to stock, bin blocking on movement, return/negative stock	SUPERSEDED-31	31	Storage strategies replaced by location directives (rules engine) + location profiles; capacity check methods covered
Storage section search (OMLH), storage type search (OMLY/T334T), bin type search (T334B)	T334T, T334B, T334E	Search sequences per movement type/stock category/special stock	SUPERSEDED-31	31	Directive rules
WM movement types (OMLR), reference movement types IM→WM (OMLM LE_WM_MVT)	T333, T321	TO creation automatic/immediate, confirmation required, source/dest bins fixed	SUPERSEDED-31	31	Work templates per source document type
Define control for TO creation / confirmation (OMLV print control, OMLN number ranges)	T329*, T340	Print immediately, pick list sorting, confirmation per item/HU	COVERED-31	31	Work template options
Storage unit management activation, SU number ranges	T300, NRIV	—	COVERED-31	31	LP sequences
Replenishment control for fixed bins / storage types (OMLH / T331B)	T331, T331B, T*	Min/max per bin, replenishment movement type	COVERED-31	31	—
Physical inventory in WM: activate, PI types per storage type, difference posting tolerances	T301, T*	—	COVERED-16	16	—
Hazardous material: regions, water pollution classes, storage classes, fire-containment sections	T* (MGEF)	—	GAP	propose 34	Hazmat gap
Interface to QM / PP (control cycles for WM staging PK05 / LPK1), kanban in WM	PKHD, T*	—	COVERED-31	31	Staging for production (control cycles) — confirm WM staging strategies (pick parts, crate parts, release order parts) in wave 31
RF: menu management (LRFMD LRF1), screen management, verification profiles, bar code types (OMLC)	T* , LRF_*	—	COVERED-32	32	Flow designer
Decentralized WM / EWM integration (SLG, qRFC, distribution model)	—	—	SUPERSEDED-31	31	—
EWM: warehouse number, storage types/sections/bins/activity areas, storage bin sorting, warehouse process types, POSC/LOSC (process-oriented/layout-oriented storage control), put-away/stock removal strategies & search sequences, HU types & packaging specs, work centers, queues, resource types, wave templates, labor management, exceptions codes, PPF	/SCWM/T3* tables	—	COVERED-31	31	Rules engine + work templates + location profiles; packaging specs partial (noted)
EWM: delivery document types / item types, mapping from ERP	/SCDL/*	—	SUPERSEDED-28	28	Single delivery model
EWM: QIE, catch weight, batch management, serial number profiles in EWM	—	—	COVERED-33	33	—
EWM: Yard management customizing	—	—	PARTIAL-31	31	—
EWM: MFS customizing (PLC communication channels, telegrams)	—	—	GAP	propose 32	—
EWM: Labor management: formulas, ELS, incentive	—	—	PARTIAL-31	31	—

13.17 LE-SHP / LE-TRA — Shipping & (classic) Transportation

SAP context: outbound deliveries (VL01N, VL10*), picking (LT03 / WM, or picking without WM), packing with HUs, post goods issue (VL02N), inbound deliveries (VL31N) and ASN, delivery monitor (VL06O/VL06I), shipping points, route determination, delivery scheduling, POD (VLPOD), output (VL71/VL74), shipment documents (VT01N) and shipment cost (VI01) in LE-TRA (deprecated in S/4 in favour of TM). Passage: wave 28 (release, pick/pack/ship, HU/SSCC, carrier adapters, ASN, drop-ship, partial shipments), wave 18 (inbound ASN receiving), wave 34 (shipment/freight).

13.17.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
VL01N / VL02N / VL03N	Outbound delivery create (w/ reference to order) / change / display	Delivery document	COVERED-28	28	Shipment/packing-slip document from order release
VL01NO	Delivery without order reference	—	COVERED-28	28	Ad-hoc shipment (e.g. samples) — confirm
VL10A / VL10B / VL10C / VL10D / VL10E / VL10F / VL10G / VL10H / VL10I	Delivery due list: sales orders / POs (STO) / items / items (STO) / …, collective delivery creation	Release to warehouse in batch	COVERED-28	28	Order release rules (batch/wave)

T-code	Name	Purpose	Passage status	Wave	Notes
VL04	Process delivery due list (classic)	—	SUPERSEDED-28	28	—
VL06O / VL06G / VL06P / VL06U / VL06C / VL06D / VL06L / VL06T / VL06F	Outbound delivery monitor: for GI / for picking / unchecked / confirmation / for distribution / loading / transportation planning / general	Delivery worklist by status	COVERED-28	28	Fulfillment workspace with status views
VL06I / VL06IG / VL06IP / VL06IC	Inbound delivery monitor	—	COVERED-18	18	Inbound ASN/receiving worklist
VL31N / VL32N / VL33N	Inbound delivery (ASN) create/change/display	ASN-based receiving	COVERED-18	18	ASN-driven receiving with LPs (wave 31)
VL34	Worklist inbound deliveries (collective creation from POs)	—	COVERED-18	18	—
VL09	Reverse goods movement (cancel PGI/PGR)	Reversal	COVERED-28	28	Packing slip cancellation reverses COGS
VL02N → Post goods issue	PGI	COGS/inventory posting	COVERED-28	28	—
VL22	Display delivery change documents	—	COVERED-5	5	—
VL23 / VL21	Post goods issue in background / collective PGI	—	COVERED-28	28	Batch PGI
VL35 / VL35_ST / VL36 / VL37	Create picking waves (by delivery time / shipment) / change wave / wave monitor	Wave picking (basic)	COVERED-28	28	Basic wave picking (wave 28), advanced (wave 31)
LT03 / LT0A (picking via WM)	Picking TO for delivery	—	COVERED-28	28	Pick confirmation
VL02N → Picking without WM (pick quantity) / "Lean WM"	Picking without WM	—	COVERED-28	28	Basic pick
VL02N → Pack (HU01 HU02 in delivery), VL74	Packing in delivery; HU creation; packing proposals	Packing	COVERED-28	28	Packing with containers/HU, SSCC
HU02 / HU03 / HUMO / HUPAST	HU management	—	COVERED-28	28	—
VLPOD / VLPODL / VLPODQ	Proof of delivery: change / list / quantity differences	POD-based billing	COVERED-34	34	POD events from carrier/EDI 214; billing on POD — confirm wave 29 billing trigger "on POD" option
VL71 / VL74 / VL70	Output from deliveries / HU output / message overview	Packing slip, labels, ASN (DESADV/856)	COVERED-28	28	ASN output, labels
VLSP	Subsequent outbound delivery split	Split delivery	COVERED-28	28	Partial shipments/split
VL_ VLUNIV	Delivery mass change (VL_MASS)	—	COVERED-5	5	—
VT01N / VT02N / VT03N	Shipment document create/change/display (LE-TRA)	Shipment (consolidated deliveries, legs, stages, carrier)	COVERED-34	34	Load/shipment (wave 34); basic shipment in wave 28 ("shipments")
VT04 / VT05 / VT06 / VT70	Shipment creation in collective processing / shipment list / shipment output	—	COVERED-34	34	Load building
VT11 / VT12 / VT14 / VT16 / VT22	Shipment lists: selection / status / change documents	—	COVERED-34	34	—
VI01 / VI02 / VI03 / VI04 / VI05 / VI11 / VI12	Shipment cost document create/change/display/list; settlement; transfer to FI	Freight cost calc & accrual	COVERED-34	34	Rating + freight accrual
VI07 / VI08	Shipment cost settlement with service agent (self-billing)	—	COVERED-34	34	Freight reconciliation / self-billing
VTFL / VFSC	Shipment cost → billing of freight to customer	—	COVERED-29	29	Freight charges on invoice
VL10 → STO deliveries (replenishment delivery NL/NLCC)	Deliveries for stock transport orders	—	PARTIAL-16	16	Transfer order gap
VRRE / VL0 (returns delivery)	Returns delivery (inbound) for RE orders	—	COVERED-30	30	RMA receipt
VL02N → batch split, serial numbers in delivery	Batch/serial assignment at shipment	—	COVERED-28	28	Tracking dimensions on packing slip
Delivery scheduling (route, transit, pick/pack times, loading)	Backward/forward delivery scheduling	—	COVERED-27	27	Delivery date control (transport days, pick/pack lead)
Fiori: Manage Outbound Deliveries / Create Outbound Deliveries / Pick Outbound Deliveries / Pack Outbound Deliveries / Post Goods Issue / Manage Inbound Deliveries / Change Inbound Deliveries	S/4 apps	—	COVERED-28	28	—
Fiori: Outbound Delivery Overview / Delivery Performance (analytical)	—	—	COVERED-46	46	OTIF metric
Dangerous goods check in delivery (EHS-DG), DG documents	—	—	GAP	propose 34	Hazmat gap
Foreign trade / export documents in delivery (customs, commercial invoice, EUR.1, Intrastat from delivery; GTS)	Export compliance	—	PARTIAL-13	13	Intrastat extract named (wave 13); export documentation (commercial invoice, packing list for customs, certificate of origin), export control screening (denied parties, licenses) and customs declarations (GTS) are not — partial; propose wave 48 "foreign trade/customs" pack
Preference determination (SAP GTS / foreign trade)	Origin & preference (USMCA/EU)	—	GAP	propose 48	Rules-of-origin/preference calculation from BOM — gap

13.17.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OVXD / OVX6 — Shipping points define / assign to plant; shipping point determination (OVL2)	TVST, TVSWZ, TVSTZ	Loading group × shipping condition × plant → shipping point	COVERED-28	28	Warehouse/shipping site determination rules
0VLK — Delivery types (LF, LR, NL, NLCC, EL)	TVLK	Order required, item requirement, route determination, output, text determination, number range	COVERED-28	28	Shipment document types
0VLP — Delivery item categories; 0184 determination	TVLP, T184L	Picking relevance, packing control, availability check, batch split allowed, zero-quantity allowed	COVERED-28	28	Line types
OVLK / 0VLG — Delivery split criteria, combination rules (per ship-to, route, shipping point)	TVLK	—	COVERED-28	28	Consolidation rules
OVLY / OVZ9 (delivery scheduling): shipping point/route times (pick/pack, loading, transit, transportation lead time), factory calendars	TVST, TVRO, TROLZ	Backward/forward scheduling, working times	COVERED-27	27	Delivery date control
0VTC / OVRF — Routes, route stages, route determination (departure zone × destination zone × shipping condition × transportation group)	TVRO, TVRSZ, TVTW, TROLZ	Transit time, carrier default, route schedule (VL51)	COVERED-34	34	Routing/rating in wave 34; basic route/transit in wave 27/28
VL51 / VL52 / VL53 — Route schedules	TVSR	—	COVERED-34	34	—
OVLT — Picking: lean WM, picking location determination (MALA/RETA/MARE rules), storage location rule	TVLK, TVKOL	—	COVERED-28	28	Picking location rules
OVLS / OVLV — Packing: packaging material types (VHAR), packing instructions (POP1/POP2/POP3/POF1), allowed packaging materials, HU number ranges (SSCC), packing control per item category	TVTY, TVEGR, PACKKP	Automatic packing via packing instructions	PARTIAL-28	28	SSCC/containers yes; packing instructions (auto-pack rules) partial (same as EWM packaging specs)
OVLP — POD: activate POD per item category / ship-to, reasons for quantity differences	TVLP, TVPODG	—	COVERED-34	34	—
V/30 / VV21 / VV22 / VV23 — Output determination for deliveries (LD00 delivery note, LALE ASN, HU labels), output types, access sequences, condition records	T685B, NAST, TNAPR	Medium, timing, partner	COVERED-28	28	Output rules (see cross-app)
VTLA — Copy control order → delivery; VTFL delivery → billing	TVCPL, TVCPF	Copy requirements, data transfer routines	SUPERSEDED-28	28	Document flow in domain model with explicit mapping rules; no copy-control routines
OVZ9 / OVZ2 / OVZ3 — Availability check in deliveries (checking groups, scope)	TVLP, T441V	—	COVERED-27	27	ATP
OVLK: Partner determination in delivery (VOPAN LF), text determination (VOTXN), incompletion (OVA2/OVA0 delivery incompletion)	TVLK, TPAER, TVIMF	—	COVERED-28	28	Partners/notes/completeness validations via metadata
0VLK: Serial numbers / batch split in delivery; batch determination (VCH1 for delivery)	—	—	COVERED-28	28	—
OVTZ / Transportation: shipment types (VTTK), shipment stages, legs, shipment cost types (T_55), pricing procedure for freight (TVFT), service agent condition records (TK11), shipment cost settlement settings	TVTK, TVFT, T_56, TVFTS	Shipment cost item categories, calculation basis (weight/volume/distance), settlement to vendor	SUPERSEDED-34	34	TM-style rating engine (rate cards, accessorials) replaces LE-TRA condition-technique freight pricing
Foreign trade: export control, preference, Intrastat settings (VEB, VE0)	T604, T605	—	PARTIAL-13	13	Foreign trade gap

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
Dangerous goods: DG profiles, DG check methods in SD/LE	DGT*	—	GAP	propose 34	Hazmat gap
Loading groups, transportation groups (material master)	TLGR, TTGR	—	COVERED-8	8	Product attributes
Define reasons for cancellation of PGI, goods movement types for delivery (601/602/641/643/651…) via schedule line	T156, TVEP	—	COVERED-28	28	Transaction types
OVLN Define number ranges deliveries / HUs	NRIV	—	COVERED-5	5	—

13.18 TM — Transportation Management (SAP TM / embedded TM in S/4)

SAP context: freight units (FU), freight orders (FO) and bookings (FB), transportation cockpit (/SCMTMS/PLAN? or NWBC/Fiori), carrier selection and tendering, charge management (agreements, rate tables, calculation sheets), freight settlement documents (FSD) → MM-IV, forwarding orders/settlement (LSP scenario), tracking events (EM), strategic freight procurement. Passage: wave 34 (load/route planning with VRP, rating, tendering, tracking, freight reconciliation, landed cost).

13.18.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
/SCMTMS/TRQ (forwarding order) / Fiori: Create Forwarding Order	Forwarding order (LSP scenario: customer orders transport)	LSP business	OUT-OF-SCOPE	—	Logistics service provider (3PL/forwarder) scenario is beyond manufacturer scope; shipper scenario only
Freight units (FU) built from deliveries/orders (FUBR rules)	Freight unit building	—	COVERED-34	34	Load building from shipments
/SCMTMS/FRE Freight order (road), freight booking (air/ocean)	FO/FB documents	—	COVERED-34	34	Loads with carrier; ocean/air bookings — confirm multi-modal (wave 34 says loads/routes/carriers; treat covered with ocean/air as modes)
Transportation cockpit (/SCMTMS/PLAN NWBC) / Fiori: Transportation Cockpit	Manual + optimizer planning (VSR)	Planning UI	COVERED-34	34	Load/route planning with OR-Tools VRP
Carrier selection (manual/automatic, cost/priority/allocation)	—	—	COVERED-34	34	Rate shopping
Tendering (peer-to-peer, broadcast, carrier portal/collaboration portal, EDI 990)	Tendering workflow	—	COVERED-34	34	Tendering workflow with timeouts cascade
Freight agreements, rate tables, calculation sheets, charge types, scales	Charge management master data	—	COVERED-34	34	Carrier rate cards, accessorials, fuel surcharge
Freight settlement document (FSD) / Fiori: Manage Freight Settlement Documents → MM-IV (service PO)	Carrier cost settlement	—	COVERED-34	34	Freight reconciliation + accrual posting
Cost distribution (to deliveries/items → CO-PA/landed cost)	Freight cost distribution	—	COVERED-34	34	Landed cost allocation
Tracking & tracing (Event Management / Fiori: Track Freight Orders), event handlers	Visibility	—	COVERED-34	34	Tracking events (EDI 214/API), POD
Transportation units / resources (vehicles, trailers, drivers), calendars	Fleet resources	—	PARTIAL-34	34	Own fleet (vehicles/drivers/driver hours) not named — partial; carriers assumed external
Transportation network: locations, zones, lanes, transshipment locations, schedules	Network master	—	COVERED-34	34	Routes/lanes/zones
Dangerous goods & DG checks in TM	—	—	GAP	propose 34	Hazmat gap
Customs declarations via GTS from TM	—	—	PARTIAL-13	13	Foreign trade gap
Fiori: Monitor Freight Orders / Freight Order Worklist	—	—	COVERED-34	34	—
Strategic freight procurement (RFQ for lanes, bid analysis)	—	—	GAP	propose 34	Lane-based freight RFQ/bid analysis — gap; could reuse wave 17 RFQ
Load consolidation / container packing optimization (load plan 3D)	—	—	PARTIAL-34	34	Load building with capacity constraints named; 3D load plan/visual stacking partial
Parcel manifesting (multi-carrier, label)	—	—	COVERED-28	28	Carrier adapters (EasyPost/Shippo-style)

13.19 SD — Sales & Distribution (pricing, orders, deliveries, billing, credit)

SAP context: SD-MD (customer sales data, customer-material info, conditions), SD-SLS (inquiry, quotation, order, contract, scheduling agreement, returns, credit/debit memo requests, consignment, free-of-charge, rush/cash sales, third-party, make-to-order with configuration), SD-BF (pricing condition technique, availability check, partner/text/output determination, incompletion, credit management), SD-SHP (see LE-SHP), SD-BIL (billing documents, billing plans, invoice lists, credit/debit memos, pro-forma, intercompany billing, rebates, revenue account determination, SD-FI interface). Passage: wave 26 (pricing), wave 27 (quotes/orders/ATP/credit/holds), wave 28 (fulfillment), wave 29 (billing/rev rec), wave 30 (AR/returns/portal), wave 40 (intercompany).

13.19.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
VD01 / VD02 / VD03 / XD01 (sales area data)	Customer master sales area view	Shipping, billing, partner functions, pricing groups per sales org/channel/division	COVERED-7	7	Customer role with sales-scope data (sales org/channel/division ≈ hierarchy purpose)
VD51 / VD52 / VD53 / VD59	Customer-material info record create/change/display/list	Customer part numbers, delivery agreements	COVERED-27	27	Customer item numbers/external item references — confirm in wave 27 (named in AX "external item descriptions"); treat covered
VK11 / VK12 / VK13 / VK14	Condition record create/change/display/create with reference (prices PR00, discounts K004/K005/K007, freight, taxes MWST)	Pricing conditions	COVERED-26	26	Pricing engine condition tables/access sequences
VK31 / VK32 / VK33 / VK34	Condition maintenance via area menu (mass)	—	COVERED-26	26	Mass price updates
V-41 … V-48 / V_I7	Create material/customer/price list conditions, scales	—	COVERED-26	26	Quantity breaks (scales)
VK30 / VKP	Condition maintenance / pricing report	—	COVERED-26	26	—
VB11 / VB12 / VB13 / VB14	Material determination (substitution) create/change/display/reference	Product substitution rules	COVERED-27	27	Alternative items
VB01 / VB02 / VB03	Listing/exclusion	Allowed/forbidden products per customer	PARTIAL-27	27	Product listing/exclusion per customer not named in wave 27 — partial; simple rule on order validation
VBN1 / VBN2 / VBN3	Free goods condition records (inclusive/exclusive)	Free goods	PARTIAL-26	26	Free goods (buy 10 get 1) not named; promotions with quantity breaks are — partial
VB21 / VB22 / VB23 / VB31 / VB32 / VB33	Sales deals / promotions	Promotions	COVERED-26	26	Promotions & campaigns
VA51 / VA52 / VA53	Item proposal create/change/display	Order templates	COVERED-27	27	Order templates / product proposals — confirm (AX "item proposal")
VA11 / VA12 / VA13 / VA15	Inquiry create/change/display/list	Pre-sales inquiry	COVERED-27	27	Quotation stage "inquiry" or CRM; wave 27 quotations cover
VA21 / VA22 / VA23 / VA25 / VA26	Quotation create/change/display/list/selection	Quotation	COVERED-27	27	Quotation → order conversion
VA01 / VA02 / VA03 / VA05 / VA05N	Sales order create/change/display/list	Standard order (OR), rush (SO), cash sales (BV), free-of-charge (FD/KL), returns (RE), credit/debit memo request (CR/DR), consignment (KB/KE/KA/KR), third-party, MTO/configurable	COVERED-27	27	Order types: journal/order/subscription/returned; CR/DR requests → credit note workflow (wave 29/30)
VA01 order type RE (returns) + VRRE	Returns order with returns delivery	RMA	COVERED-30	30	Return orders (RMA) with disposition
VA01 CR / DR (credit / debit memo request) with billing block	Credit/debit memo requests	—	COVERED-29	29	Credit notes with approval
VA01 KB / KE / KA / KR (consignment fill-up/issue/pick-up/returns)	Customer consignment processes	—	PARTIAL-27	27	Customer consignment gap (see MM-IM)

T-code	Name	Purpose	Passage status	Wave	Notes
VA01 BV / SO (cash sales / rush order)	Immediate delivery and invoice	—	COVERED-27	27	Order type with immediate release/invoice — confirm
VA01 FD / KL / SD (free-of-charge delivery / subsequent free-of-charge)	Free-of-charge	—	COVERED-27	27	Zero-price order lines with COGS
VA01 third-party (item cat TAS) → PR/PO → MIRO → VF01	Third-party order processing	—	COVERED-28	28	Drop-ship
VA01 individual purchase order (TAB)	Purchase-to-order (stock via PO)	—	COVERED-27	27	Direct delivery / back-to-back PO — covered by drop-ship & "order with configured product creates production/planned order linkage" (wave 27); back-to-back purchase covered via wave 22 MRP; treat covered
VA01 with variant configuration (TAC)	Configure-to-order	—	COVERED-27	27	Configurator (wave 8)
VA01 MTO (TAK) → production order	Make-to-order linkage	—	COVERED-27	27	Order-linked production order
VA31 / VA32 / VA33 / VA35	Customer scheduling agreement create/change/display/list (SA with JIT/forecast schedules VA32 → delivery schedule)	Customer SA (automotive)	PARTIAL-27	27	"Scheduling agreements" named in wave 27 replaces list; inbound EDI DELFOR/DELJIT (830/862) customer schedules with cumulative quantities and schedule reconciliation are not named — partial (automotive)
VA41 / VA42 / VA43 / VA45	Contract create/change/display/list (quantity contract, value contract, service contract, master contract)	Sales agreements	COVERED-27	27	Sales agreements (blanket); service contracts in wave 45
VA44 / VA46	Contract: actual overview / value contract release orders	—	COVERED-27	27	Release tracking on agreements
VA88 / VA08	Sales document mass processing (MASS VBAK)	Mass change	COVERED-5	5	—
VA14L	Sales documents blocked for delivery	Holds	COVERED-27	27	Order holds
VKM1 / VKM2 / VKM3 / VKM4 / VKM5	Credit: blocked SD documents / released / all / release / delivery	Credit release	COVERED-27	27	Credit hold workflow
V.01 / V.02 / V.03 / V.04 / V.05	Incomplete sales documents lists (orders, deliveries, contracts…)	Incompleteness	COVERED-27	27	Validation/incomplete status
V_R1 / V_R2 / V_RA	Rescheduling / backorder processing	ATP rebalancing	COVERED-27	27	Backorder handling
CO06 / CO09 / CO24	Backorder processing (ATP manual allocation) / availability overview / missing parts	ATP	COVERED-27	27	ATP/CTP with cumulative ATP view
V_V2	Rescheduling sales documents (batch)	—	COVERED-27	27	—
VKA / VSB1 (self-billing)	Self-billing procedure (customer self-billing, automotive)	—	GAP	propose 29	Customer self-billing (EDI 820/GSVERF reconciliation against invoices) not named; automotive; propose wave 29/35 option
VF01 / VF02 / VF03	Billing document create/change/display (invoice F2, pro-forma F5/F8, credit memo G2, debit memo L2, intercompany IV, returns credit RE, cancellation S1)	Billing	COVERED-29	29	Invoice posting; credit notes; pro-forma — confirm pro-forma (no posting) document type; treat covered
VF04	Maintain billing due list (order-related, delivery-related, collective)	Billing run	COVERED-29	29	Invoice generation from shipments/orders; consolidated invoices
VF05 / VF05N	List billing documents	—	COVERED-29	29	—
VF06	Batch billing	—	COVERED-29	29	—
VF11	Cancel billing document	Reversal	COVERED-29	29	Credit note / cancellation
VF21 / VF22 / VF23 / VF24 / VF25	Invoice list create/change/display/worklist/list	Invoice lists (periodic collective invoice with factoring discount)	COVERED-29	29	Consolidated/summary invoices
VF31	Output from billing documents	Print/EDI invoice (810/INVOIC), e-invoice	COVERED-29	29	Invoice layouts; e-invoice via wave 35
VFX3	Release billing documents to accounting (blocked)	—	COVERED-29	29	Posting errors queue
VF44 / VF45 / VF46 / VF47	Revenue recognition (classic SD rev rec): worklist / display / cancel / inconsistency check	Classic rev rec	SUPERSEDED-29	29	ASC 606/IFRS 15 rev rec engine
RAR: FARR_* (contracts, POBs, schedules), Fiori: Manage Revenue Contracts	Revenue Accounting and Reporting (IFRS 15)	—	COVERED-29	29	Performance obligations, SSP allocation, schedules
Billing plans (periodic/milestone) on order items (VA02 → billing plan)	Periodic / milestone billing	—	COVERED-29	29	Subscription (recurring) + milestone billing
Down payment processing in SD (billing plan FAZ, F-29)	Down payment request/invoice	—	COVERED-27	27	Deposit requests; wave 30 customer prepayments
VF01 IV (intercompany billing)	Intercompany invoice from cross-company delivery	—	COVERED-40	40	IC mirror documents
Resource-related billing DP90/DP91 (see CS/PS)	—	—	COVERED-41	41	T&M billing
Customer returns (S/4 Advanced Returns Management: MSR_*)	Returns with inspection, refund determination, logistics follow-up (return to vendor)	—	COVERED-30	30	RMA: inspection, disposition, credit/refund; return-to-vendor flow — confirm return-to-vendor; treat covered
VKP0 / Pricing report (V/LD)	Pricing reports (condition lists)	—	COVERED-26	26	Price simulation and explain
VOFM (routines) — see customizing	—	—	SUPERSEDED-26	26	—

T-code	Name	Purpose	Passage status	Wave	Notes
Fiori: Manage Sales Orders / Sales Quotations / Sales Contracts / Sales Scheduling Agreements / Credit Memo Requests / Debit Memo Requests / Customer Returns / Billing Documents / Create Billing Documents	S/4 apps	—	COVERED-27	27	—

13.19.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OVX5 / OVXA / OVXB / OVXG / OVX3 / OVXK / OVXM — Sales organizations, distribution channels, divisions, sales areas, sales offices/groups, assignments to company code/plant	TVKO, TVTW, TSPA, TVKOV, TVKOS, TVBUR, TVKGR, TVKWZ	—	COVERED-6	6	Sales hierarchy purpose; sales scope dimensions
VOV8 — Sales document types (OR, RE, CR, DR, KB, BV, SO, QT, KA, IN, WK1, LZ…)	TVAK	Number range, screen sequence, delivery/billing type defaults, credit check, incompletion procedure, pricing procedure determination (doc pricing proc), immediate delivery, lead time, transaction group	COVERED-27	27	Order types with defaults
VOV7 — Item categories (TAN, TAS, TAB, TAK, TAC, TANN, TAQ, TAD, REN, G2N, L2N…)	TVAP	Billing relevance (A/B/F/I), pricing relevant, schedule lines allowed, returns, BOM explosion, credit active, completion rule	COVERED-27	27	Line types
VOV4 — Item category determination (doc type × item category group × usage × higher-level)	T184	—	SUPERSEDED-27	27	Line type derived from product type/order type via metadata rules
VOV6 / VOV5 — Schedule line categories and determination (CP, CN, CV, DN…)	TVEP, T184	Movement type, requirement transfer, availability check, purchase requisition creation (third-party)	SUPERSEDED-27	27	Delivery schedule lines are native; movement/requirement behaviour by line type
OVKK — Pricing procedure determination (sales area × doc pricing procedure × customer pricing procedure)	T683V	—	COVERED-26	26	Pricing procedure selection rules
V/08 — Pricing procedures (RVAA01 etc.): steps, counters, condition types, from/to, manual, required, statistical, subtotals, requirements, calculation/base formulas, account keys	T683S	Requirements/formulas (VOFM), subtotals, account keys ERL/ERS/ERF/MWS	COVERED-26	26	Pricing procedure = ordered condition steps with rounding; VOFM routines replaced by expression rules
V/06 — Condition types (PR00, K004, K005, K007, KF00, HD00, RA01, MWST, VPRS, SKTO, BO01…)	T685, T685A	Condition class (price/discount/tax/rebate), calculation type (qty/percent/fixed/scale), scale basis, group condition, header/item, manual, plus/minus, text, reference condition	COVERED-26	26	Condition type attributes
V/07 — Access sequences	T682, T682I, T682Z	Accesses with condition tables, exclusive, requirements	COVERED-26	26	Access sequences specific → general
V/03 / V/04 / V/05 — Condition tables create/change/display	T681, A001..A999	Field catalog, header/with validity	COVERED-26	26	Condition tables generated from metadata
OV31 / V/N — Condition exclusion groups (VB(1 / OV32)	T684, T684G	Best price among groups	COVERED-26	26	Exclusion/best-of rules
OVKI / OVKJ — Document pricing procedure / customer pricing procedure indicators	TVKV, TVKD	—	COVERED-26	26	—
V/76 / V/77 — Material pricing group / customer pricing group / price lists / price groups	T178, T151, T189, T188	—	COVERED-26	26	Price groups
V/LD — Pricing reports definition	—	—	COVERED-26	26	—
VOFM — Requirements, formulas (pricing, copy, output, data transfer)	TFRM	ABAP routines	SUPERSEDED-26	26	Expression/rule language in metadata; no ABAP (PRD non-goal)
OVA8 / OVAK / OVAD / OVA7 — Automatic credit control, credit check per sales doc type, delivery type, item category credit active	T691F, TVAK, TVLK, TVAP	Static/dynamic, horizon, max doc value, oldest open item, reaction, release via VKM	COVERED-27	27	Credit rules
OB45 / OB38 — Credit control areas / assignment (classic)	T014, T001	—	SUPERSEDED-27	27	—
OVZ9 / OVZ2 / OVZ3 / OVZ1 / OVZG / OVZH / OVZ0 — Availability check: checking groups, checking rules, scope of check (include POs, reservations, production orders, safety stock), requirement classes/types, strategy groups (planning), delivery date control	TMVF, T441V, T459K, T459A, TVEP	ATP scope, replenishment lead time, backorders, product allocation	COVERED-27	27	ATP configuration: supply/demand elements included, delivery date control; planning strategy in wave 22
OVZJ / OVZI — Product allocation (quota per customer/period)	T190, KOTA	—	GAP	propose 27	Product allocation (ATP quotas per customer/region in scarcity) not named — propose wave 27 ATP option
OVZK / OVZ — Availability check against product allocation; aATP (S/4): backorder processing strategies (BOP), alternative-based confirmation (ABC), release for delivery	—	—	PARTIAL-27	27	ATP/CTP covered; aATP backorder processing with strategies (win/gain/redistribute/fill/lose) partially named ("backorder handling")
VOPAN — Partner determination procedures (sales doc header/item, delivery, billing, customer master)	TPAR, TPAER, TVPG	Partner functions SP/SH/BP/PY, mandatory, unique	COVERED-7	7	Document partner roles (sold-to, ship-to, bill-to, payer)
VOTXN — Text determination (text types, procedures, access sequences)	TTXID, TTXERN	Copy from customer/material/preceding doc	COVERED-27	27	Notes/text blocks with inheritance — confirm inheritance rules
OVA2 / OVA0 / OVA — Incompletion procedures (order/delivery/billing), status groups	TVUVG, TVUV, TVUVF	Fields required for next step	COVERED-27	27	Validation/completeness rules via metadata

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
VTAA / VTLA / VTFA / VTFL / VTAF / VTFF — Copy control order→order, order→delivery, order→billing, delivery→billing, quotation→order, billing→billing	TVCPA, TVCPL, TVCPF	Copy requirements, data transfer routines, item category proposal, quantity/value update (+/-)	SUPERSEDED-27	27	Document conversion rules (quote→order→shipment→invoice) in the domain model with explicit mapping and quantity tracking; no VOFM copy routines
VOFA — Billing types (F2, F5, F8, G2, L2, RE, IV, S1, S2, FAZ, FAS)	TVFK	Number range, posting block, account determination procedure, cancellation type, invoice list type, rebate relevant, statistics	COVERED-29	29	Invoice document types
OVBI / OVBJ / OVBK / OVBL / OVBM — Billing plan types (periodic, milestone), date descriptions, date categories, date proposals, assignment to item categories	T6B0, TFPLA, TFPLB, TFPLT	Horizon, in advance/arrears, billing block until milestone, milestone from PS	COVERED-29	29	Billing schedules (ratable/milestone/usage)
VKOA — Revenue account determination (condition technique: application V, procedure KOFI/KOFK, tables 001-005: sales org/account assignment group customer/material/account key)	C001..C005, T030, TVKV	Account keys ERL, ERS, ERF, MWS, EVV, DIF	COVERED-29	29	Revenue/discount/freight posting profiles by customer group × item group × sales scope
OVK1 / OVK3 / OVK4 / OVK6 — Tax determination rules: tax categories per country (MWST, UTXJ), customer tax classifications, material tax classifications, plant/region tax codes	TSTL, TSKD, TSKM, T005, TVKWZ	Tax classification combinations → tax code via condition records (VK11 MWST)	COVERED-13	13	Tax groups × item tax groups → tax codes (tax engine); jurisdiction codes (TAXUSJ)
OVFL / OVF — Define plant/region tax jurisdiction defaults	—	—	COVERED-13	13	—
OVXD / OVX — Shipping points etc. — see LE-SHP	—	—	COVERED-28	28	—
OVLK — Delivery scheduling and transportation scheduling activation per sales doc type	TVAK	—	COVERED-27	27	—
OVKP / OVRC — Order reasons, reasons for rejection, delivery blocks, billing blocks, order blocks	TVAU, TVAG, TVLS, TVFS, TVAST	—	COVERED-27	27	Reason codes; holds (credit, manual)
OVB — Define sales document status groups, user statuses (BS02)	TJ30	—	COVERED-4	4	—
OVK — Customer groups, customer account assignment groups, material account assignment groups, item category groups, material groups 1-5	T151, TVKT, TVKM, TPTM, TVM1..TVM5	—	COVERED-7	7	Customer groups (wave 7), item groups (wave 8)
OVSH — Sales districts, sales offices, sales groups, customer hierarchy types (OVH1/OVH2/OVH3 hierarchy assignments)	T171, TVBUR, TVKGR, T179, KNVH	Hierarchy nodes for pricing/rebates	COVERED-7	7	Customer hierarchies (party hierarchy purposes)
OVZ "Define requirements classes/types, assignment to strategy group" (OVZG/OVZH/OVZI)	T459K, T459A, T459U	MTO/MTS/CTO behaviour, costing, special stock E	PARTIAL-27	27	Planning strategies (wave 22) + sales-order stock partial
Output determination SD (NACE V1/V2/V3, V/30 V/40 V/42 V/48 V/57): output types BA00/LD00/RD00, access sequences, condition records VV11/VV21/VV31, print programs/forms	NAST, TNAPR, T685B, B001..	Medium (print/EDI/email/ALE), partner, timing, repetition	COVERED-27	27	Output rules per document type; EDI 855/856/810 wave 35
OV "Define material determination types/procedures" (OV11 OV12)	T475, T475T	Substitution reasons, automatic/manual	COVERED-27	27	Alternative items rules
OV "Listing/exclusion procedures" (OV04)	T684	—	PARTIAL-27	27	Listing gap
OVKF — Free goods: condition type NA00, procedure NA0001, determination	T685, KOTN	Inclusive/exclusive, calculation rule	PARTIAL-26	26	Free goods gap
OVSD / OVSE / OVSG — Sales activities (CAS) customizing	—	—	OUT-OF-SCOPE	—	CRM non-goal
OMO1 / MC18 / MC21 / MC24 — SIS info structures, update rules, update groups	TMC*, S0xx	—	SUPERSEDED-46	46	Lakehouse + semantic layer
OVB6 / V/86 — Define rounding (unit of measure rounding, rounding profiles OVR)	T006R, TVRPL	Rounding profiles for order qty	COVERED-27	27	Order quantity rounding (UoM); smart rounding for prices (wave 26)
OVRQ / Define units of measure groups, delivery units, minimum order qty (material master)	T006, MVKE	—	COVERED-8	8	Product sales attributes
Advanced Returns Management settings: return reasons, refund types, inspection codes, follow-up activities, logistical follow-up	MSR_*	—	COVERED-30	30	Disposition codes
RAR customizing: accounting principles, POB types, SSP determination, allocation methods, contract categories, inflight checks	FARR_C_*	—	COVERED-29	29	Rev rec configuration
Payment card customizing (CCARD): card types, authorization horizon, merchant IDs, clearing house interface	TCCAA, TCCT	—	COVERED-30	30	Payment adapter
Define sales deal / promotion types (OVB / VB(2)	T6B1, T6B2	—	COVERED-26	26	—
Intercompany billing settings (IV billing type, internal customer per sales org, OVV9 / OVV8)	TVKO, T001, TVVF	—	COVERED-40	40	—
Define number ranges SD documents (VN01, VN02, VN03, VN04)	NRIV	—	COVERED-5	5	—
Define sales document field selection / screen sequence (SHD0 transaction variants)	—	—	SUPERSEDED-5	5	Metadata-driven forms + personalization
Mass maintenance of SD conditions (VK12 scales), condition index (V/I / V/I7), condition table index	—	—	COVERED-26	26	—

13.20 SD Rebates / Settlement Management (condition contracts)

SAP context: ECC SD rebate processing — rebate agreements (VBO1/VBO2/VBO3), accruals via condition types BO01–BO06 on billing, settlement (VB(7), partial settlement, retroactive rebates (VBOF), rebate index rebuild (VBOF/OVB3). S/4HANA replaces this with Settlement Management (condition contracts WCOCO,

business volume determination, settlement runs WB2R_SC, settlement documents, accruals; also supplier rebates / chargebacks / commissions). Passage: wave 26 (rebate agreements + accrual), wave 30 (rebate settlement), wave 19 (vendor side via AP).

13.20.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
VBO1 / VBO2 / VBO3	Rebate agreement create/change/display (types 0001 group, 0002 material, 0003 customer, 0004 hierarchy, 0005 independent of sales volume)	Customer rebate agreements	COVERED-26	26	Rebate agreements and accrual calculation
VB(D	Extend rebate agreement (validity)	—	COVERED-26	26	—
VB(7	Rebate settlement (partial/final; creates credit memo request B1/B3)	Settlement	COVERED-30	30	Rebate settlement from wave 26 accruals
VBOF	Update billing documents (retroactive rebate accrual)	Retroactive agreements	PARTIAL-26	26	Retroactive rebate (apply agreement to already-invoiced volume) not named — partial
VB(8 / VBOE	Rebate index: list / rebuild	—	SUPERSEDED-26	26	Accruals computed from journal/billing events
WCOCO (S/4) / Fiori: Manage Condition Contracts	Condition contract create/change (customer, supplier, commission; contract types)	Settlement management master	COVERED-26	26	Agreement model covers customer rebates; supplier rebates (vendor-side accrual + AP credit) — confirm wave 19/26 cover supplier rebates; see below
Supplier condition contracts (purchasing rebates, chargebacks)	Vendor rebates / ship-and-debit chargebacks	—	PARTIAL-19	19	Supplier rebate accrual and settlement (credit from vendor) and chargeback/ship-and-debit claims are not named in waves 17/19 — partial; propose wave 26 engine reused for purchasing with settlement via AP in wave 19
Commission contracts (sales rep commissions via settlement management)	Commissions	—	PARTIAL-26	26	"Commission calculation hooks" only — partial; settlement to payroll/AP not named
WB2R_BUSVOL / Fiori: Business Volume	Business volume determination (condition contract business volume selection)	—	COVERED-26	26	Accrual base from billed/shipped volume
WB2R_SC / WB2R_SV	Settlement run (single / mass) → settlement documents (WB2R_SD display)	—	COVERED-30	30	—
Settlement documents (credit memo / invoice) WB2R_* / Fiori: Manage Settlement Documents	Settlement documents with accounting	—	COVERED-30	30	Credit note / vendor invoice from settlement
Fiori: Condition Contract Overview / Settlement Dates / Accruals monitor	—	—	COVERED-26	26	—
Promotion pricing / trade promotion management (TPM, CRM)	Trade promotions with funds	—	OUT-OF-SCOPE	—	CRM TPM non-goal; wave 26 promotions cover pricing side
Chargeback / ship-and-debit claims from distributors	Claim validation against agreements	—	GAP	propose 30	Distributor chargeback claims (EDI 844/849) validation and settlement — gap for manufacturers selling via distribution; propose wave 30 + wave 35
Royalty / licensing payments (settlement management use)	Royalty accrual/settlement	—	GAP	propose 26	Royalty accrual by sales volume (license fees to third parties) — gap; reuse rebate engine with vendor-side settlement

13.20.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
VB(8 / VBO3 → sales volume / verification level	Rebate agreement sales volume & accrual verification	COVERED-26	26	Explain accrual
VB(5	Rebate agreement list	COVERED-26	26	—
S_ALR_87012 (rebate accruals in FI)	Accrual balances	COVERED-26	26	Accrual account reconciliation
Fiori: Condition Contract Overview / Business Volume analytics / Settlement document list	—	COVERED-26	26	—
WB2R_* reports: settlement document list, accrual list	—	COVERED-30	30	—

13.20.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
VB(7 (periodic settlement run)	Partial settlement per period	COVERED-30	30	—
VBOF (batch)	Retroactive accrual update	PARTIAL-26	26	—
WB2R_SC (batch) / settlement calendar	Settlement run by settlement date type	COVERED-30	30	—
Accrual run / accrual reversal (settlement management)	Periodic accrual posting	COVERED-26	26	Rebate accrual job
WB2R_BUSVOL (batch)	Business volume update	COVERED-26	26	—
Delta accruals / delta settlement	Delta settlement after retro changes	PARTIAL-26	26	Retroactive gap

13.20.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OVB3 / VB(2 — Rebate agreement types, condition type groups, rebate condition types (BO01-BO06), accrual account keys (ERB/ERU)	T6B1, T6B2, T685, T687	Manual accruals, settlement periods, verification levels	COVERED-26	26	Rebate agreement types
OVB1 / OVB2 — Activate rebate processing (sales org, billing type, payer)	TVKO, TVFK, KNVV	—	COVERED-26	26	—

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
V/08 rebate steps in pricing procedure (BO01 subtotal, statistical accrual)	T683S	—	COVERED-26	26	—
Settlement management: condition contract types, settlement process types, settlement document types, business volume selection criteria, settlement calendars, accrual settings, pricing procedures for settlement (WB2R)	WCB_*, WB2_*	Customer/supplier/commission contract types, settlement date types (partial/final/delta), accrual condition types	COVERED-26	26	Agreement types + settlement calendars (wave 30 settlement)
Settlement management: account determination for settlement docs, tax determination	T030, WB2_*	—	COVERED-30	30	—
Chargeback / claim types	—	—	GAP	propose 30	—
Commission settlement integration (HR/AP)	—	—	PARTIAL-26	26	—

13.21 PP — Production Planning (master data, MRP, SOP/demand management, production orders, capacity, KANBAN, REM)

SAP context: PP-BD (material MRP views, BOMs CS01, work centers CR01, routings CA01, production versions C223, ECM CC01), PP-MRP (MD01/MD02/MD03, MD04 stock/requirements, MD05/MD06 MRP lists, planned orders MD11–MD16, planning file MD20/MD21, MRP areas, MRP Live MD01N), PP-MP (SOP MC87/MC88, flexible planning MC93/MC94, demand management MD61–MD63, PIR transfer MC74/MC75, long-term planning MS01–MS70), PP-SFC (production orders CO01–CO15, COOIS, COHV, CO40/CO41 conversion, confirmations CO11N, COGI, availability check, TECO/close), PP-CRP (capacity CM01–CM07, leveling CM21–CM29, CM25 planning table), PP-KAB (control cycles PK01, kanban board PK13N), PP-REM (REM profile, planning table MF50, backflush MFBF, cost collectors), PP-PDC. Passage: wave 9 (BOM/routing/work centers/ECM), wave 21 (production orders, confirmations, WIP), wave 22 (MRP/MPS/forecasting), wave 23 (capacity/scheduling), wave 24 (lean/kanban/REM), wave 25 (shop floor/PDC), wave 39 (costing).

13.21.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
MM01 / MM02 / MM03 (MRP 1-4, work scheduling views)	Material master planning data: MRP type, lot size, procurement type, special procurement, safety stock, planning strategy, scheduling margin key, availability check, production version, backflush, batch entry	Planning parameters per item/site	COVERED-22	22	Coverage groups (requirement/period/min-max), lead times, safety stock, planning strategy on released product; wave 8 for master
MM02 → MRP areas (MD61 per MRP area)	MRP area assignment (storage location / subcontractor level planning)	—	PARTIAL-22	22	Planning at warehouse (sub-site) level and at subcontractor level not explicitly named — partial; wave 22 plans by site; add "planning scope = site or warehouse"
CS01 / CS02 / CS03	Material BOM create/change/display (usage 1 production, 2 engineering, 3 universal; alternatives; item categories L/N/R/D/T/K/M/I)	BOMs	COVERED-9	9	BOM header/version/lines with effective dates, phantoms, scrap, by-/co-products
CS05 / CS06 / CS07 / CS08	Change/display BOM group / plant assignment BOM (allocate BOM to plant)	—	COVERED-9	9	BOM versions per site
CS11 / CS12 / CS13	BOM explosion: level by level / multilevel / summarized	—	COVERED-9	9	Explosion API
CS14	BOM comparison	—	COVERED-9	9	Version diff — confirm; treat covered
CS15	Where-used list (single-level/multilevel)	—	COVERED-9	9	Where-used
CS20	Mass change BOM	—	COVERED-9	9	Mass change with ECO
CS40 / CS41 / CS42	Configurable BOM (super BOM) assignment / create / change	Super BOM for VC	COVERED-8	8	Configurator BOM with constraints
CS51 / CS52 / CS53 / CS61 / CS62 / CS63 / CS71 …	Standard BOM / document BOM / equipment BOM / functional location BOM / sales order BOM / WBS BOM	Other BOM categories	PARTIAL-9	9	Material BOM yes; equipment/functional location BOMs in wave 44; sales-order BOMs (order-specific) and WBS BOMs not named — partial (ETO)
CS80 / CS81 / CS82	BOM change documents	—	COVERED-5	5	Audit
CR01 / CR02 / CR03	Work center create/change/display (capacities, scheduling formulas, costing activity types, default values, hierarchy)	Resources	COVERED-9	9	Resources (machine/tool/labor/vendor/location) with capabilities, calendars, cost categories
CR05 / CR06 / CR07 / CR08	Work center list / assignment to cost center / capacity list / hierarchy	—	COVERED-9	9	—
CR11 / CR12 / CR13	Capacity create/change/display (pooled capacities)	Capacity master	COVERED-9	9	Resource capacity with shifts
CR21 / CR22 / CR23	Work center hierarchy create/change/display	Resource groups	COVERED-9	9	Resource groups
CRC1 / CRC2 / CRC3	Resource (PP-PI) create/change/display	PI resources	COVERED-9	9	Same resource model
CA01 / CA02 / CA03	Routing create/change/display (operations, sequences — standard/alternative/parallel, component allocation, PRTs, inspection characteristics, user fields)	Routings	COVERED-9	9	Routing versions, operations, operation relations (sequential/parallel), setup/run times, component allocation — confirm component-to-operation allocation; treat covered
CA11 / CA12 / CA13	Reference operation set create/change/display	Reusable operation sequences	COVERED-9	9	Operation templates — confirm; treat covered
CA21 / CA22 / CA23	Rate routing (REM) create/change/display	—	COVERED-24	24	Production flow / rate routing
CA31 / CA32 / CA33	Reference rate routing	—	COVERED-24	24	—
CA80 / CA81 / CA82 / CA83 / CA85 / CA85N / CA90	Where-used (work center / PRT / ref op set), mass change routings, routing change documents	—	COVERED-9	9	—
CA97 / CA97N	Update material master (lot size data from routing)	—	COVERED-9	9	Lead time roll-up from routing (CA97) — covered by routing capacity calc proof

T-code	Name	Purpose	Passage status	Wave	Notes
CA98 / CA99	Delete routings / display task list change docs	—	COVERED-9	9	—
C223	Production versions (BOM alternative + routing + lot size range + validity)	Production versions	COVERED-9	9	BOM/route version pairing per site/quantity — confirm production-version concept (AX has BOM/route versions separately); treat covered
CF01 / CF02 / CF03 / CF10 …	Production resources/tools (PRT: material/equipment/document/misc)	Tools	COVERED-9	9	Resource type "tool"
CC01 / CC02 / CC03 / CC04 / CC05 / CC06 / CC07	Engineering change master (ECR/ECO) create/change/display/info system/alternative dates/leading change master	ECM	COVERED-9	9	ECR/ECO workflow with effective dates, impact analysis
CC11 / CC12 / CC13	Change request (ECR) create/change/display	—	COVERED-9	9	—
CC31 / CC32 / CC33	Change package / change number release	—	COVERED-9	9	—
CEWB	Engineering workbench (mass BOM/routing maintenance)	—	COVERED-9	9	Engineering workspace grid
MD61 / MD62 / MD63	Planned independent requirements (PIR) create/change/display	Forecast/demand input per strategy	COVERED-22	22	Forecasts with reduction/consumption modes
MD64 / MD65 / MD66 / MD67	PIR: create/change planning table / display / split / copy	—	COVERED-22	22	—
MD70 / MD71 / MD72 / MD73 / MD74 / MD75 / MD76	Copy PIR from forecast / planning / delete old PIRs / reorganize	—	COVERED-22	22	—
MD81 / MD82 / MD83	Customer independent requirements	—	COVERED-22	22	Manual demand lines — confirm; treat covered
MP30 / MP31 / MP32 / MP33 / MP38 / MP39	Material forecast (execute / change / display parameters / total forecast)	Statistical forecast	COVERED-22	22	ETS/Croston forecast service with manual override
MC87 / MC88 / MC89	SOP standard: create/change/display plan (product group / material)	Sales & operations planning	COVERED-22	22	Forecast consensus workflow (S&OP) — rough-cut capacity planning (MC88 RCCP) partially via wave 23 capacity load; treat covered
MC84 / MC85 / MC86	Product group create/display/change (SOP aggregation)	Planning hierarchies	COVERED-22	22	Forecast at product family level with disaggregation — confirm; treat covered
MC93 / MC94 / MC95 / MC96	Flexible planning: create/change/display/copy plan versions (info structures)	Flexible planning	SUPERSEDED-22	22	Planning on lakehouse/semantic layer + forecast service (wave 46/22)
MC74 / MC75 / MC76	Transfer SOP to demand management (material / product group / disaggregate)	—	COVERED-22	22	Consensus → PIR
MC8B / MC8E / MC8V	Event, mass processing SOP	—	COVERED-22	22	—
MS01 / MS02 / MS03 / MS04 / MS05 / MS06 / MS07 / MS08	Long-term planning (LTP): planning scenario, simulative MRP, stock/requirements (simulation), evaluations	Simulation planning	PARTIAL-22	22	What-if simulation plans (separate planning versions with simulated demand, evaluating capacity/purchasing) not explicitly named — partial; propose "static plans" (AX-style) in wave 22
MS31 / MS32 / MS33 / MS44 / MS47 / MS64 / MS65 / MS70	LTP: planning scenario create/change/display, planned orders in scenario, evaluation (capacity, PURCHIS transfer)	—	PARTIAL-22	22	Same
MD01 / MD02 / MD03	MRP total planning / single-item multilevel / single-item single-level	MRP run	COVERED-22	22	Planning engine with regenerative/net-change modes
MD01N (MRP Live, S/4)	MRP Live (HANA-based total run)	—	COVERED-22	22	50k items < 10 min target
MD40 / MD41 / MD42 / MD43	MPS total / single-item multilevel / single-level / interactive	MPS	COVERED-22	22	MPS with firming (planning time fence)
MD50 / MD51	MRP for sales order / project	Order-specific MRP (MTO)	COVERED-22	22	Pegged planning for MTO — covered via pegging; sales-order stock partial noted in MM-IM
MD04	Stock/requirements list (current)	Net requirements view	COVERED-22	22	Net requirements / pegging inquiry
MD05 / MD06	MRP list (individual / collective)	Planning results at run time	COVERED-22	22	Plan run results snapshot
MD07	Stock/requirements list collective (by MRP controller, exception groups, traffic lights)	Planner worklist	COVERED-22	22	Planner workspace with action messages
MD09	Pegged requirements	Pegging	COVERED-22	22	Pegging tree
MD4C	Multilevel order report	Order network	COVERED-22	22	Explain-this-plan
MD11 / MD12 / MD13 / MD16 / MD19	Planned order create/change/display/collective display/firm	Planned orders	COVERED-22	22	Planned orders with firming, grouping
MD14 / MD15 / MD17	Convert planned order → PR (individual / collective) / conversion collective PR	Conversion	COVERED-22	22	Firm → requisition/PO
CO40 / CO41 / CO48	Convert planned order → production order (individual / collective / partial)	Conversion	COVERED-21	21	Firm → production order
MD20 / MD21	Create / display planning file entry	Net-change triggers	SUPERSEDED-22	22	Event-driven net change
MD25 / MD26 / MD27	Planning calendar create/change/display	Period lot-sizing calendars	COVERED-22	22	Period coverage calendars — confirm custom period calendars; treat covered
MDAB / MDRE	Planning file setup / consistency check	—	SUPERSEDED-22	22	—
MDBT	MRP run in background (variants)	—	COVERED-22	22	Scheduled nightly plan
MDVP	Collective availability check (planned orders)	—	COVERED-22	22	—
MDSA / MDSB	Planned orders with/without components (BOM explosion numbers)	—	COVERED-22	22	—
MF50	REM planning table (rate-based line loading)	Lean planning board	COVERED-24	24	Production flow / kanban board; rate-based planning — confirm line-loading planning table; treat covered
MFBF / MF41 / MF42N / MF70	REM backflush (assembly/component/activity) / reverse / collective / aggregate collective confirmation	REM execution	COVERED-24	24	Backflush costing for lean (periodic)

T-code	Name	Purpose	Passage status	Wave	Notes
MF60 / MF63 / MF65 / MF68	Pull list (material staging) / stock transfer / situation / printing	Material staging	COVERED-24	24	Kanban/withdrawal + wave 31 staging
MF12 / MF26 / MF27	Document log / display postprocessing errors	—	COVERED-24	24	—
MF30 / KKF6N	Create product cost collector (REM)	—	COVERED-24	24	—
MFPR	Production version check (REM)	—	COVERED-24	24	—
PK01 / PK02 / PK03 / PKMC	Control cycle create/change/display / maintenance (S/4)	Kanban rules (supply area, container qty, replenishment strategy: in-house/external/stock transfer, status sequence)	COVERED-24	24	Kanban rules (manufacturing/withdrawal/fixed/event)
PK05 / PK05S	Supply area create / display	Supply areas (PSA)	COVERED-24	24	Supply areas / kanban locations
PK13N / PK12N / PK11	Kanban board (demand source / supply source / status change)	Kanban board	COVERED-24	24	Kanban board, cards
PK21 / PK22 / PK23 / PK31 / PK41 / PK51	Kanban status change (barcode), kanban correction, event-driven kanban (PK23), kanban calculation (PK41), card print	—	COVERED-24	24	Event kanbans; card printing (wave 32 labels); kanban quantity calculation (PK41/PK51) — confirm kanban quantity calculation; treat covered
PK17 / PK18	Kanban plan/actual, kanban evaluation	—	COVERED-24	24	—
CO01 / CO02 / CO03	Production order create/change/display (with material)	Production order	COVERED-21	21	Production order lifecycle
CO07 / CO08 / CO10	Production order without material / for sales order / for project	Variants	COVERED-21	21	Rework orders (CO07), MTO orders (CO08), project orders (wave 41)
CO05N / CO05	Collective release of orders	—	COVERED-21	21	Mass release
CO11N / CO11 / CO12 / CO14 / CO15 / CO16N / CO13	Confirmations: single operation (time ticket) / fast entry / collective / display / order confirmation / postprocessing errors / cancel	Confirmations	COVERED-21	21	Report as finished + route card/job card confirmations; shop-floor kiosk (wave 25)
CO1F / CO1L / CO1P / CO1V	Progress confirmation / confirmation list / predefined confirmation processes / fast entry	—	COVERED-21	21	—
COGI	Postprocess failed goods movements (backflush errors)	Error queue	COVERED-21	21	Backflush error queue with retry — confirm; essential; treat covered
CO27 / CO28	Picking list / collective picking	Component picking	COVERED-21	21	Picking lists (backflush/manual)
MB1A 261 / MIGO GI for order, MB31 / MIGO GR for order (101), 531 by-product, 545	Goods movements for production orders	—	COVERED-21	21	Material issues, RAF with by-/co-products
CO02 → TECO / CLSD / mass via COHV	Technically complete / close orders	Status transitions	COVERED-21	21	Lifecycle state machine (end)
COHV / COHVPI / COMAC	Mass processing of production orders (release, print, schedule, costing, TECO, close, availability check)	Mass processing	COVERED-21	21	Mass operations with job framework
COOIS / COOISPI	Order information system (orders, operations, components, confirmations, documented goods movements, capacities, PRTs)	Inquiry	COVERED-21	21	Production order inquiry: cost roll, status log, transactions
CO24	Missing parts information system	Shortages	COVERED-21	21	Component shortage list (ATP on components)
CO46 / CO50	Order progress report / collective	—	COVERED-21	21	—
CO04 / CO04N	Print order papers (shop papers: job ticket, pick list, time ticket, confirmation slip)	Shop papers	COVERED-21	21	Route cards, job cards; document designer wave 46
CORS / CO88 (see CO-PC)	—	—	COVERED-21	21	—
CM01 / CM02 / CM03 / CM04 / CM05	Capacity planning: load (standard overview) / orders / pool / backlog / overload	Capacity evaluation	COVERED-23	23	Capacity load views by resource/group/period
CM07 / CM50 / CM51 / CM52	Variable capacity evaluation / work center view / order view / extended	—	COVERED-23	23	—
CM21 / CM22 / CM23 / CM25 / CM26 / CM27 / CM28 / CM29 / CM31	Capacity leveling: planning table (graphical/tabular), dispatching, work center view, individual capacity	Finite scheduling / dispatching	COVERED-23	23	Interactive Gantt with drag-reschedule; finite scheduling
CM40 / CM41	Capacity leveling in background / evaluation of background leveling	—	COVERED-23	23	Scheduler service batch
CM99 / CM38	Capacity leveling profiles	—	COVERED-23	23	—
CR15 / CR16	Where-used work center / capacity	—	COVERED-9	9	—
Production scheduling board (Fiori Manage Production Operations / Schedule Production), PP/DS board	—	—	COVERED-23	23	Gantt
Fiori: Manage Production Orders / Confirm Production Operation / Monitor Production Orders / Manage Material Coverage / Monitor Material Coverage / Display MRP Master Data Issues / Manage Change Requests (MRP) / Schedule MRP Runs / Manage Planned Orders / Manage Supply Demand / Monitor External Requirements / Monitor Internal Requirements	S/4 PP Fiori apps	—	COVERED-22	22	Planner workspace
Fiori: Manage Work Center Capacity / Schedule Production / Monitor Work Center Schedules / Monitor Capacity Utilization	—	—	COVERED-23	23	—
Fiori: Kanban Board / Manage Control Cycles	—	—	COVERED-24	24	—
Fiori: Manage Production Versions / Manage Bills of Material / Manage Routings / Manage Work Centers / Manage Change Records (ECM)	—	—	COVERED-9	9	—

T-code	Name	Purpose	Passage status	Wave	Notes
Demand-driven replenishment (DDMRP: buffer positioning, buffer levels, replenishment planning, Fiori apps)	DDMRP (S/4)	—	GAP	propose 22	DDMRP (decoupling points, buffer zones red/yellow/green, net flow equation) not named; propose as wave 22 coverage-group type "DDMRP buffer"
Predictive MRP (pMRP, S/4)	Rough simulation of future demand vs capacity	—	PARTIAL-22	22	Overlaps LTP partial
Production planning with PP/DS — see §13.23	—	—	COVERED-23	23	—
Subcontracting with MRP (special procurement 30), components provided, subcontract orders from planned orders	—	—	COVERED-21	21	Subcontracting operations with vendor PO linkage (wave 21) + MRP (wave 22)
Co-products / by-products in BOM & order settlement (apportionment structure)	—	—	COVERED-24	24	Co/by-product costing allocation
Phantom assemblies, alternative items (BOM item alternative groups), discontinuation (MM02 follow-up material)	—	—	PARTIAL-9	9	Phantoms yes; alternative item groups (priority/strategy) and discontinuation/follow-up (run-out) are not named — partial; propose wave 9 BOM line attributes + wave 22 MRP logic
Assembly processing / assemble-to-order (planning strategies 81/82)	ATO: production order created from sales order with dynamic ATP	—	COVERED-27	27	Order with configured product creates production/planned order linkage
Make-to-order with sales order stock (strategy 20), planning with final assembly (40), planning without final assembly (50), subassembly planning (70)	Planning strategies	—	PARTIAL-22	22	Coverage groups + forecast reduction named; the full strategy-group semantics (consumption modes, MTO stock segmentation, planning at assembly level) are partially covered — partial; sales-order stock noted in MM-IM
Scrap: assembly scrap, component scrap, operation scrap (routing), net ID	Scrap planning	—	COVERED-9	9	BOM scrap and route scrap — confirm operation scrap on routing; treat covered
Rework (CO07 / trigger points CO31 / CO33)	Rework orders / trigger points inserting rework operations	—	PARTIAL-21	21	Rework via order w/o material covered; trigger points (automatic rework operation insertion on confirmation) not named — partial
Serial numbers in production orders (header/components), batch determination in production (COB1)	—	—	COVERED-21	21	Tracking dimensions
Order split (CO02 → split), order change management (OCM: COCM / COCM1)	Order split / order change management after ECO	—	PARTIAL-21	21	Order change management (propagating BOM/routing changes to open orders with change costs) not named — partial; propose wave 9/21

13.21.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
MD04 / MD05 / MD06 / MD07	Stock/requirements and MRP lists	COVERED-22	22	—
MD09 / MD4C	Pegging / order report	COVERED-22	22	—
MD45 / MD46 / MD47 / MD48	Evaluation of planning result (individual/collective) / product group planning / cross-plant evaluation	COVERED-22	22	—
MDLD	Print MRP list	COVERED-22	22	—
MD44 / MD4x	Planning situation (material/product group)	COVERED-22	22	—
COOIS / COOISPI	Production order info system (all list variants)	COVERED-21	21	—
CO24	Missing parts	COVERED-21	21	—
CO26 / CO28	Order information system: planned/production orders	COVERED-21	21	—
COID	Object overview (order info system)	COVERED-21	21	—
CM01 … CM07	Capacity evaluations	COVERED-23	23	—
CS11 / CS12 / CS13 / CS15	BOM explosion / where-used	COVERED-9	9	—
CA80 / CA81 / CA82	Routing where-used	COVERED-9	9	—
CC04	Change master information system	COVERED-9	9	—
MCP1 / MCP3 / MCP5 / MCP7 / MCPB / MCPD / MCPF (PP-IS, Shop Floor Information System)	Work center analysis / operation analysis / material analysis / production order analysis (lead times, quantities, scrap)	COVERED-46	46	Production analytics (OEE in wave 25)
MCRE / MCRI / MCRM (REM analysis) / MCRP / MCRK (kanban analysis)	REM/kanban LIS	COVERED-46	46	—
MCP6 / MCPK	Work center capacity analysis (LIS)	COVERED-46	46	—
MD4 / S_ALR "Planning file entries"	—	SUPERSEDED-22	22	—
PK17 / PK18 / PK19	Kanban evaluations (plan vs actual, status history)	COVERED-24	24	—
MF26 / MF12	REM document log / postprocessing list	COVERED-24	24	—
Fiori: Production Order Overview / Production Execution analytics / Production Cost Analysis / OEE dashboards (SAP Digital Manufacturing)	—	COVERED-25	25	OEE
Fiori: MRP Cockpit (Monitor Material Coverage / Shortages), Display MRP Key Figures	—	COVERED-22	22	—

13.21.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
MD01 / MDBT / MD01N (scheduled)	Nightly MRP / MRP Live run	COVERED-22	22	—
MD40 (scheduled)	MPS run	COVERED-22	22	—
MP38 / MPBT	Mass forecast run	COVERED-22	22	Forecast batch
MC8E / MC8D / MC8G	SOP mass processing (copy, transfer)	COVERED-22	22	—
MD74 / MD75 / MD76	Reorganize PIRs (delete history, adjust)	COVERED-22	22	—

T-code	Name	Passage status	Wave	Notes
MD15 / CO41 (batch)	Mass conversion of planned orders	COVERED-22	22	—
CO05N / COHV (batch release, print, costing)	Mass release / scheduling / costing	COVERED-21	21	—
COGI (periodic)	Backflush error reprocessing	COVERED-21	21	—
CO1P	Predefined confirmation processes (background)	COVERED-21	21	—
CM40 (scheduled)	Background capacity leveling	COVERED-23	23	—
CO88 / KKAX / KKS1 (see CO-PC)	Settlement / WIP / variances	COVERED-21	21	—
MFBF / MF70 (periodic) / KK87 (REM settlement)	REM period-end	COVERED-24	24	—
PK41 / PK51 (kanban calculation run)	Kanban quantity recalculation	COVERED-24	24	—
CORUPROC / CORUAFWP	Confirmation background process (actual costs, goods movements)	SUPERSEDED-21	21	Synchronous posting via journal/inventory APIs; job framework for retries
SARA PP_ORDER / PR_ORDER	Archiving production orders	COVERED-48	48	—
CA97 (periodic)	Update lot-size dependent lead times	COVERED-9	9	—
Fiori: Schedule MRP Runs / Schedule Production Order Jobs	—	COVERED-4	4	—

13.21.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OS20 / OS21 / OS22 / OS23 / OS24 / OS25 / OS27 / OS28 / OS30 — BOM: usages, status, item categories, default values, modification parameters, BOM explosion/applications, alternative determination	T415S, T416, T418, TCS	Item category control (stock/non-stock/variable size/document/text), usage-specific item status	COVERED-9	9	BOM line types and usages
OPJM / OPJI / OPJF — Selection ID for alternative BOM/routing (application, priorities)	TCS, T407	—	COVERED-9	9	Version selection rules
OPJL — Define checking groups / checking rules for order availability (OPJJ scope, OPJK checking control per plant/order type/business event: component, PRT, capacity check; release behaviour)	T441V, T441R, T399X	Availability check at creation/release; collective conversion rules	COVERED-21	21	Component availability on release
OPJH — Production order types (PP01, PP02…)	T003O	Number range, settlement profile, residence time, status profile, CO partner update, classification	COVERED-21	21	Order types
OPL8 — Order type dependent parameters (planning: production scheduling profile, routing selection, BOM application; implementation: documentation of goods movements; cost accounting: costing variants, RA key)	T399X	—	COVERED-21	21	Order type parameters
OPKP — Production scheduling profiles (automatic release/GR/print at creation, batch management, capacity leveling flags, overall profile)	TCO43	—	COVERED-21	21	Production scheduling profile → order defaults
OPJ / OPU3 / OPU5 — Scheduling parameters production orders / planned orders (scheduling type: forward/backward/today, reduction strategies, capacity requirements generation, scheduling horizon)	T399D, TCX	Lead time scheduling vs duration, reduction levels, float before/after (OPJ scheduling margin key OMI8)	COVERED-23	23	Scheduler settings (forward/backward, finite/infinite)
OPK4 — Confirmation parameters (per plant/order type): goods movements (backflush), actual costs posting, error handling, propose dates/quantities, decoupled/synchronous, HR integration (time tickets), termination on error	TCORU, T399	—	COVERED-21	21	Confirmation behaviour
OPK0 / OPK1 / OPK2 / OPK3 — Confirmation screens, single-screen entry layout, reasons for variances	TCORV, T*	—	COVERED-21	21	Reason codes for scrap/variance
OPKF / OPK8 — Print control (shop papers): lists, forms, print programs	T496	—	COVERED-21	21	Document designer
OPJB / BS02 — Status profiles (user statuses for orders)	TJ30	—	COVERED-4	4	—
OPJ2 / OPJ — Define number ranges production orders / confirmations / reservations	NRIV	—	COVERED-5	5	—
OPJ6 / OPJ7 / OPJ8 — Production order field selection, component/operation defaults	T*	—	COVERED-3	3	—
OPPQ — Plant parameters for MRP (number ranges, planning run defaults, floats, scheduling margin keys, direct procurement, BOM explosion, planning file, external procurement defaults, rescheduling horizon, exception messages)	T399D, T436A (margin keys)	—	COVERED-22	22	Planning parameters per site
OPPR — MRP groups (strategy group, consumption mode, planning horizon, creation indicators)	T438M	—	COVERED-22	22	Coverage group / planning group
OMDQ / OMDR — MRP types (PD, VB, VM, VV, ND, M0-M4, P1-P4 with firming types, planning time fence, roll-forward)	T438A	Reorder point, forecast-based, MPS, time fence, firming types 0-4	COVERED-22	22	Coverage groups: requirement/period/min-max; firming/time fences
OMI4 — Lot-sizing procedures (EX, FX, HB, WB, MB, TB, PK, optimum: dynamic/least unit cost/part period balancing, rounding, min/max, takt)	T439A	Static/period/optimum, scheduling, rounding profiles	COVERED-22	22	Lot-sizing: requirement/period/min-max/fixed/multiples/EOQ — confirm optimum procedures (least-unit-cost, part-period) — treat covered with note
OMD9 — Special procurement types (subcontracting 30, phantom 50, stock transfer 40, withdrawal from alternative plant, direct production 52, production in other plant 70/80)	T460A	—	COVERED-22	22	Procurement type per item/site incl. transfer from other site (transfer order gap noted)
OMD0 — MRP controllers	T024D	—	COVERED-22	22	Planner assignments
OMDX / OMDU — Activate MRP / planning file per plant	T399D, MDLV	—	SUPERSEDED-22	22	—

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OMDY / OMD3 — Exception messages, exception groups	T458A, T458B	—	COVERED-22	22	Action/futures messages
OPPS / OPPT — Planning strategies / strategy groups (10, 11, 20, 25, 30, 40, 50, 52, 59, 60, 63, 70, 74, 81, 82…)	T461S, T461P	Requirements type, consumption, assembly processing	PARTIAL-22	22	Planning strategy semantics partial (noted)
OMPO / OMI — Consumption mode, consumption periods (backward/forward)	T438M	—	COVERED-22	22	Forecast reduction
OMIK / OMI8 — Scheduling margin key, floats	T436A	—	COVERED-22	22	Safety margins
OMIZ / MRP areas (OMIZ / S/4 MRP areas per storage location, subcontractor)	MDLV, MDLG, MDLW	—	PARTIAL-22	22	MRP area partial
OMIX / OMD — Define planning horizon, rescheduling check (tolerances), firm receipts handling	T399D	—	COVERED-22	22	Action message tolerances
OMDT / Safety stock availability %, dynamic safety stock (range of coverage profiles OMIA)	T438R	—	COVERED-22	22	Safety stock + period coverage — confirm range-of-coverage profile (dynamic safety stock) — treat covered
MC7F / OMPB / OMPC — SOP: info structure S076 planning parameters, planning types (MC8A/MC8B), macros, period split, aggregation/disaggregation (proportional factors MC9)	S076, T445, TMC	—	COVERED-22	22	Forecast hierarchy disaggregation
OMPN / OMPK — Demand management: requirement types, PIR versions, consumption, requirements class	T459K, T459A, T459U	—	COVERED-22	22	—
MP80 / OMPH / OMPG — Forecast profiles, forecast parameters (model selection, alpha/beta/gamma, periods)	T* , MPOP	Constant, trend, seasonal, Croston	COVERED-22	22	Forecast models
OPPB / OPPP — Planning calendars	T439	—	COVERED-22	22	—
OP40 / OP41 / OP42 / OP43 / OP44 / OP45 … — Work center: categories, field selection, default values, capacity categories, formulas, standard value keys, performance efficiency rate, shift definitions, shift sequences, move time matrix, location groups	TC26, TC27, TC30, TC31, TC37, TC24, T430, T435, T436	Formulas for setup/processing/teardown/capacity; standard value keys (SAP1, SAP2); shifts	COVERED-9	9	Resources: capabilities, calendars with shifts, time formulas — confirm formula-based durations (quantity-dependent) — treat covered
OP00 / OP01 / OP4 — Capacity planning profiles (overall profiles, selection, time, evaluation, strategy, period profiles for CM21/CM25), dispatching strategy (finite, insert, midpoint, date entry, sequence dependent setup)	TCY*	—	COVERED-23	23	Scheduler settings; setup optimization
OP4A / OP4B — Capacity reduction, available capacity versions, intervals of available capacity	TC26, KAKO, KAZY	—	COVERED-23	23	Capacity versions
OP5A / OP8B / OP8 — Routing: task list types, usages, status, control keys (OPJ8 OP67 / OP00 — control key: scheduling, capacity, costing, confirmation required, external processing, print, milestone), operation default values, number ranges, user fields, PRT control keys	TCA*, T430 (control keys), T430T	Control key flags	COVERED-9	9	Operation control attributes (schedule/cost/confirm/external)
OP67 / OPJ — Control keys (PP01, PP02, PP03 external, PP99 milestone)	T430	—	COVERED-9	9	—
OPMP / OPM — Trigger points (standard trigger points, functions)	TTRIG	—	PARTIAL-21	21	Trigger point gap
OS40 / OS41 / OS44 — ECM: change types, object types, status, ECR/ECO profiles, release keys, effectivity types (date, serial, parameter)	TCC*, TECH*	Date effectivity vs parameter/serial effectivity	PARTIAL-9	9	Date effectivity covered; serial-number/parameter effectivity not named — partial
OPZ / OSPT / OSP2 — REM profiles (reporting point backflush, cost collector, GI/GR posting, aggregate backflush, RP confirmation)	T437S	Reporting points (milestones), pull-list, cost collector	COVERED-24	24	Lean profiles
OSP / OPKA — Kanban: control cycle categories, replenishment strategies (in-house: 0001 production order, 0002 run schedule, 0003 manual KANBAN; external: PO, SA, source list; stock transfer: reservation, TO), status sequences, kanban calculation profiles, print control	TPKM, TPK*	—	COVERED-24	24	Kanban rules types
OPKW / OPKX — PDC (plant data collection) interfaces: CC2/CC4 communication parameters, upload/download, time events	TCORU, T*	—	COVERED-25	25	Shop-floor kiosk + IoT replaces PDC; HR time events in wave 25
OPJG / OPK — Batch determination in production (search procedure, strategy types), serial number profiles per order type	TLSP, T*	—	COVERED-21	21	—
OPJW / OPJ — Define default values for conversion (planned → production), order types per MRP group	T399X, T438M	—	COVERED-22	22	—
OPPE / OPPI — Default document types for PRs from MRP, purchasing group, account assignment	T399D	—	COVERED-22	22	—
OPJJ — Availability check scope (production)	T441V	—	COVERED-21	21	—
OPJK — Checking control (order type × plant × business transaction)	T399X / T441R	—	COVERED-21	21	—
OMK / OMI — Define MRP areas, MRP list layout, MD04 navigation profiles, period totals	T*	—	COVERED-22	22	—
OPPS "Assembly processing" settings (order type for ATO)	T461S	—	COVERED-27	27	—
DDMRP buffer profiles, classification runs (S/4 DD)	PPH_DD_*	—	GAP	propose 22	DDMRP gap
OCM profiles (order change management: change profiles, change cost)	COCM*	—	PARTIAL-21	21	OCM partial

13.22 PP-PI — Production Planning for Process Industries

SAP context: master recipes (C201–C203; recipe header, operations/phases, resources, materials, secondary resources, process instructions/XSteps), process orders (COR1–COR3, COR5 collective, COR6N confirmation, CORR? mass), process management (control recipes CO53, process messages CO54/CO57, PI sheets CO60), electronic batch record (COEBR), batch management and batch determination, resource networks (CMX? / RN?), campaign planning (PP-PI campaigns), process manufacturing cockpit (CO50?), material quantity calculation. Passage: wave 24 (formulas/batch orders, potency, co/by-products, catch weight, recipe version control), wave 21 (order lifecycle), wave 25 (shop floor/PI sheets), wave 33 (QM in process).

13.22.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
C201 / C202 / C203	Master recipe create/change/display (recipe group, operations, phases, material list, resources, process instructions, QM characteristics, relationships)	Recipes	COVERED-24	24	Formula + route (recipe) with version control integrated with ECM
C223 (PI)	Production versions (recipe + formula)	—	COVERED-24	24	—
C251 / C252 / C253	Print recipes / recipe lists / where-used	—	COVERED-24	24	—
C260 / C261	Change recipe with ECM / recipe change documents	—	COVERED-9	9	—
C298	Mass deletion of recipes	—	COVERED-24	24	—
CRC1 / CRC2 / CRC3	Resource (PI) create/change/display (resource category: processing unit, labor, storage, vessel)	Resources	COVERED-9	9	Resource model
CRC5 / CRC	Resource network (RN)	Resource networks for scheduling	PARTIAL-23	23	Resource networks (allowed sequences of resources, e.g. vessel → filler) not named — partial; scheduling with CP-SAT could model as constraints
CS01 (BOM for PI = formula) / material quantity calculation (C201 → MQC formulas)	Formula with material quantity calculation (active ingredient scaling, yield)	—	COVERED-24	24	Potency-based consumption, scalable quantities
COR1 / COR2 / COR3	Process order create/change/display	Batch/process orders	COVERED-24	24	Batch orders from formulas
COR5 / CORS / COR7 / COR7_PI / COR8	Collective release / cancel / create from planned order (individual / collective)	—	COVERED-24	24	—
COR6 / COR6N / CORK / CORR / CORT / CORZ	Confirmation: phase / order / collective / display / cancel	Confirmations	COVERED-24	24	Batch order reporting (RAF with co/by-products)
CORA / CORM / CORP	Process order scheduling / mass processing (COHVPI)	—	COVERED-24	24	—
CO53 / CO53XT	Control recipe monitor (send control recipes to process control / PI sheet)	Process management	PARTIAL-25	25	Shop-floor instructions/drawings on kiosk; structured *control recipes* with process instruction categories sent to a destination (PCS/PI sheet) are partial
CO54 / CO54XT / CO57 / CO58	Process message monitor / create process message manually / send	Process messages (from shop floor/PCS → ERP: consumption, yield, quality results)	PARTIAL-25	25	IoT/MQTT machine events + kiosk reporting cover inbound; configurable message categories with destinations (e.g. to QM results, to batch record) partial
CO60 / CO60XT / CO60_PI / CO64 / CO67	PI sheet: find/maintain / worklist / print / archive	Electronic work instructions (XSteps/PI sheets)	PARTIAL-25	25	Kiosk instructions; a designer for interactive PI sheets (XSteps with input fields, calculations, signatures, process data requests) is not named — partial
COEBR	Electronic batch record (EBR) creation/approval/archive (21 CFR Part 11)	Batch record	GAP	propose 24	EBR with digital signatures, deviation review and archiving (GxP) not named — propose wave 24 (+ wave 48 compliance)
CMX / Standard XSteps (CMXSV) / SXS repository	Standard XSteps repository	—	PARTIAL-25	25	Same as PI sheet
CO50 (Process manufacturing cockpit) / COPOC	Process operator cockpit	—	COVERED-25	25	Shop-floor kiosk
MSC1N / MSC2N / MSC3N / MSC4N (batch master — see §13.33)	Batch create/change/display/changes	—	COVERED-24	24	—
Campaign planning (PP-PI campaign, process order campaigns: COCP / CMP)	Group process orders into campaigns (setup/cleanout)	—	PARTIAL-23	23	Campaign/sequence planning (group orders to minimize changeover, cleanout orders) not named — partial; CP-SAT setup optimization partly covers
Cleanout / changeover orders, recipe-dependent cleaning	—	—	PARTIAL-23	23	Same
Digital signature in PI sheets / batch records (DSIG)	21 CFR Part 11 signatures	—	GAP	propose 24	E-signature framework (meaning of signature, re-authentication) not named; propose cross-cutting in wave 24/48
Shelf life / batch expiry, batch-specific UoM (potency UoM, proportion/product units)	—	—	COVERED-24	24	Batch attributes, shelf life, catch weight dual UoM, potency
Batch derivation (DVMO / DVMAN) — see §13.33	—	—	PARTIAL-24	24	Batch derivation (inherit attributes from component batches to product batch) not named — partial
Fiori: Manage Process Orders / Confirm Process Order Phase / Monitor Process Orders	S/4 apps	—	COVERED-24	24	—

13.22.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
COOISPI	Process order information system	COVERED-24	24	—
CO54 (monitor)	Process message log	PARTIAL-25	25	—
COEBR (list)	Batch record list	GAP	propose 24	—
MB56 / BMBC	Batch where-used / batch information cockpit	COVERED-24	24	Batch traceability (top-down/bottom-up)
MCP (PP-PI LIS: resource analysis, phase analysis)	—	COVERED-46	46	—
C251 recipe lists	—	COVERED-24	24	—
CMX/CO60 worklists	PI sheet worklist	PARTIAL-25	25	—

13.22.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
COR5 / COHVPI (batch)	Mass release / scheduling	COVERED-24	24	—
CO53 (send control recipes, batch)	—	PARTIAL-25	25	—
CO54 (process message processing, batch)	—	PARTIAL-25	25	—
CO64 / CO67 (PI sheet archive)	—	PARTIAL-25	25	—
COEBR (batch record generation/archive)	—	GAP	propose 24	—
CO88 / KKAX / KKS1 (process orders)	Settlement / WIP / variances	COVERED-21	21	—
Campaign settlement / cleanout cost allocation	—	PARTIAL-23	23	—
SARA PR_ORDER	Archive process orders	COVERED-48	48	—

13.22.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
Master recipe: profiles, task list types (2), status, control keys (PI01, PI02…), phase/operation categories, relationship types	TCA*, T430	—	COVERED-24	24	—
Process order types (PI01…), order type dependent parameters (COR4), production scheduling profile (CORY), confirmation parameters (CORO / OPK4 PI), availability check (OPJJ/OPJK PI)	T003O, T399X, TCO43	—	COVERED-24	24	—
Material quantity calculation: formulas, functions	—	—	COVERED-24	24	Potency scaling
Process management: process instruction categories/characteristics (O10C O12C / O13C), process message categories & destinations (O05C / O06C / O07C), control recipe destinations (O10C), PI sheet layouts, XStep settings (SXS), signature strategies (O2 / DSIG)	TPM*, CPM*	Destinations: PI sheet, process control system (PCS via PI-PCS interface), ERP functions (goods movement, confirmation, QM results)	PARTIAL-25	25	PI sheet / message framework partial
Resource networks	—	—	PARTIAL-23	23	—
Campaign planning settings	—	—	PARTIAL-23	23	—
EBR: batch record profiles, archiving, approval workflow	—	—	GAP	propose 24	—
Batch management in PP-PI: batch determination procedures for process orders (COB1), classification (023), batch derivation	TLSP, T*	—	PARTIAL-24	24	Derivation partial
Co-product apportionment structures (CK / OPJ)	—	—	COVERED-24	24	Allocation methods

13.23 PP/DS — Advanced Planning & Detailed Scheduling (APO PP/DS and S/4 embedded PP/DS)

SAP context: APO PP/DS (CIF integration CFM1/CFM2, product view /SAPAPO/RRP3, detailed scheduling planning board /SAPAPO/CDPS0, heuristics, optimizer, pegging, alert monitor /SAPAPO/AMON1, product planning table /SAPAPO/PPT1, PP/DS runs /SAPAPO/CDPSB0, order views /SAPAPO/RRP4, block planning, setup matrices, characteristic-dependent planning (CDP), MRP heuristics, shelf-life planning). S/4HANA embedded PP/DS: advanced planning flag on material, PP/DS planning via MD04/Fiori, same planning board. Passage: wave 23 (scheduler service with finite/infinite, OR-Tools CP-SAT optimization, Gantt, bottlenecks) + wave 22 (pegging). PP/DS-specific supply-chain-wide planning (SNP, GATP) outside this component.

13.23.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
CFM1 / CFM2 / CFM3 / CFM4 / CFM5 / CFM6	CIF integration models: generate / activate / display / deactivate / delete / change transfer	ERP ↔ APO master & transactional data	SUPERSEDED-23	23	Embedded single system, Kafka events; no CIF
CFC9 / CFG1 / CFP1 / CFP3	CIF settings / application log / queue display	—	SUPERSEDED-23	23	—
/SAPAPO/MAT1 / /SAPAPO/LOC3 / /SAPAPO/RES01 / /SAPAPO/PDS_DISP / /SAPAPO/SCC03 (PPM)	APO product / location / resource / PDS (production data structure) / PPM master	Planning master data	SUPERSEDED-23	23	Native product/site/resource/BOM-route data (waves 6/8/9)
/SAPAPO/RRP3	Product view (receipts/requirements, pegging, order creation)	Planner view	COVERED-22	22	Net requirements view with pegging
/SAPAPO/RRP4 / /SAPAPO/RRP7	Receipts view / product overview	—	COVERED-22	22	—
/SAPAPO/CDPS0 / /SAPAPO/CDPS1 / CDPSC	Detailed scheduling planning board (variable/interactive), DS strategies	Gantt scheduling	COVERED-23	23	Interactive Gantt with drag-reschedule

T-code	Name	Purpose	Passage status	Wave	Notes
/SAPAPO/PPT1	Product planning table (REM/line loading)	—	COVERED-24	24	Lean/rate-based board
/SAPAPO/CDPSB0 / /SAPAPO/CDPSB1	Production planning run (heuristics: SAP_PP_002 planning standard lots, SAP_PP_003, SAP_MRP_001, SAP_PP_C001 bottom-up, SAP_PP_SL001 shelf life…) in background / display	Planning run	COVERED-22	22	Planning engine runs with pluggable heuristics (lot sizing); bottleneck/multi-level heuristics via CP-SAT
/SAPAPO/OPT (PP/DS optimizer profiles & runs), /SAPAPO/CDPSOPT	Optimizer (genetic algorithm / constraint propagation; objectives: makespan, lateness, setup time/cost, mode cost)	Optimization	COVERED-23	23	CP-SAT objectives: minimize lateness/makespan; setup optimization
Setup matrices / setup groups (/SAPAPO/CDPSC4 / CDPSC5)	Sequence-dependent setup	—	COVERED-23	23	Setup optimization (sequence-dependent setup matrix) — confirm matrix data model; treat covered
Block planning (resource blocks per characteristic, /SAPAPO/CDPSC12)	Reserve capacity blocks by product characteristics	—	GAP	propose 23	Block planning (time blocks on resources restricting which characteristic values can be produced) not named — propose wave 23 constraint type
Characteristic-dependent planning (CDP) / CDP configuration	Planning by batch characteristics (e.g., color, grade)	—	PARTIAL-24	24	Batch attributes exist; planning that matches demand characteristics to supply batches (CDP) — partial; propose wave 22/24
Shelf-life planning (SAP_PP_SL001)	Pegging respecting expiry (FEFO planning)	—	PARTIAL-22	22	FEFO picking (wave 16) yes; planning-time shelf-life pegging (min remaining shelf life at demand date) not named — partial
Pegging (dynamic/fixed), /SAPAPO/PEG fixed pegging	Pegging	—	COVERED-22	22	Pegging tree; fixed pegging (manual lock) — confirm "firming"; treat covered
/SAPAPO/AMON1 / /SAPAPO/AMON3	Alert monitor (alert profiles, overall profiles)	Exceptions	COVERED-22	22	Action/delay messages + wave 5 alerts
/SAPAPO/RRPCUST1 / /SAPAPO/CDPSC (strategy profiles, planning board profiles)	Planning strategies (finite/infinite, insert/append/squeeze-in, planning direction, scheduling mode)	—	COVERED-23	23	Scheduler strategies
/SAPAPO/MC01 (models/versions), /SAPAPO/MVM	Planning versions (simulation versions)	—	PARTIAL-22	22	Simulation versions = LTP partial
/SAPAPO/SDP94 (DP), /SAPAPO/SNP94 (SNP), GATP (/SAPAPO/AC03)	Demand planning / supply network planning / global ATP	—	PARTIAL-22	22	DP ≈ wave 22 forecasting (statistical + consensus); SNP (multi-site network optimization: sourcing across plants/DCs with transport lanes and capacity) and GATP (rules-based ATP, multi-site substitution) are not named — partial; register multi-site network planning as a v1.x candidate under wave 22/27
S/4 embedded PP/DS: "Advanced planning" flag (MM02), PP/DS planning via MD04 extension, Fiori: Monitor Capacity Utilization / Schedule Production / Production Scheduling Board	—	—	COVERED-23	23	—
Multi-resource planning (modes, alternative resources, secondary resources)	—	—	COVERED-23	23	Primary/secondary resources, alternative resources via capabilities
Finite scheduling with time-continuous capacity, calendar, breaks, downtime (from PM)	—	—	COVERED-23	23	Downtime from wave 44 affects capacity

13.23.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
/SAPAPO/RRP3 / RRP4 / RRP7	Product/receipt views	COVERED-22	22	—
/SAPAPO/CDPS0 (views: resource, order, operation)	DS board views	COVERED-23	23	—

SU53 / SU56 / ST01 / STAUTHTRACE	Authorization check analysis / user buffer / system trace / auth trace	Troubleshooting	COVERED-2	2	Effective-permission viewer + OPA decision logs
SUIM	User information system (users by role/auth/transaction, change docs for users/roles, comparisons)	Reporting	COVERED-2	2	Effective-permission report; access reports
SM19 / SM20 / RSAU_CONFIG / RSAU_READ_LOG / SM18	Security audit log configuration / evaluation / reorganization	Security audit	COVERED-5	5	Audit log + OTel logs; wave 48 SOC 2 evidence
SECPOL / RZ10 login parameters	Password/security policies	—	COVERED-2	2	Keycloak policies
GRC AC: NWBC Access Request (ARM) / Access Risk Analysis (ARA) / Business Role Management (BRM) / Emergency Access Management (EAM firefighter IDs, logs) / User Access Review (UAR) / SoD Review	Access governance	—	COVERED-48	48	SoD rules engine, conflict detection, mitigation workflow, access certification campaigns; emergency (break-glass) access — confirm firefighter/break-glass with session log; treat PARTIAL via next row
GRC EAM firefighter (superuser privilege management with reason codes and log review)	Emergency access	—	PARTIAL-48	48	Break-glass elevated access with time-boxed sessions, reason codes and reviewer sign-off not explicitly named — partial
SE09 / SE10 / SE01 / SE03 / STMS / STMS_IMPORT / SE06 / SE07	Transport organizer (workbench/customizing requests), transport management, import queues, system change option	Transports	COVERED-1	1	GitOps: config/metadata changes as versioned artifacts promoted through environments by digest; customizing-as-code
SCC4 / SCC1 / SCCL / SCC3 / SCC5 / SCC7 / SCC8 / SCC9	Client maintenance, client copy (local/remote), client transport, delete	Clients	SUPERSEDED-2	2	Tenants + environments; tenant provisioning automation (wave 50)
SE11 / SE12 / SE13 / SE14 / SE15 / SE16 / SE16N / SE16H / SE17	ABAP Dictionary: tables/views/data elements/domains/search helps/lock objects, technical settings, DB utility, repository info system, table browser	DDIC	COVERED-3	3	Metadata registry (entities, fields, enums); generated schema; table browser = entity explorer
SE80 / SE38 / SE37 / SE24 / SE41 / SE51 / SE71 / SE91 / SE93 / SE63 / SE54 / SM30 / SM31 / SM34	Development workbench, programs, function modules, classes, menus, screens, SAPscript, messages, transaction codes, translation, table maintenance generator, table maintenance	ABAP development	OUT-OF-SCOPE	—	PRD non-goal: no proprietary extension language; metadata extensions (wave 3) and public APIs (wave 35) instead
SE18 / SE19 / SE20 / CMOD / SMOD / SPAU / SPDD / SE95	BAdIs, enhancement spots, customer exits, modification adjustment	Enhancement framework	SUPERSEDED-3	3	Lifecycle hooks/extension points in metadata; webhooks and event subscribers (waves 4/35)
SNOTE / SPAM / SAINT / SUM / SPAU / SPDD	Note assistant, support packages, add-ons, upgrade	Patching	SUPERSEDED-1	1	Continuous delivery; zero-downtime migrations (wave 50)
SM36 / SM37 / SM62 / SM64 / SM61 / SM65 / SMX	Background jobs: define, monitor, events, trigger event, job servers, check	Batch	COVERED-4	4	Batch job framework with job monitor UI
SM50 / SM51 / SM66 / SM04 / AL08 / SM12 / SM13 / SM14 / SM21 / ST22 / SM58 / SMQ1 / SMQ2 / SMQR / SMQS	Work processes, servers, global process overview, user sessions, locks, update requests, system log, dumps, tRFC, qRFC queues	System monitoring	SUPERSEDED-5	5	Kubernetes + OpenTelemetry (Grafana/Tempo/Loki/Prometheus), SLO dashboards, alerting; Kafka lag monitoring; Temporal UI
ST02 / ST03 / ST03N / ST04 / ST05 / ST06 / ST07 / ST10 / ST11 / ST12 / STAD / SQLM / SWLT / ST14	Buffers, workload analysis, DB performance, SQL trace, OS monitor, app monitor, table call stats, developer traces, single transaction analysis, statistics records, SQL monitor	Performance	SUPERSEDED-5	5	OTel traces/metrics; pgBadger/pg_stat_statements; k6 load campaigns (wave 50)
RZ20 / RZ21 / RZ03 / RZ04 / RZ10 / RZ11 / RZ12 / SMLG / SM63	CCMS monitoring, operation modes, instance profiles, parameters, RFC server groups, logon groups	—	SUPERSEDED-1	1	Helm values / K8s config; HPA; Envoy routing
SM59 / SICF / SOAMANAGER / SRT_* / WE21 / SMICM / SMMS	RFC destinations, HTTP services, web service config, ICM	Connectivity	SUPERSEDED-35	35	Integration hub (REST/GraphQL/webhooks/Kafka), API gateway, keys & quotas
STRUST / SSFA / SSO2 / SAML2 / SNCWIZARD	Trust manager (certificates), SSF, SAML	PKI	COVERED-1	1	cert-manager, Vault, Keycloak
SPAD / SP01 / SP02 / SPAD printers / SP12	Spool administration, output requests, device types	Printing	COVERED-32	32	Print service (ZPL, PDF) + document designer; cloud print queues — confirm generic print queue management for office printers (not just ZPL); treat PARTIAL via note in cross-app
SCOT / SOST / SOSG / SOSV / SBWP / SO10 / SO16	SAPconnect (email/fax), send status, business workplace, standard texts	Messaging	COVERED-5	5	Notification service (email/SMS/in-app) — confirm; treat covered
SM35 / SHDB	Batch input sessions / recorder	Data entry automation	SUPERSEDED-10	10	Import/export (wave 5) and migration pipeline (wave 10); APIs
SLG0 / SLG1 / SLG2	Application log objects / display / delete	App log	COVERED-5	5	Structured logs (Loki) with trace ids
SCDO / SCU3 / SE16 CDHDR-CDPOS / RSSCD100	Change document objects / table logging evaluation / change documents display	Change documents	COVERED-5	5	Field-level immutable audit from CDC with viewer
SNRO / SNUM / NRIV	Number range objects/intervals/buffering	Number ranges	COVERED-5	5	Number sequence service (gap-free option)
SARA / SARI / SARJ / DB15 / AOBJ / ILM (IRM_CUST, ILMARA, ILM_DESTRUCTION) — see cross-app	Archiving	—	COVERED-48	48	—
DB02 / DB12 / DB13 / DB14 / DB20 / DBACOCKPIT / HANA cockpit / HDBSQL	Database administration: space, backups, planning calendar, statistics	DBA	SUPERSEDED-50	50	CloudNativePG backups/PITR, backup/restore drills (wave 48), partitioning (wave 50)
SM02 / SM13 / SE38 RSPARAM / SU10 lock	System messages, update admin	—	SUPERSEDED-5	5	Shell banner/notifications — confirm system-wide announcement banner; treat covered
SM30 → table maintenance views (customizing data)	Customizing table maintenance	—	SUPERSEDED-3	3	Configuration entities generated from metadata with UI
SE93 transaction codes / SMEN favorites / SSM2 area menus	Navigation	—	SUPERSEDED-5	5	Workspaces, global search, saved views

T-code	Name	Purpose	Passage status	Wave	Notes
SPRO / SPRO_ADMIN / S_IMG (IMG projects, project views, activities)	Implementation guide, IMG projects, customizing activities, documentation	Customizing navigator	SUPERSEDED-3	3	Configuration workspace organized per module; implementer guide (wave 50); configuration-as-code with diff/versioning (wave 3 registry)
SOLMAN (Solution Manager: ChaRM, test suite, process documentation, monitoring, EarlyWatch, Focused Build) / SAP Cloud ALM / Signavio	ALM	—	SUPERSEDED-1	1	GitHub + Argo CD + observability; process documentation = functional guides (wave 50)
SAP Router, Web Dispatcher, SAProuter, Gateway (SMGW), Cloud Connector	Network components	—	SUPERSEDED-1	1	Envoy Gateway, ingress, cert-manager
SLD / LMDB / RZ70	System landscape directory	—	SUPERSEDED-1	1	Backstage catalog (wave 35)
SU01 → user types (dialog, system, communication, service, reference)	Technical users	—	COVERED-2	2	Service accounts/API keys (wave 35)
SAP Identity Management (IdM) / Identity Authentication Service (IAS) / Identity Provisioning (IPS)	Cloud identity	—	SUPERSEDED-2	2	Keycloak + SCIM
UI5/Fiori launchpad admin (/UI2/FLPD_CUST, /UI2/FLPCM_CUST, /UI2/SEMOBJ, /UI2/FLP, spaces & pages /UI2/FLPD_SPACE) — see cross-app	—	—	COVERED-5	5	—
SAP GUI (Windows/Java/HTML), SAP Business Client (NWBC), WebGUI, Personas	Clients	—	SUPERSEDED-5	5	React shell; Personas-style personalization = shell personalization
HANA: HDB user/role admin, SQL privileges, calculation views	DB-level security	—	SUPERSEDED-2	2	Postgres roles + RLS; no end-user DB access

13.30.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
SUIM (all reports)	Users by roles/authorizations/t-codes; roles by authorization; change documents (users/roles/profiles); comparison; critical authorizations	COVERED-2	2	Access reports; SoD (wave 48)
RSUSR002 / RSUSR003 / RSUSR008_009_NEW / RSUSR100 / RSUSR200	Users by complex criteria / standard users password check / critical combinations / change docs / logon dates & password changes	COVERED-2	2	—
SM20 / RSAU_READ_LOG	Security audit log evaluation	COVERED-5	5	—
ST03N / STAD / SM21 / ST22	Usage statistics, statistics records, syslog, dumps	SUPERSEDED-5	5	Grafana dashboards
SM37 job overview / SM36	Job logs	COVERED-4	4	Job monitor
SLG1	Application log	COVERED-5	5	—
SCU3 / RSVTPROT	Table change logs	COVERED-5	5	Audit viewer for configuration entities
SE16/SE16N/SE16H	Table display	SUPERSEDED-3	3	Entity explorer + lakehouse SQL (wave 46) with RLS
GRC AC reports: risk analysis (user/role/profile level), mitigation reports, firefighter logs, access request status, UAR status	Access governance reports	COVERED-48	48	—
STMS import history / SE10 request logs	Transport history	COVERED-1	1	Argo CD history, git log
AIS (Audit Information System: SECR / S_ALR_87100 system audit, business audit)	Audit information system	COVERED-48	48	SOC 2 control evidence; wave 15 audit trail
EarlyWatch Alert / Solution Manager dashboards	System health	SUPERSEDED-5	5	SLO dashboards
License administration (SLAW / USMM / LAW2)	License measurement	SUPERSEDED-50	50	Tenant usage/cost model (wave 50)

13.30.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
SM36 standard jobs (SAP_REORG_JOBS, SAP_REORG_SPOOL, SAP_COLLECTOR_FOR_PERFMONITOR, SAP_REORG_ABAPDUMPS, SAP_CHECK_ACTIVE_JOBS…)	Housekeeping jobs	SUPERSEDED-4	4	Platform housekeeping (log retention, vacuum) via K8s CronJobs / job framework
SM18 / RSAU_FILE_ADMIN	Security audit log reorganization	COVERED-5	5	Log retention policies
SUIM/PFCG mass user comparison (PFUD / PFCG_TIME_DEPENDENCY)	Role assignment validity cleanup	COVERED-2	2	Effective-dated role assignments
SU10 mass lock / unlock, inactive users (RSUSR200)	User lifecycle	COVERED-2	2	SCIM deprovisioning; wave 48 access reviews
GRC UAR campaigns, periodic risk analysis batch, firefighter log sync	Access certification	COVERED-48	48	Access certification campaigns
STMS import jobs / transport of copies / ChaRM cycles	Release management	COVERED-1	1	GitOps promotion
DB13 backups / statistics / reorg	DBA calendar	SUPERSEDED-50	50	CloudNativePG scheduled backups; wave 48 restore drills
SPAM/SUM/SNOTE patch cycles, kernel upgrades	Patching	SUPERSEDED-1	1	CI/CD with SBOM/vuln scans (Grype/Trivy), image signing
Client copy refresh (SCCL) for test systems	Environment refresh	SUPERSEDED-2	2	Tenant clone/anonymized refresh — confirm anonymized test-data refresh tooling (wave 48 privacy + wave 50 ops); treat PARTIAL via row below
Anonymized production-to-test data refresh (TDMS / client copy with scrambling)	Test data management	PARTIAL-48	48	Tenant clone with PII scrambling not explicitly named — partial; propose wave 48/50
SLG2 / SARA application log deletion	Log cleanup	COVERED-5	5	—

T-code	Name	Passage status	Wave	Notes
License measurement (USMM)	—	SUPERSEDED-50	50	—
SM13 update error reprocessing / SM58 tRFC retry / SMQ2 queue restart	Error reprocessing	SUPERSEDED-4	4	Outbox + Temporal retries, DLQ replay (wave 35)

13.30.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
Profile parameters (RZ10/RZ11: login/, *auth/*, rdisp/, *icm/*, rsau/*)	TPFET, PAHI	Password rules, lock on failed logons, SSO settings, session timeout, audit	COVERED-2	2	Keycloak realm policies; gateway settings
PFCG role concept: org levels (PFCG_ORGFIELD_CREATE), derived roles, composite roles, menu, SU24 check indicators	AGR_*, USOBT_C, USOBX_C	—	COVERED-2	2	Role/duty/privilege metadata; org-scoped assignment
SU25 steps / SU24 maintenance (check indicators)	USOBT_C	—	SUPERSEDED-2	2	—
Security audit log filters (SM19/RSAU_CONFIG), audit classes	RSAU*	—	COVERED-5	5	—
GRC AC: rule sets (functions, risks, SoD matrix), mitigating controls, risk owners, workflow MSMP, firefighter configuration, connectors	GRAC*	—	COVERED-48	48	SoD rules + mitigation workflow
GRC AC: access request types, approval stages (MSMP), provisioning settings, UAR settings	GRAC*	—	COVERED-48	48	Access request workflow via wave 4 + Keycloak provisioning
STMS configuration: transport domain, routes, layers, QA approval procedure, import strategies; CTS+ for non-ABAP	TMS*	—	SUPERSEDED-1	1	Argo CD environments, promotion by digest, approval gates
SCC4 client settings (customizing changes allowed, cross-client, protection)	T000	—	SUPERSEDED-2	2	Environment-level write protection via GitOps
SE06 system change option, SE03 namespaces, software components	—	—	SUPERSEDED-1	1	—
Operation modes (RZ04), logon groups (SMLG), RFC server groups (RZ12)	—	—	SUPERSEDED-1	1	K8s scheduling/HPA
Background processing: job classes, server groups (SM61), event definitions (SM62)	TBTCO, BTCSEV	—	COVERED-4	4	Job priorities/partitioning; event triggers (Kafka)
Printing: device types, output devices, access methods (SPAD), front-end printing, print queues	TSP03*	—	PARTIAL-32	32	Print service for labels/documents; generic office print queue/printer management partial
SAPconnect nodes (SCOT), SMTP, fax, domains, send jobs	SX*	—	COVERED-5	5	Email provider adapter
Table logging activation (rec/client, SE13 log data changes), change document objects (SCDO)	—	—	SUPERSEDED-5	5	CDC audit for everything flagged audit=true in metadata
Number range buffering (SNRO: no buffering, main memory, parallel)	TNRO	—	COVERED-5	5	Gap-free vs buffered sequences
Archiving customizing: archiving objects, residence times, archive infostructures (SARI/SARJ), content repository (OAC0), ILM policies	AOBJ, ARCH_*, ILM*	—	COVERED-48	48	Retention policies, legal holds
ArchiveLink / KPro: content repositories (OAC0/OACT/OAC2/OAC3), document types, links to business objects (GOS)	TOA*, TOAOM	—	COVERED-5	5	Attachments object store (S3-compatible) — confirm object storage for attachments; treat covered
SAML/OIDC/SNC configuration, trusted IdPs, user mapping	SAML2*	—	COVERED-2	2	—
HTTP whitelist, CSRF, UCON (unified connectivity) RFC allowlist	UCON*	—	COVERED-2	2	API gateway policies
Read Access Logging (SRAL) configuration	SRAL*	—	PARTIAL-48	48	PII access logged (wave 42) for HR; configurable read-access logging for arbitrary sensitive fields partial — propose wave 48
UI data protection masking (UI masking/logging add-on)	—	—	COVERED-42	42	PII masking per role
Data destruction / blocking (ILM, BP blocking BUPA_PRE_EOP, end of purpose)	ILM*	—	COVERED-48	48	Retention + erasure; end-of-purpose checks per party — confirm EoP checks across modules; treat covered
SAP Cloud ALM / Solution Manager process management, test management (ECATT SECATT, CBTA)	—	—	SUPERSEDED-1	1	CI tests, Playwright, fixtures

13.31 Cross-Application (workflow, IDoc/ALE, PI/PO, DRC e-documents, output management NAST/BRF+, Fiori launchpad, archiving/ILM, GDPR/IRF, attachments, texts, enterprise search)

13.31.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
SWDD / SWDD_SCENARIO / SWDM	Workflow builder (classic) / flexible workflow scenario editor / business workflow explorer	Workflow design	COVERED-4	4	Workflow designer (configuration-driven approval chains) + Temporal
PFTC / PFTC_INS / PFTC_CHG / PFTC_DIS	Task maintenance (standard tasks, workflow templates)	—	SUPERSEDED-4	4	Workflow templates in designer
PFAC / PFAC_INS / PFAC_CHG	Rules (agent determination: responsibilities, org, function module)	Agent rules	COVERED-4	4	Approver resolution (role, hierarchy, amount band, delegation)
SWO1 / SWO2 / SWO3 / SWO6 / SE24 (ABAP OO)	Business object builder / repository / delegation	BOR	SUPERSEDED-3	3	Entities + events from metadata
SWE2 / SWETYPV / SWEC / SWEL / SWELS / SWE3 / SWEINST	Event type linkages, change-document events, event trace, instance linkages	Event linkage	COVERED-4	4	Entity-changed CloudEvents trigger workflows; AsyncAPI

T-code	Name	Purpose	Passage status	Wave	Notes
SBWP / Fiori My Inbox / SWNCONFIG / SWNADMIN / SOST	Business workplace inbox, My Inbox app, extended notifications (email)	Task inbox	COVERED-4	4	Human tasks UI in shell + notifications; delegation/substitution (HRUS_D2 / SBWP substitutes) — confirm substitution rules; treat covered
SWIA / SWI1 / SWI2_FREQ / SWI2_DEAD / SWI2_DURA / SWI2_ADM1 / SWI5 / SWI6 / SWI14 / SWPR / SWPC / SWU_OBUF / SWWL / SWWH	Work item administration (execute as admin, selection, frequency, deadlines, durations, without agents), workload, workflows for object, restart after error, continue after system crash, buffer sync, delete work items	Workflow admin	COVERED-4	4	Temporal UI + workflow admin (retry, restart, reassign, SLA/deadline monitor)
SWU3 / SWU0 / SWUS / SWUD / SWU2 / SWU_EWBTE	Automatic workflow customizing / event simulation / test workflow / diagnosis / RFC monitor	—	COVERED-4	4	Workflow test harness (Temporal test server in CI)
SWF_ADM_ / SWFVISU / SWF_PROCESS_	Flexible workflow admin, task visualization (My Inbox UI), process monitor	—	COVERED-4	4	—
WE02 / WE05 / WE09 / WE19 / WE07 / WE10	IDoc display / list / search by content / test tool / statistics	IDoc monitoring	COVERED-35	35	Message monitor with replay
WE20 / WE21 / WE30 / WE31 / WE60 / WE81 / WE82 / WE41 / WE42 / WE57 / WE47 / WE46 / WE40 / WE44 / BD51 / BD55 / BD56 / BD62 / BD64 / BD87 / BD20 / BD21 / BD50 / BD52 / BD53 / BD61 / BD10 / BD11 / BD12 / BD13 / BD14 / BD15 / BD16 / BD17 / BD18	Partner profiles, ports, IDoc types, segments, documentation, message types, assignment, process codes (outbound/inbound), status processing, distribution model, reprocess, inbound/outbound processing, change pointers (activate, per message type, reduce), send material/customer/vendor/cost center…	ALE/IDoc configuration & distribution	SUPERSEDED-35	35	EDI engine (X12/EDIFACT) + Kafka topic subscriptions + webhooks + REST/GraphQL; partner profiles, acknowledgements, message monitor; master-data distribution = events (no change pointers)
SALE / BDLS / BD54 / BD97 / SM59	ALE customizing, logical system conversion, define logical systems, assign RFC	—	SUPERSEDED-35	35	—
PI/PO: ESR (Enterprise Services Repository), Integration Directory (ID), SXMB_MONI / SXI_MONITOR / SXMB_ADM / SXMB_IFR / SRT_MONI / SRT_UTIL / IDX1 / IDX2 / IDX5 / SLDCHECK / RWB / PIMON	Process integration design/configuration/monitoring, IDoc adapter metadata, web service monitoring	Middleware	SUPERSEDED-35	35	Integration hub (API catalog via Backstage, developer portal, webhooks, Kafka, iPaaS connectors Salesforce/Shopify/Stripe); message monitor with replay and partner SLAs
SAP Integration Suite (Cloud Integration/CPI iFlows, API Management, Open Connectors, Trading Partner Management, Event Mesh, Integration Advisor)	Cloud middleware	—	SUPERSEDED-35	35	Same; Event Mesh = Kafka topics; TPM = EDI partner profiles
EDOC_COCKPIT / EDOC_RESUBMIT / EDOC_BACKGROUND / Fiori: eDocument Cockpit (DRC) / Manage Electronic Documents	Document and Reporting Compliance: e-invoices/e-documents per country (IT SDI, MX CFDI, ES SII, HU RTIR, IN e-invoice/e-way bill, PL KSeF, Peppol, FR, BR NF-e…)	e-documents	COVERED-35	35	Peppol UBL 2.1, Factur-X/ZUGFeRD, country mandates framework (IT SDI, MX CFDI hooks); further mandates per country pack (wave 48) — note: only IT/MX hooks named; first packs US/UK/DE/FR/IN/MX/CA — IN e-invoice & FR 2026 mandate expected in packs
DRC Statutory Reporting (Run Statutory Reports / Manage Compliance Reports: VAT returns, EC sales list, SAF-T, withholding, Intrastat, e-filing)	Statutory reporting framework	—	COVERED-48	48	Electronic reporting designer + regulator mandates registry; wave 13 extracts
NACE / NACZ / NACO / VV11-VV13 / VV21-23 / VV31-33 / MN01-MN27 / VOK2 / V/30 / V/40 / V/57 / V/59 / V/G6 / VN	Output determination (condition technique per application: V1 sales, V2 shipping, V3 billing, EF purchasing, EA RFQ, EV contracts, EL SA, ME inventory, Q QM, PM , MR invoice verif, KM) — output types, access sequences, procedures, condition records, print programs/forms, partners, media, dispatch time	Output management (NAST)	SUPERSEDED-46	46	Output rules: per document type/event → channel (print/email/EDI/portal) with templates from document designer; events (wave 4) for timing; wave 35 EDI; no condition technique for output
S/4 Output Management (BRF+ output determination: OPD, output parameter determination, Manage Output Items , Adobe forms via ADS, email templates, printer queues)	S/4 output control	—	SUPERSEDED-46	46	Same; BRF+ decision tables ↔ rules engine
BRF+ (BRFPLUS / FDT_WORKBENCH) / Decision Service Management (DSM)	Business rules framework (decision tables, formulas, rulesets)	Rules engine	PARTIAL-3	3	Validation rules and OPA policies exist; a general-purpose, user-maintainable decision-table/rules engine (used by output, tax, credit, dispute, GRC, substitution) is implied across waves but not named as a shared service — partial; propose explicit "rules engine (decision tables)" in wave 3/4
SE71 (SAPscript) / SMARTFORMS / SFP (Adobe forms) / ADS / Fiori form templates (Maintain Form Templates)	Form design	Forms	SUPERSEDED-46	46	Operational report/document designer (invoices, POs, packing slips, checks)
SO10 / SO72 / SE75 (text objects/IDs)	Standard texts, text management	Text blocks	PARTIAL-5	5	Document/line notes exist; a reusable standard-text library with placeholders and language versions for documents is not named — partial; propose wave 46 designer text blocks
GOS (Generic Object Services): attachments, notes, links, relationships, workflow overview, ArchiveLink (OAAD / OAWD / OAOR)	Attachments & notes on any object	—	COVERED-5	5	Attachments & notes on any entity (journal attachments wave 11; DMS §13.35)
Document Relationship Browser (DRB) / document flow	Cross-document flow	—	COVERED-27	27	Document flow (order→shipment→invoice→payment), trace ids
/UI2/FLP / /UI2/FLPD_CUST / /UI2/FLPCM_CUST / /UI2/FLPD_CONF / /UI2/SEMOBJ / /UI2/NWBC_CFG_CUST / /UI2/FLPCM_ (catalogs, groups, tiles, target mappings, spaces & pages, launchpad content manager) / /UI2/FLP_SYS_CONF / /IWFND/MAINT_SERVICE (OData services) / /IWFND/ERROR_LOG / /IWFND/GW_CLIENT / /UI5/THEME_DESIGNER / /UI5/UI5_REPOSITORY_LOAD	Fiori launchpad configuration, OData gateway, UI theme designer	Launchpad & gateway	COVERED-5	5	React shell: workspaces by role, navigation, global search, personalization, theming; API gateway
SAP Screen Personas / GuiXT	Screen simplification	—	SUPERSEDED-5	5	Metadata-driven forms + personalization

T-code	Name	Purpose	Passage status	Wave	Notes
SAP Enterprise Search (ESH_COCKPIT / ESH_ADMIN) / Fiori search	Enterprise search	—	COVERED-5	5	Global search
SARA / SARI / SARJ / SARE / AOBJ / SAR / DB15 / ILM: IRM_CUST / ILMARA / ILM_DESTRUCTION / ILM_STOR / ILM_SNAPSHOT / LHM (legal hold) / ILM retention warehouse	Data archiving (write/delete/store/retrieve), archive info system, ILM retention rules, legal holds, data destruction, retention warehouse (system decommissioning)	Archiving & ILM	COVERED-48	48	Retention policies, legal holds, erasure; history in lakehouse (wave 46) — archive retrieval = lakehouse query; system decommissioning (retention warehouse) partially covered by migration-factory history load (wave 49)
GDPR: IRF (Information Retrieval Framework: data model, purposes, retrieval runs), blocking/deletion (BUPA_PRE_EOP, EoP checks), consent management (ECM), read access logging (SRAL), UI masking, data privacy workbench (DPW)	Data protection	—	COVERED-48	48	GDPR/CCPA subject requests (export/erasure), retention; consent in HR (wave 42); SRAL partial (noted)
SAP Information Steward / MDG (Master Data Governance: change requests, data models, validation rules, replication)	Master data governance	—	COVERED-7	7	Data governance: ownership, stewardship queue, change approval workflow (party); product/BOM governance via ECO (wave 9) — note MDG-style central governance for all master domains confirm; treat covered
MDG consolidation & mass processing (duplicate check, best record)	—	—	COVERED-7	7	Dedup/merge with survivorship
SAP Business Partner Screening / Watch List Screening (GTS)	Sanctions/denied-party screening	—	GAP	propose 48	Denied-party/sanctions screening of parties and documents not named; propose wave 48 (compliance) with provider adapter
Legal Content Management / contract management (SAP CLM, Ariba Contracts)	Legal contracts	—	PARTIAL-17	17	Purchase/sales agreements exist; legal contract authoring, clause library, obligations — partial (noted in Ariba row)
SAP Jam / SAP Build Work Zone / Collaboration	Collaboration	—	OUT-OF-SCOPE	—	Integrate with Slack/Teams via webhooks (wave 35); no native collaboration suite
SAP Mobile Platform / SAP Mobile Services / Mobile Start / Fiori Client	Mobile platform	—	COVERED-5	5	PWA shell; mobile apps (waves 25/32/45)
Business Application Studio / Web IDE / Eclipse ADT (SE80 successors) / ABAP Cloud / Steampunk / BTP extensions (side-by-side)	Extension development	—	SUPERSEDED-3	3	Metadata extensions + public APIs/webhooks/MCP (waves 3/35/47)
Key User Extensibility (Custom Fields and Logic, Custom Business Objects, Custom CDS Views, Custom Analytical Queries, Adapt UI)	In-app extensibility (S/4)	—	COVERED-3	3	Metadata kernel: entity extensions (fields, enums, hooks), custom entities; custom views (wave 46); adapt UI (wave 5)
SAP Business Technology Platform (BTP) services: Workflow Management, Business Rules, Process Automation, Event Mesh, API Management, Integration Suite, Document Management, Launchpad service	Platform services	—	SUPERSEDED-4	4	Temporal, rules (partial), Kafka, hub, object storage, shell
SAP Cloud Appliance Library / S/4 activation (Best Practices content, SAP Activate)	Pre-configured content	—	SUPERSEDED-6	6	Seed data / demo manufacturer; tenant templates (wave 50 provisioning)
Data Quality Management (DQM: address validation, duplicate check via SAP DQM microservices)	Address validation	—	COVERED-6	6	Validated postal addresses, geocoding hook
SAP Geographical Enablement Framework (GEF) / maps	Geo	—	COVERED-6	6	Geocoding; maps in TM/FSM (waves 34/45)
Business Event Handling (BTE: FIBF/BF / open FI events)	Event hooks in FI	—	SUPERSEDED-4	4	Lifecycle hooks + events
SAP Business Rules (BRF+ in GRC, tax, dispute, output) — see above	—	—	PARTIAL-3	3	—
Application Interface Framework (AIF: /AIF/CUST, /AIF/ERR, interface monitor)	Interface monitoring & error handling	—	COVERED-35	35	Message monitor with replay, dead-letter, partner SLAs
SAP Process Mining (Signavio) / Process Observer (POC)	Process mining	—	PARTIAL-46	46	Event stream + lakehouse enables mining; no native process-mining UI — partial

13.31.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
SWI1 / SWI2_* / SWI5 / SWI6	Work item selection, frequency, deadlines, durations, workload	COVERED-4	4	Workflow dashboards (SLA, throughput)
SWEL	Event trace	COVERED-4	4	Kafka topic browser / event log
WE02 / WE05 / WE07 / WE09	IDoc lists & statistics	COVERED-35	35	Message monitor
BD87 (status overview)	IDoc status overview	COVERED-35	35	—
SXMB_MONI / SRT_MONI / /AIF/ERR	Integration message monitors	COVERED-35	35	—
EDOC_COCKPIT (status by country)	e-document status	COVERED-35	35	—
NAST analysis (VV13 / WE output status) / Fiori: Manage Output Items	Output status lists	COVERED-46	46	Output log per document
SOST	Sent emails/fax status	COVERED-5	5	Notification log
SARI / ILM reports	Archive info system queries	COVERED-46	46	Lakehouse history queries
IRF retrieval run results	Subject access report	COVERED-48	48	—
/IWFND/ERROR_LOG / /IWFND/APPS_LOG	OData gateway logs	SUPERSEDED-5	5	OTel traces
/UI2/FLP usage analytics (Fiori usage)	Usage analytics	COVERED-5	5	Product analytics on shell (OTel)
ESH search analytics	—	COVERED-5	5	—

13.31.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
SWWDHEX / SWWERRE / SWWCOND / SWWCLEAR (deadline monitoring, error monitoring, condition evaluation, clear work items)	Workflow background jobs	SUPERSEDED-4	4	Temporal timers/retries
RSWWWIDE / SWWL (delete work items) / SWW_SARA archiving	Workflow housekeeping	COVERED-48	48	Workflow history retention
RSEOUT00 / RBDAPP01 / RBDMANI2 / RBDMIDOC (change pointers → IDocs) / RSEIDOC2 / RBDAGAIN / RBDAGAIE	IDoc outbound processing, inbound posting, reprocess, change pointer processing	SUPERSEDED-35	35	Event-driven outbox; replay
RSNAST00 / RSNASTED	Output processing (print/EDI) batch	COVERED-46	46	Output jobs
EDOC_BACKGROUND / DRC submission jobs	e-document submission/polling	COVERED-35	35	—
SARA write/delete/store jobs; ILM destruction runs	Archiving runs	COVERED-48	48	Retention jobs
IRF retrieval runs; blocking runs (BUPA_PRE_EOP/EoP)	GDPR runs	COVERED-48	48	—
/IWFND/ cache cleanup, /UI2/ cache invalidation	Gateway maintenance	SUPERSEDED-5	5	—
ESH index updates (ESH_COCKPIT)	Search indexing	COVERED-5	5	Search index from CDC
SXMS_ / integration archiving & retention	Message retention	COVERED-35	35	—
MDG replication / data load jobs (DRFOUT)	Master data replication	SUPERSEDED-7	7	Events

13.31.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
SWU3 basic workflow settings (RFC destination WORKFLOW_LOCAL, WF-BATCH user, prefix numbers SWU9 , monitoring jobs)	SWF_*	—	SUPERSEDED-4	4	Temporal cluster config
Flexible workflow scenarios (per document type: PR, PO, contract, journal entry, supplier invoice, credit memo…), step conditions, agent determination rules, deadlines, email notifications	SWF_FLEX*	—	COVERED-4	4	Workflow designer with templates per entity
Substitution/delegation rules (SBWP, HRUS_D2), vacation handling	HRUS_D2	—	COVERED-4	4	Delegation/escalation with SLA timers
ALE: logical systems, distribution model, partner profiles, ports, serialization groups, filters, change pointers activation per message type	TBDLS, TBD*, EDP*, EDIPO*	—	SUPERSEDED-35	35	Partner profiles for EDI; topic subscriptions
EDI: converter/subsystem settings, status codes, message control	EDI*	—	COVERED-35	35	EDI engine (AS2/SFTP, acknowledgments 997/CONTRL)
PI/PO / Integration Suite configuration (communication channels, adapters, mappings, SLAs)	—	—	SUPERSEDED-35	35	Hub
DRC: e-document types per country, activation, interface connectors (PEPPOL access point, SDI, CFDI PAC), source document types, status mapping	EDOC*	—	COVERED-35	35	Country mandates framework; packs wave 48
DRC statutory reporting: report definitions, categories, parameters, document and data sources, correspondence	—	—	COVERED-48	48	ER designer
Output determination customizing (NACE per application: output types, procedures, access sequences, condition tables, print programs, forms, partner functions, media, dispatch times, storage mode)	T685B, TNAPR, NAST, T681*	—	SUPERSEDED-46	46	Output rules/channels/templates
S/4 output control: output types, determination (BRF+), form templates, email templates, printer settings, channels	APOC_*	—	SUPERSEDED-46	46	—
BRF+ applications, functions, rulesets, decision tables, expressions	FDT_*	—	PARTIAL-3	3	Rules engine gap
Text determination (text objects, IDs, procedures) across SD/MM/FI	TTXID, TTXERN	—	COVERED-27	27	Notes types per entity
GOS/ArchiveLink: document types, object types, links (OAC3), content repositories (OAC0), bar code entry (OAM1) , storage scenarios	TOA*	—	COVERED-5	5	Attachment types, object storage
Fiori launchpad: catalogs, groups, spaces, pages, target mappings, roles (PFCG menu), theming, user defaults (default values per parameter)	/UI2/*	—	COVERED-5	5	Workspaces, navigation by role, personalization
OData/Gateway activation (/IWFND/MAINT_SERVICE), service groups, system aliases	/IWFND/*	—	SUPERSEDED-35	35	Generated OpenAPI/GraphQL; API catalog
Archiving objects: residence/retention, variants, archive routing, info structures, ILM rules (audit areas, policies: retention/destruction), legal hold management	AOBJ, ILM*	—	COVERED-48	48	Retention policies per entity
Data protection: purposes, EoP (end-of-purpose) checks per application, blocking, IRF data model/purposes, SRAL, consent	ILM*, IRF*, SRAL*	—	COVERED-48	48	Privacy requests; SRAL partial
Enterprise search: connectors, models, authorization	ESH*	—	COVERED-5	5	—
Key user extensibility: custom fields (business contexts), custom logic (BAdI implementations in-app), custom business objects, custom CDS views, UI adaptation	—	—	COVERED-3	3	Metadata extensions
Application log objects (SLG0), log retention	BALOBJ	—	COVERED-5	5	—
AIF interfaces, error handling recipients, alerts	/AIF/*	—	COVERED-35	35	—
MDG data models, change request types, workflows, validation (BRF+), replication (DRF)	MDG*	—	COVERED-7	7	Governance workflow
Watch list screening / GTS compliance configuration	—	—	GAP	propose 48	Screening gap

13.32 LO-VC — Variant Configuration & AVC (Advanced Variant Configuration)

SAP context: classification-based configuration: characteristics (CT04), classes type 300 (CL02), configurable material KMAT (MM01), configuration profile (CU41), object dependencies (CU01: preconditions, selection conditions, procedures, actions, constraints/constraint nets), variant tables (CU60/CU61), variant functions (CU65), super BOM (CS40) and super routing with dependencies, configuration simulation (CU50), material variants (MM01 with configured values), order BOM (CU51), variant pricing (VA00/VA01 condition types with $SET_PRICING_FACTOR), VC modeling environment (PMEVC), AVC (S/4 Advanced Variant Configuration: new engine, Fiori Manage/Simulate Configuration Models, Manage Classes/Characteristics, product modeling environment), Product Structure Management (PSM/iPPE). Passage: wave 8 (constraint-based configurator on MiniZinc/OR-Tools; attributes & classification), wave 27 (configured order → production), wave 26 (variant pricing via engine), wave 9 (BOM/routing).

13.32.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
CT04 / CT06	Characteristics maintain / where-used (values, intervals, multi-value, required, restrictable, reference to table field)	Configuration attributes	COVERED-8	8	Attributes with value domains; reference attributes — confirm "reference characteristics" (bind to document field e.g. order qty); treat covered
CL02 / CL01 / CL03 / CL6B / CL6C	Class (type 300 variant) create/change/display, class hierarchy	Configuration classes	COVERED-8	8	Classes
MM01 (KMAT, configurable flag)	Configurable material	—	COVERED-8	8	Product master (configurable)
CU41 / CU42 / CU43	Configuration profile create/change/display (class assignment, BOM explosion, interface design, process: planned/production order BOM, order BOM, sales order)	Config profile	COVERED-8	8	Configurator model binding to product + explosion mode
CU01 / CU02 / CU03 / CU04 / CU05	Object dependencies (global) create/change/display/list/where-used (preconditions, selection conditions, procedures, actions, constraints)	Dependencies	COVERED-8	8	Constraint model (MiniZinc/OR-Tools): constraints, selection rules, defaults; procedure-style value inference — confirm procedural "procedures" semantics (set defaults, $SELF.x = ...) map to constraint model; treat covered
CU21 / CU22 / CU23	Dependency nets (constraint nets) create/change/display	Constraint nets	COVERED-8	8	—
CU60 / CU61 / CU62 / CU65 / CU66 / CU67	Variant tables: structure / content / display; variant functions (ABAP)	Lookup tables / functions	PARTIAL-8	8	Variant tables (decision tables) map to constraint tables — covered; *variant functions* (ABAP-coded) → SUPERSEDED by expression functions; table maintenance UI not named — partial
CU50	Configuration simulation (for material with profile)	Test configuration	COVERED-8	8	Configurator simulation/test (fixture set proof)
CU51 / CU52 / CU55 / CU56	Order BOM maintain (sales order BOM — result-oriented/knowledge-based) / display / instantiation	Order BOM (ETO adjustments)	PARTIAL-21	21	Order-specific BOM edits after configuration (ETO) not named — partial; propose wave 21/27 "order BOM"
CU70 / CU71 / CU72	Configurable material: variant matching / material variant matching	Material variants	COVERED-8	8	Variants: pre-defined variants (dimension combinations) and configured variants — matching an entered configuration to an existing variant (type matching) — confirm; treat covered
MM01 material variants (configured values in MRP 3 / Basic data)	Material variant (stockable configured product)	—	COVERED-8	8	Released variant per configuration
CS40 / CS41 / CS42	Super BOM allocation to configurable material / dependencies on BOM items (CS02 → dependencies)	Super BOM	COVERED-8	8	Configurator BOM selection rules
CA01 super routing with dependencies on operations	Super routing	—	COVERED-9	9	Operation selection rules — confirm; treat covered
CU80 / CUMODEL / PMEVC	Product modeling environment for VC (model tree, dependencies, variant tables)	Modeling IDE	COVERED-8	8	Configurator model editor
VA01 → configuration (CUCFG screen, characteristic value assignment, consistency check)	Configure in sales order / quote	—	COVERED-27	27	Configured products on quotes/orders; portal configurator (wave 30) — confirm customer-portal configurator; treat PARTIAL via row below
Customer-facing configurator (web, Fiori / SAP CPQ)	Guided selling	—	PARTIAL-30	30	Customer portal order entry named; guided configurator UI for portal/e-commerce not explicitly named — partial
VK11 VA00 / VA01 (variant conditions, $SET_PRICING_FACTOR)	Variant pricing (surcharges by characteristic values)	—	COVERED-26	26	Pricing engine with attribute-based conditions — confirm condition on configuration attribute; treat covered
CU44 / CU45 (configuration overview, config display in documents)	Display configuration (orders, deliveries, production orders)	—	COVERED-27	27	Configuration on documents
CU7 / CUCPT (configuration copy/ templates)	Configuration templates	—	PARTIAL-8	8	Saved configurations/templates for reuse — partial
AVC: Fiori Simulate Configuration Models / Manage Configuration Models / Manage Characteristics / Manage Classes / Configuration Model Overview / Object Dependencies (AVC syntax: constraints only, no procedures), AVC engine (variant configuration engine with HANA), "Classic vs Advanced"	S/4 AVC	—	COVERED-8	8	Constraint-only engine matches AVC direction
PSM / iPPE (Product Structure Management: product variant structures, CMP nodes, PVS)	Product structure for complex configurable products (automotive)	—	PARTIAL-9	9	Multi-level configurable structures covered by super BOM; iPPE-style product variant structures with alternatives/variants at node level — partial; propose wave 9 v1.x
Configuration in production (planned/production order configuration, CO02 → configuration), configured BOM explosion at order	—	—	COVERED-21	21	Configured order explosion (phase 4 exit: configured product manufactured)
Configuration in purchasing (configurable PO items for configurable vendor products), configuration in service (IBase configuration)	—	—	PARTIAL-17	17	Configured PO items not named — partial
VC with batch/serial effectivity, parameter effectivity (ECM)	Effectivity	—	PARTIAL-9	9	Noted in PP (serial/parameter effectivity partial)
Fiori: Configuration Reporting / Where-used of characteristics in configurations	—	—	COVERED-8	8	—

13.32.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
CU05 (where-used dependencies) / CT06 (char where-used) / CL6C	Where-used lists	COVERED-8	8	—
CU50 (simulation trace / explanation)	Configuration explanation (why value set/excluded)	COVERED-8	8	Explain configuration (constraint explanation) — confirm explanation output; treat covered
CU44 / CUTRACE (configuration trace)	Trace dependencies	COVERED-8	8	—
Configured documents lists (VA05 with config, COOIS with config)	—	COVERED-27	27	—
AVC: Configuration Model Overview / usage analytics (most used values)	—	COVERED-46	46	—

13.32.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
CU mass release of dependencies / knowledge base (CU31 / CU32 / CU33 / CU34 / CU36 runtime versions for SCE/IPC)	Knowledge-base objects & runtime versions (for external configurators, IPC)	SUPERSEDED-8	8	Single configurator service with versioned models
Model versioning / release (AVC model release)	Model release	COVERED-8	8	Versioned configurator models with ECO (wave 9)
Re-explosion of configured orders after model change (OCM)	—	PARTIAL-21	21	OCM partial (noted)
Material variant generation (mass create variants)	—	COVERED-8	8	Variant explosion (1,000 variants < 5 s)

13.32.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
Class types (300 variant, 200 material, 001…), class status, characteristics groups, organizational areas	TCLA, TCLAT, TCLO	—	COVERED-8	8	—
Configuration profile settings: BOM explosion (none/single/multi-level), configuration process (planned/production order, sales order, order BOM), result-oriented vs knowledge-based order BOM, interface design (UI groups)	CUCO	—	COVERED-8	8	Explosion mode per model; UI groups → configurator form layout
Dependency editor settings, variant table DB-tables, variant functions (function modules)	—	—	SUPERSEDED-8	8	Expression language
Pricing: variant condition types (VA00), $SET_PRICING_FACTOR, pricing procedure steps	T685	—	COVERED-26	26	—
Material variant settings (MRP 3: configured material, variant/configuration type matching activation)	—	—	COVERED-8	8	—
AVC activation (per configuration profile: Advanced), AVC engine settings, Fiori apps	—	—	SUPERSEDED-8	8	—
Configurable BOM/routing settings (item/operation dependencies allowed), ECM for VC objects	—	—	COVERED-9	9	—
Order BOM settings (CU51 processing)	—	—	PARTIAL-21	21	—
Integration with CPQ / IPC / SCE knowledge-base runtime	—	—	SUPERSEDED-8	8	Configurator API for portals

---

13.33 Batch Management & Serial Numbers

SAP context: batch master (MSC1N/MSC2N/MSC3N/MSC4N; batch level plant/material/client OMCT; batch status management OMCS?; batch classification class type 022/023 with characteristics e.g. expiry, potency, grade), batch determination (search strategies by application: MM MBC1, SD VCH1, PP COB1, WM LS?; condition technique with selection classes and sort rules CU70?), batch where-used (MB56, BMBC batch information cockpit), batch derivation (DVMO monitor, DVSP? setup, sender/receiver), shelf life (SLED, min remaining shelf life, OMJ5 checks), batch-specific units of measure (proportion/product units), electronic batch record, batch input/output in all movements, Batch Management in EWM/QM (quality inspection per batch, batch status), serial numbers (serial number profiles OIS2, serial number master IQ01-IQ09 = equipment, serial procedures MMSL/SDRE/SDLS/PPAU/PPRL/QMSL/PPSF/MMSL, serial in deliveries/orders/inventory, Fiori Manage Serial Numbers?), S/4 "Batch Management: Manage Batches, Batch Genealogy? Fiori Batch Information Cockpit". Passage: wave 8 (batch/serial tracking dimensions, profiles), wave 16 (batch/serial on movements, FEFO), wave 18 (serial capture at receipt, duplicate block), wave 24 (batch attributes, shelf life, disposition, potency, catch weight), wave 28 (batch/serial on shipments), wave 33 (QM per batch), wave 45 (serial → installed base).

13.33.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
MSC1N / MSC2N / MSC3N / MSC4N	Batch create/change/display/changes (basic data: production/expiry dates, status, vendor batch, classification values)	Batch master	COVERED-24	24	Batch entity with attributes, shelf life, status; wave 8 tracking dimension
MSC5N / MSC (mass change batches)	Mass batch change	—	COVERED-5	5	—
MCH1 / MCHA / MCHB (tables)	Batch tables (client/plant/stock level)	Data	COVERED-16	16	Batch on-hand per warehouse/location
MBC1 / MBC2 / MBC3	Batch search strategy (MM) create/change/display	Batch determination rules (MM)	COVERED-16	16	Picking policies FEFO/FIFO + attribute-based selection — confirm attribute-based batch selection (e.g. grade ≥ X, customer-specific restrictions); treat covered
VCH1 / VCH2 / VCH3	Batch search strategy (SD)	—	COVERED-28	28	Customer-specific batch rules (e.g. min remaining shelf life per customer) — confirm; treat covered
COB1 / COB2 / COB3	Batch search strategy (PP/PI)	—	COVERED-21	21	Batch determination in production issues

T-code	Name	Purpose	Passage status	Wave	Notes
LS (WM batch strategy) / /SCWM/ batch determination	—	—	COVERED-31	31	—
MB56	Batch where-used list (top-down / bottom-up)	Genealogy	COVERED-24	24	Batch traceability; batch where-used (recall) — confirm "batch genealogy" explicitly for recall reporting; treat covered
BMBC	Batch information cockpit (search by attributes, stock, where-used, documents, QM results)	Batch cockpit	COVERED-24	24	Batch workspace
DVMO / DVSP / DVMAN	Batch derivation: monitor / set up derivation (sender/receiver, rules) / manual derivation	Derivation	PARTIAL-24	24	Batch derivation (inherit attribute values from component batches) partial (noted in PP-PI)
BMSM / batch status change (restricted/unrestricted) via MSC2N / QA11 UD	Batch status management	—	COVERED-24	24	Batch disposition (QM UD, manual)
Batch split in deliveries / orders; batch entry in confirmations	—	—	COVERED-28	28	—
Shelf life: SLED/BBD, remaining shelf life checks (OMJ5), batch expiry re-inspection (QA07), expired batch stock reports (MB5M)	Shelf life	—	COVERED-24	24	Best-before/expiry, FEFO
Batch-specific UoM (CUNI with batch-specific conversion, potency conversion, active-ingredient management)	Proportion/product units	—	COVERED-24	24	Potency-based consumption & catch weight dual UoM
Batch classification (CL20N class 023, characteristics CT04: e.g. expiry date, potency, country of origin, vendor batch)	Batch attributes	—	COVERED-24	24	Batch attributes
Batch valuation (split valuation per batch, OMWC valuation type = batch)	Batch-level valuation	—	PARTIAL-20	20	Split valuation gap
Batch numbering (internal/external, OMAD number ranges, batch number templates, customer-specific numbering via exit)	Batch numbering	—	COVERED-5	5	Number sequences (per item/site templates) — confirm template-based batch numbers (e.g. YYMMDD-xxx); treat covered
Documentary batches (S/4 "documentary batch" for non-batch-managed materials)	Documentary batches	—	PARTIAL-24	24	Recording batch numbers for info only (no stock segregation) not named — partial
Batch in EWM (batch-managed stock in bins), QIE	—	—	COVERED-31	31	—
OIS2 — Serial number profiles (customizing; see below)	—	—	COVERED-8	8	—
IQ01 / IQ02 / IQ03 / IQ04 / IQ08 / IQ09	Serial number master (material serial = equipment category) create/change/display/list/display list	Serial master	COVERED-8	8	Serial entity (tracking dimension) with status and history; equipment link (wave 44/45)
Serial numbers in: GR/GI (MIGO), deliveries (VL02N), sales orders, production orders (CO02 header/components), inspection lots, PM orders, physical inventory	Serial tracking	—	COVERED-16	16	Serial on all movements; duplicate block (wave 18 proof)
Serial number history (IQ03 → history: stock, location, customer)	Serial genealogy	—	COVERED-45	45	Installed base serial tracking from shipments; serial history — confirm full movement history per serial; treat covered
Fiori: Manage Batches / Batch Information Cockpit / Display Batch Genealogy / Manage Serial Numbers	—	—	COVERED-24	24	—
Serial numbers at component level in finished-goods serial (as-built genealogy)	As-built records	—	PARTIAL-21	21	Serial-to-serial component genealogy (as-built) not explicitly named — partial; propose wave 21 RAF capture

13.33.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
MB56 / BMBC	Batch where-used / cockpit	COVERED-24	24	—
MB5M	Expiration date list	COVERED-24	24	—
MMBE / MB52 (batch level)	Stock by batch	COVERED-16	16	—
MB5C	Batch pick-up list	COVERED-24	24	—
CL30N / CL6BN (find objects/batches by characteristic values)	Batch search by attributes	COVERED-24	24	—
IQ08 / IQ09	Serial number lists	COVERED-8	8	—
QA33 (per batch) / QGA3	Batch quality results	COVERED-33	33	—
DVMO (derivation monitor)	—	PARTIAL-24	24	—
Fiori: Batch Genealogy / Expiring Batches / Serial Number History	—	COVERED-24	24	—

13.33.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
QA07 (recurring inspection / expiry monitoring, batch status change)	Expiry handling	COVERED-33	33	—
MB5M-based expiry alerts	—	COVERED-24	24	—
Batch archiving (SARA MM_SPSTOCK / batch deletion flag MSC2N, MM71)	—	COVERED-48	48	—
Batch derivation runs (DVMO)	—	PARTIAL-24	24	—
Serial number archiving / equipment	—	COVERED-48	48	—
Batch level conversion (plant → material level, RVBLEVEL)	—	SUPERSEDED-8	8	Batch uniqueness scope is a product attribute

13.33.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
OMCT — Batch level (plant / material / client)	TCUCH	Uniqueness scope	COVERED-8	8	Batch uniqueness scope per product
OMCS — Batch status management activation (restricted/unrestricted), initial status per material type/plant (OMAB)	TCUCH, T134, T001W	—	COVERED-24	24	Batch status
OMAD / OMAE — Internal batch number assignment, number ranges, automatic creation at GR/GI	TCUCH, NRIV	—	COVERED-5	5	—
OMCV / OMCZ — Batch classification activation per movement type/transaction, class type 023 settings, characteristics for batch class (standard characteristics LOBM_*)	T156, TCLA	—	COVERED-24	24	—
OMJ5 — Shelf life expiration check per plant/movement type, SLED calculation (production date + shelf life)	T159L	—	COVERED-24	24	—
Batch determination: condition tables, access sequences, strategy types (per application MM/SD/PP/WM), search procedures, assignment to movement types/order types/sales doc types, selection classes, sort rules (CU70) , quantity proposal, batch split settings	T6 , TLSP	—	COVERED-16	16	Picking policies & batch selection rules
Batch derivation: activation, sender/receiver fields, derivation events, rules	DVMO*	—	PARTIAL-24	24	—
Batch-specific units of measure: activation, proportion/product units, characteristics (LOBM_*)	T006, TCUBSUOM	—	COVERED-24	24	—
Batch valuation (valuation type = batch) activation	T001K, T149	—	PARTIAL-20	20	—
Documentary batch activation (S/4)	—	—	PARTIAL-24	24	—
OIS2 — Serial number profiles (serialization level, serializing procedures per business transaction: MMSL goods movement, SDRE returns, SDLS deliveries, PPAU production order header, PPRL production release, PPSF serial in production, QMSL inspection, HUSL HU; equipment requirement, stock check)	T377, T377P, T377X	Optional/mandatory serial per transaction; stock validation	COVERED-8	8	Serial tracking profiles (track at receipt/issue/shipment/production)
OIS / OIEQ — Serial numbers: equipment category for serial numbers, number assignment (serial = equipment), equipment creation automatic	T377, T370T	—	COVERED-8	8	—
Serial number status management, serial number history activation	—	—	COVERED-8	8	—
EWM/WM batch & serial settings	—	—	COVERED-31	31	—

13.34 CA-CL — Classification System

SAP context: characteristics (CT04: formats CHAR/NUM/DATE/TIME/CURR, values, intervals, multi-value, required, additional values, reference to table fields, documents, long texts), classes (CL01/CL02/CL03: class types 001 material, 002 equipment, 003 functional location, 017 document, 022 batch (plant), 023 batch (material), 032 release strategy, 300 variant, 010 vendor, 011 customer, 012 BP…), class hierarchies (CL24N? CL6?), object assignment (CL20N single object/multiple classes, CL24N class/multiple objects, CL22N?), find objects (CL30N/CL6BN), where-used (CL6AN?), mass change (CLMM), class type customizing (O1CL), characteristic groups, organizational areas, status, keywords, classification data transfer (BAPI_OBJCL_*), standard characteristics (LOBM_, etc.). Passage: wave 8 ("Attributes & classification (SAP CL-style classes) and category hierarchies") used by products, batches, equipment, documents; metadata kernel typed fields (wave 3).

13.34.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
CT04 / CT06 / CT10 / CT12	Characteristics maintain / where-used / list / dependencies	Attribute definitions (typed, value sets, intervals, multi-value, units, templates)	COVERED-8	8	Attribute definitions with typed value domains and UoM
CL01 / CL02 / CL03 / CL04	Class create/change/display/delete (class type, characteristics, keywords, standards, documents, status, organizational areas, hierarchy)	Classes	COVERED-8	8	Attribute groups/classes per entity type
CL24N / CL20N / CL22N / CL25	Assign objects to class / assign class(es) to object / display assignments / class hierarchy maintenance	Object classification	COVERED-8	8	Attribute assignment to products/batches/equipment/documents/parties — confirm classification applies to parties (010/011) and documents (017); treat covered
CL6AN / CL6BN / CL30N / CL31	Where-used (class), find objects in classes (search by characteristic values), class list	Search	COVERED-8	8	Attribute search (global search + filters)
CLMM	Mass change classification data	—	COVERED-5	5	—
CL2B / CLHP	Class hierarchy / hierarchy display	—	COVERED-8	8	Category hierarchies
CLGT / CLWA / CL6 (class statistics, characteristics overview)	—	—	COVERED-8	8	—
CTBW (characteristic ↔ BW extraction)	—	—	SUPERSEDED-46	46	Attributes stream to lakehouse
CL02 class type 032 (release strategy)	Classification used for release strategies	—	SUPERSEDED-17	17	Policy-driven approvals
CL02 class type 300 (variant) — see §13.32	—	—	COVERED-8	8	—
CL02 class types 022/023 (batch) — see §13.33	—	—	COVERED-24	24	—
CL02 class type 017 (document) — see §13.35	—	—	COVERED-8	8	—
CL02 class types 002/003 (equipment / functional location)	Technical object classification	—	COVERED-44	44	—

T-code	Name	Purpose	Passage status	Wave	Notes
Engineering/technical attributes with UoM & tolerances (e.g. for parametric search of parts)	Parametric search	—	COVERED-8	8	Attribute search
Fiori: Manage Characteristics / Manage Classes / Classify Products	—	—	COVERED-8	8	—

13.34.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
CL30N / CL6BN	Find objects in class (by values)	COVERED-8	8	—
CL6AN / CT06	Where-used	COVERED-8	8	—
CL6C / CLGT	Class/characteristic lists, statistics	COVERED-8	8	—
Fiori: Classification analytics (products by attribute)	—	COVERED-46	46	—

13.34.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
CLMM (mass update)	—	COVERED-5	5	—
Classification reorganization / redundancy cleanup (RCCLUKA / CL)	—	SUPERSEDED-8	8	Metadata registry
Classification data transfer (BAPI_OBJCL_CREATE, LSMW object CLASSIFICATION)	Migration	COVERED-10	10	Migration DSL for attributes

13.34.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
O1CL — Class types per object (table, screen, key fields, multiple classification, standard class, hierarchy allowed, variant class)	TCLA, TCLAO, TCLAT	—	SUPERSEDED-3	3	Attribute groups attachable per entity in metadata
Characteristics groups (CT04), characteristic status, organizational areas, keywords	TCMG, TCLST	—	COVERED-8	8	—
Class status (released/locked), class groups	TCLST	—	COVERED-8	8	—
Characteristic templates / formats, default values, currency/UoM settings	—	—	COVERED-8	8	—
Object key settings per class type (e.g. material+plant for 022)	TCLAO	—	COVERED-8	8	—
Classification in BW/extraction settings (CTBW)	—	—	SUPERSEDED-46	46	—
Attribute inheritance in class hierarchies	—	—	COVERED-8	8	Category hierarchies with inherited attributes — confirm inheritance; treat covered

13.35 DMS — Document Management System (CA-DMS), Easy DMS, ECTR, CAD integration

SAP context: document info records (CV01N/CV02N/CV03N/CV04N; document type, part, version, status network, originals stored in KPro/content server, object links to material/BOM/equipment/orders/customers/WBS, classification 017, document hierarchies/structures CV11/CV12/CV13?, document BOM), document distribution (CVI?), status management with release workflow, change management via ECM, Easy DMS (Windows Explorer integration), SAP Engineering Control Center (ECTR) for CAD (AutoCAD/SolidWorks/NX) with BOM sync, conversion (PDF/viewer), ArchiveLink (OAAD) for scanned docs, Fiori: Manage Documents, SAP Document Management service (BTP), Product Lifecycle Management (PLM: engineering record, PLM web UI, Enterprise Product Development EPD). Passage: wave 5 (attachments on any entity), wave 8 (product images/documents), wave 9 (ECO workflow, "PLM integration" named), wave 48 (retention) — a true DMS (versioned, status-controlled, CAD-linked documents) is only PARTIAL.

13.35.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
CV01N / CV02N / CV03N	Document info record create/change/display (document type, number, part, version; status; originals; object links; classification; texts)	Document master	PARTIAL-8	8	Attachments (wave 5) and product documents (wave 8) exist; a *document info record* with type, versioning, part/version numbering, status network and release is not named — partial; propose wave 9 "engineering documents" (drawings/specs under ECO control)
CV04N	Find document (by attributes, classification, object links, full text)	Search	PARTIAL-8	8	Global search covers attachments metadata; attribute/classification search on documents partial
CV11 / CV12 / CV13 / CV15	Document structure (document BOM) create/change/display / where-used	Document hierarchies	GAP	propose 9	Document structures (assemblies of documents, e.g. drawing sets) not named — propose wave 9
CV01N → originals (check-in/check-out, KPro storage categories, viewer, conversion)	Original files (CAD, PDF, Office) with check-out locking	Files	PARTIAL-5	5	Attachments stored; check-out/check-in locking, multiple originals per version, viewer/conversion (2D/3D) not named — partial
CV01N → object links (MARA, STKO, EQUI, IFLOT, AUFK, KNA1, LFA1, PRPS, VBAK, EKPO…)	Link documents to business objects	—	COVERED-5	5	Attachments on any entity; cross-entity links — confirm one document linked to many entities; treat covered
CV01N → status network (in work → released → obsolete), status with release/approval workflow, digital signature	Document status & release	—	PARTIAL-9	9	ECO workflow covers BOM/route release; document release state machine with signature — partial
CV01N → version / part / change number (ECM)	Document versioning under ECM	—	PARTIAL-9	9	ECO-controlled document versions partial
CV01N → classification (class type 017)	Document attributes	—	COVERED-8	8	Attribute classes on documents
CV01N → document distribution (recipients, distribution orders CVI1 / CVI2 / CVI8)	Distribution of documents (e.g. to suppliers)	—	PARTIAL-20	20	Supplier portal document exchange named; controlled distribution with acknowledgement partial

T-code	Name	Purpose	Passage status	Wave	Notes
Easy DMS / SAP DMS Connector for Windows	Explorer-integrated document management	—	SUPERSEDED-5	5	Web shell drag-drop + Excel/CSV import; desktop sync not planned
ECTR (Engineering Control Center): CAD integration (SolidWorks, Inventor, NX, CATIA, AutoCAD, ECAD), BOM derivation from CAD, 3D viewer, DMS for CAD	CAD–ERP integration	—	GAP	propose 9	CAD integration (CAD file management, CAD BOM → engineering BOM sync) not named; wave 9 says "PLM integration" only as reference — propose wave 9 (v1.x) PLM/CAD connector (e.g. via a PLM system) rather than native CAD management
OAAD / OAWD / OAOR / OAC0 (ArchiveLink scanned documents, business document navigator)	Scanned document linking (incoming invoices, delivery notes)	—	COVERED-5	5	Attachments; OCR capture (wave 18)
Document BOM items (CS01 item category D)	Documents as BOM components (e.g., drawings, instructions)	—	PARTIAL-9	9	BOM line type "document" not named — partial
PLM: Engineering Record (change management cockpit), Product Structure Management, Visual Enterprise (3D visualization), Recipe Development (PLM-RDP), Specification management (EHS specs), Labeling (GLM)	PLM suite	—	PARTIAL-9	9	ECR/ECO covered; recipe development with formula trials/specs (process industries), specification management, global label management — partial; propose wave 24 (recipe dev) & wave 48 (labeling compliance)
SAP Document Management service (BTP) / Document Information Extraction	Cloud DMS	—	COVERED-5	5	Object storage; OCR (wave 18)
Fiori: Manage Documents / Manage Document Info Records	—	—	PARTIAL-8	8	—

13.35.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
CV04N	Document search	PARTIAL-8	8	—
CV13 / CV15	Document structure display / where-used	GAP	propose 9	—
CVI8 (distribution log)	Distribution status	PARTIAL-20	20	—
Document lists per object (object links)	—	COVERED-5	5	Attachment lists
ECTR reports (CAD BOM comparison)	—	GAP	propose 9	—

13.35.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
CV conversion runs (originals → PDF/neutral formats)	Conversion server runs	PARTIAL-5	5	Preview generation for attachments — partial
Document archiving / retention (SARA CV_DVS / KPro cleanup)	—	COVERED-48	48	—
Document distribution runs (CVI)	—	PARTIAL-20	20	—
ECTR sync jobs	—	GAP	propose 9	—

13.35.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
DC10 — Document types (number assignment, version/part numbering, status network, object links, screen layout, classification class, originals count, versioning)	TDWA, TDWS, TDWO, TDWP	—	PARTIAL-8	8	Attachment types exist; full document type model partial
DC20 — Status (document status definitions, release flag, content version)	TDWS	—	PARTIAL-9	9	—
DC30 — Workstation applications (file types, viewer/editor, conversion)	TDWP	—	PARTIAL-5	5	Preview/viewer mapping partial
OACT / OAC0 / KPro storage categories, content repositories, cache servers	SDOKSTCA, TOAAR	—	COVERED-5	5	Object storage buckets
Object link customizing (DC screen numbers, object types allowed per document type)	TDWO	—	COVERED-5	5	—
Document distribution customizing (recipient lists, distribution types)	—	—	PARTIAL-20	20	—
ECTR configuration (CAD applications, templates, BOM sync rules)	—	—	GAP	propose 9	—
Digital signature for documents (signature strategies)	—	—	GAP	propose 24	E-signature framework gap (noted in PP-PI)
Full-text search activation (TREX/HANA) for originals	—	—	PARTIAL-5	5	Attachment content indexing not named — partial

---

13.36 Analytics — BW/4HANA, CDS views & embedded analytics, SAP Analytics Cloud, LIS, Report Painter, SAP Query

SAP context: BW (RSA1 workbench, DataSources RSA5/RSA6/RSA3, process chains RSPC, InfoProviders, transformations/DTPs, queries BEx RSRT/BEx Query Designer/Analyzer, Analysis for Office, BW/4HANA, Open ODS, HANA calculation views, BW Bridge), embedded analytics (CDS views with @Analytics annotations, analytical queries, Fiori analytical list pages/overview pages, KPI modeler & Smart Business, Query Browser, View Browser, Custom Analytical Queries, Multidimensional reports), SAP Analytics Cloud (stories, planning, predictive, Digital Boardroom, live connection to S/4), Datasphere, SAP Query (SQ01/SQ02/SQ03, SQVI QuickViewer, InfoSets), Report Painter/Writer (GRR1/GR51/GR55), LIS (SIS/PURCHIS/INVCO/PP-IS/QMIS/PMIS; MC* transactions), Drill-down reporting (FGI0, KE30, FM/PS), Fiori Overview pages. Passage: wave 46 (CDC → Iceberg lakehouse, Trino/ClickHouse, dbt, Cube semantic layer with governed metrics and RLS, embedded dashboards, self-service explorer, scheduled reports, export to Excel/Power BI/Tableau, operational document designer, OpenMetadata catalog/lineage), wave 15 (financial report designer), wave 5 (saved views, export).

13.36.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
RSA1	BW Data Warehousing Workbench (InfoObjects, DataSources, InfoProviders, transformations, DTPs, process chains)	Warehouse modeling	SUPERSEDED-46	46	CDC → Iceberg lakehouse; dbt models replace transformations/InfoProviders
RSA5 / RSA6 / RSA3 / RSA7 / LBWE / LBWQ / LBWG / SBIW	Install/maintain DataSources, extractor checker, delta queue, LO cockpit (logistics extraction), setup tables	Extraction	SUPERSEDED-46	46	Debezium CDC from every domain; no extractors/setup tables
RSPC / RSPCM / RSPC1	Process chains (maintenance / monitor)	ETL orchestration	SUPERSEDED-46	46	dbt + job framework (wave 4) with lineage
RSRT / RSRT2 / RRMX / BEx Query Designer / BEx Analyzer / Analysis for Office (AO) / BEx Web	Query monitor / BEx reporting / Excel-based analysis	Query & reporting	SUPERSEDED-46	46	Semantic layer (Cube) + self-service explorer; Excel export & Power BI/Tableau connectivity
RSD1 / RSD5 / RSDS / RSDCUBE / RSDODS / RSDMPRO	InfoObjects, DataSources, InfoCubes, DSOs, MultiProviders, CompositeProviders (BW/4: aDSO, CompositeProvider, Open ODS)	Modeling objects	SUPERSEDED-46	46	dbt models + semantic cubes
RSECADMIN	BW analysis authorizations	RLS in BW	SUPERSEDED-46	46	RLS mirrored from OPA
RSMO / RSRV / RSDDV / RSKC / RSBATCH	Monitor, analysis & repair, aggregates/BWA/HANA, special chars, batch manager	BW admin	SUPERSEDED-46	46	Lakehouse ops, OpenMetadata
HANA calculation views (HANA Studio / Web IDE), HANA Live, Smart Data Integration	HANA native modeling	—	SUPERSEDED-46	46	Trino/ClickHouse views; dbt
CDS views (ADT: @Analytics.query, @Analytics.dataCategory CUBE/DIMENSION, @ObjectModel), Custom CDS Views (Fiori), View Browser, Query Browser	Embedded analytics virtual data model	—	COVERED-46	46	Semantic layer models over lakehouse (and OLTP for operational views); custom views via self-service explorer with governed metrics
Custom Analytical Queries (Fiori), Manage KPIs and Reports (KPI modeler, Smart Business tiles), Analytical List Page, Overview Pages	Embedded analytics apps	—	COVERED-46	46	Embedded dashboards in every workspace; KPI tiles (OTIF, OEE, DSO…)
Multidimensional reports (Design Studio/Lumira/WebDynpro grid), Fiori "Multidimensional" apps	Pivot analysis	—	COVERED-46	46	Self-service explorer pivot
SAP Analytics Cloud (stories, data models, live/import connections, planning models, predictive scenarios (Smart Predict), Digital Boardroom, Analytics Designer, SAC for Group Reporting)	Cloud BI & planning	—	COVERED-46	46	Embedded dashboards + explorer; planning in wave 38; predictive via wave 22 forecasting & wave 47 agents
SAP Datasphere (spaces, data builder, semantic layer, data marketplace), BW Bridge	Cloud data warehouse	—	COVERED-46	46	Lakehouse + semantic layer + catalog
SQ01 / SQ02 / SQ03 / SQVI	SAP Query (queries, InfoSets, user groups), QuickViewer	Ad hoc query	SUPERSEDED-46	46	Self-service explorer with RLS
GRR1 / GRR2 / GRR3 / GR51 / GR52 / GR53 / GR55 / GR32 / GR37 / GRCT / GRS	Report Painter / Report Writer: reports, libraries, sets, variables, report groups	Financial/CO reporting	SUPERSEDED-15	15	Row/column report designer (Management-Reporter model)
GS01 / GS02 / GS03 / GS11	Sets (basic, single, multi) for Report Writer / allocation	Sets	SUPERSEDED-6	6	Hierarchies & dimension groups
FGI0 / FGI1 / KE30 / CJE0 / FMEN / S_ALR drill-down reports	Drill-down reporting tools	—	SUPERSEDED-46	46	Explorer drill-down
MC* (LIS: MCSI, MC21 info structures, MC18 field catalogs, MC24 update rules, MC3 planning, OMO1 update control, standard analyses MC.x, MCE*, MCT*, MCP*, MCI*, MCX*, MCL*)	Logistics Information System	—	SUPERSEDED-46	46	Lakehouse + semantic metrics; see per-module rows
S_ALR_* report trees (SAP Easy Access: Information Systems) / SARP / SERP (report trees) / SE43 area menus	Report navigation	—	SUPERSEDED-5	5	Workspace navigation + saved reports
Report variants (SE38 variants, SU3 defaults), ALV layouts (/N ALV grid, layout management), ALV export to Excel	Report personalization	—	COVERED-5	5	Saved views, grid personalization, Excel/CSV export
Scheduled report distribution (SM36 + SP01 + SOST; BW broadcasting RSRD_ADMIN; SAC schedule publications)	Report broadcasting	—	COVERED-46	46	Scheduled reports (PDF/XLSX/email)
SAP BusinessObjects BI (Web Intelligence, Crystal Reports, Lumira, Dashboards)	Enterprise BI	—	SUPERSEDED-46	46	Embedded BI + export to Power BI/Tableau
Crystal Reports / Adobe forms for operational documents (invoice, PO layouts)	Operational documents	—	COVERED-46	46	Operational report/document designer (replaces SSRS/Adobe layouts)
Data catalog / metadata (SAP Information Steward, Datasphere catalog, BW metadata repository RSOR)	Catalog & lineage	—	COVERED-46	46	OpenMetadata catalog & lineage
Data quality dashboards (Information Steward)	DQ monitoring	—	PARTIAL-46	46	Metric reconciliation checks exist; generic data-quality rule dashboards (completeness, validity per entity) partial — propose wave 46 DQ rules on catalog
SAP Predictive Analytics / Predictive Analytics Integrator (PAI) / ISLM (Intelligent Scenario Lifecycle Management) / HANA PAL/APL	Embedded ML scenarios	—	SUPERSEDED-47	47	Agent runtime + Python forecasting/ML services; eval harness (wave 47)

13.36.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
BEx queries / AO workbooks / SAC stories (all standard BW business content: FI, CO, SD, MM, PP, QM, PM, HR InfoCubes/queries)	Standard BI content	SUPERSEDED-46	46	Governed metric library (revenue, margin, DSO, DPO, OTIF, OEE, inventory turns, etc.) + standard dashboards per workspace
Fiori Overview Pages (Procurement, Sales, Finance, Inventory, Production, Quality, Maintenance, HR)	Role-based KPI pages	COVERED-46	46	Embedded dashboards in every workspace

T-code	Name	Passage status	Wave	Notes
Fiori analytical apps (hundreds: e.g. Sales Volume, Overdue Receivables, Inventory Turnover, Supplier Evaluation, Production Order Cycle Time)	—	COVERED-46	46	Covered per-module rows
Query Browser / View Browser	Discover CDS views/queries	COVERED-46	46	Catalog
S_ALR_* standard reports (all modules)	Classic reports	COVERED-15	15	Report designer + explorer; see per-module tables
SQVI / SQ01 outputs	Ad hoc lists	SUPERSEDED-46	46	—
LIS standard analyses (MC.x etc.)	—	SUPERSEDED-46	46	—
Usage/monitoring: RSRT statistics, BW statistics, SAC usage	BI usage analytics	COVERED-46	46	—

13.36.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
RSPC process chains (daily loads, delta, rollup, compression, aggregates)	ETL schedule	SUPERSEDED-46	46	Streaming CDC (p95 lag < 60 s) + dbt scheduled models
LBWE / LBWQ / setup table fills (OLI*BW: OLI7BW, OLI3BW…)	LO extraction setup	SUPERSEDED-46	46	—
OMO1 / LIS update runs, OLIX (LIS rebuild)	LIS statistics	SUPERSEDED-46	46	—
RSRD_ADMIN / broadcasting / SAC publication schedules	Report distribution	COVERED-46	46	Scheduled reports
Data archiving of BW (near-line storage NLS)	—	SUPERSEDED-46	46	Iceberg retention/partitioning
Metric reconciliation (revenue in semantic layer = GL daily)	—	COVERED-46	46	Automated check (proof)
ISLM model retraining schedules	—	SUPERSEDED-47	47	Agent/ML eval & retraining pipelines

13.36.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
BW source system connection (RSA1: source systems, ODP, SLT/RFC), BW settings (RSCUSTV*, RSADMIN)	RSADMIN, RSBASIDOC	—	SUPERSEDED-46	46	Debezium connectors per domain DB
LIS customizing (MC21 info structures, MC24 update rules, OMO1 update control per application, period units)	TMC*	—	SUPERSEDED-46	46	—
Report Painter libraries, standard layouts, report groups; Report Writer sets	T803*, T801*	—	SUPERSEDED-15	15	—
SAP Query: InfoSets (SQ02), user groups (SQ03), query areas (global/standard)	AQ*	—	SUPERSEDED-46	46	—
Embedded analytics: analytical authorizations (CDS DCL), KPI/Smart Business configuration (KPI catalog, evaluations, tiles), analytical app configuration	—	—	COVERED-46	46	RLS from OPA; KPI tiles
SAC: connections, models, teams/roles, data access control	—	—	COVERED-46	46	—
Datasphere spaces, connections, semantic layer	—	—	COVERED-46	46	—
Data catalog/lineage configuration	—	—	COVERED-46	46	OpenMetadata
Report scheduling & distribution (broadcast settings, email templates)	—	—	COVERED-46	46	—
ALV layout administration (global vs user layouts, default layouts)	LTDX	—	COVERED-5	5	Saved views (shared/personal)
Export governance (Excel export restrictions, download audit)	—	—	PARTIAL-48	48	Export of PII/financial data audit & restriction policies not named — partial; propose wave 48

13.37 AI — SAP Joule, SAP Build Process Automation, Business AI (SUPERSEDED by wave 47)

SAP context: Joule (generative AI copilot in S/4HANA Cloud, SuccessFactors, Ariba: navigational, transactional, informational, Joule agents, Joule Studio), SAP Build Process Automation (BPA: workflow + RPA bots, decisions/business rules, process visibility), SAP CoPilot (legacy), SAP Business AI scenarios (cash application ML, AP invoice matching proposals, MRP exception triage, predictive delivery, intelligent product proposals, GR/IR account reconciliation ML, situation handling (Situation Framework: situation types, situation pages), Intelligent Scenario Lifecycle Management (ISLM), Document Information Extraction, Business Document Processing, SAP AI Core/AI Launchpad, generative AI hub), SAP Signavio process AI. Passage: wave 47 (MCP server over every API/entity/report with OPA, copilot UI, Temporal-backed agent runtime with approval gates — AP coding, cash application, MRP exception triage, collections outreach, journal anomaly detection — eval harness in CI, prompt/version registry, cost budgets, responsible-AI controls, model-agnostic provider layer).

13.37.1 Master data & documents

T-code	Name	Purpose	Passage status	Wave	Notes
Joule (navigational/transactional/informational capabilities; natural-language navigation, create documents, Q&A over data/documentation)	Copilot in S/4 Fiori	Copilot	SUPERSEDED-47	47	Copilot UI in the shell: ask-the-data (semantic layer), explain-this-record, draft documents, summarize workflows; MCP server exposes every API/entity/report
Joule Agents (e.g. dispute resolution agent, cash collection agent, maintenance planner agent, sourcing agent, financial accruals agent) / Joule Studio (build custom agents/skills)	Autonomous agents	Agents	SUPERSEDED-47	47	Agent runtime (Temporal) with approval gates: AP invoice coding, cash application suggestions, MRP exception triage, collections outreach, journal anomaly detection; agent builder = MCP tools + workflow designer
SAP Build Process Automation: processes (workflow), automations (RPA bots), decisions (business rules), forms, process visibility dashboards, pre-built content (SAP Store)	Low-code process automation + RPA	—	SUPERSEDED-4	4	Workflow designer (wave 4) + rules (partial, §13.31) + agents (wave 47) for unstructured steps; RPA screen-scraping bots replaced by APIs/MCP tools
SAP CoPilot (legacy digital assistant)	—	—	SUPERSEDED-47	47	—

T-code	Name	Purpose	Passage status	Wave	Notes
Situation Handling (Situation Framework: standard/extended situation types, situation pages, My Situations)	Proactive alerts with context and actions	—	SUPERSEDED-47	47	Wave 5 alerting + wave 22 exception messages + wave 47 agents triage; "situations" = proactive tasks from events
Business AI scenarios: Cash Application (ML matching), Intelligent Invoice Matching / AP, GR/IR reconciliation ML, Predicted delivery delay (sales), Intelligent product proposal, Slow-moving inventory prediction, Demand forecasting ML (IBP/S/4), Maintenance predictive (PAI), Anomaly detection in journals (Financial Statement Insights)	Embedded ML	—	SUPERSEDED-47	47	Agents in suggest-mode (AP coding ≥ 92%, cash application ≥ 90% precision); ML forecasting (wave 22); predictive maintenance hooks (wave 44); anomaly detection on journals
Document Information Extraction / Business Document Processing (invoice OCR, PO extraction)	Document AI	—	COVERED-18	18	OCR/AP-automation adapter (wave 18); receipts OCR (wave 43)
ISLM (Intelligent Scenario Lifecycle Management: scenarios, models, training, activation) / SAP AI Core / AI Launchpad / generative AI hub (model access, prompt management, orchestration, grounding)	ML/AI lifecycle & model hub	—	SUPERSEDED-47	47	Model-agnostic provider layer (Claude default, Bedrock/Azure/open-weights), prompt/version registry, eval harness in CI, cost/token budgets
SAP Signavio Process AI / Process Insights (process mining recommendations)	Process intelligence	—	PARTIAL-46	46	Process mining partial (noted §13.31)
Joule in SuccessFactors / Ariba / Concur (HR Q&A, procurement assistant, expense assistant)	Domain copilots	—	SUPERSEDED-47	47	Copilot enabled in all workspaces
SAP Conversational AI (chatbots, legacy)	Chatbots	—	SUPERSEDED-47	47	Copilot UI
Responsible AI: SAP AI ethics policy, Joule data privacy (no training on customer data), AI governance	AI governance	—	COVERED-47	47	PII redaction, action logging, kill switch, permission inheritance (agent never exceeds user), NIST AI RMF

13.37.2 Reports & inquiries

T-code	Name	Passage status	Wave	Notes
Joule informational queries (Q&A over business data and documentation)	Ask-the-data	SUPERSEDED-47	47	Ask-the-data over semantic layer
ISLM model monitoring (accuracy, drift) / AI Launchpad metrics	Model monitoring	SUPERSEDED-47	47	Eval dashboards; cost/token budget alerts
BPA process visibility dashboards	Process KPIs	SUPERSEDED-46	46	Workflow dashboards (wave 4/46)
Agent action audit (Joule agent logs)	—	COVERED-47	47	Every agent action audited with inputs, tool calls, outputs, approver
Situation analytics (situations by type, resolution time)	—	SUPERSEDED-47	47	—

13.37.3 Periodic processing

T-code	Name	Passage status	Wave	Notes
ISLM training/retraining jobs, model activation	—	SUPERSEDED-47	47	Eval runs in CI gate deploys; retraining pipelines (Python services)
Cash application ML proposal runs (nightly)	—	SUPERSEDED-47	47	Cash application agent (suggest-mode)
Situation determination batch runs	—	SUPERSEDED-47	47	Event-driven
RPA bot schedules (BPA)	—	SUPERSEDED-4	4	Job framework + APIs
Token/cost budget resets & reports per tenant	—	COVERED-47	47	Cost guard

13.37.4 Customizing (SPRO)

IMG node / T-code	Table(s)	Key options	Passage status	Wave	Notes
Joule activation per scope item, capability assignment to roles, Joule Studio skill/agent configuration, grounding sources	—	—	SUPERSEDED-47	47	Copilot/agent enablement per workspace & role (OPA); MCP tool catalog
Situation types (standard/extended), triggers, conditions, responsibility management (teams & responsibilities), notification channels	—	—	SUPERSEDED-47	47	Alert rules + responsibility assignment via org model (wave 6)
ISLM scenario settings, AI Core resource groups, model deployment configs, generative AI hub orchestration (prompt templates, content filtering, data masking)	—	—	SUPERSEDED-47	47	Provider layer config, prompt registry, PII redaction, kill switch
BPA: process templates, decision tables (business rules), RPA agent settings, environment/destinations	—	—	SUPERSEDED-4	4	Workflow designer; rules engine (partial)
AI governance policies (usage logging, consent, data residency for AI processing)	—	—	COVERED-47	47	Responsible-AI controls; data residency per tenant (wave 48)
Business AI scenario activation (per company code / app), confidence thresholds, auto-apply vs propose	—	—	COVERED-47	47	Suggest-mode vs auto with approval gates; precision thresholds gating deploy

---

13.98 Coverage summary by module

Row counts per section (all four tables). Modules with a high PARTIAL/GAP share are where the roadmap needs decisions.

Section	COVERED	PARTIAL	GAP	OUT-OF-SCOPE	SUPERSEDED	Total
13.1 FI-GL — General Ledger (classic GL, New GL, ledgers, ACDOCA)	123	13	9	0	19	164
13.2 FI-AP — Accounts Payable	91	11	5	0	5	112
13.3 FI-AR — Accounts Receivable	96	7	5	0	4	112
13.4 FI-AA — Asset Accounting	89	5	0	3	1	98
13.5 FI-BL / FSCM-CM / BAM — Bank Accounting, Cash Management & Bank Account Management	48	7	6	0	1	62
13.6 FSCM — Credit, Collections, Dispute Management & Treasury (TRM)	23	3	14	2	3	45
13.7 CO-OM — Overhead Cost Controlling (cost centers, internal orders, activity types, allocations)	99	3	0	0	8	110
13.8 CO-PC — Product Cost Controlling (product cost planning, cost object controlling, material ledger)	67	13	0	0	5	85
13.9 CO-PA — Profitability Analysis (costing-based, account-based) and EC-PCA Profit Center Accounting	27	7	0	0	22	56

Section	COVERED	PARTIAL	GAP	OUT-OF-SCOPE	SUPERSEDED	Total

All	**2049**	**310**	**91**	**22**	**274**	**2746**

13.99 Gap register

Every row above whose status is `GAP` or `PARTIAL–<wave>`, in document order, with the wave it is currently mapped to (PARTIAL) or the *proposed* wave (GAP). The "What is missing / proposal" column repeats the row's Notes so this register can be read on its own and pasted into the wave issues. Proposed waves are suggestions for the roadmap owners; a GAP stays a GAP until a wave's `deliverable` in waves.json names it.

13.99.1 Rollup by (current or proposed) wave

Wave	PARTIAL rows mapped	GAP rows proposed	Total
3	3	0	3
5	5	0	5
7	6	0	6
8	9	0	9
9	10	6	16
11	17	0	17
12	3	0	3
13	4	0	4
14	0	5	5

13.99.2 Register (document order)

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
1	13.1 FI-GL	Master data & documents	F-03 / F-04	Clear G/L account / post with clearing	PARTIAL–11	11	Open-item management specified only for AP/AR (waves 19/30) and GR/IR (wave 18); generic OI-managed G/L accounts (clearing accounts, bank sub-accounts) need the same clearing engine exposed on GL
2	13.1 FI-GL	Master data & documents	FBCJ	Cash journal	GAP	propose 36	No wave mentions a petty-cash/cash-journal document; small but common on plant floors — add to wave 36 (cash & bank) as "cash journal with receipts, business transactions and daily closing"
3	13.1 FI-GL	Master data & documents	FBCJC0 / FBCJC1 / FBCJC2 / FBCJC3	Cash journal setup, number ranges, business transactions, print	GAP	propose 36	Follows FBCJ
4	13.1 FI-GL	Master data & documents	FAGL_ACTIVATE_OP	Activate open-item management on G/L accounts	PARTIAL–11	11	Depends on the GL OI gap above
5	13.1 FI-GL	Master data & documents	FAGL_SWITCH_TO_OPEN_ITEM	Switch to OI management (S/4)	PARTIAL–11	11	Same
6	13.1 FI-GL	Reports & inquiries	S_ALR_87012309	Cash book / cash journal report	GAP	propose 36	Follows FBCJ gap
7	13.1 FI-GL	Periodic processing	F.13 / F13E	Automatic clearing (with/without specification of clearing currency)	PARTIAL–11	11	Automatic clearing specified for GR/IR (wave 18) and AP/AR settlement; generic rule-based GL auto-clearing is part of the GL OI gap
8	13.1 FI-GL	Periodic processing	FAGLF101 / F101	Regroup receivables/payables (sorted list, reclassification by remaining term)	GAP	propose 14	Balance-sheet reclassification (short/long-term, debit-balance vendors, credit-balance customers) is a standard close step not named in wave 14's checklist/allocations — add as a close task type
9	13.1 FI-GL	Periodic processing	F.50 / F.52	G/L interest calculation (balance / account interest)	GAP	propose 30	Interest on GL balances (e.g. intercompany loans) is not named; wave 30 covers AR interest notes only — extend the interest engine to GL/intercompany accounts
10	13.1 FI-GL	Periodic processing	FAGL_CL_REGROUP / FAGL_CL_MIGRATION	Closing: regrouping (S/4)	GAP	propose 14	Same as FAGLF101
11	13.1 FI-GL	Periodic processing	F.97 / F.98 / F.99	Balance confirmations for G/L / AP / AR	GAP	propose 19	Balance confirmation letters (vendor/customer/GL) not named in waves 19 or 30 — add to wave 30 customer statements + wave 19 vendor confirmations
12	13.1 FI-GL	Customizing (SPRO)	OB28 / GGB0 — Validations (FI)	GB90*, T001Q	PARTIAL–11	11	Wave 11 has dimension validation rules; a general user-defined validation rule language (Boolean rules over header/line fields with message classes) is only implied by wave 3 "validation" — scope it explicitly
13	13.1 FI-GL	Customizing (SPRO)	OBBH / GGB1 — Substitutions (FI)	GB91*, T001R	PARTIAL–11	11	Default dimensions on master data exist; rule-based substitution (derive dimension from another field) needs an explicit rule engine on the Post API

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
14	13.1 FI-GL	Customizing (SPRO)	OBBZ / OBBW — Substitution/validation for cost of sales accounting	—	PARTIAL–11	11	Functional area as a dimension with derivation rules (see above)
15	13.1 FI-GL	Customizing (SPRO)	Document splitting: classify G/L accounts, document types, splitting method, zero-balance, constants (FAGL_SPLIT*)	T8G01…T8G40	PARTIAL–11	11	Wave 11 requires every line to carry dimensions, so dimension-complete documents are native; but *inheritance to balance-sheet lines* (AP/AR/tax lines split by the expense lines' profit centers) and zero-balance clearing per dimension are not named — needed for balance sheet by profit center/segment
16	13.1 FI-GL	Customizing (SPRO)	OBXR / OBYR — Special G/L indicators (customers / vendors)	T074	PARTIAL–19	19	Prepayments/down payments covered (waves 19/30); bills of exchange and noted items not named — see FI-AP/AR sections
17	13.1 FI-GL	Customizing (SPRO)	OBB8 / OBB9 — Terms of payment / installment terms	T052, T052R	PARTIAL–7	7	Payment terms covered; installment terms (split one invoice into several due dates) not named — add to wave 7 terms model
18	13.1 FI-GL	Customizing (SPRO)	OBA0 — Tolerance groups for G/L accounts (clearing)	T043S	PARTIAL–11	11	GL OI gap
19	13.1 FI-GL	Customizing (SPRO)	OB46 — Interest indicators / OB82 / OBAA	T056*	GAP	propose 30	Interest engine (see F.52)
20	13.1 FI-GL	Customizing (SPRO)	OB74 — Additional rules for automatic clearing	TF123	PARTIAL–11	11	GL OI gap (AP/AR criteria covered by settlement rules)
21	13.1 FI-GL	Customizing (SPRO)	FAGL_CL_RGRP / Define sort method & adjustment accounts for regrouping	T043/ T030	GAP	propose 14	FAGLF101 gap
22	13.1 FI-GL	Customizing (SPRO)	Cost of sales accounting: functional areas (OKBD), activate (FAGL_FUNC_AREA)	TFKB, T001	PARTIAL–11	11	Functional area dimension + derivation rules (substitution gap)
23	13.2 FI-AP	Master data & documents	One-time vendor (account group CPD)	One-time accounts with address on document	PARTIAL–7	7	Not named in wave 7; add "one-time party" role with document-level address capture
24	13.2 FI-AP	Master data & documents	F-40 / F-36 (AP side: FBW6)	Bill of exchange payment (AP)	GAP	propose 36	Bills of exchange (AP and AR) are not in any wave; relevant in IT/ES/FR/JP/BR; propose as a wave 36 (bank) option or defer to a localization v1.x pack under wave 48 — needs a decision
25	13.2 FI-AP	Master data & documents	J1INCHLN / J1INBANK / J1INCERT (IN WHT)	Withholding tax challan / bank challan / certificate (India)	PARTIAL–13	13	Withholding engine + 26AS hooks named; Indian TDS challan/certificate flows belong to the IN country pack (wave 48) — partial until pack ships
26	13.2 FI-AP	Master data & documents	FIBLFFP / F111	Payment request / payment program for payment requests	PARTIAL–36	36	Payment requests from treasury (not vendor items) not named; add to wave 36 in-house banking
27	13.2 FI-AP	Reports & inquiries	S_ALR_87012116	Bill of exchange list	GAP	propose 36	Follows bills gap
28	13.2 FI-AP	Periodic processing	F111	Payment program for payment requests	PARTIAL–36	36	See payment requests
29	13.2 FI-AP	Periodic processing	F150 (AP dunning)	Dunning vendors (debit balances)	PARTIAL–30	30	Dunning covers customers; dunning vendors with debit balances is an edge case — reuse engine
30	13.2 FI-AP	Periodic processing	FAGLF101 (AP)	Regroup vendors with debit balances	GAP	propose 14	Reclassification gap
31	13.2 FI-AP	Periodic processing	F.98	Vendor balance confirmation	GAP	propose 19	Balance confirmations gap
32	13.2 FI-AP	Periodic processing	FBWE (AP bill of exchange presentation)	Bill of exchange presentation	GAP	propose 36	Bills gap
33	13.2 FI-AP	Periodic processing	F.64 (AP correspondence)	Correspondence: maintain / print	PARTIAL–19	19	Correspondence types (account statement, payment notice) only partially named (payment advice) — define correspondence framework (templates + triggers) on wave 46 document designer
34	13.2 FI-AP	Customizing (SPRO)	OBYR — Special G/L indicators vendors (down payments, guarantees, BoE)	T074	PARTIAL–19	19	Down payments yes; BoE no
35	13.2 FI-AP	Customizing (SPRO)	OBB9 — Installment terms	T052R	PARTIAL–7	7	Installment gap
36	13.2 FI-AP	Customizing (SPRO)	Define correspondence types / forms (OB77, OB78, OB79)	T048, T048B	PARTIAL–19	19	Correspondence framework gap
37	13.2 FI-AP	Customizing (SPRO)	OBD3 "one-time account"	T077K	PARTIAL–7	7	One-time party gap
38	13.2 FI-AP	Customizing (SPRO)	Bank-to-bank transfers (payment request types, FIBL)	—	PARTIAL–36	36	Payment requests gap
39	13.3 FI-AR	Master data & documents	F-34 / F-36 / F-33	Bill of exchange payment / discount (AR)	GAP	propose 36	Bills of exchange gap
40	13.3 FI-AR	Master data & documents	FB12 / F.61 / F.64	Request / print correspondence	PARTIAL–30	30	Statements and dunning named; general correspondence framework (payment notices, individual letters, open item lists) only partial

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
41	13.3 FI-AR	Reports & inquiries	S_ALR_87012199	Customer: bill of exchange list	GAP	propose 36	Bills gap
42	13.3 FI-AR	Periodic processing	FAGLF101 (AR)	Regroup customers with credit balances	GAP	propose 14	Reclassification gap
43	13.3 FI-AR	Periodic processing	F.99	Customer balance confirmation	GAP	propose 30	Balance confirmation gap
44	13.3 FI-AR	Periodic processing	SEPA mandate management (FSEPA_M1..M4)	Mandates	PARTIAL–30	30	SEPA direct-debit mandates not named; required for EU customers paying by direct debit — add mandate entity to wave 30
45	13.3 FI-AR	Periodic processing	FBWD / FBWE (AR BoE)	Bill of exchange presentation	GAP	propose 36	Bills gap
46	13.3 FI-AR	Customizing (SPRO)	OBXR — Special G/L customers (down payments, security deposits, BoE)	T074	PARTIAL–30	30	BoE gap
47	13.3 FI-AR	Customizing (SPRO)	OBB9 — Installment terms (customers)	T052R	PARTIAL–7	7	Installment gap
48	13.3 FI-AR	Customizing (SPRO)	Define correspondence types (OB77) / periodic account statements	T048	PARTIAL–30	30	Correspondence framework gap
49	13.3 FI-AR	Customizing (SPRO)	SEPA mandate customizing	SEPA_*	PARTIAL–30	30	Mandate gap
50	13.3 FI-AR	Customizing (SPRO)	Define alternate payer / head office–branch	KNA1-KNRZE, KNB1	PARTIAL–7	7	Head-office/branch (invoice to branch, pay from HQ) not named in wave 7 party roles — add "bill-to/pay-from parent" relationship
51	13.4 FI-AA	Master data & documents	AS21 / AS22 / AS23	Group asset create/change/display	PARTIAL–37	37	Group assets (depreciate at group level, e.g. ADR) not named in wave 37 — add to tax book features
52	13.4 FI-AA	Master data & documents	Insurance values (asset master tab, S_ALR_87011951)	Insurance values / indexing	PARTIAL–37	37	Insurance values and index series not named — add to asset master
53	13.4 FI-AA	Reports & inquiries	S_ALR_87010127 / 87010129 (US: form 4562 / mid-quarter)	Tax depreciation reports	PARTIAL–37	37	MACRS tables yes; IRS Form 4562 layout belongs to the US pack (wave 48)
54	13.4 FI-AA	Customizing (SPRO)	OAYM / OAAX — Group assets per area	T093A	PARTIAL–37	37	Group asset gap
55	13.4 FI-AA	Customizing (SPRO)	OAVI / OAVF — Insurance types, companies, index series	T086, T094	PARTIAL–37	37	Insurance gap
56	13.5 FI-BL / FSCM-CM / BAM	Master data & documents	FBCJ	Cash journal	GAP	propose 36	Cash journal gap (see FI-GL)
57	13.5 FI-BL / FSCM-CM / BAM	Master data & documents	FRFT / FRFT_B	Repetitive payment codes / bank-to-bank transfer	PARTIAL–36	36	Bank-to-bank transfer / payment request gap
58	13.5 FI-BL / FSCM-CM / BAM	Master data & documents	IHC0 / IHC1IP (In-House Cash)	In-house cash center, IHC accounts, internal payment orders	PARTIAL–36	36	"In-house banking basics: netting, cash pooling" named; full IHC (internal accounts, interest, statements for subsidiaries) is partial
59	13.5 FI-BL / FSCM-CM / BAM	Master data & documents	Fiori: Approve Bank Payments / Monitor Payments (Advanced Payment Management)	APM	PARTIAL–36	36	Payment approval covered; APM-style central payment hub (route, batch, reformat across entities) only partially (adapters)
60	13.5 FI-BL / FSCM-CM / BAM	Master data & documents	FBWE / FBWD (bills)	Bill of exchange presentation	GAP	propose 36	Bills gap
61	13.5 FI-BL / FSCM-CM / BAM	Reports & inquiries	S_ALR_87012309 (cash journal)	Cash journal report	GAP	propose 36	—
62	13.5 FI-BL / FSCM-CM / BAM	Reports & inquiries	Fiori: Bank Relationship Overview / Bank Fee Analysis	Bank fees (camt.086)	GAP	propose 36	Bank fee analysis (camt.086) not named; propose as wave 36 report
63	13.5 FI-BL / FSCM-CM / BAM	Periodic processing	Cash pooling / sweeping run (IHC)	—	PARTIAL–36	36	Basics named
64	13.5 FI-BL / FSCM-CM / BAM	Periodic processing	F111 (treasury payment requests)	—	PARTIAL–36	36	—
65	13.5 FI-BL / FSCM-CM / BAM	Periodic processing	Bank fee statement import (camt.086)	—	GAP	propose 36	—
66	13.5 FI-BL / FSCM-CM / BAM	Customizing (SPRO)	Bank chains (FIBC)	TBCHAIN*	PARTIAL–36	36	Correspondent/intermediary bank chains not named — add to bank connectivity
67	13.5 FI-BL / FSCM-CM / BAM	Customizing (SPRO)	IHC customizing: IHC centers, accounts, conditions, payment orders	IHC_*	PARTIAL–36	36	IHC partial
68	13.5 FI-BL / FSCM-CM / BAM	Customizing (SPRO)	Cash journal customizing (FBCJC0..3)	TCJ_*	GAP	propose 36	—
69	13.6 FSCM	Master data & documents	FTR_CREATE / FTR_EDIT / FTR_00	Treasury transaction manager: create financial transaction (money market, FX forward/spot/swap, derivatives, securities, loans)	GAP	propose 36	TRM transaction manager is not in any wave. Manufacturers with FX exposure need at least FX spot/forward deal capture, settlement and valuation; propose a wave 36 "treasury deals (FX, loans, deposits)" extension, with derivatives/securities deferred to v2

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
70	13.6 FSCM	Master data & documents	TBB1 / TPM10	Post flows / treasury posting	GAP	propose 36	Follows TRM gap
71	13.6 FSCM	Master data & documents	TPM1 / TPM60	Valuation (key date), amortization, position management	GAP	propose 36	—
72	13.6 FSCM	Master data & documents	THMEX (Hedge management & accounting, IFRS 9)	Hedge relationships, effectiveness, hedge accounting postings	GAP	propose 36	Hedge accounting per IFRS 9/ASC 815 — v2 candidate; register as gap
73	13.6 FSCM	Master data & documents	Exposure management (raw exposures, TEM)	Exposure capture from AP/AR/forecast	GAP	propose 36	FX exposure from open items is derivable from waves 12/36 data; deal side missing
74	13.6 FSCM	Master data & documents	TBDM market data import (rates, prices)	Market data management	PARTIAL–12	12	Exchange-rate providers covered; interest curves/security prices not
75	13.6 FSCM	Master data & documents	Loans management (FN*, CML)	Loan contracts	GAP	propose 36	Intercompany and bank loans: schedules + interest; propose minimal loan contract in wave 36
76	13.6 FSCM	Reports & inquiries	TPM12 / TPM13	Position list / flow list (TRM)	GAP	propose 36	TRM gap
77	13.6 FSCM	Reports & inquiries	TPM20	Posting journal (TRM)	GAP	propose 36	TRM gap
78	13.6 FSCM	Reports & inquiries	Hedge plan reports	—	GAP	propose 36	—
79	13.6 FSCM	Reports & inquiries	Treasury information system (TRM)	—	GAP	propose 36	—
80	13.6 FSCM	Periodic processing	TBB1 (periodic) / TPM1 valuation run / accruals	TRM period-end	GAP	propose 36	TRM gap
81	13.6 FSCM	Periodic processing	Hedge effectiveness test run	—	GAP	propose 36	—
82	13.6 FSCM	Periodic processing	TBDM import run	Market data import	PARTIAL–12	12	—
83	13.6 FSCM	Customizing (SPRO)	TRM: product types, transaction types, flow types, update types, valuation areas/classes, accounting codes, position management procedures	TRL*, TRD*, TPM*	GAP	propose 36	TRM gap
84	13.6 FSCM	Customizing (SPRO)	Hedge management: hedging profiles, exposure categories	THM*	GAP	propose 36	—
85	13.6 FSCM	Customizing (SPRO)	Market data: rate types, yield curves, volatility	VTB*, TCURR	PARTIAL–12	12	—
86	13.7 CO-OM	Periodic processing	CPTA / CPTB	ABC: template allocation (actual/plan)	PARTIAL–38	38	ABC named; template (driver-formula) allocation is partial — specify driver formulas
87	13.7 CO-OM	Customizing (SPRO)	CO versions for parallel valuation (group/profit-center valuation, transfer prices)	TKA07, TKA09, TKA01	PARTIAL–40	40	Transfer-pricing documentation hooks named; parallel group/profit-center valuation views (three valuation views in CO/ML) are not — register as partial for consolidation of profit in inventory
88	13.7 CO-OM	Customizing (SPRO)	ABC: template allocation environments, functions (CPT1)	—	PARTIAL–38	38	—
89	13.8 CO-PC	Master data & documents	CKECP / CKECP1	Easy cost planning / ad-hoc cost estimate	PARTIAL–39	39	What-if simulations named; template-based "easy" cost planning for non-material objects (projects/orders) — partial, map to wave 41 project estimates
90	13.8 CO-PC	Master data & documents	CK51N / CK53N	Sales order cost estimate create / display	PARTIAL–27	27	Order-specific costing for configured/MTO products not explicitly named in waves 27/39 — add "sales order cost estimate" to wave 39 simulations
91	13.8 CO-PC	Master data & documents	CK91N / CK92	Procurement alternatives / mixing ratios (mixed costing)	PARTIAL–39	39	Mixed costing (weighted sources: make vs buy, multiple vendors/production versions) not named — add to wave 39 fallback rules
92	13.8 CO-PC	Master data & documents	KKPHIE / KKP2	Cost object hierarchy	PARTIAL–38	38	Cost object hierarchies for process cost distribution — partial
93	13.8 CO-PC	Periodic processing	CKMLCPAVR (Alternative valuation run)	Alternative valuation run (cumulative periods)	PARTIAL–20	20	Multi-period cumulative actual costing (AVR) not named — partial
94	13.8 CO-PC	Periodic processing	CKMDUVACT / CKMDUVMAT	Distribution of usage variances	PARTIAL–20	20	Usage-variance distribution to consumers — partial
95	13.8 CO-PC	Periodic processing	WIP at actual cost (ML)	—	PARTIAL–20	20	WIP revaluation at actual cost — partial
96	13.8 CO-PC	Customizing (SPRO)	Mixed costing: quantity structure types, procurement alternatives (OMXL)	CKMLMV*	PARTIAL–39	39	Mixed costing gap
97	13.8 CO-PC	Customizing (SPRO)	Easy cost planning: costing models, characteristics	CKF*	PARTIAL–39	39	—

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
98	13.8 CO-PC	Customizing (SPRO)	Sales order costing: requirements class settings (OVZG) valuation/costing	T459K	PARTIAL–27	27	Sales-order stock valuation (valuated MTO stock) belongs to wave 16/21 — not named; partial
99	13.8 CO-PC	Customizing (SPRO)	Transfer prices / multiple valuation views (OKKP, OKEQ group)	TKA01	PARTIAL–40	40	See CO-OM
100	13.8 CO-PC	Customizing (SPRO)	Cost of goods sold split by cost component (S/4 COGS splitting)	FINSC_COGS*	PARTIAL–39	39	COGS posting by cost component (material/labor/overhead accounts) not named in wave 28/39 — add posting profile option
101	13.8 CO-PC	Customizing (SPRO)	Price-difference splitting (S/4)	—	PARTIAL–39	39	Same
102	13.9 CO-PA	Master data & documents	KEDR / KEDE	Derivation strategy / rules (derive characteristics)	PARTIAL–11	11	Default dimensions on master data exist; rule-based derivation tables (lookup A×B→C with validity) = substitution gap (see FI-GL)
103	13.9 CO-PA	Periodic processing	KE28	Top-down distribution (actual)	PARTIAL–38	38	Top-down distribution of aggregated values (e.g. freight by revenue share) to detailed segments not named — add as allocation type "top-down"
104	13.9 CO-PA	Periodic processing	KE27	Periodic valuation (revaluate with actual costs from ML)	PARTIAL–20	20	Revaluation of COGS in profitability with actual cost — tied to ML revaluation of consumption partial
105	13.9 CO-PA	Periodic processing	KEND / KEDR realignment run	Realignment (re-derive characteristics on history)	PARTIAL–11	11	Mass re-derivation of dimensions on posted lines is a controlled restatement; propose explicit "dimension realignment" tool (audit-logged) in wave 11/15
106	13.9 CO-PA	Customizing (SPRO)	KEDR — Derivation rules (table lookup, derivation rule, move, clear, enhancement)	TKEDR*, K9R*	PARTIAL–11	11	Derivation gap
107	13.9 CO-PA	Customizing (SPRO)	0KEM / 0KEP — PCA substitution rules / derivation of PC from SD (sales org, material), MM	T8A*	PARTIAL–11	11	Derivation gap
108	13.9 CO-PA	Customizing (SPRO)	8KEM / 8KEN — Transfer prices: pricing procedures, conditions, transfer price variants	T8PT*	PARTIAL–40	40	Transfer pricing documentation hooks only; PC valuation view not covered
109	13.10 EC-CS / SEM-BCS / S/4HANA Group Reporting	Master data & documents	Fiori: Manage Reclassifications / Define Reclassification Rules	Rule-based reclassifications	PARTIAL–40	40	Elimination rules named; general reclassification rules (e.g. move FS item based on sign) partial
110	13.10 EC-CS / SEM-BCS / S/4HANA Group Reporting	Master data & documents	Fiori: Consolidation of Investments (activity-based: first consolidation, subsequent, step acquisition, divestiture; equity method)	CoI	PARTIAL–40	40	Minority interest named; purchase-method CoI with goodwill, step acquisitions, divestitures and equity-method accounting are not — partial
111	13.10 EC-CS / SEM-BCS / S/4HANA Group Reporting	Master data & documents	Fiori: Manage Investments / Equity data	Investment and equity holdings	PARTIAL–40	40	—
112	13.10 EC-CS / SEM-BCS / S/4HANA Group Reporting	Master data & documents	Disclosure management / XBRL (SAP DM, SAC)	Statutory filing packages	GAP	propose 48	XBRL/ESEF filing output not named; propose electronic reporting designer (wave 48) output type
113	13.10 EC-CS / SEM-BCS / S/4HANA Group Reporting	Periodic processing	Consolidation monitor tasks: IC elimination (AR/AP, revenue/expense, dividends), elimination of IC profit in inventory, CoI, group validation	Group-level tasks	PARTIAL–40	40	IC balances and inventory profit named; dividend elimination and CoI partial
114	13.10 EC-CS / SEM-BCS / S/4HANA Group Reporting	Periodic processing	Reclassification runs	—	PARTIAL–40	40	—
115	13.10 EC-CS / SEM-BCS / S/4HANA Group Reporting	Customizing (SPRO)	Reclassification methods / elimination methods (IC elimination of AR/AP, revenue/expense, dividends)	TF*	PARTIAL–40	40	—
116	13.10 EC-CS / SEM-BCS / S/4HANA Group Reporting	Customizing (SPRO)	CoI methods (purchase, equity, proportional), activities	TF*	PARTIAL–40	40	—
117	13.11 FM / PSM	Master data & documents	FM5I / FM5S	Fund create/display	PARTIAL–38	38	"Fund" dimension (restricted/unrestricted funding) not named; grants/projects usually carry it — partial; usable via a financial dimension
118	13.11 FM / PSM	Master data & documents	FMMEASURE (funded program)	Funded program	PARTIAL–38	38	Same
119	13.11 FM / PSM	Master data & documents	FMX1 / FMX2 / FMX3	Earmarked funds: funds reservation create/change/display	PARTIAL–38	38	Pre-encumbrance from requisition is named; manual "funds reservation" without a requisition is not — add budget reservation document
120	13.11 FM / PSM	Master data & documents	FMY1 / FMZ1 / FMW1 / FMV1	Funds precommitment / commitment / forecast of revenue / funds blocking	PARTIAL–38	38	Same
121	13.11 FM / PSM	Master data & documents	FMDERIVE	Derivation of FM account assignment	PARTIAL–11	11	Derivation gap

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
122	13.11 FM / PSM	Customizing (SPRO)	FMDERIVE strategy	FMDERIVE*	PARTIAL–11	11	—
123	13.11 FM / PSM	Customizing (SPRO)	Earmarked funds document types, number ranges	FMEF*	PARTIAL–38	38	—
124	13.12 MM-PUR	Master data & documents	ME84 / ME85 / ME86	Create SA releases (FRC/JIT) / renumber / display release documentation	PARTIAL–17	17	Vendor-facing forecast/JIT release generation (cumulative quantities, release documentation) is a supplier-schedule capability not explicitly named in wave 17; EDI DELFOR/DELJIT in wave 35 lists 850/855/856/810/820/214 only — partial
125	13.12 MM-PUR	Master data & documents	MEQ1 / MEQ3 / MEQ4 / MEQ6 / MEQ8	Quota arrangement maintain/display/changes/analyze	PARTIAL–22	22	Quota arrangements (percentage split across vendors/own production for MRP) not named in wave 17/22 — partial
126	13.12 MM-PUR	Master data & documents	ME21N item category K (consignment)	Vendor consignment PO	PARTIAL–16	16	Consignment stock (vendor-owned at our site, settle on consumption MRKO) not named in waves 16/18 — partial; needs ownership attribute on inventory + settlement run
127	13.12 MM-PUR	Master data & documents	ME21N item category U (stock transfer) / UB STO / NB cross-company STO	Stock transport orders (intra/intercompany) with delivery	PARTIAL–16	16	Wave 16 "transfer journals" and wave 40 intercompany trade cover the postings; an explicit *transfer order document* with delivery, in-transit stock and receiving (plant-to-plant with shipping) is not named — partial; propose "transfer orders with in-transit status" in wave 16/28
128	13.12 MM-PUR	Master data & documents	ME21N service item (D)	Services PO	PARTIAL–18	18	See MM-SRV
129	13.12 MM-PUR	Master data & documents	Fiori: Create Purchase Requisition (self-service, catalog, free text)	Self-service requisitioning with catalogs (OCI punch-out)	PARTIAL–17	17	Requisition yes; catalog/punch-out (OCI/cXML) item selection not named — partial; propose wave 20 (supplier collaboration) or wave 35 (integration)
130	13.12 MM-PUR	Master data & documents	SAP Ariba Buying / Sourcing / Contracts / SLP (supplier lifecycle)	Cloud procurement suite	PARTIAL–20	20	Supplier portal (ack, ASN, invoice, docs) covers Ariba Network basics; strategic sourcing events (auctions, weighted RFP scoring), supplier onboarding/qualification questionnaires and contract authoring are not — partial; propose v1.x
131	13.12 MM-PUR	Reports & inquiries	MSRV1 / MSRV3 (services)	—	PARTIAL–18	18	See MM-SRV
132	13.12 MM-PUR	Reports & inquiries	Fiori: Monitor Supplier Confirmations / Monitor Scheduling Agreement Releases	—	PARTIAL–17	17	SA release documentation partial
133	13.12 MM-PUR	Periodic processing	ME84 (batch)	SA release creation run	PARTIAL–17	17	SA release partial
134	13.12 MM-PUR	Periodic processing	MRKO (consignment settlement)	—	PARTIAL–16	16	Consignment gap
135	13.12 MM-PUR	Periodic processing	MEI1 / MEI2 / MEI4	Subsequent price change (automatic document adjustment after condition change)	PARTIAL–17	17	Retroactive re-pricing of open POs after condition change — not named; partial
136	13.12 MM-PUR	Customizing (SPRO)	OMGN — Set up stock transport order (delivery type, checking rule per supplying plant)	T161V, T161W	PARTIAL–16	16	Transfer order gap
137	13.12 MM-PUR	Customizing (SPRO)	Source determination — source list requirement per plant, quota arrangement rules	T001W, TMQ1	PARTIAL–22	22	Quota partial
138	13.12 MM-PUR	Customizing (SPRO)	Scheduling agreement — release creation profile, firm zone/trade-off zone, JIT indicator	T163M	PARTIAL–17	17	SA release partial
139	13.12 MM-PUR	Customizing (SPRO)	Ariba Network integration (cXML, Cloud Integration Gateway)	—	PARTIAL–35	35	cXML not listed among EDI formats (X12/EDIFACT/Peppol); partial
140	13.13 MM-IM	Master data & documents	MB53 / MB54	Plant availability / consignment stock	PARTIAL–16	16	Vendor consignment gap
141	13.13 MM-IM	Master data & documents	MB58	Consignment and returnable packaging stock at customer	PARTIAL–27	27	Customer consignment (fill-up/issue/pick-up/return orders) not named in SD/inventory waves — partial; needs "stock at customer" ownership dimension
142	13.13 MM-IM	Master data & documents	MIK1 / MIQ1 / MIM1	PI for vendor consignment / project stock / returnable transport packaging	PARTIAL–16	16	Consignment/RTP gaps
143	13.13 MM-IM	Master data & documents	MIE1 / MIW1 / MIV1	PI for sales order stock / customer consignment / returnable packaging at customer	PARTIAL–27	27	Sales-order stock & customer consignment partial

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
144	13.13 MM-IM	Master data & documents	MIS1 / MIS2 (inventory sampling)	Inventory sampling (statistical)	GAP	propose 16	Statistical inventory sampling (count a sample, extrapolate) — rarely used but a recognized GAAP-compatible method; low priority
145	13.13 MM-IM	Master data & documents	Special stock: sales order stock (E), project stock (Q)	Stock segregated by SO/WBS	PARTIAL–16	16	Sales-order/project-specific stock (valuated/non-valuated) not explicitly named as an inventory dimension — partial; needed for MTO/ETO manufacturers (waves 21/27/41)
146	13.13 MM-IM	Master data & documents	Stock in transit (MB5T; S/4 stock in transit for STO)	In-transit stock	PARTIAL–16	16	Transfer order gap
147	13.13 MM-IM	Master data & documents	Returnable transport packaging (M, V)	RTP at vendor/customer	GAP	propose 28	Returnable packaging (pallets, crates) tracking at customers/vendors not named; propose wave 28 (packaging/HU) option
148	13.13 MM-IM	Reports & inquiries	MB5T	Stock in transit (cross-company/plant)	PARTIAL–16	16	Transfer order gap
149	13.13 MM-IM	Reports & inquiries	MB54 / MB58 / MBLB	Consignment / customer consignment / subcontractor stock	PARTIAL–16	16	Consignment gaps
150	13.13 MM-IM	Reports & inquiries	MBBS	Valuated special stock (sales order/project)	PARTIAL–16	16	Special stock gap
151	13.13 MM-IM	Periodic processing	MRKO	Consignment & pipeline settlement	PARTIAL–16	16	Consignment gap
152	13.13 MM-IM	Customizing (SPRO)	OMWD / OMWC / OMSK — Valuation grouping code / split valuation (valuation categories/types) / valuation classes & account category reference	T001K, T025, T025K, T149*	PARTIAL–20	20	Split valuation (different values per valuation type, e.g. new vs refurbished, domestic vs import) not named — partial; batch-level valuation needed for process industries
153	13.13 MM-IM	Customizing (SPRO)	Special stock settings (consignment price determination, pipeline)	—	PARTIAL–16	16	Consignment gap
154	13.13 MM-IM	Customizing (SPRO)	Stock determination (OSPX / OSPW) strategies for issues (consignment vs own, SLoc priority)	—	PARTIAL–16	16	Picking policies FEFO/FIFO named; ownership-based stock determination partial (consignment)
155	13.14 MM-IV	Master data & documents	MRKO	Consignment and pipeline settlement	PARTIAL–16	16	Consignment gap
156	13.14 MM-IV	Master data & documents	MRIS	Invoicing plan settlement (periodic/partial invoicing plans on PO)	PARTIAL–17	17	Invoicing plans on POs (periodic settlement without GR) not named — partial; relevant to leases/services; propose wave 17 PO line "invoicing plan"
157	13.14 MM-IV	Master data & documents	MRNB	Revaluation (retroactive price change on invoiced items)	PARTIAL–17	17	Retro re-pricing partial (MEI1 row)
158	13.14 MM-IV	Periodic processing	MRKO (scheduled)	Consignment settlement	PARTIAL–16	16	—
159	13.14 MM-IV	Periodic processing	MRIS (scheduled)	Invoicing plan run	PARTIAL–17	17	—
160	13.14 MM-IV	Periodic processing	MRNB (scheduled)	Revaluation run	PARTIAL–17	17	—
161	13.14 MM-IV	Customizing (SPRO)	OMRX — Stochastic block (random sampling thresholds)	T169P	GAP	propose 18	Random audit sampling of invoices — simple to add to wave 18 exception rules; register as gap
162	13.14 MM-IV	Customizing (SPRO)	Invoicing plan types (periodic/partial)	T163*	PARTIAL–17	17	Invoicing plan gap
163	13.15 MM-SRV	Master data & documents	AC01 / AC02 / AC03 / AC04 / AC06	Service master create/change/display/list/changes	PARTIAL–8	8	Product of type "service" is covered; a dedicated service master with service categories, purchasing text, standard service catalog is partial — add "service product type" attributes to wave 8
164	13.15 MM-SRV	Master data & documents	ML10 / ML11 / ML12	Model service specifications create/change/display	GAP	propose 17	Service specification templates (hierarchical outlines of services with quantities) not named; propose "PO line templates" in wave 17
165	13.15 MM-SRV	Master data & documents	Standard service catalog (SSC)	Standard texts for services	GAP	propose 17	Same
166	13.15 MM-SRV	Master data & documents	ME21N (item cat D) with service lines, value limits, contract limits	Service PO with hierarchical service outline and limits	PARTIAL–17	17	Limit/blanket POs named; service outlines (hierarchy of service lines under one PO item) and contract-limit references are partial
167	13.15 MM-SRV	Master data & documents	ML81N / ML82 / ML83 / ML84 / ML85	Service entry sheet create-maintain / display / list / accept-revoke / collective release	PARTIAL–18	18	Receiving covers "product receipt"; a *service entry sheet* (lines of performed services with quantities/prices, acceptance workflow, partial entries, unplanned services within limits) is not named — partial; add "service receipt/entry sheet with acceptance" to wave 18

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
168	13.15 MM-SRV	Master data & documents	ML33 / ML34 / ML35 / ML36 / ML39 / ML40 / ML41 / ML45 / ML46 / ML47 / ML48	Service conditions: vendor-level / service-level / vendor+plant	PARTIAL–17	17	Vendor price lists for service products via pricing engine — partial until service products confirmed
169	13.15 MM-SRV	Master data & documents	MSRV1 … MSRV6	Service lists: by service / by PO / by SES / by vendor / by contract / entry sheets	PARTIAL–18	18	—
170	13.15 MM-SRV	Master data & documents	MIRO with SES reference	Invoice for services (SES-based)	PARTIAL–18	18	Match to service receipt

186	13.15 MM-SRV	Customizing (SPRO)	Lean services: activate, product type service, service entry sheet (lean) settings	—	PARTIAL–18	18	—
187	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Master data & documents	LXDCA / cross-docking (LXDCK)	Planned cross-docking	GAP	propose 31	Cross-docking (inbound → outbound without put-away, planned/opportunistic) not named in wave 31 — propose directive type "cross-dock"
188	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Master data & documents	EWM: /SCWM/PACK / /SCWM/PACKSPEC / /SCWM/PSSTAGE	Packing work center / packaging specifications	PARTIAL–31	31	HU/packing covered; *packaging specifications* (rules: product → packaging material, quantities per level) only implied — partial; propose wave 28/31 "packaging rules"
189	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Master data & documents	EWM: /SCWM/VASEXEC / VAS orders	Value-added services (kitting, labeling)	GAP	propose 31	VAS/kit-to-order in warehouse not named; propose wave 31 work type "VAS" and wave 24 kitting via lean BOM
190	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Master data & documents	EWM: /SCWM/LM (labor management: engineered labor standards, planned vs actual, performance docs)	Labor management	PARTIAL–31	31	Warehouse KPIs named; engineered labor standards, operator performance/incentive documents — partial
191	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Master data & documents	EWM: /SCWM/YM_* yard management (yard bins, vehicles, TUs, checkpoints)	Yard management	PARTIAL–31	31	Dock scheduling named; yard (trailer positions, moves, check-in/out) partial

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
192	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Master data & documents	EWM: /SCWM/TU, /SCWM/VEH	Transportation units / vehicles	PARTIAL–34	34	Load/TU in wave 34 — partial for yard link
193	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Master data & documents	EWM: /SCWM/MFS* (Material Flow System: PLC interface, conveyors, ASRS)	Automation integration	GAP	propose 32	MFS/PLC integration (telegrams to conveyor/AS-RS) not named; wave 25 OPC-UA/MQTT edge is the natural base — propose wave 32 "automation adapter (ASRS/conveyor)"
194	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Master data & documents	EWM: Kit-to-stock / kit-to-order	—	GAP	propose 31	See VAS
195	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Master data & documents	EWM: Dangerous goods / HazMat checks in warehouse (EHS)	—	GAP	propose 34	Hazmat classification, storage compatibility, DG documents — not named; propose wave 34 (transport) + wave 8 attributes
196	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Reports & inquiries	LX06 / LX07	Fire-containment sections / check storage (inconsistencies)	PARTIAL–31	31	Fire/hazard sections tie to hazmat gap
197	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Reports & inquiries	EWM: /SCWM/LM_ labor reports (planned vs actual)	—	PARTIAL–31	31	—
198	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Periodic processing	Labor management period close (/SCWM/LM)	—	PARTIAL–31	31	—
199	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Customizing (SPRO)	Hazardous material: regions, water pollution classes, storage classes, fire-containment sections	T* (MGEF)	GAP	propose 34	Hazmat gap
200	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Customizing (SPRO)	EWM: Yard management customizing	—	PARTIAL–31	31	—
201	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Customizing (SPRO)	EWM: MFS customizing (PLC communication channels, telegrams)	—	GAP	propose 32	—
202	13.16 LE-WM (classic Warehouse Management) and EWM (Extended Warehouse Management)	Customizing (SPRO)	EWM: Labor management: formulas, ELS, incentive	—	PARTIAL–31	31	—
203	13.17 LE-SHP / LE-TRA	Master data & documents	VL10 → STO deliveries (replenishment delivery NL/NLCC)	Deliveries for stock transport orders	PARTIAL–16	16	Transfer order gap
204	13.17 LE-SHP / LE-TRA	Master data & documents	Dangerous goods check in delivery (EHS-DG), DG documents	—	GAP	propose 34	Hazmat gap
205	13.17 LE-SHP / LE-TRA	Master data & documents	Foreign trade / export documents in delivery (customs, commercial invoice, EUR.1, Intrastat from delivery; GTS)	Export compliance	PARTIAL–13	13	Intrastat extract named (wave 13); export documentation (commercial invoice, packing list for customs, certificate of origin), export control screening (denied parties, licenses) and customs declarations (GTS) are not — partial; propose wave 48 "foreign trade/customs" pack
206	13.17 LE-SHP / LE-TRA	Master data & documents	Preference determination (SAP GTS / foreign trade)	Origin & preference (USMCA/EU)	GAP	propose 48	Rules-of-origin/preference calculation from BOM — gap

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
207	13.17 LE-SHP / LE-TRA	Customizing (SPRO)	OVLS / OVLV — Packing: packaging material types (VHAR), packing instructions (POP1/POP2/POP3/POF1), allowed packaging materials, HU number ranges (SSCC), packing control per item category	TVTY, TVEGR, PACKKP	PARTIAL–28	28	SSCC/containers yes; packing instructions (auto-pack rules) partial (same as EWM packaging specs)
208	13.17 LE-SHP / LE-TRA	Customizing (SPRO)	Foreign trade: export control, preference, Intrastat settings (VEB, VE0)	T604, T605	PARTIAL–13	13	Foreign trade gap
209	13.17 LE-SHP / LE-TRA	Customizing (SPRO)	Dangerous goods: DG profiles, DG check methods in SD/LE	DGT*	GAP	propose 34	Hazmat gap
210	13.18 TM	Master data & documents	Transportation units / resources (vehicles, trailers, drivers), calendars	Fleet resources	PARTIAL–34	34	Own fleet (vehicles/drivers/driver hours) not named — partial; carriers assumed external
211	13.18 TM	Master data & documents	Dangerous goods & DG checks in TM	—	GAP	propose 34	Hazmat gap
212	13.18 TM	Master data & documents	Customs declarations via GTS from TM	—	PARTIAL–13	13	Foreign trade gap
213	13.18 TM	Master data & documents	Strategic freight procurement (RFQ for lanes, bid analysis)	—	GAP	propose 34	Lane-based freight RFQ/bid analysis — gap; could reuse wave 17 RFQ
214	13.18 TM	Master data & documents	Load consolidation / container packing optimization (load plan 3D)	—	PARTIAL–34	34	Load building with capacity constraints named; 3D load plan/visual stacking partial
215	13.18 TM	Customizing (SPRO)	Dangerous goods in TM	—	GAP	propose 34	—
216	13.19 SD	Master data & documents	VB01 / VB02 / VB03	Listing/exclusion	PARTIAL–27	27	Product listing/exclusion per customer not named in wave 27 — partial; simple rule on order validation
217	13.19 SD	Master data & documents	VBN1 / VBN2 / VBN3	Free goods condition records (inclusive/exclusive)	PARTIAL–26	26	Free goods (buy 10 get 1) not named; promotions with quantity breaks are — partial
218	13.19 SD	Master data & documents	VA01 KB / KE / KA / KR (consignment fill-up/issue/pick-up/returns)	Customer consignment processes	PARTIAL–27	27	Customer consignment gap (see MM-IM)
219	13.19 SD	Master data & documents	VA31 / VA32 / VA33 / VA35	Customer scheduling agreement create/change/display/list (SA with JIT/forecast schedules VA32 → delivery schedule)	PARTIAL–27	27	"Scheduling agreements" named in wave 27 replaces list; inbound EDI DELFOR/DELJIT (830/862) customer schedules with cumulative quantities and schedule reconciliation are not named — partial (automotive)
220	13.19 SD	Master data & documents	VKA / VSB1 (self-billing)	Self-billing procedure (customer self-billing, automotive)	GAP	propose 29	Customer self-billing (EDI 820/GSVERF reconciliation against invoices) not named; automotive; propose wave 29/35 option
221	13.19 SD	Master data & documents	Fiori: Manage Solution Orders / Solution Business (bundles)	Bundled sales (products, services, subscriptions)	PARTIAL–29	29	Bundles with mixed revenue types partially via rev rec bundles; solution-order document type not named — partial
222	13.19 SD	Master data & documents	Cross-selling (VB41), product proposal/dynamic product proposal	Order-entry suggestions	PARTIAL–27	27	Product proposals partially (item proposal); cross-sell rules not named
223	13.19 SD	Customizing (SPRO)	OVZJ / OVZI — Product allocation (quota per customer/period)	T190, KOTA	GAP	propose 27	Product allocation (ATP quotas per customer/region in scarcity) not named — propose wave 27 ATP option
224	13.19 SD	Customizing (SPRO)	OVZK / OVZ — Availability check against product allocation; aATP (S/4): backorder processing strategies (BOP), alternative-based confirmation (ABC), release for delivery	—	PARTIAL–27	27	ATP/CTP covered; aATP backorder processing with strategies (win/gain/redistribute/fill/lose) partially named ("backorder handling")
225	13.19 SD	Customizing (SPRO)	OVZ "Define requirements classes/types, assignment to strategy group" (OVZG/OVZH/OVZI)	T459K, T459A, T459U	PARTIAL–27	27	Planning strategies (wave 22) + sales-order stock partial
226	13.19 SD	Customizing (SPRO)	OV "Listing/exclusion procedures" (OV04)	T684	PARTIAL–27	27	Listing gap
227	13.19 SD	Customizing (SPRO)	OVKF — Free goods: condition type NA00, procedure NA0001, determination	T685, KOTN	PARTIAL–26	26	Free goods gap
228	13.20 SD Rebates / Settlement Management (condition contracts)	Master data & documents	VBOF	Update billing documents (retroactive rebate accrual)	PARTIAL–26	26	Retroactive rebate (apply agreement to already-invoiced volume) not named — partial
229	13.20 SD Rebates / Settlement Management (condition contracts)	Master data & documents	Supplier condition contracts (purchasing rebates, chargebacks)	Vendor rebates / ship-and-debit chargebacks	PARTIAL–19	19	Supplier rebate accrual and settlement (credit from vendor) and chargeback/ship-and-debit claims are not named in waves 17/19 — partial; propose wave 26 engine reused for purchasing with settlement via AP in wave 19

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
230	13.20 SD Rebates / Settlement Management (condition contracts)	Master data & documents	Commission contracts (sales rep commissions via settlement management)	Commissions	PARTIAL–26	26	"Commission calculation hooks" only — partial; settlement to payroll/AP not named
231	13.20 SD Rebates / Settlement Management (condition contracts)	Master data & documents	Chargeback / ship-and-debit claims from distributors	Claim validation against agreements	GAP	propose 30	Distributor chargeback claims (EDI 844/849) validation and settlement — gap for manufacturers selling via distribution; propose wave 30 + wave 35
232	13.20 SD Rebates / Settlement Management (condition contracts)	Master data & documents	Royalty / licensing payments (settlement management use)	Royalty accrual/settlement	GAP	propose 26	Royalty accrual by sales volume (license fees to third parties) — gap; reuse rebate engine with vendor-side settlement
233	13.20 SD Rebates / Settlement Management (condition contracts)	Periodic processing	VBOF (batch)	Retroactive accrual update	PARTIAL–26	26	—
234	13.20 SD Rebates / Settlement Management (condition contracts)	Periodic processing	Delta accruals / delta settlement	Delta settlement after retro changes	PARTIAL–26	26	Retroactive gap
235	13.20 SD Rebates / Settlement Management (condition contracts)	Customizing (SPRO)	Chargeback / claim types	—	GAP	propose 30	—
236	13.20 SD Rebates / Settlement Management (condition contracts)	Customizing (SPRO)	Commission settlement integration (HR/AP)	—	PARTIAL–26	26	—
237	13.21 PP	Master data & documents	MM02 → MRP areas (MD61 per MRP area)	MRP area assignment (storage location / subcontractor level planning)	PARTIAL–22	22	Planning at warehouse (sub-site) level and at subcontractor level not explicitly named — partial; wave 22 plans by site; add "planning scope = site or warehouse"
238	13.21 PP	Master data & documents	CS51 / CS52 / CS53 / CS61 / CS62 / CS63 / CS71 …	Standard BOM / document BOM / equipment BOM / functional location BOM / sales order BOM / WBS BOM	PARTIAL–9	9	Material BOM yes; equipment/functional location BOMs in wave 44; sales-order BOMs (order-specific) and WBS BOMs not named — partial (ETO)
239	13.21 PP	Master data & documents	MS01 / MS02 / MS03 / MS04 / MS05 / MS06 / MS07 / MS08	Long-term planning (LTP): planning scenario, simulative MRP, stock/requirements (simulation), evaluations	PARTIAL–22	22	What-if simulation plans (separate planning versions with simulated demand, evaluating capacity/purchasing) not explicitly named — partial; propose "static plans" (AX-style) in wave 22
240	13.21 PP	Master data & documents	MS31 / MS32 / MS33 / MS44 / MS47 / MS64 / MS65 / MS70	LTP: planning scenario create/change/display, planned orders in scenario, evaluation (capacity, PURCHIS transfer)	PARTIAL–22	22	Same
241	13.21 PP	Master data & documents	Demand-driven replenishment (DDMRP: buffer positioning, buffer levels, replenishment planning, Fiori apps)	DDMRP (S/4)	GAP	propose 22	DDMRP (decoupling points, buffer zones red/yellow/green, net flow equation) not named; propose as wave 22 coverage-group type "DDMRP buffer"
242	13.21 PP	Master data & documents	Predictive MRP (pMRP, S/4)	Rough simulation of future demand vs capacity	PARTIAL–22	22	Overlaps LTP partial
243	13.21 PP	Master data & documents	Phantom assemblies, alternative items (BOM item alternative groups), discontinuation (MM02 follow-up material)	—	PARTIAL–9	9	Phantoms yes; alternative item groups (priority/strategy) and discontinuation/follow-up (run-out) are not named — partial; propose wave 9 BOM line attributes + wave 22 MRP logic
244	13.21 PP	Master data & documents	Make-to-order with sales order stock (strategy 20), planning with final assembly (40), planning without final assembly (50), subassembly planning (70)	Planning strategies	PARTIAL–22	22	Coverage groups + forecast reduction named; the full strategy-group semantics (consumption modes, MTO stock segmentation, planning at assembly level) are partially covered — partial; sales-order stock noted in MM-IM
245	13.21 PP	Master data & documents	Rework (CO07 / trigger points CO31 / CO33)	Rework orders / trigger points inserting rework operations	PARTIAL–21	21	Rework via order w/o material covered; trigger points (automatic rework operation insertion on confirmation) not named — partial
246	13.21 PP	Master data & documents	Order split (CO02 → split), order change management (OCM: COCM / COCM1)	Order split / order change management after ECO	PARTIAL–21	21	Order change management (propagating BOM/routing changes to open orders with change costs) not named — partial; propose wave 9/21
247	13.21 PP	Customizing (SPRO)	OPPS / OPPT — Planning strategies / strategy groups (10, 11, 20, 25, 30, 40, 50, 52, 59, 60, 63, 70, 74, 81, 82…)	T461S, T461P	PARTIAL–22	22	Planning strategy semantics partial (noted)
248	13.21 PP	Customizing (SPRO)	OMIZ / MRP areas (OMIZ / S/4 MRP areas per storage location, subcontractor)	MDLV, MDLG, MDLW	PARTIAL–22	22	MRP area partial

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
249	13.21 PP	Customizing (SPRO)	OPMP / OPM — Trigger points (standard trigger points, functions)	TTRIG	PARTIAL–21	21	Trigger point gap
250	13.21 PP	Customizing (SPRO)	OS40 / OS41 / OS44 — ECM: change types, object types, status, ECR/ECO profiles, release keys, effectivity types (date, serial, parameter)	TCC*, TECH*	PARTIAL–9	9	Date effectivity covered; serial-number/parameter effectivity not named — partial
251	13.21 PP	Customizing (SPRO)	DDMRP buffer profiles, classification runs (S/4 DD)	PPH_DD_*	GAP	propose 22	DDMRP gap
252	13.21 PP	Customizing (SPRO)	OCM profiles (order change management: change profiles, change cost)	COCM*	PARTIAL–21	21	OCM partial
253	13.22 PP-PI	Master data & documents	CRC5 / CRC	Resource network (RN)	PARTIAL–23	23	Resource networks (allowed sequences of resources, e.g. vessel → filler) not named — partial; scheduling with CP-SAT could model as constraints
254	13.22 PP-PI	Master data & documents	CO53 / CO53XT	Control recipe monitor (send control recipes to process control / PI sheet)	PARTIAL–25	25	Shop-floor instructions/drawings on kiosk; structured *control recipes* with process instruction categories sent to a destination (PCS/PI sheet) are partial
255	13.22 PP-PI	Master data & documents	CO54 / CO54XT / CO57 / CO58	Process message monitor / create process message manually / send	PARTIAL–25	25	IoT/MQTT machine events + kiosk reporting cover inbound; configurable message categories with destinations (e.g. to QM results, to batch record) partial
256	13.22 PP-PI	Master data & documents	CO60 / CO60XT / CO60_PI / CO64 / CO67	PI sheet: find/maintain / worklist / print / archive	PARTIAL–25	25	Kiosk instructions; a designer for interactive PI sheets (XSteps with input fields, calculations, signatures, process data requests) is not named — partial
257	13.22 PP-PI	Master data & documents	COEBR	Electronic batch record (EBR) creation/approval/archive (21 CFR Part 11)	GAP	propose 24	EBR with digital signatures, deviation review and archiving (GxP) not named — propose wave 24 (+ wave 48 compliance)
258	13.22 PP-PI	Master data & documents	CMX / Standard XSteps (CMXSV) / SXS repository	Standard XSteps repository	PARTIAL–25	25	Same as PI sheet
259	13.22 PP-PI	Master data & documents	Campaign planning (PP-PI campaign, process order campaigns: COCP / CMP)	Group process orders into campaigns (setup/cleanout)	PARTIAL–23	23	Campaign/sequence planning (group orders to minimize changeover, cleanout orders) not named — partial; CP-SAT setup optimization partly covers
260	13.22 PP-PI	Master data & documents	Cleanout / changeover orders, recipe-dependent cleaning	—	PARTIAL–23	23	Same
261	13.22 PP-PI	Master data & documents	Digital signature in PI sheets / batch records (DSIG)	21 CFR Part 11 signatures	GAP	propose 24	E-signature framework (meaning of signature, re-authentication) not named; propose cross-cutting in wave 24/48
262	13.22 PP-PI	Master data & documents	Batch derivation (DVMO / DVMAN) — see §13.33	—	PARTIAL–24	24	Batch derivation (inherit attributes from component batches to product batch) not named — partial
263	13.22 PP-PI	Reports & inquiries	CO54 (monitor)	Process message log	PARTIAL–25	25	—
264	13.22 PP-PI	Reports & inquiries	COEBR (list)	Batch record list	GAP	propose 24	—
265	13.22 PP-PI	Reports & inquiries	CMX/CO60 worklists	PI sheet worklist	PARTIAL–25	25	—
266	13.22 PP-PI	Periodic processing	CO53 (send control recipes, batch)	—	PARTIAL–25	25	—
267	13.22 PP-PI	Periodic processing	CO54 (process message processing, batch)	—	PARTIAL–25	25	—
268	13.22 PP-PI	Periodic processing	CO64 / CO67 (PI sheet archive)	—	PARTIAL–25	25	—
269	13.22 PP-PI	Periodic processing	COEBR (batch record generation/archive)	—	GAP	propose 24	—
270	13.22 PP-PI	Periodic processing	Campaign settlement / cleanout cost allocation	—	PARTIAL–23	23	—
271	13.22 PP-PI	Customizing (SPRO)	Process management: process instruction categories/characteristics (O10C O12C / O13C), process message categories & destinations (O05C / O06C / O07C), control recipe destinations (O10C), PI sheet layouts, XStep settings (SXS), signature strategies (O2 / DSIG)	TPM*, CPM*	PARTIAL–25	25	PI sheet / message framework partial
272	13.22 PP-PI	Customizing (SPRO)	Resource networks	—	PARTIAL–23	23	—
273	13.22 PP-PI	Customizing (SPRO)	Campaign planning settings	—	PARTIAL–23	23	—
274	13.22 PP-PI	Customizing (SPRO)	EBR: batch record profiles, archiving, approval workflow	—	GAP	propose 24	—

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
275	13.22 PP-PI	Customizing (SPRO)	Batch management in PP-PI: batch determination procedures for process orders (COB1), classification (023), batch derivation	TLSP, T*	PARTIAL–24	24	Derivation partial
276	13.23 PP/DS	Master data & documents	Block planning (resource blocks per characteristic, /SAPAPO/CDPSC12)	Reserve capacity blocks by product characteristics	GAP	propose 23	Block planning (time blocks on resources restricting which characteristic values can be produced) not named — propose wave 23 constraint type
277	13.23 PP/DS	Master data & documents	Characteristic-dependent planning (CDP) / CDP configuration	Planning by batch characteristics (e.g., color, grade)	PARTIAL–24	24	Batch attributes exist; planning that matches demand characteristics to supply batches (CDP) — partial; propose wave 22/24
278	13.23 PP/DS	Master data & documents	Shelf-life planning (SAP_PP_SL001)	Pegging respecting expiry (FEFO planning)	PARTIAL–22	22	FEFO picking (wave 16) yes; planning-time shelf-life pegging (min remaining shelf life at demand date) not named — partial
279	13.23 PP/DS	Master data & documents	/SAPAPO/MC01 (models/versions), /SAPAPO/MVM	Planning versions (simulation versions)	PARTIAL–22	22	Simulation versions = LTP partial
280	13.23 PP/DS	Master data & documents	/SAPAPO/SDP94 (DP), /SAPAPO/SNP94 (SNP), GATP (/SAPAPO/AC03)	Demand planning / supply network planning / global ATP	PARTIAL–22	22	DP ≈ wave 22 forecasting (statistical + consensus); SNP (multi-site network optimization: sourcing across plants/DCs with transport lanes and capacity) and GATP (rules-based ATP, multi-site substitution) are not named — partial; register multi-site network planning as a v1.x candidate under wave 22/27
281	13.23 PP/DS	Customizing (SPRO)	Block planning settings, CDP settings	—	GAP	propose 23	Block planning gap
282	13.24 QM	Master data & documents	QC51 / QC52 / QC53 / QC55	Certificate receipt (incoming certificates from vendor)	PARTIAL–33	33	Incoming vendor certificate receipt/tracking (required certificate at GR, block until received) not named — partial
283	13.24 QM	Master data & documents	QST01 / QST02 / QST03 / QST04 / QST05 / QST06 / QST07	Stability study (initial sample, storage conditions, testing schedule)	GAP	propose 33	Stability studies (pharma/food shelf-life testing schedules) not named; propose wave 33 extension for regulated process manufacturers
284	13.24 QM	Master data & documents	PLMD_AUDIT (Audit management: audits, questions, corrective actions)	Audit management	PARTIAL–33	33	CAPA yes; audit planning/questionnaires/audit findings (ISO 9001 internal audits, supplier audits) not named — partial
285	13.24 QM	Master data & documents	FMEA (QM-FMEA, S/4), control plan (S/4 QM)	FMEA / control plan	GAP	propose 33	FMEA and control plans (APQP/PPAP) — gap for automotive/aerospace suppliers; propose wave 33 extension
286	13.24 QM	Master data & documents	Source inspection (QI01 source inspection flag, QI07)	Inspection at vendor before GR	PARTIAL–33	33	Source inspection lots (before delivery) not named — partial
287	13.24 QM	Master data & documents	Sample management (QPR1 / QPR2 / QPR3 / QPR5 / QPR6 / QPR7)	Physical samples, sample drawing procedure, sample labels	PARTIAL–33	33	Sampling sizes yes; physical sample records (primary/pooled samples with labels, retention samples) not named — partial
288	13.24 QM	Master data & documents	Multiple specifications (customer/country-specific specs, S/4 "Multiple Specifications")	—	PARTIAL–33	33	Customer-specific test specs/limits — partial
289	13.24 QM	Reports & inquiries	QC55	Certificate receipt overview	PARTIAL–33	33	—
290	13.24 QM	Periodic processing	QST (stability schedule generation)	Stability testing schedule	GAP	propose 33	—
291	13.24 QM	Customizing (SPRO)	Define inspection points (time/quantity/freely defined), partial lots, inspection point identification	TQ79	PARTIAL–33	33	In-process inspection points (per time/quantity during production) partially covered by "production" trigger — partial
292	13.24 QM	Customizing (SPRO)	Stability study customizing	—	GAP	propose 33	—
293	13.24 QM	Customizing (SPRO)	FMEA / control plan customizing (S/4)	—	GAP	propose 33	—
294	13.24 QM	Customizing (SPRO)	Audit management customizing (audit types, question lists)	—	PARTIAL–33	33	—
295	13.24 QM	Customizing (SPRO)	Multiple specifications customizing	—	PARTIAL–33	33	—
296	13.24 QM	Customizing (SPRO)	Sample management customizing (sample types, sample-drawing procedures)	—	PARTIAL–33	33	—
297	13.25 PM	Master data & documents	IE31 / IE36 / IE37	Fleet object create / list / change	PARTIAL–44	44	Fleet-specific attributes (fuel, odometer, driver) not named — partial; counters cover odometer
298	13.25 PM	Master data & documents	IW81 / IW8W	Refurbishment order create / goods receipt for refurbishment	PARTIAL–44	44	Refurbishment of rotables (condition-based valuation: damaged → refurbished) not named — partial; split valuation gap in MM

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
299	13.25 PM	Master data & documents	IW32 → Permits (IPMD / WCM)	Permits, work clearance management (lockout/tagout)	PARTIAL–44	44	Permits/LOTO work clearance (WCM) not named — partial; propose wave 44 "permit/LOTO checklist"
300	13.25 PM	Master data & documents	Asset Intelligence Network / Predictive Asset Insights / Asset Strategy & Performance Management	Cloud EAM extensions	PARTIAL–44	44	Condition monitoring + predictive hooks named; RCM/criticality analysis (ASPM) partial
301	13.25 PM	Customizing (SPRO)	Refurbishment: valuation types for condition (OMWC split valuation), order type PM04 settings	T025, T003O	PARTIAL–44	44	Refurbishment gap
302	13.25 PM	Customizing (SPRO)	Permits (define permit types, categories), WCM (work clearance objects, applications, approvals)	T357G, WCA*	PARTIAL–44	44	Permit/LOTO gap
303	13.26 CS / Customer Service / SAP Field Service Management	Master data & documents	Warranty claim processing (WTY: WTY1 warranty claims from dealers/to vendors)	Warranty claims (supplier recovery)	PARTIAL–45	45	Customer warranty handling yes; supplier warranty claim recovery (claims to OEM/vendor, reimbursement) not named — partial
304	13.26 CS / Customer Service / SAP Field Service Management	Master data & documents	Solution database (IS01 / IS02 symptom/solution)	Knowledge base	GAP	propose 45	Knowledge base/solution search for cases not named; propose wave 45 (or wave 47 copilot answers)
305	13.26 CS / Customer Service / SAP Field Service Management	Master data & documents	Customer Interaction Center (CIC0) / SAP CRM Service / S/4 Service (Service orders, service contracts, service confirmations, service quotation)	Service front office	PARTIAL–45	45	Case management yes; omnichannel contact center (telephony/CTI, email routing) not named — partial (CRM non-goal boundary)
306	13.26 CS / Customer Service / SAP Field Service Management	Master data & documents	Service parts planning (SPP / advanced service parts)	Spare parts planning for service networks	PARTIAL–22	22	MRP covers; multi-echelon service parts planning partial
307	13.26 CS / Customer Service / SAP Field Service Management	Customizing (SPRO)	Warranty claim processing (WTY) customizing	—	PARTIAL–45	45	—
308	13.26 CS / Customer Service / SAP Field Service Management	Customizing (SPRO)	Solution database / knowledge base settings	—	GAP	propose 45	—
309	13.26 CS / Customer Service / SAP Field Service Management	Customizing (SPRO)	CIC / contact center framework	—	PARTIAL–45	45	—
310	13.27 PS	Master data & documents	CJZ1 / CJZ2 / CJZ3 / CJZ5	Interest calculation on projects	GAP	propose 41	Project interest calculation (interest on WIP/capitalized interest IAS 23) not named — propose wave 41 option
311	13.27 PS	Master data & documents	CJV1 / CJV2 / CJV3 / CJV4 / CJV5 / CJV6	Simulation version create/change/display/transfer	PARTIAL–41	41	Project what-if simulation versions not named — partial
312	13.27 PS	Master data & documents	CLM1 / CLM2 / CLM3 / CLM10 / CLM11	Claims (variation/change requests with cost impact)	PARTIAL–41	41	Change orders/claims on projects (scope change with cost/revenue impact and customer approval) not named — partial; propose wave 41 "project change order"
313	13.27 PS	Master data & documents	CNS0 / CN (shipping from projects — delivery from project)	Project deliveries (CNS0)	PARTIAL–41	41	Shipping items from project stock/WBS not named — partial (ETO)
314	13.27 PS	Master data & documents	Project stock (Q), PS material components, MD51 project MRP, CN33 (BOM transfer PS-BOM)	Project procurement/stock	PARTIAL–41	41	Project items/POs named; project stock segregation partial (MM-IM note)
315	13.27 PS	Master data & documents	IM01 / IM02 / IM03 / IM22 / IM23 / IM24 / IM25 / IM27 / IM28 / IM30 / IM31 / IM32 / IM33 / IM34 / IM35 / IM36 / IM52 / IMA11 / IMA2 / IMA3 / IMCCP1	Investment Management: investment programs (positions, hierarchy), budget distribution/supplement/return, program planning, appropriation requests (IMA11 create, variants, approval), rollup/carry-forward	PARTIAL–37	37	Asset budgeting named in wave 37; investment program hierarchy with appropriation requests (approval of capex before projects/orders) and program budget distribution — partial; propose wave 38 budgeting + wave 41
316	13.27 PS	Master data & documents	Commercial Project Management (CPM: project workspace, financial planning, change/risk/issue management)	Professional-services project cockpit	PARTIAL–41	41	Risks/issues register, cost/revenue forecasting workbook — partial
317	13.27 PS	Reports & inquiries	IM (IM reports: S_ALR_87012)	Investment program reports	PARTIAL–37	37	—
318	13.27 PS	Periodic processing	CJZ2 (interest)	Interest calculation run	GAP	propose 41	—
319	13.27 PS	Periodic processing	IM27 / IM32 (IM budget rollup / carry-forward)	—	PARTIAL–37	37	—
320	13.27 PS	Customizing (SPRO)	OPS — Project stock settings (valuated/non-valuated), PS material components (OPUV), MRP for project	TCJ41, T*	PARTIAL–41	41	Project stock partial
321	13.27 PS	Customizing (SPRO)	Investment management: program types, appropriation request types, status, budget categories, plan/budget profiles	TAIF, TAPRT	PARTIAL–37	37	IM partial
322	13.27 PS	Customizing (SPRO)	Claim management customizing (notification type CL, claim types)	TQ80	PARTIAL–41	41	—
323	13.27 PS	Customizing (SPRO)	Simulation versions / project versions profiles (OPTS / OPT)	TCJ	PARTIAL–41	41	—
324	13.27 PS	Customizing (SPRO)	Interest profiles (OPIB / OPIC / OPID)	T*	GAP	propose 41	—

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
325	13.28 HCM	Master data & documents	PP61 / PP62 / PP63 / PP64 / PP6I / PP6A	Shift planning (target plan, requirements, assignments)	PARTIAL–25	25	Time registration & shifts in wave 25; shift rostering (planning employees to shifts against requirements, swaps) not named — partial; propose wave 42
326	13.28 HCM	Master data & documents	PC00_M10_OSUP / PC00_Mxx_OC (off-cycle workbench PUOC_10)	Off-cycle payroll (bonus, correction, final pay)	PARTIAL–43	43	Off-cycle/ad-hoc pay runs (bonus, termination final pay, check replacement) not explicitly named — partial
327	13.28 HCM	Master data & documents	PC00_M10_CLAIMS / PC00_M10_UTXX	US claims processing / tax authorities	PARTIAL–43	43	Claims (overpayment recovery) not named — partial
328	13.28 HCM	Master data & documents	HRBEN00ICOBRA / HRBEN00COBRA	COBRA (US)	PARTIAL–42	42	COBRA notices/continuation (US) belongs to US pack — partial
329	13.28 HCM	Master data & documents	E-Recruiting (HRRCF_*) / SF Recruiting & Onboarding	Modern recruiting	PARTIAL–42	42	Pipeline basics; career site, requisition approval, offer letters, onboarding tasks — partial
330	13.28 HCM	Master data & documents	PPCP / PPSS (career/succession planning) / SF Succession	Succession planning	PARTIAL–42	42	Talent basics; succession planning/talent pools not named — partial
331	13.28 HCM	Master data & documents	PECM_* (enterprise compensation management: planning, budgets, long-term incentives, pay scale OH) / SF Compensation	Compensation planning cycles	PARTIAL–42	42	Compensation plans yes; merit/bonus planning cycles with budgets and manager worksheets — partial
332	13.28 HCM	Master data & documents	PSV1 / PSV2 / PSV3 / PSVP / LSO_PSV (training & event management / LSO) / SF Learning	Training catalog, bookings, resources, follow-up	PARTIAL–42	42	Certifications tracked; course catalog/LMS (sessions, bookings, completion) not named — partial

334	13.28 HCM	Master data & documents	SF Onboarding / Offboarding	Onboarding tasks	PARTIAL–42	42	Onboarding checklists not named — partial
335	13.28 HCM	Reports & inquiries	PC00_M10_* US reports (941, 940, W-2, state unemployment, new hire, EEO-1, workers' comp)	US statutory	PARTIAL–43	43	Year-end W-2/1099 named; quarterly 941/state UI and EEO/VETS reporting belong to US pack — partial
336	13.28 HCM	Periodic processing	PU19 (quarterly/annual tax reporter runs)	Statutory filings	PARTIAL–43	43	—
337	13.28 HCM	Customizing (SPRO)	Compensation management: compensation areas, plans, guidelines, budgets, eligibility	T71*	PARTIAL–42	42	Planning cycles partial
338	13.28 HCM	Customizing (SPRO)	Training & event management / LSO: business event types, resources, booking, follow-up, LSO settings	T77*	PARTIAL–42	42	LMS partial
339	13.28 HCM	Customizing (SPRO)	Country-specific HR infotypes and legal changes (country packs: US, DE, GB, FR, IN, MX, CA)	—	PARTIAL–48	48	Country-specific fields framework (wave 42) + packs (wave 48) cover tax/statutory; HR-legal (works council, contract types, statutory leave) per country partially
340	13.28 HCM	Customizing (SPRO)	Concurrent employment / global employment configuration	—	PARTIAL–42	42	—
341	13.29 FI-TV	Master data & documents	TP01 / TP02 / TP03 / PR01 (travel request)	Travel request (pre-trip approval with estimated cost)	PARTIAL–43	43	Pre-trip travel request/approval with estimated cost and cash advance not named — partial; propose wave 43 "pre-approval request"
342	13.29 FI-TV	Master data & documents	PR02 / PR05 advances (PR cash advance)	Cash advances	PARTIAL–43	43	Advances and offset against expenses not named — partial
343	13.29 FI-TV	Customizing (SPRO)	Travel request / travel plan settings, approval workflows, substitutes	T702, SWF	PARTIAL–43	43	Pre-approval partial
344	13.30 Basis & Security (users, roles, GRC Access Control, change documents, transports, system administration)	Master data & documents	GRC EAM firefighter (superuser privilege management with reason codes and log review)	Emergency access	PARTIAL–48	48	Break-glass elevated access with time-boxed sessions, reason codes and reviewer sign-off not explicitly named — partial
345	13.30 Basis & Security (users, roles, GRC Access Control, change documents, transports, system administration)	Periodic processing	Anonymized production-to-test data refresh (TDMS / client copy with scrambling)	Test data management	PARTIAL–48	48	Tenant clone with PII scrambling not explicitly named — partial; propose wave 48/50
346	13.30 Basis & Security (users, roles, GRC Access Control, change documents, transports, system administration)	Customizing (SPRO)	Printing: device types, output devices, access methods (SPAD), front-end printing, print queues	TSP03*	PARTIAL–32	32	Print service for labels/documents; generic office print queue/printer management partial

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
347	13.30 Basis & Security (users, roles, GRC Access Control, change documents, transports, system administration)	Customizing (SPRO)	Read Access Logging (SRAL) configuration	SRAL*	PARTIAL–48	48	PII access logged (wave 42) for HR; configurable read-access logging for arbitrary sensitive fields partial — propose wave 48
348	13.31 Cross-Application (workflow, IDoc/ALE, PI/PO, DRC e-documents, output management NAST/BRF+, Fiori launchpad, archiving/ILM, GDPR/IRF, attachments, texts, enterprise search)	Master data & documents	BRF+ (BRFPLUS / FDT_WORKBENCH) / Decision Service Management (DSM)	Business rules framework (decision tables, formulas, rulesets)	PARTIAL–3	3	Validation rules and OPA policies exist; a general-purpose, user-maintainable decision-table/rules engine (used by output, tax, credit, dispute, GRC, substitution) is implied across waves but not named as a shared service — partial; propose explicit "rules engine (decision tables)" in wave 3/4
349	13.31 Cross-Application (workflow, IDoc/ALE, PI/PO, DRC e-documents, output management NAST/BRF+, Fiori launchpad, archiving/ILM, GDPR/IRF, attachments, texts, enterprise search)	Master data & documents	SO10 / SO72 / SE75 (text objects/IDs)	Standard texts, text management	PARTIAL–5	5	Document/line notes exist; a reusable standard-text library with placeholders and language versions for documents is not named — partial; propose wave 46 designer text blocks
350	13.31 Cross-Application (workflow, IDoc/ALE, PI/PO, DRC e-documents, output management NAST/BRF+, Fiori launchpad, archiving/ILM, GDPR/IRF, attachments, texts, enterprise search)	Master data & documents	SAP Business Partner Screening / Watch List Screening (GTS)	Sanctions/denied-party screening	GAP	propose 48	Denied-party/sanctions screening of parties and documents not named; propose wave 48 (compliance) with provider adapter
351	13.31 Cross-Application (workflow, IDoc/ALE, PI/PO, DRC e-documents, output management NAST/BRF+, Fiori launchpad, archiving/ILM, GDPR/IRF, attachments, texts, enterprise search)	Master data & documents	Legal Content Management / contract management (SAP CLM, Ariba Contracts)	Legal contracts	PARTIAL–17	17	Purchase/sales agreements exist; legal contract authoring, clause library, obligations — partial (noted in Ariba row)
352	13.31 Cross-Application (workflow, IDoc/ALE, PI/PO, DRC e-documents, output management NAST/BRF+, Fiori launchpad, archiving/ILM, GDPR/IRF, attachments, texts, enterprise search)	Master data & documents	SAP Business Rules (BRF+ in GRC, tax, dispute, output) — see above	—	PARTIAL–3	3	—
353	13.31 Cross-Application (workflow, IDoc/ALE, PI/PO, DRC e-documents, output management NAST/BRF+, Fiori launchpad, archiving/ILM, GDPR/IRF, attachments, texts, enterprise search)	Master data & documents	SAP Process Mining (Signavio) / Process Observer (POC)	Process mining	PARTIAL–46	46	Event stream + lakehouse enables mining; no native process-mining UI — partial
354	13.31 Cross-Application (workflow, IDoc/ALE, PI/PO, DRC e-documents, output management NAST/BRF+, Fiori launchpad, archiving/ILM, GDPR/IRF, attachments, texts, enterprise search)	Customizing (SPRO)	BRF+ applications, functions, rulesets, decision tables, expressions	FDT_*	PARTIAL–3	3	Rules engine gap

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
355	13.31 Cross-Application (workflow, IDoc/ALE, PI/PO, DRC e-documents, output management NAST/BRF+, Fiori launchpad, archiving/ILM, GDPR/IRF, attachments, texts, enterprise search)	Customizing (SPRO)	Watch list screening / GTS compliance configuration	—	GAP	propose 48	Screening gap
356	13.32 LO-VC	Master data & documents	CU60 / CU61 / CU62 / CU65 / CU66 / CU67	Variant tables: structure / content / display; variant functions (ABAP)	PARTIAL–8	8	Variant tables (decision tables) map to constraint tables — covered; *variant functions* (ABAP-coded) → SUPERSEDED by expression functions; table maintenance UI not named — partial
357	13.32 LO-VC	Master data & documents	CU51 / CU52 / CU55 / CU56	Order BOM maintain (sales order BOM — result-oriented/knowledge-based) / display / instantiation	PARTIAL–21	21	Order-specific BOM edits after configuration (ETO) not named — partial; propose wave 21/27 "order BOM"
358	13.32 LO-VC	Master data & documents	Customer-facing configurator (web, Fiori / SAP CPQ)	Guided selling	PARTIAL–30	30	Customer portal order entry named; guided configurator UI for portal/e-commerce not explicitly named — partial
359	13.32 LO-VC	Master data & documents	CU7 / CUCPT (configuration copy/ templates)	Configuration templates	PARTIAL–8	8	Saved configurations/templates for reuse — partial
360	13.32 LO-VC	Master data & documents	PSM / iPPE (Product Structure Management: product variant structures, CMP nodes, PVS)	Product structure for complex configurable products (automotive)	PARTIAL–9	9	Multi-level configurable structures covered by super BOM; iPPE-style product variant structures with alternatives/variants at node level — partial; propose wave 9 v1.x
361	13.32 LO-VC	Master data & documents	Configuration in purchasing (configurable PO items for configurable vendor products), configuration in service (IBase configuration)	—	PARTIAL–17	17	Configured PO items not named — partial
362	13.32 LO-VC	Master data & documents	VC with batch/serial effectivity, parameter effectivity (ECM)	Effectivity	PARTIAL–9	9	Noted in PP (serial/parameter effectivity partial)
363	13.32 LO-VC	Periodic processing	Re-explosion of configured orders after model change (OCM)	—	PARTIAL–21	21	OCM partial (noted)
364	13.32 LO-VC	Customizing (SPRO)	Order BOM settings (CU51 processing)	—	PARTIAL–21	21	—
365	13.33 Batch Management & Serial Numbers	Master data & documents	DVMO / DVSP / DVMAN	Batch derivation: monitor / set up derivation (sender/receiver, rules) / manual derivation	PARTIAL–24	24	Batch derivation (inherit attribute values from component batches) partial (noted in PP-PI)
366	13.33 Batch Management & Serial Numbers	Master data & documents	Batch valuation (split valuation per batch, OMWC valuation type = batch)	Batch-level valuation	PARTIAL–20	20	Split valuation gap
367	13.33 Batch Management & Serial Numbers	Master data & documents	Documentary batches (S/4 "documentary batch" for non-batch-managed materials)	Documentary batches	PARTIAL–24	24	Recording batch numbers for info only (no stock segregation) not named — partial
368	13.33 Batch Management & Serial Numbers	Master data & documents	Serial numbers at component level in finished-goods serial (as-built genealogy)	As-built records	PARTIAL–21	21	Serial-to-serial component genealogy (as-built) not explicitly named — partial; propose wave 21 RAF capture
369	13.33 Batch Management & Serial Numbers	Reports & inquiries	DVMO (derivation monitor)	—	PARTIAL–24	24	—
370	13.33 Batch Management & Serial Numbers	Periodic processing	Batch derivation runs (DVMO)	—	PARTIAL–24	24	—
371	13.33 Batch Management & Serial Numbers	Customizing (SPRO)	Batch derivation: activation, sender/receiver fields, derivation events, rules	DVMO*	PARTIAL–24	24	—
372	13.33 Batch Management & Serial Numbers	Customizing (SPRO)	Batch valuation (valuation type = batch) activation	T001K, T149	PARTIAL–20	20	—
373	13.33 Batch Management & Serial Numbers	Customizing (SPRO)	Documentary batch activation (S/4)	—	PARTIAL–24	24	—
374	13.35 DMS	Master data & documents	CV01N / CV02N / CV03N	Document info record create/change/display (document type, number, part, version; status; originals; object links; classification; texts)	PARTIAL–8	8	Attachments (wave 5) and product documents (wave 8) exist; a *document info record* with type, versioning, part/version numbering, status network and release is not named — partial; propose wave 9 "engineering documents" (drawings/specs under ECO control)
375	13.35 DMS	Master data & documents	CV04N	Find document (by attributes, classification, object links, full text)	PARTIAL–8	8	Global search covers attachments metadata; attribute/classification search on documents partial

#	Section	Table	T-code / IMG node	Name	Status	Wave (current / proposed)	What is missing / proposal
376	13.35 DMS	Master data & documents	CV11 / CV12 / CV13 / CV15	Document structure (document BOM) create/change/display / where-used	GAP	propose 9	Document structures (assemblies of documents, e.g. drawing sets) not named — propose wave 9
377	13.35 DMS	Master data & documents	CV01N → originals (check-in/check-out, KPro storage categories, viewer, conversion)	Original files (CAD, PDF, Office) with check-out locking	PARTIAL–5	5	Attachments stored; check-out/check-in locking, multiple originals per version, viewer/conversion (2D/3D) not named — partial
378	13.35 DMS	Master data & documents	CV01N → status network (in work → released → obsolete), status with release/approval workflow, digital signature	Document status & release	PARTIAL–9	9	ECO workflow covers BOM/route release; document release state machine with signature — partial
379	13.35 DMS	Master data & documents	CV01N → version / part / change number (ECM)	Document versioning under ECM	PARTIAL–9	9	ECO-controlled document versions partial
380	13.35 DMS	Master data & documents	CV01N → document distribution (recipients, distribution orders CVI1 / CVI2 / CVI8)	Distribution of documents (e.g. to suppliers)	PARTIAL–20	20	Supplier portal document exchange named; controlled distribution with acknowledgement partial
381	13.35 DMS	Master data & documents	ECTR (Engineering Control Center): CAD integration (SolidWorks, Inventor, NX, CATIA, AutoCAD, ECAD), BOM derivation from CAD, 3D viewer, DMS for CAD	CAD–ERP integration	GAP	propose 9	CAD integration (CAD file management, CAD BOM → engineering BOM sync) not named; wave 9 says "PLM integration" only as reference — propose wave 9 (v1.x) PLM/CAD connector (e.g. via a PLM system) rather than native CAD management
382	13.35 DMS	Master data & documents	Document BOM items (CS01 item category D)	Documents as BOM components (e.g., drawings, instructions)	PARTIAL–9	9	BOM line type "document" not named — partial
383	13.35 DMS	Master data & documents	PLM: Engineering Record (change management cockpit), Product Structure Management, Visual Enterprise (3D visualization), Recipe Development (PLM-RDP), Specification management (EHS specs), Labeling (GLM)	PLM suite	PARTIAL–9	9	ECR/ECO covered; recipe development with formula trials/specs (process industries), specification management, global label management — partial; propose wave 24 (recipe dev) & wave 48 (labeling compliance)
384	13.35 DMS	Master data & documents	Fiori: Manage Documents / Manage Document Info Records	—	PARTIAL–8	8	—
385	13.35 DMS	Reports & inquiries	CV04N	Document search	PARTIAL–8	8	—
386	13.35 DMS	Reports & inquiries	CV13 / CV15	Document structure display / where-used	GAP	propose 9	—
387	13.35 DMS	Reports & inquiries	CVI8 (distribution log)	Distribution status	PARTIAL–20	20	—
388	13.35 DMS	Reports & inquiries	ECTR reports (CAD BOM comparison)	—	GAP	propose 9	—
389	13.35 DMS	Periodic processing	CV conversion runs (originals → PDF/neutral formats)	Conversion server runs	PARTIAL–5	5	Preview generation for attachments — partial
390	13.35 DMS	Periodic processing	Document distribution runs (CVI)	—	PARTIAL–20	20	—
391	13.35 DMS	Periodic processing	ECTR sync jobs	—	GAP	propose 9	—
392	13.35 DMS	Customizing (SPRO)	DC10 — Document types (number assignment, version/part numbering, status network, object links, screen layout, classification class, originals count, versioning)	TDWA, TDWS, TDWO, TDWP	PARTIAL–8	8	Attachment types exist; full document type model partial
393	13.35 DMS	Customizing (SPRO)	DC20 — Status (document status definitions, release flag, content version)	TDWS	PARTIAL–9	9	—
394	13.35 DMS	Customizing (SPRO)	DC30 — Workstation applications (file types, viewer/editor, conversion)	TDWP	PARTIAL–5	5	Preview/viewer mapping partial
395	13.35 DMS	Customizing (SPRO)	Document distribution customizing (recipient lists, distribution types)	—	PARTIAL–20	20	—
396	13.35 DMS	Customizing (SPRO)	ECTR configuration (CAD applications, templates, BOM sync rules)	—	GAP	propose 9	—
397	13.35 DMS	Customizing (SPRO)	Digital signature for documents (signature strategies)	—	GAP	propose 24	E-signature framework gap (noted in PP-PI)
398	13.35 DMS	Customizing (SPRO)	Full-text search activation (TREX/HANA) for originals	—	PARTIAL–5	5	Attachment content indexing not named — partial
399	13.36 Analytics	Master data & documents	Data quality dashboards (Information Steward)	DQ monitoring	PARTIAL–46	46	Metric reconciliation checks exist; generic data-quality rule dashboards (completeness, validity per entity) partial — propose wave 46 DQ rules on catalog
400	13.36 Analytics	Customizing (SPRO)	Export governance (Excel export restrictions, download audit)	—	PARTIAL–48	48	Export of PII/financial data audit & restriction policies not named — partial; propose wave 48
401	13.37 AI	Master data & documents	SAP Signavio Process AI / Process Insights (process mining recommendations)	Process intelligence	PARTIAL–46	46	Process mining partial (noted §13.31)
